In their courſe they ſaw many albatroſſes and petrels, penguins, ſeals, and whales; and the ſkins of the latter appeared to be covered with little worms, ſomewhat like theſe that are found at the bottoms of veſſels in harbour, which lie there till they are rotting.

They made the land of Terra del Fuego, ſoon after they had ſight of Cape Virgin, and for many days afterwards had nothing but contrary winds and ſtorms. The wind blowing more in their favour for a little while, on the third of December they tried to reach the ſtreights mouth, but a calm and a thick fog ſucceeded, when the breeze roſe up again, night coming on, they ſteered to the weſtward.

They ſtood in for land again on the 4th, as the wind was once more favourable; but the rain and hazy weather hindering them from ſeeing the coaſt, they were obliged to keep the ſea; when it cleared up a little after, they made another attempt to enter the ſtreights, when the wind changed, the fog returned, and they were obliged to lie to between the main land, and the two ſhores of Terra del Fuego. On the 4th of December the foreſail of the Boudeuſe was ſplit by the fury of the winds, and as at this time they were in no deeper water than 20 fathom, they determined to ſcud under their bare poles, leſt they ſhould run foul of ſome breakers which lie off Cape Virgin to the ſouth ſouth-eaſt. They now made other fruitleſs attempts to enter the ſtreights, ſometimes being within ſight of the cape, and at other times a conſiderable diſtance from it. The night of the 15th was ſpent in ſtanding off and on; and early in the morning of the 6th they were in ſight of Cape Poſſeſſion, and likewiſe of Terra del Fuego. They now took the advantage of a weſterly tide, and tried to get cloſe to the coaſt of Patagonia. They kept ſounding all the night between the 6th and 7th, not ſailing at a greater diſtance from the coaſt than three leagues. What they had gained by plying to the windward, they loſt by the oppoſition of the currents, and about noon on the 7th, were in their former ſtation. This day they had ſight of Cape Orange, which forms the firſt narrow paſs in the ſtreights. This narrow paſs M. Bougainville called a gut. It is rather more than forty miles from Cape Virgin to this firſt gut, and the ſtreights for this diſtance are of different breadths, but ſeldom leſs than five, or more than ſeven leagues. On the north coaſt the land is high and healthy, and of a regular appearance, as far as Cape Poſſeſſion, in the bays of which there are ſeveral dangerous rocks, to which Sir John Narborough gave the name of Aſſes Ears. In the afternoon when they had reached the entrance of the gut, though the wind blew freſh, and all their ſails were ſet, the tide ran with ſo great force, that they were driven backwards, inſtead of advancing in their voyage. In the evening the ſhips were anchored in Poſſeſſion Bay, and on the eighth, by the aſſiſtance of a ſtrong breeze, they ſtemmed the tide, and afterwards, by different tacks, they got through the firſt narrow entrance of the gut, with the wind againſt them.—During the preceding night, they had obſerved fires on the ſhore, and this morning they diſcovered a white flag, which the Patagonians had erected on a riſing ground; on which a white flag was likewiſe hoiſted at the maſt head of each veſſel. The flag which theſe Patagonians held up, was one given them by the commander of the Etoile, when that ſhip lay in Boucault's Bay, in the month of June, 1766, ſo that it is evident that the people were the ſame. M. Bougainville ſpeaks in very grateful terms of the care theſe Indians had taken to preſerve the flag.

As the ſhips were paſſing the above-mentioned gut, a number of men cloathed in the ſkins of beaſts were obſerved on Terra del Fuego, who ran along the ſhore with the utmoſt expedition, in order to keep pace with the veſſel; they alſo frequently beckoned with their hands, as if they wiſhed the voyagers to ſtop. The Spaniards ſay that the natives of that part of Terra del Fuego, are leſs ſavage in their manners than moſt other Indians. When M. Bougainville ſailed from Rio de la Plata, a Spaniſh ſhip was on the point of ſailing thence to convey ſome prieſts to inſtruct theſe people in the doctrines of Chriſtianity. The ſhip having come to an anchor in the afternoon, in Boucault's Bay, ſeveral officers from each veſſel, having fire-arms with them, embarked in boats, and went on ſhore at the bottom of the bay. The common ſailors were ordered to remain in the boats, and to keep them a-float. The gentlemen were no ſooner landed than half a dozen of the natives came riding up to them in full ſpeed. When they were advanced within fifty yards of the French, they diſmounted and came forward, pronouncing the word *Shawa*. Having come up quite cloſe, they held out their arms, and laid them on thoſe of the officers, whom they ſhook hands with, and embraced them, repeatedly ſaying *Shawa*, which word was repeated by M. Bougainville and his officers. The Patagonians appeared to be much pleaſed with the company of their new friends; but it was obſerved that ſome of them had a mixture of fear imprinted on their countenances: this, however, was ſoon removed by the hoſpitality of the officers, who ſent to the boats for bread cakes, which were as readily eaten as they were chearfully given. More of the Indians ſoon approached, among whom were ſome children. They expreſſed no kind of ſurpriſe at the ſight of their viſitants, and ſeemed not to be unacquainted with the uſe of fire-arms, as appeared by their making a noiſe which reſembled the report of a gun. The good-nature of theſe people was expreſſed in all their actions: ſome of the French gentlemen being engaged in collecting plants, the Patagonians no ſooner ſaw what kinds they collected than they immediately began to pull up and bring the ſame ſorts. One of them obſerving an officer engaged in this employment, went to him, and pointing to his eye, which had received an injury, intimated his wiſh, that ſome herb might be ſhewn him the virtues of which would cure the diſorder; and this was deemed to be a concluſive proof that they had an idea of the medical powers of herbs. M. Bougainville received from theſe Patagonians a number of ſkins of the guanacoe and other beaſts, in exchange for a few trinkets on which they

they ſeemed to ſet a great value. Some of the gentlemen having red cloaths on, the natives advanced, and ſtroaked them with their hands, ſeeming highly delighted with every thing of that colour; they alſo made ſigns for ſome tobacco, and as often as any thing was given them, they cried out *Shawa*, in a very loud and diſagreeable tone. A ſmall quantity of brandy being preſented to each of the Patagonians, they had no ſooner drank, than they ſtruck their hands repeatedly againſt their throats, and blew with their mouths, ſo as to produce a kind of trembling ſound, at the concluſion of which they had a ſingular quivering of the lips. The evening advanced, and the gentlemen repaired to their ſhips, which was no ſooner obſerved by the Indians, than their uneaſineſs was expreſſed in their countenance, and they intimated by ſigns, that they wiſhed them to remain longer, as they expected more of their brethren. The French, on the contrary, made ſigns that they would come again the next day, and bring ſuch articles as the natives had requeſted of them. M. Bougainville and his party now walked to their boats accompanied by the Indians, one of whom ſung ſongs till they reached the coaſt, and ſeveral of them went into the water, as far as where the boats lay, and ſeized all the articles they could lay their hands on, but when they ſaw they were obſerved, they made no ſcruple to return them. As the boats were rowing off, many more Patagonians were obſerved galloping down to their countrymen; and the crews of the boats now cried out *ſhawa* ſo loud, that the people on ſhore could not fail to hear them. M. Bougainville ſays, that theſe Indians were the ſame that were ſeen by the crew of the Etoile, in the year 1765, for one of the ſeamen recollected a perſon among them whom he had before ſeen. Theſe people are well made, and appear to be about the height deſcribed by other voyagers. Our author ſays, that it is the thickneſs of their limbs, the largeneſs of their heads, and the extraordinary breadth of their ſhoulders, that make them appear to be of a gigantic race. The colour of the Patagonians is brown. Their muſcles are ſtrong, and their nerves well braced, and as their food abounds with juices proper for the nouriſhment of the human frame, it is no wonder that they arrive at their full growth. Their eyes are ſparkling, their teeth very white, their faces extremely round, but rather flat, and many of them are rather comely men. Some of them have whiſkers, which grow long, but are very thin, and they all tie their hair, which is long and black, on the top of the head; the cheeks of ſome of them are painted red. Their language has an agreeable and melodious ſound. Our voyagers did not ſee any of the Patagonian women, though it was conjectured, that the men intended to have brought them from a kind of camp, which appeared to be about three miles diſtant. M. Bougainville ſays theſe people wear a piece of leather round the waiſt, and a kind of cloak made of ſkins, which deſcend to the bottom of the leg, and is girt round the body, the part that would otherwiſe cover the ſhoulders, is permitted to fall back, ſo that the greater part of the body is left naked, though the climate is ſo cold as apparently to require more covering than the whole which they wear. [It was in the ſummer that M. Bougainville was on the coaſt of Patagonia, yet, he ſays, there was only a ſingle day on which the thermometer was obſerved to riſe to ten degrees higher than the freezing point.] The reſt of the dreſs of the Patagonians conſiſted of a ſort of half-boots, made of the ſkins of the horſe, and left open at the back part of the leg. A few of them wore on the thigh a ring of copper, two inches in breadth; and the necks of two very young men were adorned with beads. Some ſmall knives, of the manufacture of England, were ſeen in their poſſeſſion, which our author concludes were the gift of Commodore Byron; and their only arms conſiſted of a twiſted gut, in the two ends of which were incloſed a round pebble, and weapons of that kind, he ſays, are uſed in all that part of the American continent. Their horſes are very poor, and of a ſmall ſize, and the ſaddles and bridles were ſuch as are uſed by the natives of Rio de la Plata. One of theſe people was obſerved to have gilt nails on his ſaddle, ſtirrups made of wood encloſed with copper, a bridle made of leather twiſted, and a complete Spaniſh harneſs. Their food conſiſts chiefly, as has been obſerved, of guanacoes and vicunnas, and they eat both the fleſh and marrow of thoſe animals. They devour this raw, with great avidity, and carry it with them on their horſes. Freſh water being very ſcarce in this country, the horſes drink the ſea-water, as do likewiſe the dogs, which are both ſmall and ugly. 1767

It was obſerved that ſome of them pronounced *capitan*, *chico bueno*, and other Spaniſh words. M. Bougainville concludes that the Patagonians lead the ſame kind of life as the Tartars, as they are always on horſeback, traverſing immenſe plains, in purſuit of wild beaſts, and game; and he imagines that they alſo, like the Tartars, plunder the caravans of travellers; but this remark ſeems unlikely. Our author concludes with ſaying, that he has "Since found a nation in the Pacific Ocean, where the people are taller than the Patagonians." M. Bougainville tells us, that the ſoil of this country is extremely dry, and very much like that of Falkland's Iſlands, the coaſt, likewiſe, exhibits the ſame kind of ſea-weeds, and ſhells of ſimilar ſorts are ſtrewed upon the beach. The country yields ſhrubs, but affords no woods for ſhelter.

On the 9th of December, 1767, all the ſails of the veſſels were ſet, to make head againſt the fury of the tide; but they were obliged again to come to an anchor, after ſailing only three miles. During two whole days the weather was ſo tempeſtuous that not a boat could put off from the ſhips, which was a mortifying circumſtance, as great numbers of the Patagonians were by this time got together, on the ſpot where they had converſed with the officers who were concerned that they were not able to keep their promiſe with theſe friendly people, whoſe little wants might have been eaſily ſupplied. It appeared by the help of glaſſes, that they had built ſeveral huts on the ſhore, and it was obſerved, that ſome of them were conſtantly galloping backwards and forwards from this place to a ſpot where it was ſuppoſed the main body of them lay. Early on the morning of the 12th the Boudeuſe loſt an anchor, by the parting of the cable, ſoon after which they ſet all their ſails, and by the aſſiance of the ebb tide, and a favourable wind they got through the ſecond gut in the afternoon, and anchored on the north ſide of the iſle of Elizabeth. As they were detained here two days by tempeſtuous weather, and contrary winds, M. Bougainville reſolved to land on the iſle of Elizabeth, where he met with a few buſtards that were at this time hatching their eggs, but theſe birds were ſo intimidated at the ſight of our adventurers, that they could not approach near enough to have even a ſingle ſhot at them. The iſland produces no wood, but only a kind of heath which might ſupply its place, as fuel for the fire. The water of this place is brackiſh, and the ſoil extremely dry. Several places were likewiſe obſerved, which had been marſhes that had become dry, and the ground on ſome parts of them were covered with a thin cruſt of ſalt. It was evident that the iſland was occaſionally viſited by the Indians, as the ſhells of ſome fiſh they had eaten were found near where a dead dog was lying, and where it was plain that fires had been made. The adventurers were now on the point of entering that part of the ſtreights of Maghellan which abounds in woods, and the principal difficulties were already overcome. On the afternoon of the 30th the anchors were weighed, and they ſailed with a ſtrong wind in a channel between the iſlands of Barthelemi and Lions, and that of Elizabeth. They were now obliged to coaſt the laſt named iſland, to ſteer clear of a number of breakers, with which the other iſlands are encompaſſed. Having ſailed beyond Cape Noir, they obſerved that the country had a pleaſant appearance, being almoſt every where covered

1767 with woods, which afforded a moſt delightful proſpect to the eye. In the evening the weather became ſuddenly calm and pleaſant, ſo that M. Bougainville pleaſed himſelf with the hope of being able to double Cape Round before the morning; but in this climate the moſt flattering appearances are by no means to be relied on; a truth that was fully evident in the preſent inſtance; for ſoon after twelve at night the wind ſuddenly ſhifted, and blew moſt violently, bringing with it ſtorms of hail, and deluges of rain, while a fog, apparently impenetrable, covered the whole coaſt. The main-ſail of the Boudeuſe being ſplit by this ſtorm, they endeavoured to make Port Famine, where they hoped to be ſheltered from the tempeſt; but this attempt was fruitleſs, for the violence of the current was ſuch that they loſt nine miles in as many hours, and were hurried with amazing rapidity into a large bay, formed part of the coaſt of Terra del Fuego, which M. Bougainville called *Bay Duclos*, from the name of the officer who was next in command under the commodore of the expedition, and whoſe knowledge and experience are mentioned as circumſtances highly advantageous to the enterprize. This bay is deſcribed as being very convenient for ſhips to anchor in, on account of weſterly winds blowing over the coaſt. Two ſmall rivers diſcharge their ſtreams into the bay, the water of which is excellent at about a quarter of a mile from the ſea-coaſt, though nearer than that diſtance it is impregnated with ſaline particles. The landing place is a ſandy beach, above which a pleaſant meadow ſtretches itſelf to a conſiderable diſtance. Behind this meadow the woods raiſe their lofty heads, and form a kind of amphitheatre. Our adventurers traverſed a conſiderable track of the country, without meeting with any living animal, except a very few parroquets, buſtards, ducks, teals, and two or three ſnipes.

Bay Duclos.

Several huts were ſeen at the mouth of a river which had been conſtructed by twiſting branches of trees into the form of an oven. In theſe huts were found a large number of limpets, muſcles, and calcined ſhells, and the huts themſelves appeared to have been recently made. Our adventurers going ſome miles up the river, obſerved the track of human creatures, and remarked that the flood came from the eaſt at the riſing of the tide, which they had not before obſerved in any other part of the ſtreights. The ſeamen were now engaged in cutting wood till the 16th, when the veſſels ſailed with a favourable wind, and paſſed Point St. Anne, which covers Port Famine.

There are four bays proper for the anchoring of veſſels, between Cape Forward and Cape Round, and two of theſe bays are ſeparated by a cape of a moſt ſingular kind, which conſiſts of petrified ſhells, lying horizontally, and riſing more than fifty yards above the level of the ſea. M. Bougainville took ſoundings at the foot of this cape, but a line of an hundred fathom would not reach the bottom.

As the ſhips were now becalmed for two hours, the commodore took this opportunity of taking the ſoundings near, and the bearings of Cape Forward, which he mentions as the moſt ſouthern point of land on the continent, in the known world; and he fixes its latitude at fifty-four deg. five min. and forty-five ſeconds ſouth. Its ſurface conſiſts of two hills, ſomething more than two miles in extent, one of which is conſiderably higher than the other. The tops of theſe hills are covered with ſnow, which gradually melting, by the warmth of the ſun, ſupply with perpetual moiſture the roots of trees which are fixed in the crevices of the rocks.

Having returned to the ſhip, and the wind coming about favourable, M. Bougainville ſailed in ſearch of a harbour, which received the name of *French Bay*, where he reſolved to take in a quantity of wood and water, as a ſupply during their voyage acroſs the great South Sea. In conſequence of this reſolution all the boats were inſtantly hoiſted out, with a view to begin this neceſſary buſineſs the next morning. The night proving exceſſively ſtormy and tempeſtuous, it was paſſed in fears and apprehenſions which baffle all deſcription.

French Bay.

Early in the morning a boat was ſent out to ſound the mouth of a river which had been previouſly denominated *Gennes River*, from the name of a gentleman who was partaker in the dangers and hardſhips of this expedition. As it was low-water when the boat reached the ſhore, her crew could not land without running her a-ground on a ſand, and it was evident that the larger boats could only make the ſhore at high water, ſo that their wood and water could be brought on board only once a day. For theſe reaſons M. Bougainville determined to anchor in a ſmall bay about three miles diſtant, called after his own name, where he had taken in a loading of wood for Falkland's Iſlands in the year 1765.

Gennes River.

Bougainville Bay, to which they now ſailed, is ſurrounded by high mountains, which ſecure it from the winds blowing from every point of the compaſs, ſo that the ſurface of the water is unruffled by a ſingle breeze. Having caſt their anchors in this bay, and made faſt the veſſels by means of hawſers tied to ſome trees on the coaſt; they landed, and found two Indian huts conſtructed of the branches of trees, but they did not appear to have been lately inhabited. In the year 1765, M. Bougainville had cauſed a hut of bark to be erected on this ſpot, in which he left ſome trifles by way of preſent to ſuch of the natives as might happen to wander that way: on this hut he had put up a white flag, but both the flag and the preſents had been taken away, and the hut levelled with the ground. On the morning of the 18th of December, a kind of Camp was formed on ſhore, by way of guarding the effects which were landed, and protecting the men who were to be employed in taking in wood and water. Small ponds were now dug for the accommodation of thoſe deſtined to waſh the linen, and the water-caſks were ſent on ſhore to be repaired. The crew of the Eagle having cut down many more trees than were wanted for that veſſel, the labour of this taſk was ſaved to our preſent adventurers, who were likewiſe happy in finding roads ready made through the woods, for the convenience of bringing down the timber to the ſea-ſhore. At this place the remainder of the month was ſpent in the neceſſary employment above-mentioned, and in repairing the ſhips, particularly the Etoile, which had ſo large a leak in her ſtern, that moſt of the hands on board her were fatigued beyond expreſſion, by ſtanding at the pumps night and day alternately.

M. Verron, the aſtronomer, now landed on a little iſland which was denominated the *The Iſle of Obſervatory*, from its being a place admirably calculated for making aſtronomical obſervations; but his labours were fruitleſs, owing to the cloudineſs of the weather, which is almoſt perpetual in this country. At ſome periods, however, the ſun appeared free from clouds, and melted a part of the ſnow which had lodged on the mountains of the main land. Whenever this fine weather happened, the prince of Naſſau, attended by M. de Commerſon, a celebrated botaniſt, went in ſearch of plants and herbs, and they were very ſucceſsful in their reſearches: but the gentlemen who endeavoured to fiſh or to hunt for animals, were not ſo lucky, for they never caught any fiſh;—and a fox was only killed, ſo little ſucceſs had they in their ſearch after quadrupeds.

Iſle of Obſervatory.

The French commander intending to take a ſurvey of the coaſts of the main land, and of thoſe of Terra del Fuego, went in his boat on the 22d in the morning, having two gentlemen in company who intended to go with him as far as Cape Holland. At firſt, they had fair weather, but were afterwards overtaken by a hurricane, and obliged to run into the mouth of a ſmall river for ſhelter. They waited in hope that the tempeſt would abate; but in the mean while were benumbed with cold, and wet to the ſkin, and at length were forced to land and cut down ſome branches of trees for the purpoſe of conſtructing ſome huts in which they might lodge for the night, to defend them from the in-

clemency of the weather; but it continued to blow and rain violently, and was ſo cold, that the gentlemen found their ſituation untenable, and therefore they ſheltered themſelves in the beſt manner they could under the ſail of the boat, keeping up a large fire all night. They loſt no time in returning to the boat in the morning, which carried them to their ſhip in good time; as it ſeemed very probable that if they had ſtayed much longer, the weather growing more and more boiſtrous, would not have admitted of their return, and this on ſuch a coaſt, that their caſe muſt have been deſperate.* Nevertheleſs, when the tempeſt had ſubſided, M. Bougainville, with the true ſpirit of one bent upon diſcovery, reſolved to go upon a ſecond expedition. Early in the morning of the 29th, he embarked with the prince of Naſſau, and two others; the long-boat of the Boudeuſe, and the Etoile's barge having been equipped and provided with muſquets and ſwivel guns for that purpoſe. In about ſix hours they gained the coaſt of Terra del Fuego, and landing, ſat down to a repaſt in a place where the natives had left a number of huts ſtanding. They afterwards coaſted the country for a conſiderable time, and then croſſed an inlet, which M. Bougainville, for many reaſons, ſuppoſed to be a ſtreight leading to the ſea, at no great diſtance from Cape Horne. Having almoſt reached the oppoſite ſide of the inlet, the French diſcovered ſeveral of the inhabitants on the point of a bay, whither the adventurers ſteered, and the commander recollected that the people he then ſaw, were the ſame who he had remembered in the courſe of his former voyage. They generally made uſe of the word *Pecherais* in the ſame manner as thoſe already deſcribed had done of *Shawa*, and thence they had obtained their name, beſtowed (as moſt appellations of new-diſcovered people and places are in a whimſical manner) by the French.

Pecherais.

Theſe Indians were ſeen aſſembled to about the number of forty of both ſexes, and ſeveral of their canos were obſerved in a creek adjacent. The evening however advancing, M. Bougainville could not ſtay long with the Pecherais; but left them with a view to reach an inlet where he intended to ſpend the night. Failing however of accompliſhing this purpoſe, for want of time, he landed on the bank of a river, and ordered tents to be ſupplied by the ſails, and making a large fire, the party were better accommodated than they had been the foregoing night. The inlet abovementioned was found to form an excellent harbour, and on that account received the name of *Beaubaſſin*† from the adventurers.

Beaubaſſin.

M. Bounard was left here to take an account of every thing that might be thought worth notice, with orders to return after he had made the ſurvey in the long-boat to the ſhips. But the commander himſelf, with part of the company, embarking in the barge, rowed to the weſtward and diſcovered an iſland, on the coaſt of which they ſaw ſeveral of the natives catching fiſh. They arrived at a bay before evening, to which they gave the name of *de la Cormorandiere*, from a rock that lay about a mile diſtant from it.

Cormorandiere Bay.

They left this bay on the 29th early in the morning, and paſſed between two iſlands, which M. Bougainville called *The Two Siſters*, which are about nine miles from Cape Forward, ſo often mentioned in our voyages. They ſoon after ſaw a mountain, whoſe figure was like that of a cane, which they denominated *The Sugar-loaf*, and in the courſe of this day, they came to a convenient bay and port, into which there fell a remarkable caſcade; which were therefore diſtinguiſhed by the appellation of *The Bay and Port of the Caſcade*. They found good anchorage there, and it is deſcribed as a place very proper for wooding and watering veſſels. The water-fall is formed by the ſtream of a ſmall river, that meanders between a number of lofty hills; and it deſcends from the ſide of a rock above forty yards perpendicular. The French commander went to the top of the caſcade, and from thence took a view of the adjacent country. He ſays that there are ſmall plains, in ſome parts of which produce a ſort of ſpungy moſs, but in others the ground is covered with thickets. As to the trees and plants they appeared to be the ſame as thoſe of the Patagonian coaſts; and the country in general has much the appearance of Falkland's Iſlands. He deſcribes all that part of Terra del Fuego, from the ſpot where he then was, to that which lay oppoſite Elizabeth Iſland, in general covered with ſnow. No traces of inhabitants were found here, the reaſon of which was ſuppoſed to be the natives being no where able to obtain the neceſſaries of life, except upon the ſea-coaſts. 1768

Two Siſters. Sugar-loaf Mountain.

The Bay and Port of the Caſcade.

The French remained at Port Caſcade during the night of the 29th, which was rendered highly diſagreeable by inceſſant rain, and intenſe cold; and on the morning of the following day they croſſed the ſtreight with a boiſterous wind, and a rough ſea, which made the navigation dangerous to ſmall veſſels. The rain kept pouring down almoſt the whole of this day, which was employed in viewing the coaſt, and making ſuch remarks as may be uſeful to future navigators. Our voyagers had now a very narrow eſcape with their lives, the boat having been nearly overſet in croſſing a bay, owing to a miſtake of the ſteerſman in the management of the helm; at length, however, they got ſafe on board the Boudeuſe, and as the commanding officer, during M. Bougainville's abſence, had ſhipped every thing that was neceſſary, preparations were immediately made for ſailing. They departed from Bougainville Bay in the afternoon of the 31ſt of December, 1767, and in the evening came to an anchor in the road of Port Gallant, which is ſituated at the bottom of Forteſcue Bay, were detained no leſs than three weeks by ſuch bad weather, as the inhabitants of theſe milder climes cannot form an adequate idea of. On the firſt of January, 1768, M. Bougainville diſpatched a party in a boat, to make remarks on the coaſt, as far as Elizabeth Bay, and to take a view of the numerous iſlands, with which this part of the ſtreights of Maghellan abounds. Two of theſe iſlands, to which Sir John Narborough formerly gave the name of Charles and Monmouth, were diſtinctly ſeen from the place where the ſhips lay at anchor; but thoſe which he had denominated the Royal Iſles, and Rupert Iſland, were at too great a diſtance to be viewed from M. Bougainville's preſent ſtation. Notwithſtanding the ſeverity of the weather, and the almoſt inceſſant rains, the crew which had been ſent out, landed on different places, at one of which it was evident that ſome Engliſh ſhips had lately touched; for on ſeveral trees they ſaw initial letters, and even whole names cut in the wood; they alſo ſaw many ſpice laurel trees, the bark of which had been lately taken off, with other plain indications who they were that had viſited the ſpot, but what put the matter beyond all doubt, were the words "Chatham, March, 1766," which were very legible on a piece of wood, of that kind which is frequently affixed to pieces of cloth in the royal marine warehouſes of Great Britain. The aſtronomer, M. Verron, in the mean time had his aſtronomical inſtruments conveyed to a peninſula, by which the harbour is formed, in order to make obſervations for aſcertaining the bearing and diſtances of particular capes; but the reſult of his obſervations would afford neither inſtruction nor entertainment to our readers.

The weather was ſo exquiſitely ſevere on the 4th and 5th of January, that no pen can deſcribe it, nor any imagination conceive an idea of it. A violent ſtorm of wind was attended with inceſſant rain or ſnow, and the keeneſt biting coldneſs in the air. M. Bougainville informs us that during this ſevere weather he ſent out a boat to ſearch for a convenient anchoring place on the coaſt of Terra del Fuego, and an excellent one was found to ſouth-weſt of Charles and

* The ſnow was almoſt continual, though it was Midſummer, and the day in theſe parts was then eighteen hours long.

† Beautiful Bay.

1768 and Monmouth Iſlands. On the 6th the weather was more moderate than it had been for ſome days paſt. In the morning of this day four ſmall boats, with Indians on board them, were obſerved at the point of Cape Gallant, one of which advanced towards M. Bougainville's ſhip, while the reſt rowed towards the bottom of the bay. In the boat which approached the Boudeuſe, were a man, his wife and two children, the former of whom went on board, without the leaſt apparent ſign of fear, leaving the woman and children in the boat. Soon after this man had gone on board two Indians from the other boats followed his example, bringing their children with them. Theſe people ſeemed not to expreſs the leaſt ſurpriſe either at the ſtructure of the ſhip, or at any thing they ſaw on board her.

The commodore prevailed on them to dance and ſing, and alſo treated them with a kind of concert of muſic. He likewiſe gave them bread, and different kinds of meat, all of which they devoured with avidity, ſeeming equally pleaſed with every thing that was given them, and with every occurrence that paſſed; nor could they be perſuaded to quit the ſhip till ſeveral pieces of ſalt meat had been put into the boats. He ſays they are clothed with ſeal ſkins, which are by far too ſmall to cover the whole of the body; and with theſe ſkins they make the ſails of their boats and the covering of their huts. They are likewiſe poſſeſſed of a few of the ſkins of the guanacoe, but our author does not mention to what uſe they apply them; tho' it ſhould ſeem probable that they form a part of their clothing. M. Bougainville deſcribes theſe Indians as thin, ſhort, and ugly; and that a moſt offenſive ſmell is the conſequence of keeping them company. The women are ſtill more diſagreeable than the men, who do not appear by any means fond of them. It is the duty of the females to ſteer the boats, and to repair any damage that may happen to them; and they are often obliged to ſwim after them through the ſea-weeds; nor are even women who have ſucking children excuſed this duty; but the child is carried on the mother's back, encloſed in the ſeal-ſkin that forms her dreſs. When the women are on ſhore, their buſineſs is to collect ſhells and wood; nor do the men even ſhare with them in this employment.

The boats are conſtructed of the bark of trees, faſtened together with ruſhes, and the ſeams are caulked with moſs. A fire is conſtantly kept in the middle of the boat, on a heap of ſand, which is placed to prevent the turning of the veſſel. Their arms conſiſt of bows and arrows formed of the branches of the barberry-buſh, which grows plentifully in theſe parts. The arrows are pointed with ſharp ſtones, and the ſtring of the bow is made of the gut of ſome animal; but they uſe not theſe weapons againſt an enemy; they are deſigned only for the deſtruction of birds or other animals proper for the ſupport of life.

M. Bougainville ſays that theſe Indians uſe a kind of harpoon, for the purpoſe of ſtriking fiſh, which is made of bones, it is about twelve inches in length, pointed at the end, and indented on one of its ſides. The principal ſubſiſtance of thoſe people is fiſh; but it is ſuppoſed that they ſometimes catch game, as they have dogs of the ſporting kind, and ſprings or nooſes, adapted for the ſnaring of quadrupeds. The teeth of all the natives are very bad, which our author attributes to the eating of fiſh when boiling hot; though they do not half boil it before it is ſo eaten. They live in huts which have no partition of rooms, in the middle of which a fire is lighted, that ſerves the whole family. The diſpoſition of theſe people is of the amiable kind; but their extreme good nature borders on weakneſs; they believe in evil genii, and have prieſts and phyſicians, whom they ſuppoſe capable of deprecating the vengeance of theſe inviſible enemies. M. Bougainville obſerves, that the *Pecherais* have the feweſt conveniences of life of any people he has ever known, yet they do not repine, but appear to be contented with their ſimple ſituation; although they live in the moſt inclement climate hitherto diſcovered in that habitable part of the globe.——Beſides the other peculiarities of their fate, they are fewer in number than any other known race of men: yet this little ſociety, cut off as it is from all intercourſe with the reſt of mankind, is not totally free from the vices common to larger ſtates, as a conteſt for dominion exiſts even among them, and the more powerful are perpetually labouring to diſtreſs the weaker.

The inclemency of the weather, during the 7th and 8th of the month, was ſuch, that the crews of the ſhips could not venture on ſhore; and though it was even now the ſummer time, the adjacent country was covered with ſnow, which alſo lay on the ſhip to the depth of ſeveral inches. On the 9th the Indians who had previouſly painted their bodies with red and white ſtreaks, advanced towards the ſhips, but ſeeing the boats go off towards their habitations, all of them, except one followed the ſhips boats, and that went on board the Etoile, where ſhe remained but a little while, and then followed the others. The crews of the boats having landed, went to the huts of the Indians, who ſeemed by no means to reliſh this unexpected viſit, which was particularly evinced by the women having all retreated to one hut, the men invited the French ſailors into thoſe huts where the women were not to be found, and the Frenchmen having accepted the invitation, were treated with ſhell-fiſh, which the Indians ſucked before they delivered them to their viſitors. The behaviour of the natives was lively, and they entertained their gueſts with dancing and ſinging; they revelled with uncontrouled delight, when, their mirth was interrupted by an unexpected accident; a boy, who was the ſon of one of the Indians, was ſuddenly ſeized with a diſorder which occaſioned the moſt violent convulſions, and ſpitting of blood. This child had been on board the Etoile, where the ſeamen had preſented him with ſome pieces of glaſs, and as theſe Indians are accuſtomed to put things of this kind up their noſtrils, and into their throats, it was ſuppoſed this youth had taken the ſame meaſure, and that the fatal effects which followed were the conſequence of his having ſwallowed the glaſs. It is here proper to remark, that the *Pecherais* conſider the ſwallowing of ſubſtances which reſemble glaſs, as a preventive remedy againſt certain diſorders to which they are liable. The lips, palate, and gums of the boy where cut: and as he bled freely, the Indians conceived an idea that the Frenchmen had violated the rights of hoſpitality, and injured him, whom, by all the laws of honour, they were bound to treat with civility. This circumſtance gave riſe to a jealouſy and diſtruſt no way favourable to their European viſitors, whom they could not look on in a favourable light, while they thoguht they had cauſed the child's illneſs. A linen jacket having been given to this child by the French, he was ſtript of it, and it was thrown at their feet, but it was inſtantly ſeized by an Indian, who did not ſeem to dread the powers of inchantment. The child being laid on his back, a conjurer knelt between his legs, and preſſing the body forcibly with his hand and head, utterred a number of inarticulate vociferations. At repeated intervals, during this ceremony, he aroſe and opening his hands, which had been before graſped, he blew in the air with his mouth, as if deſirous of driving away ſome evil genius. While this buſineſs was tranſacting, an ancient woman bawled in the ears of the child ſo as to deafen him with her noiſe, and indeed the remedy ſeemed to be, in the literal phraſe, worſe than the diſeaſe. The conjurer having retired for ſome time, returned in a new dreſs, and, with an air of triumph, renewed his incantations, but with no better ſucceſs than before. His hair had been powdered, and his head was diſtinguiſhed by two wings ſimilar to thoſe with which Mercury is repreſented by the painters. The life of the child now appearing to be even in more danger than before, the French captain haſtily baptiſed him, unobſerved by the Indians. Some officers having repaired on board the ſhip and acquainted the commodore with what was tranſacting, he went on ſhore with the ſurgeon, who

took ſome gruel and milk with him; and when they came to the ſpot, they found that the juggler was aſſiſted by another perſon habited like himſelf, and that the patient had ſuffered much from their abſurd attempts to relieve him, yet were theſe attempts continued, without any complaint on the part of the poor boy. The affection of the parents, and indeed, of the whole company of Indians, was manifeſted by floods of tears, and by many other expreſſions of grief; and when it was obſerved, that the Frenchmen ſeemed to ſhare in their misfortune, they appeared to be leſs diffident of the conduct of the ſtrangers, and at length they permitted the ſurgeon to examine the mouth of the ſick youth, which being bloody, had been repeatedly ſucked by his father and another man. After ſome time the father accepted the gruel, and permitted his ſon to drink ſome milk, but not till the French gentleman had repeatedly taſted it in his preſence. The conjurers appeared to be jealous of the ſurgeon, but they could not help confeſſing the ſuperiority of his abilities. It was remarked, that while one of thoſe Indian phyſicians was endeavouring to drive away the diſorder, the other was buſily employed in deprecating that vengeance which they ſuppoſed the viſit of the ſtrangers had occaſioned. In the evening the child appeared to be in leſs pain; but, from many circumſtances, it was ſtill evident, he had ſwallowed ſome pieces of glaſs. M. Bougainville and the ſurgeon now went on board, and it is conjectured, that the boy died about two o'clock the next morning; for ſoon after that time loud cries were heard, and at day-break the Indians departed from a place which had been ſo peculiarly fatal to them; for the loſs of even one member of ſo ſmall a community, could not but be an object of great and public concern. On the 13th and 14th the weather was ſo bad that it was impoſſible to think of ſailing, and on the 15th the veſſels were detained by a ſtrong contrary wind; but on the following day they ſailed, with a favourable breeze, which, however, ſoon ſhifted, and prevented their reaching Ruport Iſland, off which it was M. Bougainville's intention to have anchored. After a whole day of fatigue and danger, they returned to Port Galant, and anchored again near their former ſtation.

On the 17th the ſtorms were more violent than they had ever yet been; the ſea ran to a mountainous height, and the wind blew in ſuch contrary directions, that the oppoſing waves deſtroyed each other. The ſtorm having in ſome degree ſubſided before noon, a loud peal of thunder was preſently heard, after which the winds blew with increaſing violence. The anchors of the ſhips having dragged, the top-maſts and lower yards were ſtruck, to avoid the dreadful conſequences of the ſtorm. At this time, however, the ſhrubs and plants were in bloom, and the trees were covered with a luxuriance of verdure.

On the 21ſt and the following days the weather was extremely windy, while it rained and ſnowed inceſſantly. The night of the 21ſt indeed was moderately calm; but this calm ſerved only as the prelude to a ſtorm, which deſcended with aggravated fury; ſuch a ſtorm as the oldeſt ſailor on board had never remembered, but its continuance was by no means proportioned to its violence. On the 24th the weather being fine and ſerene, preparations were made for ſailing, and on the following day the anchors were weighed, and the veſſels got under way. Having arrived at Cape Quod, the commodore thus deſcribes it: Its figure, he ſays, is very ſingular, conſiſting of craggy rocks, the moſt elevated of which bear a ſtrong reſemblance to the ruins of ancient building. From Bay Galant to this Cape, the verdant appearance of the trees takes off, in ſome degree, that horror which would otherwiſe ariſe in the mind from the conſtant ſight of the ſummits of mountains which are always frozen. After paſſing Cape Quod, the face of the country was totally changed, both ſides of the ſtreights exhibiting a proſpect of rocks, which are uncovered even with the ſlighteſt layer of earth. The tops of theſe rocks are cloathed with external ſnow, while the valleys between them are choaked up with prodigious quantities of ice, which have the appearance of having been congealed for a long ſeries of years. So dreadful is the appearance of this part of the ſtreight, that Sir John Narborough gave it the name of *Deſolation*; and in fact it is deſolate and dreary beyond all deſcription. 1767

When M. Bougainville's ſhip was oppoſite Cape Quod, the coaſt of Terra del Fuego, at the diſtance of forty miles appeared as is terminated by a projecting cape. There are three capes on the continent which our adventurers called *Etoile Cape*, *Boudeuſe Cape*, *Split Cape*, the laſt of which is ſo denominated from its figure. The ſtreight which in this part is about ſix miles wide, received the name of *Long Reach*. As the evening of 26th was very fine, M. Bougainville determined to continue his way under an eaſy ſail; about two hours before midnight a thick fog came on, the wind aroſe, and the rain poured down in torrents, while it became ſo exceſſive dark that no land could be ſeen. The ſituation of the ſhips was now ſuppoſed to be oppoſite Cape Monday, and the night was ſpent in ſtanding off and on ſhore, in momentary expectation of ſome fatal accident. The land being ſeen at day-break, they hoiſted additional ſails and proceeded with rapidity, till they reached Cape Pillar, when they had ſight of the main ocean, into which they arrived under a full ſail, on the evening of the ſame day; having by the advantage of thirty-ſix hours fair wind, ſailed from Port Galant into the great South Sea, without once coming to anchor. M. Bougainville was ſeven weeks and three days in paſſing the ſtreights of Maghellan, the whole length of which from Cape Virgin Mary to Cape Pillar, he computes at about 340 miles. Though the paſſing the ſtreights is a work of ſome difficulty and danger, our author recommends it as more ſafe than the doubling of Cape Horn, if undertaken between the months of September and April; but during the reſt of the year he adviſes the paſſing through the open ſea, and he obſerves that the loſt time in ſailing through the Maghellanic Streights is amply repaired by the conveniences of taking in wood and water, and the chance there is of the ſcurvy making leſs havock among a crew when they have repeated opportunities of landing. He adds, that when he left the ſtreights he had not a ſingle invalid on board eitheir of his veſſels.

Etoile Cape, Boudeuſe Cape, Split Cape, Long Reach.

The commodore now ſailed nearly a weſterly courſe, having previouſly agreed with the captain of the Etoile that he ſhould keep company with the Boudeuſe during the nights, and in the morning of each day ſhould ſail as far as he could to the ſouthward, without loſing ſight of the other veſſel, in order that the ſhips might command as extenſive a proſpect as poſſible by which means it was hoped that ſome new diſcoveries might be made.

On the 30th of January, while the ſea ran very high, one of the crew of the Boudeuſe fell overboard, and was drowned, notwithſtanding every endeavour to preſerve his life.—From this time till the 17th of February, M. Bougainville ſailed in ſearch of what is called Davis's Land, which was diſcovered by our countryman of that name, in 1686, and he ſays, that following the directions laid down in M. de Bellin's chart, he muſt have ſailed over this land.—On the 17th, ſea gulls were ſeen, and as theſe birds do not go above eighty leagues from land, it was reſolved not to alter the courſe of the ſhips for three days; but within this period no land was diſcovered. The weſterly wind, with a ſlight variation to the north and ſouth, prevailed from the 23d of February to the 3d of March, during which time they had rain and thunder every day, immediately before or ſoon after the ſun had reached the meridian. This variation of the wind, from what is commonly called the trade wind, is mentioned by M. Bougainville as an extraordinary circumſtance.—Soon after the ſhips had got clear of the ſtreights of Maghellan, an epidemical

1767 sore throat attacked almoſt every man on board, which was cured by putting vinegar and red hot bullets into the water-caſks, ſo that by the end of March, the crew were recovered. For ſeveral days after this period, ſuch a quantity of bonettas, and other fiſh was caught, as afforded one meal daily to every man on board. On the 21ſt a runny fiſh was taken, in the belly of which were a number of ſmall fiſh, ſuch kinds as are known not to ſwim far out to ſea, whence it was concluded, that land could not be at any great diſtance, and on the following day this conjecture appeared to be well founded, for four very ſmall iſlands were then diſcovered, to which M. Bougainville gave the name of *Les quatre Facardins*; but as theſe were too much to the windward of the ſhips, they held on their way, ſteering for another iſland, which was almoſt right a-head.

Les quatre Facardins.

As the veſſel advanced towards this latter iſland, it was obſerved, that it abounded with cocoa-nut trees, the fruit of which had a very tempting appearance. Theſe trees grew on plats of graſs, ſtrewed with an abundance of beautiful flowers; and the reſt of the iſland was cloathed with trees of various kinds. Immenſe numbers of birds were ſeen on the coaſt, which was therefore ſuppoſed to afford a plenty of fiſh, but the ſea running high, and no harbour being diſcovered, in which the voyagers might hope for protection from the fury of its waves, they were prevented from landing, when they had coaſted the iſland for about two miles, they had ſight of three men, who advanced haſtily towards the ſhore. M. Bougainville at firſt imagined that theſe people were part of the crew of ſome European ſhip, which had been wrecked on the coaſt, and impreſſed with this idea, he gave the neceſſary orders for affording them the wiſhed for relief: but he ſoon diſcovered that his conjecture was ill-founded, for the people retired to the woods, from whence, in a ſhort time, iſſued a number of them, ſuppoſed to be near twenty, with long ſtaves in their hands, which they held up with an air of threatening and defiance. This being done, they retreated to the woods, in which, by the help of glaſſes, their habitations were plainly ſeen. Theſe iſlanders were very tall, and of a copper complexion.* During the night between the 22d and 23d, they had much rain, accompanied with violent thunder, while the wind blew almoſt a tempeſt.——At the dawn of day land was diſcovered, which appeared to be a regular level, ſufficiently cloathed with verdure. Breakers being obſerved on the coaſt, the ſhips ſtood out to ſea, till the weather becoming more calm, they might approach the ſhore with greater ſafety, which happened before noon; they then coaſted the iſland, which is ſhaped like a horſe-ſhoe, and its inſide is filled by the ſea. Some parts of this iſland produce cocoa-nut and other trees, which afford a very agreeable ſhade, but the greater part of it is only a ſand, on which grows no kind of verdure.——Many Indians were obſerved in boats, ſome of them rowing, and others ſailing, on the lake, formed by the ſhape of the iſland. Theſe people were all naked, and in the evening, large numbers of them were ſeen on the ſhore, with pikes in their hands, like thoſe with which the inhabitants of the Iſle of Lance-bearers were armed.—Night advanced before any proper place was found for the ſhip's boats to land, nor were they more ſucceſsful in their reſearches in the morning, wherefore they held on their courſe, M. Bougainville having called the place *Harp Iſland*; the inhabitants of which had the appearance of being tall, and genteelly made. In the evening of the day on which Harp Iſland was diſcovered, they had ſight of other land, at the diſtance of ſomething more than twenty miles, which had the appearance of being, what it afterwards was found to be, a cluſter of iſlands, eleven of which was ſeen, and received the name of the *Dangerous Archipelago*. Our author conjectures, that they are more numerous, and obſerves, that it is dangerous ſailing among them, as they are ſurrounded with ſhoals and breakers, through which a veſſel ought to ſteer with peculiar care. The ſhips now ſtood to the ſouth, and by the 28th of the month, were out of ſight of all land.†

Harp Iſland.

Dangerous Archipelago.

Nothing material happened from this time till towards the end of March, when the weather was boiſterous and ſtormy to a very great degree, for ſeveral days ſucceſſively; and the ſcurvy now began to attack ſeveral of the crew. To combat the ill effects of this diſorder, every invalid received daily a pint of lemonade, in which was infuſed a powder that had been frequently uſed with ſucceſs during the voyage. About this time they were much in want of freſh water, which was procured by the diſtillation of ſea-water, according to a proceſs invented by M. Poiſſonier; and the water thus procured was uſed in boiling meat and making broth. The bread was kneaded with ſalt-water.—A ſteep mountain, which appeared to be encompaſſed by the ſea, was diſcovered on the ſecond of April, and received the name of the *Boudoir*, or *Boudeuſe Peak*, from that of M. Bougainville's ſhip. Bearing to the northward of this peak, they had ſight of land, which extended farther than the eye could reach. By this time it was become neceſſary for the ſhip to put in at ſome port, where they might obtain refreſhments, and take in a ſupply of wood. For the greater part of this day the weather was wholly calm;——in the evening a breeze ſprang up, which conveyed the ſhips near the newly diſcovered land; but it was thought prudent to ſtand off and on, for the night. In the morning they had ſight of more land to the northward, but were not able to diſtinguiſh whether it was another iſland, or a part of that which they had before ſeen. In the night between the 3d and 4th of the month, fires were obſerved on ſeveral places, from whence it was conjectured that the country abounded with inhabitants. Juſt before ſun-riſing on the 4th, it was diſcovered that the two lands, which had been ſuppoſed to be ſeparate iſlands, were connected with a flat country, bending like a bow, and forming a fine bay. While the ſhips were ſtanding in towards the land, a boat was ſeen coming from the offing, which ſoon after croſſed a-head of the ſhip, and joined a number of other boats, that had aſſembled from various parts of the iſland. This aſſemblage of boats was preceded by one which was rowed by twelve Indians, quite naked, who advanced towards the ſide of the ſhip, and held up the boughs of the banana-tree. Conſidering this as a token of friendſhip, the French in their turn, endeavoured to expreſs a reciprocal regard. This being done, the natives rowed alongſide the Boudeuſe, and a rope being lowered into the boat, one of them affixed to it a branch of the banana tree, a quantity of the fruit of that tree, and a ſmall pig. This preſent was accepted, and, in return for it, M. Bougainville gave them ſome handkerchiefs and caps; and thus a friendly intercourſe was eſtabliſhed with theſe people. In a ſhort time, upwards of a hundred boats ſurrounded the French ſhips: the former were laden with bananas, cocoa-nuts, and various other kinds of fruit, highly acceptable to the French, who gave them a number of toys, which proved equally acceptable to the Indians.—In order to carry on this traffic, the voyagers held up ſuch articles as they meant to give for the fruit, and when the natives were ſatisfied with the quantity which was offered

Boudeuſe Peak.

* The French voyager ſeems to think it a ſort of myſtery how this ſolitary iſland was firſt peopled; however, we find he had ſeen four others, about the inhabiting of which the ſame doubts might have ariſen, and ſome time afterwards he diſcovered a larger iſland, from whence the natives here ſpoken of might poſſibly have come.

† The cluſter of iſlands above-mentioned were firſt diſcovered by Quiros, in the year 1606, and again viſited by Roggewein, in the year 1722, who gave them the name of the Labyrinth.

fered, it was let down by the ſhip's ſide in a net or baſket, and the Indians having taken it out, returned their commodities by the ſame conveyance; but ſometimes the baſket was lowered when empty, and the natives put their effects into it before they had received the European goods, without ſeeming to harbour the leaſt diſtruſt or jealouſy of thoſe with whom they dealt, thereby giving the beſt proof of the integrity of their own hearts. When the evening advanced, the ſhips ſtood out farther from the coaſt, and the natives rowed back to the ſhore. During the night a number of fires were ſeen on the iſland, at ſmall and nearly equal diſtances from each other, which the French imagining to be illuminations in honour of themſelves, a number of ſky-rockets were fired from both the ſhips, to return the compliment. On the morning of the 5th, the boats were ſent in ſearch of an anchoring-place, while the day was ſpent in plying to the windward of the iſland. The deſcription which M. Bougainville gives of the appearance of this place, as ſeen from the ſhip, is very beautiful. "The mountains, though of great height, are every where cloathed with the fineſt verdure, even to the extreme points of their moſt lofty ſummits, one peak in particular, runs up to an enormous height, tapering gradually as it riſes; yet it was every where cloathed with the moſt beautiful foliage, forming the appearance of a pyramid, adorned with garlands, and well carved. The lower land conſiſts of an intermixture of woods and meadows, while the coaſt is a level ground, ſheltered by the mountains, and abounding in cocoa-nut and other trees, beneath the ſhade of which are ſituated the houſes of the inhabitants."——As M. Bougainville coaſted the iſland he was charmed with the appearance of a noble caſcade, which falling immediately from the ſummit of a mountain into the ſea, produced a moſt elegant effect. On the ſhore, very near to the fall of this caſcade, was a little town, and the coaſt appeared to be free from breakers. It was the wiſh of the adventurers to have caſt their anchor within view of ſuch an enchanting proſpect; but after repeated ſoundings, they found that the bottom conſiſted only of rocks; and they were therefore under a neceſſity of ſeeking another anchoring place. Soon after the dawn of the day, the natives rowed along-ſide the ſhips, and brought with them fowls, pigeons, ſhells, and other things which they bartered for earrings, and pieces of iron. Both parties dealt with the ſame eaſe and mutual confidence as they had done on the preceding day; and among the number of viſitors were ſeveral women, whoſe cloaths barely ſufficed to hide their charms, which could not fail of attracting the eyes of the ſeamen. One of the Indians ſlept all night on board the Etoile, and ſeemed not to entertain any fear. The ſhips plied to windward during the night, and by the morning of the 6th they had nearly reached its moſt northern extremity, when they diſcovered another iſle; but as the paſſage between the two iſlands appeared to be rendered dangerous by a number of breakers, M. Bougainville came to a reſolution of returning to the bay which they had ſeen when they firſt diſcovered land, where he hoped to find a convenient anchoring-place, and where after different ſoundings, the ſhips were at length ſafely moored. The natives now put off in their boats and ſurrounded the ſhips in greater numbers than they had yet done, exhibiting many tokens of regard, and perpetually crying out *Tayo*, which was afterwards found, (as we have obſerved) to ſignify Friend. The ſtrangers were much pleaſed with ſome nails and toys which the officers and ſailors gave them. Theſe boats were crowded with women, whoſe beauty of face was at leaſt equal to that of the ladies of Europe, and their ſymmetry of body much ſuperior. Almoſt all of them were naked, the old men and women having taken previous care to diveſt them of thoſe coverings which might otherwiſe have prevented their charms from taking the wiſhed-for effect.

Theſe lovely laſſes eyed the ſailors with looks the moſt emphatically expreſſive, yet with a degree of timidity, which is at once the characteriſtic and the ornament of the ſex. It was not however neceſſary that theſe females ſhould give any plain indications of their meaning: the Indian men ſaved them this trouble, intimating that the favours of the ladies might be purchaſed upon eaſy terms: they even urged each of the ſeamen reſpectively to make choice of a girl with whom he would chuſe to retire to the ſhore; and their geſtures appeared not leſs extravagant than thoſe of the ſame people as recited in the account of Captain Cook's voyage. M. Bougainville and his officers did all in their power to preſerve order and decorum, and to prevent any of theſe tempting creatures from coming into the ſhip; but their efforts were unſucceſsful:—one of them, notwithſtanding every precaution got on board, and took her ſeat on the quarter-deck, near the hatch-way, which was open to give air to ſome of the crew, while others were working at the capſtern. She had ſcarcely ſeated herſelf when ſhe let fall a cloth that covered her, with an air of negligence, and both ſeamen and marines now eagerly crowded to the hatch-way; and the capſtern was worked with great chearfulneſs and expedition. After ſome time the officers ſucceeded in bringing the crew into ſome kind of order, though as M. Bougainville confeſſes, they found it equally difficult to reſtrain the force of their own paſſions. The commodore's cook, having eluded the vigilance of the officers, got from the ſhip, and having ſelected a miſtreſs from one of the boats, went on ſhore with her; where he had no ſooner arrived than the natives crowded about him, and pulled off all his cloaths. They now examined with curious attention every part of his body, while he ſtood trembling under their hands, in continual apprehenſion of being murdered, or otherwiſe abuſed; but his fears were ill founded; for they had no ſooner finiſhed the examination than they gave him back his cloaths, put into his pockets ſeveral things which they had taken out of them, and then introduced his girl to him, urging him to gratify thoſe paſſions which had impelled him to come on ſhore; but his fears had deſtroyed all ideas of love, nor could even the beauty of his miſtreſs recal them: the natives were obliged to take him back to the ſhip, where he told M. Bougainville, that he had nothing to fear from his anger, for he had lately ſuffered ſuch exquiſite miſery, that all other puniſhment would be light in compariſon of it. The commander and ſome of his officers now went on ſhore to take a view of the watering-place, and were no ſooner landed than the natives flocked round them in prodigious numbers, regarding them with looks of inexpreſſible curioſity; ſome of them, bolder than the reſt, came and touched the French, and put aſide their cloaths, to find if they were formed like themſelves. The iſlanders, who wore no kind of arms, teſtified great pleaſure at this viſit of our voyagers. A perſon, who appeared to be the principal man among the Indians, took M. Bougainville's party to his houſe, where they found an old man, the father of the chief, and ſeveral women. Theſe laſt paid their compliments to the ſtrangers, by placing their hands on their breaſts, and frequently repeating the word *Tayo*. The old man was a venerable figure, whoſe long white beard and hair added dignity to his perſon, which was exceedingly graceful and well formed. He had none of the decrepitude of age, no wrinkles on his face, and his body was nervous and fleſhy. The behaviour of this man was wholly different from that of all the reſt of his countrymen; for he expreſſed no ſign of admiration or curioſity, and left the room without returning the compliments of his viſitors, and with an air that teſtified his uneaſineſs at their arrival. M. Bougainville even imagines, that he feared a new race of men were coming to ſettle on the iſland, and might diſturb that happy repoſe in which its inhabitants had hitherto lived. The houſe of the chief was about twenty feet in width, and eight in length, and covered with thatch, from which hung a cylinder, above a yard long, formed of the twigs of the ozier, and adorned with

1767

1767 with feathers. Two wooden figures were obſerved, which M. Bougainville thought were idols, and that one of them was the god of the natives. The figure which our author took for the god, was fixed upright againſt one of the pillars of the houſe, and over-againſt it ſtood the other, which he calls the goddeſs, leaning againſt and faſtened to the reeds which form the walls of the houſe. Theſe figures ſtood on pedeſtals of hard black wood, about two yards high, one yard in circumference, ſhaped like a tower hollowed out, and carved. The chief having deſired his gueſts to ſeat themſelves on a graſs-plat in the front of his houſe, he preſented them with a collation, conſiſting of broiled fiſh, water, and fruit. While they were regaling themſelves, he produced two collars, formed of ozier, and adorned with ſharks teeth, and black feathers. Theſe collars, which reſembled the prodigious large ruffs worn by the French in the reign of Francis the Firſt, were put on the necks of M. Bougainville, and a gentleman of his party. The chief having likewiſe preſented our author with ſome pieces of cloth, the French were about to take their leave of this hoſpitable Indian, when one of them found that his pocket had been picked of his piſtol; on which a complaint was made to the chief, who immediately reprimanded ſeveral of his houſhold, and would have ſearched them all, but this the commodore would not permit, contenting himſelf with intimating to the chief, that the weapon which had been ſtolen would kill the thief.—M. Bougainville was attended to the coaſt by the chief and his family. As the company paſſed along, they obſerved an Indian, remarkable for the fine proportion and ſymmetry of his figure, reclined at the foot of a tree, who prevailed on the French to ſit down by him, and ſung them an excellent ſong, to the ſlow muſic of a flute, which another blew with his noſe, in the manner already deſcribed. The company now proceeded to their boats, in which a few of the Indians embarked, and went to ſpend the evening and ſleep on board. The iſlanders ſeemed to be under no kind of reſtraint, but to have the fulleſt confidence in the hoſpitality of the French, who treated them in a very elegant manner, and concluded the evening with a band of muſic, and a diſplay of fire-works; at which, however, the Indians, ſeemed more terrified than delighted. The chief went on board M. Bougainvelle's ſhip the following day, and took with him a preſent of ſome fowls and a hog: he likewiſe gave a full proof of the integrity of his heart, by returning the ſtolen piſtol. The name of this chief was *Ereti*: he remained on board ſeveral hours, and then went on ſhore with M. Bougainville, who by this time had made the neceſſary preparations for landing the ſick, and filling the water caſks.

As ſoon as the boats crew had landed, the commodore fixed on a ſpot on the borders of a rivulet, where he gave orders for the forming of a camp, for the protection as well of the ſick men and their attendants, as the waterers and others, whoſe buſineſs might call them on ſhore. For ſome time Ereti beheld the marines under arms, and regarded the preparations which were making to form the camp, without any apparent uneaſineſs, and then took his leave. In a few hours, however, he returned, bringing with him his father and ſome others of the moſt eminent men on that part of the iſland, who remonſtrated with M. Bougainville on the impropriety and injuſtice of his taking poſſeſſion of their country, at the ſame time intimating that they were welcome to remain there during the day, for any period of time he might think proper, but inſiſting that the party ſhould return on board every night. The commodore, on the contrary, as peremptorily inſiſted that he would form the encampment, and endeavoured to convince the natives how neceſſary it was that he ſhould do ſo in order to procure wood and water, and to have the better opportunity of trafficking with the iſlanders.

The Indians now retired and held a conference on the occaſion, at the cloſe of which Ereti came to M. Bougainville, and deſired to know whether the French propoſed to take up their reſidence on the iſland for life, and if not, how long they intended to ſtay?—In anſwer to this, the commodore put eighteen ſmall ſtones into his hands, intimating, that he ſhould remain there only ſo many days. Hereupon a third council was held, the reſult of which was, that an elderly man, of great authority, was diſpatched to the commodore, and endeavoured to prevail on him to depart in nine days; which, however, he poſitively refuſed to do, and thus the matter ended.

After this the iſlanders became again eaſy and happy. Ereti complimented M. Bougainville with the uſe of a large building, that had been erected on the ſide of the rivulet, for the purpoſe of laying up the Indian boats, which were inſtantly removed at the command of the chief. Under this building tents were ſet up for the accommodation of the ſick, and other tents for various uſes. A ſufficient number of muſquets were carried on ſhore, to arm thirty mariners, all the workmen, and even the invalids, in caſe of neceſſity. M. Bougainville paſſed the firſt night on ſhore, in company with Ereti, who added his ſupper to that of the commodore's, invited a few ſelect friends to partake of the repaſt, and gave orders that a crowd of Indians, whoſe curioſity had brought them to the ſpot, ſhould be diſperſed. He then deſired to ſee ſome fire-works, which he beheld with a mixture of pleaſure and aſtoniſhment. Late in the evening he ſent for one of his wives, who ſlept in the tent allotted to the uſe of the prince of Naſſau. [M. Bougainville ſays that this woman was old and ugly.]

The camp was compleated on the following day, and the building intirely incloſed, except at one entrance, where a guard was conſtantly ſtationed. None of the Indians were admitted into this building but Ereti, and his friends of both ſexes. A crowd of people were conſtantly about the place, but they made way for any one who had permiſſion to enter, on the motion of a ſmall ſtick, which a Frenchman held in his hand. To this place the natives reſorted from all quarters, bringing poultry, hogs, fiſh, fruit, and cloth, in exchange for which they received buttons, beads, tools, nails, and trinkets of various kinds, on which they appeared to ſet a high value. Theſe benevolent iſlanders vied with each other which ſhould oblige their viſitors moſt; and when the French were obſerved collecting ſhells, and gathering plants, a number of women and children inſtantly employed themſelves in the ſame manner, bringing the ſame plants in great abundance, and variety of fine ſhells. M. Bougainville now applied to Ereti, for information where he might cut wood, and was directed to the mountains, where the hard wood grows, the low lands producing only a gum-tree, and fruit-trees of various kinds. The chief even marked the trees which were proper for cutting, and pointed out the ſide on which they ſhould be felled. The iſlanders aſſiſted them in cutting the wood, and carrying it down to the boats, and likewiſe helped them to fill water, and roll the caſks to the coaſts. For theſe ſervices they received a number of nails proportioned to the induſtry they had exerted, but it was neceſſary for the French to be conſtantly on their guard, to prevent their thieving the articles which were brought on ſhore, nor were even their pockets ſafe from the depredations of theſe people, who, as M. Bougainville ſays, are as ingenious in the art, as the pick-pockets of Europe. Yet he ſuppoſes that theſe iſlanders do not rob each other, as none of their effects were kept under locks and keys, and he attributes their attempts to rob Europeans to an inſatiable curioſity for articles which they had never before ſeen. Guards were ſtationed, and patroles appointed, to protect the French property, notwithſtanding which, the iſlanders found means to ſteal ſeveral things, and they even pelted the guards with ſtones. Theſe pillagers hid themſelves in a marſh behind the camp, which was over-grown with reeds; but a part of this marſh was cleared, by order of the com-

modore, who directed, that when any more thieves were ſeen, they ſhould be fired at, Ereti even hinted, that this meaſure was neceſſary, but, pointing to his own houſe, ſeemed very ſolicitous that M. Bougainville would not fire that way. Orders were now given for ſome of the ſhips boats to anchor before the camp, and point their ſeveral guns ſo as to protect it. The article of thieving excepted, every other intercourſe between the French and Indians was carried on in the moſt harmonious manner. The ſeamen made ſeveral incurſions into the iſland unarmed, ſometimes in ſmall parties, and ſometimes ſingly; when the natives invited them into their houſes, gave them proviſions, and preſented the young damſels to their embraces. On theſe occaſions the hut was inſtantly crowded with numbers of both ſexes, who ſurrounded the young lovers, and eyed them with looks of the moſt intenſe curioſity. Leaves and flowers were immediately ſtrewed on the ground, and while ſome played on flutes, others ſang a kind of ſong ſacred to the rites of love.—The people of Otaheite ſeemed aſtoniſhed at the embarraſſment of ſome of the Frenchmen on theſe occaſions; but M. Bougainville is of opinion, that there was not a man of the whole crew who had not got the better of his European delicacy, by making a public ſacrifice to Venus.

M. Bougainville now proceeds to a deſcription of the beauties of the interior parts of the iſland. He has often walked out, with only a few attendants, and arrived at places beautiful beyond the power of pen or pencil to paint. Trees abounding with fruit of the moſt delicious kinds, were frequently found on meadows interſected by rivulets, which gave an agreeable coolneſs to the air. On theſe enchanting ſpots numbers of the natives revel in the profuſe gifts of nature, unincumbered with the cares of the buſy world. Our author met with many little ſocieties, repoſing at their eaſe, under the ſhade of trees, who welcomed the ſtrangers in the moſt friendly manner. Thoſe he ſaw on his way made room for his paſſage with a degree of civility that would have done honour to the moſt poliſhed European; and in every place he found evident marks of the content and happineſs of the people; while he was treated with the utmoſt hoſpitality. M. Bougainville gave Ereti ſome ducks and geeſe, and a couple of turkies, that might raiſe a breed of thoſe birds. He likewiſe preſented him with ſome garden ſeeds, and adviſed him to cultivate ſome ground in the European manner; and a ſpot being fixed on by the French, it was incloſed, and ſeveral of the crew employed in digging it. The natives were much pleaſed with the implements of gardening, and happy in having wheat, barley, oats, rice, &c. put into the ground; as were likewiſe onions, and a variety of pot-herbs. The commodore is of opinion, that his generoſity in this particular will not be thrown away, as the people of Otaheite ſeem to have a taſte for agriculture; and he thinks they might ſoon be brought to cultivate, in a proper manner the fineſt ſoil in the world: they have indeed a ſort of kitchen gardens near their huts, which produce yams, potatoes, and other edible roots.

Soon after the camp was formed, the commodore was viſited on board the ſhip by Toutaa, [Tootahah] the chief of a diſtrict near that of Ereti, who was a very tall man, and moſt admirably well made; he was attended by ſeveral gentlemen, hardly one of whom was leſs than ſix feet in height. Toutaa brought with him cloth, hogs, fowls, and fruit, which he preſented to M. Bougainville, who complimented him with ſome ſilk ſtuffs, trinkets, nails, &c.

Toutaa invited M. Bougainville to his houſe, where in the midſt of a large aſſembly, he preſented him with a fine young girl, whom the commodore conjectures to have been one of his wives; and the muſicians inſtantly began the bridal hymn—the reader may gueſs the reſt.—One of the Indians happening to be killed, his countrymen complained to M. Bougainville of this violation of the rights of hoſpitality. The dead body being conveyed to one of the huts, ſome perſons were ſent to examine it, when it appeared that he fell by a gun-ſhot wound; on which all poſſible enquiry was made after the offender, but he could not be diſcovered; and how he came to be ſhot remained a myſtery; for M. Bougainville ſays, that none of the crew had that day left the ſhip with fire-arms, nor had any of thoſe on ſhore been permitted to leave the camp. It was evident, however, that the natives in general conceived their countryman to have been the aggreſſor; for their dealings with the Europeans were not intermitted; tho' ſome few of them moved off their furniture to the mountains, and even the houſe of Ereti was ſtripped; but a few preſents from the commodore regained his friendſhip and eſteem. Early in the morning of the 12th, the cable of the Boudeuſe parting, that ſhip ran foul of the Etoile, but the veſſels were happily got clear of each other, before any damage had been ſuſtained. A boat was now ſent to ſound for ſome convenient paſſage, as the ſhips were in evident danger of being driven on ſhore; and at this unfortunate juncture, news arrived that three of the Indians had been either murdered or wounded in their huts, and that in conſequence of this unhappy circumſtance a general terror had ſeized the inhabitants. The women, children, and old men, had fled up the country, taking their effects with them, and even carrying off the bodies of the deceaſed. The commodore, on receiving this intelligence, went on ſhore, and ſelecting four marines, on whom reſted the ſuſpicion of having perpetrated this foul deed, he ordered them to be put in irons in the preſence of Ereti, a circumſtance that conciliated the affection of the Indians. M. Bougainville, apprehenſive that the natives might revenge the injury they had ſuſtained in the perſons of their countrymen, ſpent a conſiderable part of the night in the camp, and gave orders for a reinforcement of the guards.——But the ſituation of the French was every way ſo advantageous, that in all probability, they might have been an over-match for the united forces of the natives. The night however was ſpent in perfect repoſe, except ſome ſlight alarms, occaſioned by thieving interlopers. 1768

The commodore's concern aroſe more from the apprehended loſs of his ſhips, than from any hoſtile efforts that might be made by the Indians. After ten at night, the wind blew violently; the ſea rolled to an enormous height; the rain deſcended in torrents, and the whole ſcene was tempeſtuous in a high degree. M. Bougainville went on board ſoon after midnight, when a violent ſquall of wind was driving the ſhips towards the ſhore. Happily the ſtorm was ſoon over, and a breeze from the ſhore prevented the veſſels being ſtranded. About day-break another cable, and the hawſer of the Boudeuſe parted, when ſhe was almoſt cloſe on the ſhore, on which the ſurges beat with unremitting fury. At this time too, as an aggravation of their misfortunes, the buoys of the anchors were miſſing; but it was doubtful whether the natives had ſtolen them, or whether they had ſunk.

Some little time before noon another cable parted, and the Boudeuſe drove towards the ſhore. They now let go their ſheet anchor, but it could be of no ſervice to them, as they were ſo near the breakers, that the ſhip muſt have ſtranded before a ſufficient length of cable could have been veered out, to have given the anchor time to reach the bottom. Thus ſituated, within a moment of deſpair, a breeze off ſhore operated in their favour; yet this wind ſoon changed, though not till it enabled them to get a diſtance from the ſhore, by the help of a hawſer from a ſtream-anchor of the Etoile, which ſhip happening to be anchored in firmer ground than the Boudeuſe, was, undoubtedly, the great means of ſaving that veſſel and her crew from deſtruction. On occaſion of this ſingular eſcape, M. Bougainville pays a grateful compliment to M. de la Giraudais, the commander of the Etoile, to whoſe friendſhip and abili-

1768 ties he deems himself greatly indebted for the preservation of the Boudeuse.

Soon after day-light, it was observed, that the camp was totally destitute of its usual visitors, not an Indian was to be seen near it, nor even a single boat sailing on the river. The natives had quitted their houses, and the whole country appeared to be depopulated. The prince of Nassau now went on shore, with a small party, and, at about three miles from the camp, found Ereti, with a considerable number of his subjects. When the chief recollected the prince, he advanced towards him with a mixed countenance expressive of hope and terror. Many women were now with Ereti, who dropping on their knees at the foot of the prince, kissed his hands, and bathed in tears, exclaimed, *Taye mati*, You are our friends, and you kill us.—The prince succeeded in his endeavours to inspire them with fresh confidence; and M. Bougainville had the pleasure of observing from on board, by the help of his glasses, that the natives hastened to the camp, carrying with them fowls, fruits, &c. so that there could be no doubt but that peace was re-established. The commodore instantly left the ship, and taking with him a quantity of silk, stuffs, and a variety of other articles, he presented them to the principal persons, intimating how unhappy he was on account of the misfortune which had happened, and assuring them that the perpetrators of so foul a deed should not escape unpunished. The Indians caressed the commander; the natives in general were happy that peace was restored, and the market soon became more crowded than ever; so that in two days only, more refreshments were brought in than had been before, and the whole place had the appearance of a fair. The Indians having requested to see some musquets fired; were not a little alarmed when they found that the animals fired at were instantly killed. The boat which the commodore had sent to sound, having found an excellent passage to the northward, the Etoile sailed on the 14th, and being got safe without the reef, her commander sent the boat to the Boudeuse, in which was an officer, who having surveyed the passage, and conducted the Etoile to a place of safety, returned to take the same care of M. Bougainville's ship. The crew of the Boudeuse now laboured incessantly in compleating her stock of water and in bringing her effects on board. The commodore took possession of the island, for his sovereign, by an inscription carved on an oak plank, and burying in a bottle, near the building they had occupied, a writing, containing the names of the several officers concerned in this expedition; and this method he followed invariably, at all the places he discovered in the course of his voyage. The Boudeuse set sail early in the morning of the 15th, and the commodore congratulated himself on having got clear of the reefs, when the wind suddenly dying away, the tide, and a swelling sea drove the ship violently towards the rocks, on which she must have been instantly dashed in pieces, and every man on board have perished, except the few who could swim remarkably well. But at the moment when she was ready to strike, a western breeze sprang up, which in about two hours, conveyed the voyagers clear of all those dangers they had dreaded. M. Bougainville joined the Etoile before the evening, and a strong gale springing up about midnight, they set all their sails and soon got perfectly clear of the coast. What happened at his taking leave of the people of Otaheite is related as follows. ——Soon after the dawn of day, when the Indians observed that their visitors were making preparations for their departure, Ereti came hastily on board, in the first boat that was ready. He now clasped in his arms, embraced, and wept over these new-made acquaintances, whom he was about to part with for ever. This scene was scarcely ended, when a larger boat in which were the wives of the generous chief, came along side the ship, laden with a variety of refreshments. This vessel likewise brought off the Indian who, on their first arrival, had slept on board the Etoile. This man was called *Aotourou*. Ereti presented him to M. Bougainville, intimating his determined resolution to sail with the strangers, and intreating permission that he might do so. His request being complied with, Ereti presented him to the officers respectively, saying, That he intrusted a well-beloved friend to the care and protection of friends equally beloved. Ereti having accepted some presents returned to the boat, in which were a number of weeping beauties, made still more lovely by their tears. With him went Aotourou, to take a melancholy leave of a lovely girl. He took three pearls from his ears, which he delivered as a love-token to the desponding beauty; embraced her affectionately, tore himself from her arms, and left it to time and tears to restore her serenity of mind. The following is M. Bougainville's description of the island.—"There is a fine bay about ten miles in depth, between a cape which advances to the north and the south-east point of the island. Towards the bottom of this bay the coast is almost level, and this part appears to be the first peopled, as well as the most agreeable part of the country. In a passage between the two most northerly islands, there is good anchorage for thirty vessels. The rest of the coast is mountainous land, and in most places is incompassed by reefs of rocks, some of which are almost covered by the sea, while others are left sufficiently destitute of water to be considered as islands. On these the natives kindle fires every night, that the crews of their boats may fish in safety. Between these rocks are spaces through which a ship may enter, but she will find it difficult to get anchorage. The mountains at a distance from the coast are much higher than it is usual for hills to be in countries of no greater extent. These, being covered with verdure and fruits of various, beautiful, and delicious kinds, afford the richest prospect that the imagination can form an idea of. Springs issuing from the mountains form themselves into rivulets, which meandring thro' the country, serve at once to fertilise and adorn it. On the level parts of the island the houses are erected, under the shade of fruit trees; not in regular towns and villages, but separately, and where the fancy of the owner shall fix the spot. Public walks, kept in the neatest order, lead from one residence to another throughout the island, so that the whole appears one scene of inchanted ground. The principal fruits of the island are plaintains, cocoa-nuts, yams, curassol okras, and the bread-fruit. Indico and sugar-canes grow wild; and two substances proper for dying, one red and the other yellow, were found among the natives; but the French could not learn from what vegetable they were produced.

"While Aotourou was on board the Boudeuse it appeared, that he was acquainted with many of the plants and fruits in the possession of the French, which he called by their Indian names. Indeed, the same productions are common to most countries within the tropics. The natives use the cedar-wood, which grows on the mountains, for the construction of the largest boats, and they make a sort of pikes of a very heavy black wood. Their smaller boats are made of the wood of the bread-fruit tree, which is extremely soft, and full of gum. The island of Otaheite produces very rich pearls, which are worn by the women and children, but they were secreted almost as soon as the French landed, and were seen no more during their stay. A sort of castanets, instruments used by the Indian dancers, are formed out of the shells of the pearl-oysters.

"M. Bougainville obtained by his traffic with the natives, about 140 hogs, and more than 800 fowls; and he might have procured much larger numbers, if his stay had been longer. No venomous animals were seen on this island, nor any of those noxious insects, which are common to, and the greatest curse of, hot climates. There can remain no doubt of the salubrity of the air of Otaheite; for though the French laboured hard all day in the heat of the sun, were frequently in the water, and slept all night in the

open

open air, on the bare ground, not a ſingle perſon contracted any diſorder, while thoſe who landed for the cure of the ſcurvy recovered very faſt, and many of them acquired ſo much ſtrength, that their cure was perfected on board the ſhips. And what affords an undoubted proof of the healthineſs of the climate, is the ſtrength of its inhabitants, who grow to an extreme old age, without feeling any of its inconveniences, though they ſleep only on a few leaves ſtrewed on the ground, in huts ill adapted to defend themſelves from the inclemencies of the weather. The chief articles of food are fiſh and vegetable, fleſh is ſeldom eaten even by grown perſons, and by the young women and children never. Their drink is pure water; and from this temperance doubtleſs ariſes, in a great meaſure, that freedom from diſeaſe, which is one of their greateſt bleſſings. Theſe people were averſe to the taſte and ſmell of every thing ſtrong, particularly of tobacco, ſpices, brandy and wine. The natives of Otaheite are of two diſtinct tribes, having hardly any perſonal reſemblance, yet practiſing the ſame cuſtoms, aſſociating together in the moſt friendly manner, and converſing in the ſame dialect." [The firſt race of theſe people are much taller, larger, and better proportioned than the other. Few of theſe are leſs than ſix feet high, and ſo extremely well made, that, as our author ſays, 'in order to paint a 'Hercules or a Mars, one could no where find ſuch 'beautiful models.'] Their features are perfectly like thoſe of the inhabitants of Europe, their hair is black, and their ſkins rather brown, but this is attributed to their being ſo much expoſed to the ſun and air.

"The other Indians are about the middle ſtature, have almoſt the features and complexion of Malattos, and rough, curled hair, as ſtrong as the briſtles of a hog. Aotourou was of this tribe, and the ſon of one of the chiefs of the iſland. *

"Both the tribes ſhave the upper part of the face, permitting the beard on the chin to grow, and a whiſker on each lip; ſome of them bind the hair on the top of the head, while others cut it ſhort, but all of them rub the oil of the cocoa-nut into the hair and beard. They permit all their nails to grow a great length, except that of the middle-finger of the right-hand. Among theſe people one cripple only was ſeen, and it was ſuppoſed that he got his hurt by a fall.†" There are ſome other particulars mentioned by the French author which are ſo exactly alike with the accounts of the Captains Wallis and Cook, that we have purpoſely omitted them.

"The people of Otaheite ſtain the lower parts of their backs, and their thighs, with a deep blue, the method of doing which having been already mentioned in our account of Captain Cooks's voyage, need not be here repeated. M. Bougainville mentions it as a ſingular circumſtance, that the practice of painting the body has always prevailed among the people of all countries, at the time when they bordered on a ſtate of nature, it is, indeed, a well known fact, that the ancient Britons were found ſtained with wood, when Julius Cæſar made his firſt deſcent on this iſland. Our author repreſents theſe iſlanders as good natured and benevolent in a high degree. He ſays, that, though the ſeveral diſtricts are governed each by its own chief, public war, or private animoſity ſeemed to be equally unknown on the iſland. The natives ſeem not to entertain even the ſlighteſt doubt of the integrity of each other, and appear to enjoy, in common, whatever is neceſſary to the ſupport of life. Their houſes are always open night and day, and whoever enters may freely eat of whatever he finds. In like manner they gather fruit from every tree, and all the level country being a kind of continued orchard, ſeems to be but one common property. Yet were theſe people, with ſuch exalted ideas of general benevolence, moſt dextrous in ſtealing the property of the French. The chiefs, however, did not encourage their inferiors in theſe depredations, on the contrary, they requeſted the officers to kill thoſe who ſhould be detected in an act of theft, but they would never take this diſagreeable taſk on themſelves. When a thief was pointed out to Ereti, he would run after till he had overtaken him, and then compelling him to reſtore the ſtolen goods, he puniſhed the offence by a number of ſtripes.—Although the inhabitants of Otaheite maintain perpetual peace among themſelves, yet it ſeldom happens, but that they are engaged in war with the natives of the adjacent iſlands.—

1768

"They have large veſſels, called Periaguas, in which they deſcend on the enemies country, and even engage in ſea-fights. A pike and a bow with a ſling are all their arms. If Aotourou's information is to be depended on, the conſequence of their battles are very fatal to the vanquiſhed. The men and boys, who are made priſoners, are ſtripped of their ſkins, and the beards of the men are taken off, and carried away in triumph, as enſigns of the victory. The conquerors take with them the women and girls, with whom they frequently cohabit. Aotourou declared himſelf the ſon of one of theſe alliances, his mother being a native of *Opiri*, an iſland not far diſtant from Otaheite, with the inhabitants of which they are frequently at war. M. Bougainville aſcribes the difference between theſe two races of people, to this intercourſe with the captive women of the adjacent iſlands. The principal people on the iſland have a number of ſervants, who ſubmit to their orders with the moſt unreſerved obedience; and, in each diſtrict, the will of the chief is a law, from the authority of which there is no appeal; but the chief himſelf does not come to any reſolution reſpecting matters of great importance, till he has previouſly conſulted with the principal inhabitants."

M. Bougainville ſays, that when the moon exhibits a certain aſpect, which bears the name of *Malama Tamai*, [the moon in a ſtate of war] the natives offer up human ſacrifices. He alſo mentions one circumſtance, as a proof that theſe people originated on the continent, from whence their anceſtors muſt have emigrated. When any one ſneezes his companions cry out, *Evaroua-t-eatoua*, that is, may the good genius awaken thee; or, may not the evil genius lull thee aſleep.

The principal people on the iſland appear to have many wives; and our author ſays polygamy is common among them all, as the rich are chiefly diſtinguiſhed from the poor by keeping a greater number of the fair ſex; for univerſal love is the characteriſtic of the inhabitants of Otaheite. Both the parents ſeem equally fond of nurſing their infants. The men employ themſelves principally in war, fiſhing and agriculture, while the women have little to do, but to render themſelves agreeable by their aſſiduity to pleaſe; they ſubmit implicitly to the will of the men, and the woman who ſhould proſtitute herſelf without the permiſſion of her huſband, would atone for her infidelity with her life. But that liberty to gratify her paſſions, in what way ſhe pleaſes, is ſo eaſily obtained, that theſe fair ones are not under the leaſt temptation, to diſobedience; in fact, the wife generally yields her perſon at the ſolicitation of her huſband.

The commodore having engaged Aotourou to come on

* Our author ſays that this Indian's want of perſonal beauty was amply recompenſed by the goodneſs of his underſtanding; but this aſſertion has been flatly contradicted by the teſtimony of ſeveral Engliſh gentlemen, who ſaw Aotourou, during his reſidence at Paris, and who repreſented him as one of the moſt ignorant blockheads they ever knew.

† The ſurgeon informed M. Bougainville, that many of the natives were marked with the ſmall-pox; and he ſays, he took every precaution that the venereal diſeaſe ſhould not be communicated to theſe unhappy, unoffending people, but it appears from Captain Cook's account, that ſome of the Frenchmen were baſe enough to plant this dreadful malady in a country where, from Bougainville's own account, it is more likely to ſpread than any other part of the world, on account of the extreme attachment of the inhabitants to the act of venery.

1768 on board, was at great expence to bring him to Paris, and to render his residence easy, improving, and entertaining. M. Bougainville informs us, that a gentleman of Paris, distinguished by his skill in teaching the art of speech to persons born deaf and dumb, repeatedly examined Aotourou, and found that he could not naturally pronounce any of the French nasal vowels, and but very few of the consonants.

Aotourou informed the commodore, that an English ship had arrived at Otaheite about eight months before the French touched at that island. This (says our author) was the vessel commanded by Captain Wallace; and he ascribes the knowledge of iron, which was observed among the natives, to this visit of the English, especially as they call it *Aouri*, which he says is not unlike our word *iron*. On the morning of the 16th of April, 1768, M. Bougainville discovered what he thought to be three other islands; but it was afterwards found to be only one, the high lands, of which had, at a distance, given it the appearance of separate islands. At a considerable distance from this island they saw another, which Aotourou told them was called *Oumaitia*; that the natives of it were in alliance with the people of Otaheite; that there was a girl on the island to whom he had a strong attachment; and that if the commodore would touch there, he would meet with the same kind of necessaries, and the same hospitable treatment as he had experienced among his countrymen.

The commander, however, deaf to all these persuasive arguments, held on his way, and lost sight of the island the same day. The succeeding night proved remarkably fair, and the stars appearing with unclouded lustre, Aotourou pointed out a constellation in the shoulder of Orion, and expressed a wish that the ship's course might be directed by it, in consequence of which they would, in two days time, arrive at a fine island where he had a numerous acquaintance, and it was conjectured from his hints, that he had also a child there. As M. Bouganville persisted in his resolution not to alter the ship's course, Aotourou became very uneasy, and endeavoured to persuade him to steer for the desired port, by assuring him that the island abounded in hogs, fowls, fruits, and what he seemed to think would be the most prevailing argument, fine women, who were abundantly liberal of their favours. Being angry that his reasons did not operate with the commodore, he ran to the steerage, and seizing the wheel of the helm tried to steer for his favourite isle, nor was it without great difficulty on the part of the helm's-man, and equal vexation on the part of the poor Indian, that he was prevented from carrying his design into execution.

Early on the following morning, he climbed to the mast-head, where he remained several hours, anxiously looking out for the spot which had so much attracted his regard. On the preceding night he pointed out a great number of stars, and informed M. Bougainville of their names in the language of Otaheite; and it was afterwards certainly known, that this islander was not unacquainted with the phases of the moon, and that he was learned in those prognosticks which evince an approaching change in the weather. It likewise appeared that his countrymen were not uninformed in this kind of knowledge, so useful to people whose wants or curiosity frequently carry them to sea, where they have no compass to direct their course, except their own judgment and the sight of the cœlestial constellations; and M. Bougainville says that the natives of Otaheite are fully convinced that the sun and moon are peopled.

The weather continued fine till the end of April, at which time the principal pilot on board the Boudeuse, died of an apoplectic fit. In the beginning of the month of May, three islands were discovered at the distance of ten or twelve leagues to the north-west; but these were unknown to Aotourou, who imagined that it was M. Bougainville's country. The moon shone bright in the night, during which they kept sight of islands, and in the morning steered for the largest, the eastern shore of which they coasted, and found it about nine miles in length. The coasts of this island are remarkably steep, and, indeed, the whole of it is little else than an enormous hill cloathed with trees. Several fires were seen on shore, and a small number of houses covered with reeds, under the shade of cocoa-nut-trees, and more than twenty of the natives running hastily along the coast. The two smaller islands were each about a mile and a half in length, and separated from the larger one by an arm of the sea. In shape and appearance they were very like the former.

The commodore had given directions to steer between the islands, when a boat with five Indians in her was observed coming off towards the ship; she advanced very near, and though every sign of friendly invitation was made, not one of the natives would venture on board. They had no kind of cloathing but a bandage round the waist, and as they could not be prevailed on to come up the ship's side, Aotourou stripped himself, leaving on nothing more than what they wore, and addressed them in the language of Otaheite; but they understood not a word of what he said. As they held up some cocoa-nuts and other vegetables, and seemed to wish to barter them for some trinkets which were shewn them, M. Bougainville ordered out one of the ship's boats, with a view to visit the strangers; but they no sooner learned his intention, than they rowed off with all possible expedition, and he did not think proper to follow them. In a little time many boats advanced towards the ships, some of them rowing and others sailing. These, less diffident than the former, came close under the ship's side, but none of the islanders would venture on board. They exchanged pieces of an exquisitely fine shell, yams, cocoa-nuts, and a water-hen of most beautiful plumage, for small pieces of red stuff; but they did not seem fond of ear-rings, knives, nails, nor iron of any kind; which had been so eagerly coveted by the inhabitants of Otaheite. One of these Indians brought a cock with him, but he would not part with it upon any terms. They had also some pieces of cloth of the same kind as that manufactured at Otaheite; but not of so fine a fabrick, and died black, brown, and red, but none of the colours were good of their kinds. They were likewise possessed of a kind of wood hardened by fire, lances, mats, and fish-hooks made of bones. M. Bougainville conjectures from the features of those islanders, that they are not of so amiable a disposition as the natives of Otaheite; and he represents them as such dextrous thieves, that it was almost impossible to guard against their depredations. These people are of the middle size, and exceedingly alert; they are of a deep brown complexion, but one was seen among them who was much fairer than any of the others; they had no beards, so it was supposed they were plucked up by the roots, and their hair, which was universally black, stood almost erect on their heads; their hands and breasts were painted with deep blue.

Their boats are built in a most ingenious taste, and are furnished with out-riggers. The head and stern of the vessel are equally flat with its sides, and over each is a small deck. In the centre is a row of wooden pegs, the tops of which are inclosed in a shell of the purest white; the sail is formed of matting, and its shape triangular, being extended by means of sticks. In these boats the islanders followed the French vessels a considerable distance out to sea, while several others from the smaller islands, joined the naval procession, and produced an effect that was highly agreeable. In one of these last-mentioned boats was an old woman remarkably distinguished by the ugliness of her features. As the weather now fell calm, the commodore gave up, from an apprehension of danger, his project of sailing between the islands, though the breadth of the channel was more than four miles. They now therefore sailed in the open sea, and on the evening of the same day, the man at the mast-head had sight of other land, even while they were yet in

view, by the aid of a bright moon, of the islands they had lately left.

On the morning of the 5th, it appeared that the newly discovered land was a beautiful island consisting of alternate mountains and vallies, clothed with the richest verdure, and finely shadowed by the spreading branches of the cocoa-nut, and a variety of other trees. Near the westermost point of this island is a ledge of rocks, and the sea breaks with violence on many parts of the coasts, so that it would be difficult to land, except in very few places. Many boats put off from the island, and sailed round the ships, though they were then going at the rate of at least seven knots an hour. These boats, however, one only excepted, would not venture near the ships; but that one went along-side, and her crew made signs for the French to land, which they would have done, but the breakers rendered it impossible. At this time the man at the mast-head observed a number of the Indians boats sailing to the southward. On the following day another island was seen to the westward of the ships course, in the neighbourhood of which were two smaller islands; but none of these could be distinctly beheld on account of some thick fogs, which intercepted the view. The last-mentioned islands are situated nearly where Tasman the Dutch navigator has placed a number of islands which he discovered, and to which he gave the names of Heemskirk, Prince William, Pylstaart, Amsterdam, and Rotterdam.—The longitude of these islands corresponds likewise very nearly with those which navigators have called Solomon's Isles, so that it is most probable they are the same. M. Bougainville conjectures that the number of boats which were observed sailing to the southward, is a vindication that there are other islands at no great distance; and, indeed, this opinion seems to be well grounded. To all these islands the commodore gave the general name of the *Archipelago of the Navigators*.

Archipelago of the Navigators.

On the morning of the 11th, another island was discovered, which received the name of the *Forlorne Hope*. At a distance, it had the appearance of two islands, but this deception was occasioned by its shape; for it consisted of two hills joined by a low land, which could not be seen far out at sea. At this period, and some days before and afterwards, the weather was extremely unfavourable, the winds being adverse, and the rains and calms alternate. M. Bougainville (on this circumstance) observes, that in the ocean which has obtained the name of Pacific, the approach to land is generally announced by violent tempests, which becomes still more violent in proportion as the moon decreases, the vicinity of the islands is generally foreboded by thick clouds at the horizon, and squally weather; and the precaution necessary to be taken to prevent a vessel's running foul of shoals, may be more easily conceived than described. In the present instance it was impossible to proceed with the necessary degree of precaution; for the crew were in want of provisions, and water in particular, grew very scarce; so that they were obliged to take advantage of every breeze of wind, both by night and day, and run all hazards for fear of starving. Thus situated, it may be presumed that they thought themselves sufficiently unhappy; but their distress was aggravated by the greater number of the crew of each ship being attacked by the scurvy, which inflamed their mouths to such a degree, that they could scarcely have swallowed those refreshments of which they stood much in need. Salt beef, pork, and dried pulse, constituted the whole fare of those who remained in health for the sick, however, there were yet some few articles of fresh provisions remaining. At this unfortunate juncture the disease, consequent on an illicit commerce between the sexes made its appearance, attended by all its most disagreeable symptoms, Aotourou was so extremely ill of it, that though seeming to despise its effects, he was obliged to submit himself to the care of the surgeons.

Forlorn Hope.

The ships now steered a westerly course, and on the morning of the 22d, two islands were discovered, one of which received the name of *Aurora*, from the early hour on which it was seen, and the other of *Whitsuntide Isle*, from the day on which it was discovered. The track of the vessels was now so directed as that they might have passed between the two islands, but an unexpected calm prevented this manœuvre. Proceeding to the northward of this first-discovered island, a rising land, in a conical form, was observed to bear north by west; which received the name of the *Peak of the Etoile*. In the afternoon, mountainous lands at thirty miles distant were seen appearing, as it were over and beyond the island of Aurora.

1767
Aurora Island.
Whitsuntide Isle.
Peak Etoile.

On the 23d it was discovered, that the land last seen was a separate island, the appearance of which was lofty, its descent steep, and the whole cloathed with trees. A number of boats were seen coasting the shore, but none of them approached the ships: smoke was seen issuing from among the woods, but no habitation was observed. In the morning the commodore dispatched three boats very well manned and armed to take in wood, and to learn the necessary particulars respecting the country, while the ship's guns were brought to bear on the island, in order to protect the boat's crew from any insult that might be offered them by the natives. M. Bougainville himself went on shore in the afternoon, where he found the Indians assisting the French, in carrying to the boats a quantity of wood which had been cut.

The information obtained from the officer commanding the boat's crew was, That on his first landing, the natives assembled on the shore, armed with bows and arrows, intimating, by signs, that the strangers must retreat. The French officer, however, gave orders for landing, and while his people advanced, the Indians retreated, but with their bows bent, and in an attitude of self-defence. At length, they were ordered to halt, while the prince of Nassau approached the Indians, who no longer retired when they saw only one person advancing. The prince having given them some remnants of red cloth, their esteem appeared to be at once conciliated. The commanding officer now stationed himself at the entrance of a wood, and sent out a party in search of refreshments, while another was dispatched to cut fire-wood. The natives now came forward with an appearance of friendship, and distributed some fruit among the seamen, to whom they likewise gave some arrows, but refused to accept any thing in exchange. Their numbers were considerable, and those who were not armed with bows and arrows, had provided themselves with stones, as instruments of defence.

These people intimated, that they were at war with the natives of a different district on the island, and even while they were hinting this circumstance, an armed party of Indians approached from the westward, while the former appeared determined not to retreat from their enemies; but the valour of these latter was rendered unnecessary to be exerted by the want of courage in the others. Matters were in this situation when M. Bougainville landed on the island, where he remained till his boats were laden with the articles he wanted. This being done, he took possession of the place, by the act of burying at the foot of a tree an inscription, carved on an oak-plank, and then he retreated to the ship. It was imagined, that this early retreat of the French prevented an attack which the islanders had meditated, as they seemed to be making preparations for what they had not yet in their power to carry into execution, but no sooner had the boats put off, than the Indians hastened to the beach, and complimented them with a shower of arrows, and a volley of stones; some of them even plunged into the waves, aiming their fury at the supposed invaders, and hurling their vengeance on the insolent strangers. When, at length, one of the seamen having been wounded by a stone, a discharge of musquets drove the islanders to their native woods, evidently wounded, from their cries and exclamations.

M. Bougainville gives the following description of the natives of this island, which he called the *Isle of Lepers*,

Isle of Lepers.

1768 *Lepers*, from obſerving that many of the inhabitants were afflicted with the leproſy: Some of them are mulattoes, and others perfect negros; their hair is woolly, and generally black, but in ſome inſtances very light-brown, approaching to yellow. Few women were ſeen among them, but thoſe few were equally diſagreeable as the men, who are repreſented as low in ſtature, ill favoured, and diſproportionably made.

The women of this ſingular country carry their children in a bag of cloth, ſlung at their backs. On theſe cloths there are elegant drawings in a fine dye of crimſon. The noſes of the men are pierced and hung with ornaments; and it is preſumed, that they pluck out their beards, as none of them were obſerved to have any. They wear a bracelet on the arm, which had the appearance of ivory, and pieces of tortoiſe-ſhells round their necks. Clubs, ſtones, bows and arrows form the armour of theſe people, the arrows are made of reeds pointed with bone. On the points of theſe bones are inverted darts, which prevent the arrow's being drawn without tearing the fleſh of the wounded perſon. The boats of theſe iſlanders bore a ſtrong reſemblance to thoſe of the Indians of the Iſle of Navigators, but theſe veſſels did not approach the ſhips ſo near as to furniſh the French with an opportunity of giving a deſcription of their conſtruction. —Near the beach on which M. Bougainville landed, is a lofty hill, extremely ſteep, yet cloathed with a ſuper-abundance of verdure. The vegetable productions of the Iſle of Lepers, are far inferior to thoſe of Otaheite, owing, as is ſuppoſed, to the lightneſs of the ſoil, and its want of depth. Figs of a ſpecies not before known, were found in this country, and ſeveral paths were ſeen cut through the woods, and incloſed by palliſadoes about a yard in height. It was conjectured, that theſe incloſures marked the boundaries of the landed property of different perſons. Half a dozen hovels only were ſeen, into which no perſon could enter but upon hands and knees, yet the inhabitants were very numerous, and it is ſuppoſed they muſt be very miſerable, from the perpetual wars among the natives of different diſtricts on the iſland. M. Bougainville ſays, that the ſound of a drum, harſh and diſſonant to the ear, was frequently heard in the wood, near the top of the above-mentioned hill; and this he imagines to have been a ſignal for the Indians to rally their forces; for no ſooner had the diſcharge of the fire-arms diſperſed the multitude, than this drum was heard, and when the iſlanders in enmity with the others appeared, the drum was beat with ſuſpended violence.

Aotourou formed a very contemptible opinion of the inhabitants of the Iſle of Lepers, whoſe perſons appeared beyond deſcription odious in his eyes; and of whoſe language he had not the ſlighteſt idea.

On the 23d more land was diſcovered, which on the 25th was obſerved to encloſe almoſt all the horizon, ſo that the ſhips were ſurrounded in one extenſive gulph, while the coaſt of the newly diſcovered country contained many other gulphs, or large inlets, acroſs which ſeveral boats were obſerved rowing from one ſhore to the other.

The night of the 25th was ſpent in tacking, and in the morning it was obſerved, that the currents had carried the veſſel ſeveral miles more to the ſouth than their reckoning. The number of iſles now ſeen was ſo great, that they could not be counted, nor could the end of the extenſive countries be diſcerned. Steering north-weſt by weſt, the land had a very beautiful aſpect, being diverſified with fine trees, between ſpots of land that had the appearance of being cultivated. Some parts of the mountains being barren, and ſpotted in different places with a red earth, M. Bougainville conjectures from that circumſtance, that they contained ſome mineral ſubſtances.

A great inlet to the weſtward having been ſeen on the preceding day, the ſhips now arrived in it, and ſaw a number of negro Indians on the ſouth coaſt of it, while others approached the veſſels in their boats, but when they came to about the diſtance of a muſquet-ſhot, they would advance no nearer, nor could any ſign of invitation from the French induce them to alter their reſolution.—The land on the north ſhore is of a moderate height, and cloathed with trees. On this ſhore many negros were ſeen, and ſeveral boats put off towards the ſhips; but theſe, like the former, refuſed to come on board. At the diſtance of about eight miles from this ſpot, two iſlands were ſeen, which formed the entrance of a fine bay, which the boats were ſent to examine, and after they had been gone a few hours, the ſound of muſquets was heard, which made the commodore very uneaſy. On their return in the evening it appeared, that one of them, in diſobedience to the orders of the commander, had left her conſort, and going near on ſhore, the Indians diſcharged two arrows at the crew, which outrage was returned by the muſquetry, and ſome larger guns. A projecting point of land prevented the boat's being ſeen from the ſhips, but the inceſſant firing induced the commodore to imagine, that ſhe was engaged with a very large number of the enemies boats, two of which ſhe had certainly encountered.

Preparations were making for diſpatching the long-boat to her aſſiſtance, when ſhe was deſcried, coming round the above-mentioned point of land.

The drums were now heard inceſſantly beating, and the cries of the wounded Indians, who retreated to the woods. "I immediately made ſignal to the boat (ſays he) to come on board, and I took my meaſures to prevent our being diſhonoured for the future, by ſuch an abuſe of the ſuperiority of our power." The country laſt-mentioned, conſiſted of a number of ſmall iſlands, off which there is tolerable good anchorage, but at ſuch a diſtance from the coaſt, that a ſhip could not cover any boats that ſhould land, which, as the iſlands are cloathed with thick woods, would be the more neceſſary. Theſe Indians went naked, and, except a bandage round the waiſt, wore the ſame kind of ornaments as thoſe on the Iſland of Lepers, whom they reſembled in all reſpects, except not being quite ſo black; and the productions of the iſland were likewiſe the ſame. The commodore very properly declined any attempt to trade with theſe people, whom he could not ſuppoſe would barter their effects with thoſe from whom they had received ſuch eſſential injuries. On the morning of the 27th they again ſailed, and, in a few hours had ſight of a fine plantation of trees, between which there were regular walks reſembling thoſe of an European garden. Many of the natives were ſeen near this ſpot, and as an inlet was obſerved at no ſmall diſtance, the commodore ordered the boats to be hoiſted out, but they found that it was impracticable to land.

The ſhips now quitted the great cluſter of iſlands they had lately viſited, which received the general name of *The Archipelago of the great Cyclades*, which it is conjectured, occupies no leſs than three degrees of latitude, and five of longitude. M. Bougainville ſays, that theſe iſlands are not the ſame that Quiros called *Tierra Auſtral del Eſpirito Santo*; but that Roggewein ſaw the northern extremity of them, which he denominated *Groningen*, and *Tienhoven*. Our author now recites a very ſingular fact: On board the ſtore-ſhip was a perſon reported to be a woman, which was almoſt confirmed by her want of beard and voice, and her ſhape. The commodore going on board the Etoile, enquired into the fact, when the party confeſſed her ſex, while floods of tears ſtreamed down her face: her ſtory is extraordinary.—Born in Burgundy, and left an orphan, ſhe was ruined by the fatal iſſue of a law ſuit; on which ſhe reſolved to drop the habit of her ſex, and ſerved a gentleman at Paris; but hearing of M. Bougainville's intended expedition round the world, ſhe repaired to Rochfort, where juſt before the ſhips embarked, ſhe entered into the ſervice of M. de Commerſon, who went out with a view of increaſing his botanical knowledge. She followed her maſter, with aſtoniſhing courage and reſolution, through deep ſnows to the hoary tops of the mountains

Archipelago of the great Cyclades.

tains in the ſtreights of Maghellan, carrying loads of herbs, plants, arms, and proviſions, with unſpeakable courage and unwearied toil. While our adventurers were at Otaheite, the men of that iſland flocked round our heroine, and exclaiming, "this is a woman," would have treated her as ſuch, but that an officer reſcued her from their hands, and ordered her to be delivered, unviolated, on board the ſhip. M. Bougainville obſerves, that this is the firſt woman that ever circumnavigated the globe, and remarks on the ſingularity of her ſituation, if the ſhips ſhould have been wrecked on ſome deſart iſle in the great ocean. The name of this extraordinary woman is Baré; and ſhe is as celebrated for her chaſtity as her courage.

On the night between the 4th and 5th of June, ſome breakers were ſeen at half a league diſtance, by the light of the moon. In the morning it appeared to be a low, flat, ſandy iſle abounding in birds, which received the name of the *Shoal of Diana*. About this period ſeveral ſpecies of fruit, and ſome pieces of wood floated by the ſhip, and a kind of flying fiſh was ſeen, larger than the common ſort, the body of which was black, and the wings red. A ſand-bank was diſcovered on the 6th, on which the ſea broke violently, and the tops of rocks were ſeen at intermediate ſpaces. At this time the ſalt proviſions on board were become ſo putrid, that it was almoſt impoſſible for men, even on the point of ſtarving to ſwallow them; and therefore the rats were induſtriouſly ſought after, and eaten in preference to them. The remaining peaſe would ſerve only forty days, and the bread two months; ſo that it become highly neceſſary to think of ſteering to the northward.

On the 10th, before day-break, an agreeable fragrancy impregnated the air, announcing that land was near; and it was accordingly diſcovered before ſun-riſing. This is deſcribed as a moſt delicious country, divided near the ſea-coaſt into groves and plains, behind which the land riſes in the form of an amphitheatre, till the tops of the mountains are loſt in the clouds. The moſt lofty of this chain of mountains was ſeen above ſeventy miles in-land. The whole country appeared to be rich and fertile, but the deplorable ſituation the ſhips companies were reduced to, would not admit of their ſtaying to take a more accurate ſurvey of it. On the 10th a prodigious ſwell from the ſouth-eaſt drove the ſhips violently towards land, and they were ſoon within about two miles of it; and the night was paſſed in this dangerous ſituation, taking advantage of every ſlight breeze to clear the ſhore. A number of boats were now ſeen coaſting the iſland, on many parts of which fires were obſerved. A turtle was found here in the belly of a ſhark. For ſeveral ſucceſſive days there was ſo thick a fog, that the Boudeuſe was obliged to fire frequent guns to keep company with the Etoile, on board of which was a part of their proviſions. Several ſhell fiſh, called cornets, leaped into the ſhip in the night, and it is known of theſe fiſh, that they are accuſtomed to keep at the bottom of the ſea, it is evident that the veſſels muſt have been in very ſhallow water. On the 16th the weather became fine, and on the following day ſeveral iſlands were diſcovered, one of which was called, *Uſhant*, from its ſimilitude to the iſland of that name. By this time our voyagers were reduced to very great extremities. The allowance of bread and peaſe was conſiderably reduced; and a fear of the conſequences that might ariſe, obliged the commodore to forbid the eating of leather.* On the 18th not leſs than nine or ten iſlands were diſcovered, and on the 20th, a ſtill farther number. The navigators now ſtruggled at once with a variety of inconveniences occaſioned by foul ſhips, damaged rigging, crazy maſts and tempeſtuous weather. On the 25th, high land was diſcovered, which appeared to terminate in a cape, which they doubled with a degree of tranſport that may be more eaſily conceived than deſcribed, as it was the point they had wiſhed for a ſight of, from a certainty that it would enable them to quit the Archipelago of iſlands, amidſt which they had been long in hourly dangers of ſhipwreck or ſtarving. This cape was called *Cape Deliverance*, and the name of the gulph of the Louiſiade, was given to the bay, of which the cape forms the eaſtermoſt point. — North of Cape Deliverance, about ſixty leagues, land was diſcovered, which proved to be two ſmall iſlands; and two days afterwards an officer was ſent to examine ſeveral creeks, in the hope of finding anchorage, while the ſhips ſailed ſlowly after the boats, ready to join them on the firſt ſignal. 1768

Cape Deliverance.

Gulph of Louiſiade.

The natives now advanced towards the ſhip in ſeveral boats, carrying from two or three to upwards of twenty men each. Theſe boats had no out-riggers, and their crews were as black as the negros on the coaſt of Guinea, ſome of them had reddiſh hair, and that of all of them, were long and curled. They wore white ornaments on their foreheads and necks, and were armed with lances and bows; they kept almoſt a continual ſhouting, and ſeemed rather inclined for war than peace. When the boats returned on board, the officer reported, that the ſea broke on all parts of the coaſt, that he had found only one ſmall river, that the land was every way covered with wood, and that the mountains ran down cloſe to the ſea-ſhore. The natives dwell on the mountains, but they have a few huts on the banks of ſome of the ſmall creeks. Some of them followed one of the ſhip's boats, and ſeemed almoſt reſolved on the attack; and one of the Indians repeatedly put himſelf in an attitude to have thrown his lance; but he deſiſted from his purpoſe and no miſchief was done.

M. Bougainville ſays, that he was now advanced too far to return; but that he hoped to find a paſſage, though the weather was ſo foggy that he could not diſcern any object at the diſtance of more than two leagues. In the morning of the 1ſt of July, the ſhips were juſt on the ſtation they had quitted the preceding night, having been impelled forward, and driven back, by the tides. Nothing remarkable happened but the diſcovery of a race, in the middle of a paſſage, to which was given the name of *Dennis's Race*, from that of the maſter of the Boudeuſe. A race is a part of any channel or ſtreight where there are oppoſite tides, or a rapid and dangerous current, and ſuch are even ſometimes met with in the open ſeas. Boats were now ſent to find anchorage in a fine bay; and the account of their expedition is as follows: That a number of the Indian boats, in which were 150 of the natives, armed with ſhields, lances, and bows, came from the banks of a rivulet on which their habitations were ſituated, and rowed haſtily towards the French boats, which they ſurrounded, and, with hideous outcries, began the attack with their bows and lances. The French diſcharged their muſquets; but the natives covering themſelves with their ſhields, the fight continued till a ſecond firing terrified them ſo, that they made a haſty retreat, ſome of them ſwimming to ſhore.

Dennis's Race

Two of their boats were taken, on the ſtern of which was the figure of a man's head with a long beard, the eyes being mother of pearl, the ears tortoiſe-ſhell, and the lips were dyed of a bright red, beſides their weapons and uteniſils, there were found in their boats cocoa-nuts, and ſeveral fruits, the ſpecies of which were not known, the jaw of a man half broiled, and various other things. The natives of this coaſt are negros, whoſe hair curls naturally, and they have a method of colouring it yellow, red, and white; their cloathing conſiſts only of a piece of matting round

* There was yet on board a ſhe-goat, which had been brought from Falkland's Iſlands; ſhe yielded milk daily; but this was inſufficient to ſave her life, the ſtarving crew demanded the victim, and the butcher who had hitherto been her feeder, wept as he plunged the knife into the breaſt of his favourite. Soon after this, a dog, which had been put on board at the ſtreights of Maghellan fell alſo a ſacrifice to the dire demands of hunger.

1768 round their waiſts. This river received the name of *Warrior's River*, and the whole ſpot, that of the *Iſle and Bay of Choiſeul*. Two days afterwards a cape was diſcovered which was called *Cape L' Averdi*, on which were mountains of an aſtoniſhing height. On the 4th other mountains had been diſcovered, from which came off five or ſix Indians, and after lying on their oars ſome time, they accepted ſome trifles which were thrown to them. They now exhibited ſome cocoa-nuts, ſaying, *bouca, bouca, oneille!* and ſeemed greatly pleaſed when the French repeated the ſame words. They then intreated that they would fetch ſome cocoa-nuts, but they had ſcarcely left the ſhip's ſide, when one of them diſcharged an arrow, by which, however, no perſon was wounded. The people were altogether naked, had long ears bored, and curled ſhort hair, which ſome of them had dyed red, and they had alſo white ſpots on their bodies. Their teeth were red, probably from the chewing of betel.

Warriors River.

Iſle and Bay of Choiſeul.

Cape L' Averdi.

Bouka Iſland. This iſland, which was named *Bouka*, appeared to be cultivated, and, from the number of huts that were ſeen, it probably abounds with inhabitants. The cocoa-nut, and other trees, diſperſed over a beautiful plain, was a ſufficient tempation for landing, but the rapidity of the current prevented the poſſibility of it.

Two more iſlands were ſeen on the 5th, and, as wood and water were expended, and diſeaſe reigning aboard, the commodore reſolved to land here, and on the following afternoon, the ſhips came to an anchor. The caſks were ſent on ſhore, and tents erected for the ſick, on a commodious ſpot, where there were four rivulets near together, and where wood for the carpenters uſe, as well for burning, was very plenty, there were no inhabitants near the place, ſo that the ſick had an opportunity of ranging the woods, fearleſs of any attack of the natives, and every thing ſeemed to conſpire to render this ſpot the moſt eligible imaginable; but there was one great inconvenience, no fruit could be found. Two huts were diſcovered on the bank of a rivulet not far from the encampment, and a boat, near which was ſeen the remains of fires, ſome calcined ſhells, and the ſkeletons of ſome animals heads, which were taken for thoſe of the wild boar, ſome freſh bananas were found, which proves that the natives lately left the place. This iſland produces a large blue creſted pigeon, which has ſo plaintive a note, that the ſeamen miſtook it for the cries of men in the neighbourhood of the mountains.

M. Bougainville now relates an extraordinary incident: A ſeaman being looking over the ſhells, found a plate of lead, buried in the ſand, on which the following letters were very viſible;

HOR'D HERE

ICK MAJESTY's

The mark of the nails with which the lead had been faſtened appeared; and it is plain that the natives muſt have torn off the plate and broke it. This circumſtance gave riſe to a diligent ſearch, and, at about ſix miles from the watering-place, the ſpot was found where the Engliſh had formed their encampment. Several trees were ſeen which had been felled, and others which had been ſawn in pieces. A very large and conſpicuous tree was found, on which the inſcription had been nailed; it ſtood in the midſt of a ſpacious place, and it appeared that the plate had been pulled down but a very ſhort time. There were other trees to which the ends of ropes were faſtened. One of the trees which had been cut down, had put forth freſh twigs, apparantly of the growth of four months. M. Bougainville mentioned it as a very ſingular circumſtance, that, amidſt ſo many iſlands, he ſhould happen to land on that ſo lately viſited by a rival nation. Diligent ſearch was now made for food and refreſhments, but almoſt in vain; for nothing could be found but a few cabbage-trees, and thatch palms. No fiſh could be caught, and though a few wild boars were ſeen, not one of them was taken. A ſmall number of pigeons indeed were ſhot, the feathers of which were of green and gold.*

No time was now loſt in the neceſſary repairs of the ſhips, and an equal diviſion was made of the proviſions, which now began to run extremely ſhort. A third part of the late allowance of peaſe was taken off. From the commodore, to the loweſt perſon on board, all fared alike: their ſituation, like death, baniſhed all diſtinction. On the 13th, there was an eclipſe of the ſun, which was clearly ſeen, and the proper aſtronomical and nautical remarks made on it. The name of *Port Praſlin* was given to this harbour, an inſcription having been firſt buried under the ſpot where the eclipſe had been obſerved.

Port Praſlin.

The Etoile being a light veſſel, and there being no ſtones to ballaſt her, after the proviſions had been taken out, this important buſineſs was neceſſarily performed with wood, a fatiguing and unwholeſome taſk in ſo damp a country.

A ſailor who was hauling the fiſhing-net, in ſearch of a ſcarce fiſh called the Hammer-oyſter, having been bitten by a ſhark whoſe bite is poiſonous, was cured in a few hours by a profuſe perſpiration, produced by taking flower-de-luce water and treacle.

Aotourou having remarked the progreſs of the cure, intimated that at Otaheite there were ſea-ſnakes, whoſe bite is mortal in every inſtance. On the 22d repeated ſhocks of an earth-quake were felt for about two minutes. The ſea roſe and fell ſeveral times, ſo that the concuſſions were felt on board the ſhips.—Notwithſtanding the extreme bad weather which prevailed, the crews divided into ſeparate parties, went to the woods every day, in hopes to ſhoot ſome turtle-doves, and gather cabbage-trees and thatch-palms: but it generally happened that they returned without any ſucceſs, and wet to the ſkin. At length, however, they found ſome mangle apples, and a kind of pruens, but too late to be of any ſervice, as they were now on the point of departure. A kind of ivy was ſucceſsfully applied in the cure of the ſcurvy.

An immenſe caſcade was ſeen, falling from numerous rocks into a hundred baſons of water, and at once ſhaded and adorned by ſtately trees, ſome of which grow even in the reſervoirs.—The ſituation of the ſhips companies now became ſo dreadful, that no time could be loſt. In the afternoon of the 24th, a favourable breeze enabling the ſhips to get to ſea, they ſailed accordingly, though the crew were ſtill in a ſad ſituation.

M. Bougainville remarks that this country muſt be *New Britain*, and that the great bay muſt be the ſame which Dampier calls St. George's Bay, but that he had the happineſs to land on a part of it where his wants could be ſupplied by the inhabitants. A ſucceſſion of iſlands having been ſeen in the offing, M. Bougainville named them after the officers. The field-tents were now cut up, to make trowſers for the ſeamen, who had been repeatedly cloathed during the voyage, to enable them to ſuſtain the inclemencies of ſo many different climates. But the beſt change of cloathing was now delivered out; and at this period an ounce of bread was deducted from their ſcanty allowance. Their ſalt proviſions were now ſo bad, as to be nauſeous in a high degree; yet their ſtarving ſituation impelled them to feed on them; but even at this melancholy period, no one yielded himſelf a prey to melancholy; and the ſailors, influenced by the example of the officers, employed every evening in dancing,

* An inſect of a moſt wonderful texture was found on this iſland, the body and wings of which appeared ſo much like the leaf of a tree as ſcarcely to be diſtinguiſhed from it, even on a nice inſpection. When the wings are extended, each forms the half of a leaf, and when they are incloſed it is intire. The upper ſide of the body is of a brighter hue than the under parts, and it has ſix legs, the upper joints of which reſemble parts of leaves. This curioſity was preſerved in ſpirits, and is in the cabinet of the French king.

dancing, diſpelling by their mirth, ſome of the pangs of hunger. New Britain continued in ſight till the beginning of Auguſt, when the ſhips being nearer to land than they had been before, ſeveral Indians boats came off, the crews of which were negros, with woolly heads, which they had covered with powder. They were tall and active, and wore no other cloaths than leaves round the middle. They held out ſomething that had the appearance of bread, and invited the French to land, but they refuſed to enter the ſhips, though an attempt was made to conciliate their friendſhip, by preſents of ſome pieces of ſtuff. They accepted what was given, and threw a ſtone from a ſling in return; inſtantly retreating, with loud vociferations. On the following day a large number aſſembled along-ſide the Boudeuſe; a perſon, who had the appearance of authority, carrying a red ſtaff, knobbed at each end, in his hand. On approaching the ſhip, he held his hand over his head for a conſiderable time. The hair of theſe negroes was painted red, ſome of them were adorned with feathers, ear-rings made of the ſeed of ſome herb, or circular plates deſcending from their necks; others had the noſe pierced, and rings ran through it, but the general ornament was a bracelet, made of the half of a ſhell. The French were anxious to gain the eſteem of theſe people, but in vain;—they eagerly graſped at whatever was given them, but would make no preſent in return. The roots of a few yams were all that could be obtained from them. Two of their boats being obſerved approaching in the night, a rocket was fired, on which they inſtantly rowed off.

On the 31ſt a number of Indian boats attacked the Etoile with a volley of ſtones and arrows, but by a ſingle diſcharge of muſquetry, ſhe got rid of theſe troubleſome companions.

Two iſlands were ſeen on the 4th of Auguſt, that were ſuppoſed to be the ſame as thoſe called by Dampier, Matthias and Stormy Iſlands. A third iſland was ſeen on the 5th, and afterwards they diſcovered the northern point of New Britain.

They ſaw a flat iſland on the 7th of the ſame month, which abounded with cocoa-nut trees, and from the houſes appearing on the ſhore, ſeemed to have been well inhabited. To this they gave the name of the *Iſle of Anchorets*. Many fiſhing-boats were ſeen here; but no notice was taken of the veſſel by the fiſhermen. A great number of ſmall iſlands were diſcovered the next day, in the endeavour to clear which, the commodore experienced many and great dangers. At laſt, however, he effected his purpoſe, a breeze that increaſed with the riſing ſun, greatly contributed to his deliverance.

Iſle of Anchorets.

Coaſting along he afterwards came in ſight of two lofty peaks, to which he gave the appellation of the *Two Cyclops*; and on the 15th ſaw two high mountains upon the continent, near which were two ſmall iſlands; and two others were obſerved on the 23d, when the French attempted to land; but two boats crews ſent for that purpoſe reported that there were no fruits fit for food growing upon them, and that they were entirely uninhabited.

Two Cyclops.

From the rippling of a ſtrong tide, it was this day reported that there were breakers a-head; and afterwards the ſhips actually paſſed over a ſhoal, but without much danger or damage. Forty of the company were now afflicted with the ſcurvy, of which M. Denys, firſt maſter of the Boudeuſe died, greatly regretted by his companions.*

Still ſurrounded by iſlands,† they now ſteered a ſoutherly courſe, and on the following night ſailed out of this labyrinth, through a channel about three leagues in width. There were a number of ſmall iſles ſeen on each ſide of the channel, which they had denominated *French Paſſage*. On the 26th, they ſaw a ſmall iſland, and afterwards a ſteep hill, which they called in their langurge, *Big Thomas*, and three iſlands more were diſcovered in the vicinity.

1768

French Paſſage.

Big Thomas.

To the ſouth-weſt of ſeveral other iſles that were ſeen the next day, M. Bougainville gave orders to a boat belonging to the Etoile, to ſteer in queſt of anchorage, and for the ſake of enquiring into the nature of their produce. On two of theſe the crew landed, but had no reaſon to ſuppoſe that they were inhabited, and the French were juſt on the point of returning when an Indian made up to the boat, to whom they intimated that they were in want of refreſhment. This man preſented them with a kind of meal and ſome water, in return for which he received a handkerchief, a looking-glaſs, and ſome other trifles, at which he ſeemed to laugh, as thinking them below his notice, from whence it might reaſonably be concluded that he had come from one of the neighbouring Dutch ſettlements.‡ However, a turtle of 200lb. weight was taken by the crew of the Boudeuſe.

The commodore diſcovered the iſland of Ceram, on the laſt day of the month. This place is partly wild, and partly cleared. It is mountainous, and runs in a parallel eaſt and weſt. A number of fires which the adventurers obſerved upon it, intimated that it was well peopled. Early in the morning, on the firſt of September, the French found themſelves at the entrance of a bay, on the banks of which they beheld a number of fires. They ſoon obſerved two boats under ſail, conſtructed on the plan of thoſe of the Malays. A Dutch pendant was now hoiſted, and a gun fired, but the commodore confeſſes his error in this procedure, as the people of Ceram are at variance with the Dutch, whom they have almoſt totally routed from their iſland. M. Bougainville having been thus unſucceſsful through miſtake, returned from the bay, and employed the reſt of the day in plying between the iſlands Bonao, Kelang, and Manepo.—— Sometime before midnight, a number of fires attracted their attention to the iſland of Boero, where there is a Dutch factory, well provided with the neceſſary refreſhments.

The above-mentioned Dutch factory is at the entrance of the gulph of Cajeli, which the French had ſight of at day-break. The joy on this occaſion is not to be expreſſed, for at this time not half the ſeamen were able to perform any duty: and the ſcurvy had raged ſo violently, that no man on board was perfectly clear of it. What few proviſions were on board were abſolutely rotten, and ſtunk intolerably. Thus circumſtanced, their change of ſituation muſt have been peculiarly happy. From midnight the fragrant breeze had wafted the aromatic ſavour of the plants, which abound in the Moluccas. "The aſpect, (ſays our author) of a pretty large town, ſituated in the bottom of a gulph, of ſhips at anchor there, the cattle grazing in the meadows, cauſed tranſports which I have felt, but which I cannot deſcribe." The commodore hoiſted Dutch colours, and fired a gun; but though ſeveral boats were ſailing in the bay, none of them came along-ſide. In a few hours a piragua, rowed by Indians, advanced towards the ſhip, and the commanding officer inquired in Dutch who they were, but refuſed to go on board. M. Bougainville, however, proceeded under all his ſails, and in the afternoon came to an anchor oppoſite the factory.

The Dutch ſoldiers, one of whom ſpoke French, now came on board the Boudeuſe, demanding the reaſon of the commodore's entering that port, when he muſt know that the ſhips of the Dutch Eaſt India Company had an excluſive right to that privilege. He was anſwered in brief, that neceſſity was the motive; that hunger muſt preclude the force of treaties,

* The liberal uſe of wine and lemonade, in ſome meaſure checked the progreſs of this cruel diſorder.

† None of them appeared to be inhabited, though all of them were cloathed with verdure.

‡ Meaning, upon the iſlands formerly ſeven, but by earthquakes, thoſe ſcourges of nature, reduced now to five in number only.

1768 and that they would depart as ſoon as their wants were ſupplied. The ſoldiers ſoon returned with the copy of an order from the governor of Amboyna, who preſides over the reſident of Boero, forbidding him to admit foreign ſhips into that port. The reſident, therefore, intreated M. Bougainville to declare in writing the cauſe of his putting in there, that he might tranſmit ſuch declaration to the governor of Amboyna, in juſtification of his own conduct. This requeſt being complied with, all difficulties were at an end, the reſident having performed his duty as a ſervant of the company, was anxious to diſcharge the ſuperior duties of humanity. The commodore and his officers viſited him on ſhore, were received in the moſt friendly manner, and accepted his invitation to ſupper.

The reſident and his company beheld with equal pleaſure and ſurpriſe the effects that hunger had on the appetites of the gueſts, nor were they willing to eat themſelves, leaſt they ſhould deprive their viſitants of their full ſhare of the repaſt. M. Bougainville profeſſes that he was ſupremely happy, becauſe he had previouſly ſent on board what would be an equal feaſt to both the ſhips companies. A contract was now made, that while the ſhips ſhould remain in that harbour, veniſon ſhould be daily ſupplied to the crews, that eighteen oxen, a number of ſheep and poultry, and a quantity of rice (to ſupply the place of bread) ſhould be put on board. The reſident was likewiſe kind enough to furniſh the ſick with a quantity of pulſe from the company's garden, but much could not be obtained, as it is not generally cultivated on the iſland. The ſick were now brought on ſhore, and the majority of the ſeamen were likewiſe indulged in walking about for their health and pleaſure. The commodore hired the ſlaves belonging to the company to fill the water-caſks, and to carry the ſeveral neceſſaries on board. M. Bougainville and his officers were gratified with the pleaſure of ſtag-hunting, and he mentions the deer of this country as moſt exquiſite food. The Dutch originally tranſported them hither. This iſland is deſcribed as a delightful compoſition of woods, hills, plains, and well cultivated vallies. The town of Cajeli, and about 14 Indian dwellings, formed the Dutch ſettlement. A ſtone fort which the Dutch had originally erected, was accidently blown up in the year 1689; ſince which time it has had no incloſure but that of palliſadoes, with a battery of ſix ſmall cannons. About fifty white people are all that reſide on the iſland, of whom a ſerjeant and twenty-five men, commanded by the reſident, form a part. The negros who reſide in the interior parts of the country ſubſiſt by the cultivation of rice.

The Moors and the Alfourians are the genuine natives of this country, the former are protected by the Dutch factory, who endeavour to inſpire them with the dread of all foreigners. Theſe people are principally kept in awe by the influence of their own chiefs, for whom the Dutch reſident profeſſed a ſincere regard.* The natives of Boero are not treated as ſlaves of the Dutch, their ſlaves being procured from the iſlands of Ceram or Celebes. Unlimited freedom and independance appear to reign among the Alfourians, who, reſiding on the mountains in the interior parts of the iſland, ſubſiſt on the produce of their hunting, with fruits and ſago. It is preſumed they are not Mahometans, becauſe they eat ſwine's fleſh. The principal people among the Alfourians pay occaſional viſits to the Dutch reſident.

The chief products of this iſland are various kinds of wood, particularly black and white ebony; and there is a fine plantation of pepper. The fruits are pine-apples, citrons, lemons, bitter oranges, ſhaddocks, bananas, and cocoa-nuts. Very good barley is likewiſe a produce of this country. Parrots, and a variety of other birds, many of them extremely beautiful, abound in the woods. There is likewiſe the wild cat, whoſe bag under the belly ſerves for the conveyance of its young. The bats and ſerpents are of an enormous ſize, the latter of which are ſaid to have a ſwallow capacious enough for the reception of a whole ſheep. There is a ſnake too, which poſting itſelf to the trees, darts into the eye of the paſſenger who happens to look up, and the bite of this animal is certain death. Crocodiles of an aſtoniſhing ſize reſide on the banks of the rivers, devouring ſuch beaſts as fall in their way; and men are only protected from their fury by carrying torches. M. Bougainville aſſerts, that theſe crocodiles, which roam for prey in the night, have been even known to ſeize people in their boats.

The name of the reſident at Boero is Ouman, he is by birth a Batavian, and is married to a native of Amboyna. He lives in great elegance and ſplendour, attended by no leſs than 100 ſlaves. M. Bougainville ſpeaks of his politeneſs and hoſpitality in very high terms. After having twice regaled the French officers in the ceremonious way, he bid adieu to all ſet forms, but his houſe was conſtantly as open to them as if it had been their own; they always found good viands and liquors, and our author thinks this was no inconſiderable degree of civility to perſons, ſo lately on the point of ſtarving. The reſident's houſe is conſtructed in the Chineſe taſte, in the middle of a garden, which is interſected by a river; the houſe itſelf is elegantly furniſhed. Its approach is through an avenue of trees, which are planted down to the ſea-ſide. The wife and daughter were habited in the Chineſe manner, and were no way deficient in the eſſential requeſts of good breeding. Their chief employ conſiſts in making noſegays, and ſelecting flowers proper for diſtillation. The aſtoniſhment of Aotourou, at the firſt ſight of an European ſettlement, may be more eaſily conceived than deſcribed. He regarded every object with an intenſeneſs of curioſity ſcarcely to be ſatisfied, but he was particularly charmed with the hoſpitality of the Dutch. He ſuppoſed every thing freely given, as he did not ſee any thing returned by way of barter. M. Bougainville ſays, that he behaved ſenſibly with reſpect to the Dutch, to whom he intimated the conſequence he was of in his own country, and that his preſent voyage was merely pleaſurable, with friends whom he eſteemed. His conſtant practice was to imitate the manners of the French, both in their viſits, and in their rural amuſements. The knees of this Indian being diſtorted, he attributed to that circumſtance, his not being taken with the commodore on his viſit to the reſident, and actually deſired ſome of the ſeamen to preſs their weight on his knees to make them ſtrait. He would frequently enquire whether Paris was as grand a place as Boero. Though the French were only ſix days on ſhore, the healthful air of the place, had ſo far contributed to the recovery of the ſick, that by the help of the refreſhments now ready to be put on board, it was very poſſible to perfect the cure at ſea. The ſick people were conveyed to the ſhips in the morning of the 7th, and before evening every one was on board, in expectation of the land-breeze, by which after much difficulty in weighing the anchor, they were enabled to ſail about an hour before midnight, and get clear of the gulph of Cajeli before morning.

Having coaſted the iſland of Boero, the iſles of Manipa and Kilang were ſeen on the morning of the 8th, and on the 9th they had ſight of the iſland of Xullabeſſic, where the Dutch have a factory, named Cleverblad, that is, clover leaf. There is a garriſon conſiſting of twenty-five men, under the diſcipline of a ſerjeant, and commanded by a perſon who holds no higher rank than book-keeper to the Dutch Eaſt India Company. On the 10th the commodore buried his

* Dutch policy, in this, as in all their other ſettlement, is the ſame, by fomenting a jealouſy among the chiefs of their reſpective dependants;—a plot is no ſooner formed by one chief, than it is revealed by another.

his taylor, who fell a ſacrifice to the ſcurvy, encreaſed when on the point of cure, by an exceſſive drinking of brandy. On the morning of the 11th they had ſight of the iſland of Wawoni, and in a few hours ſaw that of Buton, the ſtreights of which they entered on the following day, and obſerved a veſſel of a ſquare form, ranging the ſhore, and towing a piragua. The French ſhips were no ſooner obſerved by this veſſel than ſhe furled her ſail, and concealed herſelf behind a ſmall iſland. A French ſeaman, whom M. Bougainville had engaged at Boero, ſaid that the veſſel in queſtion was manned by a ſet of Indian pirates, who made a practice of taking priſoners in order to ſell them. In the afternoon the ſhip ſailed by a beautiful port on the coaſt of Celebes, the view of which was moſt delightfully variagated by mountains, hills and valleys, and clothed with an exuberance of verdure. In a few hours afterwards the iſland of Pangaſani was in ſight, to the northward of which appeared the higheſt mountains of Celebes. Pangaſani is a flat iſland abounding in trees, and our author conjectures, that it produces ſpices; it is however certain, that it is well inhabited, from the number of fires that were ſeen on it during the night. On the morning of the 13th the ſhips were ſurrounded with Indian boats, bringing paroquets, cockatoes, fowls, eggs, and bananas, which the natives ſold for Dutch money, or exchanged for knives. Theſe people were inhabitants of a conſiderable diſtrict on the mountains of Buton, oppoſite the place where the ſhips lay at anchor. On this ſpot the land is cleared and cultivated, the property of different perſons being divided by ditches. Some of the fields are incloſed by hedges, and there are houſes in theſe fields, beſides which there are ſeveral villages.

The produce of this country conſiſts in potatoes, yams, rice, maize, &c. and the bananas are deemed as good as in any part of the world. Pine-apples, cocoa-nuts, and citrons, are very plentiful. The natives, are of a brown complexion, ordinary features, and low of ſtature. They profeſs the Mahometan faith, and ſpeak the language common in the Molucca iſles. They are very honeſt, though expert traders. They offered M. Bougainville ſome pieces of coarſe cloth; but he does not ſay whether he dealt with them or not, he aſked them for ſome nutmegs, which they ſaid they procured from the Iſland of Ceram, and the neighbourhood of Banda; and his remark is, that the Dutch cannot ſupply them from thoſe places. The coaſt of Pangaſani is deſcribed as riſing in the form of an amphitheatre, from the level of the coaſt which he imagines is frequently overflowed, becauſe the dwellings of the natives were obſerved to be ſituated on the ſlope of the hills. The people of Buton conſider the inhabitants of Pangaſani as pirates, and each party is provided againſt the attacks of the other by a dagger, which is always worn, ſtuck in the girdle.

The ſhips ſailed on the morning of the 14th, but coming to anchor in a few hours afterwards a number of piraguas ſurrounded the Boudeuſe, one of which hoiſting Dutch colours, the reſt retreated, that ſhe might come along-ſide. It appeared that this boat belonged to one of the chiefs of the country, to whom alone the Dutch permit the diſtinction of carrying their colours. M. Bougainville ſailed again on the 15th, and in the afternoon of that day diſpatched his barge after a boat which was ſeen in a large bay, with a view to procure a pilot, and the boat readily came, having an Indian on board, who, for thirteen ſhillings readily engaged in the pilotage, but his intended ſervices were rendered unneceſſary, by the ſun happening to ſhine with great luſtre on a ſpot which directed their paſſing out of the channel. As oppoſing winds and tides now obliged the ſhips to come to an anchor, the piraguas come off in great numbers, bringing pieces of cotton, articles of curioſity, and variety of refreſhments. At the approach of evening, the ſhips got clear of the narrow paſs, and anchored in Buton Bay.

The coaſt of Buton abounds in incloſures proper for the catching fiſh, while the riſings are beſpread with habitations. The oppoſite ſhore is perpendicular; and after paſſing the galley both ſides are ſteep, hanging in ſome places over the channel. The coaſt of Pangaſani has two or three ſmall houſes on it, though it is little elſe than a ſolid rock, yet well cloathed with trees. The Indian pilot above-mentioned gave the beſt inſtructions in his power, reſpecting the mode of paſſing the gut; but he appeared totally unſkilled in the European art of navigation. Another Indian, ſuppoſed to be the pilot's father, went on board the Boudeuſe in the morning, and remained till the evening. They both drank plentifully of brandy, but would eat only bananas, and chew betel, abſolutely refuſing to taſte of the ſhip's proviſions. On the morning of the 17th, while the ſhips were under ſail, the Indians came off in great numbers, bringing fruit, poultry, and eggs, which they ſold at ſuch moderate rates, that even the common ſeamen could poſſeſs themſelves of thoſe refreſhments, in very great abundance. 1768

This morning five of the *Orencaies*, or chiefs of Buton, came off in a boat of the European form, with Dutch colours hoiſted at its poop. Theſe people were dreſſed in jackets and long breeches, with turbans, and each of them had a ſilver headed cane, with the company's mark on it. They gave M. Bougainville a roe-buck, and received in return, each a quantity of ſilk ſtuffs. They paid many compliments to the French nation, ſo freely drinking the health of his moſt chriſtian majeſty, and the king of Buton, that they were at length, obliged to be helped down the ſhip's ſide into their boats. The commodore inquired of the Orencaies, whether any ſpices grew on the iſland of Buton, to which they replied in the negative, and were eaſily credited, on account of the weakneſs of the Dutch ſettlement, which is nothing more than a few huts, built of the bamboo cane, and incloſed with palliſadoes. The guard, on the part of the company, conſiſts only of a ſerjeant and three men. The coaſt oppoſite Buton is incloſed, cultivated, and well peopled, nor is the iſland itſelf leſs populous, or leſs fruitful.

In the morning the Indian pilot viſited the commodore and informed him, that the ſouth-eaſt wind would blow freſheſt exactly at noon. This proved to be ſtrictly true, and was a circumſtance ſo well known to the natives, that all the boats which had ſurrounded the ſhip retired before the ſun had gained the meridian.——M. Bougainville, taking advantage of the pilot's advice, got out to ſea with a fair wind, ſteering for the iſland of Saleyor, which he diſcovered on the 18th. On this iſland the Dutch have a ſmall ſettlement, the principal reſident at which is the book-keeper. This day at noon there iſlands were diſcovered, which were called *North Iſland*, *South Iſland*, and *Iſle of Paſſage*; which laſt was ſo denominated from the ſhips paſſing near it, for the advantage of a ſafe navigation. By day-light on the 19th they were within about a league of the coaſt of Celebes, which is deſcribed as one of the fineſt countries in theſe parts.——Immenſe herds of cattle graze on the plains, which are adorned with groves, while the coaſt is one continued plantation of the cocoa-nut-tree. The plains are in moſt places cultivated and covered with houſes, while the mountains behind them add dignity and ornament to the landſcape. North Iſland, South Iſland, Iſle of Paſſage.

This day M. Bougainville chaced a Malayan boat, in hope of obtaining a pilot, acquainted with the coaſt, but ſhe fled at his approach, nor even brought to, after he had fired ſeveral guns at her. He conjectures that the Boudeuſe was miſtaken for a Dutch ſhip, and obſerves that the generality of people on the coaſt are pirates, who are always made ſlaves when they are taken by the Dutch. The ſhips having, during the evening, ſteered between an iſland named Tanakeka, and three ſmall iſles, orders were given at midnight, to carry all the ſail poſſible, in order to come within ſight of the iſles of Alambar.

1768 At midnight, between the 21ſt and 22d, a boat was obſerved advancing towards the ſhips; but tho' guns were fired, ſhe bore off in the apprehenſion, as conjectured, that they were Dutch veſſels.

In the afternoon of the 22d, the north-eaſt of Madura was ſeen from the maſt-head, and a number of fiſhing boats were obſerved, ſome at anchor, and ſome employed in their buſineſs. On the following morning four ſhips were ſeen, two of which hoiſted Dutch colours, and one of them was ſpoken with by the Boudeuſe, which proved to be a ſnow from Malacca, bound for Japara. M. Bougainville now coaſted the land of Java, the ſhore of which is level, but the interior country abounds in lofty mountains. At ſun-riſe on the 26th, the coaſt of Java appeared. In the afternoon the commodore ſpoke with a Dutchman who commanded a boat bound for the iſles of Amboyna and Ternate, who ſaid that, according to his reckoning, he was then twenty-ſix leagues from Batavia.——Having come to an anchor for the night, the ſhip ſailed early in the morning of the 27th, and on the following night, came to an anchor, in the fear of having even paſt the port of Batavia; but having ſight of the church of that town in the morning, they proceeded, and ſoon anchored in the road, happy, after ſo many toils, difficulties and dangers, to have reached a ſpot which they conceived would ſoon put a period to all their misfortunes, by inſuring them a ſafe arrival in Europe.

M. Bougainville reſolved to make his ſtay at Batavia as ſhort as poſſible, but the want of biſcuit, a ſufficient quantity of which was not baked, compelled him to ſtay longer than he had intended. A Dutch officer came on board, with a written paper, of which the Frenchman underſtood not a word, but the cockſwain having enquired who their viſitants were, demanded a certificate written and ſigned by the commanding officer. M. Bougainville, who had ſent an officer on ſhore to wait on the governor, declined to give any anſwer till his return. This officer came back late in the evening, with an account that his excellency was at his country-houſe, but that he had been with the ſhebander, who promiſed to introduce the commodore to the Dutch general, on the following day.——The heat of this climate requires that viſits ſhould be made early in the morning; M. Bougainville therefore ſet out ſoon after day-break, and, after waiting on the ſhebander was by him conducted to the governor-general, who was then at one of his country reſidences, about nine miles from the town. The behaviour of this chief of an important diſtrict, was equally ſincere and obliging, he approved of the conduct of the reſident at Boero, in his treatment of the French, during the hour of their diſtreſs. He gave permiſſion for the ſick to be lodged in the hoſpital, and iſſued the proper orders for their being received. The furniſhing of the neceſſary ſupplies was left to the ſhebander, and when all matters of buſineſs were ended, the governor aſked the commodore if he would ſalute the citadel. To this an affirmative anſwer was given, on condition that the ſalute ſhould be properly returned. Theſe preliminaries being adjuſted, M. Bougainville went on board his ſhip, ſaluted with fifteen guns, and was complimented with the ſame number.

The ſick people were now ſent to the hoſpital, 28 in number, moſt of whom were now troubled with the bloody-flux, and the reſt with the ſcurvy. The officers having taken lodgings in the town, fixed a day for paying a viſit of ceremony to the governor, at his country-ſeat, called Jacatra; after which they viſited in form, an officer called *Schout-by-Nacht*, or rear admiral; who is a member of the regency, and has a vote in every matter reſpecting maritime affairs. This gentleman lives with a degree of ſplendour that would not diſgrace a prince. M. Bougainville mentions the theatre of Batavia as an elegant building; but of the performances he was not qualified to judge, from a total ignorance of the language. His curioſity impelled him to take a view of the Chineſe comedies, but of theſe alſo he could form no judgment but from ſight. Excluſive of the exhibitions on the regular theatres, he ſays that a kind of pantomime is daily performed on ſcaffolds, erected in the Chineſe quarter of the city. It is a ſingularity of the Chineſe comedy, that the characters of men are repreſented by women; nor is it unfrequent to ſee the actors entertain the ſpectators with a boxing-match. Our ingenious voyager repreſents the neighbourhood of Batavia as elegant beyond deſcription. The neatneſs is all Dutch; the magnificence, he ſays, is Pariſian. A clergyman of Batavia, Mr. Mohr, diſtinguiſhed for his immenſe riches, and his extenſive knowledge, has erected in the garden of one of his country-houſes, one of the moſt ſuperb obſervatories in the world, and has furniſhed it with a great variety of inſtruments of the conſtruction of European artiſts; our author obſerves "That he is doubtleſs the richeſt of all the children of Urania."—The water of Batavia is of ſo bad a quality that the people of fortune import Seltzer water from Holland, for their common drinking at a moſt enormous expence. The houſes of this city are built only one ſtory high, on account of the frequent earthquakes, which would be of pernicious conſequence to buildings of a lofty conſtruction. The riches of the Batavians are marked by the magnificent taſte in which their houſes are furniſhed; yet is the city ſaid to be much inferior to what it was ſome years ago; and it is certain the rent of houſes is not half as much as it was; yet will this place always be rich, through the refined policy of the Dutch, which makes it difficult for any man, after he has amaſſed a fortune to tranſmit it to Europe; for any money intended to be ſent to Holland, muſt paſs through the hands of the company, who charge eight *per cent.* for the care of ſending it to Europe; excluſive of which the current money of Batavia would ſuſtain a loſs of no leſs than twenty-eight per cent, even if it could be ſmuggled out of the country. The diſtinction of rank he ſays, is obſerved in the ſtricteſt degree at Batavia, and the *Etiquette* is never diſpenſed with. The gradation of rank is as follows, viz. The high regency, the court of juſtice, the eccleſiaſtics, the company's ſervants, the ſea-officers, and thoſe of the military. There is no appeal from the court of juſtice. This court, about twenty years ſince, ſentenced to death the governor of Ceylon, who had been convicted of moſt infamous oppreſſion in his government; and he was executed oppoſite the citadel at Batavia. If any of the reſpective ſovereigns of the iſland of Java offend againſt the eſtabliſhed Dutch policy, they are put to death in the moſt inhuman manner. On theſe melancholy occaſions, the unhappy ſufferers are dreſſed in white drawers, and are never beheaded, from a conviction prevalent among them that appearing in any other dreſs, or viſiting the other world without their heads, would be productive of the moſt fatal conſequences; nor do the Dutch dare to controul theſe opinions, as the immediate conſequence of ſuch a procedure on their part, would be a revolt of the Javaneſe.—The Dutch company have an excluſive right to a large part of the iſland of Java. The iſland of Madura formerly belonged to them, but the chief of it revolted from their authority, and the ſon of this revolting king, is at preſent the governor of that very iſland of which his father had been ſovereign. The Dutch, equally deep in every ſtroke of their politics, have ſeized the province of Balimburan, in conſequence of the ſovereign of that diſtrict having revolted from their authority. It is aſſerted, that the Engliſh erected him a fort, and ſupplied him with arms and ammunition to combat that ſlavery, which he thought the more an indignity becauſe it was impoſed on him by a merchantile nation. After a war of two years, and after repeated battles, in the laſt of which the Javaneſe prince and his family were made priſoners. The Dutch became final conquerors, and the routed ſovereign being lodged in the citadel at Batavia, ſoon fell a ſacrifice to the grief that preyed on his mind.—When M. Bougainville

arrived at Batavia, it was in agitation to ſend the ſon and the other branches of this unhappy family to the Cape of Good Hope, in order that they might ſpend the remains of a wretched exiſtence on the Iſland of Roben. The ſeveral chiefs of the different diſtricts of the Iſland of Java, are ſurrounded with Dutch guards, ſo that they are kings only in name. From theſe, however, the Dutch receive arrack, rice, ſugar, coffee and tin, in return for which they ſupply opium, the ſale of which is very profitable, from the great quantities conſumed by the Javaneſe.

Before the crews of the Boudeuſe and Etoile had been ten days at Batavia, the diſeaſes common to that climate began to attack them with all their fury. From a vigorous ſtate of health the people were, in a few days, reduced to the brink of the grave, nor could the commodore's utmoſt diligence enable him to tranſact his affairs with a proper degree of diſpatch, as the illneſs of the Shebander himſelf prevented the acceleration of his buſineſs.

Every officer on board the Boudeuſe began to experience the fatal effects of the climate; and, at length Aotourou felt the dreadful influence of this peſtiferous clime, and it is ſuppoſed, that nothing but the readineſs with which he took the preſcriptions offered him, could have ſaved him from the moſt fatal conſequences of the contagion. For a long time after he left Batavia, he diſtinguiſhed it by the name of *Enoua Mate*, "the land which kills."

The ſhips ſailed on the 16th of October, 1768, and cleared the ſtreights of Sunda on the 19th in the afternoon. By this time the crew were all perfectly cured of the ſcurvy; but a few of them remained ill of the bloody-flux. On the 20th, the ſhips were in ſight of the Iſle of France, and on the 8th of November, the Boudeuſe anchored in the port of that iſland, the Etoile, which had been unavoidably left behind, anchoring in the ſame port on the following day. At this place the ſhips were repaired, and the commodore left behind him on the iſland ſeveral perſons, who deſired to add to the numbers already in that colony.—And here he expreſſes his happineſs that he was enabled, after ſo tedious a voyage, to enrich this colony with inhabitants and neceſſaries, but he laments in the moſt pathetic terms the death of the Chevalier de Bouchage, an enſign on board the king's ſhip, whoſe abilities as an officer could be ſurpaſſed only by his virtues and accompliſhments as a man.

M. Bougainville ſpeaks in high terms of the forges for making iron, which are eſtabliſhed on this iſland, and he even prefers them to thoſe of Europe. M. Bougainville ſailed from this place the 12th of December, 1768, leaving the Etoile behind him, to undergo ſome neceſſary repairs, and this ſhip did not arrive in France till a month after the Boudeuſe. Without encountering any ſingular accident, the adventurers had ſight of the Cape of Good Hope on the 18th of January, and came to an anchor in Table Bay, on the following morning. M. Bougainville omits a deſcription of the cape, which has been ſo often and ſo accurately deſcribed by our circumnavigators, and other voyages; one circumſtance, however, he fails not to mention, that they killed a quadruped, named the Giraffe, which was ſeventeen feet in height, and that they took the young one alive, which meaſured ſeven feet. "None of theſe (ſays our author) had been ſeen after that which was brought to Rome in the time of Cæſar, and ſhewn in the amphitheatre." M. Bougainville ſailed from the cape on the 17th, and came to anchor off the iſland of St. Helena, on the 4th of February, where he remained till the 6th, and then got under ſail in purſuance of his voyage to France. On the 25th of this month the commodore fell in with the Swallow, commanded by Captain Carteret, as has been already related.

Nothing material happened from this time till they had ſight of the iſle of Uſhant, when a violent ſquall of wind had nearly blaſted all the hopes of ſo fine a voyage. The commodore bore away for St. Malocs, which port he entered after an abſence of two years and four months from his native country; during all which time he had buried only ſeven of his crew, a circumſtance that will be deemed quite aſtoniſhing, when we reflect on the variety of dangers they had encountered. 1769

We have mentioned that M. Bougainville brought Aotourou to Paris, where he took great pains to have him inſtructed, yet when he had been almoſt two years among Frenchmen, he could ſpeak but a very few words of their language, partly owing to a natural defect in his pronunciation already intimated, and partly to his being arrived at thirty years of age without his memory being exerciſed by ſtudy. M. Bougainville ſays he muſt have created a world of ideas in a mind as indolent as his body, before he could have adapted them to French words proper to expreſs them. Though Aotourou was thus deficient in the language of France, yet the ſtreets of Paris were quite familiar to him. He frequently bought things and was ſeldom defrauded in the purchaſe. None of the publick diverſions had any charms for him but the opera, to which he went regularly; for he knew the nights on which it was to be performed, and paid the ſame for admittance as other people: his great fondneſs for dancing was what rendered the opera ſo agreeable to him. He was exceedingly grateful to thoſe who conferred any obligations on him, nor did he ever forget their perſons or their favours. The Ducheſs of Choiſeul was the firſt in the liſt of his friends, and he expreſſed more gratitude for the polite attention with which ſhe treated him than even for the numerous preſents which he received at her hands: and as often as he heard of that lady's being arrived from her country-ſeat, he would immediately go and viſit her. After a reſidence of eleven months at Paris, Aotourou was put on board the Briſon, at Rochelle, which ſhip was deſtined to convey him thence to his own country. M. Bougainville gave about 1500l. ſterling, towards the fitting out the Briſon for this voyage; and the Ducheſs of Choiſeul ordered a conſiderable ſum to be expended in cattle, ſeeds, implements of huſbandry, &c. which were ſhipped for the uſe of the natives of Otaheite.*

While Aotourou was at Paris, in 1769, a comet appeared, which furniſhed M. Bougainville with an opportunity of knowing that this kind of ſtars had been frequently obſerved at Otaheite; but that the natives do not ſuppoſe that they are in any reſpect portentous of evil conſequences;——but what we call ſhooting-ſtars, are by theſe people deemed evil-genii.

M. Bougainville has made many philoſophical reflections on the character of this Indian; and many others are interſperſed in the courſe of his voyage, the principal of which we have ſelected. The French commander has alſo given a deſcription of the eſtabliſhment of the Spaniards at Rio de la Plata, as alſo an account of the miſſions in Paraguay, which though we conſidered as too long to be inſerted in the midſt of his narration, yet we think of too much importance to be omitted. We ſhall, therefore, here preſent it to our readers.

Paraguay deſcribed.

"The river de la Plata, (ſays our author) takes a ſoutherly courſe to the 34th degree of latitude, where it is united with the river Uraguai, making one ſtream, which runs ſtill ſoutherly to the Ocean. The Jeſuits have advanced a falſe principle of geography, and other authors have fallen into their errors, by ſuppoſing the River de la Plata to ſpring from the lake of Xarages. This lake, which has been the ſubject of much inquiry, is now ſuppoſed to have no exiſtence. By order of the courts of Spain and Portugal, the Marquis of Valdelirais, and Don George Menezes, undertook to determine the limits of the poſſeſſions of theſe two powers; and accordingly ſeveral Spaniſh

* M. Bougainville concludes this part of his narrative with the following very humane and equally political wiſh. "O may Aotourou ſoon ſee his countrymen again!"

1769 and Portugueſe officers, traverſed this large diſtrict of America, between the years 1751 and 1755. The Spaniards embarked on the river Paraguay, and the Portugueſe proceeded from a ſettlement belonging to the crown of Portugal, called Maragoſſo, ſituated on the interior boundaries of the Braſils, at about twelve degrees ſouth latitude, and proceeded up the river Caourou, which, according to the maps of the Jeſuits, is deſcribed as falling into the lake Xarages. But how great was their ſurpriſe and diſappointment at meeting in the 14th degree of ſouth latitude in the river Paraguay, without finding any thing to juſtify the ſuppoſition of the exiſtence of the lake! Hence it was concluded that the periodical inundations of the river over a conſiderable tract of adjacent country, having been received in low grounds, formed a body of water, which, by former navigators was taken for the ideal lake. The ſource of the Paraguay, or Rio de la Plata, is among the mountains, between the two oceans, and between five and ſix degrees ſouth latitude, and it empties itſelf into the river of Amazons. The Uraguai ariſes in the Captainſhip of St. Vincent's in the Braſils; and the Parana, in the mountains to the eaſt north-eaſt of Rio Janeiro, whence it flows to the weſtward, and then changes its courſe to the ſouth.——It appears from the account of the Abbé Prevoſt, that Diaz de Solis, firſt diſcovered the Parana in 1515, and called it after himſelf; but that in 1526, Sebaſtian Cabot named it la Plata, or, Of Silver, on account of the many pieces of ſilver, which he obſerved in the poſſeſſion of the natives of that country. The fort of Eſpiritu Santo was erected by Cabot, who had ſcarcely time to ſee it completed before it was levelled with the earth. In 1535, Don Pedro de Mendoza, great cup-bearer to the emperor, ſailed for the river de la Plata, and founded Buenos Ayres; but this undertaking proved extremely unſucceſsful; and after Mendoza's death, the inhabitants of Buenos Ayres, unable to defend themſelves againſt the depredations of the Indians, and living in perpetual dread of famine, fled for ſanctuary to Aſſumption, now the capital of Paraguay, which was built by the followers of Mendoza, ſoon became well inhabited, and of courſe conſiderably enlarged. Don Pedro Artiz de Zarara, governor of Paraguay, rebuilt Buenos Ayres, upon an improved plan, in the year 1580, and it ſoon became the principal reſort of ſhips, navigating the South Seas; ſoon after which it was an epiſcopal ſee, and the place of reſidence of the chief magiſtrate. The ſituation of Buenos Ayres is computed to be in 34 deg. 56 min. ſouth lat. and 61 deg. 5 min. weſt longitude from Paris. The inhabitants, including negros, do not exceed twenty thouſand, notwithſtanding which, the town covers a very large ſpace of ground, owing to the generality of the habitations having no more than a ground-floor, with ſpacious court-yards, and extenſive gardens. The public market is held in a grand ſquare, the angles of which are formed by the governor's palace, the town-hall, the cathedral, and the epiſcopal palace. There is no harbour at Buenos Ayres, ſo that ſhips of any conſiderable burden are obliged to ſail to Encenada de Baragon, about ten leagues eaſt ſouth-eaſt of the town, or elſe receive and deliver their freights by means of ſmall boats. Adjoining to the Jeſuits convent there is a building, called the houſe for the exerciſes of women, where married and unmarried people, without the conſent of their huſbands or friends, ſequeſter themſelves for the ſpace of twelve days, during which time various religious exerciſes are practiſed, almoſt without intermiſſion. There are holy ceremonies appointed for the ſlaves; and ſuch of the negros, as pay four reals per annum to the Dominicans, are admitted members of ſome religious comniunity, and intitled to certain holidays, to hear maſs, and a decent interment at the expence of the friars. This community of negros acknowledge St. Benedict of Palermo, and the Virgin Mary for their patrons, and on the days dedicated to theſe ſaints, they ſelect two perſons to repreſent the kings of Spain and Portugal, who are followed by all the negros of the order, parading through the ſtreets from the riſing to the ſetting of the ſun, ſinging, dancing, repreſenting battles, and repeating religious incantations. The grounds near Buenos Ayres are extremely fruitful, producing all the real neceſſaries of life; but it is entirely uncultivated at only three leagues diſtance; and in croſſing the plains ſcarcely a hovel is to be met with; ſo that paſſengers are frequently under the neceſſity of ſleeping in their carriages, and thoſe who go on horſeback are often, for many ſucceſſive nights, expoſed to the inclemency of the weather. Horſes and black cattle abound in theſe plains, and the latter are frequently killed by travellers, who take away ſufficient for a few meals, and leave the reſt for the birds and beaſts of prey. The only furious animals known here are wild dogs and tygers, the former, which are ſaid to have been originally brought from Europe, are both fierce and numerous, perhaps owing to their food; and the climate ſeems greatly to have altered their ſpecies;—— the latter are of the uſual kind, but are not very frequently met with. In the neighbourhood of Buenos Ayres wood is ſo extremely ſcarce, that very little is to be found that will ſerve for fuel, and what is uſed in erecting and repairing houſes, or in refitting veſſels, is tranſported from Paraguay.—The Indians inhabiting this part of America are of a copper complexion, ſeldom exceeding five feet in ſtature, and of a very forbidding aſpect. Their chief is diſtinguiſhed by a thong of leather tied round his forehead, to which are faſtened ſeveral plates of copper. The arms they uſe are bows and arrows, ſlings and balls. Theſe are about the circumference of a two pound cannon ball, and being received in leathern cups at the ends of cords of about ſix or ſeven feet long, they throw them when on horſeback, with ſuch amazing force and dexterity, as to be almoſt at a certainty of killing an animal at the diſtance of three hundred yards. Some years ago a number of delinquents, eſcaping the puniſhment they were ſentenced to, retreated to the north of the Maldonadoes, where being joined by ſome deſerters and Indian women, they have formed a community of deſperadoes. They frequently plunder the Spaniſh ſettlements, and carry their ſpoils to the boundaries of the Braſils, where they receive in exchange for them fire-arms and cloaths from the Pauliſts, another deſperate race of robbers, ſuppoſed to be between ſix and ſeven hundred in number, who removed from Braſil farther to the north weſt about the ſixteenth century, ſince which time they have continually traverſed the adjacent country in parties; and ſuch travellers as are ſo unfortunate as to meet with them, generally fall victims to their cruelty and rapine.—The governments of Tucuman and Paraguay, with the miſſions of the Jeſuits, are dependent upon the governor-general of la Plata, who, in all matters relating to the ſilver mines of Potoſi, is under the juriſdiction of the viceroy of Peru.—A mint having been lately eſtabliſhed at Potoſi, the ſilver will not in future be brought from hence in the ore, but refined on the ſpot.—Two hundred carts, attended by three hundred men, go annually from Buenos Ayres to fetch ſalt from the lakes adjacent to the ſea in 43 deg. ſouth lat. and the neceſſity of obtaining ſalt, is the only motive that induces the Spaniards to travel ſo far ſouth of Buenos Ayres, where the country exhibits a melancholy proſpect of dreary and uncultivated lands.

The principal commerce of Buenos Ayres is with Peru and Chili, to which provinces they ſend cotton, mules, ſome ſkins, and about 400,000 Spaniſh pounds weight of the Paraguay herb, or South Sea tea, every year; great part of which laſt article is conſumed by the laborious in the Peruvian mines, it being eſteemed a moſt excellent preventive againſt the effects of the noxious vapours ariſing from thoſe inexhauſtible funds of treaſure. Notwithſtanding there is but little trade at Buenos Ayres, it is a place of ſuch great riches that the regiſter ſhips frequently carry away a million

of dollars each: and if they were inclined to extend their ſkins and fur trade, thoſe articles alone would, undoubtedly, acquire them immenſe treaſure.

Montevideo was built between forty and fifty years ſince, upon a peninſula, to the north of the river, and about ninety miles above its mouth. The town has a bay, affording ſafe anchorage, but in boiſterous weather ſome ſkill muſt be exerted, to keep clear of a chain of hidden rocks of the coaſt point of the bay, which are called Punta de les Carretas. The town of Montevideo affords every refreſhment; and the air being particuly ſalubrious, renders it ſtill more inviting to voyagers, who generally find here a happy renewal of that health and vigour which from various cauſes, muſt inevitably be impaired by a long reſidence on the ſtormy element.

The Jeſuits took up their reſidence at Paraguay, in the year 1580, and in the time of Philip the Third formed their celebrated miſſions, called by the Europeans [Paraguay or Uraguai.] Theſe miſſions are thirty-ſeven in number; twenty-nine being on one ſide of the river Uraguai, and eight on the oppoſite ſhore.—The Jeſuits undertook to convert the natives of this tract of America to the Roman Catholic religion; and in order to encourage them to purſue this difficult taſk with a proper degree of ſpirit, they were rendered independant of the governor's authority, and allowed an annual ſtipend of ſixty thouſand piaſtres for their neceſſary expences. And, in order to indemnify the crown for this expence, a tax of one piaſtre per head was levied upon all the Indians between the age of eighteen and ſixty. Notwithſtanding the many and great obſtacles which would have diſpirited leſs determined men, the Jeſuits, by a ſteady perſeverance, the moſt ardent zeal, and a ſtrict attention to the genius and diſpoſition of thoſe ſavages, at length civiliſed their manners, implanted in their minds the principles of the chriſtian religion, and made them happy within themſelves and uſeful to the community.—In the year 1757, the Spaniſh Monarch having given up the colonies on the left ſhore of the river to the Portuguſe in exchange for Santo Sacramento, with a view to ſuppreſs the ſmuggling trade, the Indians of the ceded colonies, diſguſted at being driven from their cultivated lands took up arms againſt the Spaniards. Don Joſeph Andonaighi, governor-general of the province De la Plata, and Don Joachim de Viana, governor of Montevideo, marched againſt and entirely defeated them. Soon after this battle the inſurrections being quelled, Viana left Buenos Ayres, and was accompanyed as far as the Maldondoes by ſeven Indian families where they ſettled, leading a life of exemplary prudence and induſtry. The ſituation of theſe reclaimed people gives an idea of what the poets call the golden age: they knew no diſtinction of rank, were neither incumbered with riches, nor oppreſſed with poverty; and as all their wants were ſupplied from the warehouſes appointed to receive the produce of the common labour, they had no incitement to uſe ſiniſter and clandeſtine means to obtain private property. The country, in which the miſſions are ſituated, reaches about four hundred and fifty miles eaſt and weſt, and about ſix hundred miles north and ſouth, and the number of the inhabitants is computed to be three hundred thouſand. There are immenſe foreſts of all kinds of wood, and extenſive meadows, watered by innumerable ſmall rivers and brooks, which produce paſture ſufficient for upwards of two millions of cattle.—The country was divided into diſtricts, over each of which two Jeſuits were appointed to preſide; one of whom acted as rector, and the other as his curate. The Indians lived in a ſtate of the moſt abſolute ſubmiſſion to their rectors, who ſeverely chaſtiſed them for miſdemeanours, and annually appointed a number of inferior officers called corregidors to take cognizance of petty offences. Near the church are two buildings; one of which was inhabited by a great number of girls, who were inſtructed in various occupations. The other building was occupied by young negro men, who were brought up to various handicraft profeſſions, and one department of this building was appointed to the teaching of muſic, ſculpture, architecture, &c. The rector's houſe ſtood between theſe buildings, and had communications with each, which he viſited every day to ſee the proviſions juſtly diſtributed, and the proper decorum in other reſpects ſtrictly obſerved.— 1769

The intire expulſion of the Jeſuits from the Spaniſh dominions having been reſolved upon, Don Francis Buccarelli was appointed to carry this deſign into execution; and he accordingly ſailed for Buenos Ayres, arrived there in the beginning of 1767, and immediately ſent the diſpatches with which he was charged to the governors of Peru and Chili, and the commanders of Cordoua, Mendoza, Corrientes, Santa Fe, Salta, Montevideo, and Paraguay. Theſe diſpatches were accompanied by letters ſtrictly injoining the perſons to whom the diſpatches from the court were directed, not to open them till an appointed day. As it was a matter of doubt whether the Indians would tamely ſubmit to ſee Jeſuits arreſted in the colonies, all the preparations for carrying the king's orders into execution, were conducted with the moſt profound ſecrecy. The time for accompliſhing this grand deſign at length arrived, and the different governors being previouſly inſtructed to open their letters, and to proceed according to their contents with all imaginable diſpatch, the general execution began about two o'clock in the morning, when the Jeſuits with equal horror and aſtoniſhment, found their habitatious inveſted by the Spaniſh troops. They evinced a high degree of philoſophical reſignation and humility in quietly ſubmitting to their fate.

On the thirteenth of September a cacique belonging to each colony, and all the corregidors, arrived at Buenos Ayres. Theſe people were politically detached from their companions by the following ſtratagem, with a deſign of ſecuring them as hoſtages, in caſe any reſiſtance had been made. The governor-general ſent for them under pretence of communicating the ſubſtance of the king's letters; and theſe deluded people were not informed of the events that happened till they received the account from the mouth of the governor, who gave them a general audience immediately upon their arrival; when the governor informed them that he came to free them from the ſlavery they had long groaned under, and directing them to one of the houſes formerly occupied by the Jeſuits, they were there properly provided for at the king's expence. The Jeſuits had eſtabliſhed other miſſions than thoſe above mentioned to the South of Uraguai, and were making great progreſs ſouthward of Chili, towards the iſland of Chiloe, but the unexpected turn of affairs in Europe utterly deſtroyed a work, the completion of which had been an object of great attention for a long ſeries of years.—

Such is M. Bougainville's account of this extraordinary revolution which ſurprized all the world. Our circumnavigator ſeems in this, and many other inſtances, to have proved himſelf an accurate obſerver, and one calculated to do honour to the French nation.

PORTU-

PORTUGUESE VOYAGES TO THE EAST INDIES.

THE VOYAGE OF PEDRO ALVAREZ CABRAL.

1500 AFTER having given an account of the circumnavigators according to our promiſe, we return to the voyages of the Portugueſe, in whoſe ſervice Vaſquez de Gama had opened a way to India by the Cape of Good Hope, and had already made overtures towards a treaty of trade and commerce with the Samorin of Calicut.

A reſolution was now taken by the court of Liſbon to proſecute theſe valuable eaſtern diſcoveries. For this purpoſe, thirteen veſſels of different ſizes were fitted out, and the command given to Pedro Alvarez Cabral, a gentlemen of great merit, to whom, on the 8th of March, in the year 1500, the king delivered the Flag of the Croſs. The fleet contained 1200 men, with whom went eight Franciſcan friars, eight chaplains, and a chaplain-major. Their inſtructions were to begin with preaching, and in caſe that failed, to proceed to the deciſion of the ſword. The names of the captains of the ſhips were Sancho de Toar, of Cabral's veſſel, Nicholas Coello, Don Luis Coutinno, Simon de Myſaranda; Simon Layton, Bartholomew Diaz, who diſcovered the Cape of Good Hope; Diego Diaz (his brother, who had been purſer to De Gama, in the former voyage.) The captain of the caravels were Pedro de Atayde, and Vaſquez de Silveyra; Ayres Correa, was factor of the fleet, and was to remain as ſuch at Calicut.

In caſe the king of Calicut readily conſented to the ſettling of the factory, Cabral was ſecretly to importune him to prohibit the Moors from trading thither, or in any other of his ports; and to promiſe on that condition, to import from Portugal, the ſame ſorts of commodities, better and cheaper, than thoſe the Moors brought. They were alſo to touch at Melinda, on the coaſt of Africa, in order to land the ambaſſador, (brought from thence by Gama) and ſend the king a preſent. The 9th of March the fleet ſet ſail from Belem, the king accompanying Cabral to the water-ſide. On the 18th they came in ſight of the Canaries, and the 22d paſſed by St. Jago. The 28th De Atayde's ſhip was ſeparated, and no more heard of. They ſailed till the 24th of April, and then diſcovered land; which lying ſo far to the weſt, they concluded was ſome coaſt which Gama had not ſeen in his voyage. The men who were ſent on ſhore, brought word that it was a fruitful country, full of trees, and well inhabited. The people were ſwarthy and naked, and uſe bows and arrows. At night a ſtorm ariſing, they ran along coaſt for a port; which having found, they called it Puerto Seguis, or the Safe Port. Here maſs was ſaid on ſhore, great numbers of the natives aſſembling to look on, who were very civil and merry. They trucked parrots for paper and cloth. Cabral called this country Tierra de Santa Cruz, from the ſtone croſs he erected, which afterwards took the name of *Braſil*. Here he left two baniſhed men, to inform themſelves concerning the country, and ſent a letter to Portugal to acquaint the king with this new diſcovery.

Braſil diſcovered.

They departed on the 2d of May for the Cape of Good Hope, and on the 12th there appeared a comet in the eaſt, which for ten days continually increaſed, and was viſible both day and night. This was the fore-runner of a violent ſtorm, which aroſe on the 23d, in the north-eaſt, mixed with rain; it was ſucceeded at night by a calm. On the 28th it blew hard again, and they were forced to take in their ſails; but a water-ſpout appearing to the north-eaſt, and a calm enſuing, they not being acquainted with ſuch a phœnomenon took it for a ſign of fair weather, when on a ſudden a furious wind ſprang up, that not having time to furl their ſails, four ſhips periſhed, with all their men, among whom was Bartholomew Diaz, the diſcoverer of the Cape of Good Hope. The other ſeven remained half full of water, and had ſunk, but that their ſails being torn. The wind veering to the ſouth-weſt, the ſtorm ſtill continued; and in this manner they were toſt about for two days without ſails, the day being ſo dark, that the ſhips could not ſee one another, and expecting every moment to be ſwallowed up. But on the third day the wind abating, the fleet joined again, and they began to hope all was over, when preſently after, the wind coming about to the eaſt and north-eaſt, began to blow with greater fury than ever, and the waves to ſwell as high as mountains; ſo that one moment the ſhips ſeemed to be toſſed above the clouds, and the next to be plunged in the bottom of the deep. This dreadful tempeſt continued for twenty days together: in the day the water looked as black as pitch, and at night appeared like flames of fire. At length, the winds abating, they found they had paſſed the Cape of Good Hope during the ſtorm, which, however, had ſeparated four of the ſhips. On the 16th of July they fell in cloſe with the coaſt of Africa, in twenty-ſeven degrees ſouth, which appeared to be populous: yet none of the natives came to look at them, nor would the general ſuffer his men to land, having no hopes of getting proviſions there. Running on along the ſhore, and being near Sofala (with which as yet the pilot was not acquainted) they ſaw two iſlands, and near one of them two ſhips at anchor, which, on ſight of the Portugueſe, made towards ſhore; but being purſued, were overtaken, and yielded without reſiſtance: They belonged to the Moors, and came from the mines of Sofala, laden for Melinda, with gold, moſt of which they threw into the ſea, in their flight. The general treated the commander courteouſly, expreſſed ſorrow for his loſs, and reſtored all that was taken, as being a relation of the king of Melinda, who was a friend of the Portugueſe. The Moor, being willing to recover his gold again, aſked Cabral if he had any witches on board, who might conjure it up from the bottom of the ſea. The general anſwered, That the Chriſtians neither practiſed nor believed in witchcraft. Being informed that he had overſhot Sofala, he proceeded, and on the 20th arrived at Mozambique, where he took in water, and a pilot to carry him to Quiloa, an iſland 100 leagues beyond, in about nine degrees ſouth, where he was joined by two of the ſeparated ſhips. The dominions of this prince extended from Cape Corientes almoſt as far as Mombaſſa, near 400 leagues of coaſt, which is very populous and full of towns, beſides innumerable iſlands along it, that paid taxes; yet, for all this, he was of no great power, not being able to raiſe any conſiderable force. The country is very fruitful, and ſtored with ſmall cattle. The water is excellent. Quiloa is a place of great trade for Sofala gold, for which there is a great reſort of merchants from Arabia, Fœlix, and other parts. The ſhips here, as in all other places, were built without nails, and rubbed over with wild frankincenſe, inſtead of pitch, there being none in theſe parts.

A terrible tempeſt.

7 AP 53

Being arrived at the ancient and noble city of Quiloa, (where Ibrahim, a man renowned among his people, and rich with the trade of Sofala, then reigned) the general ſent to acquaint the king, that he was come with a letter from the king of Portugal, and had brought merchandiſe, in order to ſettle trade with him, deſiring an interview, and that it might be on the water, he having expreſs orders not to land. The king conſented, and the next day met him in a pinnace, accompanied with many attendants in boats, the ſtreamers flying, and trumpets ſounding. The king's letter being read, the ſheik conſented to a trade, and deſired an account of the merchandiſe might be ſent him the next day, promiſing to give gold in exchange. But next day, when the factor waited on him, he excuſed himſelf from performing his promiſe, alledging firſt, that the goods were not for his purpoſe; ſecondly, that he ſuſpected the general came with a deſign to conquer his country; but the true reaſon was, that finding they were Chriſtians, he had no mind to have any trade or correſpondence with them. The general, after this baulk, ſtayed three or four days, to ſee if the king would alter his mind: but perceiving, that inſtead of complying with their demands, he was fortifying himſelf for fear of an attack, it was reſolved to go on to Melinda, where he arrived on the ſecond of Auguſt.—Here he found three Mooriſh ſhips of Guzarat, but the general would not ſuffer them to be attacked, in friendſhip to the king of Melinda. Being come to an anchor, he ſaluted the city with his ordnance. The king immediately ſent to viſit him, with a preſent of proviſion and fruits, ſaying he might command whatever his country afforded. Cabral returned thanks by a meſſenger, and gave him to underſtand that he came with a preſent and letter from the king his maſter, offering to ſerve him with his fleet where-ever he ſhould command it. The preſent was the rich furniture of a horſe. Ayres Correa, chief factor of the fleet, being ſent with others to carry the letter and preſent, was met by ſeveral nobles at the water-ſide before the palace, attended by women with perfuming pans, and in this manner he was conducted to the king, who was much pleaſed with the letter, written both in Portugueſe and Arabic, and kept Correa to diſcourſe with him about Portugal. Next day the king had an interview with the general on the water, (the latter not caring to land) told him how much he was embarraſſed by the king of Mombaſſa, for admitting the friendſhip of the Portugueſe, and gave him two Guzarat pilots for Calicut.

Although the place ſtood near the ſhore, the king would ride down to the water-ſide in his new furniture.—On this occaſion, ſome of his courtiers had got a live ſheep at the foot of the ſteps, before his palace, and while the king was coming down, they opened its belly, and took out the bowels, over which the king rode, pronouncing certain words; a ſuperſtitious cuſtom in this place. The general left with the king two baniſhed men to inform themſelves of the country; one of theſe, who was afterwards called Machedo, learned the Arabic, and went by land to the ſtreights of Mecca; from thence paſſing to Balagat, by way of Cambaya, ſettled with Sabay, who was then lord of Goa, pretending to be a Moor; and became afterwards very ſerviceable to Albuquerque.

About the 7th Cabral left Melinda, and on the 20th, arrived at Anſadiva, (Anchediva) where after waiting a few days for the ſhips of Mecca, and finding they did not come, he proceeded on his voyage; and the 13th of September caſt anchor within a league of Calicut; and preſently there came on board ſeveral pinnaces, with proviſions to ſell; and afterwards ſeveral of the principal nayres, with a compliment from the Samorin, expreſſing much ſatisfaction at his arrival, and making great offers of friendſhip. Upon this Cabral went nearer the city with his ſhips, and next day went one Gaſpar to demand a ſafe conduct for a meſſenger, and with him the four Malabars, whom de Gama had carried away, dreſſed in the Portugueſe habit, the citizens ſeeing them return in good health and plight, were very glad, and ſo was the Samorin; but he would not ſee them as being but fiſhermen. He received Gaſper very well, and gave leave for any one to come on ſhore who had a mind. The general here upon ſent Alonſo Hurtado, with an interpreter, to acquaint the king, that he came from Portugal purely to ſettle trade and friendſhip, and deſired hoſtages that he might wait on him in perſon. The pledges he deſired were the cutwal, and Araxemenoka, one of the principal nayres. The king not caring to part with the perſons he required, on account of their age and infirmities, propoſed to ſend others in their ſtead. But afterwards, at the inſtigation of the Moors, was againſt ſending any at all, upon the punctilio that the general's demand argued want of confidence in him. After three days debate, the Samorin being overcome with the proſpect of the advantages ariſing from trade, complied to ſend the hoſtages: whereupon the general reſolved to wait on the king on ſhore; ordering Sancho de Toar, whom he left to command in his abſence, to uſe the hoſtages well, but not to deliver them to any perſon who came to demand them, althqugh it ſhould be in his name. 1500

The 28th of December, the Samorin ſent ſeveral of the principal nayres, with many ſervants and muſical inſtruments to attend the general; who being informed that he waited for him in a gallery built on purpoſe to receive him, near the water-ſide, ſet out in all the ſtate he could, accompanied with the boats of the fleet, and thirty of the principal perſons belonging to it. The hoſtages were very loath to enter the ſhip, till they ſaw the general landed, apprehending, that as ſoon as they were aboard, he would return and detain them. While this parley was on foot, Cabral landed; on the ſhore many kaymals, pinakals, and other principal nayres waited for him. He was immediately taken up in a chair, and accompanied with all his attendants, carried to the ſerame, which was a lodge or hall, hung with carpets of Alkatif; at the farther end whereof, the king ſat in an alcove, like a little oratory. Over his head hung the cloth of ſtate, of crimſon velvet, and under and about him were twenty ſilk cuſhions.

He had only a piece of white calico embroidered with gold about his middle; all the reſt of his body being naked. On his head was a cap of cloth of gold. At his ears hung jewels, compoſed of diamonds, ſaphires, and pearls; two of which were larger than walnuts; his arms, from the elbow to the wriſt, and his legs, from the knees downwards, were loaded with a number of precious ſtones of great value. His fingers and toes were covered with rings. In that on his great toe was a large ruby, of a ſurpriſing luſtre. Among the reſt there was a diamond bigger than a large bean. But all this was nothing, in compariſon to the richneſs of a girdle made with precious ſtones, ſet in gold, which caſt a luſtre that dazzled every body's eyes. Near the Samorin ſtood a chair of ſtate, and his litter, all of gold and ſilver, curiouſly adorned with precious ſtones. There were three trumpets of gold, and ſeventeen of ſilver, whoſe mouths were ſet with ſtones alſo; and ſeveral ſilver lamps and cenſers, ſmoaking with perfumes, beſides a golden ſpitting baſon. Six paces from him ſtood his brothers, who were next heirs to the crown; and a little farther ſeveral of his nobles all-ſtanding before him.

The general on his entrance would have gone up to kiſs the Samorin's hand, but being informed it was not the cuſtom there, he deſiſted, and took his ſeat in a chair placed near the king; which was the greateſt honour that could be done him. He then delivered his letter of credit written in Arabic, which having been read by the Samorin, the general delivered his meſſage, importing, that the king of Portugal was deſirous of the Samorin's friendſhip, and to ſettle a factory at Calicut which ſhould be ſupplied with all ſorts of European goods; requeſting, that either in exchange or for ready money his ſhips might have liberty

1500. liberty to lade with ſpices. The Samorin ſeemed pleaſed with the embaſſy, and told the general that the king his maſter ſhould be welcome to whatever his city afforded; whilſt they were talking the preſent was brought in, which conſiſted of a wrought ſilver baſon gilt, a fountain of the ſame, a ſilver cup with a gilt cover, two wedges of ſilver, four cuſhions, (two of cloth of gold, and two of crimſon velvet) a cloth of ſtate of the ſame velvet, ſtriped and bound with gold lace, a very fine carpet, and two rich pieces of arras. The audience being over, the king told the general that he might retire, either to his lodgings or ſhips; for that he was obliged to ſend for the hoſtages, who were not uſed to the ſea, and he was ſure would neither eat nor drink ſo long as they were on board; adding that if he came next day to conclude what was begun, they ſhould be ſent on board again. But this happy beginning had like to have been ſpoiled by an unreaſonable diſtruſt which happened to prevail on both ſides. The general being come to the water-ſide, a ſervant belonging to one of the hoſtages by order of the clerk and comptroller of the king's houſhold went before in a pinnace, to let them know that the general was coming on board. As ſoon as the hoſtages heard this, they all leaped into the water in order to get off in the pinnace:—Ayres Correa jumping immediately into his boat took ſome of them, but the reſt got off, among whom was the cutwal. The general being come on board, ordered the hoſtages that were taken to be put under the hatches that they might not run away, and ſent to the king, to complain of the reſt, laying the blame upon the clerk and comptroller, and promiſing to deliver thoſe he detained, as ſoon as his baggage and the men he had left to take care of it was brought on board. The next day the Samorin accompanied with 12,000 men came to the water-ſide, and ſent on board the general's men and baggage, along with whom went thirty pinnaces, to fetch back the hoſtages; but none of theirs through fear of being detained, durſt venture near enough to receive them. The Portugueſe ſeemed alſo as backward to venture to deliver them; ſo that they remained ſtill in cuſtody, however, next morning the general reſolved to ſend them on ſhore in his own boat, ordering his men to land them at a diſtance from the pinnaces. While they were preparing to put off with them, Araxemenoka the oldeſt of the pledges, and another, on a ſudden leaped into the water; the former was taken again, but the other with five more of them eſcaped. Cabral, ſurpriſed at their inſincerity, ordered Araxemenoka to be cloſely watched: but no meſſenger coming to demand him for three days, and the general obſerving that he would eat nothing all the while, in pity ſent him with ſeveral weapons belonging to the Malabars, to the king, who thereupon ordered two Portugueſe ſtill on ſhore, to be returned. Three days more being elapſed without hearing of the Samorin, the general reſolved to ſend to know whether he was inclined to finiſh the agreement already begun, in which caſe he propoſed to ſend his chief factor on ſhore, provided hoſtages were delivered as before, every one was poſſeſſed with fear, ſo that Frankciſco Correa was the only man aboard the fleet who would undertake to deliver this meſſage. The king received Correa kindly, ſaid he was well pleaſed to have trade ſettled, and made no difficulty to ſend hoſtages, naming for that purpoſe two nephews of a rich Guzarat merchant, who were immediately ſent aboard, and a handſome houſe provided for the factor Ayres Correa, to lodge his merchandiſe. And as the factor was not yet well known in the country, or acquainted with the rules obſerved in trade, and prices of commodities, the king ordered the grandfather of the hoſtages (to whom the houſe belonged) to inſtruct him therein; but the Guzarat neglected his orders, being a friend to the Moors; who by theſe means had their goods at their own price: the Gentiles, for fear of them, ſeldom going to the factory. On the other hand Correa, for want of knowing the rates of Indian merchandiſe, always offered more than the commodities were worth, and ſo bought them too dear. The Moors likewiſe ordered it ſo, that whenever he went to ſpeak to the Samorin, ſome of them might be preſent to thwart his meaſures. They alſo prevailed on Khojah Samiſide, admiral of Calicut, to hinder thoſe belonging to the factory from going on board, and to detain any of the ſhips which ſhould remove near the ſhore. Cabral being informed of this, and fearing to be ſet upon by the king's fleet, in caſe he remained in the harbour, weighed anchor, and ſtood out to ſea, reſolving there to conſult what was beſt to be done. The Samorin hereupon ſent for Correa, and learning from him the cauſe thereof, deſired him to ſend to the general to return, and forthwith gave orders to prevent the deſigns of the Moors. He alſo removed the Guzarat from about Correa, and in his place put another, named Coſebequin, who, though a Moor, was an honeſt man, and a friend to the Portugueſe. For the Moors, who are natives of India, are always at ſtrife with thoſe who come from Cairo, and the Streights of Mecca; and Coſebequin was head of the former, as Samiſide was of the latter. Further than this, the Samorin, to prevent the factory from being diſturbed by the Moors, and that they might have the better opportunity of buying and ſelling to advantage, gave them a houſe by the water-ſide, for ever. This was done by writing; and a copy given; to which the king put his hand and ſeal, incloſed in a piece of cloth of gold, for the general to carry back to Portugal. It was the Samorin's pleaſure alſo, that a flag, with the arms of Portugal, ſhould be erected on the top of the houſe. After this, they had a pretty good vent for their goods by Coſebequin's means: The natives frequented the factory, and the Portugueſe walked about in Calicut, with as much ſafety and as little moleſtation, as they could in Liſbon. However the merchants of Mecca obſtructed their lading for their ſhips, and though complaint was made to the king, they received no redreſs: this was occaſioned by the enmity of the two Mooriſh officers before-mentioned. The admiral being offended that the factor Correa had made greater application to the other than to him, contrived to be revenged, by getting the general to ſet upon a great ſhip of Ceylon, bound from Cochin to Cambaya with elephants. To effect this, he told Correa, that the owners of the ſhip had refuſed the Samorin one of thoſe creatures; and that therefore if the Portugueſe ſhould take the veſſel, they would not only oblige the king, and forward their own buſineſs, but alſo poſſeſs themſelves of a great quantity of ſpice, which belonged to the merchants of Mecca. His deſign was that the Portugueſe ſhould receive damage in the attempt, that ſhip being of great bulk; and to this purpoſe gave notice to the owners, that they might be the better provided: he concluded at leaſt in caſe his ſtratagem did not ſucceed, that the Portugueſe would diſoblige the merchants of Cochin. The general ſent word that to oblige the king, he would willingly undertake the buſineſs though he was ſenſible it was a dangerous attempt; but expected, as it could not be done without loſs of men, that he ſhould not be offended if his ſailors killed thoſe who were in the Cambaya ſhip. This having been allowed as reaſonable, the general ſent after the ſhip Pedro de Attayda with his caraval (wherein were ſixty men, beſides ſome Moors ſent by the admiral) who gave her chace; but being a ſhip of 600 tons and 300 men: ſhe made no account of the caraval, which was ſmall, till ſome of their balls reaching her, ſhe bore down upon them, pouring in her ſhot: but being fiercely attacked by the Portugueſe, and receiving a ball between wind and water, ſhe quickly made off, and was purſued into the bay of Cananor, where ſhe was taken. There were on board ſeven elephants, worth in Calicut 30,000l. one of which was killed and eaten by their men. The king next day came to the water-ſide, and was ſtrangely ſurpriſed, to ſee ſuch a veſſel taken by one that was not about a ſixth part of her bulk, praiſing the action, and treating the

men:

men: but the general having diſcovered the fraud, in order to gain the friendſhip of the king of Cochin, reſtored the ſhip to the owners, making ſatisfaction for the damages. Here it was that Duarte Pacheco Percyra, gave the firſt marks of that heroic valour, for which he was afterwards rewarded.

The taking this ſhip terrified the Moors of Calicut more than ever, who imagined the king ſet the Portugueſe on, in revenge of their injuries; and finding the latter was capable of bringing a great trade to his port, was careleſs whether they continued in his dominions or not. Upon this, they joined in a body, and waited on the Samorin, repreſenting how much concerned they were to find, that thoſe new comers ſhould be ſo highly prized by him, while thoſe who had ſo long ſupported the trade of Calicut, and given proofs of their fidelity, ſhould be held of no account. They inſinuated that the Portugueſe were pirates, and could not poſſibly come to India for the ſake of trade, ſince the profits ariſing from thence, could not (as they alledged) go near to defray the expences of a voyage of 5000 leagues, with ſo many ſhips and men. They even affirmed, that their deſign was to plunder the country, and take the city, if they could once get the leaſt footing in it; that they would turn the houſe which the king had given them for a factory into a fort; and from thence make war upon him in a little time: they concluded, by threatening to remove to ſome other city of Malabar, in caſe he continued to give the Portugueſe ſo much countenance, and them ſo little.

The king having heard this complaint, aſſured them of his friendſhip, and that he would not forſake them in favour of any ſtrangers, he told them the reaſon for ſending the general to take the Cochin ſhip was, to try the valour of the Portugueſe, and that he permitted them to trade as he did other merchants, in order to bring their money into his country. For all this, the Moors were not ſatisfied, becauſe the king did not command the Portugueſe to quit Calicut, and permit their trading in his port. After this, they openly intermeddled in their affairs, and gave them what oppoſition they could in buying of ſpices. Their deſign was to pick a quarrel with theſe new comers, that they might at length come to blows: in which caſe they concluded, they ſhould be able to deſtroy them by their numbers; in the mean time, incenſing the common people as much as poſſible againſt them. By means of theſe ſubtle dealings in the Moors, in three months time there were but two ſhips laden with ſpices, and at dear rates; although the Samorin had promiſed that all the fleet ſhould be laden in twenty days; and that they ſhould be laden before all ſtrangers. It was alſo diſcovered that the Moors bought up ſpices privately, at a lower price than the Portugueſe could get them for; and ſhipped them off contrary to an order of the king in favour of the latter. The general being troubled at theſe things, judged they could not happen without the conſent of the Samorin; for which reaſon he ſent to expoſtulate with the prince, and let him know how little had been performed of all that had been promiſed him; intreating, that as the time for returning to Portugal was now come, that he would cauſe him to be diſpatched without more delay. The Samorin ſeemed to be ſurpriſed and concerned, that the ſhips were ſtill unladen. He ſaid he could not believe that the Moors would offer to diſobey his commands by a clandeſtine buying of ſpecies, and lading their veſſels: but declared, if they had deceived him, that he would puniſh them for it; and gave the Portugueſe leave to ſearch their ſhips, and take all the ſpices they found in them, only paying the price which the Moors gave for them. As the Moors waited for an occaſion to quarrel with the Portugueſe, they thought this a very fit one. Immediately one of the principal among them, began to lade his ſhip openly; and the better to ſucceed in his ſcheme, got ſome Moors and gentiles, whom the factor took for his friends, to perſuade him, that if he did not ſend to ſeize the ſame, he would never be able to freight the fleet. Correa giving credit to what they told him, ſent to deſire the general to take the ſhip: but he, apprehenſive that it would cauſe the Moors to riſe againſt the factory, argued againſt it; Correa preſſed again, and Cabral declined it a ſecond time; but the factor perſiſting in his oppoſition, and engaging to anſwer for all damages that ſhould happen on that occaſion, the general, at length, much againſt his will, on the 16th of December, ſent word to thoſe on board the Mooriſh ſhip, that they muſt inſtantly depart, by virtue of the authority he had from the Samorin. The Moors making ſlight of the general's commands, he next day ſent all his boats to bring the ſhip into the harbour. This being known to the Moors on ſhore, they immediately roſe in a tumultuous manner, and after incenſing the rabble, repaired to the palace, where, the better to gain the king over to their ſide, they alledged that the Portugueſe had gotten a much greater quantity of ſpices and drugs than they had; yet, that not content with the larger ſhare, they, like thieves and pirates, would needs run away with all; intreating that they might have liberty to take ſatisfaction for the injury. The inconſtant king granted them their requeſt; and the revengeful Moors haſtened back to aſſault the factory. It was encompaſſed with a wall ten feet high, and in it were ſeventy men, including the friars; but among them all, there were only eight braſs bows, beſides their ſwords. The firſt party of the Moors that advanced were ſo few that the Portugueſe took them for a parcel of mob, and reſolved to defend the gates of the factory with their cloaks and rapiers: but their numbers increaſed ſo faſt, and they galled the defendants ſo much with their arrows and ſpears that, after loſing five men, they ſhut the gates with no ſmall difficulty, and betook themſelves to the walls with their braſs bows: but Correa perceiving their numbers to amount, in a little time, to four thouſand, with ſeveral nayres amongſt them, and that it was impoſſible to hold out long againſt ſuch a force without aid from the ſhips, ſet up a flag on the top of the factory to give notice of their diſtreſs. The general being ſick in bed, and unable to aſſiſt them in perſon, ſent Sancho de Toar with all the boats, and what men they had; but finding the enemy ſo numerous, he would not venture to land, nor even go too near the ſhore, for fear they ſhould ſend out their veſſels to take him.—Many of the beſieged being wounded with the ſpears and arrows, which ſhowered on them as thick as hail; and ſeeing the Moors preparing huge engines to batter down the walls, they reſolved to quit the factory by a door that opened to the water-ſide, hoping to ſave themſelves by the boats, but the enemy preſſing them cloſe, and the boats not advancing, only twenty eſcaped, though not unwounded; all the reſt being either taken or killed: among the latter was Ayres Correa; but his ſon Antonio, (who afterwards acquired great reputation by his actions in India) got off, being then only eleven years of age. The merchandiſe that was ſeized on this occaſion, amounted to 4000 ducats, and of the men that were then priſoners, four died of their wounds.

1500

The factory aſſaulted.

The general was greatly concerned at this diſaſter, and finding that the Samorin ſent no apology for what had happened, it was reſolved to take revenge immediately, that he might not have time to prevent it, by arming his fleet. Hereupon Cabral gave orders to attack ten large ſhips that lay in the harbour. After ſome reſiſtance, they were taken. Six hundred of the men were either killed or drowned; thoſe who remained alive were kept to ſerve as ſailors. In the ſhips were found ſpices, and other merchandiſes, with three elephants, which were killed and ſalted for proviſions. The goods being taken out, the veſſels were burnt in ſight of crowds of Moors on the ſhore, and, in the almadias, which came out to ſuccour their friends, but were ſoon repulſed with loſs. The general, not thinking this ſufficient, ordered his ſhips in the night to ſpread, and advance as near the ſhore as poſſible, with their boats before them; at

1500 break of day, the ordnance began to play upon the town, which did great damage both among the houſes and inhabitants, who crowded to avoid or repel the danger, and fell thick every ſhot. Several of the temples were demoliſhed, with part of the king's palace, and the terror was ſo great among the citizens, that the Samorin himſelf fled, who narrowly eſcaped a bullet, (from the boats) a nayre being killed juſt behind him. Towards evening they gave over the cannonade, to follow two large ſhips, which (on ſight of what was doing, as they were making into the port) fled to Panderane, where there were five more at anchor, but not being able to get near them, the general purſued his voyage to Cochin, where it was reſolved to ſettle a factory, and took two Mooriſh ſhips in his paſſage, which he burned, after taking out their cargoes of rice, he arrived at that city the 20th of December. Cochin. Cochin is the capital of a kingdom of the ſame name, 19 leagues ſouth of Calicut, it ſtands upon a river, is very ſtrong, and has a ſafe and a capacious port; the land about it is low, and divided into many iſlands. It is built after the manner of Calicut, and inhabited by Gentiles and Moors, who came from ſundry parts to trade. There were two, each of whom had fifty ſhips. Proviſions are not plentiful; but there is pepper enough, moſt of that which is at Calicut being brought from hence; yet the greater reſort of merchants being at this latter place, makes it the richer of the two. The country being of no great extent, and the king not intitled to coin money, he was therefore but poor. Beſides, he was ſubject to the Samorin, who on his acceſſion to the throne, went to Cochin, and diſpoſed of the crown as he thought fit. He was alſo obliged to aſſiſt the king of Calicut in all his wars, and to be of the ſame religion.

The general having caſt anchor, ſent a Gentile convert, called Michael Joghi, to the king to inform him of his coming, of what he had done at Calicut, and of his deſire to trade to his port, with either merchandiſe or ready money. The king, (whoſe name was Trimumpara) left it to his own choice, and let him know that he might ſend whom he would to land for that purpoſe; diſpatching, at the ſame time, two of his principal nayres as hoſtages, on condition, that he ſhould change them every day, becauſe, if they once ate on ſhip board, they never appeared in his preſence any more. The General pleaſed with this hopeful beginning appointed Gonzalo Gil Barboſa, for factor: and ſent with him a clerk, an interpreter, and four baniſhed men, as ſervants. The king ſent the regiſter of the city, and ſeveral nobles to receive the factor and bring him to court. Here they found nothing of that ſtate which they ſaw at Calicut. The prince was but meanly clad, and his court had nothing but bare walls, with certain ſeats round them, railed or boxed in like a theatre, in one of which Trimumpara ſat. The factor being introduced, offered the preſent from the general, which conſiſted of a ſilver baſon, for waſhing hands, full of ſaffron, a large ſilver ewer, filled with roſe water, and ſome branches of coral. The king received them with pleaſure, returning the general thanks, and after he had talked a while with the factor, ordered them to be well lodged. The general would not venture more men on ſhore, for fear of ſuch an accident as happened at Calicut, but the event ſhewed there was no reaſon for diſtruſt, for by the kind uſage the Portugueſe met with, by the diſpatch that was made in lading their ſhips, and the willingneſs with which the natives aſſiſted them on all occaſions, it plainly appeared, that Trimumpara was a prince of an honeſt diſpoſition, and that their differing with the Samorin, was the beſt fortune that could have attended them.

The ſhips being laden, and the general on ſhore, there came two Indian chriſtians from Crangalor, or Cranganor, a city near Cochin, who were brothers, (one of them named Joſeph) and deſirous to go to Portugal, with a deſign to viſit Rome and Jeruſalem. Cabral aſked them whether the place they came from was inhabited ſolely by Chriſtians? and, whether they belonged to the Greek or Latin church? One of them anſwered, That the inhabitants were a mixture of Gentiles, Chriſtians, Jews, and ſtrangers, who were merchants of Syria, Egypt, Perſia, and Arabia; that the chriſtians paid the king tribute, and dwelt in a part of the city by themſelves; that they had a church in which they had croſſes, but no images or bells, (but the prieſts in calling the people to prayers, obſerved the order of the Greeks.) That they had their popes, under whom were twelve cardinals, and two patriarchs, with many biſhops and archbiſhops, who all reſided in Armenia: thither he ſaid went the biſhops of Cranganor to receive their dignity, and added he had been there to be ordained prieſt by the pope; that the ſame method was obſerved by all the clergy within his juriſdiction, which extended over India and Chatay; that the two patriarchs reſided in thoſe two provinces, and the biſhops were diſperſed in the cities belonging to them; that their pope was called Catholicos, and their tonſure was made in the form of a croſs. They were both admitted on board.—After this there came two meſſengers from the kings of Cananor and Coulan, inviting Cabral to their harbour, and promiſing him ſpices cheaper than he could have at Cochin. The general returned them thanks, and excuſed himſelf from going, in regard he was already laden: but promiſed to viſit them on his return to India. He had ſcarcely taken in his cargo, when twenty-five great ſhips, beſides ſmaller veſſels, appeared on the coaſt. The King of Cochin being informed of their deſign, immediately ſent the general word, that they came on purpoſe to ſeek him out, and had 15,000 ſoldiers on board: offering, at the ſame time, to aſſiſt him with what he wanted. Cabral returned thanks, but ſaid, he ſhould be able, with the few he had, to make them repent their errand. The general obſerving that they hovered about, and did not venture within a league of his fleet, weighed anchor, and went out againſt them: but a ſtorm ariſing, and the wind ſhifting contrary, he was obliged to return.

On the next day, the 10th of January, the wind proving very fair, the general prepared to move towards the enemy; but miſſing Sancho de Toar's ſhip, which was the ſecond in ſize, and beſt provided with men, he thought fit to change his reſolution, and make the beſt of his way home. He was followed all day by the Calicut fleet, which at night left him. This accident prevented him from returning to Cochin, as he had propoſed, to ſet on ſhore ten nayres, hoſtages; who, after five days ſailing, were reconciled to eat on board, by the general's good words. On the fifteenth they anchored before Cananor, 31 leagues to the north of Cochin. This city is very large. The houſes are of earth, and covered with ſlates. There is a fine bay before it. The country produces plenty of ginger, cardamons, tamarinds, mirabolans, caſſia, and the like; but no more pepper than is conſumed in the country. The Moors drove here a great trade. The pools, near the city, breed aligators. Here are adders likewiſe ſo poiſonous, that they were ſuppoſed to kill men with their breath, and bats as large as kites, the head being like that of a fox: they are very good to eat: proviſions are plenty. The king was a Bramin, and one of the three independent princes of Malabar, but not ſo rich as either the prince of Calicut or Coulan. Here the general took in 400 quintals of cinnamon: and it being judged, that the reaſon why he did not buy more, was for want of money, the king ſent to tell him, he might have what he would on truſt. This generous offer Cabral declined with thanks; and took on board an ambaſſador, ſent by the king to cultivate Friendſhip with the court of Portugal. Afterwards he departed, making his way acroſs the gulph, lying between India and Africa: about the middle of which, on the thirty-firſt of January, he took a great merchant-ſhip; but finding it belonged to the king of Cambaya, let it go again, ſending word that the deſign of his coming to India was not to make war with any of the princes belong-

ing to it, though he had been forced to it by the Samorin's breach of peace. He took nothing out of the ſhip but a pilot, to conduct him through the gulf. Being arrived near the African coaſt, the 12th of February a ſtorm ſuddenly aroſe, by which in the night, the ſhip of Sancho de Toar was driven on ſhore, and taking fire was burnt; but all the men were ſaved. Following their courſe in this tempeſt, they paſſed by Melinda, not being able to put in there, nor at any other place upon the coaſt, till they came to Mozambique, where they caſt anchor in order to refit their ſhips and take in water.

Cabral, in the mean time, ſent de Toar to diſcover Sofala, and the fleet being in readineſs, ſome time after he proceeded on his voyage. Near the Cape of Good Hope, they were attacked by ſeveral violent ſtorms, in which one of the ſhips was ſeparated; at laſt they doubled it the 22d of May, and had favourable weather till they came to Cape Verd, where they met with Diego Diaz, who having been ſeparated from the fleet in its way to the Indies, was driven into the Red ſea, where he loſt his boat and moſt of his men, by ſickneſs and want of proviſions. The pilot not venturing to carry him to India, he returned towards Portugal, with only ſeven men on board; who, after quitting the Arabic gulf, grew ſtrong and able to manage the tackle. 1501

The general finding there came no more ſhips, departed for Liſbon, where he arrived the 31ſt of July, 1501. He was followed in a few days by the ſhip which ſeparated from him at the Cape of Good Hope, and after that came in de Toar, who brought an account that Sofala was a ſmall iſland, cloſe to the continent, inhabited by Caffres; that the Moors from India traded there for gold, whereof there were mines up the country. Of the twelve ſhips that went out of Portugal, only ſix returned, the other ſix being never heard of more.

THE VOYAGE OF JUAN DE NUEVA.

BEFORE Cabral returned, the king of Portugal in the month of March 1501, ſent another fleet to India; but as he imagined the contention begun in the firſt voyage at Calicut was at an end, and that a trade had been ſettled there by Cabral as well as at Quiloa and Sofala, he thought fit to ſend no more than three ſhips and a caraval, with only 400 men in them, two carrying merchandiſe to Sofala, and two to Calicut. He appointed Juan de Nueva general, [admiral] of this fleet a native of Galicia, and an experienced ſeaman. His inſtructions were to touch at San Blas, and, in caſe he miſſed any of his ſhips, to wait there for them ten days, and after which he was to proceed to Sofala, and if a factory was not already eſtabliſhed, he was to ſettle one if poſſible. Then he was to call at Quiloa, and thence ſail over to Calicut; where if he found Cabral, he ſhould acknowledge him as general, and get him to eſtabliſh a factory at Sofala on his return, in caſe his own attempt ſhould prove in vain. De Nueva (having diſcovered the iſland of Conception in eight degrees ſouth latitude) got ſafe to San Blas (beyond the Cape of Good Hope) where in an old ſhoe was found a letter written by Pedro de Atayde, before-mentioned, which gave an account how matters ſtood at Calicut, Cochin and Cananor. Concluding, upon this, that it was not proper to leave the caraval at Sofala, having but few men, they paſſed on; and in Auguſt arrived at Mozambique, then at Quiloa, having found an iſland, which, from the commander, was called Juan de Nueva. At Melinda, the king informed them of what had paſſed in India, as the baniſhed man had done at Quiloa. Not far from the former they chaced two great ſhips, and took and burned one of them. From thence they croſſed the gulf to Anchedivia, where they arrived in November; and while they ſtayed to take in water, ſeven large ſhips of Cambaya paſſed by, in their way to the ſtreights of Mecca; but not caring to engage did not ſtop. The fleet being come to anchor, the general had a conference with the king, who preſſed him to leave his ſhips there: but De Nueva, deſirous firſt to talk to the factor at Cochin, declined that offer. On his way thither, he took a ſhip belonging to the Moors of Calicut, after a vigorous defence, and cauſed it to be burned. Being arrived at Cochin, the factory, with the reſt of the company, came on board, and acquainted him, that the king was greatly offended with Cabral, for leaving the port without ſeeing him, and carrying away the hoſtages; that, notwithſtanding, they were all kindly entertained, that at night they were lodged in the palace; and if in the day any of them went abroad, they had nayres to attend them; obſerving that this care was taken by the king to defend them from the Moors, who had one night ſet fire to their houſe. He alſo told the general that they had prejudiced the merchants of the country ſo much againſt the Portugueſe commodities, that they would not take them in exchange for thoſe of India, obſerving withal, that if he had not brought money, they would not part with their ſpices. This having been the general's caſe, he returned immediately to Cananor; but money being required there as well as at Cochin, and it coming to the king's ear, that he had brought none, that prince, rather than he ſhould return with empty ſhips, was ſo generous as to become his ſecurity for 1000 quintals of pepper, 50 of ginger, and 450 of cinnamon, beſides ſome linen cloth, till the factor, whom he left at Cananor, with two clerks, ſhould ſell the merchandiſe put into his cuſtody. After the lading was taken in, on the 15th of December, the king ſent him word, that above eighty praws appeared to the northward, ſent by the Samorin to attack him; and adviſed him to land with his men and ordnance. The general ſent to thank the king, but let him know withal, that he did not fear to meet his enemy by ſea. Next morning, by day-break, about one hundred ſhips and praws full of Moors, entered the bay. As ſoon as the general perceived them, he removed into the middle of it, and ordered his ſhips to pour in their ſhot upon the enemy without intermiſſion; by which means they durſt not approach to lay the Portugueſe on board, and having brought no ordnance with them, they could do their foes no harm at a diſtance.

Iſle of Juan de Nueva.

It was to this want of cannon, doubtleſs, that the Portugueſe owed their ſafety, and boldneſs to face them ſo long. Having ſlain many of the Moors, and ſunk ſeveral of their veſſels, without a man being hurt on their ſide, the enemy towards evening hung out a flag. The general at firſt ſuppoſing it to be ſome artifice, continued his fire: but perceiving they did not take their flag down, and moſt of his ordnance being burſt with ſhooting, at length gave over, and anſwered them with another flag. Whereupon a Moor was ſent in a ſmall boat to deſire a truce till next day, which was granted, on condition that they ſhould quit the harbour and put out to ſea, which they did. At the ſame time the general quitted his ſtation alſo, and came to anchor near them; but finding in the night that the enemy came in their boats with an intent, as was ſuppoſed, to fire his ſhips, he removed farther

1502 farther off; and as they ſtill followed him, he ordered a gun to be ſhot at them, on which they retreated, and ſtood away for Calicut.—De Nueva immediately after this, took his leave of the king of Cananor, and ſet ſail for Portugal, where he arrived ſafely with all his ſhips. After his departure, there came to Cananor one of his men who had been taken priſoner at Calicut, and was ſent by the Samorin to excuſe what had been done both to him and the former general Pedro Alvarez Cabral, offering to lade his ſhips, if he would come to Calicut, and give him ſufficient pledges for his ſecurity.

THE SECOND VOYAGE OF VASQUEZ DE GAMA.

THE reader has already had an account of the firſt voyage of Vaſquez de Gama, and proper reaſons were aſſigned for deferring the relation of the ſecond, which now comes in according to the rule that we preſcribed ourſelves.——

As it appeared from Cabral's account that it would be neceſſary to apply force in India, or quit the attempt of eſtabliſhing a ſettlement there, the king ſent out three ſquadrons, in March, 1502; the firſt of ten ſhips, commanded by Vaſquez de Gama, now on his ſecond voyage. The ſecond of five ſhips, under Vincent Sodre, which was to range the coaſt of Cochin and Cananor, and hinder the Moors (that is the Turks and Arabs) from trading in the Indies by watching the mouth of the red ſea. The third was under Stephen de Gama, but all were ſubordinate to Vaſquez. The whole conſiſted of twenty ſhips; and they were gone before Juan de Nueva arrived.—The command of this fleet was firſt conferred on Pedro Alvarez de Cabral: but on farther conſideration, it was given to Vaſquez de Gama to whom the king delivered the flag with great honour, in the cathedral church, giving him the title of Admiral of the Eaſtern Seas. With him returned the ambaſſadors of Cochin and Cananor, who had been much honoured by his Portugueſe majeſty. The two firſt ſquadrons departed in March; the ſecond, not till the firſt of May. Don Vaſquez off Cape Verd met with a caraval bound for Liſbon, with much gold from La Mina, ſome of which he ſhewed to the ambaſſadors, and they, ſurprized, ſaid, it did not agree with the account the Venetian ambaſſador in Portugal, had given them, viz. that the Portugueſe without the help of Venice, could ſcarcely put ſhips to ſea. This was ſpoken out of envy, becauſe they were like to loſe their trade with India by way of Egypt.

Having doubled the Cape of Good Hope, and paſſed the currents, Don Vaſquez, with four of the ſmalleſt veſſels, ſtruck off for Sofala, and ſent the reſt of the fleet before him to Mozambique. He went purſuant to the king's orders, not only to obſerve the ſituation of that city, and ſee if there was a convenient place for building a fort, but alſo to inſpect the gold of the country. He made friendſhip with the king, and obtained leave to ſettle a factory: after which, mutual preſents paſſed between them. Having ſpent twenty-five days in this tranſaction, he departed, and in turning out of the river, loſt one of his ſhips, but ſaved the men.

Having reached Mozambique, he made friendſhip with the king, who was ſo averſe to it in his firſt voyage; and obtained leave to ſettle a factory: the whole intent whereof was, to provide victualling for the Portugueſe fleets which ſhould touch there in their voyage either going or coming. From hence departing, he arrived at Quiloa, the twelfth of July, with a reſolution to force the king to become tributary for his ill uſage to Cabral. As ſoon as he came to anchor, Ibrahim, more through fear than any thing elſe, paid him a viſit on ſhip-board, Don Vaſquez knowing that he was not to be truſted, and having him in his power, without farther ceremony, threatened to confine him under the hatches unleſs he immediately agreed to pay his maſter tribute.—The captive prince promiſed 2000 miticals of gold yearly; and gave for pledge one Mahomet, a wealthy Moor, whom he mortally hated, in order to get rid of him. For the moment Ibrahim got back to Quiloa, he refuſed to perform his agreement; not ſo much to ſave the money, as to provoke the general to kill his ſecurity. But the Moor finding the tribute came not, thought fit to pay the ſum himſelf, and was releaſed. Here Stephen de Gama joined the general with his fleet, and both together proceeded on their voyage. He was put by Melinda, and forced to water eight leagues beyond it in a bay, whence ſpreading his fleet, that no ſhip might eſcape him, he took ſeveral; but was moſt ſevere upon thoſe of Calicut.——Being arrived on the coaſt of India, near Mount Deli, to the north of Cananor, he met a ſhip of great bulk, called the Mars, belonging to the Sultan of Egypt, which was very richly laden, and full of Moors of quality, who were going on pilgrimage to Mecca. This ſhip being taken, after a vigorous reſiſtance, the general went on board; and ſending for the principal Moors, ordered them to produce ſuch merchandiſes as they had; threatening, otherwiſe to have them thrown into the ſea. They pretended all their effects were at Calicut: but one of them having been flung over-board, bound hand and foot, the reſt, through fear, delivered their goods. All the children were carried into the general's ſhip, and the remainder of the plunder was given to the ſailors. After which, Stephen de Gama, by Don Vaſquez's order, ſet fire to the veſſel. But the Moors having broken up the hatches under which they were confined, and quenched the flames with the water that was in the ſhip, Stephen was commanded to lay them aboard. The Moors being made deſperate with the apprehenſion of their danger, received him with great reſolution; and even attempted to burn the other ſhips. As night came on, he was obliged to deſiſt without doing his work: but the general gave orders that the veſſel ſhould be watched that the paſſengers might not, by favour of the darkneſs, eſcape to land which was near. All night long, the unhappy Moors called on their prophet to help them. In the morning Stephen de Gama was ſent to execute his former orders. He boarded the ſhip, and ſetting fire to it drove the Moors into the poop, who ſtill defended themſelves; for ſome of the ſailors would not leave the veſſel till it was half burnt, many of the Moors when they ſaw the flames approach them, leaped into the ſea with hatchets in their hands, and ſwimming, ſought their purſuers; ſome even made up to and attacked the boats, doing much hurt: however, moſt of them were at length ſlain; and all thoſe drowned who remained in the ſhip, which ſoon after ſunk, ſo that of three hundred perſons, among whom were thirty women, not one eſcaped the fire, ſword, or water. A terrible inſtance of barbarity exerciſed by men calling themſelves chriſtians. The general being come to Cananor, ſent to acquaint the king he deſired to ſpeak with him. For this purpoſe a wooden bridge was made, which entered a good way into the water, this was covered with carpets; and at the end towards land

land a houſe of wood was ſet up furniſhed alſo with carpets. The king arrived firſt attended by 10,000 nayres; the trumpets ſounding, and other inſtruments playing before him. Soon after the general came accompanied with all the boats of the fleet furniſhed with flags, muſical inſtruments, and ordnance, under the diſcharge of which he landed. There were carried before him two large ſilver baſons gilt, to waſh in, covered with pieces of coral and other things eſteemed in the Indies. He was received at the head of the bridge by ſeveral nayres, placed there for the purpoſe, and the king came to the door of the houſe to meet him, where that prince embraced him, and then they walked in together to the room of audience, where there were placed two chairs, on one of which the king ſat down, though contrary to the cuſtom of the Indians, in reſpect to the general. At this interview, a treaty of friendſhip and commerce was concluded, and a factory granted at Cananor, in conſequence of which, the general laded ſome of his ſhips, and then departed for Calicut.

When Gama arrived in the harbour, he took ſeveral praws, with about fifty Malabars in them, before it was known who he was: but forbore all hoſtilities againſt the city, to ſee if the king would take any notice of him. In ſome time there came a boat on board, carrying a flag with a Franciſcan Friar, whom, at firſt ſight, they took for one of thoſe left with Ayres Correa. On entering the ſhip, he ſaid Deo gratias; and then they diſcovered he was a Moor. He made an apology for coming in that diſguiſe, which it ſeems, he put on the more eaſily to be admitted; being ſent with a meſſage from the Samorin to the general, about ſettling a trade at Calicut. Gama's anſwer was, that he ſhould not talk of any ſuch matter, till the king had made him ſatisfaction for the goods that were in the factory, when he conſented to the death of Correa and the reſt.

Three days were ſpent in meſſages backwards and forwards without any effect: when the general conceiving the drift was only to delay time, ſent the Samorin word, that he would wait for his final anſwer no longer than noon; and in caſe in that time he did not comply with his demands, he would make cruel war on him with fire and ſword, and would begin with thoſe of his ſubjects whom he had taken priſoners: On this occaſion, he called for an hour-glaſs; and told the Moor who carried the meſſage, that as ſoon as it had run out ſo many times, he would infallibly put his threats in execution. The Samorin influenced by the Moors ſent no anſwer; therefore when the time was expired, De Gama ordered a gun to be ſhot off, which was the ſignal for his Captains to hang the poor Malabars who were diſtributed aboard their ſhips, when dead, he ordered their feet and hands to be cut off, and ſent in a praw guarded by two armed boats, with a letter for the Samorin, written in Arabic; giving him to underſtand that in ſuch manner he propoſed to reward him for his repeated breaches of faith and deceitful dealings; and that for the king his maſter's goods, he would recover them an hundred fold. Then he ordered three ſhips to advance as near the ſhore as poſſible in the night, and the next morning their ordnance was played without intermiſſion upon the city whereby many of the houſes were demoliſhed, and among the reſt the king's palace. This done, he departed for Cochin, leaving Vincent Sodre with ſix ſhips, to ſcour the coaſts, and obſtruct the Mooriſh trade.——As ſoon as Gama entered the harbour of Cochin, Trimumpara ſent hoſtages on board and came in perſon to meet him on land. At this interview De Gama delivered him king Emanuel's letter and preſent. The letter imported thanks for the kind treatment Cabral had met with, and conſent for ſettling a factory at Cochin. The preſent conſiſted of a crown of gold, thick ſet with jewels; a gold collar enamelled, two ſilver fountains wrought, two pieces of figured arras, a coſtly pavilion, and a piece of crimſon ſattin, and another of ſendal; Trimumpara received it with pleaſure and the pavilion being ſet up to ſhew the uſe of it, a farther treaty of peace was concluded within it. The king alſo gave a houſe for the factory, and ſettled the rates at which ſpices were to be delivered. This agreement was reduced to writing, and ſigned by Trimumpara who ſent the king of Portugal the following preſent: two gold bracelets, ſet with precious ſtones, a ſaſh for the head, uſed by the Moors, of ſilver tiſſue, two yards and a half in length, two great pieces of fine Bengal callico, and a ſtone as big as a walnut reported to be good againſt poiſons, and ſaid to be taken out of the head of a beaſt, called in the Indies Bulgoldolf, and very rare to be found. 1502

While Gama's ſhip was lading, a meſſenger came from the Samorin to acquaint him that if he would return to Calicut, all his goods ſhould be reſtored him, and a trade granted, the general ordered the meſſenger to be confined, in order to puniſh him, if the Samorin proved deceitful. And againſt the advice of all his Captains, determined to go alone to Calicut, ſaying, that in caſe of neceſſity he would retreat to Sodre's ſquadron, which hovered on that coaſt. On his arrival in the road, the Samorin ſent him word, that next day every thing ſhould be concluded: but as ſoon as he underſtood that the general had left the reſt of his ſhips behind, he ordered thirty-four praws to go out and take him. They ſet upon Gama's ſhip ſo ſuddenly, that to eſcape them he was obliged to cut one of his cables, and ſtand out to ſea, for all this they did not give over the purſuit, but followed him ſo cloſe, that he muſt infallibly have been taken but for Sodre's Ships, on ſight whereof, the praws made off. At his return to Cochin he ordered the meſſenger to be hanged. The Samorin was much concerned at this; but finding he laid his ſnares in vain, to take Gama, he reſolved to try whether he could perſuade the king of Cochin to deny the Portugueſe a liberty of trading in his ports, with this view he wrote him a letter, wherein he called the Portugueſe, robbers, repreſenting the danger that might attend entertaining ſuch gueſts, and the diſpleaſure it gave him. Trimumpara anſwered, that ſince they brought money to lay out in his country, it was his intereſt to encourage them: and that the Samorin would not be willing, at his requeſt, to prohibit the Moors of Mecca from trading to Calicut. The Samorin replied, that he was ſorry to find the king of Cochin preferred the friendſhip of chriſtian ſtrangers to his, and took part with his enemies; adviſing him once more to abandon them, as he tendered his own welfare.

The king of Cochin in his anſwer let the Samorin know, that he did not value his threatning, and that he ſhould never, through fear of the conſequence be induced to do a baſe or perfidious action. The Samorin finding he could not prevail by intreaty, reſolved to apply force, as ſoon as the Portugueſe were returned homewards. Mean time he commanded twenty-nine large ſhips to be fitted out, in order to attack them once more before they left the coaſt; imagining, that as the general's fleet was heavy laden, his would be better able to deal with it.

The king of Cochin told Gama nothing of what had paſſed between him and the Samorin, till he went to take his leave, at which time, as a farther proof of his integrity, he declared he would hazard the loſs of his dominions, to ſerve the king of Portugal. The general, with many expreſſions of gratitude, aſſured him, that his maſter would never forget ſo many demonſtrations as he had given of friendſhip, and engaged in his maſter's name, to afford him ſuch effectual ſuccour, that it would be in his power not only to ſecure his own kingdom, but to conquer others; adding that thence-forward ſuch fierce war ſhould be carried on againſt the Samorin, that far from being able to attack others, he would have enough to do to defend himſelf, and promiſed to ſend him a fleet of ſhips forthwith from Cananor. The king was the

1502 more pleaſed with the declaration of the general, as it was ſpoken before his nayres; who, in friendſhip to the Moors, were ſorry that a factory had been granted to the Portugueſe.

The general having ſailed from Cochin, about three leagues from Padarane, deſcried the Mooriſh fleet before mentioned, which came to intercept him in his paſſage.——He then immediately bore down upon them: and Sodre, with two other captains, advancing before the reſt, attacked two of the largeſt ſhips with ſo much fury, that many of the men leaped into the ſea, to avoid their weapons.——Gama coming up with the reſt of the fleet, the remainder of the enemies veſſels made towards ſhore as faſt as they could, nor would the general ſuffer his ſhips to follow them, for fear of the ſhoals. Mean while the Portugueſe in their boats, ſlew all the Moors who defended themſelves ſwimming in the water, to the number of 300 perſons. In the two ſhips they found much China ware, ſilver veſſels gilt, and other rich merchandiſe; but what exceeded all the reſt, was an image of gold, weighing thirty pounds, of a monſtrous ſhape: the eyes were two emeralds; part of it was covered with a garment of beaten gold, curiouſly wrought, and ſet with precious ſtones. On the breaſt of the idol was a large ruby, which ſent forth a moſt brilliant light.

The goods being taken out, the ſhips were burnt, and Gama proceeding to Cananor, the king gave him a houſe for the uſe of the factory, which he left there, conſiſting of 24 men, who were to be furniſhed with ſpices at a ſettled price, at Cochin. The two nations were to defend each other, and the king of Cananor was not to aſſiſt any prince againſt Trimumpara. Then Gama ordered Sodre to remain on that coaſt till February, and if, in the mean time, there was any likelihood of war breaking out between the kings of Calicut and Cochin, he ſhould winter at the latter place; in caſe there was not, he was then to ſail for the Red Sea, and take all ſhips of Mecca, bound to the Indies.

On the 20th of December, Gama departed for Portugal, with 13 ſhips, and came to Mozambique, where they refitted two that were leaky. At Cape Corientes they were detained by contrary winds and ſtorms, which came with ſudden ſqualls. Gama arrived at Caſcais the firſt of September, where ſeveral noblemen went to receive and accompany him to court. He was preceded by his page, who carried a ſilver baſon, containing the tribute of the king of Quiloa. His maſter gave him an honourable reception, juſtly due to his great ſervices, and made him admiral of the Indian ſeas. He conferred on him alſo the title of Count of Videgueyra. Six days after came to Liſbon Stephen de Gama, whoſe ſhip had been ſeparated from the reſt at Cape Corientes, and in the way home had loſt its main-maſt in bad weather.

VARIOUS VOYAGES AND TRANSACTIONS OF PACHECO, ALBURQUERQUE, AND OTHER PORTUGUESE ADVENTURERS.

AS the Samorin envied the advantage which Trimumpara king of Cochin, made of the Portugueſe trade, and was offended with him for encouraging the enemies of the Moors, whom he ſupported, which might endanger the loſs of the trade of Arabia and Egypt, he got together 50,000 men at Panani, ſixteen leagues from Cochin, and made other preparations for war. The people of Cochin fearing ſo great a power, were for delivering up the Portugueſe to the Samorin, who demanded nothing more. But Trimumpara refuſed, and went out with three of his nephews and a ſmall force, to meet the enemy; at the firſt charge he was forſaken by ſome of his nobles, yet aſſiſted by the Portugueſe, valiantly maintained a paſs, till his nephews being killed, whereof one was general, and himſelf wounded, after ſtoutly reſiſting, he was forced to fly, and ſecure himſelf in the Iſland Vaipi, near to and more tenable than Cochin, which the Samorin took and burned: yet ſtill he perſiſted not to deliver up the Portugueſe.

Whilſt the people of Cochin were beſieged in the iſland, there ſailed from Liſbon nine ſhips, under three different commanders: the firſt was Alonſo (or Alphonſo) de Alburquerque; the ſecond, Franciſco de Alburquerque; and the third, Antonio de Saldanna.—The laſt were to cruize in the mouth of the Red Sea, againſt the ſhips of Mecca; the others to return with their lading.—Franciſco de Alburquerque arrived firſt with more ſhips than he brought out, having met with thoſe of Vincent Sodre, who was cruiſing upon the Indian coaſt, and diſtreſſed by ſtorm, as alſo a veſſel that had been ſeparated from Don Vaſquez De Gama. Sodre had taken four ſhips of Calicut, which he carried to Cananor, and burned ſeveral ſmall veſſels, but this happened before the invaſion of Cochin, to whoſe king he had offered his aſſiſtance, but was not admitted. Therefore ſailing thence, he touched at Socotra and Guardafu, and, on the coaſt of Arabia, took ſome veſſels of Cambaya and Calicut. Winter coming on, he put for ſhelter into a bay near the iſlands Curiamuria, and found the Arabs of that coaſt called Badwins, who lived by their cattle, very tractable. After two months ſtay, they adviſed him to ſeek a good harbour, to avoid being caſt away in the ſtorms, which aroſe about that time. Sodre would not credit them, believing they ſaid it only to get rid of him; but, when it was too late, found they ſpoke the truth, being, with his brother and all the crew loſt in a ſudden tempeſt. The other veſſels, after being in great danger, and ſuffering much through hunger and thirſt, eſcaped, and met Franciſco de Alburquerque, with whom they ſailed to Cochin.—The commander, immediately on his arrival, ſent a preſent into the iſland, part whereof was 10,000 ducats. Then going on ſhore, Trimumpara ran and embraced him, crying, *Portugal! Portugal!* which words all the people with great cries repeated; and the Portugueſe, to return the civility, cried, *Cochin! Cochin!* Franciſco comforted the king, giving him aſſured hopes in the aſſiſtance of his ſhips, and the others he expected. Not to loſe time, he fell upon thoſe who held the iſland of Cochin for the king of Calicut, and killing many people, he expelled the reſt. Thence he paſſed to Vaipi, and reſtored that country to its lawful prince. The territory of the lord of Repelim, was waſted with fire and ſword, and only four Portugueſe loſt in this action.

The joy Trimumpara received in being reſtored by the aſſiſtance of the Portugueſe, moved him to grant them leave to build a fort in Cochin. The work was begun when Alphonſo de Alburquerque arrived, and it was called the Fort of St. Jago. A church was likewiſe then built, dedicated to St. Bartholomew. Five hundred men being put on board ſome veſſels, taken from the enemy, they burned Repelim, after a ſtout defence made by 2000 nayres. Alphonſo, ambitious of performing ſome notable exploit by himſelf, advanced againſt a town, whence a multitude of expert heathens iſſuing, brought him into great danger, which was increaſed by the aſſiſtance of 33 veſſels of Calicut.

cut. But his brother Franciſco coming up, they were put to flight, and many killed, as were 700 in the iſland Cabalam, where they thought to ſecure themſelves. Duarte Pacheco deſtroyed another town, killing many of the inhabitants. As the Portugueſe ſailed, fifty ſhips of Calicut met them, and they, (tho' victorious) now ſpent with fatigue, were ſurpriſed at the number: but the cannon being well played, the enemy deſerted the fight.

Pepper was obtatained with ſome expence of blood. The queen of Coulan offered lading for two ſhips. [Alburquerque] went thither and ſettled a trade, and to manage it, left behind a factor, and twenty-ſix men. The king of Calicut perceiving the ſucceſs of the Portugueſe, deſired peace, which was granted, upon their own conditions; but after having fulfilled only a part of them, he renewed the war. As Trimumpara requeſted that ſome able commander might be left at Cochin with a military force to aſſiſt him, Duarte Pacheco was ſent thither with his ſhips, two caravals, and 110 men.

Franciſco de Alburquerque and his fleet loſt.

The Alburquerques now ſet out for Europe, where Alphonſo arrived ſafe;* but Franciſco and his ſhips were never heard of more; as for Pedro de Ataida, he was found at Melinda, where he had put in, after having weathered the fury of a violent tempeſt. The third commander, Antonio Saldanna, who was ſent to cruiſe at the mouth of the Red Sea, came to anchor at St. Thomas's, after having loſt Diego Fernandez Peteira. Ruy Lorenzo being ſeparated from him by a ſtorm, was driven up from Mozambique, from whence he ſailed to Quiloa, and took ſome ſmall prizes. Deſirous however of doing ſome remarkable action, he ſailed to the iſland of Zanzibar, tweny leagues from Mombaſſa, where he took twenty ſmall veſſels, and afterwards appeared before the town of that name.—The king fitted out ſeveral praws with an intention of taking his ſhip; but the long-boat defeated their purpoſe, took four praws, and killed ſeveral of their people.——The king afterwards made an attempt to defend the place with his army, but this was defeated, and his ſon ſlain in the engagement; after which the vanquiſhed party offered to become tributary to the king of Portugal. From hence Lorenzo ſailed to Melinda. In his way he took two ſmall veſſels, on board of which were twelve magiſtrates of Brava, who promiſed that city ſhould likewiſe become tributary to the Portugueſe. At this time the kings of Mombaſſa and Melinda being at war, were on the point of coming to a battle; but Saldanna arriving, the latter ſettled matters with the former.

The Samorin aſſembles his army.

While theſe things were paſſing, the Samorin of Calicut was not idle: he called round him the princes of Malabar, and aſſembled a body of 50,000 men for the ſea as well as the land ſervice. Forty thouſand of theſe were embarked in 280 veſſels, having with them 382 pieces of cannon, intended for the purpoſe of battering the new fort, while the land-force was to attack the fording-place of a river that paſſed to the iſland.

He is repeatedly defeated.

As many of the king of Cochin's ſubjects deſerted him, that prince began to be in fear for the event. Pacheco however, encouraged alike his own people and their allies, and made proper preparations for maintaining the expected combat. He placed 25 men in the ſhip, and 39 in the fort; he put 23 men into one boat, and threw himſelf with 22 into another. The reſt of his force conſiſted of 300 Malabars; and the king remained with his troops to guard the city. With this ſmall power the Samorin, who had quartered himſelf in a neighbouring village, was defeated with great loſs. His men were routed with great ſlaughter in three different engagements which they had in diſputing the paſs. At the ſame time 15000 of them were defeated by land; and afterwards four towns were burned by the victor in the purſuit.

The king of Cochin was ſtill unhappy in thoſe about him, who continued to deſert to the enemy, at which Pacheco was much diſpleaſed and five of the deſerters, being ſecured, he obtained leave to puniſh them. When theſe were ſecured, the Portugueſe commander cauſed it to be reported that they were hanged, with which, however, the king and his people were highly diſpleaſed. 1503

The Samorin, notwithſtanding his defeat, returned, and attempted another ford, and found the Portugueſe and their allies again prepared for his reception. Diego Perez and Pedro Raphael were poſted with two caravals and ſome boats, where the lord of Repelim was to attack with 3000 men. At this very juncture no leſs than 300 Moors deſerted Pacheco, who wanting powder, ſent to the prince of Cochin, but he did not relieve him, the meſſenger treacherouſly forbearing to deliver the meſſage: but Pacheco overcoming all difficulties, killed 650 of the Samorin's men, who retired to a grove of palm-trees, where nine were ſlain ſo near him, that he was ſprinkled with their blood; he afterwards loſt 6000 more by the plague.

After this the king of Calicut made great preparations; and in the mean time fatigued Pacheco with ſeveral ſtratagems and treacheries. The Bramin conjurors propoſed making a powder, which being thrown into the eyes of the Portugueſe, would blind them, and ſo they would be eaſily overcome. Beſides, they had a new invention of caſtles that were to deſtroy them, and the Moors of Cochin were underhand bribed to poiſon the water of the iſland. The powder was looked upon as ridiculous, but great care was taken by Pacheco to prevent the poiſon. The caſtles were eight in number, fifteen feet high; each placed upon two boats, and carrying many men. Pacheco had 160 men divided into four parties, the ford, the fort, in the caravals, and the ſhip; and herein conſiſted the principal ſtrength of the kingdom of Cochin: for of the 30,000 men the king had at firſt, there were now but 8000 left, many of the principal men having deſerted. The Samorin had brought 80,000 men, and loſt 20,000. Whilſt the towers were preparing, Pacheco, who was aſſaulted by a number of praws, in one attack killed ſome men, and took five boats; in another eight, with thirteen pieces of cannon.

Six bold negros offered to kill him, and in order thereto, came over as deſerters; but he having intelligence, apprehended, and ſent them to the king. The Samorin gave out, that the Portugueſe of Cochin were all killed, to the intent that thoſe who reſided at Cananor and Coulan, ſhould be deſtroyed. This brought them into great danger; one or two were killed, and many wounded. The king of Cochin was reſolved to endure the utmoſt miſeries, rather than abandon the Portugueſe: but fearing theſe few muſt at laſt be over-powered by the multitude of the enemy, earneſtly intreated Pacheco to quit the enterpriſe. Pacheco bid him be of good courage and not diſhearten his ſubjects with any ſign of fear. To chear up the Portugueſe, he went on board the ſhip, and made a moſt pathetic ſpeech, which gave new vigour to them all, but much more his example at that very time; for ſcarce was the ſpeech ended, when the enemy came to aſſail him, and burn his ſhip, but Pacheco uſed long beams, one end of which reſting on the ſhip, the other hindered the approach of the flaming towers.

The enemy appeared with 290 ſmall veſſels, well ſtored with men and artillery, and eight caſtles, one carrying 40 men; two, 35 each; and every one of the other five, 30 men, with fire-works in front. The ſhore was covered with 30,000 men, with good artillery, and, at the head of them, the lord of Repelim, with a vaſt number of pioneers. The fight began, the odds being almoſt three hundred veſſels to three. At firſt the artillery did no great hurt; but being continued, tore the towers to pieces, and when the ſmoke

* Amongſt other things which he brought home were a quantity of pearls, an exceeding large diamond, and two fine Arabian horſes, ſaid to be the firſt of the breed that had ever been ſeen in Portugal.

1505 was ſomewhat allayed, the ſea appeared covered with broken boats, arms, dead bodies, and others ſtruggling with death: the fight was renewed with great loſs to the enemy, and not one Portugueſe killed. Next day the Samorin returned to the charge, and was beaten off with greater damage. Thus having loſt 18,000 men in the ſpace of five months, by the advice of his Bramins, he retired to do penance: and by conſent of his council, deſired a peace, which the king of Cochin granted. At this time Pacheco, purſuant to a meſſage from the factor at Coulan, went thither, and made five ſhips of Moors ſubmit, who obſtructed the market of pepper, which afterwards he took at their own rate, without doing them any harm.——

King Emanuel being informed by Don Vaſquez de Gama, how neceſſary it was to appear with a greater force in India, fitted out a fleet of thirteen ſhips, the biggeſt that had yet been built in Portugal, with 1200 men on board, and gave the command of them to Lope Soarez.

The firſt land of India he touched at, was Anchediva, where Antonio de Saldanna, and Ruy Lorenzo were refitting, in order to cruize on the coaſt of Cambaya againſt the Arabs of Mecca. But Lope Soarez took them along with him to Cananor, where he ſtaid to give the neceſſary orders, and then appearing before Calicut, had ſome priſoners taken in the late war, delivered to him: but becauſe they did not give up all, he for two days battered the city, whereof he ruined great part, and killed 300 inhabitants. Then ſailing to Cochin, (at which time Pacheco was upon his return to Coulan) the king informed him of the damage he received from Cranganor, a town but four leagues diſtant, and fortified by the Samorin.

Lope Soarez, with great ſecrecy, provided twenty veſſels, and ſailed with them up the river, where he found five ſhips, and eighty praws well manned, which were, by two of the foremoſt ſhips burnt after a ſharp engagement. Trimumpara was to have joined him, but came too late. A multitude of Indians and Moors, with ſhowers of arrows endeavoured to hinder his landing, but the muſqueteers made way, and having reached the town, burned it down to the ground, while the king of Calicut fled, but this victory, and another obtained by the king of Tanor againſt him, produced a peace at laſt.

Lope Soarez left Manuel Tellez Barreto with four ſails to ſecure the fort of Cochin, and ſet ſail, in order to return home; but reſolved in his way, to fall upon Panani, a town ſubject to Calicut. He was met by twenty praws, who pouring in their ſhot, drove him into a bay, where there waited ſeventeen great ſhips, well ſtored with cannon, and provided with 4000 men. After a fierce engagement, the ſhips were all burnt with their lading, which was very rich, and 700 Turks drowned, beſides thoſe that periſhed by fire and ſword; with the loſs of only twenty-three Portugueſe. Soarez ſailed hence the beginning of January, and arrived at Liſbon on the 22d of July, 1506, with thirteen victorious ſhips laden with riches; three were of the foregoing year's fleet: of his own he loſt Pedro Mendoza, who being ſtranded 14 leagues from Aquada de S. Blas, was never more heard of. One of the other three was that of Diego Fernandez Peteyra, who, after taking ſeveral prizes on the coaſt of Melinda, diſcovered the iſland Socatra.—The king placed Duarte Pacheco (who had ſo bravely defended Cochin) by his ſide, under a canopy, and went with him in that manner to church, to honour his great valour: but ſoon after impriſoned, and ſuffered him to die miſerably. Such was the end of this great conqueror in thoſe parts, and ſuch the gratitude of Indian kings.

Quiloa taken. In the year 1507, Don Franciſco de Almeyda ſailed from Portugal, and arriving at Quiloa with his ſon Lorenzo, landed at the head of 500 men, and attacked the city in two places. When he entered, Emir Ibrahim fled and ſet up Portugueſe colours in the field, which ſtopped the purſuit till he had got over to the continent with his wives and riches. The city was plundered without the loſs of one Portugueſe, though a great number of the enemy was killed; Ibrahim was but an uſurper, though the forty-fourth poſſeſſor of that iſland. When things were ſettled, Almeyda declared Mohammed Anconi (Ibrahim's relation, who had been ſerviceable to the Portugueſe) king of that place, putting a crown of gold on his head, with great pomp. The new king at the ſame time declared, that had the lawful king Alfudail, murdered by the late uſurper, been living, he would have reſigned the crown to him, and actually appointed Alfudail's ſon his ſucceſſor, though he himſelf had children. In twenty days the fort was raiſed, into which the viceroy put 550 men, and leaving a caraval and brigantine to cruiſe there, on the 8th of Auguſt, ſailed with thirteen ſhips for Mombaſſa, ſeated, as has been noticed, like Quiloa, in an iſland which is about fourteen leagues in compaſs. The city is beautiful and ſtrong, with a large bay for ſhipping. Two veſſels that were ſent to ſound the bar, were played upon with eight pieces of cannon. But a ball falling luckily among the enemies powder, obliged them to quit the work; and after driving them from two ſmaller batteries, the fleet entered without farther reſiſtance. Don Franciſco then went to burn the ſhips of Cambaya in the port; and landing his men, entered the town the 15th of Auguſt, while the king fled out at the other end. In this action only five Portugueſe were loſt; of the Moors, 1513 were killed, and 1200 taken; after which the city being plundered, was burnt to the ground.

From thence Almeyda departed for India, and coming to Anchediva, there built a fort, into which he put eighty men, and then ſailed to Onor, on the coaſt of Malabar, where being ill received, he burnt the town, and the ſhips that were in the harbour, here the viceroy was wounded with an arrow; and a party ſent to attack 1500 of the enemy, were likely to have been defeated; but farther miſchief was prevented by Timoja, governor of the city, a man of graceful preſence, who excuſing his king, and, in his name, offering vaſſalage to Portugal, appeaſed Almeyda. The viceroy then ſailed to Cananor, where he had an interview with the king, who brought with him 5000 men well armed, and gave him leave to build a fort in the harbour; where he left Lorenzo de Brito with 150 men, and two veſſels, to cruize upon the coaſt. Being informed at Cochin, that all in the factory at Coulan had been killed by the Moors, he ſent his ſon thither, with three ſhips, and three caravals, which burnt twenty-four ſhips (belonging to Calicut, and other places) there prepared to receive them, only a few of the Moors being ſaved by ſwimming. Almeyda intended to have crowned Trimumpara at Cochin to reward his fidelity and galantry: but he being retired to a religious life, it was thought fit to beſtow that honour upon Nambeadora, his nephew and ſucceſſor, who was inaugurated with great ſolemnity, with a crown of gold ſet with jewels, carried from Portugal for that purpoſe.

King Emanuel ſent Pedro de Annaya after Don Franciſco, with ſix ſhips to build a fort at Sofola, famous for its gold trade; to ſecure which, he had already cauſed a fort to be built at Quiloa, another at Mozambique, and a factory to be ſettled at Melinda; Annaya raiſed a fort there, ſtrong, though of wood, with leave of the king, who imagined that the Portugueſe would be ſoon obliged to quit it, becauſe the country was unhealthy; but finding himſelf deceived, he took the opportunity, when Annaya had ſent away three of his ſhips, and his men were weakened through diſeaſes cauſed by the bad air, to aſſault the place with 5000 Caffres; but great havock was made with the cannon; though only thirty-five Portugueſe were able to bear arms. Afterwards ſallying out with fifteen or twenty Moors, they drove the enemy into a wood of palm trees; and attacking the town by night, with a few men, entered the king's houſe, who ſtood behind the door with a ſcymetar, and wounded Annaya in the

neck; but was ſoon killed, with many more. Next day his ſon, with all the Moors, aſſaulted the fort, but in vain; for the fright cured many of the ſick, who joined in the common defence. Afterwards the brothers fell out about the ſucceſſion; and Annaya being gained by Solyman, crowned him; who for his own ſecurity, made an alliance with the Portugueſe. Here Annaya found twenty Portugueſe in a miſerable condition. At Cape Corientes, being no longer able to keep their ſhip above water, they ran her aſhore: after which, refuſing to obey their captain, Lope Sanchez, they divided into ſeveral companies, and ſo travelled through thoſe unknown countries. They ſuffered extreme hardſhips before they reached Sofala. All were loſt except thoſe twenty, and five found by Antonio de Magellanes, in the river of Quiloama.

Sofala. The kingdom of Sofala is a large tract of land, 750 leagues in circumference; ſubject to the Monomotapa, whoſe empire bears the ſame name: it is watered by the Rio del Eſperitu Sancto, and Cuama, the latter navigable 250 leagues: theſe, and many other rivers that fall into them, are famous for their golden ſands. Moſt part of the land enjoys a temperate air, is pleaſant, wholeſome, and fruitful. Here are reared great flocks of ſheep, with whoſe ſkins the natives are cloathed, becauſe of the cold ſouth winds. Along the back of Cuama, the country is mountainous, covered with woods, and watered with many rivers, which make it delightful. Here it is the beſt peopled, and the common reſidence of the Monomotapa. It is ſtocked with elephants, (conſequently ivory) and mines of gold, encompaſſed thirty leagues about with mountains, on the tops whereof the air is ſerene and clear. They are called the Mines of Manica, 50 leagues ſouth-weſt of Sofala. There are others 150 leagues diſtant, none then much valued by their owners.

Here are ſome buildings of wonderful ſtructure, with inſcriptions of unknown characters; but the natives know nothing of their foundation. The inhabitants believe in one God, under the name of Mozime, and uſe no images. Witchcraft, theft, and adultery, are moſt ſeverely puniſhed by them. They have as many wives as they can maintain: thoſe of the king are above 1000, but the firſt commands the reſt, and her children inherit. In their funerals they are very ſuperſtitious. Their cloathing is cotton, the better ſort mixed with ſome gold threads. The houſes of wood. The king's attendance were more ceremonious than great, his guards was two hundred dogs, and he was followed by 500 jeſters. He reigns ſovereign over many princes, and becauſe they ſhall not rebel, always kept their heirs about him. There were no law-ſuits among them. They fought on foot: their arms were arrows, javelins or darts, daggers, and ſmall ſharp hatchets. The women were ſo much reſpected, that if the king's ſon met one he gave her the way, and ſtopped till ſhe paſſed. Theſe mines of Sofala, believed by ſome to be the mines of Ophir, were firſt poſſeſſed by the Moors of Magadoxa, afterwards by thoſe of Quiloa, whoſe kings enjoyed them, till Yulef, one of their governors rebelled, and uſurped the ſovereignty to himſelf, aſſuming the title of king, with whom Pedro de Annaya now treated.

Whilſt theſe things happened at Sofala, in India, the Samorin of Calicut had ſtirred up the Sultan of Egypt, and hoped with his aſſiſtance to drive the Portugueſe out of thoſe ſeas. This was not carried on ſo privately, but the king of Cochin had intelligence of it, and advertiſed the viceroy Almeyda, who ſent his ſon Lorenzo with eleven ſail, to prevent the deſign. As he viſited ſome ports, he learned, that in the road of Cananor was a fleet of 260 praws, whereof ſixty exceeded our ſhips in bulk. He directed his courſe towards them, and after a very ſharp engagement, they were put to flight, and ſome taken, but many ſunk, and obliged to run a-ground, with great loſs to the enemy, and of his own, only five or ſix men: ſoon after the fort of Anchediva was beſet by ſixty well armed veſſels of Moors and Gentiles, commanded by a renegado; but hearing that Lorenzo was coming to its relief, they went off with all poſſible ſpeed. 1508

The Moors perceiving their Trade was cut off by the Portugueſe, thought to ſhun them by keeping out at ſea in their voyage to Sumatra and Malacca, where they went for ſpice, ſtriking through the Maldivia iſlands, and bearing away ſouth of Ceylon. The viceroy ſent his ſon from Cochin, with nine ſhips, to infeſt their courſe, when the pilots wandering through unknown ſeas, diſcovered that iſland. They anchored at the port of Gale, where many Moors were lading cinnamon, and taking in elephants for Cambaya. They, fearful of Don Lorenzo's anger, preſented him in the name of the king, with 400 bahars of cinnamon. He well underſtood the contrivance, but thought it that time, better to diſſemble, and content himſelf with the preſent, and diſcovery of Ceylon, planting there a croſs, with an inſcription, ſignifying the time of his arrival. In his return to Cochin, he fell upon the town of Biramjam, which he burned down, putting all to the ſword, in revenge for the Portugueſe killed at Coulan; becauſe that town belonged to this crown. Meanwhile Pedro de Annaya, and moſt of his men died at Sofala, and not long after, the fort of Quiloa was raiſed by the Portugueſe themſelves; all being the effect of their ill uſage towards the natives.

The king being informed by Diego Fernandez Piteyra, that there were Chriſtians at Socotra, who were ſubject to the Moors, he ordered Triſtan de Cunna, and Alphonſo de Alburquerque, to direct their courſe thither, and take the fort; to the intent his fleet might afterwards winter there, and ſo the navigation of that ſea be ſecured. On the 6th of March, 1508, they ſailed from Liſbon with 13 veſſels, and 1300 fighting men; whereof ſome (being infected with the plague, at that time raging in the city) died by the way. When they came under the line, the ſickneſs left them. They paſſed in ſight of Cape St. Auguſtin, in Braſil, and in croſſing the vaſt ocean between that place and the Cape of Good Hope. Triſtan de Cunna ran ſo far to the ſouthward, that ſome of his men periſhed with cold, and he diſcovered the iſlands ſtill called by his name. Here being attacked by a ſtorm, all the ſhips were parted, each running a different courſe, till they met again at Mozambique; except Alvaro Tellez, who being driven as far as Cape Guardafu, took ſix ſhips, ſo laden with all ſorts of goods, that from them to his own veſſel, he made a bridge of bales, thrown into the ſea, over which the men paſſed as on dry land. Ruy Pereyra, who fell into Matatanna, a port of Madagaſcar, being informed it abounded in ſpices, eſpecially ginger, invited thither Triſtan de Cunna, who came and anchored in a bay which his ſon, Nunno de Cunna, called de Donna Maria de Cunna, after a lady he courted; others name it of the Conception, at a town inhabited by the Moors, and governed by a Sheikh, in a cloſe bay, which receives the great river Lulangan; they had a ſkirmiſh, and found the iſland produced little ginger.

Hence de Cunna ſent Alphonſo de Alburquerque, with four ſail to Mozambique, whither coming afterwards, they proceeded to Melinda, whoſe king obliged him to fall upon Oja; a city, which being aſſiſted by the king of Mombaſſa, infeſted him. The Arabs inhabited this country, where are ſeen ſome ancient and wonderful ſtructures. Each city, and almoſt village, has a king, whom they call ſheikh; the chief cities are Quiloa, Zanzibar, and Mombaſſa; but that of Melinda pretended to be the oldeſt, deducing his pedigree from thoſe of Quitau, a city 18 leagues from him, which though ruined, ſhews the footſteps of its former grandeur, having been ſuperior to Luziva, Parimunda, Lamo, Jaka, Oja, and other its neighbours. The country is watered by the river Gulimanja. George Alphonſo going up this river five days, ſaw in the banks impenetrable woods, and in the waters an infinite number of ſea-horſes.

Triſ-

1503 Triſtan de Cunna (with ſix ſhips) appeared before the city Oja, ſtanding 17 leagues from Melinda, on an open ſhore, ſecured with a wall towards the land, which hides it from the Caffres. He ſent the ſheikh word, that he had important affairs to communicate to him; who anſwered, That he was a ſubject of the Sultan of Cairo, head calif of the houſe of Mohammed, and therefore could not treat with people that were ſo much his enemies. Triſtan, conſidering the danger of delays, as ſoon as day appeared, divided his men into two parts into boats; one part commanded by Alphonſo de Alburquerque, the other by himſelf: and though the ſea ſeemed to favour the Moors, who ſtood on ſhore to hinder their landing, they were forced to fly, entering at one gate, and running out at the other.

Nunno de Cunna, and Alphonſo de Noronha, purſued the king, with many of his men, into a wood of palm-trees, and killed him in the midſt of them. George Silveyra perceiving a grave Moor, who led a beautiful young woman through a path in the wood, ran at him, and the Moor, making ſigns to the woman to fly, whilſt they fought, ſhe followed him, ſignifying, ſhe had rather die, or be taken with him, than eſcape alone. Silveyra ſeeing them ſtrive who ſhould give the greateſt proof of affection, let them both go away: ſaying, "God forbid my ſword ſhould part ſo much love." The town was plundered, and then burnt with ſuch precipitation, that ſome of the Portugueſe periſhed in the flames.

What happened, being known at the city of Lamo, 15 leagues diſtant, its ſheikh came and ſubmitted himſelf, offered a tribute of ſix hundred meticals of gold yearly, and paid the firſt year in hand. The fleet went on to the city Brava, a populous place, before conquered, but then in rebellion, with 6000 armed men on the ſhore: but de Cunna and Alburquerque, next day landing with two bodies, in ſpite of ſhowers of arrows, darts, and ſtones, ſcaled the walls, and routed the Moors; after waſhing the ſtreets with their blood, and killing ſo many, that their number was not known. Of the Portugueſe, forty-two were loſt, half through covetouſneſs; for over-loading a boat, they were drowned with the ſpoil, barbarouſly acquired, by cutting off the hands and ears of women, to ſave time in taking off their bracelets and ear-rings. The city being burnt and plundered, de Cunna ſet ſail, and met off Cape Guardafu, Alvaro Tellez, who had been in a ſtorm with a rich booty before ſpoken of. Having diſcovered the Cape, he ſtood for Socotora, (or Socotra) an iſland twenty leagues in length, and nine in breadth; it lies almoſt eaſt and weſt, in the latitude of 12 deg. 40 min. It is the biggeſt about the mouth of the Read Sea; but has no ports fit for any number of ſhips to winter. Acroſs the middle of it runs a ridge of hills as high as the clouds, yet the ſand of the ſhore is carried up to the top by the north winds; this renders it barren not only of plants, but trees, excepting ſome ſmall valleys, that are under ſhelter of thoſe winds. It is diſtant from the coaſt of Arabia fifty leagues, and thirty from Cape Guardafu. The ports moſt uſed by the Portugueſe, are, Zoko, inhabited by Moors; Calanſea, to the weſtward, and Beni to the Eaſtward; the natives are unpoliſhed. The valleys ſheltered from ſand produce apple and palm trees, and the beſt aloes; which for its excellency is called Zocotorinos. The common food is maize, or Indian wheat, tamarinds, and milk.

Socotra.

"They are all Jacobite Chriſtians, like the Abaſſines. The men uſe the names of the apoſtles, the women chiefly that of Mary: they worſhip the croſs, which they wear on their cloaths, and ſet up in their churches; where they pray twice a-day in the Chaldean language, alternately as in a choir. They receive but one wife; uſe circumciſion, faſting, and tythes. The men comely; the women ſo manly that they follow the war, and live like Amazons. Some of them for propagation making uſe of ſuch men as arrive there. Their cloathing is ſome cloth and ſkins; their habitations, caves; their weapons ſtones and ſlings. They were ſubject at that time to the Arabian king of Caſhen."

De Cunna found here an indifferent port, not ill manned, nor unprovided. Being provoked by the Sheikh's anſwer to his meſſage, he reſolved (though it was dangerous) to land with Alburquerque. The firſt who leaped on ſhore was his nephew, Don Alphonſo de Noronha, with a few, but brave men. The ſheikh received him with no great number, though with much gallantry, maintaining his ground, and threatening de Cunna; who, through a ſhower of bullets and ſtones, made his approach to the fort, and was briſkly repulſed by the ſheikh, whom then Don Alphonſo ſtruck down with his lance. Hence enſued a ſharp ſkirmiſh; the Moors endeavouring to carry off their prince, and the Portugueſe to hinder it; when he and eight more had been ſlain, the enemy fled to the caſtle, which was ſcaled; and thoſe who entered, opening the gate for the reſt, a bloody fight began within, the Moors diſputing it to the laſt man; for out of 80, there was but one left alive, except a blind man, who was found in a well, and being aſked how he got there, anſwered, "That blind men ſaw only one thing, which was the way to liberty, and which even blind men coveted." He had his liberty given him. The Portugueſe loſt ſix men. The natives who had kept off, hearing of their ſucceſs, came to thank De Cunna for delivering them from the heavy yoke of thoſe Mahometans, and were received under the protection of the king of Portugal, who having choſen Don Alphonſo de Noronha to command the fort, if taken, De Cunna gave it him, with 100 men for a garriſon. De Cunna wintered in thoſe parts; after which, he ſailed for India, and Alburquerque for the coaſts of Arabia.

While theſe things delayed the fleet, the king of Calicut relying on the ſucceſs, promiſed by his ſoothſayer (as foretold by a great earth-quake, and eclipſe of the ſun which happened ſo that the ſtars appeared for a conſiderable time) was arming againſt the Portugueſe. But the Viceroy Almeyda ſent out a ſquadron of ten ſhips, which the Samorin little expected, under the command of his ſon Lorenzo, who ſailed to Dabul, diſcovered the fleet of Calicut, and would have engaged it, but that on account of the narrowneſs of the place, it was carried in council, not to attack them, for which, on his return to Cochin, he was ſeverely reprimanded by his father, who broke all the officers, and ſent them to Portugal.

Gonzalo Vaz, who followed Don Lorenzo, meeting a ſhip of Cananor, though with a Portugueſe paſs, ſunk it, and all the Moors ſewed up in a ſail, that they might never be ſeen, but his villainy ſoon came to light: for one of the bodies being found on ſhore, and known to be the nephew of Mamala, a rich merchant of Malabar, the Samorin uſed it as an argument to gain the king of Cananor, who before wanted to break with the Portugueſe. Lorenzo de Brito, captain of the foot there, on whom at firſt the ſuſpicion fell, was preſently beſieged by 20,000 Moors, when aſſiſtance came from the Viceroy; but their magazine of proviſion taking fire, they were forced to eat vermin; and had been famiſhed, but for abundance of lobſters which the ſea being then rough, left behind, and was their only relief. The Samorin having ſent a powerful ſupply, the king of Cananor gave an aſſault both by ſea and land, with above 50,000 men, who were repulſed with great loſs, and not one Portugueſe killed. The king vexed at this, and terrified at the coming of de Cunna, ſued for peace. After this the Viceroy went with de Cunna to fall upon Panani, a town ſubject to Calicut, where there were four ſhips of the Samorin, commanded by Cutioli, a courageous Moor. They went up the river through ſhowers of balls from the ſhore, which is high; and the Moors ran into the water to meet their boats, but the Portugueſe landing, attacked their trenches, where a ſtrong Moor wounding Don Lorenzo, he with one ſtroke clove his head to his breaſt. The town being entered, all were put to

the ſword; the ſhips and plunder alſo, though of great value, were burnt; and only the artillery ſaved, in this action above 500 of the enemy periſhed, and but 18 of the Portugueſe, none of note.

After parting from de Cunna, the 20th of Auguſt, 1508, as before related, he ſailed for the coaſt of Arabia, in Perſia, purſuant to the king's order; having with him ſeven ſail, and 460 fighting men. He firſt touched at Calayata, a beautiful ſtrong town in the kingdom of Ormuz, but not ſo populous as heretofore: whoſe buildings are after the manner of Spain. The governor, having offered refreſhments, and ſettled peace, he went to Curiat, ten leagues farther, where, being ill received, he ſtormed the town, and met with a vigorous oppoſition, but entered killing eighty of the enemy, with the loſs of only three men.

The place being plundered and burnt, with fourteen veſſels in the harbour, he ſailed eight leagues farther to Maſcat, a place ſtronger than any of the others, and well provided with men; who having heard of the deſtruction of Curiat, reſorted from all parts to defend it. But the governor fearing the like diſaſter, made peace, and ſent great ſtores of proviſions; when on a ſudden the cannon of the town began to play furiouſly upon the Portugueſe ſhips, which drew off haſtily, not knowing the cauſe of this change: till ſome time after they underſtood, that 2000 men, ſent by the king of Ormuz, being arrived, their officers refuſed to ſtand to the treaty. But Alburquerque landing his men at break of day, aſſaulted the town ſo courageouſly that as the Portugueſe entered at one gate, the Moors ran out at the other. All the houſes were plundered except the governor's, who had given them notice when the relief came, but he was killed in the confuſion, not being known. This done, they paſſed to Soar, all the inhabitants whereof fled except the governor, and ſome of the principal Moors, who yielded up to Alburquerque, and received back to hold of king Emanuel, under the ſame tribute they had paid to the king of Ormuz. The inhabitants of Orfucam, fifteen leagues farther, having deſerted it, the town was plundered for the ſpace of three days: and during this time, the general prepared to enter the harbour of Ormuz, which was the principal end of the voyage.

Ormuz. The city of Ormuz is ſituate on a little iſland, called Jerun, at the mouth of the Perſian Gulph, about three leagues in compaſs, and ſo barren, that it produces nothing but ſalt and ſulphur. The buildings of the city are ſumptuous: it is the great market of all goods, brought thither from the Eaſt, Weſt, and North, which is the reaſon, that though it has nothing of its own, it abounds in all things, and is plentifully ſupplied from the province of Mogoſtan in Perſia, and the Iſlands Keyſhom, Laree, and others. About the year 1273, king Malech Caez poſſeſſed all the land, from the Iſland Jerun, to that of Bahrayn, and bordered upon the king of Gordunſhah, of the Province of Mogoſtan. This king ſubtily obtained of Malech the iſland of Jerun, as a place of no worth, and after he was fortified therein, drove his benefactor out of all his dominions, and tranſlating the city of Ormuz, where the king kept his court before, to this iſland, he grew ſo formidable, that the king of Perſia, fearing he would refuſe to pay the tribute the other had done, prepared to invade him; but he of Gordunſhah prevented him, by impoſing on himſelf a yearly tribute, and offering to do homage by his ambaſſadors, every five years. In this tyrant began the city and kingdom of Ormuz, afterwards poſſeſſed by his heirs, and others, for the moſt part violently.

About the end of September, when Alburquerque arrived there, Sayfaddin, a youth of twelve years of age, reigned; and over him, his ſlave Chojah Attar, a man ſubtle and courageous, who hearing what had been done by that commander, made preparations, laying an embargo upon the ſhips in the harbour, and hiring troops from the neighbouring provinces, Perſians, Arabians, and others, ſo that when the Portugueſe fleet entered the port, there were in the town 30,000 fighting men; among them 400 Perſians, moſt expert archers; and in the harbour, 400 veſſels, ſixty of conſiderable bulk, with 2500 men. Alburquerque, to ſhew thoſe people the greatneſs of his reſolution, came to an anchor among five of the largeſt ſhips, firing his cannon to ſtrike a terror along the ſhore, which was ſoon covered with above 8000 men. Finding no meſſage came from the king, he ſent on board the biggeſt of thoſe ſhips, which was of Cambaya, and ſeemed to ride admiral: the captain whereof preſently repaired to him, and was received with civility and ſtate. Alburquerque told him, he had orders to take the king of Ormuz into his protection, and grant him leave to trade in thoſe ſeas, provided he paid a reaſonable tribute: but in caſe of refuſal, he was to make war. 1507

The Moors delivered his meſſage to the king and his governor Chojah Attar, who preſently returned with one Chojah Beyram, to excuſe their not having ſent to know what the Portugueſe demanded in that port, promiſing the governor ſhould come next day. He came not, but the meſſages continued, in order to gain time to fortify the city, and receive farther ſupplies. Alburquerque ſaw into the matter, and told Beyram, he need only return with the acceptation of peace as offered, or the declaration of war. Beyram brought word, that Ormuz uſed not to pay, but receive tribute. As night drew on, the noiſe of warlike inſtruments and ſhouts was heard from all parts. The morning diſcovered the walls, ſhores, and veſſels, crowded with armed men, while the windows and tops of the houſes were filled with both ſexes, and all ages, as ſpectators of what ſhould enſue. Alburquerque began to play his cannon furiouſly, and was anſwered by the enemy; who taking advantage of the ſmoke, which hindered the ſight, attacked his ſhips with 130 boats well manned, which did ſome damage, with ſhowers of arrows; but received more, many being ſunk, and the reſt forced by the artillery to retire. Yet they made a ſecond onſet; but were ſo received that the ſea was coloured with blood.

By this time Alburquerque had ſunk two of the great ſhips, and taken a third, though with great oppoſition; forcing the Moors to leap into the ſea; mean time, the reſt of the Captains had maſtered other ſhips, and running along the ſhore, ſet fire to above thirty more, which cutting their cables were drove flaming upon the Perſian coaſt, where they burned others that lay aground, this ſtruck ſo great a terror into all that multitude, that they fled to the city; and Chojah Attar ſending to offer Alburquerque all that had been demanded, he ſtopped farther proceedings; but perceiving the deceitfulneſs of the Moors, threatened much worſe effects of his anger, in caſe he perſiſted in his wiles. Thus, with the loſs of only ten men, moſt of the enemy's veſſels full of riches, were either burnt, ſunk, or torn to pieces, and 1700 of them killed, the dead bodies floating upon the water. Many were ſeen with ornaments of beaten gold, which the Portugueſe fiſhed for, who obſerved that ſeveral were wounded with their own arrows; there being none uſed among the Portugueſe.

Chojah Attar, conſidering the damage received, and what might enſue, called a council; wherein it was agreed to ſubmit to Alburquerque's demands. The articles were drawn, and ſworn to by both parties: their ſubſtance was, that the king of Ormuz did ſubmit himſelf to king Emanuel, to the tribute of 15000 xeraphines yearly: and ſhould aſſign the Portugueſe ground to build a fort. The fort was immediately begun, and much advanced in a few days: but Chojah Attar could not bear with it. He feigned that ambaſſadors were come to receive the tribute they uſed to pay to the king of Perſia; therefore deſired Alburquerque to give them an anſwer, ſince his king was now ſubject to the king of Portugal. He gueſſed at the deſign, and deſired Chojah Attar would ſend ſomebody to him, who might carry the anſwer. The meſſengers being come, he put bullets and

1507 ſpears into their hands, telling them, that was the coin the tribute ſhould be paid in. Chojah Attar, finding his plot fail, endeavoured to corrupt the Portugueſe with money, and prevailed with five ſeamen. One of them was a founder, who caſt ſome cannon there; and another informed him, that the enemy were not 460 in number; animated by this, he ſtudied to break the peace, refuſing to deliver up theſe men, and pretended at the ſame time, it was Alburquerque who broke it. Alburquerque began to revenge this affront, but with little ſucceſs, becauſe the captains employed, oppoſed it. Chojah Attar perceiving this, at night fired a boat the Portugueſe were building on the ſhore; and at the ſame time, one of the deſerters cried from the wall, "Alphonſo de Alburquerque, defend the boat with your 400 men, and you ſhall meet 700 archers." Nor was this to be wondered at, ſince ſome of the captains themſelves gave intelligence to the enemy, and perſuaded thoſe five to deſert. Alburquerque burning with rage, attempted to fire ſome ſhips in the arſenal; but failing, reſolved next to beſiege the city, and having taken ſome that carried in proviſions, cut off their hands, ears and noſes, and ſent them in, to the great terror of all the inhabitants. There was a hot diſpute about filling up ſome wells that ſupplied the beſieged: inſomuch that they were filled with carcaſſes of men and horſes, the captain and guard that maintained them, being all ſlain. The king and Chojah Attar, came to ſecond this action, and Alburquerque was in great danger, his retreat being cut off; but a fortunate cannon ball opened the way, putting the enemy's horſe into confuſion. Alburquerque in theſe actions found his men ill-diſpoſed to obey: among the reſt three captains, reſolving to leave him, and ſail for India, drew up a paper of reſolutions, why he ought to deſiſt from that enterpriſe, which the general gave to one of the maſons, to lay under a ſtone in the work, ſaying, he had anſwered, and would be glad to ſee who dared to remove the ſtone to read his anſwer. Though each was much offended at this, yet none replied: but jealous about the command of the fort when built, the three captains put in execution their deſign of quitting him. This troubled Alburquerque, yet he reſolved not to deſiſt, although two captains that ſtaid with him, oppoſed him, deſirous to accompany the others: but he uſed them with ſo much ſeverity, that they were forced to obey him.

Miſcarriage there.

From Bahrayn to Keyſhom ſailed a fleet with relief of men and proviſions, which Alburquerque purſued; but miſſing of it, fell upon a country-houſe of the king's, guarded by three hundred foot, and ſixty horſe, and beat them out, killing eighty, with the loſs of one man. He returned to Keyſhom, and fell upon 500 archers, ſent to Ormuz by the king of Laz, (in Perſia) under the command of his two nephews, and ſlew them, and moſt of their men, though he had but eighty with him. The brothers he ſent to Chojah Attar, as a preſent. The town was burnt; and there was taken among the plunder a carpet ſo large, that the ſoldiers were about cutting it, for the conveniency of carriage, which was prevented by Alburquerque, who bought and ſent it to St. Jago, in Galicia. Finding he had but few men left, thoſe much harraſſed, and winter coming on, he reſolved to go to Socotra, and gave leave to Juan de Nueva to ſail for India, where he had commanded a fleet before.

Alburquerque wintered at Socotra, and relieved the Portugueſe, who were there oppreſſed by famine. To this effect, he went himſelf with his ſhip to Cape Guardafu, and ſent others towards Melinda, and Cape Fum, to ſeize ſome ſhips for the uſe of their proviſions, which put a ſtop to the growing evil. He then reſolved for Ormuz, though too weak to effect what he intended; yet at leaſt to ſound the deſigns of the king and his friend Chojah Attar. By the way he reſolved to be revenged on Calayat, for injuries done to ſome Portugueſe. This town is ſeated beyond Cape Siagro, called alſo Cape Reſelgat, at the mouth of the Perſian Gulph. On the back of it is a mountain, which has only ſome paſſes that open a communication with the neighbouring country. One of theſe paſſes is juſt oppoſite to the town, through which is managed moſt of the trade of that province of Arabia, called Yemen, which is full of populous cities, fruitful, and of great trade. Alburquerque no ſooner arrived, but he landed, and entered the town, ſome of whoſe inhabitants fled to the mountains, and others were ſlain in the ſtreets. He ſtayed there three nights, upon one of which, a thouſand Moors, getting in by ſurpriſe, did much hurt: but the Portugueſe gathering, killed many, and put the reſt to flight, and burned the place. They got a great quantity of proviſions, which was moſt of the booty; and arrived at Ormuz the 13th of September. Alphonſo de Alburquerque preſently advertiſed the king, and Chojah Attar of his arrival, and they anſwered, that as for the tribute of 15,000 xeraphines, they would readily pay it, but would not conſent to the building a fort. He therefore reſolved again to beſiege the iſland, and ordered Martin Coello, with his ſhip, to guard the Point Turumbaca, where the wells were: Diego de Melo was poſted oppoſite to the Iſland Keyſhom; he, and Franciſco de Tavora before the city. Thence he viewed the ſtrength of the fort, for Chojah Attar had finiſhed it, making uſe of what the Portugueſe had begun, the better to oppoſe them. The ſucceſs was much as before; Diego de Mela, with eight private men, were killed, and he himſelf in great danger. After this, he returned to India, having taken a ſhip that carried much pearl from Bahrayn, and Franciſco de Tavora one of Mecca.

While this happened at Ormuz, the ſultan of Cairo ſent out a fleet of twelve ſail, and 15000 men, commanded by Mir Huſſeyn, to oppoſe the Portugueſe in India. By the way he attacked Imbo, and killed the Sheikh; he did the ſame at Joddah, and got great plunder, and then ſailed to Diu, where Malec Azz commanded for the king of Cambaya, whom he was to join, and treat with, in order to oppoſe the Portugueſe. The timber whereof theſe ſhips were built, was cut in the mountains of Dalmatia, by procurement of the Venetians (as was ſaid) becauſe the ſultan and Turk were at variance. A nephew of the ſultan carried it in 25 ſhips, with 800 mamalukes, beſides ſeamen. Andreo de Amarall, a Portugueſe, commanded then the galleys of Malta. He knowing that timber was deſigned againſt his countrymen in India, attacked the 25 ſhips of the enemy, with 600 men in four galleys, and ſix ſhips, and after a ſharp engagement, that laſted three hours, took ſeven and ſunk five. The reſt fled to Alexandria, whence the timber was carried up the Nile to Cairo, and thence on camels to Suez.

Portugueſe fleet defeated by Malec Azz

At this time the viceroy Don Franciſco de Almeyda, was upon the coaſt of Malabar, and had ſent his ſon Don Lorenzo, to guard thoſe of Cananor and Cochin, and ran as far as Chaul with eight ſhips: Chaul is ſeated on the bank of a river, two leagues from the ſea, one of the chief of that coaſt for greatneſs and trade, ſubject to the Nizamaluco, by whoſe order Don Lorenzo was well received. They had ſome intelligence of the fleet of the ſultan, but gave no credit to it, till it appeared in ſight, as Don Lorenzo was diverting himſelf on ſhore with his officers. They haſted to the ſhips, giving ſuch orders as the ſhortneſs of time permitted, and were ſcarce aboard, when the enemy entered the harbour with many demonſtrations of joy. For Mir Huſſeyn thought himſelf ſecure of victory by ſurpriſing the Portugueſe ſhips, and deſigned to board the admiral himſelf. Coming up with Don Lorenzo, he poured in ball, arrows and granadoes, with other fire-works, but was ſo well anſwered, that he gave over the reſolution of boarding, though the Portugueſe veſſels were much leſs than his: the others had no better ſucceſs; and now night approaching, gave them time to prepare againſt next morning. As ſoon as day appeared, Don Lorenzo gave the ſignal for battle; and, in his turn, endeavoured to board Mir Huſſeyn. The like was done

by the other captains; but only two galleys ſailed, and took two of the enemy, having put all the men to the ſword. Meanwhile the cannon was furiouſly played on both ſides, and the Portugueſe ſeemed to have the advantage, when Malec Azz, lord of Diu, came with a great number of ſmall veſſels well manned, to the aſſiſtance of Mir Huſſeyn. Don Lorenzo ſent two galleys, and three caravals to hinder the approach of the relief, which executed their commiſſion ſo effectually, that they obliged them to fly to another place for ſhelter; and the fight continued till night parted them, each ſtriving to conceal his loſs from the other. The Portugueſe captains having met in council, they judged it raſhneſs to perſiſt in that enterpriſe, ſince Malec Azz was ſo near with ſuch powerful aſſiſtance: and alledged, that it would be much better to take the open ſea, either in order to eſcape, or to fight with leſs diſadvantage. Don Lorenzo remembering the anger of his father for not fighting the fleet of Calicut in the river of Dabul, and fearing his retreat might be termed a fearful flight, reſolutely expected the morning, only making ſome motions to ſave the ſhips of Cochin that were in great danger.

Malec Azz imagining this motion was in order to fly, launched out from his retreat, not at all daunted to ſee ſo many of his veſſels torn in pieces by the Portugueſe cannon, and charged briſkly. Unluckily at this time, Don Lorenzo's ſhip running foul of ſome ſtakes that were drove in the river, let in ſo much water, that there was no preventing her from ſinking, tho' that brave commander laboured indefatigably, till a ball broke his thigh; then ordering himſelf to be ſet againſt the mainmaſt, he ſtood, encouraging his men, till another ball broke his back, and killed him. The body being thrown beneath deck, was followed down by Gato, his page, who bewailed him with tears of blood as well as water, being ſhot through the eye with an arrow. After a vigorous reſiſtance, the Moors entered the ſhip, and found the page by his maſter's body, who riſing, killed as many as covered it, and then died upon them. The ſhip ſunk at laſt. Of above one hundred men that were with Don Lorenzo, only 19 eſcaped. In all the ſhips were loſt 140; of the enemy 600. Two other captains got to Cochin, where the viceroy then was, and received the news of his ſon's death with a wonderful reſolution.

Soon after he received a letter from Malec Azz. This man, born in ſlavery, and deſcended of the heretic Chriſtians of Roxia, roſe by degrees to the height he then appeared in. But the principal action that advanced him was very trivial. It ſeems a kite flying over the king of Cambaya, dunged upon his head, whereat in a paſſion he ſaid, "I would give all I am worth, that bird were killed." Malec Azz, who was an expert bowman, no ſooner heard this, but he let fly an arrow, which brought down the kite. The king rewarded this exploit ſo bountifully, that the archer came to be made lord of Diu, a moſt famous city; which being ſeated on a triangular peninſula, joined to the continent by a very ſmall iſthmus, is commonly reputed an iſland. Malec Azz endeavoured politically to ſecure himſelf at the ſame time, both with the king of Cambaya, and the Portugueſe, whoſe power he feared, and hated, for the damage they brought on the trade of Diu. With this view he ſent the 19 priſoners to the king of Cambaya, and then wrote to the viceroy, condoling the death of his ſon, whoſe bravery he extolled, and offered to ranſom the priſoners: endeavouring this way to appeaſe the wrath he knew he had provoked, by aſſiſting Mir Huſſeyn, which was the cauſe of all the Portugueſe loſs.

About the beginning of April, 17 ſhips ſailed from Liſbon, which being all ſeparated by bad weather, at length met at Mozambique, except one that was caſt away on the iſlands of Triſtan de Cunna: theſe ſhips, with thoſe of the foregoing year, came together to India, and raiſed the courage of the Portugueſe. The king had ordered that Don Franciſco de Almeyda ſhould reſign the government to Alburquerque, and return home in one of the trading ſhips; but he ſuſpended the execution of this order, under pretence of being already engaged in taking revenge of Mir Huſſeyn, and the Turks, who had killed his ſon, and hereupon roſe a conteſt, which proving of no effect, Alburquerque offended at this, went to Cochin; and this was the beginning of ſome mens protracting the time of their command, and others preſſing them to quit. 1508

After this, the viceroy having diſpatched the trading ſhips homeward bound, under Fernan de Soarez, and Ruy de Cunna, who periſhed by the way, ſailed the 12th of December from Cananor, towards Diu, in purſuit of Mir Huſſeyn. He had with him 19 veſſels of ſeveral ſizes, and in them 1600 ſoldiers and ſeamen, whereof 400 were Malabars. All India was alarmed at this motion of the viceroy's; but chiefly the Samorin, and Malec Azz, who had uſed all neceſſary precautions to ſecure himſelf againſt the danger. Don Franciſco being landed with his officers, in the moſt delightful iſland of Anchediva, it was unanimouſly reſolved to fall upon Dabul.

This city is one of the moſt noted upon that coaſt, by reaſon of its ſituation, greatneſs and trade, ſeated on a navigable river, two leagues from the mouth. The buildings were then ſtately, the inhabitants Pagans and Moors; it belonged to Sabay, king of Decan, in whoſe borders it ſtood; and was provided with a good garriſon, being in fear of the Portugueſe power, upon notice of whoſe approach, ſix thouſand men were ſent to reinforce them, and new works raiſed, planted with cannon. However, the inhabitants, on the viceroy's approach, began to ſend away their goods, which the governor forbade on pain of death; and the more to encourage them, brought his own wife into the town, which example was followed by many of the principal men, whoſe wives were alſo at their country-houſes. On the 30th of December the fleet entered the port, and every one ſtrove who ſhould land firſt. The works being high, the ſhot flew over the Portugueſe, who having gained the ſhore, divided themſelves, in order to attack three gates at once; which the Moors perceiving, made ſo brave a reſiſtance at each place, that the dead bodies cauſed a greater ſtop than the defendants or their works. Dabul attacked.

Nunno Vas Pereyra being ſent to force an entrance another way, after a hot diſpute, put the Moors, though very numerous, to flight towards the mountain, in ſuch hurry, that by falling one over another, they retarded their own eſcape, though purſued only by ten Portugueſe. In the fight, which laſted five hours, 1500 of the enemy were killed, with the loſs but of 16 Portugueſe. The viceroy diſtributed his men through the ſtreets, with orders to keep guard, expecting the enemy's return; who accordingly, by the favour of the night, ſtole into the town, hoping to recover their wives, children and goods. In the morning the viceroy gave leave to plunder, which was prevented by the ſudden firing of the houſes, which in a few hours reduced the whole to aſhes; ſo that the booty exceeded not 150,000 ducats. This was done by the viceroy's order, leſt the men taken up with the riches of the place, might retard his other deſigns. The ſhips in the harbour ſuffered the ſame fate. They could get no proviſions hereabouts, becauſe all was deſtroyed by multitudes of locuſts, whereof many were found in pots, preſerved by the natives for food. The Portugueſe found them pleaſing to the palate, and not unlike ſhrimps, ſo that they took them for land ſhrimps.

On his paſſage from Dabul to Diu, the viceroy took ſome ſhips with Moors, and got proviſion for their ranſom. The ſecond of February, 1509, he arrived at Diu, which appeared high at Sea, encompaſſed with walls and towers, beautiful and ſtrong, populous and well governed; in every thing reſembling the cities of Spain. Malec Azz, lord of this city, was at this time abſent twenty leagues off with his army, againſt the Raſhputs; but had continual advice of the

1509 the motions of the fleet, which was ſcarcely anchored before the city, when he flew thither, but without any deſign either to aſſiſt Mir Huſſeyn, or exaſperate the viceroy; who in the mean time, conſidered the ſtrong ſituation of the place, much improved by art, as well as the courage and conduct of the two Moors, aſſiſted with above two hundred veſſels, well manned and provided. Between eight and nine in the morning when there was flood enough for the ſhips to ſwim, the admiral gave the ſignal for entering the port. Immediately all moved on both ſides with loud ſhouts, and the ſound of warlike inſtruments. The veſſels of Malec Azz, haſtened to oppoſe the entrance, ſhowering bullets and arrows which flew ten men in Diego Perez's galley that led the way, yet Nunno Vaz pierced forward, and pouring his ſhot among the great ſhips, ſunk one to the right; but being in danger between two others, was reſcued by George de Mello, who, with the other captains, boarded every one his ſhips, while the viceroy playing his ordnance in the midſt of the enemy's veſſels, favoured their deſign. The praws of Calicut fled at length, ſpreading the news along the coaſt, that the Turks were victorious.——Mir Huſſeyn being ſlightly wounded, in deſpair got on ſhore in diſguiſe; and rode to tell the king of Cambaya the falſehood of Malec Azz, who had aſſiſted him with his ſhips, but not his perſon. The abſence of Mir Huſſeyn did not diſcourage thoſe in his veſſels, for being boarded, they fought without yielding, till they were all ſlain. A great ſhip belonging to Malec Azz, was ſunk, and others taken, after which, the victory being no longer doubtful, the viceroy made up to the remaining ſhips, with his galley and other leſſer veſſels, and killed all that leaped into the ſea; ſo that above 1500 were ſlain, and but about forty of the Portugueſe. The plunder of the ſhips was very rich; and by the great variety of volumes in ſeveral languages, it was judged that the men were of ſeveral nations; among theſe books there were ſome in Latin, Italian, and Portugueſe. Of all the veſſels that were taken, only two ſhips and four galleys were preſerved, the reſt being burned. Malec Azz next morning pretending to be much pleaſed with the viceroy's victory, ſent Seyd Ali, a Moor of Granada, to congratulate him. Some of the Portugueſe commanders were for puſhing their good fortune, and attacking Diu; which the viceroy was againſt; becauſe the king of Cambaya, to whom the city belonged, was their friend, the place ſtrong, and they much weakened; nor could the town be maintained if taken. Hereupon it was agreed to liſten to the Moor, with whom a profitable peace was ſettled; he delivering up many captive Portugueſe, with all the artillery and ſtores belonging to ſome ſhips of the Turks, which were afterwards burnt. The viceroy on his return, arriving at Chaul, the king became tributary; and at Cochin was received in a triumphant manner. Here Alphonſo de Alburquerque again preſſing him to deliver up the government, he was, at the inſtigation of others, ſent priſoner to Cananor, and the other commander was ſent to Cochin, and ſettled in the government of India.

Turkiſh fleet defeated.

On the 19th of November, Almeyda left Cochin, with three ſhips, and paſſed the Cape; but putting into the Bay of Saldanna, not far to the north, in order to take in water, was prevailed on, againſt his will, to go aſhore to puniſh the blacks, for knocking out the teeth of one of his ſervants who had deſerved that treatment. There went with him 150 men, the flower of the ſhips companies, to a miſerable village, and took ſome cattle and children: which the blacks perceiving, 170 of them came down from the mountains, whither they had fled, and attacked them with their ſharp pointed ſtakes ſo furiouſly that they ſoon killed fifty, and among them the viceroy, who was ſtruck through the throat. He was ſixty years old, of a graceful preſenee, and obliging carriage; of ſound judgment, liberal and grateful.

Almeyda ſlain

Duarte de Lemos before this, in 1508, being made governor of Ethiopia and Arabia, having ſailed with a ſquadron to Mozambique and Melinda, ſet out to viſit Monſia Zanzibar, Pemba, and other iſlands, which neglected to pay the uſual tribute. The firſt ſubmitted immediately; but the two latter making reſiſtance, the inhabitants were driven to the mountains, and the towns plundered. Diego Lopez de Sequeira, being intruſted with the diſcovery of Madagaſcar and Malacca ſet out for the latter, calling at Padir and Paſem. Their kings ſent him preſents, and made great offers of friendſhip. Caſting anchor at Malacca, he terrified that coaſt with his cannon. A boat coming to his ſhip to enquire who they were, they ſent word there was an ambaſſador from the king of Portugal to the ſovereign of that place. The king's anſwer was doubtful, as is uſual when men's deſigns are bad; and Hierom Teixeyra, who was ſent as ambaſſador, was honourably received, the better to inſnare Lopez who accepted of the king's invitation, but did not go; being informed that the deſign was to murder him; and the ſon of Ultimuti Raja was ſent on board him, for while thirty men were diſpatched to another place to take in pepper, by the crafty directions of the king, the fleet was ſuddenly attacked by ſeveral veſſels; from which Lopez at laſt freed himſelf, ſinking ſeveral of them; but loſt his thirty men, who were killed in the town.

Alphonſo de Alburquerque now poſſeſſed of the government, prepared, along with Don Fernando Coutinno, to fall upon Calicut; where they arrived on the ſecond of January, 1509, with thirty veſſels and eighteen hundred men, beſides boats of Malabars, who followed in hopes of plunder. Every one ſtrove to land firſt: Coutinno had 800 men, and ſome field pieces, Alburquerque had the ſame number, beſides 600 Malabars. They marched with more confuſion than order, each ſtriving to be foremoſt, 600 men in the bulwark of Seram, made a vigorous reſiſtance, till Alburquerque coming up, they quitted it. Coutinno, upon this, marched forward to the palace of the Samorin, which was five leagues from the ſhore, where being arrived, much fatigued, his men fell to plundering without ſhame or order: but in the interim, the enemy being reinforced, returned and fell upon the Portugueſe, killing many under their burdens. Alburquerque, having by this time entered and fired the city, marched towards Coutinno, who had ſent to him, being in great danger. He found him blocked up in the palace: nor could he aſſiſt him, being hindered by the multitude of the enemy, who ſlew many of his men, and wounded him with a dart in the throat, and a ſtone in the head, ſo grievouſly that he was carried ſenſeleſs to the ſhore. By this time, Coutinno and ſeveral more were ſlain in the palace: beſides many on the way, who were oppreſſed by numbers, ſpent with labour and heat, or ſtifled with the duſt. They had doubtleſs all periſhed, if 2000 men left in the city had not come up in time, and obliged the enemy to retire; they loſt in all 80 men.—Alburquerque upon his return to Cochin, made preparations for a third attempt upon the iſland of Ormuz. About the end of January, he ſailed from thence with 1700 men, in twenty-one veſſels of ſeveral ſizes. Calling at Onor, he changed his deſign, by advice of the pirate Timoja, and went to attack Goa, in whoſe port he anchored on the 25th day of February.

Calicut plundered.

The iſland of Ticuari is ſituated on the coaſt of Canara, formed by two mouths of the river Gaſſin: its length from eaſt to weſt, three leagues; the breadth, one. It conſiſts of hills and plains, has good water, is very fruitful, pleaſant, beautiful, and healthy. On the north ſide of this iſland is ſeated Goa, which formerly was on the ſouth. The city now in being, was built by Malech Huſſeyn, a Moor, forty years before the arrival of the Portugueſe. It is not known when the old one was founded; but mention is made in ſome writings of Montraſat, king thereof, above 100 years before. The Moors began to conquer India, about the year 1300. The firſt that attempted it with great power, was Norradin, king of Dehli,

Goa.

Dehli, with a powerful army he came down from the north, conquering all the gentiles as far as the kingdom of Canara. Thence he returned to Dehli, leaving Habed Shah to profecute the conqueft: who, by his valour and conduct, became fo great, that he coped with his maſter. His nephew Madura, profecuting what his uncle had began, poſſeſſed himſelf of the kingdom of Canara, and caſting of his allegiance to Shah Naſradin, called the kingdom Decan, from the ſundry nations with which he had conquered it, this word importing ſo much with that language. So great an empire always threatens ruin. Mohammed Shah, fearing this, uſed great induſtry to ſecure himſelf, which he did for a time; but at length, ſeveral governors intruſted with the command of different provinces, erected them into ſovereignties, (impriſoning their king at Bedar, the capital of Decan) The greateſt of theſe was he of Goa, when the Portugueſe entered India, called Sabay, who died about the time of Alburquerque's deſign upon that city: which the king of Hidalcan, had taken poſſeſſion of, and put it in the hands of his ſon Iſmael. The other princes were Nizamaluco, Mudra Maluco, Malech Verido, Choja Mozadan, Abexeipado, and Cotamaluco, all great princes, and foreigners (except Nizamaluco). Sabay was born at Saba, a city of Perſia, of very mean extraction: but ſerved the king of Decan ſo fortunately, that he gave him the city of Chilberga. Thence he extended his conqueſt over the gentiles of Biſnagar; and afterwards took the iſland of Goa, (which not long before had been ſeized by the Moors, who came from Onor): Malech Huſſeyn, who was then lord of it, and defended it with 1200 men, being killed in the attack. Goa had ſeveral dependencies, with which, and others he conquered, Sabay became the moſt powerful of thoſe princes; againſt whom he maintained himſelf while he lived; but his death produced great alteration. Alburquerque having ſent his nephew Don Antonio de Noronna, and Timoja, to ſound the river, on whoſe banks Goa is ſeated, found a fort well furniſhed with guns, and 400 men; which they attacked and took, after a ſtout reſiſtance made by the commander, a valiant Turk. This man flying to the city, Timoja took another bulwark with 30 men. The next day as Alburquerque entered the river, he was met by Mir Ali, and other chief perſons of the city, who came to ſurrender it, on conditions, that their lives, liberties, and eſtates, ſhould be ſecured. This unexpected ſurrender was owing to the terror which ſeized them on the report the commander made of what he had ſeen a few Portugueſe do, and to the prediction of a Joyhi, (one of their religious men) who not long before had declared, that the place ſhould ſoon be ſubject to ſtrangers. On the 17th of February, Alburquerque was received by thoſe on ſhore, as if he had been their natural prince; and mounting a horſe, they brought him rich furniture, at the gate received the keys, and went on to the palace built by Sabay; from whence he diſpatched embaſſies to divers princes. Four months after, the Moors in the town, who had delivered it up ſo eaſily only to avoid their own ruin, and gain time till relief came, revolted, Iſmael Hidalcan (Adel Chan) ſet out with a great power, to aſſiſt the revolters; ſending before his great general, Camel Chan, with 1500 horſe, and 8000 foot. Alburquerque having ſeized and put to death the heads of the conſpiracy, prepared the beſt he could for his defence, however, Camel Chan, with ſome loſs, entered the iſland and encompaſſed the city (whither the Portugueſe retired) playing his cannon to good effect. Alburquerque indeed did all that could be expected from him; but Adel Chan coming up with 6000 men, whereof 5000 were horſe, it was reſolved in council to abandon the city in the night. This was executed with great hazard; for Adel Chan had begun to cut off their retreat to the ſhips, in which Alburquerque had his horſe killed: yet got off without loſs, after a ſeige of twenty days. Alburquerque being reinforced by ſhips from Portugal, the ſame year, 1510, ſet out from Cananor with twenty-three ſail, and 1500 fighting men. At Onor he landed, to be preſent at Timoja's wedding, who married the daughter of a queen: and ſent with him three ſhips, promiſing to join him at Goa with 6000 men. On the 22d of November, the viceroy anchored a ſecond time before that city, and at break of day aſſaulted it, with great ſlaughter; the Portugueſe entering with the enemy, who fled, and doing great execution in the ſtreets. The fight was furiouſly renewed at the palace, with great danger to the Portugueſe, but Alburquerque coming up, the Moors abandoned the city, and, endeavouring to get over to the continent, through haſte and confuſion, periſhed in the river. Out of 9000 men who defended the town, 6000 were deſtroyed, and but fifty Portugueſe loſt in the attack. The booty of horſes, artillery, proviſions, and ſhips, was exceſſive. Not one Moor was left alive in the iſland: but the gentiles were reſtored to their poſſeſſions and the government of them given to Timoja, who came not till the city was taken. After this, Alburquerque received ambaſſadors with congratulations from ſeveral princes of Malabar: and laid the foundation of a fort; which he called Emanuel. He alſo coined ſilver and copper money; his intention being to make Goa the Portugueſe bulwark in India. Having left 400 Portugueſe for the defence of it, and 5000 gentiles under Melaru, nephew to the king of Onor, to ſecure the country; and to ſeek revenge, he returned to Cochin: where, under pretence of going againſt the city of Aden, in Arabia, (according to the king's inſtructions) he prepared for the conqueſt of Malacca. The city of Malacca is ſituated on what is commonly called the Aurea Cherſoneſus, or Golden Peninſula, and about the middle of the channel, which parts the iſland of Sumatra from the continent. It lies in ſomewhat more than two degrees of north latitude, ſtretched along the ſhore about a league, in the ſame manner as Liſbon. It is divided by a river, and the two parts joined by a bridge. The buildings were of wood, except the moſque and palace, which were of ſtone. It afforded a pleaſant proſpect to the ſea, and was well ſecured with fortifications. The port was filled with abundance of ſhips, as being the great market of all thoſe parts. It was firſt built by the Selates, a people for the moſt part employed in fiſhing, who joined themſelves to the Malays that before inhabited the mountains. They were aſſiſted by Pariſamora, to whom they ſubmitted. He had been a conſiderable perſon in the iſland of Java: but being expelled by a tyrant, who uſurped his lordſhip, he fled to Sincapura, and was well entertained by the king, againſt whom, however, he rebelled, and was again caſt out by the king of Siam, and ſo forced to wander about Malacca. Yet having increaſed the new colony, he gave it the name of his own Fortune; for Malacca, in the Malayan language, ſignifies a baniſhed man. The firſt king of Malacca was the ſon of Pariſamora, ſubject to the king of Siam, from whom his ſucceſſors revolted. The country of Malacca is ſubject to inundations, full of thick woods, full of hurtful and dangerous creatures, chiefly tygers, which obliges many people to paſs their nights on the tops of high trees; becauſe they fetch them off the low ones with a leap. The trade of the eaſt and weſt makes Malacca moſt rich and populous.

1513.

Malacca deſcribed.

Mohammed reigned at this time; againſt whom the king of Siam had ſent an army of 40,000 men; moſt whereof periſhed by ſundry accidents, and partly by the treachery which that king practiſed againſt Diego Lopez de Syquera. But now came Alburquerque to revenge them all. Mohammed therefore brought to his aid the king of Pahang, with a great force; and had now 30,000 men, and 8000 pieces of cannon.

On the 2d of May, 1511, Alburquerque ſet out from Cochin for Malacca, with 19 ſail, and 1400 fighting men, 800 of whom were Portugueſe, the reſt Malabars. In the way they took five ſhips of the Moors, bound for Malacca, off Ceylon. Being arrived

1515 rived on the coaſt of Sumatra, the kings of Padir and Pazaſem, ſent ſome Moors to viſit him. Nehoada Beghea, who had a chief hand in the treachery of Malacca, was taken at ſea;—and here we are told that not one drop of blood, though pierced with ſeveral mortal wounds, iſſued from him; but a bracelet being taken off his arm, he bled plentifully. The Indians, who diſcovered the ſecret, ſaid it was the bone of a beaſt that breeds in Java. It was eſteemed a great prize, and brought to Alburquerque.—The reader will judge the truth of this ſtory.——They next met a veſſel with 300 Moors, ſo reſolute, that Alburquerque was forced to come up himſelf to take it, not without danger. The firſt of July the fleet anchored in the port of Malacca, and terrified the people on ſhore with the noiſe of warlike inſtruments and cannon. The next day a Moor came from the king to tell the viceroy, that if he came for merchandiſe it was ready. The meſſenger was received with great ſtate and courteſy. The anſwer was, That the merchandiſe ſought for was ſome Portugueſe left there by Sequeyra, and that having gotten them, he would let the king know his farther demands. Being terrified with this anſwer, it was agreed to buy off the danger, by reſtoring the Portugueſe and paying a ſum of money; but Prince Aladin, his brother-in-law, the king of Pahang, hindered the king from ſo doing. Thereupon Alburquerque began ſome military execution, which obliged the king to reſtore the captives, and ſend other meſſages, to which the viceroy returned for anſwer, that he offered him peace upon condition he permitted him inſtantly to raiſe a fort there and repaid the charge of his and Sequeyra's coming to that port; ſince his falſehood had been the cauſe of all the damage ſuſtained, and that he muſt inſtantly return an anſwer, whether he choſe peace or war. The king deſired an accommodation, but his ſon and brother-in-law oppoſed it.

The viceroy landed his men on the 24th of July. The hotteſt of the diſpute was about gaining the bridge; which was defended by the prince, and the king of Pahang; King Mohammed came there alſo himſelf, on a large elephant, with two more carrying caſtles on their backs, from whence flew ſhowers of darts; but the beaſts being wounded, fled; and trampling down their own men, made way for the reſt of the Portugueſe to join thoſe at the bridge, where Alburquerque fortified himſelf: however, his men being faint thro' heat and want of food, towards night he retired with them to the ſhips, where ten died of wounds by poiſoned arrows; the enemy's loſs was not owned. The king of Pahang went away on pretence of bringing a recruit, but returned no more. Mean while, King Mohammed was buſied in undermining the ſtreets, and covering them with poiſoned thorns; being induſtrious alſo to ſecure the bridge, Alburquerque ſent Antonio de Abrieu in a veſſel well manned, to gain it: he paſſed through ſhowers of bullets, and though deſperately wounded, would not be brought off. Then floats of wild-fire were driven along the river to burn his ſhip, which was prevented by Alburquerque's gaining the bridge, who then entered the city thro' ſhowers of bullets, arrows and darts. Avoiding the mines in the broad ſtreet, he gained the moſque, and, at laſt, with great ſlaughter of the enemy, got poſſeſſion of the city, having with him in this action, only 800 Portugueſe, and 200 Malabars.—— In nine days time, all the Moors were killed or driven out of that great city, which was peopled again by ſtrangers and ſome Malabars, to whom leave was granted. Among them came Utimuti Raja, that powerful native of Java, whoſe ſon was likely to have killed Sequeyra. The ſoldiers had three days liberty to plunder. There were found 3000 pieces of great cannon, out of 8000 that King Mohammed relied upon, who with the reſt retired to Bintam (Bintang) where he and Prince Aladin fortified themſelves, but Alburquerque ſending thither 400 of his men, along with 400 of Utimuti Raja's, and 300 belonging to the merchants of Pegu; they put the prince to flight, and took ſeven elephants with coſtly trappings. Mohammed, who now wandered in the woods with his ſon, whoſe obſtinacy he blamed, and they fell at variance and parted.—Alburquerque inſtantly built a fort at Malacca, (which for its beauty he called Harmoſa) and a church. He alſo coined money, as he had done at Goa, of different ſpecies, and ſcattered ſome among the people, by which, and other ſuch ſplendid actions, he gained the hearts of the ſtrangers, and ſecured this moſt important place. Alburquerque knowing it is ſometimes convenient to truſt an enemy, gave the command of the men in the city to Utimuti Raja, but diſcovering that he correſponded with Prince Aladin, on pretence of reſtoring him, but in reality to ſet up himſelf; he, his ſon, and ſon-in-law, were apprehended; and, after conviction, publicly executed on the ſcaffold they had erected for Sequeyra. This was the firſt public execution ordered by the Portugueſe in India. Two other princes went about by artifice to poſſeſs Malacca, but did not ſucceed. Alburquerque received here ſeveral embaſſies, particularly one from the king of Siam, who rejoiced to ſee his quarrel revenged. He alſo ſent ambaſſadors to Siam and Pegu, with two perſons to diſcover the iſlands of Molucca and Banda. Then leaving 3000 men in the fort, and ten ſhips to guard the ſea, he returned towards Cochin; in his way, his ſhip, on the coaſt of Sumatra, ſtruck upon a rock. While he was on this expedition, Goa was beſieged by 20,000 of Adel Chan's men, encouraged by ſome natives within; but the viceroy arriving with ſeveral fleets at the ſame time, from different parts, the ſiege was raiſed. Hereupon the king of Calicut concluded a peace, with liberty to build a fort; and thoſe of Narſinga, Biſa, Adel Chan, and other princes, ſent ambaſſadors to him: There came alſo one from Preſter John, in order to go to Portugal. Alburquerque ſet out for the conqueſt of Aden, on the 18th of February, with twenty ſhips, manned with 1700 Portugueſe, beſides 800 Canarans and Malabars. The city of Aden is ſeated near the coaſt of Arabia Fælix, and the mouth of the Red Sea. Over it appears the mountain Arziza, all a barren rock, divided in many cliffs. The town from the ſea, looks beautiful and ſtrong. It is rich, and famous for the reſort of many nations; but water is very ſcarce, as it depends only upon a few wells and ciſterns, nor do the clouds ſupply it above once in three years: whence it is void of all trees, plants and orchards, the delight and pleaſure of other towns. They attempted to take this town by ſcaling the wall, but they were obliged to retire in four days with loſs, after taking a bulwark which guarded the port, with 39 great pieces of cannon, and burning the ſhips which were firſt plundered. From thence they ſailed to the Red Sea, being the firſt Portugueſe who had entered it, they took four rich ſhips at the iſland of Camaran, where they were obliged to winter. In July they departed, and coming again before Aden, found it newly fortified; ſo that after exchanging a few ſhot, the viceroy ſailed for India. In Auguſt Alburquerque anchored off Diu, demanding of Malec Azz leave to build a fort; Malec managed him with great addreſs, referring him to the king of Cambaya, who granted it, on condition that he might build another at Malacca. Meanwhile Malacca was in great danger of being taken by Pati Quiter, who at laſt was obliged to fly to Java, his native country, from whence Pati Unuz, lord of the city Japara (after king of Sunda) ſailed with a fleet of 90 ſhips, ſome as large as galleons, with 12000 men to fall upon Malacca; he had been ſeven years making this preparation, and held a correſpondence with the Javans in that city; but Fernando Perez with 17 ſhips, and 350 Portugueſe, and ſome natives, after two furious engagements, put Unuz to flight in his greateſt ſhip, for which a merchant offered 10,000 ducats, in caſe it was taken. The Javans from this time were baniſhed for ever out of the place; which ſoon after Mohammed, its late king, endeavoured to ſurpriſe by ſtratagem, and was very near ſucceeding.

Aden.

Alburquerque reſolving to attack Ormuz, the 20th of July, 1514, ſet out with a fleet of 27 ſail, wherein were 1500 Portugueſe, beſides 600 Malabars and Canarans, coming to anchor in the port the 26th of March: there preſently came on board a viſit, with preſents from the king. The viceroy ſent to demand the delivery of the fort he had begun there, and that ſome principal men ſhould be ſent with the inſtrument of the ſubmiſſion made of that kingdom, by King Sayfaddin; every thing was conſented to, becauſe there was no power to reſiſt. Raez (or Reis) Noraddin, the governor, with his nephew, came to ratify all, and was ſent back with rich preſents for themſelves, and a valuable collar of gold for the king. Public rejoicing was made on both ſides for this agreement. After which, Alburquerque went on with building the fort, near which on a ſcaffold, he received an ambaſſador, that came from Iſmael king of Perſia, with preſents conſiſting of ounces, precious ſtones, jewels of gold and ſilks, the treaty was concluded with mutual ſatisfaction. Before the coming of the viceroy, Raez Hamet was ſent from Perſia to Ormuz, with a deſign to ſecure it, and deliver it to Iſmael. He had got the entire aſcendant of the king; he had brought people ſecretly into the city to kill him, when there was a favourable opportunity. Alburquerque, to deliver Sayfaddin, propoſed an interview with him, when Hamet entering foremoſt rudely, and knowing him to be ſecretly armed, the viceroy ordered his officers to kill him. While the fort was finiſhing, Alburquerque perſuaded the king, that it was for the ſafety of the city to put all its cannon into the fort, which with ſome reluctancy he conſented to; and the command thereof was given to Peter de Alburquerque. Thus was this rich and powerful kingdom brought under ſubjection to the Portugueſe. Soon after, the viceroy falling ſick, was perſuaded to return to India, for the recovery of his health. In the way, meeting with news that a new governor was come from Portugal with orders for him to return home, he broke out into ſome complaint: after which he was ſeized with a profound melancholy, and died upon the bar of Goa, the 16th of December, 1515, in the 63d year of his age: He was ſecond ſon to Gonzalo de Alburquerque, lord of Villa Verda, and of Donna Leonora Meneſes, daughter of Alvaro Gonzales de Atayde, firſt count of Atouguia. He had been maſter of the horſe to King John the Second, of a moderate ſtature, his countenance pleaſing and venerable. He was twice before Ormuz, twice before Goa, and twice before Malacca, three famous iſlands and kingdoms in Aſia, over which he triumphed. He was firſt governor of India, as his predeceſſor was the firſt viceroy. The dominions of the Portugueſe in Aſia were founded by three, viz. Duarte Pacheco, Don Franciſco de Almeyda, and Alphonſo de Alburquerque.

This great man being dead, Lope Soarez de Albergaria took the government. He brought with him to India a fleet of 13 ſhips, and in them 1500 men. As Almeyda laid the foundation of the Portugueſe power in India, Alburquerque eſtabliſhed it, and ſeems to have brought it to its height; for after his death, their affairs declined every day, through the pride and avarice of the governors and other officers. The governor, according to the king's order, prepared for the Red Sea; and being informed that the ſultan of Egypt was fitting out a great fleet at Suez, he ſailed in ſearch of it from Goa, upon the 8th of February, 1516, with 27 ſail of ſeveral ſorts. He carried with him 1200 Portugueſe, and 1600 Malabars; one half ſoldiers, the other half ſeamen. Coming before Aden, Miramirzan finding himſelf defenceleſs, (by reaſon a piece of the wall was beaten down by Raez Solyman, admiral of the Suez fleet) made a virtue of neceſſity, and offered the keys to Lope Soarez, who pleaſed with this flattery, truſted to him, and took not poſſeſſion of the city, intending to do it at his return. Hearing that Solyman, by ſtreſs of weather was driven to Jodda, and had no defence, he immediately reſolved to ſail thither, up the Red Sea. 1514

Jodda. Jodda is ſituated in Arabia Fœlix, in 21 degrees, 30 minutes north lat. in a moſt barren ſoil, being all a deep ſand. The buildings are good, but not the harbour. The inhabitants are of two ſorts, the native Arabs, and foreign merchants. Mir Huſſeyn, after his defeat at Diu, by Almeyda, being afraid to return to Egypt, fortified this town for his own ſecurity, under pretence of ſecuring the prophet's ſepulchre at Mecca. Meanwhile Raez Solyman, a Turk, of baſe parentage, but a powerful and bold pirate, born in Mitylene, an iſland in the Archipelago, offered himſelf to the ſultan of Egypt to command the fleet of 27 ſail, that was preparing at Suez, to fall upon Aden; an employ which Mir Huſſeyn had ſet his heart upon, and he was accepted of. After repairing the loſs that was ſuſtained at Aden (where many of his men were killed) and taking a great booty in the city Zeybid, he returned to Jodda, where he ſlew Mir Huſſeyn, and then delivered the place up to Selim, the Turkiſh ſultan: who not long before had poſſeſſed himſelf of Egypt, and put an end to the dominion of Maluc's [by the defeat of Tuman Bey, (or Tomombaius) the ſucceſſor to Canſu al Gauri.]——

The port being dangerous, Lope Soarez anchored a league from the city, in which there was ſo good cannon, that ſome pieces reached the ſhips at that diſtance. Solyman propoſed a private combat between man and man; but the governor would not permit it, ſaying, He would anſwer on ſhore. The city was terrified by the firing a galleon, while the governors ſounded the channel that goes up to it. Solyman appeaſed the tumult, and appeared with ſome men without the walls, while multitudes appeared on them, braving the Portugueſe with loud cries; who ſeeing that Loap Soarez neglected landing, began to complain of the delay. He appeaſed them by ſhewing his inſtructions; which were not to attack the city, but the fleet: and not being able to effect this, he retired to the iſland of Comarin. From hence, after ſuffering much by famine, and loſing 17 men, taken by the Moors, he went to Zeyla, a city at the mouth of the Red Sea, on the African ſhore, and the great market of thoſe parts; which being unprovided, was eaſily taken and burnt. When he came to Aden, the wall being now repaired, Miramirzan refuſed to deliver the place, by forming delays: being thus baffled, he ſailed for Barbora, deſigning to do to that city, what he had done at Zeyla: but the fleet being ſcattered by ſtorms, and 800 men loſt, the attempt was deferred till next year, when it was taken without reſiſtance and burnt. Soarez baffled there.

——In the mean time great diſorders reigned at Goa, which at laſt brought on a ſhort ſiege: the ſame misfortune attended Malacca, through the ill government of George de Brito, and animoſities of others, whoſe tyrannical treatment made the inhabitants fly, and brought the late king with a conſiderable force to recover it; ſo that had not Don Alexio de Meneſes came with 300 men, the Portugueſe poſſeſſion there had been at an end, after which the king of Siam, who hated the Moors, ſent Siameſe, at the requeſt of a Portugueſe ambaſſador, to people Malacca, which now became ſecure.

Ceylon. The iſland of Ceylon (called by the ancient inhabitants Ilanare, and by the Arabs and Perſians, Serendib) lies oppoſite to Cape Comorin, the ſouthern point of the hither peninſula of India; from whence it is diſtant about 16 leagues, and is ſuppoſed once to have joined to it. It was divided into nine kingdoms; Colombo on the weſt; Gale, on the ſouth; Jaula, Tanavaca, Cande, Batecalon, Vilaſem, Triquinamale, and Jafanapatam. The Portugueſe had a trade with Colombo, the king whereof deſired their friendſhip, and furniſhed them with cinnamon, from the time of Alburquerque. Hither Lope Soarez ſailed next, in 1517, with 17 veſſels, great and ſmall, and 700 Portugueſe ſoldiers: with deſign to oblige the king to pay tribute, and conſent to the building a fort, as king Emanuel deſired. After a ſmall conteſt, in which the Colombo made tributary.

iſlanders,

1521 islanders, trying to assist the Moors, were put to flight; the king yielded to be a subject to Portugal: paying yearly 1200 quintals of cinnamon, twelve rings of rubies and saphires, with six elephants: commodities with which Ceylon abounds. Soon after the king of Pam, near Malacca, voluntarily became tributary to the crown of Portugal, paying a golden cup yearly. Duarte Coello having settled a peace with the king of Siam, then one of the three greatest princes of Asia (those of China and Bisnagar being the other two) Fernan Perez de Andrada arrived the same year (1517) after many difficulties at Canton in China; where he settled a trade on that coast, and returned laden with riches to Malacca. Thence, in 1518, he went with Don Meneses to Cochin: but was no sooner gone, than the king of Bintang (who waited that opportunity, though he had concluded a peace just before) attacked the city, (where there were about 200 Portuguese) with 1500 men, many Elephants by land, and sixty vessels by sea; after twenty days he raised the siege, with the loss of 330 men, and 18 Portuguese, and lay to hinder provisions getting in to relieve the town, but retired on the arrival of Garcia de Sa, with sixty men. Thither also came Antonio Correa, in 1519, from Martaban, where he had been concluding a peace with the king of Pegu, at which the priests of both nations assisted *.

Diego Lopez de Sequeyra, governor of India after Loap Soarez, having treated with Malech Azz, to erect a fort at Diu, and being put off with delays, resolved to compass it by force: for this purpose he gathered 40 vessels of all sorts, and in them 3000 Portuguese, with 800 Malabars and Canarans; the greatest fleet of theirs that ever had been seen in those seas. But coming before it, the 9th of February, and finding it had been fortified and retrenched, in a surprizing manner, as well as re-inforced with a strong garrison, it was agreed in a council of war by all the officers who assisted, not to attack it; though afterwards they charged their own cowardice on him. To as little purpose was the expedition of George de Alburquerque, governor of Malacca, with 18 sail, and 600 men, against the king of Bintang. This is an island of 30 leagues in circumference, and as many distant from Malacca. It was well fortified, having two strong castles, and the rivers staked; so that it seemed almost inaccessible. Alburquerque finding it impossible for the ships to come up, attempted to land his men in boats, in order to attack the fort, but the water being up to their middles, and the enemies shot very thick, they were forced to retire without doing any execution, many of their men being wounded, and twenty being slain.—From this place Antonio de Brito sailed for the Molucca Islands; which are in the midst of many others under the line, about 300 leagues eastward of Malacca.—To these islands, and particularly Ternate, Brito was sent to build a fort, which long since Boylee, the king of the place, had desired: others had gone before, but to no effect: as Antonio de Abrew, (in the time of Alburquerque) who, losing one of his three ships, arrived at Banda, (the chief of the five of that name) which is like an earthly paradise: and one of its chief ornaments the plant that produces the clove: from thence he returned to Malacca. But his other captain, Francisco Serram, was driven to Ternate, where he waited for the dispute to be decided, which arose among the kings of those islands, Tidore and Bachan; each striving to have the fort built on his own land.

Brito sent to build a fort at the Moluccas.

When Brito arrived at Ternate, King Boylee was dead; and he of Tidore had admitted the Spaniards; thinking himself, with very good reason, as happy in them, as Ternate could be in the Portuguese. Yet observing, that the queen of Ternate, (who was governess to her son) received Brito joyfully, the king paid him a visit, and finding him displeased on account of the new guests he had entertained, offered to deliver them up. This he thought would prevail on Brito to build a fort at Tidore, but Ternate being found to be the more convenient place, it was at length erected there. The arrival of the Spaniards was in this manner. While Serram (or Serrano) was at Ternate, a correspondence was held between him and Ferdinand Maghellan, which turned to the advantage of Spain, and trouble of Portugal. This gentleman, who was a person of great merit, by his skill in sea affairs, and the light he had obtained from Serram, having guessed there might be found another way to India; had even wrote his friend word, that he hoped to be with him soon at Ternate, by a new route. In effect, having been denied in Portugal the reward due to his services, he went over to the Emperor Charles V. and offered to bring the Spaniards to the Moluccas, a way by the west, at a time when they began to have a desire of the spice trade. His offer was readily accepted, and the command of five ships given him, with 250 men, some of them Portuguese. Maghellan, (as we have already related) sailed through the Streights that bear his name, and passed over to the great Pacific Sea, which divides that continent from Asia, and coming among the East India islands, in one whereof he was killed in a fight, in April, 1521. Gonzalo Gomez de Espinosa, in the ship Victory, arrived at the Moluccas, and was received by the king of Tidor, in hatred to the Portuguese, and those of Ternate; on the account above mentioned, Espinosa returned to Spain by way of Panama, and left the above-mentioned command of the ship to Juan Sebastian del Cano, who, having loaded her with spices, pursued his course the way the Portuguese take, by the Cape of Good Hope: being the first that lived to compleat that wonderful voyage round the world. Their arrival raised new contests between the emperor and King John the third of Portugal; who, by the former agreement, concluded the Moluccas belonged to him; and that no other European prince would offer to interfere in the trade of them.

The Spaniards arrived by the south west passage.

Fernan Perez de Andrada having secured the trade of China, at Canton, which proved exceeding profitable; his brother Simonin, in 1521, obtained leave to sail thither with five ships. When he came to the island Tamu, opposite to that city; Perez, the Portuguese ambassador to the Chinese court, was still there; but soon after he departed for Nanking, being four months on the way. He followed the emperor to Peking, where he was to have received his audience; mean while Simon de Andrada, through pride and conceit, behaved as if he had been king of the island: he raised a fort and set up a gallows, to terrify the people: committed violence upon the merchants, and bought young people of both sexes, without the usual precautions, giving occasion to kidnappers to steal them from their parents. These things coming to the emperor's ears, Perez (instead of being received as an ambassador) was seized with his people, and they were condemned to death, as spies: but the sentence being respited, they were sent back prisoners to Canton, to be released, in case the Portuguese restored Malacca to its king, who was a subject of China, otherwise they should be punished, and none of their nation ever admitted, or treated but as enemies. The Portuguese instead of reclaiming, agreed to act more insolently, which so exasperated the governor of Canton, that he secured several of them, and contrived to take some ships that were

* The gentile priest was called the Great Rawlin, who, after the capitulations were rehearsed, began to read in a book; and then taking some yellow paper, (a colour dedicated to their holy uses) with some sweet leaves of trees, inscribed with certain characters, set fire to it all: and holding the hands of the king's minister over the ashes, spoke some words, which rendered the oath inviolable. On this occasion there happened a merry passage; for Correa, to answer this solemnity, having ordered his priest to put on a surplice, and bring his breviary; the cover was so tattered, and the leaves torn, that thinking it scandalous their sacred books should appear in such bad plight, he directed instead of it a book of church music to be brought, which being bigger and better bound, passed among those people, as well as if it had been the gospel.

newly arrived from Malacca, they began to act, when Duarte Coello arriving with two veſſels from Malacca, well manned, he was attacked by the Hay-tau, or admiral of that ſea, with fifty ſail; who being repulſed, kept them beſieged forty days, mean while two ſhips more arriving, it was reſolved to force their way through the Hay-tau's fleet, and get off.

Portugueſe ambaſſador ſlain at Canton.

The Hay-tau revenged this diſaſter upon ſome of the Portugueſe who arrived there, and the ambaſſador Perez; who being returned with his company to Canton, they were all ſlain, and the effects of Perez, together with the preſent he brought for the emperor, ſeized. This man was of baſe parentage, and by trade an Apothecary; though choſen for the embaſſy, on account of his good parts. There were found with him 2000 weight of rhubarb, 160 pieces of damaſk, 400 of other ſilks, above 100 ounces of gold, and 2000 of ſilver, three quarters of a hundred of looſe muſk, and above 300 purſes of it, at firſt called papos, and much other merchandiſe. The ſame year,

Bahrayn ſubdued.

1521, the iſlands Bahrayn and Catif were conquered from Mocrin, king of Laſah; who held them of the king of Ormuz, but refuſed to pay the tribute. In 1522, the Portugueſe were attacked at Ormuz, Bahrayn, Maſcat, Curial, and Soar (or Sohar) at once. The king of Ormuz deſparing of ſucceſs, retired to Keyſhom, after ſetting the city on fire: but being murdered by his favourites, his ſucceſſor, only fifteen years of age, was prevailed on by the Portugueſe to return to Ormuz, on condition that they ſhould not meddle with the government of the city. This year alſo the country about Goa, which had belonged to Aden Chan, was recovered by him. The king of Achen attacking them in Sumatra, they abandon the fort of Paſing. Things went ill with them alſo at Malacca and the Moluccas. In 1525, the fort of Calicut being attacked by the Samorin, with conſiderable force, the Portugueſe demoliſhed it, and withdrew.

Hector de Silveyra, in 1526, deſtroyed Doſar, (or Dhafar) a ſtrong city on the coaſt of Arabia; and entering the Red-ſea, reduced the iſlands Mazua and Dalaca.

Celebes diſcovered.

They diſcovered the iſland of Celebes, Calayat and Maſcat, exaſperated by the avarice of Diego de Melo, revolted, but were reduced again.

Turks deſign miſcaries.

Raez Soliman, the Turk, who killed Mir Huſſeyn, at Joddah, having recovered his prince's favour, by delivering up the city, and ſending a preſent; Sultan Soliman, the ſucceſſor of Selim, ſent Haydarin, from Suez, with a fleet of twenty galleys, and five galliots, to deliver to Raez Soliman, who was then fortifying the iſland of Camarin, in the Red-ſea: where Haydarin, on ſome diſguſt, killed him. Muſtapha, nephew to Raez, ſucceeded him, and ſlew Haydarin: after which he fled with a few ſhips, firſt to Aden, and then to Diu, for protection. Thus this expedition deſigned againſt the Portugueſe miſcarried. Antonio Tenreyro went by land with the news to King John, being the firſt who performed that journey, till then thought impoſſible.—Malacca being infeſted by the king of Bintang, Pedro Maſcarenas, with 21 ſhips and 1000 men, 600 of them Malayans, ſailed to that iſland; and attacking the capital, which was well fortified, and defended by 7000 men, entered it ſlew 400, and took 2000 priſoners, a vaſt booty, and 300 pieces of cannon, with the loſs of only three Portugueſe: the king was reſtored on becoming tributary. In the Moluccas, Don Garcia Henriquez burned Tidore, after making peace with the king; and went to expel the Spaniards out of port Camaſo, and another town in that iſland, but were repulſed, Don George de Meneſes, in his way to the Moluccas, diſcovered the iſland of Borneo, having ſent a preſent of tapeſtry to the king; that prince, on beholding the figures, cried out, "They were men inchanted, and would kill him in the night;" and notwithſtanding all that could be ſaid, would neither ſuffer the tapeſtry to remain in his palace, nor the meſſengers in the port. At Tidore the Portugueſe were worſted by the Spaniards.

1521

Borneo diſcovered.

Bintang deſtroyed.

Tidore burned

In 1527, ſome Portugueſe, after the loſs of their ſhips, getting in the boat to Chacuria in Bengal; the Indians having made a vow to ſacrifice to their idols, the handſomeſt Portugueſe they ſhould take, it was the lot of Gonzalo Vaz de Melo to fall the victim. A fleet being ſent to burn the Turkiſh galleys left at Camarin, they could not get to them, the winds proving contrary; however they burned the city of Zeyla, on the coaſt of Adel; which Fate Mangalo, on the coaſt of India, underwent alſo. At Diu ſeventeen Portugueſe being taken in a boat, Diego de Meſquita, their captain, for refuſing to turn Mahometan, was ordered by the king of Cambaya to be blown in pieces out of a cannon; but that prince, admiring the reſolution with which Meſquita entered the mouth of it, was appeaſed, and ſpared him; Chatua near Cranganor, and Porca were burnt by Lope Vaz, the governor of India; Marabia and Mount Dehli, by his nephew Simon de Melo.

The king of Cambaya's fleet of eighty barks, were all but ſeven taken or deſtroyed by the brave Hector de Silveyra, who ſoon after in 1529, took Bazaim, and made Tana tributary. Don George de Meneſes with the people of Ternate, fell upon thoſe of Tidore, and the Spaniards, whom they defeated, burning the city, and then beſieged the fort. The Spaniards ſurrendered, obliging themſelves to retire to Camaſo; not to commit hoſtilities againſt the Portugueſe or their friends; nor to go to any of the Clove iſlands. The king of Tidore was made tributary, and compelled not to aid the Spaniards. *

Bazaim taken.

Spaniards ſubdued.

Nunno de Cunna in his way to India this year, took, plundered, and burned Mombaſſa; then ſailing to Ormuz, ſeized Raez Aſhraf, the king's viſier, and ſent him to Portugal, for mal-practices. He was there joined by Belchior Tavarez de Souſa, who had been to aſſiſt the king of Baſrah, with forty men againſt him of Jazirat, an iſland (as the name imports) about forty leagues in compaſs, made by the Euphrates and Tigris. He being the firſt Portugueſe, who had penetrated thoſe rivers from the Perſian Gulph. After this he was ſent to reduce Bahrayn, which had revolted, and battered the fort, but withdrew for want of ammunition. Antonio de Silveyra in 1530, who was ſtationed on the coaſt of Cambaya with fifty-one ſail of veſſels, went up the river Tapti and burned Surat and Reyner, two cities on its different ſides. The firſt four leagues from the river's mouth contained 10,000 families, moſtly Banyans; the other, which ſtood a little higher, 6000 houſes inhabited by warlike Moors, and well fortified. Afterwards he burned Daman and Agazem two other cities on the ſame coaſt.——Hector de Silveyra, being ſent to the mouth of the Red-ſea with ten ſhips, and 600 men; by ſpreading his fleet, took ſeveral rich prizes. After which, ſailing to Aden, he managed the king with ſuch dexterity that he conſented to pay an annual tribute of 12,000 xerafins. In the ſame manner did the king of Shael (or Sherafins) ſubmit.

Surat and other ports burned.

Aden and Shael tributary.

Nunno de Cunna, in 1531, then governor of India, ſet out for Diu, with above 400 ſail, moſtly ſmall veſſels, in which were 3600 ſoldiers, and 1450 ſailors, all Portugueſe; beſides above 2000 Malabars and Canarans, 8000 ſlaves fit for ſervice, and almoſt

Diu attempted

* After this Don George became, on a ſudden, moſt wicked and outragious. Suſpecting that Cachil Vaydeca, a Tidore nobleman, had killed a Chineſe ſow of his, he anointed his face with bacon (which is the moſt heinous injury that can be offered to a Mahometan). In the town of Tabona, he took the chief magiſtrate, and two Moors of note: the hands of theſe laſt he cut off, and on the firſt he ſet two dogs, who tore his fleſh, till to ſhun them, he ran into the ſea; where being purſued, he defended himſelf with his teeth, till at laſt he was drowned, almoſt worried to death. Another of the natives endeavouring to ſtir up the people, to drive out both Portugueſe and Spaniards, Don George ſeized and beheaded him publickly in Ternate; which ſo terrified the people, that moſt of them, with the queen herſelf, fled from the city.

1536 5000 ſeamen. They attacked the iſland of Beth, ſeven leagues from Diu, ſtrongly fortified both by nature and art, and defended by two thouſand reſolute Arabs, Turks, and others, of whom eighteen thouſand were killed, and 60 cannon taken, with the loſs of only twelve Portugueſe; among whom was the brave Hector de Silveyra. Their ſtay before this place loſt them Diu, which, in the interim, was reinforced by Muſtapha, a Turk. The city was ſurrounded with rocks and water; and the mouth of the river croſſed with chains, defended by thirty armed veſſels. Within were 10,000 men, and an infinite number of cannon, after making an attack, which laſted all day without doing the enemy much hurt; De Cunna, who expoſed himſelf the whole action in a boat, withdrew; Badur, king of Cambaya, rewarded Muſtapha with the government of Baroche, and the title of Rumi (becauſe he was a Grecian) and Chan; ſo that he was thenceforward called Rumi Chan. Antonio de Saldanna, who was in the ſea of Diu with 60 ſail, and 1500 men to do miſchief, burned the towns of Madrefabad, Goga, Belſa, Tarapor, May, Kelme, Agaſim, and laſt, Surat, juſt riſing out of the ruins of the laſt fire, the cruiſers: having taken twenty ſeven ſhips of the king of Calicut richly laden, the Samorin to obtain peace gave leave to build a fort at Ghale, three leagues from that city. Diego de Silveyra, in 1532, burned Patam, twelve leagues from Diu, Pate, Mangalor, and other towns, ſtriking an univerſal terror along the coaſt, and carrying off infinite riches.—De Cunna, encouraged by theſe ſucceſſes ſet out again with a 150 ſail, 3000 Portugueſe, and 200 Canarans to attack Baſaim, which was then fortifying by Malec Tocam, lord of Diu, who, on the approach of the Portugueſe, left a garriſon of twelve thouſand men. However, the Portugueſe attacked the place, put the garriſon to flight, killed 600 of them, razed the fort, and carried off above 400 pieces of cannon. After this, Manuel de Alburquerque, burned all the towns along the coaſt, from Baſaim Jarapor, and obliged Tana, Bandora May, and Bombaim to pay tribute. Diego De Silveyra, meeting near Aden, with a very rich ſhip of Joddah, the captain came on board, and ſhewed him a letter, given him as a paſs by a Portugueſe priſoner in that city; wherein were theſe words; "I beſeech ſuch of the king of Portugal's captains, as ſhall meet with this ſhip to make prize of her, for ſhe belongs to very wicked Moors." Silveyra perceiving how the Mahometan was impoſed upon, took no notice of the deceit, but diſcharged him, chuſing to loſe the riches of that ſhip, rather than bring into queſtion the ſincerity of the Portugueſe.

Cities on the coaſt burned.

Malec Tocam, lord of Diu, finding King Badur deſigned to confer the government of that city on Muſtapha Rumi Chan, was inclined to give leave to build a fort there; yet ſtill afraid, trifled, and at laſt was obliged to fly on Badur's approach; Badur alſo himſelf, pretended a willingneſs to conſent; whereupon de Cunna went to Diu, with 100 ſail of ſhips, and had an interview, which not taking effect, he made a league with Humayun Pediſhah, the Great Mogul, and returned to Goa.—In 1534, Martin Alphonſo took the fort of Daman; and Badur, to procure a peace, gave up for ever, to the king of Portugal, Baſaim with its dependencies by ſea and land. It was likewiſe agreed that all ſhips bound for the Red Sea from Cambaya, ſhould ſet out from that port and return thither to pay the duties; that none ſhould go to other places without leave from the Portugueſe; and that no ſhips of war ſhould be built in any of his ports.

League with Badur.

Badur, king of Cambaya, who had by force or treachery added two other kingdoms to his own, was become very powerful, when Humayun, the Great Mogul, his neighbour to the north falling out with him in 1534, took from him good part of his dominions, with Champanel his capital city. Theſe misfortunes moved Badur to apply to De Cunna for aſſiſtance, offering leave, on that condition, to erect a fort at Diu Martin, Alphonſo de Souſa, upon this, went to ſettle the articles, which were, That Badur ſhould confirm all that had been done relating to Baſaim; that there ſhould be a league offenſive and defenſive between the king of Portugal and him; that the fort ſhould be raiſed where and in what manner the governor ſhould appoint, and that a bulwark towards the ſea, ſhould be immediately delivered to him.

De Cunna being ſent for at Badur's deſire, repaired to Diu, and was received with much honour and demonſtration of joy. He immediately ſet about the fort, which was ſoon finiſhed, and the command of it given to Emanuel de Souſa, with 900 Portugueſe, and 60 pieces of great cannon, and Humayun, deſpairing of taking Diu, employed his arms elſewhere. The liberty of building this port, produced an adventure as ſurpriſing as that grant was important. James Botello, a perſon ſkilful in the affairs of India, having been in diſgrace with King John, for deſigning (as it was reported) to go for France; and being anxious to recover that prince's favour, reſolved to effect it by a moſt deſperate and almoſt incredible attempt: he knowing how earneſtly the king deſired to have a fort raiſed at Diu, leave for building it was ſcarcely granted, when getting a copy of it and draught of the fort, he committed himſelf to the vaſt ocean which is between India and Portugal, in a bark that was but ſixteen feet and a half long, nine broad, and four and a half deep, ſetting out privately with his own ſlaves, three Portugueſe, and two others. He pretended he was going to Cambaya; but as ſoon as he was out at ſea, diſcovered his deſign, at which they were all aſtoniſhed. But being overcome by fair words and promiſes, they proceeded on their way, till finding themſelves reduced to unſpeakable miſeries, the ſlaves, who were ſailors, agreed to kill him; but, after killing a ſervant, were all killed themſelves. Without ſeamen or pilot, Botello held on his courſe with the four that remained; and to the admiration of all men, at length arrived at Liſbon, where the bark was immediately burned, that nobody might ſee it was poſſible to perform that voyage in ſo ſmall a veſſel. The king was greatly pleaſed with the news, and Botello reſtored to the royal favour, but without any other reward for this prodigious action.

De Cunna, fearing the Mogul would fall on Baſaim, ſent to its relief Garcia de Sa, with 400 Portugueſe. He ſeeing the city threatened with a mighty army, reſolved to quit it; but moved by the cries of the inhabitants, and yet more by the perſuaſions of Antonio Galvano, he began to fortify the place; whereupon Humayun withdrew. Mean while, the king of Achen, by craft, decoyed and ſlew ſeveral Portugueſe at different times. At the Moluccas all things were in confuſion, through the avarice and tyranny of the governors. Gonzalo Pereyra ſucceeded George Meneſes at Ternate, in 1530; but was murdered becauſe he intended to examine into the frauds of his countrymen. Theſe put in his room one Fonſeca, who purſuing the former evil meaſures, De Cunna ſent in his place Triſtan de Atayde, more vile than Fonſeca. He impriſoned the king of Ternate and his mother; whereupon the people fled, nor when they lamented were pitied by their neighbours, who upbraided them for admitting a people ſo wicked as the Portugueſe into their country. Triſtan, to engroſs the clove trade, quarrelled with the king of Buchang, and aſſiſted by thoſe of Ternate and Tidore, took and burned his city; yet theſe and other kings at the ſame time, conſpiring to extirpate the Portugueſe, they were all cut off in Ternate, and Triſtan almoſt ſtarved out of the fort there for want of proviſions.

Azada Chan, (general of Ibrahim, Adel Chan) having ravaged the country in the neighbourhood of Goa, in 1536, the inhabitants ſurrendered it to de Cunna, who accepted of it. Soon after thoſe lands being invaded by Solyman Aga, a Turk, another of Adel Chan's generals, he was oppoſed by D. Juan Pereyra, who built a fort at Rachol in ſpite of him. Afterwards he defeated him at Margam, and Azada

Chan, at Ponda, which town was burned. This laſt commander, enraged hereat, built the fort Bori, on the river of that name, oppoſite that of Rachol, which was therefore demoliſhed by the Portugueſe. After this, the king of Calicut's forces were defeated near Cranganor, and Ripelim taken and burned. Here was recovered a piece of marble highly valued by the king of Cochin, (from whence it had been plundered) becauſe thereon were cut the names of the kings of Malabar for three thouſand years paſt.

Badur, king of Cambaya, having ſerved his ends of the Portugueſe, wanted to get rid of them: for this purpoſe, he ſent to invite the Turks to aſſiſt him. Mean while he contrived, not only to take the fort and deſtroy the garriſon, but de Cunna alſo ſending for him to Diu in 1527, where de Cunna went; and though appriſed of the king's deſign, did not ſecure him at a viſit made on board, but reſolved to do it at the fort. The king putting off in his cutter or barge, de Souſa, who commanded at the fort, followed to make the invitation. At the ſame time, another barge coming up, and ſeeing De Souſa in the king's, entered the ſame haſtily, which giving Badur a ſuſpicion, he ordered his officers to kill De Souſa. Diego de Meſquita, (who had aſſiſted the king in his late wars) underſtanding what he ſaid, flew at, and wounding that monarch, was ſlain by his attendants. Here enſued a bloody fray, wherein four Portugueſe, and ſeven of the enemy, were ſlain. Some more barges on each ſide came up; and the king ſeeing the danger, began to fly, but was ſtopped by a cannon ſhot, which killed three of his rowers. He then thought to eſcape by ſwimming, but being in danger of drowning, diſcovered who he was. Triſtan de Payva reached out an oar to bring him on board, when a ſoldier ſtruck him acroſs the face with a halberd, and then others, till he was killed; he kept a little while above water, and then ſunk: and neither his, nor De Souſa's body could be found. De Cunna entered Diu, and by his diſcreet behaviour, reconciled the inhabitants, who began to quit the city. The gold and ſilver found in the place, was not to any extraordinary amount; but the quantity of ammunition was to be admired. In the port were 160 veſſels, ſome of great bulk; no leſs wonderful was the number of braſs cannon, (not to mention thoſe of iron) among the reſt was found three pieces, of ſuch a prodigious ſize, that De Cunna ſent one, as a rarity, to Portugal, which is ſtill kept in the caſtle of St. Julian, at the mouth of the river Liſbon, and called the gun of Diu.—De Cunna found among the dead king's papers, proof, ſufficient to convince the principal Mooriſh merchants, and Cazi's of Badur's deſign, to bring the Turks upon the Portugueſe; and to ingratiate himſelf the more with the public, ordered that the Mahometans ſhould enjoy the free exerciſe of their religion and laws; continuing beſides all penſions that had been allowed by the king.

Diu entered by De Cunna.

In the beginning of the year 1538, De Cunna began that vaſt ciſtern at Diu, which is of ſuch a bigneſs, that being 25 ſpans deep, each ſpan contains 1000 pipes of water. Thus he provided againſt a long ſiege. Indeed the arrogance of the Portugueſe at this time was ſuch as continually raiſed them up enemies.—The king of Xael, (or Shael) near Caſhen on the Arabian coaſt, having received ſome Portugueſe very kindly in his port, they requited the favour with injuries. One of theſe among others, had robbed a near relation of the king's, and after inflicting ſeveral tortures, hung him, and two other perſons of note by the privities, to make them diſcover their treaſure. Gonzalo Vaz committed another robbery. Alvaro Madera, being kindly entertained by an honeſt Moor, forced his wife from him. One Godino had the honour to treat the king at his houſe, and repaid it, by calling him drunkard. Others took a ſhip belonging to his ſubjects, and impudently came to ſell it in his port. The effect of theſe villanies was, that all the Portugueſe about the town, were killed by the Moors; and Don Manuel de Meneſes, who

Portugueſe pride and villainy.

juſt then arrived as ambaſſador from De Cunna, with ſeventy attendants, were made priſoners, thirty of whom were ſent as a preſent to Conſtantinople, whence Madera eſcaped, and carried the news to Liſbon of the Turkiſh fleet that was fitting out at Suez, to invade the Portugueſe in India. Godino had his head cut off in the king of Shael's preſence. 1537

De Cunna, deſirous of having a fort at Chatigan in Bengal, and being encouraged by a rich Moor, ſent Martin Alphonſo de Melo thither, with a preſent for the King Mohammed Shah, who, jealous of his deſign, ſecured him, and 53 more. Mohammed was the 13th ſucceſſor of the Arab, who, 50 years before the Portugueſe, entered India, and uſurped the kingdom of Bengal, by ſlaying the lawful king. The capital city Gowro, extended three leagues in length along the Ganges; and contained one million two hundred thouſand families. Antonio de Silva Meneſes being ſent to redeem the priſoners, and imagining the meſſenger alſo was detained, becauſe he ſtaid longer than ordinary, he burned Chatigan and other places; for this they were uſed the harder; but for the ſervice they did the king againſt Shir Chan, a Mogul general, who had been well entertained, and was now in rebellion, he ſet them at liberty. They ſtopped Shir Chan's paſſage down the Ganges at Gori, a fort, where that river enters Bengal; as ſoon as the Portugueſe were gone, Shir Chan returned, and entering Gowro by force, ſeized the kingdom, Mohammed dying of his wounds in his way to implore Humayun's aſſiſtance. Shir Chan aſpiring to farther conqueſts, took the city of Calejor from the Raſhputs, [or Rajaputes] with intent to ſeize the treaſure of an Indian temple there; but pointing a cannon to kill an elephant belonging to that church, the gun burſt, and tore him, with many others to pieces.

At Malacca, things were ſtill in great confuſion: Don Stephen de Gama, deſtroyed Ujomtana and its fort, on the river Tor, being the ſouth-eaſt point of the coaſt of Malacca, and 40 leagues from the city of that name. In 1537 its bridge was twice attacked by a commander of Achen, who was repulſed. The troubles cauſed at the Moluccas by the avarice of Triſtan de Atayde, were remedied, by ſending Antonio Galvam to command, whoſe prudence, modeſty and juſtice, healed all the ſores made by his predeceſſors. Underſtanding that eight kings had entered into alliance againſt the Portugueſe of Tidore, he went thither with four ſhips, 170 Portugueſe, and 50 Moors, purſued by 300 ſail, with 30,000 Moors. They anchored at Tidore, whoſe ſhores were covered with multitudes; and though the fort appeared impregnable, he ſcaled it with 130 Portugueſe, and 280 ſlaves. The kings coming in with 50,000 men, he withdrew into a wood. They thought he fled, and ſome parties purſued, and they were routed; ſome flying to the fort, he followed, entered with them, and ſets it on fire. The kings, terrified, fled to the mountains with their treaſure. Galvam marched to the city, (from which the inhabitants fled) and burned it to the ground; levelling the works in ſuch a manner, that ſcarce any ſight of the place was left, but the aſhes. This unparalleled victory, which coſt but one ſlave, produced an honourable peace; after which, Galvam by his courteſies, and offering to rebuild the city, ſo much obliged the king and ſubjects, that they confided in him as in an antient friend. The people of Ternate being divided into parties about chooſing a king, they offered to make Galvam regent, till they had one conformable to their own laws, but he refuſed. Ferdinand de Grijalva, who was caſt away, being refuſed admittance by the kings of Gilolo and Bachan, into their ports, on account of their league with Galvam, this latter ranſomed the Spaniards, and treated them kindly. Francis de Caſtro, ſent out with two prieſts, was driven by bad weather, to Satigama, and other iſlands, 1000 leagues north of the Moluccas. They diſcovered alſo the iſland Mindanao; the kings, queens, nobles, and people, embracing the Romiſh religion, wherever they came, to the

Mindanao diſcovered.

1538 the wonder of the Mahometans. When Galvam's time of government expired, those kings begged to have him continued for life. He left Ternate in a flourishing condition, but returned to Portugal involved with debts; thinking to meet with some reward for so much valour, service, parts, and merit. But he found contempt and misery, which brought him to die in an hospital.

This same year, Diu was attacked by Solyman, Bassha of Egypt, in conjunction with the king of Cambaya's forces, by sea and land, of which more hereafter.

Peter de Faria, governor of Malacca, sent his kinsman Antonio de Faria Sousa to secure a peace with the king of Patane. After having ranged the coasts of India and China, with various successes, and according to his historian having met with adventures too strange to merit belief, they were all at once ended together with his life, he and his vessel being swallowed up by the sea in one night.

Japan discovered.

Antonio de Mota, Francisco and Antonio Peixoto sailing for China in the year 1642, first discovered Japan, being driven thither by a violent tempest. This was the farthest discovery made by the Portuguese in those parts to the eastward.——And here it may not be amiss to give an account of their possessions to the south east, with the account of their revenues as they stood in the year 1640. ——

Portuguese possessions from the Cape of Good Hope to China.

The Portuguese empire to the eastward, extends from the Cape of Good Hope in Africa, to Cape Liampo (or Ning Po) in China, 4000 leagues along the sea coasts; without including the shores of the Red-sea, and Persian Gulph, which make about 1200 leagues more, within this space lies half Africa, and all Asia, with innumerable islands belonging thereto. These 4000 leagues are divided into seven parts. The first division between the Cape of Good Hope, and the mouth of the Red-sea, contains along the coast many kingdoms of the Caffres: as the vast one of Monomotapa, whose monarch is lord of all the gold mines in Africa; those of Sofola, Mozambique, Quiloa, Pemba, Melinda, Pata, Brava, Magadoxa, and many other sovereignties. Here the crown of Portugal possessed the forts of Sofala and Mombassa, and the city and fort of Mozambique.—The second division, from the mouth of the Red-sea to the Persian Gulph, contains the coast of Arabia, where they have the impregnable fortress of Mascat.——The third division, between Bassah, or the Persian Gulph, and the Indies, contains the kingdoms of Ormuz, Guadel and Sinde, with part of those of Persia and Cambaya; here they held the forts of Bendel Diu. The fourth division, from the river Indus to Cape Comorin, contains what is properly called India, that is part of Cambaya, Decan, Canara, and Malabar, subject to several princes; here they had the forts of Daman, Assarim, Danu, St. Gens, Agazain, Maim, Manora, Trapor, Bazaim, with the city Tana, Caranja, the city Chaul, and opposite a fort, called Morro. The most noble city of Goa, large, strong and populous, was the metropolis of their eastern dominions; an archbishoprick, whose prelate is primate of all the east: this is the residence of the viceroys; and here are the courts of the inquisition, exchequer and chancery; a custom house, arsenal, and magazine well provided. The city is seated in an island, girt with a strong wall, and six mighty castles, called Dauguim, St. Blas of Bassoleco, St. Jago, Agazaim, Panguin, and Nuestra Sennora del Cabo. On the other side to secure the bar, is that of Barbadoes. On the castle Dauguim is the fort of Norva, with a good town. On one side of this island lies that of Salset, where is the fort of Rachel. Then going along the coast, they had the forts of Onor, Barselor, Mangalor, Cananor, Cranganor, and Cochin, which is a bishoprick; and near Cape Comorin, the town and fort of Coulan.—The fifth division lying between Cape Comorin and Ganges, contains Coromandel and Orixa, where they had fort of Negapatam, that of Meliapor, with the city which is a bishoprick, of late called St. Thomas, and Musulapatam.——The sixth division, between Ganges of Cape Singapura, contains the vast kingdoms of Bengal, Pegu, Tanazarim, and others of less note. Here they have the city of Malacca, a bishop's seat, and the last place possessed by them in the eastern continent.—The seventh division between the Capes Singapura, and Liampo, (or Ning Po) contains the kingdoms of Pam, (or Pahang) Lugor, Siam, Cambodia, Champa, or Tissiampa, Cochinchina, and the vast empire of China; here they have no place but the city of Macau; (in an island in the Bay of Canton) yet trade all along those coasts. In the island Ceylon (or Saylan) they possessed the city and fort of Columbo, those of Manar, Gale, and others; beyond Malacca, a fort in the island Timor. The number of their forts throughout this large extent, was about fifty, and twenty cities and towns, besides many vilages depending on the others.—As to the revenue, the customs of Diu were worth 100,000 crowns; those of Goa, 160,000; those of Malacca, 70,000: the tribute paid by several places, amounts to 200,000: all which, with prizes, and other uncertain profits, made up about a million. The viceroy's salary was 18,000 crowns, besides the disposing of places, which are sold: but the chief thing which they all look upon is trade: for whereas the king gets nothing out of India, the viceroys have cleared there, some five, and some 800,000 ducats. All other officers have great salaries, besides their lawful profits, and more considerable frauds.

Revenue of the city and fort.

Viceroy's salary.

The archbishop of Goa is metropolitan, and primate of all Asia. Cochin was made a bishoprick in the year, 1559: Malacca the same year; Meliapor, in 1607. The bishops of China, were instituted by Pope Pius V.——There were also a bishop of Japan, and one of the mountain near St. Thomas of Meliapor. There were bishops of Persia, as also patriarchs of Ethiopia. The city Angamala is a bishoprick, as is that of Macao, (or Macau). With regard to the houses, churches, and monasteries of religious: the Franciscans had twenty-two; the Dominicans nine; the Augustines, sixteen; the Jesuits, about twenty eight monasteries, colleges, and seminaries; besides a vast number of residences, so called by them, where there are but two or three priests. ——

The above account may shew how great the power and wealth of the Portuguese must have been in its flourishing state: but by degrees their possessions have been greatly lessened by the acquisitions of the English and Dutch: which latter, at the time that the state of India was published, had taken from them many considerable places, as they had lost Ormuz before, to the Persians. In short, the only considerable places they remain possessed of at present, are Goa and Diu. Such has been the effect of their cruelty and want of policy, as to lose them the empire of some of the finest countries in India. —

Having so often mentioned Diu, we think it proper to give the reader an account of the famous siege of that place by Solyman Bassa, whose voyage for that purpose we shall here introduce, as it is so nearly connected with the Portuguese voyages and transactions in the East Indies.

The author from whom our account is taken, himself performed the voyage on board the Turkish fleet, not voluntarily but by constraint, being ordered to follow Solyman Bassa, who was commanded by the Turkish Emperor to go on an expedition against the Portuguese in the Indies: when the war broke out in the year 1527, against the Lordship of Venice, and her trading galleys, commanded by Antonio Barbarigo were at Alexandria. Here they staid without having any opportunity of trafficking or taking in goods, till the 7th of September, on which day Almoro Barbaro, the Venetian consul, captain Barbarigo, before mentioned, the merchants, seamen, and every thing belonging to them, (among whom was the author) were arrested, and lodged in the tower of Lances, after which, all those who belonged to the sea, being picked out from the rest, they were sent

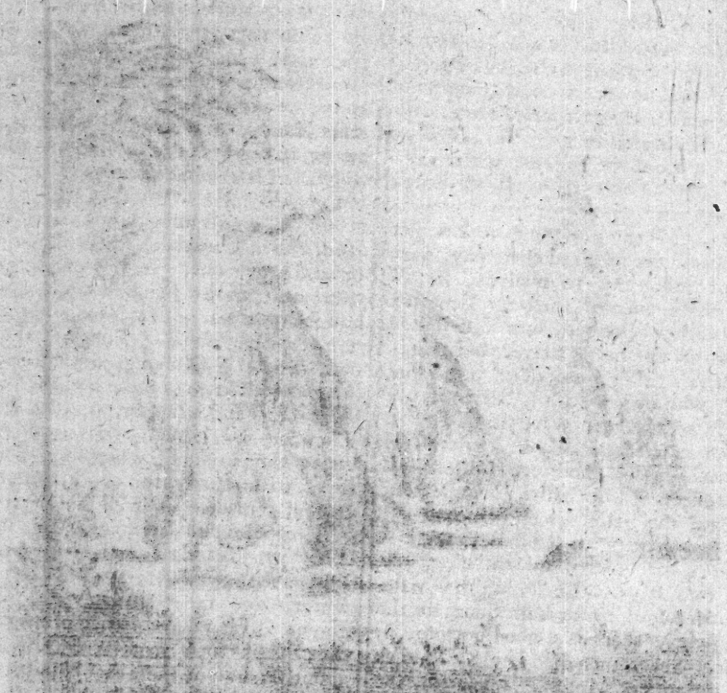
Begging DEVOTEES who stroll thro' CHINA, and extort Alms, by using various Austerities, which have great influence on the Minds of the People.



7 AP 53

to Cairo, and from thence to Basha Solyman, who having chosen the admiral, officers, gunners, rowers, carpenters, caulkers, and some companies sent them to Suez, whither a while after, he had dispatched several others to fit out the fleet in that port against his coming. Suez is in a desert place, where grows no herb of any kind.

Here the ships were built designed for India, and all the timber for building them, iron-work, and tackle, was brought from Satalia and Constantinople, to Alexandria, and then carried down the Nile in barks to Cairo, and thence by canals, to Suez. On the road from Cairo hither, which is 80 miles, one meets with no habitations, nor even any thing to eat; so that before the caravans set out, they furnish themselves with the water of the Nile. In the time of the Christians this was a great city, and full of cisterns: it had also a navigable canal, cut from the Nile, whereby, on the increase of the river, those cisterns were filled with water, which served all the year; afterwards being destroyed by the Mahometans, the canal was filled up with earth, and now the water that is drank at Suez, is brought by canals from certain ponds or wells, at a place six miles distant: which water, though very brackish, they had to drink, every fifty men being allowed as much as a camel could carry. All the timber, iron, ammunition, and provisions were brought from Cairo. The fleet consisted of 76 sail great and small, viz. Six maons, seventeen galleys, twenty-seven new foists, two galleons, four ships, and other small craft of various sizes.—

On the 9th of March, about 2000 men quitting the galleys, landed with their arms, in order to march towards the mountains; but about six miles from the shore, they were met by a sanjak, accompanied with a party of horse, designed for the garrison of Suez, who surrounded them, and having killed 200, the rest were stripped, and carried on board the galleys, where they were chained to the oar. The 15th of June, Solyman Basha, arrived at Suez, where pitching his tents, they rested eight days. Meanwhile the fleet was got in readiness, and the soldiers received their pay, viz. to each five ducats of gold, and 10 madyns, in all 215 madyns. Part of the men of the large Venetian galley, to which the author belonged, were distributed on board the fleet, 70 in one half galley, 70 in another; 15 in the kiahya's galley, and 18 on board that of Khilierki Basha, who had with him the consul of Alexandria; the rest of the men were disposed of in two galleons, which carried the powder, salt-petre, brimstone, ball, meal, biscuit, and every thing else for the use of the fleet. The basha likewise sent his treasure on board the galleys, consisting of 42 chests, which was covered with ox-hides and oil-cloth. On the 20th, he ordered all to be got on board the fleet in two days.—The 22d, the basha embarked, and removed four miles from Suez, to the point of Pharoah, where there is a good bottom, in four fathoms water. Seven men died here. This is twelve miles from the pits of Moses. The 27th, the whole fleet left Suez, with a north-west wind, and before night fall, cast anchor sixty miles thence, at a place called Corondol; here they had twelve fathoms water, and stayed one night.—The 28th, leaving Corondol, they sailed south-east, 33 leagues, and cast anchor, two hours before night, in a place called Taz; where there are many Franciscan Friars, who furnished the fleet with water. This place is a day's journey and a half, from Mount Sinai, where is the church and body of St. Catharine, and here they remained five days, in five fathom water. The 3d, of July they departed, and came behind a dry sand-bank, about one mile from shore and forty from Tor, casting anchor in 12 fathoms water, at a place called Charas, where they staid two days, to inspect the ship which carried the stores. The 5th they left Charas, and, about five o'clock came to an island called Soridan, forty miles from the coast. The whole day's course, from sun-set to sun-rise, was 100 miles. They sailed all night south-east, and at sun-rise, found themselves to windward of an island called Marzoan, on the right hand, 100 miles farther. On the 9th the morning was calm, and the winds variable; and to the south-east they found a shoal under water, 50 miles from the coast. Their course north-west, till sun-set, was ten miles, and in the night, south by west twenty miles. On the 10th they sailed 70 miles south-east, and came to a port called Kor, a very desert place in eight fathom water. 1538

From Kor, they sailed along shore, on the 11th thirty miles, to a city, named Zidem, which is the scale, or landing-place of all the spicery that comes from India and Calicut, distant from Mecca a stage and a half. Here are several shoals, both under and above water; yet it is a good port, and has plenty of provisions; but no water is to be met with, excepting what is in a few cisterns, filled with rain. Here they found great stores of merchandise; and the place affords dates, ginger of Mecca, and other sorts.—Without the city is a mosque, where, according to the Moors, is the sepulchre of Eve. The inhabitants go almost naked, and are meagre and swarthy. Here is fish in abundance. They tie three or four pieces of timber together, about five feet long, and on one of these floats a single man sitting, rows with a board, and ventures out eight or nine miles at sea to fish, in all weathers. Here the fleet rested four days, and took in water.

At their departure, on the 15th of July, five small vessels were missing by chance, which they understood by a man who escaped out of a foist. This day they sailed south-west by south, 89 miles.

On the 19th of the same month they sailed east by south with a brisk wind, till nine in the morning, and came among certain islands, called Atfas, a desert place, and inhabited only by people who came from other islands, to fish and seek for pearls, which they get by diving to the bottom of the sea, in four fathom water. They drink rain-water preserved in cisterns, and canals. Here they staid all night, having ran 100 miles. The 20th they came to an island 20 miles from land, called Camaran, where they met with good water and provisions. In this place there was a ruinous castle uninhabited, and about 50 houses made of the boughs of trees. They saw some other houses scattered over the island. They get abundance of white coral here. The men go quite naked and bare-footed. They are little, and wear nothing on their heads, but their hair, and wrapping up their privities in a clout. They are all seamen, having a few barks and small craft; the planks of which are bound together with ropes, without any iron-work, and their sails are mats, curiously made, (as well as the cordage) with the bark of palm and date trees, after the manner of sans. They go to land with these barks, and bring them abundance of dates, and a sort of white buck-wheat, and they have a good quantity of Mecca ginger. They have plenty of myrrh also from Bista; they break their buck-wheat on a piece of marble, about the size of those that colours are ground on, and upon it is another stone, half an ell broad, in form of a rolling-pin or roller, with which they bruise; and, presently work up a paste, of which they make thin cakes. This is their bread, and it is very hard, so that it must be made fresh every day, otherwise it will grow so dry, that there is no eating it. Both flesh and fish are here in great plenty. This place is from the island of Atfas 40 miles. Here the basha landed, and caused all the galleys to turn in with him. From hence he dispatched two foists, one to the king of Zibit, the other to that of Aden, ordering him to provide water and provisions for the fleet, that he might be able to proceed in his expedition to India, against the Portuguese, and to tell the king of Zibit (which lies a day's journey within land) that he must come to the water-side, and bring the grand signor's tribute, and pay obedience to the basha.——The fleet was furnished with water, and staid here ten days.

1538 On the 30th they left Camaran, with a ſmall wind, and ſailing fifty miles, ſouth by eaſt, at one in the morning came to the iſland Tuicce: where the bark which was ſent to Zibit, met them, and brought the king's preſent to the baſha; conſiſting of ſwords wrought at Zima, in the ſhape of virile members, the handles and ſcabbards being of ſilver, gilt; alſo ſome poniards of the ſame ſort of workmanſhip; the handles of which were adorned with Turky ſtones, rubies and pearls. As to the tribute, the king of Zibit ſent the baſha word, that he would pay it at their return from conquering the Portugueſe; acknowledging himſelf the grand ſignior's ſlave. This day they advanced fifty miles, and in the night they ſailed fifty more, ſouth by eaſt. On the 1ſt of Auguſt they proceeded ten miles in the night, with a ſouth-eaſt wind, to a ſhoal, called Alontrankin, near the ſtreights mouth; and to the right on the ſide of Abyſſinia; here they had two fathom water, and ſtaid one night.——Leaving the ſhoals, they ſailed eaſt by ſouth, ten miles, and got out of the ſtreights; whence proceeding till ſun riſe next morning, they went eighty miles farther. Sailing eaſt by north eighty miles, on the third, the fleet arrived at the city of Aden. It is very ſtrong, and ſtands by the ſea-ſide, ſurrounded with exceeding high mountains; on the top of which are little caſtles or forts. It is encompaſſed alſo with ravelins on every ſide, excepting a little opening, about 300 paces wide, for a road into the country, and to the ſhore, with gates, towers, and good walls. Beſides all this, there lies a ſhoal before the city, on which is built a fort, and at the foot of it a tower for the defence of the port, which lies to the ſouth, and has two fathoms water. To the north there is a large port, with good anchorage, covered from all winds. There is plenty of water here. The ſoil is dry, producing no kind of thing. They have only rain water, which is preſerved in ciſterns and pits, 100 fathom deep; and when drawn out, it is ſo hot as not to be drank, till it has ſtood to cool. This city is furniſhed with proviſions, wood, and every thing elſe from other places.——As ſoon as they arrived, there came four men of faſhion to the baſha, bringing with them ſeveral refreſhments. He received them courteouſly, and talked to them a while in private; after which he gave each of them two veſts of figured velvet; and ſent them back with his ſafe conduct for the prince, ſignifying, that he might ſafely come on board, and fear nothing. But the Lord of Aden ſent to tell him, that he would not go himſelf; but would readily ſupply him with whatever he ſtood in need of: and thus matters ſtood this day. On the 5th, the baſha ordered the janiſſaries to land with their arms, and all the galleys to man their boats. He diſpatched his kiahya, to ſummon the lord of the city to come and do homage to the grand ſignior, before the baſha. To whom he anſwered, "I ſee by your head that I am the grand ſignior's ſlave."—The baſha ſeemed to treat him well, and gave him and his retinue veſts of figured velvet; but, after having permiſſion to depart, cauſed him to be ſeized and hanged at the yard arm; and then ſent 500 janiſſaires to take poſſeſſion of the city.

Iſland Tuicce.

The king of Aden goes on board.

He is hanged at the yard arm

The whole armada, to the amount of ſeventy-four veſſels, great and ſmall, left the place on the 19th, and met with nothing remarkable during the reſt of the month of Auguſt. On the firſt of September, they ſteered north-eaſt by eaſt, ſailing ſeventy miles in the day, and eighty in the night. September the ſecond, they kept the ſame courſe, thirty-miles; being at noon in thirty-five fathoms water, and in twenty at night, within 100 miles of Diu; but from the neareſt land to north, 400 miles. They ſaw in the ſea, at the diſtance of 100 or 150 miles, certain ſnakes, and the water often green, which are ſigns of approaching the ſhore, throughout that coaſt.——The third, at day-break, the fleet proceeded with calm weather, along the ſhore; and, at nine in the morning, there came a bark from land, and told the baſha, that there were 700 Portugueſe in the caſtle of Diu, and ſix armed galleys. The baſha made them a preſent of ſix caftans, (or veſts) and having kept them an hour, diſmiſſed them. Afterwards a Jew, being taken on ſhore by the ſailors belonging to one of the Turks, was brought on board, and confirmed the former report. This day they ran thirty miles, and in the night thirty more.——The fourth, at ſun-riſe, the fleet proceeded thirty miles, and caſt anchor within three miles of Diu, before this perceiving a Portugueſe foiſt come out of the port, the baſha ordered a half galley to ſail after her, which purſued all day, but loſt her in the night.——

The ſame day, came on board one Coſa Zaffar, a native of Otranto, but turned Turk; and was captain of the galley in the former fleet, ſent by the grand ſignior to India: which fleet having been defeated and deſtroyed, this Coſa Zaffar went into the ſervice of the king of Diu, called king of Cambaya, (which is the name of the country) who gave him lands, and made him governor in chief in all his kingdom. Zaffar alſo had inſinuated himſelf with the Portugueſe, and gained their friendſhip; but when he underſtood that the Turkiſh fleet was coming, he and the viceroy of the kingdom, came with 8000 Indians, and took the city from the Portugueſe, and beſieged them in the caſtle.

Along with Coſa Zaffar, came the grand viſir of the king, they were received with honour by the baſha; and informed him that there were 500 ſoldiers, and 300 others, in the caſtle, which they had beſieged twenty-ſix days, and did not doubt to take it with their Indians, provided they were furniſhed by him, with artillery and ammunition: otherwiſe they ſhould not be able. The baſha gave each of them two veſts; but while they ſtaid to talk with him, the Turks landed with their arms, and plundered the city, doing the Indians a thouſand injuries, not ſparing the vice-roy's palace, from whence they took three fine horſes, money and furniture; in ſhort, whatever they could lay their hands on. They advanced alſo up to the caſtle, and ſkirmiſhed with the Portugueſe. The viceroy being returned, and made acquainted with the outrages committed by the Turks, immediately gave orders to his officers to be in readineſs; and the night following, retired with about 6000 men, and went to the king, who was then about two days journey up the country. The ſame night, there came a foiſt from the city with proviſions of freſh bread, nuts, fleſh, boiled-rice, and other things, in the king's name, which were diſpoſed on board the baſha's galley.——The fifth the baſha ſent the Mooriſh captain and his kiahya, to join thoſe on ſhore. All the galleys ſent their boats, filled with janiſſaries, to aſſiſt thoſe of the country, who were encamped round the caſtle, and not above 2000 men, the reſt being departed with the viceroy, and Coſa Zaffar.—On the ſeventh, the fleet removed, and came to a very good port, called Muda Burak, thirty miles from Diu, where there is water enough.

Afterwards the baſha went on ſhore, where they had begun to play their cannon; which for that purpoſe, were mounted on four maons. He ſent alſo three cannon on ſhore, which were planted on a tower, ſtanding by the water-ſide, about a cannon ſhot from the great fortreſs: on which tower ſtood Indians to give billets, and receive the cuſtoms. It had thick walls, and was defended with four braſs guns, with a commander, and 100 ſoldiers. It has neither ditch nor water round it.——On the ninth, a ſhip and galley laden with biſcuits, powder, and other ammunition, entered the port; and ſtriking on a ſand bank, ſunk. The goods and the galley were recovered again, but the ſhip ſplit in pieces.—The nineteenth there arived a half galley in bad condition, which had been kept back by the weather, and driven to a port belonging to a certain people, who are gentiles, called Samari; where ſending a boat, with ſome janiſſaries, on land, they were all cut in pieces. After which taking the barge, and manning ſome of their own barks, they ſet upon the galley, and ſlew

ſixty

ſixty perſons more, inſomuch, that ſhe had much ado to eſcape. On joining the fleet, the baſha ſent for the pilot, and cauſed him to be hanged for his ill ſucceſs. Afterwards an Indian belonging to the caſtle, who had turned Chriſtian, being taken in a ſalley, was brought before the baſha, who ordered him to be examined: but the man refuſing to anſwer any queſtion, was, by the baſha's command, cut in two. In this country, the people are very lean, and live very ſparingly, and eat no beef: but ride on their oxen, which are ſmall and handſome, very tractable, and have a ſort of pace. They make a hole through the noſtrils of the beaſt, and run a cord through, which ſerves for a bridle. They load them in the ſame manner as mules are loaded, their horns are long and ſtrait. There is great feaſting on the birth of one of theſe creatures, which they have great veneration for, eſpecially the cow, and on this account, they are reckoned idolaters. When any of this ſort of men happen to die, the wife makes a great feaſt for her relations; after which they go dancing along, according to their cuſtom, to a place where a great fire is prepared, and throw the corpſe into the flames. They carry along with them a large pot full of greaſe, ſcalding hot; then the widow dances round the fire, ſinging the praiſes of her dead huſband. After this, ſhe gives one relation a ring, another a gown, and ſo on, till ſhe has nothing left on her, but a cloth to hide her nakedneſs, and immediately after, takes a pot of the ſcalding greaſe, and caſting it into the fire, leaps herſelf into the midſt of it; thoſe about the fire, throw upon her the pots with greaſe to increaſe the flame, ſo that ſhe is dead in an inſtant. Thoſe women that would be thought virtuous, obſerve this cuſtom; and thoſe who do not, are reputed wicked, bad livers, and diſhoneſt; nor will any marry with ſuch afterwards. *

This country is very rich, and produces abundance of excellent ginger of all ſorts, and cocoa nuts, whereof they make vinegar, oil, flower, cordage, and mats. The tree reſembles the date-tree, differing in nothing but the fruit and the leaf; that of the palm being broader.——The 28th. the fleet departed from the port of Mudaferaba, where they had from two to four fathoms water.—The 29th, they ſailed ſix hours, and caſt anchor fifteen miles from Diu, where they ſailed one night.—On the 30th, the fleet departed with a north wind from the ſhore, and went behind the caſtle of Diu; where all the galleys diſcharged their artillery, and then turned off, caſting anchor about three miles from thence.

On the firſt of October, there came a perſon from the leſſer caſtle, as ambaſſador to the fleet, to capitulate, becauſe they could hold out no longer; becauſe the Turks had planted three pieces of cannon under it, which carrying 150 pound balls of iron, pierced the tower from ſide to ſide; ſo that the ſtones flew about, and killed twenty out of 100 defendants, but before they ſurrendered, they with their muſquets, and four pieces of cannon, ſlew abundance of Turks; the fire having continued for eighteen or twenty days. As ſoon as this perſon had delivered his meſſage, he was preſented with a rich veſt, and had a ſafe conduct written in ample form, for himſelf and others: with which landing, he prevailed on the captain of the tower, and two other perſons, to go to the baſha, who gave the former a veſt alſo, and confirmed the ſafe-conduct; with this condition, that they ſhould not go into the great fortreſs. The captain, whoſe name was Juan Franciſco Padoano, returning to the coaſt, which was called Gogole, brought off his men, in number eighty, whom the baſha ordered to be confined in a houſe, without arms, and under a ſtrong guard.——The ſecond, the baſha ſent for the four ſlave gunners of the large galleys, and ordered them on ſhore to batter the fortreſs. He likewiſe ordered the Portugueſe who had ſurrendered, to be diſtributed into ſeveral galleys, and chained to the oar, captain and all. The ſame day three Portugueſe galleys entered the port of Diu, without the leaſt oppoſition: for the baſha did not ſend one veſſel to hinder them.——There arrived a ſhip on the 8th, with proviſions, which was loſt in the road, on board were fifteen men of the large galleys, among whom was the admiral himſelf, and an officer of the proviſion, ſixty ſailors, and the reſt galley ſlaves.—The 13th, the fleet removed from the weſt to the eaſt ſide of Diu, two miles from it: where the guns from the fortreſs ſunk one galley, and broke the main yard of another.——The 15th, the baſha went from the Maon into the half galley, and ordered them to put all the chriſtians in irons; and to take a white ſail from another galley, his own being diſtinguiſhed with colours: and this he did becauſe he expected the Portugueſe fleet every hour, (and did not care that it ſhould be known what ſhip he was in). Being alſo doubtful of the artillery, he cauſed a great ring of cables, and other hollow things, to be made at the poop, ſufficient to keep off cannon-ſhot: for he was fearful and cowardly.—The 17th, being the eve of St. Luke, the baſha cauſed the head of one belonging to the Venetian galleys, to be cut off for only ſaying, "My Lordſhip (of Venice) is not dead."—The 22nd, the baſha gave orders to acquaint all the gunners that were on ſhore, about 400 in number, (becauſe every day one or other of them was ſlain) that whoever had ſkill enough to ſtrike down the great ſtandard of the fortreſs, which ſtood in the midſt of a great tower, ſhould, beſides being made free, have a very ample recompence, which he offered the rather, for that his ſtandard had been given by a ſanjac to the Portugueſe: whereupon one of the ſaid chriſtians, having at the third ſhot broke the ſtandard, the Turks made great rejoicings, and publiſhed the news throughout the fleet: the gunner was rewarded with a ſilk veſt.—The artillery, which they had planted under the caſtle, were all in one line, but in ſix different places. In the firſt was a Culverin of iron, that carried 150 pounders, a paterero of 200 pounds, at a ſmall diſtance was an iron paſſe volant of 16 pounds, which diſcharged cartridge ſhot, in another place, was a paterero of 300 pounds, and a culverin a 150 pounder. In the ſecond poſt was another paſſe volant, to match the firſt, both belonging to the large galleys. In another place, was an iron ſaker of 12 pounds; a little cannon of 16 pounds, a falcon of 6 pounds, a mortar carrying a 400 pounder. In another poſt was a culverin of 100 pound; inſomuch, that they had battered down one tower. So that they could eaſily mount the breach to fight, becauſe the tower was not very high, nor the foſſe quite dug. But as faſt as the Turks ruined it, the beſieged filled it up with earth and rubbiſh, as well as they could. This fortreſs has no flanks; and being built on a rock, they have made no caſemates, only erecting embraſures at the top, which were all ruined and taken, but herein their ſafety lay, that fifteen or twenty of them ſallied out, like ſo many furious beaſts, and ſlew all they met with; which ſtruck ſuch a terror among the Turks, that they fled in confuſion, as ſoon as they ſaw them iſſue forth.—The 25th, the Turks cauſed a great number of cotton ſacks, covered with ſkins, and bound with ropes, to be prepared; and in the night had them thrown into the ditch; ſo that they reached as high as the wall. Which being obſerved by thoſe within, early in the morning, before the Turks put themſelves in order to make the attack, and mount the wall, three ſcore ſailors ſallied out, whereof forty ruſhed in among the enemy, and fighting gallantly, while the other twenty remained in the ditch; each of whom had a little leather bag full of powder, with a lighted match in his hand, cut the bales, and putting in a handfull of powder, then ſet fire to them; ſo that in a ſhort time ſeveral of the ſacks were conſumed, and the burning

continued

* This was common in many other parts of India; but the cuſtom has gradually decreaſed ſince the Chriſtians came among them.——The reader will ſee more of this hereafter.

1538. continued for two days. Thoſe who ſallied out upon the enemy, maintained the fight above three hours, killing 190 Turks and wounding as many more, with the loſs of only two men.

Turkiſh ſhip taken. There arrived five Portugueſe foiſts, on the 27th, which took a Turkiſh one, and landed ſuccours, but could not enter the port, becauſe ſome of the Canarans abovementioned, commanded the ſide of it, but over-ſhot the wall. The 29th, the baſha ordered 40 boats, filled with Turks, and a few pieces of cannon in each, in order to aſſault a little caſtle or fort which is in the port by the water-ſide, behind the city, and was quite demoliſhed by the Turkiſh artillery. There were not above five or ſix men in it, who, in a bark, went daily to the great caſtle, which is leſs than a falcon-ſhot diſtant. As ſoon as the boats began to ſet forward, thoſe within the fort lay down, to prevent their being ſeen by the Turks, who coming to the place, ran their prows on the land, where every thing lay in ruins to the very edge of the water, and leaped on ſhore; but thoſe within met them with two fire-horns, and the cannon of the great caſtle played ſo furiouſly, that the enemy quickly fled, and ſome of the boats were ſunk. Many were drowned and made priſoners by theſe in the great caſtle, who came out in one of their boats and killed them in the water, and thoſe who were taken, the next day were hanged on the battlements of the caſtle. The whole camp putting themſelves in order of battle, on the 30th advanced up to the fortreſs, on the ſide towards the port, with a great many ſcaling-ladders, in order to make a general aſſault, and on the ſide towards the land, mounted the beach, (which they could do at pleaſure, becauſe the place was open) where they ſtood for three hours; but when the beſieged ſaw that the Turks had not courage to enter, they leaped upon the beach, and puſhed them into the ditch, killing 400 that day.—The 31ſt, the Mooriſh captain went with 11 galleys to attack the little caſtle, but was not able to approach it for the artillery of the great one, which ſunk the veſſels.

November the 2d, the ſanjak and janaſſaries, with all the reſt of the Turks, came on board the galleys, leaving behind them on land all the artillery, which they had not time to carry off. This was occaſioned by the news they received, that the Portugueſe fleet was advancing in order of battle. On the 5th, 20 ſail of Portugueſe ſhips appeared in ſight, and caſt anchor 20 miles diſtant from the Turkiſh fleet. They continued thus all night, and in the morning only three ſhips were ſeen at a diſtance; at which time the Turks put off from land; but at ſun-riſe there appeared many ſhips, which ſhot off a great number of guns, although nothing could be diſcerned but the flaſh of the powder; whereupon the baſha gave orders for each galley to ſhoot off three guns. After this, the trumpets being ſounded, they fell to their oars, and hoiſted their foreſails. This was done at 10 o'clock at night, and at four they departed, ſhaping their courſe ſouth ſouth-weſt, with but little wind, and at day-break ran 30 miles. On the 9th they advanced 20 miles weſt; and this day the Chriſtians had their irons taken off. The 12th, the wind being north, they entered the gulph of Ormuz, and then ſailed weſt ſouth-weſt, advancing all that day and night, but 30 miles. On the 27th they caſt anchor in ſix fathom water, at a town called Aſer, a deſert and barren place, where both men and cattle are forced to live on fiſh. Theſe men were 40 Portugueſe, with their conſul, who reſiding here, carried on trade, and had always with him ſome merchants, beſides thoſe which continually arrived, and exported ſpice and other things: but their chief trade was in horſes, which here are excellent; one being valued at 100 ducats and more; and in India will ſell for 1000. But as ſoon as the king of this country underſtood that Solyman baſha was coming with his fleet, he cauſed the Portugueſe to be ſeized in their houſe, and made a preſent of them to the baſha, who ordered them all to be chained. Here alſo they found a ſhip which had ſtaid by the way, not being able to proceed for India; and of a ſudden, ſeized all the biſcuit for the uſe of the fleet, which remained here three days. December the firſt, the fleet departed, holding its courſe weſt ſouth-weſt; and ſailing 40 miles eaſt, anchored near the coaſt of Arabia, three hours before dark, at a place called Micaiya, and took in water. The ſecond, they left Macaiya, and ſailed weſt ſouth-weſt, 30 miles in the day, and ten by night; and on the 5th, proceeding ſtill weſt ſouth-weſt, ſixty miles, at nine o'clock in the night, caſt anchor behind the town of Aden, reſting there till ſun-riſe. The next day the baſha being at Aden with his whole fleet, he ſent in the morning for a renegado Turk, (who was then a Chriſtian, and a man of conſiderable account) and without ſaying any thing, cauſed his head to be cut off. The reaſon was, they all murmured, and the baſha, fearing this renegado would accuſe him of neglect or cowardice, was reſolved to be beforehand with him: becauſe he formerly was in the pay of the king of this place, and afterwards a captain at Diu, when the king of it was ſlain by the Portugueſe. The widow queen, being poſſeſſed of great treaſure, and deſirous to retire to Mecca, was perſuaded by this man to go on board a galleon, with which he treacherouſly ſailed to Egypt, and thence carried the treaſure to Conſtantinople, and made a preſent of it to the grand ſignior, who being informed by him, how matters paſſed in India, made him patron of a galley, and ordered him to return thither with the fleet, which ſucceeded badly, and coſt him his life. After this the baſha, being deſirous to ſecure Aden, cauſed 100 pieces of cannon great and ſmall, to be landed out of the fleet; among which there was two paſſe volants of the great Venetian galleys of Alexandria. He left there alſo a quantity of powder and ball, with a ſanjac, 500 Turks, and five foiſts.

Return to Aden.

The Baſha now judging himſelf out of danger, on the 14th quitted the half-galley, and returned to the Maon. The 23d, they ſailed from Aden with a good wind, weſt by ſouth, and between the evening and morning, ran 100 miles. The 24th, at the 5th hour of the day, the fleet entered the ſtreights of the Red Sea, and all night lay at anchor. On the 25th, three hours before day, they departed, ſailing north-weſt, with a ſcanty wind; nevertheleſs, they ran 50 miles, and came to a caſtle called Mocha. The ſame day, there came an old Turk, governor of the caſtle, to wait on Solyman, who received him with great honour, and gave him a veſt. The governor, in return, continually ſent the baſha refreſhments from ſhore; and a few days afterwards brought on board all his riches, which were very great, beſides many fine ſlaves of both ſexes, thinking every body would follow him. As ſoon as the fleet arrived at Mecca, the baſha ſent an ambaſſador to the city of Zibit, three days journey within land, to ſummon the king forthwith to the ſea-ſide, to pay obedience to the grand ſignior. The king made anſwer, that as to the tribute, he would readily pay it, and would willingly accept of a ſtandard, if the baſha would ſend him one; but that he would not go to the ſea-ſide, and did not know him. The baſha being enraged at this anſwer, next day ſent his kiahya with a banner, accompanied by ſome ſtout janiſſaries, who arriving at Zibit, preſented the ſame to the king. The king, in return made him a very fine preſent, among which was a ſcymetar, with ſeveral jewels, likewiſe a dagger, and ſome beautiful pearls, of ſix carats each, which made a ſtring of more than a foot in length, beſides a fine pearl of 18 carats: for much oriental pearl is taken on this part of the coaſt of Arabia. He likewiſe gave to each of the Turks, two veſts of cloth and a little black ſlave. The kiahya made him many compliments, and conjured him to come down to the coaſt; but the king would by no means conſent, fearing he ſhould be put to death. When the kiahya ſaw that he could not prevail on him to go, he ſaid, "If you will not go to the baſha, he will come to you;" and ſo took leave. The fleet ſtaid here 20

Betrayed to the baſha.

days. The 23d of January they departed from Mocha at sun-rise, with a brisk gale, and sailed west by north, till noon; then the wind changing, they proceeded north-west, having run in all 100 miles. The 24th they advanced north-west, with their small sails, and a fair wind, 30 miles in the day, and by the 6th hour of the night cast anchor at the island of Chamaran, 20 miles farther. The 29th the basha landed, and gave pay to all the janissaries, who were willing to fight; but not any thing to the galley slaves and seamen. The 22d of February the weather being calm, they left Chamaran, by help of their oars, and about six o'clock came to a place on the coast, called Cubit Sarif, 20 miles from Chamaran. The 3d, at sun-rise, a Turk, of those in pay of the king of Zibit, having revolted, with 50 horse, came to the basha, who received him kindly, and made him presents. This man encamped on the shore with his tents. In this country, they all make use of horses cloathed with armour, on account of the darts and arrows, which are their principal weapons. On the 4th the basha landed, and caused some pieces of light cannon to be put on carriages, and his men, provisions, and ammunition, to be gotten ready in order to march to Zibit. On the 19th he set out on horseback, three hours before day; and on the road met another Turk with 50 horse, who had also rebelled against the king; him the basha made free, and continued his journey. On the 20th he arrived at Zibit, and encamping without the city, sent for the lord thereof, who seeing himself betrayed by many of his own people, and distrusting the rest, came forth with a cord about his neck, as the Grand Signior's slave, and presented himself before the basha: who immediately caused his head to be struck off. His people seeing this, fled to the mountains, to the number of 300; and among the rest three of the principal men, with all their riches, which were very great, not knowing where to go. Upon this, the basha sent to tell those who made their escape, that they ought to return and join him, promising them good pay, and to enrol them among his own troops: hereupon there returned 200 black Abyssinians, who had been soldiers to the king. These were desperate fellows, who did not value life, and ran almost as swift as a horse. They went quite naked, only wrapping their pudenda in a clout. For arms, some carried clubs of the cornel tree, headed with iron; others pointed stakes to throw in the manner of darts, and some a short sword, a span shorter than those used by the Christians: besides every one had at his girdle a dagger, bent after the Moorish fashion. The basha asked every one his name, and caused him to write it, and set down more pay than he had before. He dismissed them thus, one by one, with orders to return next morning, but without arms, giving them to understand, that he intended to give them their pay, and admit them to kiss his hand, in which case they had no occasion to carry arms. These men having presented themselves at the time appointed, were ordered to lay down their weapons, and go where the basha was sitting near a tent in the plain, with the Turks in a circle about him, under arms: but as soon as they were all entered within the ring, upon a signal given, they were in one instant cut in pieces. After this, the basha sent a sanjac, with a thousand soldiers, to secure Zibit. Both the city and country about it, are very fine, abounding with running water and delightful gardens, and many things besides, not to be found in any other part of Arabia, especially zibibs of Damascus without a stone, and other excellent fruits;——dates, and Fresh meat is plenty, and corn is not scarce. The 8th of March, the basha returned to the sea side, and ordered ammunition to be sent to Zibit, leaving also four foists to guard the coast. The 10th the basha landed, and ordered the Portuguese, who were 146 in all, reckoning some Indian converts, to be taken out of irons, and brought bound to the shore, where being distributed among the troops, their heads were by his command struck off, and that of the chief flayed, salted, and filled with straw; of others they cut the noses and ears, to be sent to the grand signior. The 13th the kiahya departed, in company with another galley, to Zadem, thence to Mecca, and so on towards Constantinople, with an account of the voyage to India; carrying with him besides the presents, the heads, noses, and ears, that their master might see they had done great feats. The 16th, they departed an hour before day, with a pleasant wind, and sailing along the coast, at sun-set, came to an anchor at Zerzet, a place subject to Mecca, in eight fathoms water, and 70 miles from Cor. Hither were brought the three persons who fled from Zibit with their riches. The basha caused their heads to be cut off, and seized the whole treasure, which filled three pair of wallets, each of which was a load for any one man. The 17th they sailed along the coast with a pleasant gale, which an hour before sun-rise, proving contrary, they cast anchor in a place called Adiudi, in eight fathoms water, having ran 50 miles. The 18th, two hours before day, they departed, coasting along the shore till noon, and then cast anchor in four fathoms, at Mugoro, a good port, fifty miles distant, where there is both water and wood. The 19th, an hour before day, they departed with their oars, and at sun-rise, the wind changing, they sailed along shore 50 miles, to a place called Darboni, subject to Mecca, in seven fathoms water. The 20th, being calm, they coasted it till noon, when a gale springing up, at sun-set they came to an anchor in ten fathoms water, at a place called Yasuf, belonging to Mecca, 50 miles farther. The 21st they went on along the coast. At noon the wind sprang up, and at sun-rise, having made 60 miles, they anchored at Chofodan, a place dependant on Mecca, in 40 fathoms. The 22d the basha ordered six galleys to go foremost, on account of the sand banks, which are so thick, that there is scarce any sailing in the day-time. They came to a shelf called Turach. The 23d they coasted it among the shoals, through which only a single galley could pass at a time, and cast anchor at a place called Salta, in four fathom water, having ran 50 miles. The 24th, sailing along the coast, at noon they anchored in a place called Ariadan, but the port Mazabraiti, a place inhabited by peasants, subject to Mocha, in six fathoms water. The 25th they sailed along shore; but at sun-rise, the wind changing, drove them to sea till noon, and afterwards towards land; so that they cast anchor betimes, and rested till the 27th.

On the first of April they landed at Joddah, and pitching their tents without the town, staid there four days; and the basha himself rode towards Mecca on a pilgrimage, ordering the fleet to proceed towards Suez. In coming into the port Contior Abchein, a galley sunk in endeavouring to double the point. Here a carpenter called Mark, belonging to the Venetian galley, of Alexandria, staid and turned Mahometan. Thus they continued ranging the coast till the 19th, when they came close in shore, without any thing material happening; for which reason we shall not trouble the reader with the names of all the places they passed by. We shall only observe, that on the 24th they proceeded with a pretty favourable wind; a half galley having left behind an anchor and three cables; and one galley ran a-shore, but was not lost. On the 27th, sailing west north-west, at noon, they were up with Tor; and continuing their course, two hours after night, the wind turned against them; therefore they lay by till day-break, when the Moorish captain set sail again; and the other galleys weighing anchor, hoisted their foresails; after running 100 miles, they came into shoal water, where they staid five days in six fathoms.

The 3d of June the fleet left the bank, and holding on their course, cast anchor sometimes on the coast of Abyssinia, (or rather of Egypt) sometimes on the other side, and the 15th they arrived at Corondel. At this place the fleet took in water; and here are the baths of Moses, as they called them.——Here they staid two days. The 16th the fleet sailed, and pur-

1540 purſued its courſe for two days together; at the end of which, they arrived at Suez, whence they ſet out, and on the 17th, began to draw the barks on ſhore.—

Arrive at Suez

They began to haul their chief galley on land the ſecond of July, next the baſha's half galley; and then the reſt were arranged and drawn on ſhore, in the order they arrived. The Chriſtians were the porters, and thoſe who worked the engines in unloading, cleared and unrigged the veſſels: all the fatigue lay upon them till the 16th; when the lemin paid them all off.

On the nineteenth of Auguſt, the lemin, accompanied with ſeven boats, went to Tor to pay off the galleys which ſtaid behind; he took with him the beſt and ſtrongeſt Chriſtians that were on the ſpot, in order to carry thoſe galleys to Suez, which were in a manner diſarmed; as well by reaſon of the death of many, as the flight of others. At Tor all were paid off, and the Chriſtians diſtributed among the galleys. The remainder of the fleet arrived at Suez, the 20th of October, and were all drawn on ſhore by the hands of the Chriſtians; who wrought hard, both day and night.—The 26th, an end was made of hauling the galleys on land; and the cables, rigging, tackle, irons, planks, ſmall cannon, and other materials were carried into the caſtle.—This is the author's account of the voyage.—The fate of the expedition againſt Diu, will be ſeen at large in the following pages.

The men paid off.

The ſhips hauled on ſhore.

From the mouth of the Red-ſea to Suez, are 1800 miles; the coaſt running north weſt all the way. The breadth of this gulph is 200 miles, and in ſome places more. It is full of banks, ſhoals and ſhelves towards land, ſo that there is no ſailing by night, except in the middle. The place is ſo intricately diſpoſed, that a perſon cannot poſſibly diſcover the proper channels, otherwiſe than by the eye, or direct the courſe to be taken, but by ſtanding at the prow, and crying ſtarboard, larboard; and for this reaſon the return could not be deſcribed ſo well as the ſetting out. There are two ſorts of pilots for this ſea; the firſt, thoſe acquainted with the middle of the gulph, which is the courſe of navigation outward; the other ſort are for ſhips returning from the ocean, and ſail within the ſhoals: theſe are commonly called Rubati, and are excellent ſwimmers, ſo that in many places, where they cannot caſt anchor, by reaſon of the bad ground, they will ſwim under water, and fix galleys within the ſhoals; and often times even faſten the prows under water according to the nature of the place.

On the 28th of November, 1539, the Chriſtians of the galleys of Alexandria, left Suez, and the firſt of December, arriving at Cairo, were lodged in the ſame houſe where they were at firſt. Each was allowed half a maiden a day, which is equivalent to two pence of Venice; ſo that they ſuffered great affliction and fatigue: for every time it happened that the ciſterns were to be cleaned, hills made plain, gardens to be put in order, buildings raiſed, or the like, all the labour fell upon the Chriſtians.——The 25th of March, 1540, many of thoſe Chriſtians went from Cairo with a guard of Turks, to a hill or mount two miles from the Nile. —— *

Venetians return to Cairo.

We have already obſerved that the author of this voyage, was obliged to follow Solyman Baſha on his expedition, which ended with the ſiege of Diu; before we proceed to a narration of that remarkable event, we ſhall ſay a few words by way of digreſſion, of the occaſion of it, and of the character and behaviour of Solyman, which may not be improper for the information of the reader.

A preſent ſent by Badur, king of Cambaya, to Solyman the Magnificent, Emperor of the Turks, was delivered, together with the news of his death. The great value of this preſent demonſtrated to that prince the vaſt riches of India, and ſtirred up in him a deſire of becoming maſter of it. He thought it might be in his power to expel the Portugueſe in the eaſt, and one of them, a renegado, then at Conſtantinople, promoted the deſign, by repreſenting it as eaſy to be executed.—The ſultan ordered a fleet to be fitted, and gave the command to the eunuch Solyman Baſha, governor of Cairo; this Solyman was a Greek janiſſary, born in the Morea, his age eighty years, of ſtature ſhort, his face ugly, and his belly ſo big, he was more like a beaſt than a man, and could not riſe up without the help of four. His purſe purchaſed this command: offering the Turk to furniſh the ſhipping at his own expence. The better to perform this, he put to death many rich men, in order to ſeize their eſtates; among others, he hanged prince David, king of Upper Egypt, after taking from him a great ſum of money. The fleet was got ready by Ibrahim, a conſiderable officer under him, and conſiſted of ſeventy ſail, moſtly large galleys, well ſtored with cannon, ammunition, and proviſions. In them were embarked 7000 land ſoldiers, Turks and Mamalues, beſides the ſeamen and ſlaves; many of which latter were taken out of the Venetian galleys, then ſeized at Alexandria, the peace made by Bajazet in the year 1503 being newly broken. Solyman having ſet out, he cauſed 400 ſoldiers to be put to the oars, and becauſe they complained, put to death 200. He thought to have taken the king of Jodda; but he, who well knew him, retired with the inhabitants. At Zibit, after receiving a rich preſent, he beheaded the king Nocada Hamed, with a hatchet. At Aden he pretended he had many ſick men on board, and having obtained houſes in the town from the king, to lodge them in, conveyed ſoldiers in beds, counterfeiting ſickneſs, on ſhore. Theſe at a ſign given from the fleet, ſeized the city; and the king coming on board the fleet, Solyman aſked him how it came to paſs that he had neglected coming, (as it was his duty) for three days. The king's anſwer having perhaps been freer than his ears were accuſtomed to, he cauſed him to be hanged at the yard-arm of his ſhip; as has been already related.

Solyman's cruelty.

Solyman Baſha

About the beginning of September, the baſha arrived before Diu, having left ſix ſhips by the way. He was, by inſtructions, to have viſited Goa firſt; but, on farther thoughts, had changed that deſign.

When king Badur was killed upon the ſea, with ſome of his retinue, one Chojah Zaffar ſwam to ſhore, and was well received by the Portugueſe, who put all others to the ſword. He upon ſeveral occaſions ſhewed himſelf ſo grateful, that Nunno da Cunna much favoured and recommended him earneſtly to Antonio de Silveyra. At laſt, without any provocation, he fled from Diu to Mohammed, the new king of Cambaya, offering his ſervice, and perſuading him to war upon the Portugueſe; affirming it would be eaſy to drive them from that coaſt, with the aſſiſtance of the Turkiſh fleet, which he knew would ſoon be there. The king with this encouragement, formed a body 5000 horſe, and 10,000 foot at Champanel, the place of his reſidence. The firſt who appeared was Chojah Zaffar, with 3000 horſe, and 4000 foot, which he maintained at his own charge, knowing it is ſuſpicious to adviſe dangerous enterprizes, and not have part in them. Antonio de Silveyra, having notice hereof, provided for a long and dangerous ſiege.——Chojah Zaffar made the firſt breach, falling upon the town of the Turks near Diu, where he did much harm. Franciſco Pacheco defended himſelf bravely in a bulwark, with fourteen Portugueſe, till he was relieved by Antonio de Silveyra, and Zaffar obliged to draw off, being wounded in the arm. At the ſame time appeared Alu Chan, the king of Cambaya's general, with all the army; who, in conjunction with Zaffar, ſat down before the paſſes: which poſts, on their approach, Antonio de Silveyra gave orders ſhould be quitted by his officers,

Chojah Zaffar

Beſieges Diu.

* Here we might entertain the reader with an account of a burying place on this mount, two miles from the Nile, where, once every year a number of people aſſemble to ſee a partial reſurrection of dead bodies: but M. Thevenot and other authors, having ſufficiently expoſed the falſity of the ſtory, we ſhall paſs it by without farther notice.

the

the better to maintain the city and fort. In the execution whereof they loſt ſome ſhips and guns.

By reaſon of this loſs, and becauſe there were many private enemies, who only waited an opportunity of ſhewing their malice, Silveyra could not maintain the city. Some he hanged, and then retired to the fort; always taking the advice of his captains. Alu Chan and Chojah Zaffar preſently poſſeſſed themſelves of the city and iſland, abandoned by the Portugueſe, and began to play their ſhot vigorouſly, Lope de Souſa, who guarded the wood and water, whereof the fort ſtood in need, had ſeveral rencounters, and ſlew many of the enemy, without loſing one man; but was himſelf much wounded. Antonio de Silveyra hearing of the approach of the Turkiſh fleet, immediately ſent advice thereof to Nunno de Cunna; the anſwer was the diligence wherewith he prepared to relieve him in perſon.

The city quitted.

Michael Vaz, a reſolute man, ſent by Silveyra to reconnoitre, ſaw the enemies fleet, and the better to view it, came up ſo near, that their ſhot reached his veſſel: however he got off, and carried the news to the governor at Goa. The fleet came to an anchor in the harbour, and was now formidable not only to thoſe few Portugueſe, but even to the Moors who had expected it. Next day Solyman landed 600 janiſſaries, well accoutred, and armed with bows and muſquets, to terrify the beholders. They entered the city, and there acted all the inſolences uſed by ſoldiers. Then drawing near the fort, they killed ſix Portugueſe, but 300 of their muſqueteers advancing, killed fifty of them, and forced the reſt to retire.

The Turkiſh fleet appears.

A ſtorm obliged Solyman to remove to Madrefavat, a ſafe harbour, five leagues from Diu. There he continued twenty days, in which time Silveyra improved the fortifications, planted his artillery, and aſſigned every man his poſt. The ſame was done by the Turks, aſſiſted by Chojah Zaffar. Some of their cannon played upon a bulwark; to burn which, they built a wooden caſtle on a great bark, filled with combuſtible matter: but Franciſco de Gouvea, who had the command by ſea, went out by night, and with great difficulty, got to, and burnt it. At this time came ſome relief ſent by Nunno de Cunna: yet the greateſt comfort they brought was the hopes of his coming after in perſon.

Solyman returned from Madrefavat, and fired his cannon upon the bulwark where De Gouvea commanded; from whence, and from St. Thomas's tower, he was ſo well anſwered, that one of his galleys ſunk with moſt of the men. The greateſt harm the Portugueſe received was from their own cannon, which burſt, and ſlew ſome: for the enemy only killed two brothers, whoſe mother (named Barbara) took them in her arms, and carried off the bodies without ſhedding a tear. Zaffar now furiouſly battered the bulwark commanded by Pacheco, which he rendered not tenable, 700 janiſſaries aſſaulted it, and ſet up their colours, but ſome of the ſcattered Portugueſe advancing, fell on, diſlodged them, and killed 150. The diſpute laſted all day, and the enemy drew off with ſhame; for the weight of this action lay upon two reſolute gentlemen.—Next day Pacheco in deſpair, ſurrendered. The enemy entered the bulwark, caſt down the Chriſtians colours, and ſet up the Turkiſh. Juan Perez, a man in years, enraged hereat, threw down the Turkiſh, and again reared the Chriſtian enſigns. But the enemy preſſing, he and five Portugueſe more, who joined him, were all killed upon the ſpot, and their bodies caſt into the ſea, which laid them at the gate of the fort, where they were honourably buried. Pacheco, and thoſe with him, had articled for life and liberty; yet the latter was not performed at all by Solyman, and the firſt but for a while. However he gave them Turkiſh veſts; and ſent one of them to ſummon Silveyra to ſurrender, who made a jeſt of the propoſal.

Enraged at this contempt, Solyman prepared to batter the fort, and planted his artillery in ſeveral places, under the direction of Zaffar. Among the cannon (about 130 in all guarded by 2000 Turks) were nine pieces of enormous ſize, carrying a ball of above ninety pounds weight: beſides ſeveral other ſizes. On Monday the 4th of October, the battery began, and continued violently twenty days, doing great harm to the fort; from whence little damage could be done; nor were the beſieged well able to repair the moſt dangerous breaches, notwithſtanding all art and diligence was employed. 1540

The caſtle battered.

The ſixth day after they began to batter, the Turks perceiving Gaſpar de Souſa's bulwark much damaged, thought to carry it; but many of them were killed in the attempt, with the loſs of two Portugueſe. Every day there was an action, Gonſalo Falcam had his head ſhot off, Juan Fonſeca being wounded in the right arm held his lance with the left, as if he had received no hurt; Juan de Gallego, a youth of nineteen, of a little body but great heart, purſued a Moor into the ſea, till loſing ground, he was like to drown; which the Moor perceiving laid hold on him to kill him; but he recovering himſelf, without loſing gun or ſword, ſlew his adverſary, and came out all bloody; walking leiſurely towards the fort, while ſhowers of bullets flew about him. Many other ſingular acts of valour were performed at this ſiege.—But by this time many brave gentlemen had been killed in the fort; powder grew ſhort, the proviſions ſcarcer: the relief of the viceroy Don Garcia de Noronna, now arrived in India, moved ſlow. The neighbouring forts ſent no aid; and all began to be in confuſion; which was increaſed by a ſickneſs (cauſed by the bad water) that hindered moſt from ſwallowing the little proviſion they had, ſwelling the gums, and looſening the teeth, ſo that they fell out.—The Portugueſe fought and ſuffered, as if the greateſt miſery could not overcome them.

Portugueſe bravery,

And great diſtreſs.

The valour of the Portugueſe women here, deſerves notice. Donna Iſabel de Vego, a woman of great virtue, and ſome beauty, was wife to Manuel de Veſcencelos; who fearing the fort might be loſt, and, ſhe taken by the Turks, earneſtly intreated her to go to her father, Franciſco Serram, at Goa; but ſhe begged not to be parted from him; which with much regret, at laſt he conſented to. This heroine conſidering there were many men employed in the works who might fight, and their places be ſupplied by as many women, aſſembled all of that ſex who were in the fort; and having exhorted them to undertake that labour, to the end ſo many men might be added to the number of their defendants, they all chearfully complied, and followed her as their leader with Anne Fernandez, to whom ſhe had before communicated her deſign. This Anne was wife to a phyſician, and ſo courageous, that by night ſhe viewed all the poſts, and appeared at aſſaults encouraging the ſoldiers; her ſon being killed in her ſight, ſhe drew him away, and returned to her poſt; when the ſervice was over, ſhe went to bury him.

Valour of the women.

Gaſpar de Souſa perceiving the Turks undermined his bulwark, ſallied with ſeventy men to view their work, which he did, and made great ſlaughter among them. At his retreat, miſſing two men, he turned back upon the enemy, and fought bravely; but being ſurrounded, was hamſtringed; yet ſtill he defended himſelf upon his knees, till oppreſſed by the multitude. The mine was countermined; but the continual labour became inſupportable, and it was impoſſible to repair ſo many ruins.——

At this juncture arrived four veſſels, ſent by the viceroy, Don Garcia de Noronna, which brought only twenty men. Solyman was concerned at this ſuccour, though ſmall, but much more that the fort ſtood ſo many aſſaults: Chojah Zaffar having affirmed he would carry it at two. At the beginning of the ſiege, there were no more than 600 men in the fort, of whom many were killed, and ſome cannon burſt: but the baſha little encouraged thereby, ſtill looked toward the ſea, fearful of the Portugueſe fleet; which he heard was coming upon him. This moved him

1540 The siege pressed hard.

to press the siege with more vigour. The bulwark of the sea where Antonio de Sousa commanded, was furiously attacked by 50 barks, two whereof were sunk by the cannon of the castle. Then they attempted to scale it, and were repulsed with great slaughter. The assault was repeated, and still the enemy came off with loss. Amongst the wounded men, sent to be dressed, Fernan Pinteado was one, who, while he waited his turn, heard the noise of a fresh attack, and forgetting the dressing, ran thither, and received another wound; the very same happened to him the third time, and then he was dressed of all three: by this time there were left in the fort but 250 of the 600 men fit to bear arms.—

Solyman, now in despair, resolved to make one push for all. The better to succeed in his design, he counterfeited raising the siege; and twelve galleys put to sea, that Silveyra might be the easier surprised; but that vigilant commander kept still upon his guard, as much as ever. One night, some noise being heard, at the foot of the wall by water, it was found that the enemy were applying great numbers of scaling ladders. They were opposed till morning appeared, which shewed the place beset all round, and assaulted by 14,000 men. They began by playing the cannon, and then mounted on all sides, chiefly next the commandant's house, where it was weakest, but he had posted such men there, as made a terrible slaughter of them. Having failed in this place, they attempted a bulwark, pouring in showers of arrows and bullets. Great was the confusion and havock on both sides. In the interim, came up 14 galleys, furiously discharging their great shot, but did no execution. At length Francisco Gouva made them draw off, having battered two of the vessels, and killed some men with his cannon. By this time 200 Turks had entered the bulwark, and planted their colours; scarce 30 Portuguese were there to oppose them; but they rushing on desperately, to regain the work, none of their shot were lost, the enemy being very thick; so that having sustained great damage, such as were in this action drew off. However, fresh men succeeded, and set up four colours. The Portuguese, wounded and burnt, ran for ease, and dipped themselves in jars of salt water, where seeking refreshment, they perished with great torture. Antonio de Silveyra indefatigably repaired to every place, encouraging all. Here a soldier wanting ball, pulled out one of his teeth to load his musquet. The enemy had much the better this second assault, which a few gentlemen perceiving, furiously rushed upon them, among whom Juan Rodrigues, a man of great body, and as great courage, ran with a barrel of powder, crying, "Clear the way, for here I carry my own and many a man's death." He threw the barrel among the enemy, and suddenly above 100 men were carried into the air, torn in pieces; 20 lay burnt upon the ground, yet Rodrigues himself came off unhurt, and doing other considerable actions, deserved some of the first rewards and honours, gained the siege. Other fireworks burnt the four ensigns, who had set up the colours; two of the cannon cleared the place of enemies; and two bullets threw down two ensigns, that succeeded the former. The enemy withdrew, and fresh supplies came on the third time, and placed their colours. The commander of these, son-in-law to Chojah Zaffar, being killed, his men were dismayed, and turned their backs. These assaults lasted above four hours; the same small number of Portuguese withstanding still fresh, and numerous detachments, while their women in the fort, and those of the enemy on the city walls, were spectators of the whole action. The Portuguese, all smeared with powder, appeared like Moors, and were known by their cloaths and voice, not colour; so black was their appearance with fire, blood and sweat. At length the enemy retired, carrying off above 1000 wounded, and leaving more than 500 men killed: of the Portuguese 14 were killed, and 200 lay useless for want of blood, only 40 remained able to bear arms, and the weapons lay broken to pieces on the ground, some serving such as could not stand on their legs, for crutches. No hope was left, if the enemy renewed their attack; the walls were all shattered, and the powder spent; nothing but horror appeared; only the brave Silveyra's countenance was what encouraged all men. Solyman put an end to all these calamities; for not knowing the condition the fortress was in, and terrified with ill success, he raised the siege. Antonio de Silveyra seeing them weigh anchor, and hoist sail, thought it was only another feint, and prepared to resist; as if he could still resist an attack. He posted the 40 men, and caused some that were wounded to lean against the walls, to shew a number. Those who could not rise, ordered themselves to be carried in their beds, saying, It was to die in an honourable place: some of the women also armed themselves, and appeared upon the works. The night was spent upon the watch, but the morning was more comfortable to the afflicted; for Solyman was withdrawn in earnest, without any thought of returning. Though fear did much, yet a device of Chojah Zaffar did more towards removing the basha. Zaffar was moved to it as well by the insupportable pride of that Turk, as an order he had from his king, that in case, he found the basha intended to keep that city and fort, (as was feared) he should rather endeavour to leave it to the Portuguese. To effect his purpose, he framed a letter, intimating, that the viceroy of India would be there the next day, with a vast fleet; which falling into Solyman's hands, as was designed, he thought fit not to delay his departure; but sailed away on the 5th of November, after two months siege, having lost 9000 men.— The same night Zaffar's men fired the city, and marched off. This was the *first* siege of Diu, which was admired throughout the world, and added new lustre to the Portuguese glory: all due to the invincible courage and vigilance of the heroic Antonio de Silveyra, and those valiant gentlemen who were with him. Solyman touching at the ports on the coast of Arabia, and took some Portuguese, he found there. He gathered above 140, and cutting off their heads, then their ears and noses, salted and sent them to the Grand Turk, as we have seen. Among these likewise was Francisco Pacheco, who had not the courage to die like a gentleman in his bulwark. Solyman being arrived at Constantinople, and not agreeing with one who aspired his post, was reduced to kill himself.

Solyman raises the siege.

His death.

This famous siege was far advanced, when the viceroy Don Garcia de Noronna arrived in India, to whom Nunno de Cunna immediately resigned the government. His arrival, (with so considerable a relief as he brought) might well have bettered the affairs of Diu, yet, on the contrary, it much endangered them; for had he not come, De Cunna had relieved Diu with 80 sail that he had in readiness for that purpose, and prevented so many miseries, and the death of so many brave men. Still fresh advice was brought of the danger the besieged were in, and still Don Garcia wasted the time in considering the means to relieve them, chusing rather to commit an error through his own wilfulness, (for he did not want for courage) than act rightly by the advice of De Cunna. Thus the siege was raised, before he pitched on the method for relieving the place, and the expence of preparation thrown away. Antonio Sylva Meneses was the second sent with succours, being 20 small vessels, and came too late: yet he contended with Silveyra for the honour of that victory. The viceroy was still at Goa, though ready to sail with a fleet of 160 sail of several sorts, and in them 5000 fighting men, and 1000 cannon, when advice came, that the Turks had raised the siege. On this news, he set out with 90 ships, but moved slowly, as if he did not care to go thither. Hearing at Dabul that Asu Chan and Chojah Zaffar still ranged about with fire and sword, he sent against them Martin Alphonso de Melo, with his galley, and the vessels that went with De Sylva; but being hard set by the enemy, he was forced to take

shelter under the castle. The viceroy, at the same slow rate, sailed to Bazaim, nothing moved with the news he received from Diu. It was whispered about that he either consulted his safety or private interest. Let what would be the cause, his actions justified the worst of suspicions; but when least expected, he steered for Diu, on the first of January, when a storm rising, which lasted eight days, his fleet was dispersed into several ports, and several vessels, with two galleys lost, so that he entered but with 50 sail. A treaty of peace was presently set on foot, and concluded little to the advantage of the Portuguese, which common fame attributed to covetousness.——

Sylveyra's character.

Antonio de Silveyra soon after returned to Portugal, and had scarce anchored at Lisbon, when the great men of the court came to conduct him to the king, and princes, who with joy to see and honour this hero, whose generosity did him as much honour as his valour at the siege of Diu. What a pity so much courage as the Portuguese displayed in the discovery and conquest of the Indies, had not been always sanctified by justice, and crowned by humanity!

Don Stephano de Gama's expedition.

In the year 1540, Don Stephano de Gama, set out from Goa, on an expedition, wherein he is said to have had two ends in view; the one of which was to carry succour to the emperor of Abyssinia, and the other, to destroy the Turkish fleet, which he expected to find at Suez.

The account of this voyage is written by Don Juan de Castro, who was afterwards governor and viceroy of India,* from whence we have derived our authorities.

It was on the 31st of December at sun-rise, that they departed from the bar of Goa, towards the streights of Mecca, and discovered the island of Socotra on the 13th of January following. Of this island we have already spoken, but the description given by our author is so exact in many particulars, that we shall here transcribe it.

"Socotra (says he) is twenty leagues in length, and nine in breadth, and lies in 12 deg. 40 min. of south latitude. The northern coast runs east and west, somewhat inclining to the north-west and south-east. The shore is quite clear from rocks and shoals, and all impediments to sailing. The ground in the road is generally sandy, but in some places stony, yet, not so as to cut the cables. But there is no other place or harbour throughout the island where ships may safely anchor. The coast is very high, and girt with lofty craggy mountains. The tides there are contrary to those of India; for when the moon appears on the horizon, it is high tide, which from that time begins to ebb, and by the time she comes to the meridian of the island, it is low water; then as the moon declines from the meridian, it begins to flow again in the same order, as it sets at Goa, and being set, it is here full sea."——The inhabitants of Socotra are Christians. They have churches throughout the island, in which there is no oracle but the cross; for which sign they have great devotion, it being rare to find any person without one about his neck; and they use the Christian names of John, Peter, Andrew, &c. and the women generally that of Mary.

These people have no king, ruler, prelate, nor any other person to whom they are subject, but, though Christians, live in a manner like wild beasts without any order or government. In all the island there is neither city nor town, but most part of them live in caves, and some in little thatched cottages quite separate from one another. Their food is flesh and wild dates. They drink milk, and seldom any water. The people are of the best disposition. The women are fair, and the men go naked, except covering the private parts with a sort of cloth, the manufacture of the islands. The inhabitants are not industrious in catching fish, and have not the art of navigation.† The fruit of the palm-tree is their chief sustenance; but the land yields all sorts of eatable and medicinal plants.—

1541

The fleet came within sight of Aden on the 27th of January, when they perceived some land, which they had seen before, and taken for an island, to be the mountain of Aden. Leaving Aden, they proceeded on their voyage; and our author here takes occasion to describe the streights of Babelmandel, and the Arabic gulph or Red Sea, of which we shall say more hereafter. We have already observed that the destination of the fleet was towards [Habesh, Abesh, or] Abyssinia, which they supposed to be the empire of Prester, or Presbyter John, a prejudice that for a long time was entertained among the European nations. In their course they passed by Shamoa, Dallaka, and other places in the channel, and on the 12th arrived at Massua, the situation of which the author has described in the following manner.

Massua described.

"Massua is an island not half a mile in length, and in breath not a caliver shot. It is very flat, and lies in a great and crooked nook of the coast, very near the point of it. The current is very small, and all the winds come from the land. The depth of the water is eight or nine fathoms, and the ground oozy. The enterance of this port is on the north-east side, towards the middle of the channel, in order to avoid the shoal running from the point of the work. Near this island lie two others. There is no spring in any of them; but in Massua are many cisterns of water, and many shoals lie scattered between them; but vessels are safe in the mid-channel."

Massua was subject to the emperor of the Abyssinians or Abassins, till the king of Dallaka seized it, and fixed his residence on account of the trade carried on for gold and ivory. The air is exceeding hot and unhealthy in May or June, for want of wind, so that both the king and inhabitants retire to Dallaka, during these two months. The land, as far as Archico, where there are many wells, a league to the south of Massua, is very high and full of mountains, between which and the sea are spacious fields and plains; but thence forward the coast is more clear. The country abounds with elephants, tygers, wolves, wild bears, stags, elks, and other sorts of beasts unknown to the Portuguese.

Head and course of the Nile.

Nilus is still called Nil, by the Abyssinians, Egyptians, Arabs and Indians. Its springs are in the southern borders, towards the country of the Caffres; nor does the river hide itself any where under ground, according to the author, but continually shewed itself carrying a great breadth and depth. He likewise learned, that the increase and overflowing of the Nile was owing to the great and continual rains which fall in June and July, in their country, which also was overflowed; and that in August the rain ceased, and the water fell by degrees. As a confirmation of this, he observes that at Massua in June, and part of July, there fell great storms, rains, and thunder; and that he could perceive within land continual tempests, and the sky black and cloudy; which yet the Abyssinians said gave but a faint idea of what it really was. He adds, that the same months of June and July, are the winter at Cape Buena Esperanza, and along that coast, where the rains fall without intermission. Upon enquiry he was farther acquainted that the river made several islands; and, among the rest, one very large, with a great city on it, which he concludes must be the antient Meroe; that it abounded with certain dan-

Cause of its increase.

Meroe. The cataracts.

* Don Juan de Castro was a Portuguese nobleman, the son of Alvero de Castro. In his youth he had served at Tangiers, and afterwards under Charles V. (against Tunis) of whom he refused to accept his part of a present in money, saying, he served the king of Portugal, and from him expected his reward. He afterwards commanded a fleet upon the coast, and was sent with another to the relief of Ceuta, which joined that of Spain

† These people have since been conquered by the Arabians.

1541 dangerous animals, which he ſuppoſes to be crocodiles; and that in a certain place which they named, it fell from a large rock with great noiſe; but not ſo as to make people deaf.

Atine Tingil, (called afterwards David) reigning in 1530, became ſo cruel and tyrannical, that he grew hateful to the Abyſſinians. At this time Gradumot, king of Zeyla, encouraged by the diſaffection of his ſubjects, or invited by ſome of the lords, invaded his dominions, and took ſome towns; by the plunder of which, he animated his troops, the chief ſtrength whereof conſiſted of 300 Turks, armed with harquebuſſes. On the other hand he made all the inhabitants free in the cities he paſſed through, and eaſed them of taxes: by which means he gained not only the people in general, but the nobles themſelves over to his intereſt.

Abyſſinia invaded.

The emperor ſent an army againſt him, but on the Turks firing their calivers, which killed ſome, the ſoldiers were ſo terrified, that they preſently fled. The king of Zeyla, encouraged by this victory, and joined by multitudes of Abyſſinians, ravaged the country; and marched towards that part adjoining Magadoxa and Melinda, in order to attack a mountain, where the royal treaſure was lodged. To prevent this, Atine Tingil met him, with all the forces he could muſter: but this army was very ſoon put to flight like the former, by means of the Turks. The emperor, after this defeat, directly retreating to the mountains, died within a few days. The king of Zeyla, after his victory, continued his march to the mountain, by great journeys; and arriving there, aſſaulted the paſſes with ſuch vigour, that although the place ſeemed inacceſſible, yet, at length, he took it, and therein the greateſt treaſure that ever was known in the world.

The loyal Abyſſinians on the emperor's deceaſe, elected his eldeſt ſon in his room; who being very young, and the country in confuſion, a brother of his tampered with ſome great men (or they prompted him) to obtain the kingdom, which proved the utter ruin of the Abyſſinians. While the unfortunate youth was thus engaged in a civil war: the king of Zeyla came upon him; and he being unable to reſiſt, fled to a mountain very high and great, and of difficult aſcent, having but one way up to the top, which is a large plain, abounding with ſprings, fruit-trees, cattle, and cultivated lands. The inhabitants here, were ſaid to obſerve the law of Moſes; but how they came here, (there being no Jews any where elſe in the land) or why they never came down and converſed with the Abyſſinians, Don John owned he could never diſcover. However theſe people defended the king againſt the Moors, and king of Zeyla, who entering the mountains, were obliged to retire.

About this time the Portugueſe arrived at Maſſua, which diſmayed the Moors, and encouraged the king to quit the mountain, and advance with his people to certain hills near the coaſt about Maſſua, from whence he ſent moſt dutiful letters to the Portugueſe governor, who returned anſwers with hopes of ſuccours; and after his return from Suez, 500 men were ſent under a commander, to his aſſiſtance.

"The Abyſſinians are deſcribed as ceremonious and full of punctilios of honour. They uſe no weapons but darts, marked with a lance and croſs, only a few wear half ſwords. They are very active on horſeback. They are generally addicted to lying and rapine. They do not reckon thoſe rich who poſſeſs money, but only ſuch as have abundance of cattle and camels; notwithſtanding which, they prize gold very much. At home they are weak and cowardly; but in other countries, ſtrong and valiant; ſo that it is become a proverb through India, "That the good ſoldier muſt be an Abyſſinian;" and they are ſo highly eſteemed in Ballegat, Cambaya, Bengal, and other places, that they are always the principal perſons in the army. Their habit is very mean, conſiſting of a linen ſhirt; only ſome great perſons wear a bedon: the common people go naked. They eat

People of Abyſſinia,

Their habit and diet.

6

their victuals either quite raw, or with moſt of the blood in it, only juſt ſhewing it to the fire. In the land there is no cities nor towns, but they live in the fields, under tents, like the Arabs.

It is a thing much talked of among the Abyſſinians, that a ſultan of Babylon having made war againſt the emperor, the latter gathered a great multitude of people, with an intent to turn the river Nile by another channel, into the ſea; which when the ſultan heard of, he was amazed; and being ſenſible, that if the work was executed, it would ruin Egypt, he ſent ambaſſadors, with great gifts, to obtain peace and friendſhip with the emperor, and gave the Abyſſinians a privilege to paſs through his country, without paying tribute; and at this day they pay none, when they go to viſit Jeruſalem and Mount Sinai. This paſſage was confirmed in every circumſtance, by ſome learned grave Moors, of whom the emperor made enquiry in the Arabic Gulph.——The 19th, at ſun riſing, they left the nook half a league beyond Maſſua, and ſet ſail, keeping about half a league from land. This day the weather was very cloſe, and it rained. The fleet conſiſted of ſixty-four rowing veſſels, viz. three galliots, eight ſmall galleys, and thirty-five foiſts. At night the wind being N. W. it calmed, and blew a little at W. In the ſecond watch it began to rain, ſome time after they weighed anchor, and rowed along the ſhore till morning, it raining ſtill very hard.——The 20th, in the evening, they were as far as the point of the range of iſlands on the north-ſide, about fourteen leagues from Maſſua, and four from the coaſt: which in that diſtance, lies N. N. W. In Herate, Dohul, and Damanil, ſome of the outermoſt iſlands, they found cattle and water, with a few poor dwellings, the land of them is low, and they are ſurrounded with ſhoals and flats. All the firſt watch of the night, they ſailed N. N. W. with a fair wind at E. At the beginning of the ſecond, they fell on a ſudden among certain white ſpots, which caſt flames like lightnings; wondering at this ſtrange appearance, they took in their ſails, believing they were upon ſome ſhoals or banks; but on ſounding, found twenty-ſix fathoms water. Therefore, perceiving the pilots of the country not ſurpriſed at it, they continued their courſe.——The 21ſt, when it was day, they ſaw off at ſea a low iſland, whereof the Mooriſh pilots were afraid.—The 22d, at day break, they ſet ſail, and arriving by noon at a very long point of land, which comes from ſhore, the emperor's pilot obſerved the latitude to be 18 degrees 30 minutes. After doubling this point, they found the ſea very open, and ſailed N. W. by W. An hour after they came to an harbour called Marate. The coaſt this day ſtretched N. N. W. and is all low land; but farther inwards, the mountains ſeem to reach the clouds.—Marate is a very low deſert iſland, of a roundiſh ſhape, about three leagues from land, ſixty-ſix beyond Maſſua, and in compaſs, a league and a half. On the ſouth-weſt ſide facing the coaſt, thers is a very good haven, ſecure from all winds, eſpecially the eaſtern, made by two long points, which extend north by weſt, and ſouth by eaſt, encloſing a ſpacious harbour, narrow at the mouth; where there lies a long very flat iſland, with ſome ſand banks and ſhoals, ſo that no ſea can get in. This port has two entries, both very near the points. The channel, on the eaſt ſide, lies north by weſt. The depth is three fathoms in the ſhalloweſt place, and increaſes advancing in the port, where, near the ſhore, there are four or five fathoms: the bottom is muddy. They rode here all night.—On the 23d, departing at ſun riſe, they found ſeven fathoms, and ſandy ground. At eleven, they came in ſight of two little iſlands, far off at ſea; one called Daratata, the other Dolcofallar, from which to Swaken, is a day's ſail; from noon they ſailed N. W. by W. till evening, when they entered the channel of Swaken, ſteering N. W. for the ſpace of a league;—then meeting with ſhoals, they, to avoid them, ſailed W. by N. and ſometimes W. They held

White ſpots in the ſea.

Marate deſcribed.

Two iſlands.

held this courſe about three leagues, and then ſeeing a great iſland a-head of them, tacked towards land; and, before ſun-ſet came to an anchor among rocky ſhoals, in a good harbour called Shabac. This day the pilot found the latitude, by the meridian altitude, to be ſcarcely 19 degrees.—The ſhoals of Swaken are ſo many, and ſo intermixed with iſlands, banks, rocks, and channels, that there is no deſcribing them; at the entrance among them to the right, there is a ſhoal under water, on which the ſea breaketh much: and to the left, a little iſland that ſtretcheth with the ſhoals, N. E. by E. and S. W. by S. The diſtance is about three quarters of a league.—Being entered, the channel appeared very ſpacious; and, the farther they advanced, the more numerous the iſlands appeared to the right, or ſea-ward. They are very low, and with the flats and banks of ſand or rocks, are without number: but thoſe towards land are not ſo many; though in compariſon of any other ſea, it is the fouleſt and moſt unnavigable. The rule for ſailing through theſe ſhoals, is to keep as near thoſe to the right as may be. The breadth of the channel, in ſome places is about half a league; in others, a quarter; and in others, leſs than a caliver ſhot. From the entrance to the port of Shabac, which is about five leagues, they never found leſs than ſix fathoms water, or more than twelve. The extent of theſe ſhoals may be eight or nine leagues, and then you paſs into another channel, ſurer for ſhips and great veſſels. Or you may leave all theſe ſhoals to the right, ſailing cloſe to the ſhore; and this is by much the beſt, and moſt pleaſant way.

Port Shabac.

Shoals of Swaken.

The channel.

On the 24th, at ſun-riſe, they left Shabac, and rowed along ſo narrow a channel, that two could not go a-breaſt; the wideſt part being not above a croſs-bow ſhot over. They never went nearer the land than the ſame diſtance, nor a cannon ſhot from it, all the ſhoals, rocks, and banks, which ſurrounded them, were under water, yet eaſily diſcovered by the colour of the ſea, which over them appeared either very red or very green; but dark or blackiſh, where the channel was deep and open. At half an hour paſt eleven, they caſt anchor to leeward of a little low, round iſland, four leagues from Shabac, in nineteen degrees. In this latitude Ptolemy places the Mountain of Satyrs, which the pilots of the country knew nothing of. But the emperor walking about two miles from the coaſt, found various kinds of beaſts, and vaſt flocks of pianets, whoſe footſteps covered all the plain to the ſea-ſide. From Shabac hither, the depth is never leſs than two fathoms and a half, or more than eleven. The tide here riſes not above half a yard; and it begins to flow as ſoon as the ſun aſcends the horizon, after the manner of the tide of Socotora.——The 28th, at day break, they hoiſted ſail, and at nine o'clock came to an anchor about two leagues from the land, in twenty-three fathom water, on a ſoft ſand, like ooze. In the way, they perceiving ſome ſhoals out at ſea, by the water's appearing either very green or red. Two hours after noon, they ſet ſail again, and at night caſt anchor in thirty-ſeven fathoms water, the bottom ſand, near by an iſland, a league and a half ſhort of Swaken. The coaſt bears N. N. W. and S. S. E. along it runs a ſhoal that entereth into the ſea, half a league. The land upon the ſea-ſide is like the former.——The firſt of March, ſetting forward, they doubled a point made by the ſhoals: and entering by the channel inward, came to anchor in the port of Swaken.

The ſea of various colours.

Swaken was one of the richeſt cities in the eaſt, ſtanding on the coaſt of the Abyſſinians. It equalled, if not exceeded, the moſt eminent places in goodneſs and ſecurity of the port; facility in lading and unlading ſhips, traffic with remote countries; ſtrength and advantageous ſituation of the town.—The harbour is ſheltered by nature from all winds, and the water is ſmooth and ſtill, that the tides are ſcarce perceptible. It is able to contain 200 ſhips, and galleys without number. The road has in all places five or ſix fathoms water, and in ſome ſeven. The bottom is mud, and may be ſeen, except where it is ten or twelve fathoms deep. The ſhips come up cloſe to the ſhore, quite round the city, and may be laden by laying a plank from them to the merchants warehouſes, to the doors of which the galleys are faſtened, with their beaks ſtretching over the ſtreets, which ſerve as bridges. As for commerce, the author ſays he knew no city that could compare with it but Liſbon, for it traded to both Peninſulas of the Indies, particularly Cambaya, Tanaſarin, Pegu, and Malacca; within the Arabic Gulph, to Joddah, Cairo, and Alexandria; beſides what it carried on with Ethiopia, and the land of the Abyſſinians, from whence it had vaſt quantities of gold and ivory.—For the ſtrength, the city ſeemed naturally well ſecured, by the many ſhoals, iſlands, rocks, ſand-banks, and intricate channels, that lay for ſixteen leagues about it; which made the approach by ſea very dangerous and terrible to navigators; yet the inhabitants have not taken the leſs care to defend it by art. The ſituation of this city is in this manner; in the midſt of a circular nook ſtands a flat iſland, almoſt perfectly round, and level with the water, about a mile in compaſs. In this ſpace, there is not a foot of ground that is not taken up with houſes; ſo that all the iſland is a city, and all the city an iſland. On the eaſt-ſouth-eaſt, and ſouth-weſt, its diſtance from the land is not a bow-ſhot. The road lies round about the city, to the diſtance of a great croſs-bow-ſhot; having every where ſix or ſeven fathoms water; ſo that the ſhips may caſt anchor at pleaſure, in a mud bottom. This road is incompaſſed with a great ſhoal, and that by others, which render it almoſt inacceſſible by ſea.—In the nook on the north-weſt ſide, lie three other iſlands: two of them which ſtand fartheſt in, are but ſmall; but the third next the channel, is about as large as the city. Between this iſland and the coaſt, on the north ſide of the nook, runs a great and long channel: where a numerous fleet may ride in ſeven fathom water, out of all danger of being hurt or even ſeen from the city, except their maſts. At ſun-riſe it is full ſea, and gradually ebbs, till he comes to the meridian, when it is dead low water; after that the tide begins to riſe, and at ſun-ſet is full in. At this time the water does not riſe in the city, above one quarter of a yard; and along the coaſt the moſt that it riſes is a yard and a half, and, in ſome high places, leſs than three quarters.—Before ſun-ſet, on the 9th of March, they left Swaken, and anchored at the mouth of the channel. The 10th, they departed; they lay all night at anchor, when a vaſt quantity of dew fell. The 11th, they had a ſtorm from the north, which carried up the ſand of the ſhore to a great height, and then ſcattering it through the air, made it appear like a great miſt or ſmoak.

1541

The road for ſhips.

Channel and tides.

City of Swaken

On the 12th, they paſſed out of the channel two leagues beyond Swaken, being about a league and a half from the coaſt; but met with ſo many rocks, ſhoals and flats, whereon the ſea broke violently, that they were forced to take in their ſails, and row for three hours, till they got clear of them. In the evening they came to an anchor within the banks, entering a very narrow channel, one league beyond the former, and three from Swaken. It is great and ſpacious within, the ground very clean, nor can the ſea enter and do any damage.

The 13th, an hour before day, they paſſed out of the channel, and ſaw to the right, about a cannon-ſhot diſtant, a very long range of ſhoals, which ſeemed to bear the ſame courſe with the coaſt. At eleven, the wind leſſened; then blowing from the north north-weſt, they could not make any way, and were forced to faſten their veſſels to the rocks. But about two in the afternoon, the wind ſpringing briſker at N. N. E. they bore N. W. and coming up with the bank of the land, took in their ſails, and rowed into a very narrow and winding channel, harbouring within the bank. It is about ſeven leagues beyond Swaken,

from

1541 from whence the coaſt bears north and ſouth, and north by weſt, and ſouth by eaſt. The 16th Don Juan went on ſhore, and obſerved that when the ſun was two hours above the horizon, it was full ſea, and at two in the afternoon, low water.——The height to which the tide roſe was twenty-two cubits.

On the 16th they left the channel, the wind at north, and half a league beyond, caſt anchor. The 17th they put into a very good harbour; called Tradate, ten leagues from Swaken; the coaſt between lying north by weſt, and ſouth by eaſt; the land near the ſhore is all very low; but three leagues within, there are very great and high mountains.

Tradate juſtly merits to be ranked amongſt the moſt eminent ports: it lies in the altitude of 19 deg. 50 min. The entry has in breadth about a ſmall falcon ſhot, but within runs gradually narrowing, yet the depth of water all the way is twenty fathoms; the ground oozy. About a quarter of a league inwards, there are ſeveral wells, affording the beſt and greateſt quantity of water known in all theſe coaſts.

The 19th, they ſailed about three leagues and a half in ſight of many ſhoals: the coaſt ſtretched north and ſouth. The 20th, at ſun-riſing, the ſea being ruffled with a north wind, they were forced to ſeek a harbour within the ſhoal, entering by a very narrow and troubleſome channel: after they had caſt anchor, the wind came north north-eaſt. The 21ſt, they departed with a fair weſt north-weſt wind, and ſailed north, within half a league of the ſhore. An hour after ſun-riſing they came up with a very long and fair point, behind which, is the bay of Doroo.

Doroo bay. Doroo, is a very fine and great bay, fifteen leagues and a half beyond Swaken. On the ſouth ſide it thruſteth a very large and bare point into the ſea, where there is built a great and round tower, reſembling a pillar. The bay is full of iſlands, creeks and nooks, where many veſſels may take ſhelter unperceived: the mouth is cloſed up all round, with a dry ſhoal, lying about a mile off at ſea; only oppoſite to the cape, it leaves a narrow entry, in which is found ſix fathoms water; and advancing gradually, the depth diminiſhes till you come into three fathoms, which is the ſhalloweſt. The ground is a very hard clay, and the courſe into it eaſt by north: about a cannon ſhot from this port is a well, with plenty of water, but very brackiſh.

Bay of Fuſhaa. At day-break on the 22d, they departed with their oars, and paſſing ſafely through the rocks, with which the ſea was full, towards ten o'clock made their ſhips faſt to ſome of them; and about evening, doubling a low point of land, came into a very ſpacious bay, called Fuſhaa, three leagues and a half beyond Doroo. The coaſt between lies north and ſouth, inclining a little to the weſt and eaſt.

Fuſhaa Bay is remarkable for a high and ſharp peak, the latitude is 20 deg. 15 min. the mouth is made by two very low points, lying north by eaſt, and ſouth by weſt, a league and a half aſunder. As no great ſea enters, there is a good harbour, with an oozy bottom. At the mouth there are ten or twelve fathoms water; the depth inward diminiſhing till it comes to five fathoms. There is no water here, and the land is very dry and barren. Along the ſouthern coaſt of the bay there lie nine little iſlands in a row, and others ſcattered elſewhere, all ſmall, low, and ſurrounded with ſhoals.

On the 25th, coaſting the land in ſight of many rocks on the right, at ten o'clock they entered a very capacious harbour, called Arkea, four leagues from Fuſhaa. This is the ſtrongeſt and moſt defenſible haven that our author had ſeen, 22 leagues beyond Swaken. In the midſt of the entry lies an iſland, about a croſs-bow ſhot in length, and near the ſame in breadth. On the ſouth ſide there runs out a ſhoal and bank from the land, which hinders a paſſage that way. The channel on the north ſide is a croſs-bow ſhot over, and 15 fathoms deep, running north-weſt, and ſouth-eaſt, the length of a caliver ſhot. It muſt be ſailed in the middle, for the ſides are ſhallow, and full of rocks. Having paſſed through this channel, the coaſt winds on both ſides, and widens, forming a large and ſafe port, one league in length, and a half in breadth. 'Tis deep in the middle, but near the land is full of ſhoals. There is no water in this place. When the peak bears weſt ſouth-weſt, you are then up with the port. From hence Gama ſent all the fleet back to Maſſua, except 15 ſmall galleys, with which he continued his voyage. From hence the coaſt begins to wind very much, and for a league beyond Ras al Dwaer, runs very low to the north north-eaſt, and at length makes a point of land, where there are 13 little heaps or elevations of ſtone, which the Mooriſh pilots ſaid were graves. And from this point of the Calmes, about two leagues, the coaſt runs north north-weſt, and thence as far as the ſhoal, where they anchored. It is the moſt noted point through all this coaſt, becauſe all that ſail from Maſſua, Swaken, and other places, to Joddah, al Coſſir, and Tor, muſt of neceſſity make it. The ſea, for theſe ſeventeen leagues, is ſo full of rocks and ſhoals, that it ſeemed fitter for wading through, than paſſing even in boats; inſomuch, that no directions can be given for ſailing hereabouts; but all muſt be left intirely to the care of a ſkilful pilot.

Between Salaca and Ras al Dwaer, there are three iſlands, forming a triangle; nearer the latter place of the two. The biggeſt of them, named Magarzawn, is about two leagues in length: it is very high land, and without water, lying three leagues to the ſouth of Ras al Dwaer. The ſecond iſland, called Almante, which lies much out at ſea, is likewiſe high, and without water; but the third is very low, and all of ſand, four leagues from Salaca. On the 2d of April, an hour before day, they looſed from the ſhoals, and having rowed along the coaſt four leagues, came to Farate, a very large and fine river. On each ſide of the channel, which runs from weſt to eaſt, in 21 deg. 40 min. north lat. is a low point of land, diſtant from each other a caliver ſhot; and from each point runs a ſhoal, and between the two is the entrance into the river. The water there has thirty fathoms depth, and thence diminiſhes to eighteen. The land on each ſide is very low, and without either buſh or tree to be ſeen. Sailing a league farther, they came to Kilfit.— Kilfit harbour.
Kilfit is a fine harbour, ſecure from all winds, with 12 fathoms water. Every where there are at the entry two very low points, bearing north-weſt by north, and is about diſtant near a mile. The circumference of the whole port may be three leagues. Along the ſhore the coaſt is rocky. Between this port and the river Farate, there croſſes a range of mountains one higher than the reſt.

The third of April they departed one hour before day, rowing along the coaſt; and, having advanced nine leagues an hour before ſun-ſet, came to anchor in Port Ras al Jidid, that is in Arabic, the New Head. Rasal Jidid.
In the way they ſaw ſome ſhoals to the right, but not ſo many as they uſed to do.

Two leagues from Kilfit there is a very good harbour, called Moamaa. And preſently from this point of the ſhrubs, to another very long point of ſand, about two leagues before (or on this ſide of) the port of Ras al Jidid, the coaſt lies north by weſt, and ſouth by eaſt; the diſtance is about three leagues and a half.—Ras al Jidid is a ſmall, but very pleaſant harbour, about two miles in compaſs, fifty-ſeven leagues beyond Swaken. It is ſhaped like a great cauldron, and round as the arch of a circle. The entry is formed by two points, which lies north and ſouth of each other, and has 18 fathoms water; within there are thirteen. The ground is very clean, and the port ſubject to be ruffled by no wind but the eaſt. Half a league within land there is a well of very brackiſh water.

On the 4th, from ſun-riſing till eleven o'clock, they had a ſtorm at north-weſt, and then it began to thunder very hard, and hailed with the biggeſt drops

Variation. the author ever ſaw: during theſe thunders, the wind ran through all the points of the compaſs, and at laſt ſettled north. This day Don Juan found the variation one degree and a quarter to the north-eaſt, and the port 22 deg. of north lat. by many obſervations. But he takes notice, that notwithſtanding theſe operations were performed on ſhore, and ſo great care was taken to fix the inſtrument, that it was never ſtirred after it was once placed, till the whole was over; yet that they muſt needs have erred ſomewhat, becauſe the intenſe heat of the ſun had cracked the ivory plate in the middle, and made a ſlit wide enough to thruſt in a piece of Portugueſe gold. The 6th, an hour before day, they left the port of Jidid; and proceeded all this day but about three leagues and a half. The 7th, in the morning, having a briſk wind, at north-weſt, they rowed along the ſhore about three leagues, and at eight o'clock faſtened themſelves to a rocky ſhoal, that lies before a long point of land: about noon they ſet ſail, but in great apprehenſion, by reaſon of the ſurpriſing number of ſhoals that appeared on both ſides of the ſhore, ſo that they were forced to take in their ſails, and make uſe of the oars again. At ſun-ſet they came to an anchor in a good haven, called Comol, 11 leagues from Ras al Jidid.

Two leagues beyond Ras al Jidid is a point of land, from which, to the long flat point abovementioned, are about four leagues north-weſt. Between theſe two points, there is a great and famous bay, in which, towards the north-weſt point, is a very deep and cloſe harbour, ſecure againſt all winds. This point is an iſland; and from hence, to another great point, at Comol is about five leagues, north weſt by weſt, making another great bay between them: at this point, which is low and flat, the great mountains running along this coaſt end.

Coaſt to Comol.

Comol port. Comol is 68 leagues beyond Swaken, in 29 deg. 30 min. north lat. This port ſtands in the end of this ſecond bay, very near the face of the north-weſt point; though ſmall, it is very ſecure, for the entrance is guarded with a dry ſhoal before it, that keeps out the ſea. The land ſurrounding it is flat and pleaſant, inhabited by Badwins, or Badonins, like (wild Arabs.) ——About three hours after midnight, leaving the port of Comol, they rowed along the coaſt a little while, and then hoiſted ſail, but an hour before day-light ſome foiſts ſtriking upon rocks and ſhoals, they lowered their ſails, and fell to their oars again till morning. The 8th, at day-break, they came into a great and fine bay, to which, towards the north and north-weſt ſide, they ſaw no end, or any point to bound it. And although they ſailed in open ſea, the ſhoals on every ſide were ſo numerous, that with tacking and wandering to find the way, they could make but little advantage of a briſk gales. About ſun-ſet they faſtened themſelves to the rocks of a great ſhelf, and there harboured. The 9th, being clear, they ſet ſail, and took harbour within another great dry ſhelf, extending north eaſt by eaſt, called in Arabic, Shaab al Yadayn, which ſignifies, The ſhelf of the Hands, becauſe it is ſhaped like two arms, wide open with their hands. It lies at the end of a great bay, far out to ſea. The port is on the ſide towards land, four leagues diſtant from Ras al Naſhef, eaſt ſouth-eaſt; and by the much winding of the ſhelf is ſhut up, and ſecured againſt all winds. From the point of the cape of the mount, to another point beyond it, where there are great furze buſhes, the coaſt runs north-weſt by north, the diſtance about three and a half, or four leagues, from this laſt point. The coaſts of the great bay wind and turn very much: and taking a large ſweep from another great cape, called Ras al Naſhef, or the Dry Cape. The iſland of Zemorjete, (which they ſaw from the ſhoal off to ſea) is diſtant from this point about eight leagues, towards the eaſt, and according to the Mooriſh pilots, is the firſt place from whence both coaſts may be ſeen, but that of Arabia is much the farther off. This iſland is very high and barren, with another very ſmall one cloſe to it.

Shaab al Yadayan.

Ras al Naſhef.

Zemorjete iſland.

On the 10th, the ſun being up, they ſet ſail, north north eaſt, the wind blew freſh, and the ſea appeared open and navigable, about half a league from the point, they thought they ſaw a ſhip under ſail, but making towards it, found it was a white rock, by which they were informed all mariners are deceived. Hence ſailing north by eaſt, at nine o'clock, they came up with an iſland called Cornaca, and paſſed between it and the land, which is about a league and a half diſtant. This iſland is ſmall and barren; it is about half a league in compaſs, and in ſhape reſembles a great lizard, with its legs ſprawling out, whence it is noted by navigators: it is diſtant from Zermorjete, about ſix leagues north-weſt by weſt. Half paſt ten o'clock they were up with a very long point of land, called Ras al Anf, that is the Cape of the Noſe. It hath no high land about it, but a vaſt plain, without tree or herb. In the very front of the point ſtood a great temple, without any other building near it. On every ſide of it is a very clear ſandy coaſt, in manner of a bay. Ras al Anf, is very famous among navigators, for being once paſt it, they reckon all their trouble and danger over. 1541

Cornaca iſland

Ras al Anf.

Proceeding along the coaſt, with a ſouth-eaſt wind, at noon, being about three leagues beyond the cape, Don Juan's pilot found the lat. 24. deg. 10 min. whence Ras al Anf, muſt lie in 24 deg. Half an hour before ſun-ſet, they paſſed by Shevarit, an iſland two miles from ſhore. It is a caliver ſhot in length, and in the middle appeared a large green buſh; on the eaſt ſide there is a great rock, like a little iſland, and about a mile farther, they came to an anchor among certain ſhelves, ſome of ſand, others rocks, in an harbour called in Arabic, Sial, one hundred and three leagues beyond Swaken. On theſe ſhelves, they ſaw a greater number of fowls than they had met with any where before in this ſea. From Baſal Naſpaf, till ſo far as the iſland Shevarit, is about 16 or 17 leagues. The coaſt at firſt winds very much inwards, and there thruſts out the very long point of ſand, called Ras al Anf, which point bears north eaſt and by north of the other.——About ſix leagues diſtant from Ras al Anf, the coaſt runs directly north-weſt, as far as Shevarit, the diſtance ten or 11 leagues. The country from Swaken to Ras al Anf, is inhabited by the Badwins beforementioned; ſo is the country from thence to Suez, (which belongs to Egypt.) Between the coaſt and Nile, Don Juan obſerves, that Pomponius Mala, and the reſt of the ancient geographers, call the former Ethiopians, and the latter, Arabs; except Ptolomy, who gives them the name of Egyptian Arabs.

Shevarit iſland

Sial port.

People of the coaſt.

On the 11th, leaving Sial, they rowed about four leagues north-weſt by north, and at nine o'clock entered a great bay, which is called Gadenauhi: the land over the ſea leaving the ſhape it had, of a wall or trench, becomes very mountainous, forming a double ridge of hills, ſurpriſingly cloſe. The port of Gadenauhi, is beyond Swaken, 170 leagues, and in lat. 24 deg. 40 min. Here, at one o'clock in the afternoon, it was low water; and full ſea an hour after the moon appeared above the horizon; thence it ebbed till an hour after ſhe had paſſed the meridian, and then began to flow again, till an hour after the planet was ſet, which made full ſea. The wind blowing from north-weſt, two or three hours after midnight, they departed; and in paſſing between the ſhoal, at the north-weſt point of the bay, and the iſland of Bahuto, they ſtruck upon the ſhoal, but got clear without damage, and hit upon the channel; rowing along the ſhore, againſt the wind, till day; and on the 12th, an hour after ſun-riſe, anchored in a ſmall but very ſafe port, called in Arabic, Sharm al Chiman, that is a Cliff, or Opening of the Mountain; it is a league and a half beyond Gadenauti, and 180 from Swaken, much like the harbour of Ras al Jidid.

Gadenhauhi port.

Bahuto iſland.

Sharm al Chiman

From Gadenauti, to a port that is called Shacara, (incompaſſed with a very red hill) the coaſt runs north-weſt by north, about 10 leagues; and from this

1541. red hill, to a point almoſt a league beyond Gualibo, there are about ſix leagues, north north-weſt. In theſe ſixteen leagues the coaſt is very free from ſhoals, (excepting one, a league beyond the red hill, and half a league from ſhore) and is full of many good ports: among them is Shawna, abovementioned, a very capacious and noted harbour, where, according to the report of the Moors and inhabitants, there ſtood formerly a famous city of the Gentiles. Along the coaſt run an infinite number of huge mountains, cloſe together, and double like the former: and beyond them, far within land, other loſty hills rear their heads. Among theſe which range the coaſt, are two more remarkable than any to be met with, here or elſewhere. One of them is very black, and looks as if it was ſinged; the other yellow; and between them are certain heaps of ſand. Beyond the black mountain, in a large plain, there are many very great and high trees, with ſpreading tops. They were the firſt which ſeemed the native ones and proper to the land: for thoſe before mentioned, a little beyond Maſſua, are the kind that grow in marſhes, and by the ſea and rivers. In like manner, the trees at ports Sharm al Cihiman, and Al Jidid, are wild, without either boughs or fruit; and the leaves ſeemed naked and dry. Theſe two mountains ſtand about two leagues before the port of Sharm al Cihiman.

Gualibo port. The port of Gualibo, which is 122 leagues beyond Swaken, reſembles much, both as to ſhape and entrance that of Sharm al Ciman: only, whereas the land about this latter, is mountainous, the country round Gualibo, is a vaſt plain.——The entry of this port is between certain rocks or ſhoals, whereon the ſea breaketh exceedingly, but the channel is deep and large. The 13th of April, after ſun-riſe, they rowed out of the port of Gualibo. The wind blew very ſtrong at north-weſt, and made the ſea ſwell much. At ten in the morning, they entered a port called Tunna, a league and a half beyond the other.

Tunna port. Tunna is a ſmall and foul harbour, in 25 degrees 30 minutes latitude, one hundred and thirty-two and a half leagues beyond Swaken, the entrance is between certain rocks, and within, the greateſt part of it is occupied with a ſhoal, and rocks, to which is owing the ſmallneſs of the port. On the north ſide, there is a point of land, which by its turning, makes a good harbour and road, againſt the north-weſt wind. The country about it is a very barren ſand. On the north-weſt ſide, towards the land, there are three peaked mounts of ſtone, made in Don Juan's opinion, to ſhew that there is an haven here.——An hour before ſun-ſet, they faſtened themſelves to a ſhoal a league beyond Tunna, from a point almoſt one league beyond Gualibo, a league and a half beyond this ſhoal, the coaſt bears north-north-weſt, the diſtance four leagues.——On the 14th, after they had rowed about five leagues beyond the ſhore, againſt both wind and ſea, which ſwelled much; at noon they entered a very good bay, and caſt anchor at the farther end, where it makes a good port, about 129 leagues beyond Swaken. The coaſt in theſe ſix leagues, bears north-weſt, and the land over it, is partly plain, and partly mountainous.——The 15th, having proceeded about ſeven leagues north north-weſt, an hour and a half after ſun-riſe, they came to anchor in the port of Al Coſſir.

Town of Al Coſſir. Al Coſſir from Swaken 136 leagues, and in the latitude of twenty-ſix degrees, fifteen minutes, as Don Juan found by obſervation. It was ſeated formerly two leagues higher on the coaſt; but for want of a port capable of the great reſort of ſhipping, it was removed higher. There are ſtill ſome remains of the antient town, which is called Old Al Coſſir. The new town is very ſmall. The houſes look like the yards cattle are kept in, although there is no kind of cattle in the place. They are built of ſtone and clay, or ſometimes only ſods, covered at the top with mats, or the like; more, as they ſaid, to keep off the ſun than the rain, which ſeldom falls. The port is the worſt on all the coaſt, and the only place that wanted fiſh, which every where elſe abounds. It is very large, and exceeding ſubject to eaſterly winds. The ſhips anchor between the land and ſome ſmall ſhoals, whereon the ſea breaks. Near the town are three wells of water, of which the people drink, though ſcarcely to be diſtinguiſhed from ſea-water. The place is quite encompaſſed with barren peaked mountains, ſcorched quite black with the ſun; which, together with the barrenneſs of the ſoil, makes a moſt uncomfortable proſpect; for there grows no manner of herb, graſs, buſh, or tree, in either the coaſt, the plains, or mountains; and whatever ground may lie between the hills and the town, is a barren ſand, intermixed with gravel.—The extraordinary barrenneſs of the place, made Don Juan curious to enquire of the more underſtanding Moors, how they came to pitch on ſuch a miſerable ſituation to inhabit. The reaſon, they ſaid, was becauſe it happened to be the neareſt port to the river Nile, fifteen or ſixteen days journey diſtant, and therefore moſt convenient for lodging the proviſions with which all the towns are furniſhed by their reſpective ſhips. Egypt they deſcribed as a plain, the moſt fruitful in the world, in cattle and all proviſions; and obſerved that theſe laſt were conveyed up the Nile to a place neareſt Al Coſſir, and from thence carried by land to this port; but they obſerved that the caravans were often attacked by the Bedouins, who ſometimes aſſaulted Al Coſſir itſelf, which circumſtance occaſioned the inhabitants, for their ſecurity, to conſtruct their houſes of ſtone and earth. It ſeemed that the name of Egypt was unknown to them; but all the country from Al Coſſir to Alexandria, was termed Al Rif, or Riſa.

Having ſtruck on a ſhoal on the 18th, getting clear of it on the 19th, they put into an iſland called Safanj-al-Bahar, * which ſtands thirteen leagues beyond Al Coſſir in latitude twenty ſeven degrees. It is about two leagues in length, and in breadth not a quarter of a league. The ſoil which is ſandy, produces neither trees nor water. On the north ſide of the iſland is one harbour, and another on the ſouth ſide; the former of which is reckoned ſecure againſt all weathers. The deepeſt part of the channel is towards land. There are ſome ſhoals above water in the mouth of the great port, which are not dangerous in the day time, and there is a rock in the opening of the ſmaller. There are a number of creeks, ports, and harbours along the coaſt. Safanj-al-Bahar.

On the 21ſt of this month, they came up with an iſle called Sheduam. This iſland is high and craggy, conſiſting of a hard rock. Its length is three leagues, and its breadth is about two; and is equally diſtant from the coaſts of Arabia and Egypt. There is no water, nor are there any trees to be found in this. Three ſmaller low iſlands, with ſhoals between them, were diſcovered to the north-weſt. Sheduam.

From hence the fleet ſailed along the land of Arabia Petræa, and came to Tor, at the diſtance of twelve leagues, which lies in latitude 28 degrees, 10 minutes, on a plain long ſtrand. At the diſtance of a cannon-ſhot from hence, they ſaw twelve palm-trees cloſe by the ſhore, and from thence diſcovered a plain extending to the foot of ſome mountains, which beginning at the gulph of Ormuz, ran along the coaſt ſkirting the ſea to this place, and then turned off to the north-eaſt, dividing Arabia Petræa, from Arabia Felix. Several Chriſtians led a devout life on the tops of theſe hills. A mountain appeared gradually riſing a little beyond the town, projecting a point into the ſea, and appearing at firſt ſight like three ſeparate mountains.

As to the town, it was ſmall but pleaſant, and inhabited by Chriſtians, who ſpoke the Arabic language, having a monaſtery of Greek Friars, where there was kept an image of St. Catharine of

* Signifying a ſea-ſponge.

Mount Sinai. A long rocky point ran parallel to the shore of the town, forming a safe harbour between it and the land. The breadth of the sea at Tor, Don Juan computed to be about three leagues. It is worth observing, that though Don Juan seems to have been very studious in examining situations, he appears to have made an error in affirming here, that this place must be the antient Elanatic, and adding, that there is no such gulph on the coast of Arabia; notwithstanding much plausible reasoning on the matter, not only the Arabs, but the more modern voyagers have confirmed what he calls a mistake. His wrong idea of this circumstance probably arose from his not having sufficiently examined the coast on the side of Arabia.—According to the account of the friars above-mentioned, Mount Sinai was but thirteen small days journeys distant, making eighteen leagues within land. They were the persons who informed him that many hermits inhabited the boundary mountains, and also that there were several Christian towers on the plains. It seems these good fathers being fearful of losing the body of St. Catharine, feigned a story that it was removed from them, lest the Portuguese should take it away by force. At this place they were also acquainted that none were suffered to enter Suez, except those appointed by the governor of Cairo. ——

The fleet departed from Tor on the morning of the 22d of April, and on the 24th, were in the latitude of twenty-nine degrees and seventeen minutes. On the 26th, at eleven o'clock, they were close in with the land. Then rowing a little along the shore, they cast anchor; but two hours before sun-set, they weighed again, and still rowed along the coast. Having proceeded little more than four miles before the sun had set, they put in behind a point of Arabia, (where there was good shelter) short of Suez about three leagues, and about half a league within land, found what was called the Fountain of Moses, the water of which, was very agreeable. When they had cast anchor, they went on shore, and saw the end of the Red-sea, and the masts of the Turkish ships; and the wind blowing hard at north, they lay at anchor till it was day.

The wind blowing hard at north-west, on the 27th, they departed at ten o'clock from the point, rowing along the coast at the distance of about a league from Suez. Don Juan went before to view the situation of the town, and the intended place of landing. They arrived at three in the afternoon, and saw many troops of horse in the field, and two large bodies of soldiers in the town, who shot at them several times from a block-house. After this they passed on to the bay on the west side of the town, and came to an anchor near the shore, in five fathoms water, where there was a very good harbour. Besides the little castle, there were two high and antient towers, supposed to be the reliques of the City of Heroes, which formerly stood here, and which Strabo says, was by some called Arsince. But on the point of land where the creek stood, they saw a great fortification of more modern date, which defended the mouth of the river, and commanded the coast by the stern of the galleys. To prevent any attempt to land in that place, there was likewise a trench, with a ditch between the galleys and the strand, so that the place seemed to be equally strong by nature and by art, and Don Juan could observe no place which was not sufficiently secured by the enemy, except behind a hill on the west side, where there might be a chance of gaining the town, by means of the eminence, without being exposed to the fire of their artillery; but the coast along was there so full of shoals, and the bottom in general consisted of a soft clay and sticky sand, circumstances very unfavourable to the landing of the troops. —— 1541

All these things being considered, nothing was done to answer the purpose of the voyage, and the Portuguese returned disappointed. *

Suez described

Suez, which as we have just observed, is supposed to occupy the same spot, once famous for the City of Heroes, lies in latitude 29 degrees 45 minutes north, being the neareſt port to Cairo in this sea. †

Sesostris king of Egypt, and Darius king of Persia, undertook to open a trench or canal from hence to the Nile, for the purpose of joining the Arabic Gulph to the Mediterranean sea; but both left the work unfinished, as some report, because they looked upon the latter to be higher, in which case, it was thought inundations would ensue. Ptolemy took up the idea, and absolutely cut a sluice of an hundred feet in breadth, and thirty in depth; but desisted for a similar reason.

When the fleet appeared before Suez, they found the place but small, and they observed that it owed its chief consequence to the Turkish army's lying there. The city stands on a long and narrow point of land, the sea terminating in two bays divided by it. ——

Portuguese fleet departs.

The expedition having come to nothing, the Portuguese fleet left Suez on the morning of the 28th of April, in order to return towards Massua, and, having run about twenty leagues, were about a league short of a sharp and red peak, which runs over the sea, at sun-set. They coasted along Arabia at night, under their foresails, the wind blowing hard at north-west, and at length came to an anchor near the shore in five fathoms water. They set sail the next day, and came to an anchor at Tor, at nine o'clock; but soon after weighed again, and proceeded to a place called the Watering Place of Solyman, where they took in water, (which however proved brackish) digging it out of pits in the sand, about a stone's throw from the sea.—On the 30th, they departed, and came to the first of three islands lying to the north-west of Sheduam.

Thus proceeding, on the 4th of May, they came to anchor in a port two leagues to the south-east of Shakara, where they lay all night, the wind being at north-west.

Bahulel Shame

The port of *Bahulel Shame*, ‡ furnishes a safe harbour in deep water. It is said to take its name from Bahulel, an eminent Bedouin, who used to sell cattle here to voyagers, on which account it was called Bahulel's Land. They found a handsome tomb here, with a sort of chapel built over it, where hung a silken ensign, and many arrows and trophies. There were also sweet waters and perfumes in the chapels, and they were informed, that Mahometan pardons were dispensed to such good Mussulmen as visited this house. However the Portuguese reverenced it so little, that they burned it to the ground.—

Bedouins or roving Arabs.

The Bedouins (or Badwis) are wild men among whom law and order are unknown. Certain tribes of them occupy the mountains and sea coasts from Melinda and Magadoxa in Africa, round by Cape Gardafu and the Abyssinian coast to Suez, and indeed along the whole coast of Arabia, as far as Ormuz. They are above all others given to stealth and rapine, and make depredations upon all they meet with indiscrimately, not sparing their own countrymen who live in cities. Their food is simple, their habit mean; but they are extremely agile, and fight well both on foot and on horseback with their darts. They have no king to rule the whole community, but each tribe has its chief, who leads them to war, and determines their differences. The greater part of them, like the original

* It appears however, that they made an attempt, but the enemies shot poured thick from the town, 2000 Turkish horse broke out from an ambush, and though the Christians killed many with their cannon, the enterprise was defeated.

† This is said to be the place whither Cleopatra caused ships to be carried by land from the Nile, (after the total defeat of Anthony by Octavius Cæsar) in order to fly to India.

‡ Shame signifies land in the Arabic language.

‖ These people are concluded to be the Troglodites mentioned by Ptolemy and other authors.

1541 original race of Iſhmael,* § dwell in tents, but ſome chuſe caves for their habitation. Their complexion is black, and they ſpeak the Arabic language.

Proceeding on their way towards Maſſua, they ſtruck on a ſhoal at about four leagues diſtance from that iſland, but having eſcaped that danger, they got ſafe into the port, about nine o'clock, where they made a great rejoicing through the whole fleet. From this time to the 25th of June, the winds continually blew at north-north-eaſt, and north-north-weſt, but from that time to the 7th of July, they came from the eaſt, eaſt-ſouth-eaſt and ſouth-eaſt, often with great violence. On the laſt day of June, there was a ſtorm ſo violent that the galleys drove, and were in danger of running a-ground. Rain and thunder accompanied this ſtorm, and the maſt of one of the veſſels attracting the lightning, was ſplit by it, in the midſt of the horrors of the tempeſt.

After having experienced more ſtormy weather, they departed from Maſſua on the 9th of July, and by day-break on the 11th, they were within three leagues of the port of Dallakha. Thus they held on their courſe, and came to Anchedivia on the 9th of Auguſt, from whence they embarked on the 21ſt, and proceeded directly to Goa, where they arrived in ſafety, after having completed a voyage, in the courſe of which they had made many curious remarks, but performed no military exploits worthy of notice.—

Red Sea.

The Red Sea, is called al Colzum, and the coaſts of it are accurately deſcribed by Aboulfaid Iſhmael, the celebrated prince of Hama, who died in the year 1332. He begins his deſcriptions at al Colzum, a ſmall city at the north end of this ſea, which from thence runs ſouthward, inclining a little to the eaſt, as far as al Caſir, (or al Coſſir.)——Hence it continues its courſe ſouth, bending ſomewhat weſtward. And from hence afterwards it paſſes directly ſouth to Swaken, a ſmall city of al Sudan, or the Land of the Blacks: thence proceeding ſouth, it encompaſſeth the iſland Dallakha, not far from the weſtern ſhore; after which, advancing on the ſame direction, it waſhes the ſhore of Ethiopa, as far as the Cape (mountain) al Mundab, at the mouth of the Red Sea, which here terminates, the Indian ſea flowing into it. The mountain al Mandab, and deſerts of Aden, approach very near, being ſeparated only by ſo narrow a ſtreight that two people may ſee each other acroſs it. The ſtreights generally called Babel Mandel lies on this ſide of Aden, a day and night's ſail towards the north weſt. The mountains of al Mandab, are in the country of the Blacks, and may be ſeen from the mountains of Aden, at a great diſtance.

Streights of Babel Mandel.

Eaſtern coaſt.

The coaſt of the Red Sea, runs northward from Aden; and thence it proceeds round the coaſt of Generen, till it comes to the borders, from thence it runs north to Joddah, and declines a little to the weſt, as far as al Jahafeh, a nation of the people of Egypt. Thence advancing north, and bending a ſmall matter to the weſt, it waſhes the coaſt of Yambaah.——Here it turns off northward; and having paſſed Madyan, comes to Aylah, then deſcends ſouthward to Mount Tor, which thruſting forwards, ſeparates two arms of the ſea. Whence returning to the north, it paſſes on to al Colzum, (where the deſcription began) which is ſituated to the weſt of Aylah, and in almoſt the ſame latitude. At Colzum, and Aylah, are ſeated on two arms or tongues of the ſea, between which the land interpoſes, running to the ſouth, which land is Mount Tor, almoſt in the ſame latitude with Aylah. This latter ſtands at the end of the eaſtern tongue, and Al Colzum at the end of the weſtern; ſo that Aylah lies more to the eaſt, and Tor more to the ſouth, than al Colzum. Aylah is ſituated on the fartheſt part of the promontory, which extends into the ſea between Tor and the coaſt of Egypt, the ſea paſſes, namely, that tongue of the ſea on the outermoſt part (or ſhore) of which al Colzum ſtands between Tor (or al Tour) and Hejaz, the ſea runs; that is, the tongue of water, on whoſe utmoſt part or ſhore, Aylah is ſituate. From Mount Tor, to either of the oppoſite coaſts, the diſtance is ſmall by ſea; but longer about the deſert, becauſe thoſe who travel from Tor to Egypt, are under a neceſſity of going round by al Colzum, and thoſe who would go from thence to al Hejaz, muſt paſs without Aylah. Tor, on the north, joins to the continent; but its other three ſides are waſhed by the ſea. The ſea of al Colzum, after paſſing a little towards the ſouth-eaſt, begins to widen on either ſide, till at length it becomes 70 miles broad.

Don Juan de Caſtro, (whoſe voyage is given above) was preſent at the ſecond ſiege of Diu, when he performed the part of a valiant ſoldier.

Chojah Zaffar, who was ſo active in the former ſiege, from that time forward, kept a fair correſpondence with the Portugueſe: yet, underhand, perſuaded the king of Cambaya, whoſe favourite he now was, to endeavour to ſhake off the yoke of the fort of Diu. To effect this, he drew together a great number of men; but deſirous rather to ſucceed by policy, than force, he agreed with an infamous Portugueſe, called Buy Freyre, to poiſon the ciſtern, fire the magazine, and, upon a ſign given, admit him into the fort. The treachery however was diſcovered by an Ethiopian, a Turk, and a woman ſlave. Chojah Zaffar, aſtoniſhed to ſee his deſign detected, began to compliment Don Juan Maſcarenhas, commander of the fort; and becauſe they obſtructed building that wall between the fort and the city, which Don Garcia de Norouna had ſo weakly allowed, and Emanuel de Souſa had courageouſly beat down, he aſſigned that as the reaſon for breaking the peace; making uſe of diſſimulation, till he had gathered a great power. Maſcarenhas, perceiving the danger that threatened him, prepared to meet it, and gave advice thereof to the governor Don Juan de Caſtro, and neighbouring commanders. He appointed every man his poſt, and placed an officer with 30 men in each of the four baſtions; his lieutenant over the gate with 20, and another with a like number, in a ſmall work; reſerving 50 for himſelf, to be wherever the greateſt danger called. This was his whole force, and this their diſpoſition, when Chojah Zaffar came on with all his power, reſolving to attack the baſtion of the ſea, with three caſtles, built upon a ſhip of a prodigious bigneſs, well ſtored with cannon to batter the wall. Within the caſtles weree 200 Turks, (out of 500 ſent from Mocha by the king of Zibid) who were to diſtract the defendants, by pouring in continually all ſorts of fire-works. But the Portugueſe commander, having notice of this deſign, ſent an officer to burn that ſhip. He took 20 men in two veſſels, and tho' unexpectedly diſcovered, (for he ſet out by night) yet did not deſiſt, but immediately went on and ſet fire to it; then returning, ſaw a great part of it fly into the air, with moſt of the Turks, the remainder caſting ſuch a flame, as at a diſtance, diſcovered the enemy's army running in battalions to quench it. He perceiving them in cluſters, let fly his cannon and killed many, having had only ſeven men wounded in the action. After this he went on to the mouth of the river, and took from the beſiegers ſome veſſels of proviſions, with which he returned to the fort, much admired of all. Chojah Zaffar now began to build the wall that had been before beat down; and

Zaffar's deceit.

He attacks the caſtle.

* Iſhmael is acknowledged to be the great father of the Arabians, and the Turks are ſtill willing to own him.—Hence the name Iſlim, by a prefix, Miſlim, corruptly *Muſſulmen*.

† There have been various reaſons aſſigned for this appellation; among theſe Don Juan de Caſtro attributes it to the redneſs of the ſea in certain parts, where there was red coral at the bottom, and a quantity of red weeds floating on the ſurface.

and though the cannon from the fortreſs killed many of the workmen, yet it was brought to ſuch perfection, that he planted thereon ſixty great cannon, beſides many ſmall; there was one of ſuch extraordinary bigneſs, that it ſhook the whole iſland, and made pieces of the fort fly, being managed by an expert French renegado. At this time arrived Don Ferdinand de Caſtro, ſon to the governor, with ſuccours: Maſcarenhas wanted ſome intelligence from the enemy's camp, which Diego Datnaya Coutinno, a gentleman of note, and a man of great ſtrength, coming to the knowledge of, at night put a helmet on his head, with a ſword by his ſide, and taking a ſpear in his hand, let himſelf down the wall, thus lying cloſe at ſome diſtance from the fort, he diſcovered two Moors, who being come up to him, he killed one of them with the ſpear, and taking up the other in his arms, ran with him to the gate of the fort, and calling, threw him in, to the great admiration of thoſe who beheld it: he had borrowed the helmet, and promiſed to return it, or die. In this ſcuffle it fell off, and he miſſed it not till the owner aſked for it; Coutinno ſaid nothing, but letting himſelf off the wall a ſecond time, went to look for the helmet, found, and reſtored it to the right owner.—Maſcarenhas obſerving an extraordinary motion in the enemy's army, and being deſirous to know the cauſe of it; ſix Portugueſe ſallied out at night, and fell among ſixty Moors who were all aſleep, whereof they killed ſome, but the noiſe waking the reſt, as alſo others not far off, they were forced to retire with the loſs of two. The four brought a priſoner with them, who informed the commander, that the king of Cambaya was come from Champanel with 10,000 horſe, to ſee (as Chojah Zaffar ſaid) that place taken. This action ſo incenſed them, that they renewed the fury of their batteries, and did much harm. However, the renegado Frenchman was ſtruck dead by a chance dart; and the gunner who ſucceeded him, being ignorant, did more harm to his own party, than to the Portugueſe. All the neighbourhood reſounded with the noiſe of the cannon, and cries of dying men, when a bullet from the fort, falling in the king's tent, ſprinkled him with the blood of one of his favourites, who was beaten to pieces, which ſo terrified him, that he inſtantly fled, leaving the command of the horſe to Juzar Chan, a valiant Abyſſinian. The ſiege being vigorouſly puſhed, there was great ſlaughter and deſtruction on both ſides; which was the more viſible and prejudicial in the fort, by reaſon of its little compaſs, and the ſmall number of men. Maſcarenhas appeared wherever there was danger, as hoping to gain no leſs honour than Antonio de Silveyra had done there a few years before. He was no leſs fortunate in courageous women, who encouraged the men, aſſiſted and relieved them at the work. One of them hearing, that the enemy were got into a houſe, ran with a ſpear, and fought till Maſcarenhas came, and put them all to the ſword.—Chojah Zaffar omitted nothing that could be deviſed, to fill the ditches, and lay open the fort; while the beſieged repaired the breaches. The prime gentry did the duties of private ſoldiers and maſons: the walls and baſtions were ruined at night, and reſtored by morning.—Zaffar, aſtoniſhed to ſee all he deſtroyed ſo ſuddenly made up again, coming on in a rage, with a freſh ſupply of men, a ball from a cannon took off his head and right hand, whereon he leaned it. His ſon, Rumi Chan, ſucceeded him in his command; who, (while Maſcarenhas was ſending freſh advice to the governors at Goa, and the captains of the neighbouring places, to haſten ſuccours) with Juzar Chan, gave a general aſſault, attacking the baſtions of St. John, and St. Thomas, where they met with a moſt vigorous reſiſtance, and many were killed: valour was forced to give way to numbers, and the enemy mounted St. Thomas's baſtion: but deſpair adminiſtered fury, the few Portugueſe fuſhed upon the multitude, and making a wonderful ſlaughter, threw headlong from the wall, ſuch as had eſcaped the ſword.—Rumi Chan, having ſpent this night in prayers and proceſſions, in the morning renewed the aſſault, but after mounting the two baſtions; was forced to retire with the loſs of near 2000 men, and among them Juzar Chan, general of the horſe, whom an uncle of the ſame name ſucceeded. In this action ſeven Portugueſe were ſlain; ſeveral other aſſaults were given with the like ſucceſs: in one of theſe, the fire was ſo cloſe and furious, that ſeveral who were clad in cotton, which ſoon took flame, ran and dipt themſelves in the water, and ſo returned to their poſts: thoſe who wore ſkins eſcaped better. Maſcarenhas taking notice of this, cauſed ſome gilt leather, wherewith his rooms were hung, to be made into coats for the ſoldiers. At one time he and Don Pedro de Almeyda, with 100 men, ſallied to deſtroy a mount raiſed to overlook the fort, killing 300 Moors. Martin Botello, another time, went out with ten men, to take ſomebody who might give intelligence, and falling upon eighteen, put them to flight, except a bold Nubian, who ſtanding all the eleven, wreſtled with Botello, and he finding it hard to overcome him whilſt he could touch the ground with his feet, ran with him in his arms to the fort.—Mean while, the defendants were equally ſpent with labour, and with hunger; ſo that they were glad to feed upon nauſeous vermin; a crow taken upon the dead bodies, was a dainty for the ſick; and ſold for five crowns; the ammunition was likewiſe almoſt ſpent; and now the enemy gave a hot aſſault with freſh men, 10,000 having newly joined them: they entered St. John's baſtion, and retired; ſcarcely had they left it, when it blew up, being undermined; and in it ſeventy Portugueſe, ten of whom came down alive; Diego de Sotomayer fell into the fort with a ſpear in his hand; a ſoldier in the ſame manner dropped among the enemies, and was killed by them. Maſcarenhas foreſeeing the danger, had ordered them to quit the baſtion; but one Reynoſo profeſſed, if they did, he would accuſe them of cowardice:—13,000 of the enemy having attacked the breach they had made, were withſtood by five ſoldiers only, till Maſcarenhas came with fifteen more: the women aſſiſted the men, and ran even to brave death. The prieſt, who was returned from carrying the advice to the neighbouring places, appeared, encouraging all, with a crucifix lifted on high. The actions done here were aſtoniſhing; but it growing dark, the enemy retired, having loſt 300 men, and Maſcarenhas ſpent all the night in repairing the damages. The enemy daily renewed their attacks with no better fortune, and held out by means of their vaſt numbers: Rumi Chan pierced the very rocks that ſtood in his way, but met not with ſucceſs as he had done the time before; for Maſcarenhas perceiving his work, countermined it, and killed many of them. Don Alvaro de Caſtro, the governor's ſon, who was ſent with ſupplies, having met with incredible ſtorms, at length arrived at Baſſaim: Antonio Moniz Barretto got firſt into Diu, with eight gentlemen, who, though ſo few, were no ſmall comfort to the beſieged; one of theſe, called Michael Darmida, a man of prodigious ſtrength, being refuſed admittance into the boat, leaped into the water with his muſquet in his mouth, and ſwimming after it, Barretto was obliged to take him up: Louis de Melo, and Mendoza, came alſo with nine men: then Don George and Don Duart de Meneſes, with ſeventeen; after them, Don Antonio de Atayde, and Franciſco Guillerme, with fifty each; and laſtly, Ruy Freyne, factor of Chaul, with twenty-four. All theſe fell upon the enemy, then poſſeſſed of ſome of the works, and among them the baſtion of St. Jago: the diſpute was hot; yet the enemy ſet up their colours on the walls. Antonio Barretto made good his poſt with only two ſoldiers, and was going to quench his flames in the water; but one of the two, who was in the ſame condition, detained him; and both did things worthy admiration. Antonio Correa ſallied out with 20 more to diſcover the enemy, and ſaw twelve Moors ſitting about a fire. He exhorted his men to fall upon them, but they fled.

A general aſſault.

Juzar Chan ſlain.

The breach attacked.

Several aſſaults.

1545. However, going forward, in hopes to take one who might give intelligence, he fell on, and behaved himself bravely, but was taken and carried to Rumi Chan, who examined him about the posture the fort was in, which though then very miserable, he represented so powerfully, as drove that general into despair; and moved him to cause the unfortunate prisoner to be dragged through the streets; then his head being cut off, it was set upon a pole next day in sight of the fort. The enemy had, by this time, lost 5000 men, and the besieged 200; so that the latter had not so many more left; and what was worse, half of them were not able to do duty, when Don Alvaro arrived with the supplies, which consisted of 400 men, and a sufficient quantity of ammunition, having by the way taken a ship of Cambaya richly laden. The joy of this relief was soon allayed; for the soldiers of this reinforcement, fearing the mines, proposed to meet the enemy in the open field. Mascarenhas, prudently refusing to comply with their motion, they broke out into open mutiny, in contempt of all military discipline. The commander seeing himself in danger of perishing in the fort, by his own men, sallied with almost 500 in three bodies. Presently they gained the enemy's advanced post, forcing them to retire to their works; but when they came there, those who had so insolently forced their commander to this extravagancy, stood at the foot of the trenches, while others mounted who had been less forward with their tongues. Mascarenhas seeing them in this posture upbraided their behaviour in such terms, that, roused by shame, they took heart and went up. The whole army now came down upon the Portuguese, who having done wonders, were forced to retire in such disorder, that the enemy must certainly have possessed themselves of the fort, had not Mascarenhas, by his prudence and courage, prevented Mojato Chan, who with 5000 men attempted to enter, and was valiantly opposed by Lewis de Sousa in St. Thomas's bulwark. Sixty men were lost in this action, and Don Fernando de Castro mortally wounded in the head. The Moors had taken the cannon of the Bastion Sant Jago, when Vasquez de Cunna, and Lewis de Almeyda, brought a fresh relief. The latter immediately went out with three caravals, and quickly returned with two great ships of Mocha, and some other vessels, whose loading was worth 50,000 ducats. Many Moors were hung at the yard-arms, whose heads were then cut off, as was the captain's, who was a janissary, and offered 3000 ducats for his ransom. The siege had now lasted eight months; when in the beginning of November the governor Don Juan de Castro, had gotten together a great fleet of all sorts of vessels for the relief of Diu. Every one admired the constancy wherewith he received the news of the death of his son Fernando: for though he highly resented it, he dissembled his grief; and dressing himself gayer than ordinary, went first in procession, to give God thanks that Diu was still in the possession of the Portuguese, and then to a public feast, which was the imitation of a fight, wherein they use canes instead of lances. The fleet consisted of above 90 sail, besides three of the ships that then came from Portugal; and several gentlemen that came in them, went in other vessels.——The governor being come to Basaim, waited the coming up of the vessels that were scattered; and in the mean while sent Don Emanuel de Lima to scour the coast. Near Daman, he took several ships, and cutting the Moors in pieces, threw them into the mouth of the river, that the tide carrying them up, they might strike a terror in all that coast. Entering the river of Surat, after a vigorous resistance made, he destroyed all that belonged to the town of the Ethiopians. The same was done at the city Ansoto, not far distant, without sparing either sex or beauty: the finest women of the Bramins and Baneans, being slaughtered in that and the neighbouring towns. When the fleet appeared in the sea of Diu; the enemy stood amazed, though they had just then received a supply of 5000 fresh men sent by the king. The governor went privately into the fort, and afterwards landed his men. It having been resolved in council to attack the enemy, they marched in the following order: Don Juan Mascarenhas, commander of the fort, led the van, consisting of 500 men; Don Alvaro led as many; Don Emanuel de Lima the like number; the governor headed the rest, which were 1000, and a body of Indians. Among the rest were some Portuguese women in men's cloaths, to assist the wounded. In the fort was left the lieutenant with 300 men. The governor appointed rewards for those who first mounted the enemy's works. At break of day, on the 11th of November; this small army marched out to attack the numerous forces of the enemy, who were well intrenched, and prepared with cannon. They gave the onset with much bravery, and some fell. At length the Portuguese mounted the works. Such was each man's eagerness to be first, that it could not be known who really was so. Cosme Paivd having lost a leg, fought on his knees, till he was killed. Another cut down one Turk, and stooping to make an end of him, was slain by his fellow. Francisco de Azevedo was killed after having made a great slaughter. Mascarenhas, and Don Alvaro de Castro, having taken a bulwark, made them room in the field. The governor came up, and inflamed the fight. He ordered his ensign to fix the colours on the enemy's works. Twice was the ensign thrown down, and twice he remounted. The men, encouraged by the governor's presence, pressed forward, and the enemy gave way. The Portuguese entered their works pell-mell with them, and Rumi Chan came on with the whole body of his army; but, after a hot dispute, retired, leaving his adversaries masters of his works. He went to join Juzar Chan, who on the other side was worsted by Mascarenhas. The governor marched out of the works to meet them, giving the van to his son Don Alvaro. The Portuguese were much distressed, when Friar Antonio del Cazel put himself before them with a crucifix on the point of a lance; on which they took courage, and covering the field with dead and wounded men, put Rumi Chan to flight. He rallying again in his turn, forced the Portuguese to retire in great confusion; but the governor renewed the fight, and restored good order. At this time a stone broke an arm of the crucifix, and the priest calling to the men to revenge the sacrilege, they fell on with such fury, that drove the enemy to the city.——The first who entered the city with them, was Don Mascarenhas, and after him came Don Alvaro, and Don Emanuel de Lima, and the governor, all several ways, making the streets and houses run with blood. The women escaped not the fate of the men, and children were slain at their mother's breasts. The first part of the booty was precious stones, pearls, gold and silver: other things, though of value, were neglected. Rumi Chan, and his general officers, rallying their men, appeared again in the field with 8000 men. The governor and his son, and Don Juan Mascarenhas encompassed them. The fight was bloody: in the heat of it, Gabriel Teyxeira, took the standard of Cambaya (after killing the bearer) and dragged it about the field, proclaiming victory; George Nunez, from among the dead, brought out Rumi Chan's head, and presented it to the governor. Others took Juzar Chan, who was wounded. The Portuguese were left absolute masters of the field, having lost 100 men; of the enemy 5000 were slain, and among them Azede Chan, and some other men of note. Free plun-

1545. However, going forward, in hopes to take one who might give intelligence, he fell on, and behaved himself bravely; but was taken and carried to Rumi Chan, who examined him about the posture the fort was in, which though then very miserable, he represented so powerfully, as drove that general into despair; and moved him to cause the unfortunate prisoner to be dragged through the streets; then his head being cut off, it was set upon a pole next day in sight of the fort. The enemy had, by this time, lost 3000 men, and the besieged 200; so that the latter had not so many more left; and what was worse, half of them were not able to do duty, when Don Alvaro arrived with the supplies, which consisted of 400 men, and a sufficient quantity of ammunition, having by the way taken a ship of Cambaya richly laden. The joy of this relief was soon allayed; for the soldiers of this reinforcement, fearing the mines, proposed to meet the enemy in the open field. Mascarenhas, prudently refusing to comply with their motion, they broke out into open mutiny, in contempt of all military discipline. The commander seeing himself in danger of perishing in the fort, by his own men, sallied with almost 500 in three bodies. Presently they gained the enemy's advanced post, forcing them to retire to their works; but when they came there, those who had so insolently forced their commander to this extravagancy, stood at the foot of the trenches, while others mounted who had been less forward with their tongues. Mascarenhas seeing them in this posture upbraided their behaviour in such terms, that, roused by shame, they took heart and went up. The whole army now came down upon the Portuguese, who having done wonders, were forced to retire in such disorder, that the enemy must certainly have possessed themselves of the fort, had not Mascarenhas, by his prudence and courage, prevented Mojate Chan, who with 5000 men attempted to enter, and was valiantly opposed by Lewis de Sousa in St. Thomas's bulwark. Sixty men were lost in this action, and Don Fernando de Castro mortally wounded in the head. The Moors had taken the cannon of the Bastion Sant Jago, when Vasquez de Cunna, and Lewis de Almeyda, brought a fresh relief. The latter immediately went out with three caravals, and quickly returned with two great ships of Mocha, and some other vessels, whose loading was worth 50,000 ducats. Many Moors were hung at the yard-arms, whose heads were then cut off, as was the captain's, who was a janissary, and offered 3000 ducats for his ransom. The siege had now lasted eight months; when in the beginning of November the governor Don Juan de Castro, had gotten together a great fleet of all sorts of vessels for the relief of Diu. Every one admired the constancy wherewith he received the news of the death of his son Fernando: for though he highly resented it, he dissembled his grief; and dressing himself gayer than ordinary, went first in procession, to give God thanks that Diu was still in the possession of the Portuguese, and then to a public feast, which was the imitation of a fight, wherein they use canes instead of lances. The fleet consisted of above 90 sail, besides three of the ships that then came from Portugal; and several gentlemen that came in them, went in other vessels.——The governor being come to Bassaim, waited the coming up of the vessels that were scattered; and in the mean while sent Don Emanuel de Lima to scour the coast. Near Daman, he took several ships, and cutting the Moors in pieces, threw them into the mouth of the river, that the tide carrying them up, they might strike a terror in all that coast. Entering the river of Surat, after a vigorous resistance made, he destroyed all that belonged to the town of the Ethiopians. The same was done at the city Ansoto, not far distant, without sparing either sex or beauty: the finest women of the Bramins and Baneans, being slaughtered in that and the neighbouring towns. When the fleet appeared in the sea of Diu, the enemy stood amazed, though they had just then received a supply of 5000 fresh men sent by the king. The governor went privately into the fort, and afterwards landed his men. It having been resolved in council to attack the enemy, they marched in the following order: Don Juan Mascarenhas, commander of the fort, led the van, consisting of 500 men; Don Alvaro led as many; Don Emanuel de Lima the like number; the governor headed the rest, which were 1000, and a body of Indians. A method whereby the MEN of GUINEA *oblige their Wives to purge themselves from the accusation of* ADULTERY

der was allowed; ſome were inriched, many got much, and all were ſatisfied, there were taken many colours, forty pieces of cannon of an extraordinary bigneſs, which with the leſſer ſort, made up two hundred, and a vaſt quantity of ammunition:—Many particularly ſignalized themſelves in the action, and the governor acted the part of a ſoldier, as well as the general. Don Juan Maſcarenhas, after a ſiege of eight months, did more than could be imagined; Don Alvaro de Caſtro, behaved like his father; the Enſign Duarte Barbudo, being ſeveral times thrown down, as often mounted the works; Friar Anthony employed his crucifix to very good purpoſe. The king cauſed twenty-eight Portugueſe he had in cuſtody, to be torn in pieces in his preſence, in revenge for his loſs. Whilſt the governor was employed in repairing the damage received. Don Emanuel de Lima, in the beginning of the year 1546, by his order, ſcoured the coaſt of Cambaya with thirty ſhips, demoliſhing all the towns along the ſhore. The city Gogo, one of the chief of that kingdom, was taken, plundered, and burnt, without any reſiſtance; the inhabitants flying to the mountains, where being purſued, they were found at night, about a league off aſleep, and all put to the ſword. All the cattle in the fields, were either killed or ham-ſtrung, and the city Gandar, and ſeveral other towns, ſuffered the ſame fate. And thus the Portugueſe ſullied their victories with thoſe cruelties that add to the horrors of war.——The joy at Goa was great on account of theſe tidings ſent by Diego Rodriguez de Azevedo, by whom the governor deſired the city to lend him 20,000 pardas's for the uſe of the army, ſending a lock of his whiſkers in pawn for the money. The city returned the pledge with reſpect, and remitted him more money than he demanded. The women, to expreſs their gratitude, ſent their pendants, necklaces, bracelets, and other jewels; but all was punctually reſtored by the governor, as it was ſent, having been ſupplied the day before, by a rich ſhip of Cambaya, taken by Antonio Moniz Barreto, on the coaſt of Mangalor. Afterwards the fort was repaired, and put into a better condition than it was before the ſiege: 500 men were left in it, and Don George de Meneſes, with ſix ſhips upon the coaſt. The city likewiſe became better inhabited, through the good uſage of the governor to the Moors. After which, ſailing for Goa, he arrived there the 11th of April, where he was received with loud acclamations, and a ſplendid triumph prepared by the city, in imitation of thoſe of Rome. The gates and ſtreets were hung with ſilk, the windows thronged with fine women, all places reſounded with muſic and noiſe of cannon; and the ſea was covered with veſſels richly adorned. The governor entered under a rich canopy, where taking off his cap, they put on his head a crown of laurel, and a branch of it in his hand; Friar Antony went before him with his crucifix; as he carried it in the fight; and next to him the royal ſtandard; then followed Juzar Chan, with his eyes fixed on the ground, perhaps that he might not ſee his prince's colours dragged and others flying, beſides the mortifying ſight of 600 priſoners in chains. In the front, the cannon, and other ſorts of arms were carried in on proper carriages.——The governor walked upon leaves of gold and ſilver, and rich ſilks. The ladies from the windows, ſprinkled him with ſweet water, and threw flowers on him. * The news of the victory at Diu was brought to Liſbon the ſame year: when the king having reſolved to honour Don Juan de Caſtro with unuſual favours, continued the government to him, with the title of vice-roy. He ſent him alſo a preſent in money; and made his ſon Don Alvaro, admiral of the Indian ſeas: but Don Juan did not live to enjoy that honour. When he ſaw that there were no hopes of life, he ſent for the council, which he had appointed to act in his ſtead, and told them "that he had nothing; and deſired that they would order ſomething out of the king's revenue, that he might not die for want;" then a maſs book being brought, he laid his hand upon it, and ſwore, "That he had no way made uſe of the king's or any other man's money, nor had driven any trade to increaſe his own ſtock;" and deſired that this act of his might be recorded. After his death there were found in his private cabinet, a bloody diſcipline, and three rials, which was all his treaſure. In 1576, his body was brought to Portugal, and laid in the church of the Dominicans, on a hill not far from Liſbon.——He is painted crowned with palm branches, and cloathed in red. He was a great linguiſt, and well ſkilled in mathematics. He was the fourteenth in the number of governors, and may be accounted the fourth vice-roy. His death is ſaid to have been accellerated by the bad conduct of ſome gentlemen in an expedition a little before; and thus died a good governor and a brave officer.

Much plunder.

His death.

VOYAGES OF THE ENGLISH TO GUINEA AND THE EAST INDIES.

THE ſucceſſes of the Portugueſe in their African and Eaſt Indian expeditions, raiſed a ſpirit of emulation among other nations. The Spaniards had endeavoured to come in for a ſhare of the advantages; and the Engliſh failed not to follow their example. The deſigns of our countrymen in this reſpect, appear to have been ſupported by the Spaniards, and were ſuppreſſed upon the remonſtrances of the Portugueſe.—It appears however that the Engliſh frequently traded to the Canary Iſlands, and even eſtabliſhed factors in thoſe parts.

About the middle of the ſixteenth century, the Engliſh ſpirit for trade exerting itſelf, and meeting with a favourable conjuncture, they began to puſh it to the ſouth as well as north, about the year 1551. Capt. Thomas Windham, in the ſhip Lion, ſailed to Morocco, whither he carried back two Moors of the royal family. This was the firſt voyage we meet with to the weſtern coaſt of Africa; and theſe are all the particulars to be found relating to it; excepting, that one James Alday, a ſervant to Sebaſtian Cabato, in a letter to Mr. Michael Locke, in 1552, repreſents himſelf as being the firſt promoter of this Barbary traffic: he alſo obſerves, that he ſhould have performed this voyage himſelf; and have had the whole command of ſhip and goods, but that Sir John Lutterel, John Fletcher, Henry Oſtrich, and others, with whom he had joined, died of the ſweating ſickneſs: and he himſelf, after eſcaping that diſeaſe, had been ſeized with a violent fever. But before he recovered, the ſhip being at Portſmouth, Thomas Windham had her away from thence, by whom he loſt eighty pounds. Next year, 1552, Windham performed a ſecond voyage to Zafin and Santa Cruz, without the Streights, where he had been the year before. This gave great offence to the Portugueſe, who threatened to treat the Engliſh as enemies, if they met with them in thoſe parts.—Notwithſtanding theſe menaces, the year following, the ſame Windham, and Antonio

To Barbary.

* Queen Catharine of Portugal, hearing the relation of his victory and triumph, ſaid "Don Juan had overcome like a Chriſtian, and triumphed like a heathen."

1552 Anes Pinteado a Portugueſe, the promoter of this attempt, undertook a voyage to Guinea, in three ſhips, with 140 men, and traded for gold along the coaſt; after which they ſailed for Benin, to load pepper: but both the commanders, and moſt of the men dying of ſickneſs, occaſioned by the climate; the reſt, being but forty, returned to Plymouth, with only one ſhip (having burnt the others for want of hands to work them) and no great riches.——In 1554, Mr. John Lock, made a voyage with three ſhips, and trading along that coaſt, brought away a conſiderable quantity of gold and ivory, but proceeded no farther. Theſe voyages were ſucceeded by others almoſt every year. At length, upon application to queen Elizabeth by certain merchants, two patents were granted, one in 1585, for the Barbary or Morocco trade; the other, in 1588, for the Guinea trade, between the rivers Senaga, and Gambra, or Gambia; and in 1592, a third was obtained by others, taking in the coaſt from the river Nonnia, to the ſouth of Sierra Leona, the ſpace of 100 leagues, which patents gave riſe to the African company.

Summary account of voyages.

The views of the Engliſh extending with their ſucceſs, and finding the diſcovery of the N. E. and N. W. paſſages, had been long attempted in vain, they reſolved to puſh their voyage round Africa, by the Portugueſe courſe. In 1591, three large ſhips undertook that voyage for the firſt time, under the command of captain Raymond: and in 1596, another fleet of three ſhips, commanded by captain Wood, ſet out on the ſame deſign; but with ill ſucceſs. Mean time, ſeveral navigators were employed to diſcover this way to the Eaſt Indies, and the Portugueſe poſſeſſions there. At length, in 1600, a body of gentlemen, merchants, and others, (to the number of 216) with George Earl of Cumberland at the head of them, obtained a charter from queen Elizabeth, for carrying on a trade to the Eaſt Indies, under the denomination of The Company of Merchants Adventurers. From this time forward, ſhips were ſent regularly every two or three years, to thoſe parts of the world. And thus was laid the foundation of the Eaſt India Commerce, which ſubſiſts at preſent.

The voyage to Barbary, in 1552, by Captain Thomas Windham, was projected by Sir John York, Sir William Gerrard, Sir Thomas Worth, Meſſrs. Francis Lambert, Cole, and ſeveral other merchants. The ſhips that went on this voyage were three. Firſt, the Lion, of London, the admiral's ſhip, about 150 tons, Thomas Windham, captain, and part owner, a Norfolk gentleman, who lived at Marſhfield Park, Somerſetſhire: ſecond, the Buttolſe, about 80 tons: and the third, a caraval, bought of ſome Portugueſe, at Newport in Wales, and freighted for this voyage, of 60 tons: the number of men in the fleet were one hundred and twenty: the maſter of the Lion was one John Kerry, of Somerſetſhire; and his mate was David Landman.—This fleet departed out of King-road, near Briſtol, on Monday morning, the beginning of May, 1552, and Monday fortnight, in the evening, came to anchor in the road of Zafia, on the coaſt of Barbary, in 32 degrees of latitude, which was the firſt port they were bound to, and there landed part of their merchandize, to be conveyed to the city of Morocco.—After this, having refreſhed themſelves with victuals and water, they went to the ſecond port, called Santa Cruz, where they diſcharged the reſt of their goods, being linen and woollen cloth, coral, amber, jet, and divers other things, eſteemed by the Moors; here they found a French ſhip, which not knowing whether war or peace ſubſiſted between England and France, drew as near the town as ſhe could, craving its protection, if need were; inſomuch, that obſerving the Engliſh ſtill to advance, a piece was ſhot from the walls, which flew between the main and foremaſt of the Admiral; whereupon, caſting anchor, there preſently came a pinnace aboard to know what they were, who underſtanding that they had been there before, and came with conſent of their king, were fully ſatisfied, and gave them leave to land their goods. They had not been long here before the viceroy, whoſe name was Sibill Manache, came to viſit them with great civility: but by one delay or other, they ſpent very near three months before they could get in their lading, which was ſugar, dates, almonds, and molaſſes.——Yet although they were here in the heat of the ſummer, none of the company died by ſickneſs. When the ſhips were laden, they put to ſea, expecting a weſterly wind; but as they were ſetting forward for England, the Lion ſprung a leak, ſo that they were driven to Lancerote, on the ſide towards Forteventura, where they landed out of her 70 cheſts of ſugar, with 12 or ſixteen of the company. The inhabitants ſuppoſed the caraval had been ſeized by them, ſuddenly came with force, and took them priſoners, and ſpoiled the ſugars. This being perceived from the ſhips, they manned three boats to reſcue them, and put the Spaniards to flight, of whom they ſlew 18, and took the governor of the iſland priſoner, who was about 70 years of age, but chacing the enemy too far, and being in want of powder and arrows, the Spaniards perceiving this, returned and ſlew ſix of them in their retreat. After this, coming to a parley, it was agreed that the Engliſh ſhould be exchanged for their old governor, and that a certificate ſhould be given under his and their hands of what damages they had received, which damages were made good by the Spaniſh merchants, upon their return into England. Having found out and ſtopped the leak, they ſet ſail; and as they left one end of the iſland, the Cacafuego, and other ſhips of the king of Portugal's armada, entered at the other, and came to anchor in the road from whence the Engliſh departed, ſhooting off their ordnance in their hearing. The Portugueſe were much offended with this new trade into Barbary; and both in this and their former voyage, gave out in England, by their merchants, with great menaces, that if they took the Engliſh in thoſe parts, they would uſe them as their mortal enemies. They were ſeven or eight weeks before they could reach the coaſt of England, putting firſt into Plymouth; ſoon after they arrived at London, where they landed their merchandiſe about the end of October, 1552.

Santa Cruz.

A VOYAGE TO GUINEA AND BENIN, BY THOMAS WINDHAM, AND ANTONIO ANES PINTEADO, CAPTAINS.

ON the 12th of Auguſt there ſailed from Portſmouth two fine ſhips, the Primroſe and Lion, with a pinnace called the Moon, furniſhed with 140 able-bodied men, ordnance and victuals. They were commanded by two captains; the one a Portugueſe, called Antonio Anes Pinteado, the ſon of Juan Anes, born in a town named, The Port of Portugal, a wiſe, diſcreet and ſober man. He was an expert pilot as well

well as a prudent captain; and for his ſkill in navigation had been in great favour with the king of Portugal, who committed to his care the coaſts of Braſil and Guinea, againſt the inſults of the French, to whom he was a terror in thoſe ſeas. He was likewiſe a gentleman of the king's houſehold: but falling afterwards into diſgrace, through the malicious inſinuations of ſome who envied his good fortune, was forced by his majeſty to come to England. The other captain's name was Windham, a perſon of very different qualities, and endowed with little virtue.——He began to ſhew his evil diſpoſition at Portſmouth, by turning out of his ſhip a kinſman of one of the principal merchants concerned in the voyages; although it proved very happy for the young man, and others wiſhed he had ſerved their ſons in the ſame manner.

"Setting out on their voyage, they came to the iſland of Madeira, where they took in wines for the uſe of their ſhips. At theſe iſlands they met with a great galleon of the king of Portugal's, full of men and ordnance, ſent out on purpoſe to prevent ſhips of other nations from trading in thoſe ſeas, and particularly to fruſtrate this voyage of the Engliſh, although they could not have done it in caſe they had attempted it. It ſeems the king of Portugal had been ſecretly informed that our ſhips were deſigned againſt his caſtle of Mina, although nothing leſs was intended. Hitherto Windham behaved in a ſeemingly very good natured friendly manner to Pinteado; but after they had left Madeira, he began to change his carriage: he took upon him the ſole command, ſetting nought by Captain Pinteado, and the factor; and proceeding even to vile language and menaces. He took from him the ſervice of the boys, and certain marines, that were aſſigned him by the orders and directions of the merchants, and left him as a common ſeaman: this was a ſenſible mortification to that worthy commander, becauſe nothing can afflict a Portugueſe or a Spaniard more, than to be deprived of their honours. Sailing forward, and paſſing by the Canaries, they came to the iſland of St. Nicholas, where they victualled with the fleſh of wild goats, which is very plentiful there, though ſcarce any thing elſe is to be met with. From hence they purſued their courſe; yet, to avoid arriving too ſoon at Guinea, on account of the heats, they ſtaid by the way at the Deſert Iſles, but being under an arbitrary direction, from whence no good can proceed, tarried too long. At length they fell in with the great river of Seſtos, on the coaſt of Guinea, where they might have laden their ſhips with the fruit of that country; which is very hot, and much like a fig, as it grows on the tree, being full of grains, which are looſe within the cod, having a hole through the middle. This kind of ſpice is very much uſed in cold countries, and may be ſold to great advantage, in exchange for other wares: but the men, by the perſuaſion, or rather compulſion, of this tragical captain, ſetting light by that commodity, in compariſon of the fine gold they thirſted after, ſailed 100 leagues further, till they came to the Golden Lands, where, without attempting to approach the king of Portugal's caſtle, ſituate on the river Mina, they ſold their wares on this ſide, and beyond it, for the gold of that country, to the quantity of 150 pounds weight; and might have had gold in exchange for their whole cargo, if Pinteado's advice could have taken place. But Windham, though there was gold enough where he was, would needs go farther, and commanded Pinteado (for ſo he took upon him) to carry the ſhips to Benin, 150 leagues beyond, under the line, where he propoſed to have them laden with pepper; Pinteado conſidering the late time of the year, adviſed him not to go elſewhere, but to ſtay and diſpoſe of the remainder of the goods for gold; but Windham refuſed.* Pinteado's view was to preſerve the men, well knowing their lives would be in great danger; either if they got thither too late, or too ſoon, they were to meet with the Roſia, which is their winter, not for cold, but for ſmothering heat, with cloſe and cloudy air, and ſtormy weather, of ſuch putrifying quality, that it rotted the very clothes on their backs. If they arrived too ſoon, then they were to fear the ſcorching heat of the ſun, which was the reaſon of their lingering by the way. Thus was he forced againſt his will, to bring the ſhip to the river of Benin. Here caſting anchor, they ſent their pinnace up the river fifty or ſixty leagues; where Captain Pinteado, Franciſco, a Portugueſe, Nicholas Lambert, a gentleman, and other merchants landing, they were conducted to the court ten leagues from thence. Being arrived, they were brought amidſt a crowd of people, to the king's preſence. He was a black Moor, (although not ſo black as the reſt) and ſat on a great hill, long and wide: the walls were made of earth, without windows; but in the roof, which was of thin boards, were ſeveral openings, like funnels, to let in the air. —The king is ſerved with great ſtate; his noblemen never look him in the face, but ſit covered with their elbows upon their knees, and their hands before their faces, nor dare lift up their eyes, until his majeſty commands them. When they approach him, as ſoon as they come in view, they aſſume the ſame poſture, and when they retire, go creeping backwards with like reverence, it being a crime to turn their backs upon him.

"The king at firſt cauſed them to ſtand up, and then in Portugueſe, (which he had learned from his infancy) he demanded the cauſe of their coming. They anſwered by Pinteado, that they were merchants, and came to exchange the commodities of their own country for thoſe of his. The king then deſired him to look at 30 or 40 quintals of pepper, which had lain a long time in his ſtorehouſes, and to bring a ſample of their merchandiſes; thereupon he ſent ſome of his people to conduct the captain and merchants to the water-ſide; and others to fetch the wares from the pinnace to the court. When they were returned, and the wares ſeen, the king agreed with the merchants to provide in 30 days the lading of all their ſhips with pepper; and, in caſe their goods ſhould fall ſhort of the value, he offered to give them credit till their next return. He forthwith ſent the country round to gather pepper, ſo that in thirty days no leſs than 80 tons were brought to the court. In the mean time, the Engliſh having no command of themſelves, eat of the fruits, and drank the palm-wines to exceſs; neither could they be kept from running continually into the water to cool their bodies, melting with the heat of the climate; ſo that not being uſed before to ſuch ſudden and violent alterations, it brought on ſwellings and agues, towards the latter end of the year, whereby three or four, and ſometimes five, died in a day. Windham finding his men drop off ſo faſt, as ſoon as the 30 days were expired, ſent to Captain Pinteado and the reſt, to come away forthwith; they let him know by letter, what a quantity of pepper they had procured, and that they daily expected as much more, deſiring him not to hurry them, conſidering what reputation they ſhould gain, in caſe they ſhould make a proſperous voyage, and how ſhameful it would be to return without full lading. But Windham, not ſatisfied with this anſwer, and the mortality continuing amongſt the men, ſent them word that if they did not come away inſtantly, he would leave them behind. Hereupon Pinteado, thinking to perſuade him by reaſon, returned to the ſhips, being conducted thither by the king's order. Mean time, Windham, in a rage, broke up Pintea-

The king's ſtate.

1553

* He fell into a rage, and reviled him, calling him Jew, and other opprobrious names, ſaying, "This whoreſon Jew hath promiſed to bring us to ſuch places as are not to be found, or he cannot bring us to: but if he do not, I will cut off his ears, and nail them to the maſt."

1553. do's cabin and chefts, ſpoiled ſuch cold diſtilled waters and other things as he had provided for his health, and left him nothing either of inſtruments to ſail by, or apparel. Then falling ſick himſelf died alſo: for all this, Pinteado, when he came on board, lamented his death as much as if he had been his beſt friend. Yet ſeveral, both of the mariners and officers, ſpit in his face, ſome calling him Jew, ſaying, he had brought them thither to deſtroy them, and others drawing their ſwords on him, offered to kill him. They inſiſted to leave the coaſt, he deſired them only to ſtay till thoſe who were at court ſhould return from thence; but they would not grant this requeſt. Then he intreated them to let him have the ſhip-boat, with a piece of an old ſail, promiſing therewith to bring the reſt into England."—Finding all he ſaid was in vain, he wrote to acquaint the merchants with what had happened; aſſuring them, in caſe he lived to return, forthwith to fetch them. As for Pinteado himſelf, after being kept on board againſt his will, he was thruſt among the cabin-boys, and worſe uſed than any of them, being glad to find favour at the cook's hand.* Having ſunk one of their ſhips for want of hands, they departed, and ſix or ſeven days after, Pinteado died, heart-broken with his hard uſage; and of 140 men, ſcarce forty returned to Plymouth, of whom alſo many died.

Windham's death.

Pinteado dies of grief.

VOYAGE TO GUINEA, IN 1554, BY CAPTAIN JOHN LOCK.

THE adventurers in this voyage, were Sir George Barne, Sir John York, Thomas Lock, Anthony Hickman, and Edward Caſtlelin.

The fleet ſets out.

On the 11th of October, 1754, they left the Thames with three good ſhips, the Trinity 140 tons; the Bartholomew, 90; and the John the Evangeliſt, 140. There were likewiſe two pinnaces, (whereof one was loſt on the coaſt of England). Having ſtaid at Dover fourteen days, and at Rye, three or four; they laſt of all touched at Dartmouth, and thence proceeding, the firſt of November, at nine at night they ſet off, the Start, bearing ſouth-weſt, and by the third, about noon ran ſixty leagues.

"On the 17th, in the morning, they had ſight of Madeira, which in the north north-eaſt part, appears very high; and to the ſouth ſouth-eaſt, is a low long land, and a long point, with a ſaddle through the middle of it, ſtanding in thirty-two degrees in the weſt part, they ſaw many ſprings of water, deſcending from the mountain: alſo ſeveral white fields, like corn fields, and ſome white houſes to the ſouth-eaſt. The top of the mountain ſeemed very ragged; and in the north-eaſt part they ſaw a bay, reſembling a harbour: alſo a rock at a little diſtance from the ſhore; and over the ſaid bay was a great gap upon the mountain.—On the 19th, at noon, they had ſight of the Iſle of Palms, Teneriffe, and the Canaries. The firſt, (which lies in twenty-eight degrees) riſes round, and extends ſouth-eaſt and north-weſt; the north-weſt part is loweſt. In the ſouth is a round hill over the headland; and another round hill in the land. Between the ſouth-eaſt part of Madeira, and the north-weſt part of Palm iſle, are fifty-ſeven leagues; their courſe ſouth and ſouth by weſt, ſo that they had ſight of Teneriffe, and the Canaries; the ſouth part of the Iſle of Palms is diſtant from the north north-eaſt of Teneriffe, twenty leagues north-weſt. Teneriffe and the great Canarie, called Gran Canaria, and the weſt part of Forteventura, ſtand twenty-ſeven degrees and a half. Gomera is a fair iſland, but very ragged, and lieth weſt ſouth-weſt of Teneriffe; and the courſe in ſailing between them ſouth by eaſt. In the ſouth part of Gomera is a town, and good road for ſhips; it ſtands in twenty-ſeven degrees and forty-five minutes. Teneriffe is high land, with a great high peak like a ſugar-loaf, whoſe top is covered with ſnow throughout the year: by this mark it may be known above all other iſlands. Here they were becalmed on the 20th of November, from ſix in the morning till four in the afternoon.—On the 22d, under the Tropick of Cancer, the ſun ſets weſt by ſouth, upon the coaſt of Barbary, twenty-five leagues north of Cape Blake, three leagues from ſhore, there are fifteen fathoms, no ſtreams, and good ſhelly ground mixed with ſand; alſo ſmall iſlands in twenty-two degrees twenty minutes.——From Gomera, they ſailed ſouth by eaſt 100 leagues, to Cape de los Barbas, in twenty-two degrees and a half. All that coaſt is very flat, with ſixteen or ſeventeen fathom water; and from that cape, till within ſeven or eight leagues of the river del Oro; is frequented by Spaniards and Portugueſe, who trade for fiſh during the month of November.

"From thence they ſteered ſouth ſouth-weſt, and ſouth-weſt by ſouth, till they came into twenty degrees and a half, reckoning themſelves ſeven leagues off ſhore, and there were the coaſt ſhoals of Cape Blake. Then they went ſouth till they got into thirteen degrees, and by eſtimation, twenty-five leagues off. They diſcovered the Croſiers when they were in fifteen degrees, and might have done it ſooner, if they had looked for them. Thoſe conſtellations are not right a-croſs in November, by reaſon that the nights are ſhort there; nevertheleſs they had ſight of them the 29th of the ſame month.—On the 1ſt of December, being in thirteen degrees, they proceeded ſouth by eaſt, till the fourth at noon, when they were in nine degrees twenty minutes, and by eſtimation thirty leagues weſt-ſouth-weſt of the ſhoals of the Rio Grande, which are thirty leagues long. On the 4th, being in ſix degrees thirty minutes, they began to ſet their courſe ſouth-eaſt. The 9th, they directed it eaſt-ſouth-eaſt; and the 14th, eaſt, being then in five degrees thirty minutes, and by computation thirty-ſix leagues from the coaſt of Guinea. On the 19th, they ſailed eaſt by north, ſeventeen leagues diſtant from Cape Menſurado, which bore eaſt-north-eaſt, and the river Seſto eaſt.—On the 21ſt, they fell in with Cape Menſurado, to the ſouth-eaſt, about two leagues off, which riſing like the head of a porpoiſe; may be eaſily known; it ſtands nearly in ſix degrees. Alſo to the ſouth-eaſt there are three trees, the eaſternmoſt is the higheſt, the middlemoſt

Cape Menſurado.

* It appears that after this gentleman had been long impriſoned by the king, he was releaſed on the repreſentation of that prince's confeſſor, a grey friar, who made known his innocence; that it was poverty, and not any crime, which obliged him to leave his country; that the king, repenting of his ſeverity towards him, by letters patent, dated the 30th of September, 1551, in conſideration of his good ſervice, made him a Knight of his houſhold, with a penſion of 700 rees (or ten ſhillings) a month, and an alcayre (or half buſhel) of barley as long as he kept a horſe.

This patent is to be found in Hakluyt's Collection. Notwithſtanding thoſe friendly overtures, however, Pinteado durſt not venture home, nor ſo much as to converſe with his countrymen, unleſs in company with others; becauſe he had private intimation given him, that they intended to murder him, if they could but find a proper opportunity.

middlemoſt like a hay-ſtack, and the ſouthermoſt reſembles a gibbet: upon the main are four or five very high hills riſing one after another like round hillocks, and to the ſouth-eaſt of the three trees, the whole coaſt is a white ſand.—On the 22d, they
River Seſto. came to the river Seſto, and remained there till the 29th. From hence they ſent before them the pinnace to the Rio Dolce, that they might have the beginning of the market, before the coming of John the Evangeliſt.—In the river of Seſto, they had a ton of grains. From whence to Rio Dolce, in five deg. thirty minutes, are twenty-five leagues. The river of
Rio Dolce. Seſto is eaſy to be known by a ledge of rocks on the ſouth-eaſt part of the road. And at the entrance of the haven, there are ſix trees that bear no leaves. This is good harbour, but very narrow at the mouth, where there is a rock juſt as you enter. All the coaſt between Cape De Monte, and Cape De las Palmas, lies ſouth-eaſt by eaſt, and north-weſt by weſt, being three leagues off the ſhore; and you ſhall have in ſome places, rocks two leagues off, and that between the river of Seſto and De las Palmas.——From the river of Seſto to the river Dolce, are twenty-five leagues, and the high land between, which begins eight leagues from the former, is called Cakeado; to the ſouth-eaſt, whereof is a place called Shawgro, and another Shyawe, where you may get freſh water.
Shawgro. Off Shyawe lies a ledge of rocks, and to the ſouth-eaſt a head-land, called Croke, between which and Cakeado, are nine or ten leagues. To the ſouth-eaſt hereof, is a harbour called St. Vincent, right over
Port St. Vincent. againſt which, there is a ſunk rock, two leagues and a half from ſhore. To the ſouth-eaſt of that rock, there appears an iſland about three or four leagues diſtant, and not above one from the coaſt eaſt-ſouth-eaſt of the iſland, is a rock, that riſes above the water, and the entrance of the river Dolce, which thereby may be known. The north-weſt ſide of the haven is flat ſand; the ſouth-eaſt ſide reſembles an iſland, and is a bare plot without any trees, ſuch as is not any where elſe. Ships ride in fourteen or fifteen fathoms, good ooze and land; being the marks of the road to bring the iſland and the north-eaſt land together. Here they anchored the laſt of December.—On the third of January, they ſailed from the river Dolce.*

"On the 12th of January, they came to a town
Samma town. called Samma, eight leagues eaſt-north-eaſt from Cape Tres Puntas. In the way, is a great ledge of rocks far out at ſea. They continued four days at that town, the captain whereof would needs have a pledge: accordingly one was ſent (being Sir John York's nephew) whom, when they had received they detained, and would traffic no more, but ſhot at them with their ordinance, whereof they have only two or three pieces.—On the 16th, they came to a
Cape Corea. place called Cape Corea, where Captain Don John dwelleth, whoſe men entertained them friendly. This cape is four leagues eaſtward of the caſtle of
Mina caſtle. Mina, where they arrived the 18th, and made ſale of all their cloth, ſaving two or three packs.—On the 26th, they ſailed forward to the Trinity, which was about ſeven leagues eaſtward of them, where ſhe ſold her wares; and adviſed them to go eaſtward of that eight or nine leagues, in order to ſell more in two other places. The firſt called Perekow, the
Perekow Grande. fartheſt Perekow Grande. This laſt may be known by a great round hill, named Mont Rodondo, lying near it on the weſt, and by the water ſide are many high palm trees.—From hence they ſet forth homeward the 13th of February, and plied up along till they came within ſeven or eight leagues of Cape Tres Puntas.— 1554

"On the fifteenth, about eight at night, they caſt about to ſeaward.—In returning from the coaſt of Mina, be ſure make your way good weſt, as far as Cape da las Palmas; where the current ſets weſtward, and within twenty leagues eaſtward of that cape, you may have freſh water, and ballaſt enough, with plenty of ivory, or elephants teeth, at the river De los Patos, which is in four degrees, and almoſt two thirds, and when you reckon yourſelf River de los Patos. as far ſhot as the cape, being in a degree, or a degree and a half of latitude, you may go weſt, and weſt by north till you come into three degrees, and then you may go weſt north weſt, and north weſt by weſt, till you come in five degrees; after which proceed north-weſt. In ſix degrees they meet with northerly winds, and great ruffling tides, the currents tending, as they judged, to the north north-weſt, moreover, between Cape de Monte and Cape Verde, there run great currents, which deceive many.—The 22d of April, they were in eight degrees; and ſo they ran to the north weſt, having the wind at north eaſt, and eaſt north eaſt, and ſometimes at eaſt, till May day, that they came into eighteen degrees twenty minutes and ſo from eighteen degrees forty minutes, they had the wind at eaſt, and eaſt north-eaſt, and ſometimes at eaſt ſouth-eaſt; and they reckoned the iſlands of Cape Verde to lie to the eaſt ſouth-eaſt, forty-eight leagues off. In twenty and twenty-one degrees, they had the wind more eaſterly to the ſouthward than before; and ſo they ran to the north-weſt, and north north-weſt, and ſometimes north by weſt and north, till they came into thirty-one degrees north, where they reckon themſelves 180 leagues ſouth-weſt by ſouth, off the iſland of De los Flores; and there meeting with the wind at ſouth ſouth-eaſt, ſet their courſe north-eaſt.

In twenty-three degrees, they had the wind at ſouth and ſouth-weſt, and then they ſteered north north-eaſt, till they came into forty degrees, after this they bore north-eaſt, the wind being at the ſouth-weſt, and the iſland Flores ſeventeen leagues eaſt of them. Iſland Flores. In forty-one degrees, they met with the wind at north-eaſt, and ran north-weſtward. Then it blew weſt-north-weſt, and at the weſt within ſix leagues, they running towards the north-weſt, preſently they caſt about and lay at north-eaſt, till they came into forty-two degrees, where they ſet their courſe eaſt north-eaſt, judging the iſle of Corvo to be thirty-ſix leagues diſtant, ſouth by weſt.—The 21ſt of May, they conſulted with John Raſe, and he thought it beſt to go north-eaſt, and judging himſelf to be twenty-five leagues eaſtward of the Iſle de Flores, in thirty-nine degrees and a half.——On the fourth of September, under nine degrees, they loſt ſight of the north ſtar: and in forty-five degrees, the compaſs varied eight degrees to the weſt. In forty degrees it varied fifteen degrees in the whole: and in thirty degrees and a half, five degrees to the weſt.——Two or three days before they came to Cape Tres Puntas, the pinnace went along the ſhore, thinking to ſell ſome wares; ſo their ſhip caſt anchor three or four leagues weſt by ſouth of the cape, where they left the Trinity, and their pinnace came aboard for more

* Cape de las Palmas, is a fair high land, but on the eaſt ſide there are ſome low places by the ſhore, which look like red cliffs, with white ſtreaks, reſembling high ways, each the length of a cable. This cape is the ſouthernmoſt land in all the coaſt of Guinea, and ſtandeth in four degrees one third. The coaſt from Cape de las Palmas to Cape de tres Puntas, is fair and clear, without rocks or other danger, and twenty-five leagues from the former cape. The land is higher than any other place, till you come to the latter, about ten leagues ſhort of which it riſes gradually all the way thither; likewiſe five leagues before you come to it to the north-weſt, there is certain broken ground, and two great rocks; within which in the bite of a bay, is a caſtle called Arra, belonging to the king of Portugal, eaſily known by the rocks that lie off it, there being none ſuch from Cape de las Palmas to Cape Tres Puntas. This coaſt lies eaſt by north, and weſt by ſouth, from Cape de las Palmas to Arra, are ninty-five leagues; and the coaſt from that caſtle to the weſtermoſt point of Tres Puntas, lies ſouth-eaſt by ſouth, and north-weſt by north. This weſternmoſt point is a low land, running out half a mile into the ſea; alſo upon the innermoſt neck, to the landward, is a tuft of trees; and there they arrived on the 11th of January.

1541 more goods. They told him, they would go to a place rich in gold, where the Primroſe had taken in a conſiderable quantity in the firſt voyage. He fearing a brigantine, that was then upon the coaſt, followed them, leaving the Trinity about four leagues behind. They rode before that town four days; ſo that Martin, by his own deſire, and conſent of ſome of the commiſſioners that were in the pinnace, went on ſhore: and John Bern went to trade at the town of Samma, already mentioned.

The ſhips brought home this time 400 pound weight and odd of gold, of 22 carrats and one grain in fineneſs; alſo thirty-five buts of grains (Guinea pepper) and about 250 elephants teeth of different ſizes. They meaſured ſome of nine ſpans in length, as they were bent; others were as thick as a man's thigh, and weighed about 84lb. weight a-piece.

The Nigritiæ (or Negros) poſſeſs a great part of Africa, extending weſtward to the ocean, and ſouthward to the river Nigritis (or Niger) which increaſes and diminiſhes at the ſame time with the Nile; and produces the ſame kind of animals, as crocodiles; for which reaſon, Eden takes it for that called by the Portugueſe Senega. Thoſe who made the voyage confirmed what is here reported of this laſt river, viz. That on one ſide the inhabitants are tall and black, and on the other ſide low of ſtature and tawny.

As to the manners and nature of the people on the Guinea coaſts, their princes and noblemen pounce and raiſe their ſkins in different figures, like flowered damaſk; and although they go in a manner all naked, yet many of them, eſpecially their women, are, as it were, laden with collars, bracelets, hooks and chains, either of gold, copper or ivory. I myſelf, (ſays my author) ſaw one of their ivory bracelets, weighing 38 ounces: it was made of one whole piece of the thickeſt part of the tooth, turned and ſomewhat carved, with a hole in the midſt, to let the hand through. Some wear one on each arm and leg, wherewith they are often ſo gauled, as to become in a manner lame; yet they will by no means leave them off. Some wear alſo on their legs, great ſhackles of bright copper, which they think to be no leſs comely. They likewiſe make uſe of collars, bracelets, garlands and girdles of certain blue ſtones like beads. Some of their women wear on their bear arms, certain foreſleeves, made of plates of beaten gold, and on their fingers rings of gold wire, with a knot or wreath, like that which children make in ruſh-rings.

Among other things of gold which the Engliſh had in exchange, were certain chains and colars for dogs. They were very wary in bargaining, and would not loſe the leaſt ſpark of gold. They have weights and meaſures, and are very circumſpect in them. Whoever would deal with them muſt behave civilly; for they will not traffic if they are ill uſed. In the firſt voyage it happened, that one of the Engliſh ſailors ſtole, or took away by force, a Muſk or Civet cat from the place they firſt touched at, never imagining that a fraud committed in one place would hinder their trading in another. But although they made what haſte they could to the port they next deſigned for, yet the news of the injury got there before them, which ſo offended the inhabitants, that they would bring down no wares to the ſea-ſide, till ſuch time as the aggreſſors had either reſtored the cat, or payed for her at their own price.—Their houſes are made of four poſts or trees, and covered with boughs. Their common food is roots, and fiſh, whereof they have great plenty. Among the reſt is the flying fiſh, like thoſe in the Weſt Indian ſeas. The Engliſh intended to lay in proviſion of their fiſh, but found they would not take ſalt; ſome ſay they muſt be eaten forthwith; yet others affirm, that being ſalted immediately after they are taken, they will keep ten or twelve days.—But what is more ſtrange, we are told part of the fleſh they carried out of England, which putrified there, became ſweet again at their return into the temperate climate. Their bread is made and baked in this manner: they grind with their hands between two ſtones, as much corn as they think may ſuffice the family; and having thus brought it to flour, make thereof very thin dough, which they ſtick upon ſome poſt of their houſes, where it is baked by the heat of the ſun, and lies till they take it down to eat. They have very good wheat, the ear whereof is two handfuls in length, and as large as a great bulruſh, being almoſt four inches about, where thickeſt. The ſtem or ſtraw ſeems near as thick as a man's little finger; the wheat itſelf is round like peaſe, and very white, ſhining like pearls, that have loſt their luſtrue. Almoſt the whole ſubſtance turns into flour, making little or no bran. Here were counted in one ear 260 grains. The ear is incloſed in three blades, each larger than itſelf, and two inches broad: and by this fertility, the ſun ſeems in part to make amends for all the great inconveniences the natives incur from its intenſe heat. Their drink is either water, or the juice which drops from the cut branches of the barren date trees, called Palmatos; to receive which, they hang either great gourds on the ſaid branches every evening, or elſe ſet them underneath the trees, that the drops may fall therein till morning. They ſay this liquor taſtes like whey, but ſomething more ſweet and pleaſant. They cut the branches in the evening, becauſe they are cloſed by the heat in the day. They have alſo great beams as big as cheſnuts, and very hard, with a ſhell inſtead of a huſk.—When the Engliſh came home, they found the keels of their ſhips quite covered with certain ſhells, more than two inches in length, and wide enough to put one's thumb in. The author ſaw the Primroſe in the dock covered with them, which, in his opinion, muſt have hindered her ſailing. They affirm, that in theſe there grows certain ſlimy ſubſtances, which at length, ſlipping out into the ſea, become thoſe fowls which we call Barnacles. The like ſhells have been ſeen on ſhips returning from Ireland, but not more than half an inch in length. Their ſhips were alſo in ſeveral parts eaten with worms, which creep between the planks, and eat through in many places.

This was one of the earlieſt voyages of our countrymen to thoſe parts.

VOYAGE TO THE COAST OF GUINEA

BY WILLIAM TOWNSON.

ON Monday, the 13th of September, they left Newport Haven, in the Iſle of Wight, with two good ſhips, the Hart and Hind, both of London. The maſters were John Ralph and William Carter, being bound to the River de Seſtos in Guinea, and other ports thereabouts. The wind was ſo various, that it was the 14th of October, before they could reach the road of Dartmouth, where having continued ſix days, the 20th they warped out, and ſet ſail, directing their courſe ſouth-weſt, and next morning they had run, by eſtimation, thirty leagues. On the firſt of November they found themſelves in 31

 degrees

degrees of latitude, by the reckoning of their maſter, and ran this day about 40 leagues. On the 3d they had ſight of Porto Santo, which is a ſmall iſland in 38 deg. ſouth lat. about three leagues long, and one and an half broad, poſſeſſed by the Portugueſe. It appeared to them, coming from the north north-weſt, like two ſmall hills near together. The eaſt land is a high land, like a ſaddle, cauſed by a valley. The weſt end is lower, with certain ſmall round hillocks. The ſame day at eleven, they ſaw the iſland of Madeira, 12 leagues from Porto Santo. Towards the ſouth-weſt the land is fair and fruitful; it is inhabited by Portugueſe. It appears at a conſiderable diſtance like great whole land, and high. By three o'clock in the afternoon, they were oppoſite Porto Santo, and bore ſouth-weſt to leave Madeira to the eaſt. About three in the morning they were within three leagues of the weſt end of Madeira, and, by means of the high hills there, were becalmed; having ran by computation, 30 leagues in the whole. The 6th in the morning, they raiſed the iſle of Teneriffe, otherwiſe called the Pike, becauſe it is a very high iſland, with a pike (or peak) on the top, like a ſugar-loaf. The ſame night they ſaw Iſle of Palma, which is high alſo, and to the weſt of Teneriffe.——The 7th they perceived the iſland of Gomera, which lies between Teneriffe and Palma, about 12 leagues eaſtward of the latter, and eight leagues to the weſtward of the former; but for fear of being becalmed by this, they left both iſles to the eaſt, and paſſed betwixt Palma and Gomera; having ran this day and night, 30 leagues.*

This day alſo they had ſight of Ferro, which is 13 leagues to the ſouthward of the other iſlands, and is poſſeſſed by the Spaniards. All this day and night, by reaſon of the wind, they could not double the point of Ferro, except they had gone to the weſtward of it, which would have been much out of their way; wherefore they tacked about, and ran back five hours, eaſt north-eaſt, to the end they might double it upon the next board, the wind continuing ſouth-eaſt, a thing that ſeldom happens upon that coaſt; for the wind blows there for the moſt part, north-eaſt, and eaſt north-eaſt; ſo upon the other board, by next morning, they were in with the iſland, and had room enough to double the ſame. The 12th they ſaw a ſail under their lee, which they took for a fiſherman, and meant to have ſpoken with him; but an hour after there roſe ſuch a fog, that they could neither ſee the ſhip, nor yet one another; they ſhot off divers pieces to the Hind, but ſhe heard them not. In the afternoon, they ſhot off a piece which the Hart heard, and anſwered with another. Half an hour after, the fog broke up; and they found themſelves within four leagues of the Barbary ſhore, in 14 fathoms water: the bark alſo came and anchored with them, by reaſon of the contrary wind. When they fell in with the land, they could not juſtly tell what part it was, becauſe of that coaſt being low land, one has nothing to judge by, but the ſhore itſelf, which is white like chalk or ſand, and very deep to the ſtrand. By the pilot's reckoning, they were 16 leagues to the eaſt of the river del Oro. Here they immediately began to fiſh, and found great ſtore of what the Portugueſe commonly fiſh for upon that coaſt, which they called Pergoſſes, and the French Saders; but the Engliſh, Salt-water Breams. During the fog, the ſhip which they followed ſteered ſuch a courſe, that they could ſee her no more, by reaſon of the ſhooting off to find the Hind again. The 13th, in the afternoon, the Hart ſaw a ſail making towards them, which they judged to be the ſail they ſaw the day before. The captain ordered the Hind to weigh anchor, and ſail up to her, and manned out the ſkiff, either to lay her aboard, or to diſcern what ſhe was. The Hart alſo weighed in half an hour, but the veſſel perceiving them, tacked about, and ſhortly after there fell ſuch another fog, which continuing all night, they were conſtrained to leave the chace. This afternoon the wind came about, and they bore ſouth-weſt, to get clear of the coaſt. They ran that night ſixteen leagues. The 14th in the morning was very foggy; but about 12 o'clock, they eſpied a caraval of 60 tons, fiſhing, and ſent their ſkiffs to her with five men. The caraval, for haſte, let ſlip her anchor, and ſet ſail, which they ſeeing, purſued her, though without any weapons; and in the end, overtaking, made a prize of her, and brought her away, although there were 14 or fifteen men on board, all with arms, but they had not courage to reſiſt. Being come to anchor near the Hart, the captain cauſed the ſkiff to come for him, and went on board to ſee that no harm ſhould be done them, nor any thing taken but what they were willing to ſpare for money; ſo the Engliſh had of them three tapnets of figs, two ſmall pots of oil, two pipes of water, four hogſheads of ſalt-fiſh, which they had taken upon the coaſt, and certain freſh fiſh which they did not eſteem, becauſe there is ſuch plenty upon that coaſt, that in an hour, and ſometimes leſs, a man may take as much as will ſerve 20 for a day. For theſe things, and ſome wine, which was drank on board, and three or four great cans, which they had ſent to the ſhips, the captain paid them 27 piſtoles, which was twice as much as they would willingly have taken; and helped them to get up their anchor and cable which they had let ſlip. After this, they ſet ſail, but the wind cauſed them to anchor again, about 12 leagues off the river del Oro. There were five caravals more in this place; but on ſight of the fleet they all made off. 1555

On the 12th of December they had ſight of the coaſt of Guinea, which as ſoon as they ſaw, they hauled into the land, north-eaſt, and about twelve o'clock at night, came within leſs than two leagues of the ſhore, then tacked about, and found eighteen fathoms water. Afterwards they ſaw a light towards the ſhore, which they took for a ſhip, and thereby judging it to be the river de Seſtos, forthwith caſt anchor, armed their tops, and made all things ready to fight, not knowing but it might be ſome Portugueſe or Frenchmen; but in the morning, ſeeing no veſſel, they judged the light came from ſhore. About two Engliſh miles from them, they ſpied four rocks, one great, and three ſmall. Then they proceeded eaſt ſouth-eaſt along the ſhore, becauſe the maſter did not know well the place, though they were not ſo far eaſt as the river of Seſtos. All this land is low, and full of very high trees along the ſhore; ſo that it is not poſſible to know whereabouts one is, except by the latitude. In theſe 24 hours, they ran 16 leagues; for all the night they had a great gale, with much thunder and lightning. The 13th, for the moſt part, they ran eaſt ſouth-eaſt, two leagues from the coaſt, and found the land full of woods, and great rocks cloſe to the ſhore, againſt which the ſea beat violently, the waves breaking as white as ſnow, and mounting ſo high, that they might eaſily be diſcerned four leagues off, in ſuch a manner, that no boat could land there. At noon they took the altitude of the ſun, and judged themſelves to be 24 leagues to the eaſt of the river de Seſtos; therefore they ſtood towards land, and anchored within two miles of ſhore, in 15 fathoms water, where the ſea was ſo ſmooth that they might have rid by a hawſer. That afternoon they trimmed the boat, that they might go along by the ſhore to ſeek ſome place to water in, for they could not turn back again to the river de Seſtos, becauſe both wind and current is always contrary, the latter running continually eaſtward. The 14th, they went back again along the coaſt, and about noon, the boats found a watering-place. Being far out at ſea, they met with divers boats of the country, ſmall, long, and narrow, with only one man in each, to whom they gave bread, which they were very glad of. About four o'clock, their boats came to them with freſh water, and this night they anchored againſt a river. The 15th, they weighed, and ſet ſail to go near the ſhore. They ſounded all the way, and found

* Theſe iſlands are ſixty leagues from Madeira.

1555 ſometimes rocks, ſometimes fair ground; and never leſs than ſeven fathom water. Within a mile of ſhore, they met with ſeven fathoms and a half; and there anchored in a manner before the mouth of the river: it is called St. Vincent in the charts; and about a mile up it the boats found very good water. This river lies in four degrees and a half, and is by eſtimation, eight leagues beyond the Seſtos: but it is ſo hard to find, that a boat ſhall not diſcern it at half a mile diſtance, becauſe the entrance is quite hidden by a ledge of rocks; which being much broader than the river, a boat muſt run in a good day betwixt the rocks and the ſhore, before it comes at the mouth. But the river itſelf is very large, and divers others fall into it; however the entrance is ſomewhat inconvenient, becauſe the ſea runs pretty high; but being once within, it is calm as the Thames. This ſhore is inhabited near the ſea, by a very large kind of people, who go all naked; except a clout to cover their nakedneſs, about a quarter of a yard long, made of the bark of trees, which will ſpin ſmall, after the manner of linen; ſome wear the like upon their heads, painted with various colours; but for the moſt part they go bare headed, their hair being clipped, and ſhaved in various manners, moſt of them have their ſkin raiſed with divers works, in manner of a leather jerkin; both ſexes go alike, ſo that the women cannot be known from the men, but by the breaſts, which are generally very ugly and long.

The ſame morning they went into the river with the ſkiff, and carried baſons, manillos, &c. and took that day, one hogſhead, and one hundred weight of grains, and two elephant's teeth, at a reaſonable rate. They were fond of baſons, for each of which, they had about thirty pounds weight of grains; and for an elephant's tooth of thirty pounds weight, they gave the negroes, ſix baſons.

In the morning of the 16th, they carried ſome of every ſort of merchandiſe; but the natives made light of them, as well as of the wares they were ſo fond of the day before; offering for baſons what could not be taken; ſo that this day they bought not above one hundred pound weight of grains, by means of the negro's captain, who would ſuffer none to ſell any thing but through his hands, at his price. He was ſo ſubtil; that for a baſon he would not give fifteen pounds weight of grains, and ſometimes would offer ſmall diſh-fulls, whereas before they had baſket's full. When he found the Engliſh would not take ſuch quantities, he departed with all the boats; thinking that they would have followed them and complied with their terms: but perceiving their drift, they weighed, and went away.

Afterwards, going to land to ſee the country, threeſcore of them came about the Engliſh, of whom at firſt they were afraid; but at length, finding no harm was done them, grew familiar, and would come and take them by the hand. On the other ſide thoſe who landed, went into their towns; which conſiſted of about twenty ſmall hovels covered with green leaves and baggage, the ſides all open, and a ſcaffold underneath the houſe, about a yard high, where they lie and work many pretty things out of the barks of trees; they alſo forge handſome darts, and various inſtruments of iron to make their boats, beſides other utenſils; the women labouring as well as the men. Many of the women to divert their viſitants, danced and ſung after their manner, which was not very agreeable to the ear. Their ſong was ſakere, ſakere, ho, ho, ſakere, ſakere, ho, ho; leaping and clapping their hands all the while. They ſaw no cattle or other animals among them; except two goats, ſome little dogs, and ſmall hens. After gratifying their curioſity, they returned on board: when the captain of the firſt boat, with a baſket of grains, by ſigns invited them to come again when they had ſlept, into the river, promiſing plenty of the commodity, a ſample of which, they ſhewed the Engliſh. On the 17th, in the morning,

Manner of traffic.

Mr. Towerſon ſent the maſter on ſhore with the reſt of the merchants. When they got into the river, the captain, with others came and brought grains. Not ſeeing Towerſon there, he made ſigns to know where he was, and being anſwered, that he was on ſhip-board, he aſked who was the diago or captain, for ſo they call theirs, and they pointed to the maſter of the ſhip. Then he began to ſhew his grains, but held them ſo dear, and at the ſame time had ſo ſmall a quantity, that they took but fifty pound weight of them, and came away. Then going aſhore at the little town, where they were the day before, one of the company plucked a gourd; which ſo offended the negroes, that many of them came with their darts and great targets, and made ſigns to them to depart; which they did, having but one bow, and two or three ſwords. As ſoon as they got on board, the ſhips ſet ſail; but as the wind hung off the ſea, they could not get clear of certain rocks, and therefore caſt anchor again.

This country, as far as they could perceive, was quite covered with trees, different from thoſe of Europe, and of many ſorts, with many leaves like the dock, taller than any man is able to reach.—There are certain peaſe by the ſea-ſide, having very great and tall ſtalks; one of which the captain meaſured, and found twenty-ſeven paces long; they grew upon the ſand like trees, and ſo near the ſea, that ſometimes it flows into the woods, as they might perceive by the water-marks: in this place the trees and all other vegetables are continually green; likewiſe the wind blows all day off the ſea, and all night off the land, which the maſter wondered at; but it varied ſometimes.—This night, at nine o'clock, the wind ſpringing up at eaſt, (which ordinarily about that time blew north-north-weſt from the ſhore) they weighed, and hauled off; but the next morning hauled in again to land, and each ſhip took in ſix tons of water.——Mr. Towerſon could not perceive that there was gold here, or any thing elſe of value; the people being ſo wild and idle, that they minded nothing. They might gather plenty of grains if they would take pains; but he could not perceive two towns in the whole place. There were ſome fowls in the country, but the people would not be at the trouble to catch them.

On the 18th, towards night, as they were ſailing along the coaſt, they met with certain boats, which informed them, that in a river oppoſite to them, there were grains to be ſold: but they would not go thither, leſt the Hind ſhould get before them. This river has lying before it, three great and five ſmall rocks; and on its bank, ſtand a great and little tree. They hauled this night, along the coaſt ten leagues.—On the 20th, the Hind having anchored by them among the rocks, and in foul ground, loſt a ſmall anchor. At noon, as they paſſed along, there came a negro, making ſigns, that if they would go aſhore they ſhould have grains. Where they anchored at night, there came others with grains, which they ſhewed them, and made ſigns that they ſhould ſtay. In the night alſo, they lighted a fire upon land, to direct them where to put aſhore; the like was done in divers other places upon the coaſt, where the natives ſaw them anchor.—On the 22d, they ran all day and night to double the point Des Palmas, in the whole, ſixteen leagues. On the 23d, about three o'clock, they were thwart of the point; and, before they paſſed the weſtermoſt part of it, ſaw a great ledge of rocks, which lie about three leagues weſt of it, and one or more from land. Soon after they had ſight of the eaſtermoſt part of the Cape, which lies four leagues from the weſtermoſt part; and upon the very corner whereof lie two green plats like paſtures; likewiſe to the weſt of the cape, the land parts from it, as it were a bay, whereby it may be eaſily known; four leagues beyond there appears a head-land; and about two leagues farther, the coaſt forms a great bay, like the mouth of a river; before which they caſt anchor, and ſtaid all night for fear they ſhould over-

Cape Des Palmas.

over-run a river where the laſt year they had all their elephants teeth.

Being under ſail on the 24th, about eight o'clock, there came certain boats, bringing ſmall eggs, which were ſoft without ſhells; and they made them ſigns, that within land there was freſh water, and goats. The maſter thinking it was the river which they ſought, caſt anchor, and ſent the boat aſhore, with one that knew the river, finding it was not the ſame, the boat came back, and with oars and ſail, went along ſhore. The Hart weighing; did the like, and being thirteen leagues beyond the Cape, the maſter thought he ſaw the river, when indeed they were two miles paſt it; yet the boat came from ſhore, and thoſe in her ſaid there was no river. Notwithſtanding, they caſt anchor, and the maſter going into the boat with the captain and five men, went upon the ſearch, and when they came near the ſhore, he perceived it was the river they ſought for. They found the entrance very difficult, the ſea running high. But as ſoon as they had entered, ſeveral boats came and ſhewed that they had elephants teeth, whereof they bought one of about eight pounds weight, and a little one of one pound. Then the negroes brought more teeth to the river-ſide; making ſigns, that if they would come next day, they might have more. They gave two of their captains a manillo each, and returning aboard, ſent the Hind's boat to another place, where certain boats that came from ſhore made ſigns that there was freſh water, when they got to land, they found a town but no river; yet the people brought them freſh water, and ſhewed them an elephant's tooth, making them ſigns, that the next day they would ſell them teeth enough.

In this place, and three or four leagues to the weſtward, there grows palm-trees along the ſhore, from which they make their palm wine. Theſe trees may be eaſily diſcovered almoſt two leagues off, being very high, white and ſtrait; the biggeſt ſtanding in the middle. They have no boughs, but only a round buſh at top, where they bore a hole, and hang a bottle to receive the juice which runs out of the hole, and that is their wine.——The language of this place, as far as Mr. Towerſon could perceive, differs not much from the language of that where they watered before; but the people were more civilized and comely. As to the building and apparel of one and the other, there was no difference. Here they were fondeſt of manillos and margarites; having no eſteem for the reſt of the things. About nine o'clock, there came boats from both places with elephants teeth; and after they had made Mr. Towerſon ſwear by the water of the ſea, that he would not hurt them, three or four ventured into the ſhip. Such victuals as were on board being ſet before them, they eat and drank very heartily: afterwards the Engliſh bought all their teeth, which were fourteen, ten of which were ſmall. At their going away, they made ſigns for them to come to the town next day.—As the towns lay three miles aſunder, on the 26th, to avoid loſing time, Mr. Towerſon diſpatched the maſter and two merchants, to one of them, and went himſelf, with a merchant to the other; carrying ſome of every ſort of goods, and bought twenty ſmall teeth, at both places. In their abſence, the maſter of the Hind had twelve elephants teeth on board, in exchange for manillos; and this was all their ſtock, except a ſmall goat at one place, and five little hens at the other, which they bought alſo; and then returning on board, by one o'clock ſet ſail, and went eighteen leagues, ſtill within ſight of land.——On the 28th, the wind varying, they ſtood out to ſea; then changing again, they returned towards land, which appeared like a red cliff, round, but not very high, and eaſt of that a ſmaller, behind which was a round hummock, and green, which they took to be trees. They ran not above four leagues in twenty-four hours.——On the 29th, drawing near ſhore, they perceived a large grove of trees on the top of the great red cliff; and cliffs of the ſame colour to the weſt of it, as far as they could ſee, which, as well as the ſhore, were covered with trees. They could ſee no cliffs to the eaſt, except one near it, and a mile off a river. This day and night's run was twelve leagues. 1555

Trade for teeth.

Thus proceeding, on the third of January in the morning, they fell in with Cape Tres Puntas, and in the night (as the pilots ſaid) paſſed by one of the Portugueſe caſtles, eight leagues to the weſt. The Cape when firſt ſeen appeared very high land, grown over with trees. Coming near it, they perceived two head-lands, with two bays between, directly facing the weſt of the three capes. The middle Cape is not above one league diſtant from the weſtern, although the charts make it three leagues. Right before the middle Cape lies a ſmall rock, ſo near that it cannot be diſtinguiſhed from it, unleſs one lie near the ſhore. This cape has a great heap of trees upon it, and being viewed from the eaſtward, there riſes near by it, a round green hummock. The third Cape about a league beyond the middlemoſt is a high land, like to the other two, and betwixt them comes out a little point of land, with ſeveral rocks cloſe to the ſhore. This day they anchored for fear of overſhooting a town called St. John's, and ran not above eight leagues. In the afternoon there came a boat from ſhore, with five men in her; and went along by them, as they thought, to obſerve the flags: but they would not come near them, and after a while went back.—On the 4th, in the morning, they ſaw a ledge of rocks by the ſhore; and to the weſt, two great green hills joining together, with a hollow between, like a ſaddle. The maſter judged that the afore-named town ſtood within thoſe rocks; but having ſent the boats with goods, they found none.—About two leagues eaſt of the two hills, a ledge of rocks lie out in the ſea, almoſt two miles, and beyond that a great bay, which runs in north-north-eaſt, as the coaſt doth; but the fartheſt point of land they could ſee, bore north-eaſt-by-eaſt. Beyond the uttermoſt head-land they ſaw a great red cliff, which the maſter taking for St. John's town, went thither with the boat, and found a town on the top of the hill; from whence the people waved a cloth for him to come in, there being a fine bay to the eaſt of the cliff; after waiting ſome time, they ſent a boat, with a piece of gold to ſhew, about half a crown weight; and required to know the meaſure and weight the Engliſh uſed, that they might inform their captain. Having given them a meaſure of two ells, and a weight of two angels, they went away, and preſently came with a meaſure of two ells one quarter and a half, and one cruſado weight of gold; making ſigns that ſo much they would give for the like meaſure, and leſs they would not have. Finding after an hours waiting, that they could do otherwiſe, and underſtanding withal, that the beſt places were before them; they departed and ran along the ſhore, the boat going a-head, and having ſailed about a league, paſſed a point with a ledge of rocks before it; beyond which the maſter ſpied a place, which he ſaid poſitively was the town of Don John, and ſo it proved. Night coming on they anchored as near it as they could. Next morning they perceived it to be the ſame town, and manned the boats and went thither, letting fall their grapnel a little way from ſhore. Here they waited two hours, and no boats came near them; for it ſeems the year before, the Portugueſe took a man from them, and then drove them from the place, with their guns demoliſhing one half of their town. The Hind's boat went into the bay, which lieth to the eaſt of it, and found a fine river. After this, the people waved to them to come in; which done, the negros came down, and made them ſigns that they had gold. But none would venture on board the boats, probably becauſe they had none of their own, which the Portugueſe might have ſpoiled. For the Engliſh being well armed thruſt the boats heads aſhore; and then the captain, who was a grave man, came with his dart

in

1555 in his hand, followed by six tall men with darts and targets: the darts were all of iron, handsome and well pointed. After them came another carrying the captain's stool. The English having saluted him, by taking off their caps, and bowing, he, like one who thought much of himself, did not move his cap, and hardly his body, but sat him down very solemnly upon his stool. As to his attendants, they put off their caps and bowed. He was cloathed, from his waist downwards, with a cloth of that country's manufacture wrapped about him, and made fast with a girdle. His cap was also of that country's cloth: he went bare-legged and barefooted, as well as naked upwards. Some of his servants were dressed like himself, others had nothing but a cloth between their legs, made fast behind and before to their girdles, with caps of skins, some like a basket, and some like a wide purse.

The chief.

His state and habit.

Their cloth, cords, and fishing lines, are made of the bark of certain trees, which they manufacture very neatly. They likewise work gold very well, and make curious implements of iron, as darts, fish, and other hooks, with iron heads, and large two-edged daggers, some of them as long as a wood knife, exceeding sharp, and bent, after the manner of Turky blades, which most of them have hanging at their left sides. Their targets are also made of bark, and very close wrought; they are besides very large, and as to form, square, somewhat longer than broad; so that kneeling down, they cover their whole body.—— Their bows are short, and pretty strong, it being as much as a man can do to draw them tight;—— the string is of bark, and flat, and about a quarter of an inch broad.

Mr. Towerson sent the captain two ells of cloth, and two basons, as a present. He sent back for a weight answering the same measure, but would not take a weight of two angels, nor suffer the town to buy any thing but the brass basons, not liking the other wares; so that they sold that morning 74 basons for about half an angel weight, one with another, and nine white basons for a quarter of an angel each.—About two o'clock the captain came again, and presented Mr. Towerson with a hen, and two great roots; letting him know, by signs, that the country people would come to his town that night, and bring plenty of gold. Accordingly, at four o'clock there came about 100 men, under three captains, well appointed with their darts and bows. When they drew near, they stuck their darts in the ground by the shore, and the captains having sat down on stools brought them, they sent a young man on board, who brought a measure with him of an ell, one quarter and one sixteenth part, insisting on having four times that quantity for a weight of an angel and twelve grains. Mr. Towerson offered him two ells for two angels weight, and at last, when it grew late, he came down to four; but falling no lower, they departed. This day they took for basons, six ounces and a half, and one eighth part. The sixth in the morning, they manned the boat and the skiff well, for fear of the Portuguese, who, the last year, had taken a man from the other ships, and went on shore, because the negros had no boats to meet the English. They were presently accosted by the same young man, who seemed to have dealt before with the Portuguese, for he could speak that language a little, and was perfect in weights and measures. He offered, as he had done before, one angel and 12 grains for four ells, making signs; that if they would not take that, they might depart; which they did, offering him three ells of rotten cloth for that weight, which he refused. The ships being a league off, they sent back again for sand and ballast.

The captain perceiving that the boats brought no merchandise, and that their intention was to sail away in earnest, made signs again to know if they would not give the four ells; and when they saw the boats ready to depart, they came and gave the weight of the angel and 12 grains, which was required before; and made signs, that if the boats would come again, they would take three ells. For quicker dispatch, Mr. Towerson, and John Savill, went on shore in one boat, and the master, (John Makeworth) and Richard Curligin in the other; the first took 52 ounces, and the other boat eight ounces and a quarter. Next day Mr. Towerson went on shore again, and took three pounds 19 ounces by noon, when they had sold most of the cloth they carried, and many of the people were departed. Those who remained, having made signs to fetch them some earthen basons, Savill and Makeworth went again, and took 18 ounces of gold, and then came away, seeing the people departed at a certain cry that was made. While they were on shore, there came on board a young fellow, who could speak a little Portuguese, with three more, to whom Mr. Towerson sold 39 basons, and two small white saucers for three ounces, &c. which was the most they made by basons. And in the afternoon, the master sold five basons to the same fellow for half an ounce of gold. This fellow seemed to have been taken by the Portuguese, and escaped from the castle; for he said they were bad men, and made them slaves if they could take them, putting irons on their legs. He told them also, that they would hang all the French and English they could take, (which names he pronounced very well;) that there were 60 men in the castle, and that every year a great ship, and a small caraval arrived thither, and that Don John was at war with the Portuguese. This encouraged Mr. Towerson the more to go to his town, which lies but four leagues from the castle, whence their men were beaten the last year. This Negro came on board the ship without fear, and demanded, why they had not brought back the five men who were taken the year before? He answered, that they were in England, well used, and kept only till they could speak the language; after which, they should be brought again to assist the English in their affairs here. He then spoke no more of the matter.——The boats being come on board, they set sail, and a little after, observed a great fire on land, by the light whereof, they might discern something white, which they took for the castle. And for fear of passing beyond the town of Don John, they anchored two leagues off shore; for it is hard to reach a town here if a ship once overshoots it. This day they took seven pounds and five ounces of gold. The town lieth in a great and very deep bay. The people here desired most to have basons and cloth; some, however, would buy trifles, such as knives, horns; and some of the men going on shore, sold a cap, a dagger, a hat, &c.

They shewed Mr. Towerson a certain coarse cloth, which seemed to be made in France;—the wool was coarse, and the thread small as worsted, and striped with green, white and yellow. Several of the people wore large glass beads about their necks.

In the morning of the 8th, the English saw the castle, but not till they were at Don John's town, on account of a mist which obscured their view. Hauling in shore, they anchored here in seven fathoms. In some places the land appeared low, in others high, and covered with verdure. The town was but small, consisting of about 20 houses, mostly incompassed with a wall about six feet high, made of reeds or sedges. After waiting for some time, they sent their boat on shore, and was informed that Don John, who was gone up the country, would return at sun-set. The person who gave this information, received an ell of cloth for his reward.

A traffic was now began with the natives, though Don John did not return at the expected time. Going on shore again there came out a boat, with a quantity of gold, and after long chaffering, the measure of cloth to be sold was fixed at three ells wanting a nail, and their weight at an angel and 20 grains; after which he took a pound and a quarter of an ounce of gold, in the space of a quarter of an hour.

The natives having made signs that he should stay till they had parted their cloth, when they would return; but receiving a message from the town while they

they were thus employed, they waved their hands to the Engliſh, ſignifying, that they wiſhed them to land at the ſame time that they fled to the woods with their merchandiſe. This conduct naturally creating ſome ſuſpicion, the crew went on board the Hind again, ſome Portugueſe having ſhewn themſelves upon an adjacent hill. 1555

In the mean time, Mr. Towerſon being curious to know what the Hart done, went towards her in the Hind's boat; and when he was near her, two pieces of cannon were fired, and he ſoon ſaw the boat and ſkiff hurrying from the ſhore. Being come on board, he was told what had happened, and that the goods had been delivered to Don John and his ſons; while they waited for his anſwer, the Portugueſe had ruſhed upon them from the hill, which was the occaſion of firing their ordnance. This circumſtance obliged them to ſail along the coaſt, after having exchanged ſome ſhot with the enemy.

On the night of the 11th, twenty-two boats were perceived running along ſhore; on which account they ſet ſail on the 12th, and ſaw ſeveral towns, many people from which came out, to take a view of them; but no boats appeared. About four miles from the eaſtermoſt of theſe, ſome negros came out upon the rocks, waving a white flag, but the Engliſh would not ſtay, conceiving themſelves to be near the principal place where (having weathered a point of land) they anchored in five fathoms water, about half a mile from the ſhore.

They ſent out their boat about ten in the forenoon; but none of the natives would come near them, a circumſtance which they judged to be occaſioned by four men having been forcibly carried off from that part of the coaſt the year before. Towards night, however, a great number of people came to the water-ſide, waving a white flag, and their captain came and ſat down under a tree, in ſight of the ſhip. It was not, however, without ſome difficulty that any of them were prevailed on to come on board, by offering them a preſent for the chief, whom they called their Grand Captain.

The Engliſh went on ſhore on the 13th, but having ſtaid till ten o'clock without being met by any body, they made preparations for returning; but the negros obſerving their motions, came down in haſte with a flag, to induce their gueſts to ſtay, making ſigns that their captain would come preſently. During this time a ſmall veſſel paſſed by, which was little noticed by the Engliſh, the natives ſtill ſignifying that their chief would come, and that a free traffic ſhould be eſtabliſhed. And ſoon after, a man clothed like their captain, appeared, ſaluted the adventurers in a friendly manner. Then one of the chief among them went and ſeated himſelf under a tree. But a number of theſe people were preſently diſcovered in a hollow way, and behind them the Portugueſe had planted a gun which was ſuddenly fired at them, but over-ſhot the mark.

Having met with the Hind on the 14th in the morning, both veſſels turned eaſtward, and went where the Trinity had been the year before. The maſter took the Hind, while Mr. Towerſon remained to try what could be done farther.

As ſoon as the negros ſaw one ſhip depart, they expected the other would follow; in order to prevent which, a boat was ſent with four people, who deſired the Engliſh would deliver one man into their hands, offering two pledges for his ſecurity. Accordingly a ſervant went, and two of the natives were ſent on board in his room. Notwithſtanding this friendly intercourſe, three guns were fired at the Engliſh, which, as it appeared, were diſcharged by a Portugueſe brigantine.

The captain came down the next morning with 100 men; and he and ſeveral others brought their wives down to the ſhore. Here the Engliſh continued trafficking for gold; and on the 23d ſome other negros made ſigns that they would deal with them. To theſe they ſold bells, ſheets and thimbles, and received above two pounds of gold in exchange. The 25th they diſpoſed of ſeven dozen of ſmall bells, and other things; after which there being no more gold to be had, they departed to leeward, to ſeek the Hind. About five o'clock they had ſight of her, and coming up, underſtood ſhe had made ſome ſales. Next day they received out of the Hind, 48 pounds three ounces of gold, which ſhe had taken in their abſence; and at the requeſt of a negro, who came from the captain, they went to ſhore with their merchandiſe, and took ſeven pounds and one ounce. At this place the negros required no gages, but in the evening ſent a boat on board which continued all night, to let the merchants know, that they would alſo come the next day. The 27th they took in both ſhips eight pounds one ounce, three quarters and an half of gold. The 28th the ſale was made for the company, and one pound and half an ounce of gold was taken. The next morning, two guns were heard from ſhore, which they judged to be ſhot off either by the Portugueſe, or their negros, they manned out their boat armed, and went to land; but they were gone. The 13th they made more ſales for the company, and the maſter next day ſent the boats to take in baliaſt, they met with the negros who had dealt with the ſhips the day before: they were fiſhing, and having no gold, exchanged fiſh for handkerchiefs, helping the men to load the ſand into the bargain.—On the firſt of February, removing to another place, they took one pound nine ounces, and three quarters of gold. The 2d they made more ſales; but finding moſt of their fare was very indifferent, they reſolved to ſtay no longer on that coaſt. The 3d and 4th they made ſome ſales, though not great, and finding the wind to come off ſhore, ran along it weſtwards. Upon this coaſt they found, that ordinarily, about two o'clock in the morning, the wind comes off the ſhore, at north north-eaſt, and continues till eight in the morning, and all the reſt of the day, and at night it blows from the ſouth-weſt. As for the tide or current, upon this ſhore, it goes continually with the wind. On the 5th they continued ſailing, and thought to have met with ſome Engliſh ſhips, but did not. Next day they ſteered ſouth-weſt, to form under the land, and ran 24 leagues. The 13th they thought themſelves, by their reckoning, to be clear of Cape das Palmas, and ran 12 leagues. Continuing their courſe, the 20th they found themſelves in 22 degrees. This day William King, one of the Hart's men, who had been long ſick, died in his ſleep. His cloaths were diſtributed to thoſe that wanted them, and his money kept to be delivered to his friends in England. On the 30th they were under the tropic; and next day made eighteen leagues, ſailing on till the 20th of April, they then found themſelves in the latitude of the Azores. The 7th of May, they fell in with the ſouthern part of Ireland; and going on ſhore, had freſh drink, and two ſheep of the country people, who were wild Kernes, with ſuch other victuals as they judged would ſerve them till they arrived in England, for which they gave them gold. On the 14th, with the afternoon's tide, they caſt anchor in the port of Briſtol called King-road.

1556

THE SECOND VOYAGE OF MR. TOWERSON TO THE COAST OF GUINEA.

THE ſhips employed in this voyage, were, the Tyger of London, Admiral, of 120 tons, Mr. Towerſon commander; the Hart, of London, 60 tons, John Skire, captain; and a Pinnace of 16 tons, John Davis, captain. They carried back with them the negros which had been brought by force from Guinea two years before, as mentioned in the former voyage. On the 14th of September, 1556, the Tyger departed from Harwich for the Iſle of Scilly, to meet the Hart and pinnace, which were rigged and victualled at Briſtol; ſhe arrived there the 28th, but they were not come; and after waiting for them ſeveral days, returned to Plymouth the 12th of October. At length they joined her, and the 15th of November all departed together from Plymouth at one o'clock in the afternoon. On the 28th, they had ſight of the iſle of Porto Santo; and next day, in the morning, of Madeira. On the 3d of December, they fell in with the Iſle of Palma, and the 9th were thwart of Cape Blanco, and found there certain caravals employed in fiſhing. On the 19th, they found themſelves in the height of Sierra Leona, and all this day ran thwart of certain currents, which ſet weſt-ſouth-weſt, ſo ſwift as if it had been the overfall of a ſand; making a great noiſe like a ſtream or flood-gate, when the water is ſhoal; yet they could find no ground with 150 fathoms. On the 30th, they fell in with the Coaſt of Guinea, which they diſcovered about four leagues off. The view conſiſted of three hills, which lay north-eaſt-by-eaſt from them; and betwixt the two northermoſt, were two great trees: and a little more to the north-weſt certain hummocks.—Having ſailed ſomewhat into ſhore, they judged they were ſhot a little beyond the river De Seſtos, and looked about to fetch it. A little after they ſaw three ſail of ſhips, and two pinnaces in the weather of them, and made ready to meet them, hauling off the ſhips to gain the wind as near as they could. "Having ſailed about an hour or two, they alſo tacked about, and went the ſame courſe to make themſelves ready; then the Engliſh chacing them, they made off: but when they had put themſelves in order, they tacked about again, and came up very finely appointed with their ſtreamers, pendants, enſigns, and the noiſe of trumpets, very bravely.—When both fleets met, they had the weather of ours, which being determined to fight, waved them to come under their lee. This they ſtoutly refuſing, the Engliſh demanded of them whence they were? they ſaid of France; and being told our ſhips were of London, they aſked what Portugueſe ſhips we had ſeen? The anſwer was none but fiſhermen. They ſaid, there were certain Portugueſe ſhips gone to the Mina to defend it, and that they met with another at the river Seſtos, of 200 tons, which they had burned, having ſaved none but the maſter, two or three negros, and a few others, grievouſly burned, whom they left on ſhore there. The names of the ſhips were, the Eſpoier, of Hableneff, Admiral, Denis Blundell, Captain; the Louriere, of Roan, Vice Admiral, Jerome Baudet, Maſter; the third was of Honfleur; the Maſter called John de Orleans. The captain of the admiral, and ſeveral others, came on board our ſhips in a friendly manner; deſiring we would keep them company, becauſe of the Portugueſe, and to go to the Mina with them. The Engliſh told them, they had not watered, and were juſt fallen with the coaſt. They made it appear, that they were fifty leagues beyond the river De Seſtos; yet ſaid, there was water enough to be had, and promiſed to help them to it with their own boats, becauſe they were deſirous to have their company. They declared farther, that they had been ſix weeks upon the coaſt, and had gotten but three tons of grains among them all. The Engliſh weighed this propoſal: they conſidered that if the Mina coaſt was clear, the French would ſpoil their market, in caſe they went there before them; and that, if it was not clear, and the Portugueſe ſhould take them, they would underſtand that they were behind, and ſo lie in wait for them. They farther conſidered that in caſe they went with them, they ſhould fare as their own companions, if the coaſt was clear; and that if it were not clear, they would be ſure to be ſtronger than the Portugueſe. Upon theſe conſiderations, the Engliſh told them, that the next day they would confer more largely of the matter. Whereupon they deſired Mr. Towerſon to come next day to dinner with them, and to bring with him the maſters of the ſhips and ſuch merchants as he ſhould think fit; offering to give them water out of their own ſhips."

On the 31ſt, in the morning, the admiral having ſent his boats on board the Tyger, Mr. Towerſon took the maſters with ſome of the merchants, and went to him. He had provided a good banquet, and treated them very friendly. He renewed his requeſt to keep him company, promiſing them half of the victuals, or whatever elſe they fancied on board his ſhips throughout the voyage; and offering even to furl his flags, and be at their command in every thing. In the end, they agreed to come to an anchor with one of his pinnaces, and an almaide, which they had brought out of France to ſeek water. As for their own pinnace, ſhe anchored out at ſea, and would not come near them.

The boats returned on the firſt of January, without finding any river. On which they ſet ſail, and came at length to a river; going into which next day, they bargained and took five ſmall elephants teeth. On the 3d, they took five more. On the 4th, the French admiral and they, took fifteen ſmall teeth. This day they went to ſeek elephants, with thirty men well-armed, with harquebuſſes, pikes, long-bows, croſs-bows, partizans, long ſwords, and bucklers. —— They found two, which they hit ſeveral times with harquebuſſes and long-bows, but they went away, and hurt one of the men. On the 5th, they ſet ſail, and ran along the coaſt. The 6th, they fell in with the River de San Andre; to the weſt of which there is a high land, and a fair bay. Next day they went in and found no village, but wild negroes, not accuſtomed to trade. It is a very great river, and is ſeven fathoms deep in ſome places at the entrance; having taken in water, they ſet ſail. On the 8th, they proceeded along ſhore, and came to the red cliffs, and went forward next day alſo. On the 10th, they conferred with Captain Blundell, admiral of the French ſhips; Jerome Baudet, his vice-admiral; John de Orleans, maſter of a ſhip of ſeventy tons; and their merchants. It was agreed, that to whatever place they came, they ſhould be of one mind, and not hurt each others market; to which end, ſome of their boats ſhould ſettle the price for all, and then one boat make ſail for each ſhip. This night their boats going to ſhore, met with certain negros, who ſaid that they had gold, and therefore they would caſt anchor.—On the 11th, they took but one half angel weight of four grains, all the day, which they dealt for by hand; for the people of this place, called Allow, had no weights.

Allow.

On the 12th, running along the coaſt, they found only one town; but no boats would come out of it, and therefore they went on. On the 13th, Mr. Towerſon went along the coaſt in his boat, and paſſing by ſeveral ſmall towns, was waved to land at three places; but the ſea beat ſo high upon the ſhore, that it was not poſſible, neither could the negros have come to him, if they had had boats, for he could ſee none but at one place. There a boat ventured out, but was over-ſet by the violence of the ſurf, and one of the men drowned; for which misfortune the people made ſuch loud lamentations, that the Engliſh could eaſily hear them. They got his body out of the ſea, and carried it to their town. On the 14th, they came within gun-ſhot of the caſtle, from whence an almaide was immediately ſent out to obſerve them; and perceiving they were not Portugueſe, ran back to the town again; for there is a great town by the caſtle, called by the negros Dondou. Without this there lies two great rocks like iſlands, and the caſtle ſtands upon a point, which appears almoſt like an iſland. Five or ſix leagues, before they came to the caſtle, the land was high; and low for about ſeven leagues before they came to it, and then they found the land high again. This caſtle ſtands above five leagues to the eaſt of Cape Tres Puntas. Here Mr. Towerſon went in the boat with his negros, and ran along the ſhore, as far as the cape, and found two ſmall towns, but no boat at them, nor any traffic to be had. Here his negroes underſtood the people well; one of them called George went aſhore at all the places, and was well received. Next day he went along the ſhore, and about three leagues beyond the eaſtermoſt part of the cape, ran into a good bay, and found a ſmall town and ſome boats belonging to it; but the natives for a long time would not come out. At laſt, by the perſuaſion of his negros, one boat came, with which he ſent George aſhore; and after he had talked to them, they approached the boats without fear. He gave their captain a baſon, and two ſtrings of margarets; and they ſhewed him about five ducats weight of gold, but required ſo much for it, that he would not take it: becauſe the French and Engliſh had agreed to ſettle the price of goods all in one boat; after which, every man was to ſell in his own boat. This place is called Bulle: and here the inhabitants were very glad to ſee the negros that came with him; and ſhewed them all the friendſhip they could, when they found they were the men, who had been taken away, and were now brought back again. Here the boats were informed, that a month before two ſhips attacked one, and put it to flight, and that a little before one French ſhip, being met by four Portugueſe made them ſhear off. This they took to be the Rowbarge; for the French, who were in company, judged her to have been there about that time, with her pinnace. They ſaid alſo, that after her, went firſt a ſhip of 240 tons, called the Shaudit; and then another of eighty, both bound for the Mina; and that they had loſt one at Cape Verde, called the Louriere of Diepoe, and another at the River de Seſtos.—On the 16th, Mr. Towerſon went along the ſhore, with two of the French pinnaces, and found a bay and river; after which they went to the town called Hanta, twelve leagues beyond the Cape. Here his negros were well known, the people weeping for joy when they ſaw them, and aſked where Antony and Binne were: the others told them they were at London in England, and ſhould be brought home the next voyage. After this, the native negros came aboard with them, and brought a weight which was ſo ſmall, that they could not give them half their demands. They informed the boats, that there were five ſhips at the caſtle, and one pinnace; that the Portugueſe did much harm to their country, and that they lived in fear of them: but were very glad when the Engliſh told them, that they would defend them from thoſe diſturbers. On the 17th, they went on ſhore along with the French, but did no great good, the negros were ſo unreaſonable. Then departing, they came to Shamma, (two leagues beyond) and went into the river with five boats well appointed with men and ordnance, under ſound of trumpets and drums; for they thought here to have found ſome Portugueſe, but did not. After ſending their negros on ſhore, ſeveral of them followed, and were very well received: the natives were overjoyed to ſee their country-men again, eſpecially a brother's wife of one, and an aunt of another. In ſhort, all the people ſhewed as much fondneſs for them as if they had been their own brethren. The Engliſh comforted the captain, and told him, they need not fear the Portugueſe, for they would defend him from them; hereupon they ordered their boats to ſhoot off their baſes and harquebuſſes. They likewiſe cauſed their men to land with their long bows, and ſhoot before the captain and his people; who were much ſurpriſed, eſpecially to ſee them ſhoot ſo far as they did, and tried to draw their bow, but could not. When it grew late, they departed to their ſhips, for they looked every hour for the Portugueſe. Here the negros gave them to underſtand, that there was an Engliſh ſhip at the Mina, which had brought one of the negros again, whom Robert Gainſh took away. On the 18th, they went into the river with no leſs ſtrength than before; and concluded with the negros to give them for every ſuffe, two yards and three nails of cloth, and to take for it one angel and a ducat; they took in all ſeventy ducats, of which the French had forty, and the Engliſh thirty. On the 19th, they went aſhore, every man for himſelf, and took a good quantity of gold; Mr. Towerſon for his own part, took four pound two ounces and a half of gold; and the Hart's boat twenty-one ounces. At night the negros gave them to underſtand, that the next day the Portugueſe would be with them by land or ſea; and when the boats were ready to depart, they heard harquebuſſes ſhoot off in the woods, which they knew to be the Portugueſe, who did it to frighten them, and make them give over their traffic, but durſt not venture nearer themſelves. On the 20th, the Engliſh manned their five boats, and a great boat of the French, with their and the admiral's men. Twelve of them had on their corſlets, and the reſt were all well armed; there were alſo four trumpets, a drum, and a fife, and the boats were adorned with ſilk ſtreamers and pendants. In this order they went into the river and trafficked; their men of war lying off and on in the river to waft them; but they heard no more of the Portugueſe. This day the negros told them that ſome ſhips were arrived at Hanta.

On the 21ſt the Engliſh manned their boats, and went to a place a league to the weſtward, and there found many negros with another captain, and ſold at the ſame rate they had dealt with the others. The 22d they went on ſhore again, and trafficked quietly; Mr. Towerſon taking four pounds ſix ounces of gold. On the 23d, about night, the negros, with their captain, came and told them, that the king of Portugal's ſhips had ſailed from the caſtle, with a deſign the next day to ply up to the windward, and come to them, warning them to be on their guard. They told them, that they were very glad of their coming, and would be ready at at all times to meet them. To let them ſee they were ſerious, they ſounded their trumpets, and ſhot off ſome guns, at which the negros rejoiced, and intreated them to fall on the Portugueſe without mercy, if they offered to hinder their traffic, promiſing, if they came by land to give them notice. On the 24th they went on ſhore with their trumpets and drums, and trafficked; the captain of the town that day dining with Mr. Towerſon. The next day, while their boats were on ſhore, the ſhip deſeried five ſail of the Portugueſe; and having ſhot of their ordnance to call them away, they threw every man his caſk on ſhore for water, and returned: but by that time they had weighed and given out orders, it was dark. They ſet ſail, and lay cloſe all night to

1556.

Caſtle del Mina, and Dondou.

Trade for gold

Hanta town.

get

1556 get the wind if they could, and make themſelves ready for the fight. The Tyger coming near ſome of them, one ſhot off a gun, which they judged to be the Portugueſe admiral, for the reſt of his fleet to come up and ſpeak with him. The 26th, the Engliſh ſhips coming in with the ſhore, had fight of the Portugueſe, where they rid at anchor, and bore with them. They gave all their men white ſcarfs, that the French might diſtinguiſh one from the other, if it came to boarding; however, night coming on they could not fetch them; but they continued within a demi culverin ſhot of them. "The 27th they weighed, as did the Portugueſe, and about ſeven o'clock, (ſays our author) got the wind of them, which, when the enemy perceived, they tacked about to ſhore again, and our ſhips after them. When they were ſo near the ſhore, that they could not well run any farther that way, they tacked about again, and lay to the leeward. Our ſhips tacked at the ſame time, being a-head of them, took in their topſails, and waited for them. The firſt that came up was a ſmall bark, which carried good ordnance, and ſailed ſo well, that ſhe valued nobody. She ſhot at the Tyger, but overſhot her, and then let fly at the admiral of the French, and ſhot him through in two or three places. After this, ſhe went a-head of the Engliſh, becauſe they were in their fighting ſails. Then came up another caraval, under the Tyger's lee, and ſhot both at her and the Frenchman; ſhe hurt two of his men, and ſhot him through the mainmaſt. Next came up their admiral under the lee of the Tyger alſo; but he was not able to do them ſo much harm as the ſmall ſhips, becauſe he carried his ordnance higher: neither was the Tyger able to make a good ſhot at any of them, becauſe ſhe was ſo weak in the ſide, that ſhe laid all her guns under water. Mr. Towerſon therefore reſolved to lay the great ſhip a-board: but as ſoon as the French admiral went room with him, he fell a-ſtern, and could not fetch him. After that he fell behind two caravals more, and in ſhort could fetch none of them, but fell to leeward of them all; and tacking about to the ſhore, left the Engliſh to ſhift for themſelves. The other two Frenchmen kept the wind alſo, and would not advance. The Hart was a-ſtern, ſo that ſhe could not come up to them. For all this the Tyger hoiſted her top-ſails, and gave the enemy chace; and after ſhe had followed them two hours to ſeaward, they tacked about again towards ſhore, thinking to hit her as they went by, and to get the wind of the French admiral; ſhe tacked about with them, and kept ſtill the wind; but continued to the Engliſh ſhips, as well as the French, run to ſeaward, and left her in the lurch. She paſſed ſtill along, and kept the wind of them to ſuccour the French admiral, who was under all of their lees. Being come up with him, every one gave him a broad-ſide: after which they tacked about again, and durſt not board him, becauſe they ſaw the Tyger in the weather of them; otherwiſe, without doubt, they would have taken or ſunk him: for the three ſmalleſt went ſo faſt, that it was not poſſible for a ſhip to board them; and carried ſuch ordnance, that if they had had the weather-gage, they would have gauled three of the beſt ſhips in the confederate fleet. As for their admiral and vice-admiral, they were both well appointed. When the Frenchmen were clear of them, he lay as near the wind as he could; and ſeeing the Tyger ſtill follow them towards the ſhore, ran to ſea after the reſt, and left her all alone. The Portugueſe perceiving this, turned about with her, and ſhe with them, to keep the wind, running ſtill within baſe-ſhot of them; but they ſhot not at her, becauſe ſhe had the weather of them, and ſaw that they could do her no hurt. Thus they followed one another till night, and then ſhe ſhot them: as for all the reſt of the ſhips, they crowded all the ſails they could, and ran to ſea, praying for the Tyger, as they confeſſed, which was all the help they deſigned her.

"On the 28th ſhe met with the vice-admiral, the pinnace, and two of the Frenchmen; the third, which was the Roan ſhip of 80 tons, was fled clear off: Mr. Towerſon went in the ſkiff, to know why they left him in ſuch a manner. Skires's excuſe was, that his ſhip would not ſteer; and as for the pinnace, Davis ſaid ſhe would do nothing, and that he could carry her no farther, for her rudder was ſo ſhattered, that the Hart was forced to tow her. Then he went to the French admiral, whom he found to be a man of courage, but one-half of his men were ſick and dead: the ſmaller Frenchman ſaid, he was in the ſame condition, and that his ſhip would bear no ſail: ſo that he was not able to do any thing. After this, the French durſt not anchor, for fear of the Portugueſe. The 29th the maſter of the pinnace came to tell him, that they were not able to keep her any longer, her rudder, with all the iron work, being broken, both aloft and below. It was therefore agreed to break her up, and put the men into the Hart. Having taken out of her four baſes, one anchor, and certain fire-wood, they ſet her on fire, and afterwards ran along the coaſt.—The 30th, they ran in ſhore, and ſpoke with certain negroes, who told them, that ſome French ſhips had been there; but there was no dealing with them, they were ſo unreaſonable. Next day Mr. Towerſon went aſhore, but did not traffick. The 1ſt of February, ſeeing they could not bring the negroes to any reaſon, they weighed, and came to another place ſtanding on a hill. The 3d day he went to a town four leagues from them, and ſhooting off two pieces, the captain came; who being known to Thomas Rippon, he was ſent to ſhore. As ſoon as he landed, he was remembered by the captain, and divers of the negroes, who aſked for Mr. Towerſon; and being told that he was in the boat, the chief immediately cauſed two boats to put to ſea, and ſeeing Mr. Towerſon at a diſtance, called out to him, and ſeemed to be very happy on the occaſion, ſo did all the company who knew him. He made him a preſent, according to the cuſtom of the country, and cauſed the Frenchman to do the ſame, promiſing to treat with him the next day. That night, becauſe it was late, he would not talk of any price, but left a pledge, and took another of Mr. Towerſon. The 4th, going on ſhore, he found that the ſhips of France, which had been there, had done much hurt to the markets: yet took five ounces and a half of gold. The 5th he took eight ounces, and 1-8th part of gold; but obſerving, that the negroes perceived the difference betwixt the Engliſh and the French cloth, which was better and broader, he told Capt. Blundel, that he would go to leeward, becauſe he found he could do no good where his cloth was ſold, at which Blundel was concerned. On the 6th, there came an Almade and negros aboard, requeſting him to go to their town, where they ſaid there was much gold, and many merchants. He went, and found their old captain gone, and another in his place; but the merchants not being come down, they did nothing that night but give pledges. On the 7th, George the negro came to him, having followed them at leaſt 30 leagues in a ſmall boat. When he came, the negros and the Engliſh ſoon concluded about the price; and Mr. Towerſon took this day five pounds one ounce and three quarters of gold. This Negro, who had been left at Shamma at the time of the fight, ſaid, that he ſaw the action from ſhore; that when our ſhips went away, the Portugueſe came to their river, and told them the Engliſh had ſlain two of their men with a cannon; (this ſhot from the Tyger) and that they required harbour there; but the captain of the Shamma would not ſuffer them; and now they took many pounds of gold. On the 11th came Jerom Baudet, vice-admiral of the French, and his pinnace, ſaying, that where they left them, there was no good to be done, and therefore he would go to the eaſtward; but they told him he ſhould not, and commanded him to go to his company, which he was appointed to be with. This he refuſed to do, till three or four ſhot were made at the pinnace; and when the ſhip ſaw that, they both tacked about, and ran to ſea. The Engliſh took this day, one pound five ounces. The

12th,

12th, there came one of the French pinnaces laden with cloth, and would have made a ſale, but Mr. Towerſon would not ſuffer him, and ſending him on board the ſhip, cauſed him to ride there all day. They took five pound ſix ounces and a half of gold; and next day four ounces more of ſome negros. On the 6th, they came to another town; and next day Mr. Towerſon going on ſhore, underſtood that three of the Portugueſe ſhips were at the caſtle, and the other two at Shamma. The captain, who was gone to ſpeak with the king, on his return brought a weight and a meaſure to the merchants; and Mr. Towerſon ſent a man to the king, and to the principal town.

The natives now began to trade with their gueſts, who acquainted the king by meſſage, that they wanted proviſions. The meſſengers were very well received by that prince, whoſe name was Abaan, and he ſent word that he had but little gold, but if they would ſtay he would ſend for ſome up the country; he added, that they might then find vent for their wares in general; but as to cloth, the French had overſtocked the market.

Our voyager thus deſcribes this town.—"It ſtands about four leagues within land, and appeared as big as London, (in the year 1556) but the buildings were no better than in other places. There was abundance of that country corn in the neighbourhood. On one ſide of the town were computed about 1000 ricks of wheat, and another ſort of corn called mill, (millet). Strict watch was kept there every night, and they had cords with bells to them, ſtretched acroſs the way that led into the town; ſo that if any one touched the cords, the bells rang, and then the watchmen run to ſee whom they were. If they were enemies and paſſed the cords, they took them by letting fall nets hung for that purpoſe over the roads, which they were obliged to paſs, and there was no getting otherwiſe to the town, by reaſon of the thickets and buſhes which were about it; it was alſo walled round with long cords, bound together with ſedge and bark of trees."

[This town ſeems to have been a place called Guaffe, which however was by no means ſo big as London in 1556. The nets and walls of cords, if the natives really uſed ſuch muſt have been but a poor defence indeed; but we have given the paſſage as it ſtood, as it is not certain what place is meant in the original.]

At this town the Engliſh arrived about five in the morning, travelling by night, in order to avoid the heat. The king ſent for them three times, and would not receive their preſent, till the laſt time of their attendance.

"After this, ſays our author, he cauſed a pot of palm wine to be brought, and made them drink. Throughout the country, before they drink, they uſe certain ceremonies; firſt they make a hole in the ground, and put ſome of the liquor into it; then they caſt the earth upon it which they dug out before. This done, they ſet the pot on it, and with a little cup made like a gourd, take out ſome of the drink, and lay it on the ground in ſeveral places. In many parts they have certain branches of palm ſet in the earth before them; and there they put in ſome drink, doing great reverence every where to theſe trees. The ceremony being over, the king took a cup of gold, into which wine being poured he drank, the people at the ſame time ſaying, *Abaan, Abaan!* with certain other words, juſt as they do in Flanders on twelfth night. When the king had drank, they gave liquor to each; after which he diſmiſſed them. In quitting the king's preſence, it is the cuſtom for every one to bow three times towards him, at the ſame time waving both hands together. The king has commonly eight or ten men with grey beards ſitting by him." 1556

From this time, till the 28th, the Engliſh continued trafficking for gold, of which they took about 15 pounds weight, and departed, when it appeared that there was no more gold to be had in exchange for their commodities.

As they proceeded, paſſing by the caſtle del Mina, they there ſaw the five ſhips at anchor; and at night they reached Shamma.

A tall ſhip of about 200 tons burden was ſeen on the 3d to the windward of them, at the diſtance of about two leagues; and ſoon after a ſhip and a pinnace were diſcovered aſtern of her. Finding theſe to be a new fleet, lately come from Portugal, they weighed and got to ſea, when the Hart fell to leeward. At laſt, obſerving the admiral to be a-ſtern of his company, the Tyger reſolved to face them again; but her conſort was too far to leeward, and by the manner in which theſe on board behaved on coming up with them, it ſeemed as if they had done it on purpoſe.—On the 18th, Mr. Towerſon loſt ſight of her after paſſing Cape Menſurado, and concluded that it was the maſter's determined reſolution to part company. They came in ſight of two ſmall iſlands, which they judged to lie about ſix leagues from Sierra Leona, from whence by their reckoning, they ſhould have been 40 leagues diſtant. This could only be attributed to a ſtrong current ſetting to the north-weſt.

On the 15th of April they met with two large Portugueſe ſhips, which they ſuppoſed were bound to Calicut; and on the 23d of the ſame month were met and engaged by a French veſſel, which they obliged to ſheer off, with conſiderable damage.

After conſulting together on the 28th, they agreed to go into the Severn, and to proceed from thence to Briſtol; but the ſame night they came to the Lizard, and the wind not favouring their deſign, they put into Plymouth;—and thus ended their voyage.

Mr. TOWERSON's THIRD VOYAGE TO THE COAST OF GUINEA.

THEY departed again from Plymouth Sound on the 30th of January, with three ſhips. The admiral was the Minion; the Chriſtopher was the vice-admiral; the third ſhip was the Tyger, and they had with them a pinnace called the Union.

Theſe were all bound for the Canaries, and the day after they ſet out, met with two Danzickers, whom they examined, and finding French property on board, made prizes of them. And now a diſpute aroſe whether the ſhips ſo taken ſhould be brought into Spain or England; but Mr. Towerſon being ſtrictly enjoined not to prolong the time, obſerved that it would be the height of imprudence to attempt bringing them into any port. And it was at laſt determined that each of the ſhip's crews ſhould take what was moſt proper and neceſſary out of the prizes.—This was agreed to; but the Engliſh ſailors ſo effectually ſtripped the Danzickers, that Mr. Towerſon pitying their condition, thought proper, after having ſecured the lawful prize goods, and had taken an acknowledge-

1556 ment under their hands, that they were laden partly on the French account, to reſtore part of what had been taken from them before he diſmiſſed them by the general conſent.

On the 10th, by their reckoning, they were 25 leagues from the Grand Canaries. At this time the pinnace broke her rudder, and was towed at the ſtern of the Minion, which ſtill kept company with the reſt of the veſſels.

After they came to the iſland, they found it was Teneriffe, and then ſaw the Grand Canary, which was twelve leagues to the eaſtward, to which they directed their courſe, and came into the road on the 12th.

After they had ſaluted the town and caſtle, the governor ſent to deſire that they would come on ſhore, and received them in a very friendly manner, offering them their horſes to ride to the town, to which they went with two Engliſh merchants, who ſtaid there that day. They went on board the next day, in order to get their pinnace mended, and to deliver their merchandiſe.

The Spaniſh fleet of the emperor Charles V. bound to the Indies, came into the road on the 14th, and ſome civilities paſſed between them and the Engliſh; but a diſpute aroſe about paying honour to the Imperial flag, which Mr. Towerſon refuſed, and the Spaniſh admiral did not think fit to inſiſt upon it, and told the Engliſhman he had puniſhed ſome of his men who fired at the Minion on that account.

They found themſelves to be in 20 deg. 30 min. weſt, and four days afterwards ſaw the land in the bay to the northward of Cape Verde.—Mr. Towerſon went in the pinnace on the 26th, with Franciſco and Francis Caſtelin, on board the Tyger, which was neareſt the ſhore, and running about four leagues beyond the Cape found an agreeable iſland, with two or three others, which were high rocks, and full of pidgeons and other land fowls. As they were told the French had a great trade here, they came to an anchor in the bay, being deſirous of learning all they could, relative to that nation: but the maſter of the Chriſtopher declared he would not ſtay there, as he was not bound thither. However, Edward Selman from the Tyger, and John Makeworth from the Chriſtopher, came to Mr. Towerſon, and agreed to go with the pinnace along ſhore. They did ſo, and ſaw negroes on the coaſt, who making ſigns to them, they caſt anchor with the pinnace, and went on ſhore in the cock-boat to ſee where the trade was. It appeared that they had elephants teeth, muſk, and hides, and offered to fetch down their captain if the Engliſh would ſend a man with them, for whom they propoſed to leave a pledge, but the maſter of the Chriſtopher would not ſtay.

The voyagers fell in with the coaſt of Guinea on the tenth of March, five leagues off Cape de Monte, near the river das Palmas.

The next day they went on ſhore, and found a man that could ſpeak a little Portugueſe, who informed them that three French ſhips had paſſed by, one two months, and the other about one month before. Nineteen elephants teeth, and two ounces and half a quarter of gold were here received by Mr. Towerſon. Sailing from hence on the 12th, for the river de Seſtos, and fell in with it on the night of the 13th.

The next day the Minion ſent out her boats for water, and delivered to the Chriſtopher and Tyger the commodities which were moſt wanted in thoſe veſſels. Meeting on the 15th, they agreed to ſend the Tyger to another river to take in her water, and to buy pepper, if any was to be had. They went afterwards into the river with goods, where they found a negro that was born at Liſbon, and had been left there by a Portugueſe veſſel, which was burnt the year before in an encounter with three Frenchmen. He likewiſe made mention of ſome veſſels belonging to the former nation that were gone towards the caſtle of Mina.

From hence proceeding along the coaſt, they came to the river Potes, and afterwards to Hanta, continuing to trade for ſome pepper and elephants teeth, for bracelets and other wares.

Having obſerved five ſail of Portugueſe on the firſt of April, they put to ſea, and both parties endeavoured to gain the wind of each other, but the Portugueſe ſucceeding in this, got within gun-ſhot of the Engliſh at laſt, and after exchanging a few ſhot without receiving any material damage, the latter having at laſt got to windward, the Minion, Tyger, and pinnace ſtood off to ſea, leaving the Chriſtopher, which, as ſoon as they met with her, informed them that they had been alſo attacked by the Portugueſe, who had ſhot through their ſails and rigging, but had done them no other damage. On this it was reſolved to go in purſuit of the enemy, which they did, but in vain; afterwards, however, they fell in with a fleet of French ſhips, that retired before them, however they took one of them on the 6th, which proved a good prize, and had fifty pounds and five ounces of gold on board.

On the 12th of this month they came to the farther part of the Mina, called Egrand, where they began taking the goods out of the prize, and afterwards divided all the priſoners among the ſhips except four, who being ſick were unable to help themſelves. Theſe, both the Chriſtopher and the Tyger refuſing to take, were left in their ſhip alone in the night, but about midnight Mr. Towerſon fetched them on board his veſſel.

The voyage to Benin was propoſed on the 15th of April, but this being refuſed by the company, it was reſolved to ſpend as much time as they had to ſpare upon the coaſt, and having done what they could where they were, they ſet ſail for Don John's town, which they reached on the 21ſt. They went on ſhore with their boats twice, but could not enter into any ſort of traffic with the negroes, who on the contrary made ſigns that they wiſhed their new gueſts would depart.

Mr. Towerſon, after experiencing ſome repulſes of this ſort, went on ſhore with a white flag at Don John's town on the 24th, but they concluded the Portugueſe were there, as none of the negroes approached them. The boat arrived afterwards well manned, and a man was ſent to the town. However, he no ſooner arrived, than the negroes retired without ever ſpeaking to him; and though another was ſent into the woods after them, they would not come to any terms. On this the Engliſh took 12 goats and ſome hens, and did no farther damage. From hence they ſailed to Macoa, and afterwards to Cormantin and took ſome gold. From hence they ſteered their courſe for Shamma, and on the 7th they ſaw five Portugueſe ſhips, and Mr. Towerſon went in the pinnace to view them on the tenth, and ſome of the people would have attacked the Portugueſe fleet, which conſiſted of one ſhip and four caravals (on account of proviſions being ſcarce); but the maſter and company of the Minion would not agree to ſuch a proceeding for fear of being puniſhed on their return to England; in conſequence of which the others deſiſted from the attempt. Mr. Towerſon went to Shamma on the 20th, where the Tyger had arrived the day before. By this time they had ſent away the Frenchmen on board their pinnaces, as they perceived their proviſions would hardly hold out for their own company.

At Shamma they were told that there was no gold to be got, and not ſo much as a ſingle hen to be bought, which was on account of the agreement between the natives and the Portugueſe, and ſending to Hanta, they met with no better ſucceſs. On which account they burned Shamma, and departed on the 25th for England. After meeting with contrary currents, they ſaw the iſland of St. Thomas on the 7th of July, and though they meant to hold on their courſe, were driven cloſe in ſhore the next day; but a breeze ſpringing up cleared them of the iſland. The Chriſtopher and the Tyger tacking about, on the 10th, thoſe that were in the Minion, thought they were going in queſt of the ſhips in the road, and were not inclined to go after them, for

fear of running in with the land again, and putting themſelves in the ſame danger they were in the night before; but they diſcharged a piece, and put out two lights, which were anſwered with lights again. On this, they kept their courſe, thinking the others had followed them: but not ſeeing them in the morning, they perceived they had dropped them by deſign, and reſolved to go after them no longer. However on the 11th, they altered their minds; and tacking about again for the iſland, to ſeek the ſhips, about four in the afternoon met with them. On the 13th, they fell in again with the iſland of St. Thomas; and the ſame night they found themſelves directly under the line.

This iſland is very high, and being on the weſt ſide of it, there appears a very high pike, which is very ſmall and ſtrait, like the ſteeple of a church, lying directly under the line; and about a mile weſt of the ſame ſouth end of the iſland, there lies a ſmall iſland.

On the 3d of Auguſt, departing from the iſland of St. Thomas, they met the wind at ſouth-weſt.—The 23d, in the morning, the ſkiff being ſent on ſhore, found no houſes, or any men but four, who kept at a diſtance. As for cattle they ſaw none, except goats, which were very numerous, but ſo wild, that they could not catch above three or four. To make amends, they have good ſtore of fiſh; and in a ſmall iſle near the ſame, they met with ſea-birds.

On the 24th, the maſter of the Tyger came to acquaint thoſe on board the Minion, that his men were ſo weak, and the ſhip ſo leaky, that he was not able to keep her above water; and therefore requeſted them to go back again to the iſland, in order to take out the goods, and give her up. They intreated him to perſevere a while, and put a French carpenter into her, to ſee if he could find the leak. This day they took a view of all their men, and found there were not above thirty ſound in the three ſhips. On the 25th, they had ſight of the iſle of St. Nicholas; and the day following, of Lucia, St. Vincent, and St. Anthony; which four bear in reſpect to each other, north-weſt-by-weſt, ſouth-eaſt-by-eaſt. On the 26th, they came again with the iſland of St. Anthony, and could not double the Cape. This day Philip Jones, maſter of the Chriſtopher, came on board the Minion, and told them that thoſe of the Tyger were not able to keep her, ſhe was ſo leaky, and the maſter ſo very weak. Farther, that he had agreed with the maſter and company, that in caſe they could double the iſland the next day, they ſhould run to the leeward of it, and there unload her: but if they could not double it, then to put in betwixt that and St. Vincent, with the ſame view. On the 3d of September, Mr. Towerſon went on board the Tyger, with the maſter and merchants, and found the ſhip very leaky, and only ſix labouring men in her, whereof one was the maſter gunner: whereupon they agreed to take in the men, and ſuch of the goods as they could ſave, and ſet the ſhip a drift. Next day they went about it, and having taken out the artillery, goods, victuals and gold; on the 8th, they gave her up in the latitude of twenty-five degrees. On the 6th of October, the Chriſtopher came to deſire thoſe of the Minion, to put in with Cape Finiſterre, her men being ſo weak, that they were not able to keep the ſea: as they were weak alſo, they agreed to go for Vigo, a place frequented by the Engliſhmen. On the 10th, the Chriſtopher went towards the Cape: but the Minion, having a briſk wind for England, and fearing the danger of enemies, who ordinarily ply thereabouts; having warned the Chriſtopher, ſhe not being able to keep up with them, they held on their courſe for England, where they arrived in ſafety on the 16th, after having experienced many inconveniencies. 1562.

A VOYAGE TO GUINEA IN 1562.

THIS voyage was at firſt deſigned to be undertaken by Mr. Lock, but he having declined it, the undertakers were Sir William Cheſter, Meſſrs. Thomas Lodge, Anthony Hickman, and Edward Caſtelin; the ſhips were the Minion and the Primroſe, which left Dartmouth on the 25th of February, 1562.

On the 20th of March, they arrived at Cape Verd, where they made no ſtay, but ſailed along the coaſt to their firſt appointed port, River de Seſtos, which they reached the 3d of April, in the morning. Here they found a Frenchman, who, as ſoon as ſhe perceived them, ſet ſail, and made to the ſea; mean while they came to an anchor in the road; and after ſhe had diſcovered by their flag, that they were Engliſhmen, ſhe bore with the ſhore, and hailed their ſhips with her ordnance. At this time Rutter, and the other merchants of both ſhips, were in the river trafficking, and having underſtood by the negros, that ſhe had been there three days before them, they reſolved, in caſe ſhe ſent her pinnace to trade, not to ſuffer it, till they had ſettled matters with their captain and merchants. In the afternoon the pinnace coming into the river, they ſpoke to the men not to proceed, till they had talked with their captain, deſiring that he might come in the evening on board the admiral; which was done. At the time appointed, M. Burton, and John Munt, went on board the Minion, where the Frenchmen were, and there concluded, that they ſhould lie by eight days, and let the Engliſh traffic by themſelves; wherewith they were not well pleaſed. Hereupon, next morning, the French ſhip left them, ſailing along the coaſt eaſtward, towards the River de Potis: wherefore the merchants of both ſhips, in conſideration that no veſſels were upon the coaſt, concluded to ſend the Primroſe before, that their traffic might not be obſtructed by the French. They went, and overtook them trading to the weſt of Potis, where paſſing them, they arrived the 12th of April. They trafficked there till the 15th, and then departed for the River Sant Andre, where they came the 17th. Here by agreement, they were to wait for the Minion, and the ſame day ſhe found them.

At Cape des Palmas ſhe met a great ſhip and caraval of the king of Portugal, bound to Mina, which gave her chace, and ſhot briſkly at her, as ſhe did at them; but received no hurt. Hereupon they haſtened towards Cape Tres Puntas, with deſign, if they could, to put them (the ſhip and caraval) from the caſtle. At the Cape they lay a-hull one night and two days; and judging they had gone paſt, the Minion went near the ſhore, and ſent her merchants to Hanta. Next morning very early, being the 21ſt of the month, they again had ſight of the ſhip and the caraval a good way to ſea-board. They preſently ſet ſail, and bore with the foremoſt of them, hoping to have got between the caſtle and them, but came ſhort of their deſign, which was a great diſappointment. When the enemy was under the protection of the caſtle, they ſhot ſmartly at the Engliſh, and they at them; but to little purpoſe. In the afternoon, they ſet ſail, and came to the town of Don John, where,

1563 where, on the 22d, in the morning, they went on ſhore to traffic, but the negros would do nothing till they heard from Don Luis; for at that time Don John was dead. On the 23d, Antonio, (the ſon of Don Luis) and Pacheco, arrived, with intent to traffic with them. At the ſame time, two galleys came rowing from the caſtle, to interrupt them. On the 24th, the Engliſh ſet ſail, and chaced the galleys to the caſtle again. The negros pleaſed at it, required them to go to the Mowre, about three leagues behind, promiſing to come thither; for that they ſtood in fear of the Portugueſe. There they waited for the merchants out of the country, who were come with their gold; but Don Luis's ſon, and Pacheco, were on board the Minion.

On the 25th in the morning came the two galleys from the caſtle again: the weather being very calm, they ſhot at, and hit the Primroſe three times. And ſhortly after, the wind blowing from the ſhore, ſhe deſcried the ſhip and caraval coming towards her. Then ſhe ſet ſail, and bore as near unto them as ſhe could; but it being dark before ſhe came up with them, ſhe loſt them in the night. On the 27th the Engliſh plied to the ſhore, and at night agreed to go to Cormantin: but next morning they found themſelves near the great ſhip, and the two galleys having no wind at all, and the caraval cloſe to the ſhore. Preſently the two galleys come rowing to the ſtern of the Minion, and fought with her moſt part of the forenoon. During the fight, a barrel of powder happening to take fire in the ſteward's room, hurt the maſter-gunner, the ſteward, and moſt of the gunners, which the galleys perceiving, they began to be more fierce upon her, and with a ſhot cut her fore-maſt in two, that, without preſent remedy, ſhe was not able to bear ſail. Immediately upon this, the great ſhip ſent her boat to the galleys, which ſuddenly departed. As ſoon as they were gone, thoſe of the Primroſe went on board the Minion to conſult what was beſt to be done. They found her company grievouſly dejected; therefore perceiving that the negros neither would nor durſt traffic ſo long as the galleys were upon the coaſt, it was agreed to depart for Rio de Seſtos.—The 14th of May in the morning, they ſell in again with the land, and ſending their boats to ſee what place it was, found it to be Rio de Barbos, to the eaſt of Sant Andre, and there ſtayed to take in water, till the 21ſt. The day before, the Primroſe loſt five of her men, by the black pinnace overſetting. The 22d, the ſhips departed for Rio de Seſtos, where they put in the 2d of June; and the 4th, leaving that river to return home, arrived the 6th of Auguſt within ſight of the Start, in the weſt part of England, the men being very ſick and weak. Beſides 21 who died, many were ſorely hurt. In ſhort, there were not above 20 men that were ſound and able to labour. Mr. Burton, who had been ſick for ſix weeks, was then ſo weak, that his life was deſpaired of.

There were brought home this voyage, 166 elephants teeth, weighing 1758 pounds, and two buts of Guinea pepper, dearly enough purchaſed by the voyagers loſſes and misfortunes.

A VOYAGE TO GUINEA BY MR. BAKER, IN 1563.

MR. Baker, who has written an account of this voyage in verſe, after the unlucky diſaſter that befel him in Guinea the year before, had made a fort of vow never to go near that country any more: but being returned to England and recovered of his complaint, he ſoon forgot the ſorrows that were paſt, and being invited to undertake the voyage the next year, in quality of a factor, conſented. After they had been at ſea two days and a night, the man from the mainmaſt diſcovered a ſail or two. They preſently made up to the largeſt of them, which they judged to be the beſt, and Mr. Baker hailed her to know whence ſhe was: ſhe anſwered, from France; whereupon the Engliſh waved them, and ſhe, nothing diſmayed, waved them again. Mr. Baker immediately ordered men with arms to the main and fore-tops, alſo powder to be laid on the poop, to blow up the enemy, if they ſhould enter the ſhip that way. Then, at the ſound of trumpet, they began the fight, diſcharging both chain and croſs-bow ſhot from their brazen artillery; while the French, from the main-yard, flouriſhing their ſwords, called out to the Engliſh to board their ſhip. The Engliſh, on their ſide, willing to accept of the invitation, plied them hotly with their cannon, poured in their arrows, and their harquebuſſes from the loop holes; attempting, at the ſame time, to burn their ſails with arrows and pikes carrying wild fire. Baker, wiſhing to encourage his men, made the ſpiced wine go briſkly round among them, propoſed boarding the enemy, which they did with their lime-pots, breaking their nettings with ſtones, while the men from above entered the enemy's tops, after killing thoſe who defended them; then cutting the ropes, brought down the yard by the board. Thoſe who entered by the ſide of the ſhip, played their parts ſo well with their ſwords, that at length the remainder of the Frenchmen fled beneath deck, and ſurrendered themſelves. Having thus taken the ſhip, they ſailed to the Groine, in Spain, and there ſold the lading. After this they proceeded on their voyage for Guinea; where being arrived, Mr. Baker, one day about noon, with eight more, went on ſhore in a boat to traffic; intending to diſpatch his buſineſs, that he might be back again by night; but juſt when they had got near land, a furious wind aroſe, accompanied with rain and thunder, which forced their ſhips from their anchors, and drove them out to ſea. In the mean time, thoſe in the boat, in order to provide for their ſafety, ran along the coaſt, ſeeking ſome place to put into; yet meeting with none, were forced to lie on board all night, by the ſhore, expoſed to thunder, rain, and wind, which continued without intermiſſion. Next day the ſhips turned back again, thinking the boat ſtaid behind; and the boat rowed forward along the coaſt, ſuppoſing the ſhips were before them, ſtill looking out to ſea; but the miſt that morning occaſioned by the jarring of the elements the night before, was ſo great, that they could not ſee each other. Thus they continued beating the ſea two or three days together; after which thoſe in the ſhips concluded the boat was caſt away in the ſtorm, made the beſt of their way towards England. Mr. Baker and his companions in diſtreſs, having been three days without any food. At length they landed, and having exchanged ſome wares for roots, and ſuch other proviſions as they had, put to ſea again in purſuit of their ſhips, which they ſtill ſuppoſed to be before them. Thus they continued 12 days ranging the ſhore; where they ſaw nothing but thick woods and deſerts, full of wild beaſts, which often appeared, and, at ſun-ſet, came in herds to the ſea-ſide, where they lay down or played upon the ſand, and ſometimes, to cool themſelves, plunged into the water.

They often ſaw a man or two on the ſhore, who, as ſoon as they perceived the boat, came to it with their Almaide. Then caſting anchor, they offered the negros their wares in exchange for fiſh and freſh water, or any victuals of their own cooking. Theſe

people would bring to them great roots and berries, which grow on the palm-trees, being ſuch eatables as were moſt agreeable to themſelves; likewiſe ſome of their wines, the colour of which is like the juice that runs out of the tree. Sometimes they brought them wild honey in the combs. With theſe, and ſuch other things as came, they relieved their hunger; but nothing could repair the ſtrength they loſt by grief, fatigue, and the want of reſt, which reduced them to a very weak condition. They were ſo oppreſſed with affliction, to think of the dreadful circumſtances they were in, that their hearts were ready to break. They had now been ſo long ſeeking the ſhips in vain, that they were reſolved to give over their purſuit, concluding that they were loſt or returned home, but what courſe to take was difficult to determine: as for returning home in ſuch a boat as that, in want of every thing, they ſaw was an utter impoſſibility; and conſidering they were in a ſtrange country, inhabited by a people, whoſe manners and cuſtoms were ſo oppoſite to theirs, they knew not what to reſolve on. By this time they found they had paſſed beyond the Melegete (or Grain) Coaſt, and were advanced as far as that of Mina; for their negros ſpeaking Portugueſe, came on board them with their ſcales and weights, propoſing to traffic, and aſking where their ſhips were? They, in hopes to be better uſed, anſwered, there were two at ſea, and that they would be with them in a day or two. However, much diſmayed at a queſtion which only renewed their grief, they turned off from the natives to conſult how they ſhould diſpoſe of themſelves. They conſidered, that if they continued at ſea in their boat, expoſed to the burning heat of the day, which ſenſibly conſumed them by ſweating, and the frequent hurricanes accompanied with lightnings, thunder, and rain, which deprived them of reſt all night, that they could not poſſibly long hold out. They were often three days without eating; and having ſat continually for 20 days together, the boat affording no ſpace to walk in, they were in danger of loſing the uſe of their legs, for want of exerciſe; and their joints were ſo much ſwelled with the ſcurvy, that they could ſcarce ſtand.

On this Mr. Baker told them, that as it was not poſſible for them, in the condition they were, to keep their boat much longer, it was time to come to ſome reſolution, and make choice of one of the three courſes they had to take. The firſt was, to repair to the caſtle of Mina, which was not far off, and put themſelves into the hands of the Portugueſe, who were Chriſtians, if they durſt truſt them, or could expect the more humanity from them on that account. However, he told them, the worſt that could happen to them, was to be hanged out of their miſery. That poſſibly they might have ſome mercy on them for their own ſakes, ſeeing nine ſuch young men would be ſerviceable in their galleys, that although they ſhould be made ſlaves for life, yet they ſhould be ſure of having victuals enough, in order to enable them to tug at the oar; whereas there they rowed and ſtarved. The next courſe was, to throw themſelves upon the courteſy of the negros. As to this expedient, Mr. Baker told them, it was a very diſcouraging one: for that he could not ſee what favour was to be hoped for from a beaſtly ſavage people, whoſe condition was worſe than that of any ſlave; that poſſibly they might be canibals, and then they were ſure to be deſtroyed at once, without any ceremony: that in caſe they ſhould not, their cuſtoms were ſo oppoſite to the Europeans, that they could not poſſibly comply with them: That it was not to be imagined, that they who had always been fed upon the fleſh of animals, could live upon roots and herbs (as the negros did) which was the food of wild beaſt; that being accuſtomed to wear cloaths, they could not for ſhame go naked, and expoſe thoſe parts of their bodies to view, which, from their infancy, had been covered; that in caſe they could get the better of modeſty in this point, yet, for want of that defence againſt the ſun-beams, which they had always been uſed to, their bodies would be grievouſly tormented, as well as emaciated, and their ſpirits exhauſted by the ſcorching heats. The laſt courſe they had to take, was to ſtay in the boat, and die miſerably there. But as they ſeemed determined to run any riſque at land, rather than to continue pent up in ſuch a narrow compaſs, ſubject to all the inclemencies of the weather, day and night, as well as liable to be famiſhed for want of victuals, Mr. Baker, in concluſion, gave it as his opinion, with regard to the other two methods, that more truſt and confidence was to be put in the Portugueſe, who were baptiſed, than in the negros, who lived in a brutiſh manner. Mr. Baker ended his diſcourſe, and they all determined to throw themſelves on the mercy of the Portugueſe, and hoiſted ſail, immediately ſetting forward for the caſtle, which was not above 20 leagues diſtant. They went on without ſtopping all day, and till late in the night, when they perceived a light on the ſhore. The boatſwain concluding from thence that it was a place of trade, propoſed to caſt anchor, and try in the morning if they could get ſome food in exchange for their wares. This was agreed upon, and the next morning, going towards ſhore, they perceived a watch-houſe upon a rock, in the place from whence the light proceeded the night before, with a large black croſs of wood ſtanding near it. Here they began to doubt what place this was, and looking forward, beheld a caſtle, which perplexed them ſtill more; but their doubts were quickly ſolved, by the appearance of a Portugueſe or two, one of them holding a white flag in his hand, made a ſignal to them to come aſhore. Although they went in queſt of the Portugueſe, yet at ſight of them, their hearts began to fail them, and they tacked about to make off. This being obſerved from the caſtle, immediately a gun was fired at them by a negro, the ſhot falling within a yard of the boat. If they had been provided with a ſtout ſhip or two, they would not have valued their bullets, but being unable to make any reſiſtance, they complied with neceſſity, and rowed as faſt as they could to land, to yield themſelves and know their doom. This they thought would pleaſe thoſe in the caſtle; but, to their great ſurpriſe, the nearer they drew to the ſhore, the more the Portugueſe ſhot at them. The bullets fell thick about the boat, yet they ſtill advanced, till at laſt they got ſo near the caſtle wall, as to be out of danger from the cannon. They now reſolved to land, in order to try the courteſy of the Portugueſe; but preſently there came ſhowers of ſtones from the caſtle wall; and ſoon after they ſaw the negros marching down with their bows and targets. The aſſault was ſo furious, that having much to fear if they ſtaid any longer, from the heavy ſtones that fell into the boat, and with their weight threatened to break thro' the bottom of it, as from the ſhowers of arrows which hiſſed about their ears, and wounded ſome of them; they, like deſperate men, who did not value what became of their lives, put off from ſhore, to return to ſea, ſetting four of their company to row: yet being unwilling to depart from the coaſts, without repaying the inhabitants ſome part of their civility, they began to handle their bows and fire-arms, which they firſt employed againſt the negros, of whom ſeveral preſently dropped, and then againſt the Portugueſe, who ſtood on the walls of the fort in long white ſhirts (or gowns) many of which were ſoon dyed red by means of the Engliſh arms. They thus maintained their ground a long time, and fought at their leiſure; never regarding the enemy's menaces, ſince they ſaw there were no galleys in the place to ſend to take them. When they had ſufficiently revenged their want of hoſpitality, they rowed off; and although they knew they were to paſs through another ſtorm of bullets from the caſtle; yet they puſhed on, and like men, commonly who fear no danger, eſcaped without receiving any damage. By the time they had reached the ſea, they perceived three negros, who came rowing after them to know what country they were of, ſpeaking very good Portugueſe. They told them they

1563

1564 Engliſhmen, and had brought wares to traffic with them, if they had not uſed them ſo ill. The negros were farther inquiſitive to know where their ſhips were. They anſwered they had two at ſea, well appointed, which would ſoon take their way along the coaſt, to trade for gold, and only waited for their return. The negros pretending a concern for what had happened, intreated them to ſtay for that day, promiſing to bring them whatever they ſtood in need of. But the Engliſh putting no confidence in their words, only aſked them what place that was; and being anſwered that it was the Portugueſe caſtle, at the weſtern point of Cape Tres Puntas, without exchanging any more words, hoiſted ſail, and put to ſea, to ſeek out a more friendly place.

The Portugueſe kindneſs being thus experienced ſufficiently, they were reſolved to have recourſe to them no more, but try the negros. Therefore ſailing back again about thirty leagues, they caſt anchor, and the natives coming immediately to the boat, the Engliſh gave every one ſome preſent or other, whereby they won their hearts. The news of the arrival of ſuch generous ſtrangers, brought the king's ſon on board. As ſoon as he came, Mr. Baker began movingly to explain the caſe to him; making great lamentation, and giving him to underſtand by ſigns, that they were quite undone, had loſt their ſhips, and were almoſt famiſhed for want of food: at the ſame time offering all the goods they had in the boat, provided he would take them under his protection, and relieve them in ſuch great diſtreſs. The negro chief, moved by the tears which fell plentifully from the eyes of all, refuſed the preſent, and bade them be comforted. He went on ſhore, to know his father's pleaſure, and preſently returning, invited them to land. This was a joyful hearing to them. He had no ſooner ſpoke the word than they fell to the oar in haſte, to get to ſhore, where, 500 negros waited to receive them: but coming near the coaſt, the ſea ran ſo high, that the boat overſet. The negros immediately plunged into the water, to ſave them, and brought them all ſafe to ſhore. They alſo preſerved the boat and whatever was in her, ſome ſwimming after the oars, others diving for goods that were ſunk; after which they hauled it to land, and brought every individual thing that belonged to the Engliſh; not daring to detain the leaſt trifle for fear of the king's ſon, who according to Mr. Baker's account, was a perſon of courage, and endowed with all natural perfections. The next kind office that they did, was to bring them victuals, ſuch as they uſed themſelves; of which they ate heartily, being, as may be preſumed, very hungry; the negros ſtaring at them all the while, with aſtoniſhment. For all this appearance of humanity, the Engliſh were under no ſmall apprehenſions conſidering they were quite in the power of the negros; every one of whom went armed with his dart. They lay upon the ground all that night with them, but never once cloſed their eyes, through fear that they ſhould be killed in their ſleep. However, they received no hurt from them; and for two days fared very well. But theſe people finding no ſhips came as they expected, to fetch them away; the Engliſh diſtributed a large quantity of wares among them, in return for their hoſpitality. The negros ſoon grew weary of their new gueſts; and after leſſening their allowance every day, at length left them to ſhift for themſelves. In this diſtreſs they were conſtrained to range about the woods, in ſearch of berries and roots, which they dug up with their fingers, for want of other inſtruments. Hunger had quite worn off the delicacy of their palates. They made no diſtinction any longer in victuals; any thing that was eatable, now was a dainty to them. Neceſſity likewiſe, ſoon reconciled them to going naked: for their cloaths, grown rotten with the ſweat, fell off their backs by degrees; ſo that at length, each of them had ſcarcely a rag left to cover him before. They were not only forced to ſeek for their food, but to provide wood and utenſils to dreſs it. They made a pot of clay baked in the ſun, in which they boiled their roots; the berries they roaſted; and on theſe varieties they fed every evening. At night they went to reſt on the bare ground, making a great fire round them, to keep off wild beaſts. Thus they became, in every reſpect, the reverſe of what they were before; in ſhort, with this intire change of their way of living, joined to the heat and unhealthineſs of the climate, they began to fall ſick apace, and for want of proper nouriſhment, died ſo faſt, that in a ſhort time the nine were reduced to three. This, to the deceaſed, was a releaſe from their miſery: but what was an eaſe to them, rendered the ſtate of thoſe few who ſurvived, more forlorn and helpleſs than before. At length, when they had given over all hopes of relief, a French ſhip arriving on the coaſt, took them in, and carried them back to France, which being then at war with England, they were detained priſoners, and from thence Mr. Baker wrote an account of the voyage in verſe.

A VOYAGE TO GUINEA IN 1564, BY CAPTAIN DAVID CARLET.

THE ſhips employed in this voyage, were the Minion, one of the queen's ſhips, David Carlet, captain; the John Baptiſt, of London; and the Merlin, belonging to Mr. Gonſon.—The chief adventurers were Sir William Gerard, Sir William Cheſter, Sir Thomas Lodge, Anthony Hickman, and Edward Caſtelin. Theſe all met on the 11th of July, 1564, at Sir William Gerard's, to conſult meaſures for ſetting forward the voyage. At this meeting they came to ſeveral reſolutions; as firſt, That Francis Aſhbie ſhould be ſent to Deptford, to Mr. Gonſon for his letters to Peter Pet, to ſet about rigging the Minion, at the charges of the queen, after which he was to repair to Gillingham, with money to defray the adventurers charges there. Secondly, That each of the five partners ſhould call upon their partners to advance towards new rigging and victualling, twenty-nine pounds, ten ſhillings and ſix-pence, out of every hundred. Thirdly, That each of the five partners ſhould immediately depoſit fifty-pounds towards the ſaid occaſions. Fourthly, In caſe Mr. Gonſon gave his conſent, that the Merlin ſhould be brought round from Briſtol to Southampton, that a letter ſhould be obtained under his hand, before order was given for the ſame.

Mr. Hawkins, with the Jeſus of Lubeck, and three other ſhips, left Plymouth on the 18th of October, 1564, and that ſame day, being ten leagues from the port, met with the Minion, of which David Carlet was captain, and her conſort, the John Baptiſt; having ſaluted each other with their guns, according to cuſtom, the Minion went in queſt of the Merlin, which lagged behind; and left the John Baptiſt to keep the Jeſus company; but in a ſtorm, which happened the 21ſt, ſhe was ſeparated. On the 25th, Mr. Hawkins put into Ferrol, in Galicia, thither, on the 26th, the Minion arrived alſo, whoſe crew were much dejected, on account of the diſaſter which had happened to the Merlin; for, two days after they met with her, through the careleſſneſs of

of the gunner, the powder took fire and blew up the poop, with three men in it; preſently after which, ſhe ſunk, and the crew muſt have been loſt, but that the brigantine having been luckily at the ſtern, took them in; many of them being greviouſly wounded by the exploſion. On the 30th, both fleets departed in company. On the 6th of November, coming in ſight of Teneriffe, the Minion being three or four leagues a-head of the Jeſus, went on to that iſland, and ſo parted company with Mr. Hawkins; who ſhaping his courſe by Cape Verde and Sierra Leona, afterwards ſtruck off for the Weſt Indies, and arrived at the town of Burboroata, on the coaſt of Tierra Firma. Here he heard news of the ill ſucceſs of this Guinea voyage; for on the 29th of April, there came 1566. into the road, a French ſhip, called the Green Dragon of New Haven, one Bon Temps, captain, who informed him, that he had met with the Minion on the coaſt of Guinea, and that both had been driven off by the Portugueſe galleys; that at the Minion's firſt arrival, Captain Carlet, and a merchant, with a dozen mariners, were betrayed by the negros to the Portugueſe, with whom they remained priſoners; and that the ſhips had loſt ſo many men, through want of freſh water, and other accidents, that it was a great doubt whether thoſe laſt would be able to bring them home.

A VOYAGE TO THE ISLANDS OF CAPE VERD BY CAPTAIN GEORGE FENNER, IN 1566.

THREE ſhips were employed in this voyage, the Caſtle of Comfort, George Fenner, general, and William Bats, maſter; the May-flower, Captain Edward Fenner, vice-admiral, and William Curtis, maſter; and the George, a ſmall bark, John Heiwood, captain, and John Smith of Southampton, maſter; beſides a pinnace. On the 10th of December, 1566, they left Plymouth; on the 12th, they were thwart of Uſhant; and on the 15th, in the morning, had ſight of Cape Finiſterre. The ſame night, they loſt company of their admiral; therefore they ſailed along the coaſt of Portugal, hoping that he had been before them. On the 18th, they met with a French ſhip, who bringing no tidings of their admiral, they followed their courſe to the Canary iſlands. On the 25th, in the morning, they fell in with Porto Santo; and within three hours had ſight of Madeira, ſix leagues diſtant. The ſame day, they hoiſted out the boat, and brought on board them Mr. Edward Fenner, captain of the May-flower, (who was then with the maſter, Robert Curtis, and others, in the George) and feaſted them with ſuch as they had. On the 28th, they fell in with the iſland Teneriffe, twenty-ſeven leagues from the former; and caſt anchor on the eaſt ſide, in forty fathom water, a baſe ſhot from ſhore, within a little bay, where there were three or four ſmall houſes, about a league diſtant from the little town called Santa Cruz. From their ſhips they could ſee the Grand Canary, ſix or ſeven leagues diſtant. On the 29th, the May-flower, not being able to get into the road for the wind, bore in with Santa Cruz, thinking to caſt anchor in the road againſt the town; but before ſhe came within reach of their ordnance, they ſhot at her four pieces, which cauſing her to retire, ſhe came at laſt to anchor near the George, about one in the afternoon. The captain wrote a letter directed to the head officer of Santa Cruz, to know the reaſon of his being ſhot at. The letter was given to Curtis, and Walker Wren, who, with ſix men in the boat, rowed as near the ſhore as they durſt, the ſea there running extremely high. The people ſtanding by the water-ſide, about thirty in number, with ſuch armour as they had, Wren called to them in Spaniſh, to let them know that they had a letter for Santa Cruz, and wanted to have it conveyed thither. One of the Spaniards deſired them to land, ſaying they ſhould be welcome: but doubting the worſt, Wren anſwered, that they would ſtay till they had an anſwer to their letter. On this, one of the Spaniards ſtripping, leapt into the water, and ſwam to the boat: he was received in, and after ſaluting them, demanded what their requeſt was? they made anſwer, that by misfortune they had loſt the company of their admiral, and being bound to this iſland to traffic for wines and other things, were deſirous to ſtay there till he arrived. The Spaniard promiſed to carry the letter without delay; and Wren having ſewed it up in a bladder, delivered it him, giving four rials of Spaniſh money for his trouble. After he had returned to ſhore, and talked to the people, ſome of them threw up their hats, and others pulled them off, ſaluting the Engliſh, ſtill inviting them to land: but having returned their courteſy, they rowed back again to the ſhip. On the 30th, the governor's brother of Santa Cruz, came on board the May-flower, with ſix or ſeven Spaniards; who concluded with the captain, that the Engliſh might land and traffic. They were all well entertained; and at their departure, the captain ordered four pieces of ordnance to be ſhot off, and beſtowed upon them two cheeſes, with other things. The Spaniard promiſed the captain, that he ſhould have ſufficient pledges next day; which not being performed, they grew ſuſpicious and moſt of them went not on ſhore.

The captain however, ſent Nicholas Day and John Sumpter, on ſhore, on the 21ſt of January, who were well entertained, with as many of the company as went. "In Teneriffe, ſays our author, is a marvellous high hill, called the Peak, which a-far off is more like a cloud than any thing elſe, it is round, and ſomething ſmall at top. It has not been known, that ever any man was at the top: and and although it ſtands in twenty-eight degrees, where it was as hot in January, as it is in England at Midſummer, yet is the ſummit ſeldom without ſnow, both winter and ſummer. About two leagues from the ſaid Santa Cruz, is a city called Anagona." On the 3d, they removed towards the weſtern parts of the iſland, twelve or fourteen leagues from Santa Cruz, and on the 5th, caſt anchor in a bay, over-againſt the houſe of one Petro de Souſes; where being informed, that the admiral had been there ſeven days before, and was gone to Gomera, they ſet ſail ſoon after to ſeek him. On the 6th, they found the admiral at anchor in the road before the town of Gomera, there alſo they met with Edward Cook, in a large ſhip; and a ſhip of the copper-ſmiths of London; which the Portugueſe had treacherouſly ſurpriſed in the bay of Santa Cruz, on the coaſt of Barbary, and was all ſpoiled. The general and merchants, bought in this town, for their proviſions, fourteen pipes of wine, at the rate of fifteen ducats a pipe; which had been offered them in Santa Cruz, in Teneriffe, for eight, nine, and ten ducats. On the 9th, they departed from this road to another bay, about

1566 about three leagues off, and there took in freſh water. The 10th they ſet ſail towards Cape Blake, on the coaſt of Guinea. On the 12th, they fell into a bay to the eaſt of Cape Pargos, 35 leagues from the other; but having no knowledge of that coaſt, they went for Cape Blake; and at the fall of the land they ſounded, and had 16 fathoms water two leagues from the ſhore. The land is very low, and a white ſand upon the fall of the coaſt.——On the 17th, ſhaping their courſe ſouth by eaſt, and ſouth from Cape Blake, they fell into a bay about 16 leagues to the eaſt of Cape Verde, and ſix from ſhore; the land being full of hummocks with high trees on them, ſeemed like a great number of ſhips under ſail: they ſtood towards the land, till they were within three leagues of the ſhore; and then ſounding, found 28 fathoms water black ooze. This day, they ſaw many ſhoals of fiſh, ſwimming even with the ſurface of the water. Paſſing along the coaſt, they obſerved two ſmall round hills, (yet the higheſt they ſaw all day) ſeeming to be a league from the other, which is the cape; and between them abundance of trees.

On the 29th they came to anchor at the cape, half a mile from land, in a road cloſe by the ſide of two hills, in 10 fathoms water, where ſhips may ride in five or ſix; for the ground clean, and the wind was always off ſhore. As ſoon as they were all at anchor, the general and captains, with the maſters, went on board the George, and having dined, concluded to land; and by the advice of Mr. Bats, both captain and merchants, and many of the company; went without arms, though againſt their wills; for he ſaid that although the people were black, and naked, yet they were civil. There went on ſhore the admiral's ſkiff, and the May-flower's boat, and in them about 20 perſons, as the general, his brother Thomas Valentine, John Worme, and Francis Leigh, merchants, John Howard, Thomas Bats, Nicholas Day, John Thompſon, and others. At their landing, there were above 100 negros, without their bows and arrows, walking to and fro, as could be perceived from the ſhips. The captains and merchants talked with them; and according to the cuſtom of the country, they demanded pledges of each other. The negros were content to deliver three of their men for five Engliſhmen, who were John Howard, William Bats, Nicholas Day, John Thompſon, and John Curtis. Theſe were delivered them. They then began to talk of buſineſs. The Engliſh gave them to underſtand, that they had brought woollen cloth, linen cloth, iron, cheeſe, and other things. The negros, in their turn, let them know, that they had civet, muſk, gold and pepper, which pleaſed the captain and merchants very well; who at the negros requeſt, directly ſent on board one of the boats for part of their merchandiſe to ſhew them. In the mean time the five pledges walked on the ſhore with the negros, and the commander with the reſt, ſtaid in the other boat by the ſea-ſide, having the three negros with them. The boat being returned, brought iron, and other merchandiſe, with bread, wine, and cheeſe, which they gave the negros. Then two of the pledges feigning themſelves ſick, deſired to go on ſhore, promiſing to ſend two others in their ſtead, Captain Howard perceiving his men had let the negros come on ſhore, aſked what they meant, and doubting the worſt, began to draw towards the boat; two or three of the negros followed him; and when he came to the boat, would have ſtopped him. He made ſigns that he would fetch them more drink and bread; notwithſtanding which, one of them caught him by the breeches, to pull him back; but he ſpringing from him, leaped into the boat. As ſoon as he was in, one of the negros on ſhore, began to blow a pipe; whereupon the third negro pledge, who was ſitting on the boat's ſide, and Mr. Worme's ſword by him, ſuddenly drew it out of the ſcabbard, and leaping into the ſea, ſwam to ſhore. Soon after this, the negros laid hands on the Engliſh that were on ſhore, and violently tore the cloaths off the backs of Day, Bats, and Thompſon, leaving them naked; they alſo ſhot ſo thick into the boat, that they could hardly ſet hand to the oars to row from the ſhore. Many of them were hurt with their poiſoned arrows. The perſon is incurable, if the arrow enters the ſkin, and draws blood, unleſs it is immediately ſucked out, or the wounded part be cut away; for otherwiſe he dies in four days. Within three hours after the hurt, whereſoever it be, it ſtrikes to the heart, taking away the appetite, and cauſing violent vomitings, the party loathing both meat and drink. The negros, after they had uſed the pledges ſo roughly, led them away to a town, about a mile from the water-ſide. Next day the ſkiff was ſent on ſhore with eight perſons, one of whom was the aforeſaid John Thompſon, and the interpreter, a Frenchman, (for one of the negros ſpoke good French:) they carried with them two harquebuſſes, and two targets.——The cauſe of ſending them was, to learn what ranſom they demanded for Bats and Day, whom they detained. The negro being made acquainted with what they came about, 40 or 50 of them went and fetched them from among the trees. Being come within a ſtone's throw of the ſea-ſide, William Bats broke from them, (for they were not bound) and ran as faſt as he could into the ſea towards the boat; but happened to fall juſt as he had entered the water, either by being out of breath, or his foot ſlipping in the ſand, which was ſoft, the negros came up before he could recover himſelf, and ſeizing him, hauled him ſo, that the reſt thought they would have torn him in pieces. Having torn the cloaths off his back again, ſome of them hurried him and his brother in affliction away to their town: the reſt ſhot at thoſe who came to ranſom them with their poiſoned arrows, and hurt one Andrews in the ſmall of his leg, whoſe life the ſurgeon had much ado to ſave. Notwithſtanding all this, the admiral ſent once more to them, offering any thing they deſired for the ranſom of the Engliſhmen, but they would not deliver them; returning this anſwer, That three weeks before their arrival, an Engliſh ſhip came into that road, and carried off three negros; ſo that till ſuch time as they were brought again, they would not reſtore their men, even though they ſhould give their three ſhips to releaſe them.——On the 21ſt, a French ſhip of 80 tons arrived in the road, to traffic at the cape; the Engliſh told them of their detaining their two men, and perceiving they were in great favour with the negros, intreated them to negociate their ranſom, the admiral promiſing to pay him 100l. in caſe he procured their releaſe, and brought them off; and having thus committed the matter to his care, departed. Of the men who were hurt by the negros arrows, four died; and one to ſave his life, had his arm cut off; Andrews continued lame, not able to help himſelf; and only two recovered of their wounds.

They left Cape Verde on the 26th, and on the 28th fell in with Bona Viſta, 86 leagues diſtant; the ſame day they came to an anchor about a league with the weſtermoſt point, and found in the ſounding, fair ſand in 10 fathoms water; but ſhips may approach the ſhore, till within five or ſix fathoms; for the ground is clean. As ſoon as they were at anchor, the general ſent his pinnace to land, and found five or ſix ſmall houſes, but the people were fled to the mountains. Next day he ſent again, and met with two Portugueſe, who willingly went on board with his men. He made them welcome, although they were but poor; and having given each a pair of ſhoes, ordered them to be ſet aſhore again. The 30th, they came to a bay in a ſmall iſland, about a league diſtant, lying in 16 degrees, and took plenty of divers ſorts of fiſh.

The next day the admiral, with ſome of his men, went on ſhore to the houſes, where he found 12 Portugueſe. In all the iſland there were not above 30 perſons, who were baniſhed men, ſome for more years, ſome for leſs; and amongſt them, there was one ſimple man, who was their captain. They live upon

goats fleſh, cocks, hens, and freſh water: other victuals they had none, excepting fiſh, which they eſteemed not; neither have they any boats to catch them. They reported that this iſland was given by the king of Portugal to one of his gentlemen, who had let it out to rent at 100 ducats a year, which ſum was raiſed out of ſkins only; for if they may be credited, 40,000 of theſe ſkins have been ſent from hence to Portugal in one year. Theſe people made the Engliſh very welcome, and entertained them to the beſt of their power. They gave them the fleſh of as many goats as they would have, taking much pains to catch and bring them from the mountains on their aſſes.

On the 3d of February they departed, and the ſame day fell in with the iſland of Mayo, which is fourteen leagues from the former. In the middle between both there is a rock to be ſeen. They anchored on the north-weſt ſide of the iſle in a fine bay, where there was eight fathoms water, and white ſand: but on the 4th departed, and came to St. Jago, about five leagues diſtant, eaſt and by ſouth. Being arrived within the weſtermoſt point, they ſaw a fine road, and a ſmall town by the water-ſide, with a fort, or plat-form by it. There they propoſed to come to anchor, and the merchants to ſell ſome goods: but before they came within ſhot, two cannons were diſcharged at them, on which they turned off; and ſailing along the ſhore two or three leagues, caſt anchor in a ſmall bay, in 14 fathoms, and good ground. On the ſhore, there were two or three little houſes. Within an hour after they obſerved a number of horſe and foot on the land, right againſt them, riding and running to and fro.

A great company of both ſexes appearing the next day on the ſhore, the admiral ſent to know if they were willing to traffic with them. They ſent word that they would be glad to ſpeak to him, promiſing, that if he came to trade as a merchant, he ſhould be welcome, and be ſupplied with whatever he ſhould in reaſon demand.——With this anſwer he and and the whole company being very well pleaſed, he therefore ordered his boats to be made ready; but for fear of treachery, cauſed them to be armed, putting a double baſe in the head of his pinnace, and two ſingle baſes in the head of the ſkiff. The boats of the Mayflower, and the George, were put in the ſame poſture of defence.

Thus the commander went in his ſkiff towards the ſhore, where there were 60 horſemen or more, and 200 foot, all armed, ready to receive them. But being alarmed at their number, he ſent one with a flag of truce, to know their pleaſure. They ſent back word, with many fair promiſes and oaths, that their intentions were ſincere, and that they meant like gentlemen and merchants to traffic with him; adding, that their captain was coming to ſpeak with him, and therefore deſired that the Engliſh would land. On the return of the meſſenger with this anſwer, the general cauſed his pinnace to row forward; and as he drew near the ſhore, the Portugueſe came in a great company in the moſt ſoothing manner, ſtretching out their arms, and bowing themſelves with their bonnets off, earneſtly deſiring the admiral and merchants to land; which yet he would not conſent to, without ſufficient pledges. At length, they agreed to ſend two ſuch as he ſhould approve of, promiſing at the ſame time, to let them have freſh water, victuals, money, or negros for wares, if they were ſuch as they liked; deſiring that a bill of parcels might be ſent them, with the names and quantities of the ſeveral commodities. The admiral promiſed it ſhould be done; and being gone a little from the ſhore, cauſed his baſes, and harquerbuſſes, to be ſhot off; the ſhips, in like manner, diſcharged five or ſix pieces of great ordnance. Moſt of the Portugueſe departed, expecting ſuch as were to watch and receive the note, which was ſent about four in the afternoon.

Three leagues to the weſtward, behind a point, was a town cloſe to the ſea-ſide, where, with all ſpeed, they made ready four caravals, and two brigantines, which were like galleys, furniſhing them both with men and ordnance, as many as they could carry; and as ſoon as it was night, came rowing cloſe under the ſhore towards the ſhips, ſo that the land being high, and the weather ſomething hazy, the Engliſh could not ſee them till they were juſt againſt the Mayflower. By this time it was one or two in the morning, and the Mayflower riding nearer them than the other two, by a baſe ſhot, they made a ſure account either to have taken or burnt her. In the mean time, thoſe on the watch, (little ſuſpecting any treachery, after ſo many fair promiſes) made ſuch a noiſe, ſinging and playing, that there being but a ſmall gale of wind, they might be heard from the ſhore; they were ſo taken up with their mirth, that they did not obſerve the motions of their pretended friends; neither had they one piece of cannon primed, or any one thing in readineſs. They were within gun-ſhot of the Engliſh before they were perceived, when one of the men happened to ſee a light, looked out, and eſpied the four ſhips: he ſuddenly cried out, Galleys! galleys! at which cry they were all amazed. At the ſame time the Portugueſe ſhot off their ordnance, their harquebuſſes, and then lighting their cartridges of wild-fire, came on with great ſhouts, anſwered by thoſe on the ſhore, ſtill approaching nearer and nearer to the Mayflower, which getting ready one gun, ſhot at, and put them to the ſtand. Soon after the enemy charged again, and gave them another broad ſide, during which the Engliſh had got 3 pieces ready, and let them off a ſecond time. Notwithſtanding this, the Portugueſe advanced, and at length approached ſo near, as to be within arrow's ſhot. Whereupon they having a gale of wind from ſhore, hoiſted their foreſail, and cutting their cable at the hawſe, went towards the admiral; yet the Portugueſe continued following and ſhooting at them, and ſometimes at the admiral: but the admiral ſent them one ſhot, which made them retire, and at length they went away. Although the Portugueſe came on them by ſurpriſe, and poured in all their bullets at once, neither man nor boy was hurt; but what damage was done to the enemy, the Engliſh could not tell. 1566

They now thought it beſt to ſtay there no longer, but immediately ſet ſail towards Fuego, 12 leagues from thence, and came to anchor on the 11th againſt a white chapel, within a league of the moſt weſtern end of the iſland, and half a league off a little town. In this iſland was a very high hill, which burnt continually, and the inhabitants reported, that about three years before, the whole country had like to have been burnt, with the abundance of fire that iſſued out. About a league to the weſt of the chapel, was a good ſpring of freſh water, with which they were ſupplied. They have no wheat here; but there grows a ſeed they call Mill (or Millet) which makes good bread, and peaſe like thoſe of Guinea. They have likewiſe plenty of moſt kinds of beaſts, and goats. Their merchandiſe is cotton, which grows there. The inhabitants are Portugueſe, who are forbidden to traffic with the Engliſh or French, for victuals or any other thing, except they are compelled to it. There lies off this iſland another called Brava, which is not more than two leagues over. Here is ſtore of goats, and many trees, but not above three or four perſons dwelling in it. Shaping their courſe on the 25th of February, towards the iſlands of Azores, on the 23d of March, they had ſight of Flores, and Corvo, about two leagues to the north-weſt of it, where they came to anchor on the 27th, oppoſite a village of about 12 indifferent houſes; but in the night being diſturbed by a gale of wind, which cauſed them to drag their anchors, they hoiſted ſail, and went to Flores, where they ſaw ſurpriſing ſtreams of water deſcending from the high cliffs, occaſioned by the great and ſudden fall of rain.

On the 29th, they came again to Corvo, and caſt anchor; but a ſtorm (which continued ſeven or eight hours together) obliged them to ſlip a cable and anchor, thinking to have recovered them again,

1566 when the wind was allayed; but the Portugueſe had either taken or ſpoiled them. Both together were worth above forty pounds. On the 18th of April, they took in water at Flores: here their cable being fretted with a rock, broke, and with it they loſt another anchor. Then they ſet ſail to Fayal, about which lies three other iſlands, called Pico, Saint George, and Gracioſa, which they had ſight of on the 28th. And on the 29th, they caſt anchor on the ſouth-weſt ſide of Fayal, in a fine bay, with twenty two fathoms water, againſt a little town, where they had both freſh water and victuals. In this iſland there grows green wood; which, according to the inhabitants, is far better than the wood either of St. Michael or Tercera.

They came to Tercera on the 8th of May, where they met with a Portugueſe ſhip, and being deſtitute of a cable and anchor, the general cauſed them to keep her company, to ſee if ſhe could conveniently ſpare them any. The next morning, they perceived bearing with them a great ſhip and two caravals, all well appointed, which as they judged, were of the king of Portugal's fleet; on which the Engliſh prepared themſelves for their defence. The ſhip was one of the king's, having about 400 tons burden, with 300 men, being well appointed with braſs cannon, ſome of them ſo big, that their ſhot was as large as a man's head. As ſoon as they were within ſhot of the admiral, they brandiſhed their ſwords, and ſhot at her; and while the men prepared for their defence, the great ſhip diſcharged a whole broad-ſide at her, and the four largeſt guns that lay in her ſtern; whereby ſome of the crew were hurt; the reſt requiting them as well as they could with their ſhot. After this, two other caravals, and two pinnaces full of men, came from ſhore, and delivered them on board the great ſhip; with which, and the caraval, the admiral fought three times the firſt day. When it grew dark, they left off ſhooting; yet ſtill kept up with her all night; during which interval, the ſailors were employed to mend the ropes, and ſtrengthen their bulwarks, reſolving rather to die than be taken by them. On the 10th, in the morning, there were come to aid the Portugueſe, four great caravals more, (which made ſeven in all) three of them were, at leaſt, of 100 tons burden each, well appointed, and full of men. They all bore down upon the admiral, and one of the great caravals came to lay her aboard, having prepared their nettings, and every thing elſe for that purpoſe, advancing on her larboard, and the caraval on her ſtarboard. The captain and maſter perceiving their deſign, ordered the gunners to charge the guns with croſs-bars, chain and hail-ſhot. As ſoon as the ſhip and caraval were right in her ſides; they poured in their ſhot as faſt as they could, thinking to have laid her ſoon aboard; whereon ſhe gave them ſuch a welcome with both her ſides at once, that they were glad to fall a-ſtern, and pauſe upon it the ſpace of two or three hours, the wind being very ſmall. Then came up the other five, and having all ſhot at her, fell a-ſtern likewiſe, and went to conſult with the reſt. In the mean time, the ſmall bark, George, coming up, conferred a good while with the admiral; then perceiving the Portugueſe veſſels advance, dropped aſtern of her, intending to come up again; but falling to leeward, it was ſo long before ſhe could fill her ſails again, for want of wind, that both the ſhip and caravals were come up to the admiral. However, the bark falling in among them, played her part very well, and though five of the caravals followed her, ſhe defended herſelf againſt them all, while the great ſhip and other caravals, attacked the admiral, and fought her all that day with their ordnance. That night the May-flower coming up, (which ſhe could not do before for want of wind) the captain told them what damage had been done him; and deſired, if they could ſpare half a dozen freſh men, to hoiſt out their boat, and ſend them to him; but they ſaid they could not, and ſo bore away again. Next morning, when the enemy ſaw the Engliſh ſhips ſtill departed, they came up to the admiral once more, and began a furious fight, with much ſhouting and noiſe, thinking either to board or ſink her; the Engliſh ſailors, (although their number was but ſmall) that the enemy ſhould not think them afraid, made as much ſhouting as they could, and waved to them to come and board them if they durſt. That they would not venture to do, ſeeing them ſo courageous, and having fought the admiral's ſhip all that day, were at laſt obliged to quit her. The May-flower came the next morning, and brought ſix men to the admiral, taking back ſome that were wounded in return.

Proceeding now for England, they came in ſight of the Lizard on the 2d of June; and on the 3d, they ſaw a Portugueſe veſſel, which they ordered to ſend a boat on board them; and demanded what was their lading? To which, they anſwered, ſugar and cotton. Then the Engliſh captain ſhewing them five negros, aſked whether they would buy them, which they appearing very deſirous to do, agreed to give forty ſmall cheſts for them. Five of theſe had been delivered, when the Engliſhman perceived a large ſhip and a ſmall one bearing down upon him, deſired them to take their ſugar back, that he might prepare for his defence. But the trading veſſel earneſtly intreating the admiral not to leave her, the latter agreed, and lowered her topſails to wait for her. At length however, the ſuppoſed enemy ſheered off; and the Engliſhmen, purſuing their courſe, ſaw the Start Point on the 5th of June, and came to anchor under the Iſle of Wight, from whence they afterwards proceeded to Southampton, and thus completed their voyage without farther moleſtation.

VOYAGES TO BENIN BEYOND GUINEA, IN 1588, AND 1590, BY JAMES WELSH.

THESE voyages were ſet forth by Meſſrs. Bird and Newton, merchants of London, with a ſhip called the Richard of Arundel, burthen 100 tons, and a pinnace. On the 12th of October, weighing anchor from Ratcliff, they went to Blackwall, and next day ſailed from thence: but by reaſon of contrary winds and bad weather, it was the 25th, before they reached Plymouth; where they were unluckily weather-bound till the 14th of December, when putting to ſea, about midnight they were athwart of the Lizard.

On the 2d of January, they had ſight of the land near Rio del Oro; and there had twenty-two degrees forty-ſeven minutes latitude. On the 3d, they had ſight of Cape De las Barbas, bearing ſouth-eaſt, five leagues off; on the 4th, in the morning, Croſiers; and on the 7th, off Cape Verd; where Welſh found the latitude, fourteen degrees and forty-three minutes, being four leagues from the ſhore. On the 17th, Cape de Mont, bore from them north-north-eaſt, they ſounded, and had fifty fathoms black ooze; and

at two o'clock, it lay north-north-weſt, eight leagues off. Cape Menſurado bore off them eaſt by ſouth, and went north-eaſt with the coaſt. Here the current ſets eaſt-ſouth-eaſt along the ſhore. At midnight they ſounded, and had twenty-ſix fathoms black ooze. On the 18th, in the morning, they were near a land much like Cape Verd, nine leagues (as the author judged) from Cape Menſurado. It is a hill ſaddle-backed; and there are four or five one after another; ſeven leagues more to the ſouthward, they ſaw a row of ſaddle-backed hills, and from Menſurado run many mountains.

They were in the height of Rio del Seſtos, on the 19th, and next day, Cape des Baizas was north and by weſt, they being four leagues off ſhore. In the afternoon, there came a boat with three negros, from a place as (as they ſaid) called Tabanoo; and towards evening, they were oppoſite an iſland, with a great many ſmall iſlands or rocks, to the ſouthward. The current came from the ſouth; they ſounded, and had thirty-five fathoms. On the 21ſt, they ſaw a flat hill, bearing north-north-eaſt, being four leagues from ſhore; and at two o'clock in the afternoon, ſpoke with a Frenchman, riding by a place called Crua. This Frenchman carried a letter from them to Mr. Newton, (one of the adventurers). And as they lay at hull, while the letter was writing, the current ſet them to the ſouthward, a good ſpace along the ſhore, ſouth-ſouth-eaſt. On the 25th, they were in the height of the bay, that is to the weſt of Cape Tres Puntas; the current ſetting eaſt-north-eaſt. On the 28th, they lay ſix glaſſes a hull, ſtaying for the pinnace. The laſt of January, at ſeven in the morning, they were up with the middle part of the Cape, three leagues diſtant. At eight, the pinnace came to anchor, and they found the current ſet to the eaſtward. At ſix at night, the uttermoſt land bore eaſt by ſouth, five leagues, they ſhaping their courſe ſouth-weſt, and ſouth-weſt-by-ſouth. On the 1ſt of February, they were oppoſite a very round foreland, which they took for the eaſtermoſt part of the Cape; within the fore-land was a great bay, and in that an iſland. On the 2d, they were up with the caſtle of Mina, and when the third glaſs of their look-out was ſpent, ſpied under their larboard quarter, a boat with certain negros, and one Portugueſe in it. The maſter would have had him come on board, but he would not. Upon the high rocks over the caſtle, they perceived two watch-houſes, (ſo they ſeemed to them) which appeared very white; they ſteered eaſt-north-eaſt. On the 4th, in the morning, they were oppoſite a great high hill, (and up in the land, there were more high, ragged hills) but little ſhort, as they reckoned, of Monte Rodondo, and twenty leagues ſouth-eaſtward from the Mina. At eleven, the maſter ſaw two hills within land, ſeven leagues from the former; and to the ſeaward a bay, at the eaſt end whereof, was another hill; the land from the hills lying very low. Their courſe was eaſt-north-eaſt, and eaſt by north, twenty-two leagues; and then eaſt along the ſhore. On the 6th, they were ſhort of Villa Longa, and met with a Portugueſe caraval. Next day, which was fair and temperate, they rode before Villa Longa. On the 8th, at noon, they ſet ſail again, and ten leagues from thence anchored, ſtaying all that night in ten fathoms water. On the 9th, they proceeded along the ſhore, which was bordered with very thick woods; and in the afternoon, were near a river, to the eaſtward of which, a little way off was a great high tree, ſeemingly without leaves; at night they anchored, the weather being fair and temperate. The 10th, they went eaſt, and eaſt-by-ſouth, fourteen leagues along the ſhore; which was covered with very thick woods. Towards night, they anchored in ſeven fathoms; the weather fair. On the 11th, they 1566
ſailed eaſt by ſouth, and three leagues from ſhore, had but five fathoms water. All the wood upon the land was as even as if it had been cut with gardener's ſheers. Running two leagues, they diſcovered a high tuft of trees upon the brow of a land, which ſhewed like a porpoiſe's head; and when they came at it, found it was but part of the land. A league farther, they ſaw a very low head-land full of trees; and great way from the ſhore, meeting with very ſhallow water, they went more to ſea to avoid the ſands, and then they anchored in the mouth of the River Java, in five fathoms water. On the 12th, they ſent the pinnace and the boat to land with the merchants, who returned not till next morning. The ſhalloweſt part of this river, is towards the weſt where there is but four fathoms and a half; and it is very broad. Here the current ſetting weſtward; and the eaſtermoſt land is higher than the weſtermoſt. On the 13th, they ſet ſail, and by ſouth-ſouth-eaſt along the ſhore, where the trees are wonderfully even. Having run eighteen leagues, they had ſight of a great river, and anchored in three fathoms and a half, the current running weſtward. This was the river of Benin, and two leagues from ſhore it is very ſhallow. On the 15th, they ſent the boat and pinnace into the river with the merchants; and becauſe they rode in ſhallow water, went ſouth-ſouth-eaſt till they came into five fathoms. By this time the boat returned from the harbour, and went on board the pinnace. The land to the weſtward was high browed, while that to the eaſtward was lower, and had on it three tufts of trees, like ſtacks of corn. Here they rode from the 14th of February, till the 14th of April, with the wind at ſouth-weſt. On the 16th of February, the boat and pinnace came to them again out of the river, and told them, that there was but ten feet water upon the bar. All that night was hazy, and yet reſonably temperate. On the 17th, at cloſe of day, the wind at ſouth-weſt ſtill, the merchants put their goods on board the pinnace. There came a great current out of the river, and ſet to the weſtward. Next day they went with their goods into the river. The weather was cloſe and hazy, with thunder, rain, and lightning. The 24th, in the morning, cloſe and temperate; in the afternoon, the boat came out of the river from the merchants. On the 4th of March, a cloſe ſultry hot morning, the current went to the weſtward, and much troubled water came out of the river. On the 16th, the pinnace came on board with Anthony Ingram in her, and brought ninety-four bags of pepper, and twenty-eight elephants teeth; but the maſter of her, and all the company were ſick. This was a temperate day, and the wind at South-weſt, and continued ſo for three days. On the 19th, the pinnace went into the river again, and carried the purſer and ſurgeon. On the 25th, they ſent the boat into the river. On the 30th, the pinnace came from Benin, and brought 159 cerons or ſacks of pepper, and elephants teeth, with the ſorrowful news, that Thomas Heinſted was dead, and their captain alſo. They ſet ſail homewards on the 13th of April, in the morning, with the wind at ſouth-weſt, and ſtood weſt-and-by-north.—But it proved calm all that night; and the current ran ſouth-eaſt. On the 14th, being ſeven leagues from ſhore, the river of Benin was north-eaſt. There was little wind all day; and towards night it was calm. *

The 17th was a fair temperate day, the wind variable; and they found the latitude four degrees 20 minutes. The 25th, was a day altogether like the former; and here they had three degrees and 29 min. of latitude. The 8th of May, they had ſight of the ſhore, which was part of Cape de Monte, but they did not think they had been ſo far: this was occaſioned

* That in all the time of their ſtaying, in the mouth of the river Benin, and all the coaſt thereabout; it was fair temperate weather, when the wind was at ſouth-weſt; and when at north-eaſt, and northerly, it rained, with lightning and thunder, and was very intemperate.

1590 ſioned by the current. In this place Mr. Towerſon was in like manner deceived. On the 9th they had ſight of Cape de Monte. The 17th, was a dark hazy day; and in the night, the author ſaw the North Star for the firſt time. The 26th was a temperate day, with little wind, and they were in 12 degrees 13 min. of latitude. The 13th they met with a great ſea out of the north-weſt. The 6th of June they found it as temperate as if they had been in England, and yet they were within the height of the ſun: for it was declined 23 degrees and 26 minutes to the northward, and they had 15 degrees of latitude. The 28th they had the ſame ſort of weather, and met with a counter ſea from the ſouth.

On the 12th of July, in 30 degrees of latitude, they met with a great quantity of weeds, which ſtuck together like cluſters of grapes, and this continued till the 17th, when they were in 32 degrees 46 minutes, and then ſaw no more. The 25th at ſix in the morning, they had ſight of the Iſle of Pike, bearing north by eaſt, 15 leagues off. The 27th they ſpoke with the poſt of London, and they told them good news of England. The 29th they had ſight of the iſland of Corvo, and next day ſaw the iſland of Flores. The 27th of Auguſt, in 41 degrees of lat. they ſaw nine ſail of ſhips, and were followed by three of them till noon, who then gave over the chace. The 30th they had ſight of Cape Finiſterre.

On the 8th of September at night, they arrived at Plymouth Sound, and rode in Cauſon Bay all night. The 9th they put into Cat-water, and there ſtaid till the 28th of September, by reaſon of ſickneſs and want of men. The 29th they ſet ſail from Plymouth, and came to London the 2d of October, 1589.

The commodities that were carried in this voyage were, both linen and woollen; iron-work of ſundry ſorts; Manillos, or bracelets of copper, glaſs beads, and coral. The merchandiſe that they brought home were, pepper, and elephants teeth, oil of palm, cloth made both of cotton, and the bark of palm-trees, very curiouſly woven. Their money is pretty white ſhells,* for gold and ſilver the Engliſh ſaw none. Cotton grows in great plenty here. Their bread is made of a kind of roots, they call it Inemia; it is pleaſant to the taſte, and light of digeſtion: the root is as big as a man's arm. The Engliſhmen on faſt days, had rather eat the root with oil and vinegar, than good ſtock-fiſh. There are palm-trees in great plenty, and the wine that comes from them conſiderable: it is white and very pleaſant; and ſo cheap, that they could by two gallons for 20 ſhells. They have ſtore of ſoap, which ſmells like beaten violets. They make pretty mats, and baſkets, which are very fine, alſo ivory ſpoons, curiouſly wrought with figures of birds and beaſts. The lightning and thunder on this coaſt is prodigious. The people are very gentle and loving: both men and women go naked till they are married, and then they are covered from the middle to the knees.

The Engliſh could buy earthen pots, the quantity of two gallons, full of honey and honey-combs, for 100 ſhells. They could alſo bring great ſtore of oranges, and plantains, which is the fruit of a tree much like a cucumber, but very pleaſant to the palate.

The author informs us that he had the art of preſerving freſh water; and that when he came to Plymouth, the experiment was made with little coſt on the ſame he brought home, (which had ſerved the ſhip for ſix months,) by the principal perſons in that town, who were much ſurpriſed at it, and acknowledged, there was not ſweeter water in any ſpring about the place.

THE SECOND VOYAGE TO BENIN, IN 1590.

ON the 3d of September the fleet ſet ſail from Ratcliff, and the 18th they came to Plymouth Sound. The 22d they put to ſea again, and at midnight were off the Lizard. On the 24th they had ſight of Cape Verde; and on the 25th they met a great hollow ſea out of the north. The 5th of November they met with three currents, from the weſt and north-weſt, within an hour one of another. This was in the latitude of ſix degrees, 42 minutes.

On the 15th of December they were oppoſite a rock two leagues diſtant, ſomewhat like the New-ſtone in England: it is not above a mile from ſhore. Here they had 27 fathoms water. A mile farther they ſaw another rock, and between them both, broken ground, where they had but 20 fathoms, and black ſand; they could plainly diſcern that the rock went along the ſhore, but from the land to the ſeaward. About five leagues to the ſouth they ſaw a great bay. The latitude was four degrees and 27 minutes. The 26th they met with a French ſhip of Honfleur, which had robbed their pinnace; they ſent a letter by her; and this night they ſaw another ſpot in the ſun. At his going down towards evening, they were oppoſite a river, and right over the river, was a high tuft of trees. The 17th, being the change of the moon, they anchored in the mouth of the river, and found the land to be Cape de Palmlas. Between them and the cape there was a great ledge of rocks, one league and a half from ſhore, and they bore to the weſt of the cape. They ſaw alſo an iſland off the foreland point. Night approaching, they could perceive no more of the land, but only that it tended inwardly like a bay, where there runs a ſtream as if it were in the river of Thames. The 19th, a fair temperate day, and the wind ſouth, they went eaſt, and the land a-ſtern of them bore weſt, appearing low by the water-ſide, like iſlands. This was the eaſt of Cape de Palmlas, the coaſt tending in with a great ſound. They went eaſt all night, and in the morning were but three or four leagues from ſhore. The 20th they were oppoſite a river called Rio de los Barbos. On the 21ſt they went eaſt along ſhore; and three or four leagues to the weſt of Cape de tres Puntos, Mr. Welſh found the bay to be ſet down deeper than it is by four leagues. At four o'clock the land began to ſhew high, and the firſt part of it full of palm-trees. The 24th, ſtill going by the ſhore, which was very low and full of trees, at 12 o'clock they anchored oppoſite the Rio de Boilas. Here they ſent the boat on ſhore with the merchants, but they durſt not put into the river, becauſe of a great ſea that continually broke at the entrance upon the bar. The 29th at noon they were oppoſite Arda, and there they took a caraval; but the negros fled on the land. Going on board, they found nothing in her but a little oil of palm-trees, and a few roots. Next morning the captain and merchants went to meet ſome Portugueſe about a caraval they had taken, who came in a boat to ſpeak with them, about ranſoming the caraval, offering for her certain bullocks and elephants teeth. They gave them one of each ſort, and ſaid they would bring them the reſt the next day. The firſt of January the captain went aſhore to ſpeak with

* Theſe are called *Cowries*.

the Portugueſe; but finding they diſſembled, he came on board again, and preſently unrigged the caraval, and ſet her on fire before the town. Then proceeding along the ſhore, they ſaw a date-tree, by the water-ſide, the like of which is not on all that coaſt. They ran on ground a little on one place; then getting to Villa Longa, anchored there. The 3d they were as far ſhot as Rio de Lagos, where the merchants went on ſhore, and upon the bar found three fathoms flat, but went not in, becauſe it was late. There is to the eaſtward of this river a date-tree, higher than all the date-trees thereabouts. Thus they went along the coaſt, which was full of trees and high woods, anchoring every night.

On the 6th in the morning it was very foggy, ſo that they could not ſee land; but at three in the afternoon it clearing up, they found themſelves oppoſite the river of Jaya, where, meeting with the ſhallow water, they ran out to ſea, as they did the voyage before, and came to anchor in five fathoms. Next day they ſet ſail again, and towards noon came before the river of Benin, in five fathoms water. The 10th, at two in the afternoon, the captain went on ſhore with the ſhallop. Every morning this week it was foggy till 10 o'clock; and hitherto the weather was as temperate as the ſummer in England. This day they went into the road, (the weſt point of which bore eaſt north-eaſt of them) and anchored in four fathoms water. The 21ſt being a fair temperate day, M. Haſſald went to the town of Goto to hear news of the captain. On the 23d the caraval arrived, bringing with her 63 elephants teeth, and three bullocks. The 28th was fair and temperate; but towards night there fell much rain, lightning and thunder. This day the boat came aboard from Goto. The 24th of February, the wind at ſouth-eaſt, they took 298 ſacks of pepper, and four elephants teeth. The 26th they got the reſt of their goods into the caraval, and M. Haſſald went with her to Goto. The 5th of March ſhe came back and brought 21 ſacks of pepper, and four elephants teeth. The 9th of April ſhe came on board with water; and this day they loſt their ſhallop. The 17th was a hazy rainy day. In the afternoon they ſaw three great ſpouts of rain, two on the larboard ſide, and one right a-head, but they came not near them. This day they took in the laſt of their water: and the 26th they victualled the caraval to go with them to ſea. The 27th they ſet ſail homeward, with the wind ſouth-weſt; and at two o'clock in the afternoon, the river of Benin was north-eaſt eight leagues from them. 1563

On the 13th of Auguſt they fell in with the fleet under the Lord Thomas Howard, admiral, and Sir Richard Grenville, vice-admiral, which was lying at Hull, in waiting for Spaniſh ſhips, 30 leagues to the ſouth-weſt of the iſland of Flores. They were detained till the 15th at night, and then had leave to depart, with a fly-boat laden with ſugar, that came from Sant Thome, and were taken by the queen's ſhips; the lord admiral giving Mr. Walſh great charge not to leave her till ſhe was harboured in England. The 23d, the north-eaſt part of the iſland of Corvo, bore eaſt and by ſouth, ſix leagues off. The 17th of September they met a ſhip off Plymouth, that came from the Weſt Indies, but ſhe could tell them no news. The next day they had ſight of another ſail. This day alſo Mr. Wood, one of their company died. The 23d they ſpoke with the Dragon, of my lord of Cumberland, which Ivie was maſter of. The 6th of October they had ſight of Scilly, and were forced by rain and wind to put into St. Mary's Sound, where they ſtaid four days. Departing the 11th, they had three fathoms upon the bar at high water; then ſteering ſouth-eaſt, through Crowſand; they ſhortly after had ſight of the Land's End, and at ten o'clock were oppoſite the Lizard.—The 30th they put into Dartmouth, where they ſtaid till the 12th of December, when ſetting ſail with the wind at weſt, on the 18th they anchored at Limehouſe, where they landed 589 ſacks of pepper, 150 elephant's teeth, and 32 barrels of the oil of palm-trees. The commodities that were carried out this voyage were, broad-cloths, kerſies, linen, iron unwrought, bracelets of copper, coral, hawks bells, horſe-tails, hats, and ſuch like commodities.

THE VOYAGE OF THOMAS STEPHENS TO GOA.

THE firſt and moſt remarkable of the voyages of the Engliſh to the coaſt of Guinea, we have found it moſt proper to arrange together. We ſhall here notice thoſe which were undertaken to the Eaſt Indies, or with a view to participate in that trade, or to interrupt the progreſs of foreigners in thoſe parts. Both before and after the period we are ſpeaking of, ſeveral voyages had been made to the Azores iſlands with various ſucceſs, but not of ſufficient conſequence to be here particularly and ſeparately noticed. The voyage we are about to preſent the reader, was performed by one Thomas Stephens* who, though he was only paſſenger in the Portugueſe fleet to Goa, the account which he gave of the navigation ſeems to have been ſuch as contributed to influence his countrymen in their endeavours to trade in the Indian ſeas, and if poſſible to get ſome footing in thoſe remoter regions.

Our adventurer, with whoſe views in undertaking this voyage we are not made thoroughly acquainted, informs us that he left Italy, and arrived at Liſbon at the end of March, eight days before the departure of the Portugueſe fleet, conſiſting of five ſhips, which left the port on the 4th of April, 1579; and on the 10th of the ſame month, the ſhip wherein he embarked, being alone, was attacked near Madeira by a large Engliſh veſſel, which, however, after having exchanged ſome few ſhot, bore away and left the Portugueſe, though they ſaw her again at the Canaries where they arrived on the 13th. When they paſſed the Line, they were much incommoded by ſqualls and calms, and here our voyager made ſome nautical remarks, moſt of which have however been better illuſtrated by ſucceeding voyagers, and with which we ſhall not therefore trouble the reader. We ſhall only obſerve that he made the following obſervation on the ſigns of land to be obſerved in approaching the African coaſt.

"At 30 leagues diſtant from the coaſt, and about 200 miles, as they computed, from any iſland, an incredible number of fowls of various kinds, followed the ſhip, ſome of which were ſo large [a ſort of eagle] that their wings, when extended, ſtretched above ſeven ſpans, and they could not have wanted ſubſiſtence, as they were all very fat. Theſe fowls were denominated by the Portugueſe according to their different forms and qualities. In all calm places near

* The account is contained in a letter written by Mr. Stephens to his father. He appears to have been a Jeſuit, and was bred at New College, Oxford.

1591 the Æquinoctial Line they ſaw ſharks about five feet long, that followed the veſſel in order to catch any thing that might chance to fall over-board. They alſo ſaw numbers of flying fiſh, and their enemies the albicores.

Inſtead of doubling the Cape of Good Hope without coming in ſight of land, they having a favourable gale, came ſo near the ſhore, that by the winds ſhifting, they were in danger of being wrecked off Cape des Aquilas, which is beyond the other Cape. After they had lain in dreadful condition, loſing their anchors, and in danger of falling a prey to the roaring waves, to ſavage beaſts, or yet more ſavage men, at length, the winds ariſing, delivered them from this danger; and they proceeded on their voyage to India, in the courſe of which, though more than 150 were ſick, yet not above twenty-ſeven died; and Mr. Stephens enjoyed his health all the way. About the eleventh degree of latitude, they were followed for many days by ſome thouſands of fiſh, which furniſhed a good ſupply of proviſions for them, which however, was not a ſign of land. But at length they took two hawks, which they ſuppoſed to be a ſign that they drew near India; however they were then near Socatora. Here ſtrong winds ſpringing up from the north-eaſt, and north-north-eaſt, they were deceived by currents, and continued ten days, without coming in ſight of land, the firſt ſigns of which, were from fowls, which they knew to belong to India; afterwards they ſaw palms, ſedges and leaves ſwimming upon the water; and on the 24th day of the month, they arrived at Goa, where they were received with the greateſt cordiality. The account of this voyage is not ſo remarkable (as we have hinted) for any thing, as for its being the firſt given of any Engliſhman of this navigation, for which cauſe we have given it a place in this collection, and here given it in order, immediately preceding the Engliſh voyages to the Eaſt Indies.

A VOYAGE TO THE EAST INDIES IN THE YEAR 1591, BEING THE FIRST VOYAGE PERFORMED BY THE ENGLISH TO THOSE PARTS.

THE account of this voyage was taken from the deſcription of Mr. Edmund Barker, lieutenant to Captain Lancaſter. * The fleet ſent out, conſiſted of three large ſhips, the Penelope, admiral, commanded by George Raymond; the Merchant Royal, vice-admiral, Abraham Cendel, captain; and the Edward Bon-adventure, rear-admiral, in which was James Lancaſter.

On the 10th of April, they left Plymouth, and came to the Canaries the 25th; and departed on the 29th. On the ſecond of May, they were in the heights of Cape Blanco; the 5th, paſſed the Tropic of Cancer; and on the 8th, they were in the altitude of Cape Verde. They had a fair wind at north-eaſt till the 13th, when being within eight degrees of the equator, they met with a contrary gale, which obliged them to lie off and on in the ſea, till the 6th of June, and then they paſſed the line. Before that, they took a Portugueſe caraval, bound from Liſbon to Braſil, wherein they found ſixty tuns of wine, 1200 jars of oil, and 100 of olives; beſides ſome barrels of capers, three fats of peaſe, and divers other neceſſaries, which proved better to them than gold. Many of the men fell ſick, and two died before they paſſed the line, it being extremely unhealthy between 8 deg. north-latitude, and the equator, at that time of the year; for they had nothing but tornados, with ſuch thunder and lightning, that they could not keep their men dry three hours together, to which, and their eating ſalt victuals, with want of cloaths to ſhift them, they owed their ſickneſs.

After paſſing the line, they had ſtill the wind at eaſt-ſouth-eaſt, which carried them along the coaſt of Braſil, at 100 leagues diſtance, till they came into twenty ſix degrees of ſouth latitude, where the wind changed to the north. On the 28th of July, they had ſight of the Cape; and till the 31ſt, lay off and on, with the wind contrary, in hopes to have doubled it; intending to have gone ſeventy leagues farther to Agoada de St. Blas, before they put into any harbour; but the men in all the ſhips being weak, and requiring ſome place to refreſh, they ſteered to the northward of the Cape along the ſhore fifteen leagues, and came to Agoada de Saldanna; a good bay, with an iſland lying to ſeaward of it, where they caſt anchor on the 1ſt of Auguſt, and then landed the men: to whom there came certain ſavages, very black and brutiſh, but ſoon retired. For the firſt fifteen or twenty days, they could find no proviſions but cranes and geeſe, which they ſhot, nor was there any fiſh but muſcles and other ſhell-fiſh, which they gathered on the rocks. Then the admiral went with his pinnace to the iſland, where he found abundance of penguins and ſeals, of which he took plenty.

At length they ſeized a negro, and compelled him to march into the country with them; making ſigns that they wanted ſome cattle; but at this time, not coming to the ſight of any natives, they let him go again, with ſome trifles, by way of preſent. However, within eight days, he with thirty or forty other negros, brought them about forty bullocks, and as many ſheep, of which they bought a few, and eight days after, twenty-four of each ſort. There are divers ſorts of wild beaſts, as the antelope, whereof Mr. Lancaſter killed one, as big as a young colt, the red and fallow deer, with others unknown to us; and great numbers of overgrown monkeys.

Now it was thought good rather to proceed with two ſhips well manned, than with three, wanting ſufficient hands; and as there were but 198 men in all; 101 were put into the admiral, and 97 into the Edward; and 50 (whereof many were pretty well recovered) left in the Merchant Royal, which, for many reaſons, was ſent home. The diſeaſe that conſumed the men, was the ſcurvy. The ſoldiers who had not been uſed to ſea, held out beſt; but the ſailors dropped away. Six days after the departure of the Merchant Royal, the admiral left the bay of Saldanna, and quickly doubled the Cape of Good Hope; but being come to Cape Corientes, on the 14th of September, there aroſe a great ſtorm, with violent guſts of wind, wherein they loſt the admiral's company, and could never hear of him after, though they long ſought, and ſtaid for him at the Iſland of Comoro, the place appointed for rendezvous. Four days after, about ten in the morning, there fell a terrible clap of thunder

* This voyage was begun under the direction of Captain Raymond, whoſe ſhip was ſeparated from the reſt off the Coaſt of Africa; and we hear nothing of the concluſion of his voyage.

thunder, which killed four men, (their necks being wrung aſunder) and of ninety-four, there was not one untouched; ſome being ſtruck blind, others being bruiſed in their legs and arms, ſome again in their breaſts, ſo that they voided blood for two days after, others were drawn out at length, as though they had been racked; but all recovered. The main-maſt was alſo ſadly torn from the head to the deck, and ſome of the ſpikes that went ten inches deep into the timber, were melted with the extreme heat. Thence they ſailed north-eaſt, and fell in with the iſland of St. Lawrence: which one of the men luckily eſpied late in the evening, by moon light, without knowing what to make of it; but calling others to inform him, they perceived the ſea breaking upon the ſhoals; whereupon, in very good time they tacked about, and eſcaped the danger. Paſſing on, they happened to overſhoot Mozambic, and fell in with a place called Quintangone, two leagues to the northward, where they took two or three barks of Moors, which they called pangaias, laden with millio, hens, and ducks, with one Portugueſe boy on board, going for the proviſion of Mozambic; a few days after, they came to an iſland 100 leagues to the north-eaſt of Mozambic, called Comoro, which they found exceeding full of Moors, of tawny colour and good ſtature, but carefully to be watched, being very treacherous. Being in want of water they ſent the boat with ſixteen men well armed, whom the people ſuffered very quietly to land; and many of them came on board the ſhip with their king, dreſſed in a gown of crimſon ſattin, pinked after the Mooriſh faſhion, down to the knees. The Engliſh entertained him in the beſt manner, and had ſome conference with him about the ſtate of the place, and merchandizes; the Portugueſe boy lately taken, ſerving for their interpreter. After this, they ſent twice for water, and had it very quietly; they were now ſufficiently furniſhed. However, William Mace, of Ratcliff, the maſter, pretending that it would be long before they ſhould find any other good watering place, would needs go on ſhore himſelf with thirty men, much againſt the captain's will. But as half of them were waſhing over againſt the ſhip, the Moors took that opportunity, while they were divided, and killed moſt of them, in ſight of thoſe on board, who were not able, for want of a boat, to give them ſuccour. From hence they ſhaped their courſe for Zanzibar on the 17th of November, where ſhortly after, they arrived, and made a new boat with ſuch boards as they had in the ſhip. They rode there till the middle of February, in which time they ſaw many pangaias, or boats, which are faſtened with pins, and ſewed together with palmito cords, caulked with the huſks of cocoa-ſhells beaten. At length a Portugueſe pangaia coming out of the harbour of Zanzibar, where they have a ſmall factory, ſent a converted Moor, in a canoe, with a letter, deſiring to know who they were, and what they wanted. The anſwer was, they were Engliſhmen, come from Don Antonio about buſineſs to his friends in the Indies. On which they went away, and returned no more: ſoon after they manned out their boat, and took a pangaia of the Moors, with one of their prieſts, called in their language, Sherif, whom they uſed very courteouſly. This the king took very kindly, and for his ranſom, furniſhed them with two months victuals, all which time they retained the prieſt with them. Theſe Moors informed them of the fallacy and ſpiteful dealings of the Portugueſe; who, that the Engliſh might know nothing of the affairs and trade of the country, adviſed them if they loved their ſafety, not to go near the ſhip, repreſenting the crew as men-eaters. During their ſtay here, they ſet upon a Portugueſe pangaia, (armed with ten muſquets) in their boat, but it being ſo ſmall, that the men were not able to ſtir in it, they could not compaſs their deſign. In this harbour a ſhip of 500 tons may ride with ſafety; here is alſo good watering, with plenty of proviſions, as oxen, hens, and fiſh, beſides variety of foreign fruits. Here again they had another clap of thunder, and their fore-maſt was much ſhaken; but they finiſhed, and repaired it with timber from the ſhore, where there is abundance of trees, ſome forty foot high, which was ſuppoſed to be cedar. Six days before their departure from hence, the cape merchant of the Portugueſe factory, ſent a letter to Captain Lancaſter, by a negro, his man and a Moor in a canoe, requeſting a jar of wine, another of oil, and two or three pounds of gun-powder. The captain ſent him his demands by the Moor, but took the negro along with him, becauſe he had been in the Eaſt Indies, and knew ſomething of the country. He informed them of a ſmall bark of thirty tons, called by the Moors a junk, which came from Goa thither, with pepper for the factory. 1592

They ſet forward on the 15th of February, for Cape Comori, intending there to have lain off and on for ſuch ſhips as ſhould have paſſed from Zeilan, St. Thomas, Bengal, Pegus, Malacca, the Maluccos, the Coaſt of China, and the Iſle of Japan; which veſſels are exceeding rich; but being deceived by the currents that ſet into the Red-ſea, along the Coaſt of Melinda; and the wind ſhortening upon them to the north-eaſt, and eaſterly, they were driven farther to the northward, within eighty leagues of the Iſle of Zecotora. However, here they always found abundance of dolphins, bonitos, and flying fiſhes. Now the ſhip being ſo much driven out of her courſe, and the time ſo far ſpent, they determined to ſail either for the Red-ſea, or the ſaid iſland; but the wind very luckily came about to the north-weſt, and carried them directly towards Cape Comori. Before they doubled it, they purpoſed to touch at one of the iſlands of Mamale, in twelve degrees north, which yielded proviſions; but miſſed it, partly through the obſtinacy of the maſter: for the day before they fell in with ſome of the iſlands, the wind coming about to the ſouth-weſt, they changed their courſe. The wind increaſing ſoutherly, they feared they ſhould not have been able to double the Cape, which would have greatly hazarded their caſting away on the Coaſt of India: for the winter ſeaſon, and weſtern monſoons which continue on that coaſt till Auguſt, were already come in. Nevertheleſs, the wind changing more weſterly in May, 1592, they happily doubled the Cape, without ſight of the land. Hence they directed their courſe for the iſlands of Nicobar, (which lie north and ſouth with the weſtern part of Sumatra, in ſeven degrees north latitude) and having a very good wind, arrived there in ſix days, although the weather was foul, with violent rain, and guſts: but by the maſter's fault, in not duly obſerving the ſouth ſtar, they fell, the 1ſt of June to the ſouthward of them, within ſight of the iſlands of Gomes Polo; and kept on the north-eaſt ſide of them, two or three days becalmed, plying off and on the Coaſt of Sumatra, but two leagues diſtant, expecting to have a pilot from thence; now the winter coming on, with much contagious weather, they ſailed for the iſlands of Pula Pinami, where they arrived the beginning of June, and came to anchor between them, in a very good harbour, in ſix degrees thirty minutes north, about five leagues from the Coaſt of Malacca. Here they determined to winter, and landed their men, being very ſick, of whom twenty-ſix died, and among the reſt, John Hall, their maſter, and Rainold Golding, a merchant of very good ſenſe; they had loſt their ſurgeon before, ſo that when they left the iſland, there were but thirty-three men and a boy left, of whom not above twenty-two were fit for labour, and of them, not paſt a third part ſailors. Their refreſhing, in this uninhabited place, was very ſmall, being only oyſters and great wilks growing on rocks, with ſome few fiſh, which they took with their hooks. However theſe iſlands are full of trees of white wood, above 100 foot high, and ſo ſtrait, that they are fit for maſts.

The winter being paſſed, and their ſhip fitted for putting to ſea, towards the end of Auguſt they departed

1566. parted to ſeek ſome place of refreſhment; and croſſing over to the coaſt of Malacca, next day they came to anchor in a bay of ſix fathoms water, two leagues from ſhore. Here captain Lancaſter, his lieutenant, and ſome others landed, and perceived freſh tracks of barefooted people, with a fire burning; but ſaw no living creature, except a certain kind of ſea fowl, called Ox Birds, which are very tame, and like a ſnipe in colour, but not in beak. Having killed eight dozen with hail-ſhot, they returned towards night on board. Next day a canoe, with about 16 naked Indians, drew near them, but would not come aboard; however, the Engliſh going afterwards on ſhore, they came and converſed with them in a friendly manner, and promiſed them victuals. They ſaw three ſhips the day following of 60 or 70 tons each, one of which they made to ſtrike with their very boat, and underſtanding it was of the town of Martabam, (which is the chief haven for the great city of Pegu) and that the goods belonged to ſome Portugueſe Jeſuits, and a biſcuit-baker of the ſame nation, they took it, but did not force the other two, becauſe they were the property of the merchants of Pegu. All three were freighted with pepper, which they landed at Pera, a place 30 leagues to the ſouth. The night following, all the men except twelve, whom they had taken into their ſhip, being moſt of them Peguins, fled in their boat, leaving their ſhip and goods, which were put on board the Edward. After this they took another ſhip of Pegu laden with pepper, and diſmiſſed her without touching any thing.—Their ſick men being ſomewhat refreſhed, and ſtrengthened with ſuch relief as they found in the prize, after a ſtay of 10 days, in the beginning of September they ſailed into the ſtreights, and came to Pulo Sambilam, 45 leagues northward of the city of Malacca, to which iſlands the Portugueſe ſhips muſt always come, that are bound from either Goa, or St. Thomas, for the Maluccos, China, and Japan. When they had been five days plying to and fro, upon a Sunday, they ſaw a ſail, which proved to be a Portugueſe ſhip of 250 tons, laden with rice for Malacca, that came from Nagapatam, a port of India, over againſt Ceylon. Having taken her, Lancaſter ordered their captain and maſter on board his own ſhip, and ſent his lieutenant and ſeven more to keep the prize, which rode in 30 fathoms water; there being good anchorage in that channel, three or four leagues from ſhore. They thought alſo to have taken a Portugueſe ſhip of St. Thomas, of 400 tons, that came and anchored by the prize in the night, but the Edward was ſo foul that ſhe eſcaped. After taking out of the prize what they thought fit, they turned her a-drift, with all her crew, except a pilot and four Moors. The 6th of October they met with a Malacca ſhip of 700 tons that came from Goa, which yielded after her main-yard was ſhot through. The captain, maſter, and pilot, being commanded to come on board, only the captain, with one ſoldier came. After ſome converſation, he propoſed to go and fetch the reſt, under pretence that they would not come unleſs he went for them; but as ſoon as he reached the ſhip in the evening, he made to ſhore with all the people, to the number of 300 men, women and children, in two great boats. They found on board 25 pieces of braſs cannon, 300 butts of Canary and palm-wine, with many other commodities; but they found none of the treaſure which is uſually brought by the galleons in royals of plate. Becauſe the ſailors pillaged this rich ſhip in a diſorderly manner, and would not remove the wines into the Edward, the captain, after taking out the choiceſt goods, ſet her adrift. For fear of the forces of Malacca, they departed thence to a bay in the kingdom of Junſalaom, between Malacca and Pegu, eight degrees to the northward, to ſeek for a pilot to trim their ſhip. Here they ſent the ſoldier who was left behind by the captain of the galleon, and ſpoke the Malayan tongue, to deal for pitch, of which he procured two or three quintals. They likewiſe ſent commodities to barter with the king for ambergreaſe, and the horns of the rhinoceros, and highly eſteemed by the Moors in thoſe parts, as a ſovereign remedy againſt poiſon. They got but two or three of thoſe horns, which are of a brown grey colour, and a quantity of ambergreaſe, whereof the trade only belongs to the king, who at laſt went about to ſeize the Portugueſe and their merchandiſe, which the man perceiving, they told him there was gilt armour, ſhirts of mail, and halberts (things they greatly deſired) on board the ſhips, for which, the king let him return. They then left the coaſt, and paſſing by Sumatra, went to the iſlands of Nicabar, inhabited by Moors, with whom they trafficked. On the 21ſt of November they departed for the iſland of Zeilan, and arrived on the ſouth ſide on the 3d of December, in ſix fathoms water; but the ground being rocky and foul, they loſt their anchor. Then they ran along the ſouth-weſt ſhore, to a place called Punta del Galle, intending to wait for the Bengala and Pegu fleets: the firſt of ſeven or eight ſhips, and the 2d of two or three, which with the Portugueſe ſhips of Tanaſeri, (a great bay in the kingdom of Siam, to the ſouthward of Martabam) were to come that way within 14 days, with commodities for the Caraks, that commonly depart from Cochin for Portugal by the middle of January.

Having left their anchor in foul ground before Punta Galla, they lay all that night adrift, becauſe the two they left were unſtocked, and in hold, which the ſailors made a handle of to return home. The captain at that time lying dangerouſly ſick, in the morning, it was reſolved to ply up to the northward, and keep too-and-again out of the current, which otherwiſe would have carried the ſhip to the ſouthward out of the reach of land. Having, with this view, hoiſted the fore-ſail, and prepared to ſet the reſt, the men declared they would take their direct courſe for England, and the captain was forced to give way.

On the 8th of December they ſet ſail for the Cape of Buona Speranſa, paſſing by the iſlands of Malvida, and leaving that of St. Lawrence, in 26 degrees, to the northward. Betwixt this iſland and the coaſt of Africa, they found great ſtore of bonitos, and albacores, which are a larger kind of fiſh, of which Captain Lancaſter, being now recovered, catched, with an hook, as many in two or three hours, as would ſerve 40 perſons a whole day. They took as many daily for five or ſix weeks, which was no ſmall refreſhment for them. In February, 1593, they fell in with Baia de Agoa, 100 leagues to the north-eaſt of the Cape of Good Hope, but finding the winds contrary, they ſpent a month or five weeks before they could double it. After which, in March following, they ſailed for St. Helena, and arrived the 3d of April, where they ſtayed, to their great comfort, 19 days. Lieutenant Barker going on ſhore here, with four or five Peguins, or men of Pegu, and the ſurgeon, in a houſe by the chapel, found John Segar, of Bury, in Suffolk, who having been dangerouſly ill, was left there eight months before, by Abraham Kendall, in the Royal Merchant to recover his health. He ſeemed as freſh-coloured as could be expected; but whether through fright, apprehending them at firſt to be enemies, or through exceſs of joy, when he underſtood they were his old conſorts, he became light-headed; and taking no reſt for eight days, died for want of ſleep. Here two of the men, whereof one was troubled with the ſcurvy, and the other had been nine months ſick of the flux, ſoon recovered.

The captain departing from hence wiſhed to go to Braſil, but the ſailors abſolutely refuſed; therefore they directed their courſe for England, till they came to eight degrees of the line; ſpending ſix weeks in the way, with many calm and contrary winds at north-eaſt and weſt, which loſs of time, and expence of their proviſions, (of which they had but a ſmall compliment) made them think of altering their courſe; and ſome of the men beginning to mutiny, threatened to break up the cheſts of others for victuals: for every

man had his ſhare in his own cuſtody, that they might be ſure what they had to truſt to, and huſband it the better. The captain, deſirous to prevent this miſchief, having been informed by one of the company, who had been at the Iſle of Trinidada, that there they ſhould be ſure to meet with proviſions, directed his courſe to that iſland; but not being acquainted with the currents, was carried the beginning of June into the gulph of Paria. Here they were eight days, and often in three fathoms water; finding the current continually ſetting in, and no way out, till they got to the weſtern ſide, under the main-land, where they found no current at all, and the water deeper; and ſo keeping by the ſhore, the wind, which blew from land every night, at length helped them out to the northward. Being clear within four or five days after, they fell in with the iſland of Mona, where they rode 18 days, in which time the Indians gave them ſome refreſhment; and a French ſhip of Caen, in Normandy, likewiſe arriving, they bought of M. de Barboterre, the captain, two pipes of wine, bread, and other victuals. After this they fitted out their ſhip, and ſtopped a great leak, which ſprung in the gulph of Paria, being ready to depart, there aroſe a ſtorm from the north which drove them from anchor, and forced them to the ſouthward of Santo Domingo. This night they were in danger of ſhipwreck on an iſland called Savone, which is invironed with flats, lying four or five miles off; getting clear of them, they directed their courſe weſtward along Santo Domingo; and doubling Cape Tiberon, paſſed through the old channel, between that iſland and Cuba, for the cape of Florida. Here they met again the Caen ſhip, whoſe captain could ſpare them no more victuals, but only hides which he had trafficked for upon thoſe iſlands. Being clear off the channel of Bahama, they ſteered for the banks of Newfoundland. In this courſe they ran to the height of 36 degrees, and as far to the eaſt, as the iſle of Burmuda; where, the 27th of September, finding the wind very variable, (contrary to their expectations and all men's writings) they lay by a day or two; but a dangerous ſtorm ariſing, and being in danger of periſhing, they judged it beſt to turn back again to Dominica, and the adjacent iſlands to ſeek relief; but before they could get thither, the wind failed them, ſo that they were obliged to ſhape their courſe weſtwardly to the Nueblas, or Cloudy Iſlands, near St. Juan de Porto Rico, where they found land crabs, freſh water, and tortoiſes, which go on ſhore; moſtly about the full moon. Having refreſhed here 18 days, and taken in a little proviſion, they reſolved to return to Mona; only five men, who could not be prevailed on to go, ſtaid behind, and got home afterwards in an Engliſh ſhip. They arrived the 15th of November, 1593 at Mona, where the captain, with his lieutenant, and 16 others, went to the houſes of the old Indian, and his three ſons, hoping to get victuals, all theirs being ſpent. They were three days ſeeking proviſions for relief of thoſe on board; but the wind being northerly, and the ſea running high, ſo that the boat could not get on ſhore to fetch it off, they reſolved to wait till next day. In the mean time, about 12 at night, the carpenter cutting the cable, the ſhip drove away with only five men and a boy in her. In this diſtreſs they ſeparated in companies, that place not being ſufficient to ſupport them all. The captain and ſix others lived on ſtalks or purſelane boiled, and now and then got a pompion in the old Indian's garden, who, at this time, fled from them to the mountains. It was 29 days before they deſcried a French ſhip of Dieppe, called the Louiſa; which, on their making a fire, bore in with the land, and anchored at the weſtern end of the iſland. The Indian and his ſons on this, came down to Captain Lancaſter, and went with him to the ſhip, and the next day 11 more were carried on board, and uſed courteouſly. The ſame day another ſhip of Dieppe arrived, and ſtaid till night, expecting the other ſeven men; but although guns were fired off to call them, they came not. Hereupon the ſhip departing, arrived at the north ſide of St. Domingo, where the Engliſhmen remained till April following, 1594, and ſpent two months in traffic with the inhabitants, by permiſſion, for hides, and other merchandiſe.* At this place Captain Lancaſter and his lieutenant went on board another ſhip of Dieppe, John la Noe captain, leaving the reſt of their company to follow. On Sunday the 17th of April, 1594, they ſhaped their courſe homeward, and paſſing through the Caijeos (near the windward paſſage) the 19th of May arrived ſafe at Dieppe, where having ſtaid two days to refreſh, they croſſed over to Rye, and landed on Friday the 24th of the ſame month, 1594, after an abſence of three years, ſix weeks, and two days, from their native country. 1598

* By a ſhip of Newhaven, which touched there, they had intelligence of their ſeven men, who were left behind at Mona, which was, That two of them broke their necks in venturing to take fowls upon the cliffs; three others were ſlain by the Spaniards who came from St. Domingo, on information given by thoſe who went in the Edward; and the other two this Newhaven man had with him in his ſhip, having eſcaped their hands.

A VOYAGE TO THE EAST INDIES, IN 1598, BY CAPTAIN JOHN DAVIS.

THIS voyage was written by Davis himſelf, and ſeems to have been ſent by him from Middleborough in Zeland, in a letter to Robert earl of Eſſex, which letter, dated the firſt of Auguſt, 1600, is preſixed to the relation. From this we learn that the author had been employed by his lordſhip, for diſcovering the eaſtern parts of the world; whence he took occaſion to tell the earl, that his journal contained only ſuch things as fell within his own obſervations, but that when he ſhould be honoured with an opportunity, he would give him an account of what he had learned on board, relating to the king of Portugal's places of trade and ſtrength, as well as to the commerce of the eaſtern nations among themſelves: that with regard to the Portugueſe poſſeſſions, he would begin at Sofala, which is their firſt footing beyond the Cape of Good Hope, and ſo proceed to Mozambique, Ormus, Diu, Goa, Coulam, Onor, Mangalor, Cochin, Columbo, Negapatam, Porto Grande in Bengala, and Malacca, the city of Macao, in the province of Canton in China, and Molucas, and Amboyna.

The fleet ſet out on the 25th of March, 1598, from Fluſhing, with two ſhips, the Lion and the Lioneſs; the former of 400 tons, and 123 perſons on board; the latter of 250 tons and 100 perſons. The owners were Muſhrom, Clark, and Monef, of Middleborough; and their chief commander was Corne-

1600 lius Houteman, who had a commiſſion from Grave Maurice. They anchored in Torbay, with very rough winds, on the 22d, from whence they ſailed, on the 17th of April, 1599; and on the 20th, had ſight of Porto Santo. On the 23d, they fell in with the Iſland of Palma; and on the 30th, came to the Iſles of Cape Verde. On the 1ſt of May, they anchored at St. Nicholas, one of thoſe iſlands in ſixteen degrees, ſixteen minutes north latitude, where they watered the 7th, and ſetting ſail, on the 9th, fell in with St. Jago. On the 9th of June, they made the Coaſt of Braſil, in ſeven degrees ſouth latitude. And not being able, for the unſteady winds and bad weather, to double the Cape St. Auguſtine, ſhaped their courſe for the little Iſland Fernanda Loronha, in four degrees, where they arrived the 15th, and anchored on the north-ſide of it, in eighteen fathoms. The iſland is very fruitful, and here is good water, alſo beef, goats, hogs, hens, melons, Guinea corn, plenty of ſea fowl and fiſh. There were on the iſland but twelve negros, eight men and four women, who had been left by the Portugueſe to till the ground: no ſhips having been there for three years before. On the 26th of Auguſt, they left this iſland with a north-eaſt wind; and the laſt of the month, doubled the Cape of St. Auguſtine. On the 10th of September, they paſſed the danger they moſt apprehended, the ſhoals of Abrolhes, which lie off the Coaſt of Braſil, far into the ſea, in twenty-one degrees ſouth. On the 11th of November, they anchored in the Bay of Saldanna, in thirty-four degrees ſouth, and here found three good rivers. They traded with the natives at very eaſy rates, having had fat ſheep and oxen for old nails, and pieces of iron, not the value of a penny. The oxen were buffaloes, which have a great lump of fleſh (like the bunch upon the camels back) between the ſhoulders; and the ſheep have no wool, but long ſhaggy hair, and large tails (all intire fat) which weigh twelve or fourteen pounds. The natives are of an olive complection, darker than the Braſilians; their hair black and curled, like the negros of Angola, but not circumciſed; their faces painted with ſeveral colours, and all naked, except a ſhort cloak of ſkins, and ſandals upon their feet. "They are a ſtrong, active people, (ſays the author) and very ſwift runners. Their words are, for the moſt part, articulate, and in ſpeaking they cluck with the tongue, like a hen; which clucking and the word coming both together, ſound very oddly. Their weapons are only darts; they are ſubject to the great king of Monomotapa. The Flemmings having done them ſome injury, they abſented themſelves for three days; and having in the mean time, alarmed the country by great fires from the mountains. On the 19th, they came again, bringing much cattle along with them. But while the Dutch were bartering with them, they made a ſudden and furious aſſault upon the ſailors, killing thirteen, and although their hand-darts could do no hurt at four pikes length, yet the reſt throwing away their weapons, took to their heels, the barbarians purſuing them. Their captain (who did not think fit to venture himſelf in the ſkirmiſh) ſent them a parcel of weapons from the ſhips, ſwords, targets, pikes, and muſquets; but the Flemmings, though like giants for ſize, durſt not venture out of their tents, and though Captain Davis, with his friend Mr. Tomkins, offered to repulſe the enemy, if they would aſſiſt him, yet the greater part refuſed. The ſame night they went all on board. The country thereabouts is a very good ſoil, and a pleaſant air, it abounds with uſeful plants, as mint, plantanes, ribwort, trefoil, ſcabioes, &c. Departing on the 27th, they, on the laſt of this month, doubled the Cape of Good Hope, and on the 6th of December, the Cape des Aquillas, which is the moſt ſouthern point of all Africa: it lies in the thirty-fifth degree of ſouth latitude. On the 16th of January, 1599, they fell in with Madagaſcar, ſhort of Cape Romano; but not being able to double it; all the reſt of this month they ſteered for the Bay of St. Auguſtine, on the ſouth-weſt part of the iſland, where, on the 3d of February, they anchored, many people appearing on the ſhore, but on their landing, they fled. The reaſon of this was, that the Dutch captain in a former voyage, had done much injury to the natives, one of whom he took, bound to a poſt, and ſhot to death. Yet after ſeven days waiting, and means had been uſed to mollify them, they brought ſome milk and one cow, which the Dutch bought, and then took their final leave of them. Theſe people have ſtrong and well made bodies, and go naked, their ſkins is coal black, their ſpeech ſweet and pleaſing: their weapons are half-pikes, headed with iron, which they keep very bright.

"The country ſeems very fruitful, and produces great ſtore of tamarind-trees, and a ſort of beans, (that grow upon high trees) the pods of which, are two feet long, and proportionably large, and make a very good food; cameleons are numerous here. The Engliſh eſpecially, ſuffered great miſery in this bay, from whence they all went on board, the 8th of March, extremely hungry, and without any meat. On the 14th, they departed, naming it Hungry Bay, and ſhaped their courſe to the north-ſide of the iſland. Hungry Bay. On the 29th of March, 1600, they came up with the iſlands Comoro, which are five in number, lying between twelve and thirteen degrees, ſouth latitude: and on the 13th of May, anchored at one of them called Mayotta, cloſe by a town, where they met with people who ſeemed to be glad of their coming, and brought proviſions. The captain being invited on ſhore, went, and the king met him, with three drums beating before him; and a fine retinue, all richly dreſſed in long ſilk embroidered garments, after the Turkiſh mode. They were received very kindly by his majeſty, who gave him a letter of recommendation to the queen of Anſuma (or Joanna) whither they afterwards went, and were well received. Comoro Iſles.

"On the 28th, they departed, paſſing through the iſlands of Maſcarennas, by the ſhoals de Almirante; and on the 23d of June, fell in with the Maldivia Iſlands, which are low, cloſe by the water, and ſo covered over with cocoas, that nothing but green trees appear. Being at anchor here, many Indian boats paſſed by, but none would come to them, which cauſed the captain to give orders for the taking one of them. On the 24th, the ſhips boats brought in one of them, which was covered with mats, like a cloſe barge, and had in her a gentleman and his wife. He was dreſſed in very fine white linen, after the Turkiſh manner, had rich ſtone rings on, and his behaviour was affable, his aſpect modeſt, and his ſpeech graceful, as beſpoke him a man of quality. The captain went into his boat to ſee his wife, whom he unwillingly ſhewed him; ſhe ſat with ſilent modeſty, not ſpeaking a word; he alſo opened her caſket, wherein were ſome jewels and ambergreaſe. What was taken from them, Davis knew not, but in going away that gentleman behaved with a princely ſpirit. He was of a middle ſtature, was black, and had ſmooth hair."

Theſe iſlands are reported to be ſome thouſands in number. Their plenty of cocoas brings them a good trade, ſince they make bread, wine, and oil, ropes, ſails, and cables, of the ſeveral parts of that fruit. On the 27th, there came on board an old man, who ſpoke a little Portugueſe; when ſetting ſail, he was their pilot through the true channel, called Maldivia, which, by good luck they hit upon, lying in four degrees fifteen minutes, north latitude, there the compaſs had ſeventeen degrees weſt, variation. Vaſt numbers of ſhips from all parts of India, paſs through this channel, which is very dangerous to miſs. On the 3d of June, they fell in with the Coaſt of India, in eight degrees forty minutes, north, near Cochin; and coaſting this ſhore, doubled Cape Comorin, from whence they ſteered their courſe for Sumatra. They ſaw the Coaſt of Sumatra on the 13th, in five degrees forty minutes, north

latitude; and on the 21ſt, anchored in the bay of Achin, in twelve fathoms. Here they found ſome barks of Arabia and Pegu, that came for pepper, and Don Alphonſo Vincent, a Portugueſe, with three or four barks from Malacca, who came (as they found afterwards) to fruſtrate their trade. Soon after the king ſent officers to meaſure their ſhips, and take the number of the men and ordnance. With them the captain ſent two of his people, who carried a looking glaſs, a drinking glaſs, and a bracelet of coral, as a preſent for the king; and he ſent them back, cloathed after the manner of the country, in white calico, with tidings of peace, and plenty of ſpice.

They arrive at Achin.

On the 23d, at midnight, the king ſent for the captain, and a nobleman as hoſtage. His majeſty, beſides a civil entertainment, made him a promiſe of a free trade; and gave him as a mark of his particular favour, the criſe of honour. This is a ſort of weapon like a dagger, it has no croſs, nor hilt, but the haft and handle are of a metal of a fine luſtre, valued more than gold, and richly ſet with rubies. It is death for any man to wear it, unleſs given by the king. And he that has this favour, has an unlimited power to take victuals without paying for them, and command all others as his ſlaves. At his return, he brought a boat load of pepper along with him, and reported incredible things of his own good reception, and the great trade he had procured; but told the Engliſhmen, the king often aſked if he was not of that nation; which he denied, uttering many words againſt the Engliſh, and ſaying he would give a thouſand pounds that there had been none on board. On the 27th, the merchants went on ſhore with their wares, having a houſe prepared by the king's appointment. Some time after, the captain being at court again, the king diſcovered the treacherous deſign of the Portugueſe to him; but promiſed to ſtand his friend, and gave him a purſe of gold. Then he was aſked again, if he was an Engliſhman or not, and having anſwered that he was of Flanders, the king replied, it was a country that he had never heard of, but that the fame of England had reached his ears ſome time before. And when he heard that there were ſome Engliſhmen in the ſhip, (though to their diſparagement, it was ſaid, that they had their education in Flanders) yet to their further mortification, he told him, that he muſt ſee ſome of the men of that country. As for the buſineſs of trade, it was then agreed, that the captain ſhould aſſiſt him in his wars againſt the king of Jor, (or Jahor) and, in conſideration of that ſervice, ſhould have a full lading of pepper. The king afterwards expreſſed ſome reſentment, that none of the Engliſh had yet been brought to wait on him, (for neither Davis nor Tomkins were ſuffered to go on ſhore) and reproached the captain, as if he intended to quit the ſervice he had covenanted to perform. Upon this Captain Davis was preſently ſent for; and on the 22d, waited on the king, with whom he ſtaid four or five hours feaſting. When he had been there about an hour, he ſtood up; and the Shah Bandar, firſt taking off his hat, put a roll of white linen round his head, and a ſaſh of the ſame, embroidered with gold, that went twice about his waiſt, and hung half down his under veſt of white, and over that, one of red. Then the king made him eat, and drank to him in aqua-vitæ. He was ſerved all in gold and china, and ate on the ground, without either table or cloth. The greateſt part of his diſcourſe, was about England, the queen and her nobles, and he greatly admired them for their wars with the king of Spain, whom he had imagined to be the abſolute monarch of all Europe. Captain Davis was ſent for by the prince, on the 23d, and rode to court on an elephant, exceſſive eating and drinking, was their entertainment. This day he met with a conſiderable China merchant, who ſpoke Spaniſh, of whom he learned ſome things of moment. There were many Chineſe traders here, who had their particular town; ſo had the Portugueſe, the Guzarat Arabs, and thoſe of Bengal and Pegu. The captain diſliking that he ſhould keep company ſo much with the Chineſe, ordered him on board. On September the 1ſt, they had orders to take in ſoldiers and ordnance, and to prepare for the battery of the city of Jor, and to colour the deſign that was going on, the better, the great galleys were brought out of the river, and the ſea all about them was covered with praws, and boats loaded with armed men; ſome of the chief came on board them, as Carcoun, the ſecretary, and Abdalla, the chief Shah Bandar, with a good company of ſoldiers, appointed with all ſorts of weapons; who pretended only a good carouſe with the good liquors they had brought. The crew ſuſpecting another ſort of entertainment, prepared accordingly, making faſt all the gratings, and prepared their weapons, in ſpite of the captain, who ſeemed under no apprehenſion of danger. The Achineſe, whoſe deſign was to cut their throats, the more eaſily to effect it, mixed all the meat and drink they brought on board, with a ſort of ſeed, which grows in the country, a little of which, makes a man as it were ſenſeleſs; ſo that things appear to him quite otherwiſe than they really are, but if taken in a large quantity, is a deadly poiſon. During the banquet, the Shah Bandar, and the ſecretary ſent for Mr. Davis, and ſpoke to one of their attendants, but what he knew not. Soon after the drug began to operate upon them, ſo that they quite loſt the due management of themſelves, and began to gape and ſtare upon one another. The captain was a priſoner, and knew nothing of it. And now they had brought them into the condition they deſired, upon a ſignal given from the other ſhip, (where the ſecretary had gone to play the ſame game) they fell upon them, killed the captain and ſeveral others. Davis and Tomkins ſeeing this, with a Frenchman, defended the poop, which was all that was left of the ſhip; the enemy having got poſſeſſion of the cabin, and of the guns, by creeping in at the port holes. The maſter of the ſhip and others leaped into the ſea till all was over, and then came in again. At length the Achineſe began to fly, for the ſailors from the tops, annoyed them much) which when Davis and Tomkins ſaw; they leaped from the poop to purſue them. They were met by a Turk coming out of the cabin, who wounded Tomkins grievouſly, but as both lay ſtruggling on the ground, Davis ran him into the body with a ſmall ſword, and the ſkipper diſpatched him, by thruſting a half-pike down his throat. By this time the ſecretary and his party had got poſſeſſion of the other ſhip, and murdered the principal perſons belonging to it: but thoſe of Davis's veſſel having cut her cable, made towards them, and by means of their guns, ſoon obliged the Indians to fly, and recovered the ſhip, the galley not daring to aſſiſt them. The ſea was covered with Indians heads, for they ſwam away by hundreds; among the reſt, the Shah Bandar, and one of the king's near kinſmen were killed, and the ſecretary wounded. The news of this overthrow, ſo inflamed the tyrannical prince, who was then by the ſea-ſide, that he cut off the heads of all the Flemmings on ſhore, eight only excepted, whom he reſerved for ſlaves. Their loſs amounted to ſixty-eight men in all, including thoſe that were under confinement, beſides the two pinnaces and a boat. While they ſtaid at Achin, they had got 140 tons of pepper on board their ſhips: but upon the rupture, all the money and merchandiſe on ſhore, as well as the men, were loſt; by which means, many young adventurers were quite ruined, and Captain Davis himſelf, did not come off much better.

1600

Treachery of the Achineſe.

"The ſoil of this iſland (Sumatra) is very rich and fertile; it produces variety of excellent fruits, and very good timber for ſhipping, but no ſort of grain, only rice, of which they make their bread. Here are mines of gold and copper; precious balms and gums, rubies, ſapphires, and garnets, with much indigo, and many other valuable commodities; particularly, pepper grows here in ſuch plenty, that they are able

to

1600 to lade 20 ſhips every year, and might many more, if they were induſtrious. It grows like hops, from a planted root, which, by degrees, winds itſelf up about a pole, till it becomes a great buſhy tree. The pepper hangs in cluſters three inches long, and one about, each cluſter having forty or more corns in it; beſides theſe mineral and vegetable productions, it affords plenty of ſerviceable animals, as horſes, oxen, goats, wild hogs, elephants, and buffaloes, which laſt they uſe in ploughing their ground. To theſe advantages may be added a very wholſome and temperate air in moſt places, with ſweet dews and fruitful ſhowers that never fail to cool and refreſh the ground.

The iſland of Sumatra is divided into four kingdoms, Achin, Pider, Manancabo, and Aru. The three laſt are tributary to the firſt; but Aru holds with the king of Jor, and refuſes ſubjection. Captain Davis heard of no more than five principal cities in this iſle. Achin, Pider, Paſem, Daia, and Manancabo. Achin, the capital city of the whole iſland, ſtands in a wood, and is ſo much covered with trees, that not a houſe is to be ſeen till one is juſt upon it. It is a very large ſcattered place, and the houſes ſtands almoſt like the trees, without any order or uniformity: they are raiſed upon poſts, eight or nine feet from the ground, and have walls and coverings of mats. Here is a vaſt concourſe of people, and the three market-places yield every day the proſpect of ſo many fairs. The haven that leads to it is very ſmall, being but ſix foot at the bar, and it has one of the worſt, and moſt ill-contrived forts made of ſtone, being round, without covering, battlements, or flankers, and low-walled like a pound; but there is a very pleaſant road before this fort, in which (the wind ſtill blowing from ſhore) a ſhip may ride a little way off in 18 fathoms water, and cloſe by in ſix and four fathoms.

"The king of Achin was called Aladin, and was ſaid to be 100 years old. He was a healthy man, but exceeding corpulent. He was originally a fiſherman (of which this place had very many, for they live moſtly upon fiſh;) but diſcovered ſo much valour and conduct in ordering the former king's galleys in time of war, that his ſovereign made him admiral of his ſea forces, and gave him to wife one of his neareſt kinſwomen. The king had an only daughter married to him of Jor, by whom he had a ſon, who was ſent to Achin to be under his grand-father. The old king dying ſuddenly, the fiſherman, who was then chief commander both by land and ſea, took the protection of the child, in which the nobility and gentry oppoſing him, he put to death more than a thouſand of them, and made new lords of the meaner ſorts. This done, he murdered the child, and then proclaimed himſelf king in right of his wife. On this a war aroſe between him and the king of Jor, which ſtill continued. Theſe twenty years he had by force held the kingdom, and then ſeemed to be ſecure. His palace ſtands half a mile from the city upon the river Ore, and any one muſt paſs three courts of guards in order to get at him; it is built as other houſes are, but much higher. He ſitteth where he can ſee, and unſeen by all that come to ſee any of his guards. The walls and coverings conſiſt of maſts. It is hanged ſometimes with cloth of gold, ſometimes with velvet, and ſometimes with damaſk. He ſits upon the ground croſs-legged, and ſo muſt all in his preſence. He wears four croſſes, two before, and two behind, rich with diamonds and rubies; and had a ſword lying on his lap. He was attended by at leaſt, 40 women, ſome with fans to cool him, others with cloths to wipe off the ſweat; ſome gave him aqua-vitæ, others water; the reſt ſung pleaſant ſongs. He did nothing but eat and drink from morning to night, and ſit with his women; and delighted much in cock-fighting; and as was the king, ſo were his ſubjects, for their pleaſure led all the ſame way.

"If the king puts any of his ſubjects to death, they are torn to pieces by elephants, or impaled. There are many fettered priſoners that go about the town, beſides what may be in the goals. His women are his chiefeſt counſellors. He had three wives and many concubines, which were very cloſely kept. He had great ſtore of braſs ordnance, which they uſed without carriages, firing them as they lay upon the ground. They were the greateſt the Engliſh ever ſaw; and the metal was reported to be mixed with gold. The ſtrength of his land forces lies in his elephants.

"In religion they are a ſort of Mahometans. They bring up their children in learning, and have many ſchools. They had an archbiſhop and ſpiritual dignities. There was one in Achin whom they greatly honoured as a prophet, and ſaid he had the gift of the Spirit. He was diſtinguiſhed from the reſt in apparel, and much careſſed by the king.

"In the place of ſepulture for the kings, every grave had a piece of gold at the head, and another at the foot, weighing a thouſand pounds each, and all richly adorned with precious ſtones. The Engliſh had a great curioſity to ſee the king's ſepulchres, becauſe of the great wealth reported to be therein, but could not. The people were addicted to commerce, and generally very expert in buſineſs with reſpect to mechanical arts. They had goldſmiths, gun-founders, ſhip-rights, taylors, weavers, hatters, pot-makers, and diſtillers of aqua-vitæ, which is made of rice, (for they muſt drink no wine) cutlers and ſmiths. As to their burials, every generation or family have their particular places in the fields to inter their dead. They lay their heads towards Mecca, having a free-ſtone at each end of the grave, with the feet curiouſly wrought, thereby ſignifying the worthineſs of the perſon.

"Here was a great reſort of merchants from China, Bengal, Pegu, Java, Coromandel, Guzarat, Arabia, and Rumos in the Red Sea, and the place from whence Solmon ſent his ſhips to Ophir for gold; which is now called Achin, as by tradition they affirm; and theſe of Rumos from Solmon's time to this day, have followed the ſame trade.

"They have divers ſorts of coin, as caſpes, maſs, cowpan, perdaw, and tayell. The Engliſh only ſaw two ſorts of gold, named maſs, the bigneſs of a penny, and as common as pence in England, the other of lead, called caxas, much like the little token uſed by the vintners of London. A thouſand ſix hundred caſhes make one maſs: four hundred caſhes a cowpan; four cowpans one maſs; five maſſes four ſhillings ſterling; four maſſes make a pardaw; four pardaws a tayell: ſo that a maſs is nine-pence and three fifths of a penny.

"They ſell their pepper by the bahar, which is equal to 360 of our pounds. This coſts three pounds four ſhillings. They call their pound a Catt, which is 21 of our ounces. Their ounces are bigger than ours, by ſo much as 16 is more than 10. The weight which they ſell precious ſtones by, is called Maſs, ten and three fourths whereof make an ounce.

"Once every year the king, attended with all his noblemen, in great pomp, goes to the church to ſee if the Meſſiah be come, which happened at the time of our being here. There were 40 elephants in his train, covered with ſilk, velvet, and cloth of gold; with divers noblemen riding upon each; but there was one, whoſe furniture far exceeding the reſt, having a little golden caſtle upon his back, which was led for the Meſſiah to ride in. The king was carried alſo in a little caſtle. Some had two targets of gold, others great half-moons of gold, with ſtreamers, banners, enſigns, trumpets, and various other inſtruments of muſic. The proceſſion moved in a very ſolemn manner, and made a very handſome appearance. At length, coming to the church, they looked in, and not finding the Meſſiah, uſed ſome ceremonies; after which, the king deſcending from his elephant, rode home upon that prepared for the Meſſiah; and ſo ended the day with feaſting and diverſions."

On the firſt of September, the ſame day they had the encounter with the Achineſe, they departed, and anchored

chored before the city Pider, expecting to hear of the pinnace they had ſent thither before for rice, but did not return. On the 2d eleven galleys arriving with Portugueſe (as they thought) to take their ſhips, they ſunk one and defeated the reſt. The ſame day there came to them one La Fort, (the ſon of a French merchant in Seething Lane, London) who was one of the eight priſoners. He was ſent by the king to aſk them if they were not aſhamed to be ſuch beaſts as to get drunk, and then in their liquor to murder his people, whom he had ſent to them in kindneſs? and to demand their beſt ſhip for ſatisfaction, in which caſe he promiſed to releaſe the men. "Do this, ſaid he to la Fort, and I will make you a great man;" but the Flemings wanted ſatisfaction of the king.—Being diſtreſſed for water, they went to the iſlands called Pulo Botun, upon the coaſt of Queda, in 16 degrees 50 minutes, where they took in proviſions.—There were on board three letters ſealed up, and ſubſcribed A. B. C. which, upon the death of the Baaſs were to be opened. By A. one Thomas Quymans, was appointed to be their chief, who was ſlain at Achin. Then B. was opened, whereby La Fort (who eſcaped) was appointed chief, and was received as ſuch. The letter C. was not opened.

They ſet ſail again for Achin, on the laſt day of the month, in hopes, by ſome means, to recover their men. October the 16th they came in ſight of that city, and the 12th entered the bay, where they found 10 galleys ſet out againſt them. Bearing up to one of them, they gave her many ſhots, but in a calm under the land, ſhe eſcaped; as for the reſt, they durſt not come near them. On the 18th, they ſteered their courſe for the city of Tanaſſarin, a place of great trade; and the 25th anchored among the iſlands in the bay, in 11 degrees 20 minutes, north. Here the winds proved ſo contrary, that they could not get up the city, which ſtands 20 leagues within the bay. Being in very great diſtreſs for want of victuals, they ſailed for the iſlands of Nicobar, in eight degrees north, where they arrived the 12th of November, and were ſupplied with plenty of hens, oranges, lemons, and other fruit, and ſome ambergris which they had in exchange for linen cloth, and table napkins. Theſe iſles are pleaſant and fruitful, the land low, and has a good road for ſhips. The people are very poor, living wholly upon fruits and fiſh, without ever manuring the ground; and therefore have no rice, which the ſhips being in great want of, the ſhips ſhaped their courſe for the iſle of Ceylon. The 6th of December they took a ſhip of Negapatam, (a city on the coaſt of Coromandel) laden with rice, and bound for Achin.

There were on board 60 perſons from ſeveral parts. By them they learned, that at Mategaloa, and Trinquanamale, cities in Ceylon of great trade, they might load their ſhip with cinamon, pepper and cloves, and that there was great ſtore of precious ſtones and pearls in that iſland, as well as all kind of victuals very cheap, and that the king is mortal enemy to the Portugueſe. Upon this, they did their utmoſt to get thither, but could not for the contrary winds. The Indians then told them, that if they would ſtay till January, they would meet with more than one hundred ſhips ſailing cloſe by that ſhore, laden with ſpice, linen and China commodities, beſides precious ſtones and other rubies. To ſtay there as a man of war, their governor would not agree; therefore the 28th they ſhaped their courſe homewards, having beaten ſixteen days upon this coaſt.——They diſcharged their prize the 18th, after taking the rice, for which their chief paid them to their ſatisfaction; but the unruly ſailors plundered her of money and merchandiſe; 12 of the Indians of ſeveral places were detained on board, who informed Captain Davis among others, after he could a little underſtand them, that there was great ſtore of precious ſtones in the ſhip, hid under the timber. How true it was the captain could not ſay, for the Flemings would not ſuffer either him or Tomkins to go on board the prize, for reaſons beſt known to themſelves. The 5th of March, 1600, their food was poiſoned, before it was ſerved to them: but one of the crew taſting by chance, or greedineſs, (for it was freſh fiſh) was preſently infected, which gave the alarm. The doſe was ſufficiently ſtrong; for the ſurgeon took almoſt a ſpoonful of poiſon out of one fiſh; but this the captain obſerves was not the firſt time.—The 10th they fell in with the Cape of Good Hope, where they had a great ſtorm, and the 26th doubled the ſame. The 13th of April they anchored at the iſle of St. Helena, in 16 degrees ſouth. Here they found good water, figs, and fiſh in plenty, with goats, but hard to come at. The 15th at ſun-ſet, a caraval anchored within a large muſquet ſhot to windward of them. She was utterly unprovided, not having one piece mounted: they fought with her all night, and gave her above 200 ſhot. For eight hours ſhe ſtood the firing without making the leaſt reſiſtance; but by midnight ſhe had got out ſix pieces, which were played upon them ſo well, that their ſhip was often ſhot through, and two of their men ſlain. On which, the 16th in the morning, they departed for the iſle of Aſcenſion, in eight degrees ſouth, where they hoped to meet with relief, many of their men being ſick, and arrived there the 23d.——This iſle hath neither wood, water, nor any green thing upon it, but is a fruitleſs green rock, of five leagues broad. The 24th they ſailed for Fernando Loronha, where they knew they ſhould find relief, having ſtaid at this iſle 10 weeks outward-bound. The 6th of May they arrived there, and continued ſix days to water and refreſh themſelves. On the 13th, they ſhaped their courſe for England, and arrived at Middleborough on the 29th of July. 1600

VOYAGES OF THE ENGLISH TO THE EAST INDIES, IN SHIPS EQUIPPED BY THE COMPANY OF MERCHANTS.

THE merchants of London, in the year 1600, having joined together, and made a ſtock of 72,000l. to be employed in ſhips and merchandiſes, for the diſcovery of trade in the Eaſt Indies, they bought and fitted four large ſhips; the Dragon, of 600 tons, and 202 men, Captain James Lancaſter admiral; the Hector, of 300 tons, and 108 men, Captain John Middleton, vice admiral; the Aſcenſion, of 260 tons, and 32 men, in which was William Brand, chief governor; and the Suſannah, of 280 tons, 84 men, Captain Hayward: there were likewiſe in each ſhip three merchants, who were to ſucceed each other in caſe of death. To theſe, the Gueſt, a ſhip of 130 tons, was added, as a victualler. This fleet was furniſhed with men, victuals, and ammunition, for 20 months, and carried in Merchandiſe and Spaniſh money, to the value of 27,000l. All the reſt of their ſtock was laid out in the purchaſe and equipment of the ſhips, in providing them with neceſſaries, and in advancing or lending money to the

1601. mariners and ſailors. Queen Elizabeth having been applied to by the owners, gave them a letter of recommendation, to divers princes of India, offering to enter into a league of peace and amity with them; and granted the admiral a commiſſion of martial law.

Theſe ſhips departed from Woolwich, on the 13th of February, 1600; but ſtaid ſo long in the Thames and Downs for want of wind, that it was Eaſter before they arrived at Dartmouth; where they ſpent five or ſix days in taking in their bread and other proviſions. From thence they ſailed on the 18th of April, 1601, and put into Torbay; where the admiral ſent on board all the ſhips inſtructions for keeping company at ſea, and appointed the places of rendezvous, in caſe of ſeparation by ſtorms or other accidents. Theſe places were the calms of Canaria, the bay of Saldanna, (in caſe they could not double the Cape of Good Hope) Cape St. Roman in Madagaſcar, the Iſland Cirne, (or Diego Rodrigues) and laſt, Sumatra, the firſt of trade.

Having paſſed the Canaries, they lay from the 20th of May, till the 21ſt of June, for the moſt part becalmed, and with contrary winds at ſouth, ſo that with much ado, they got into two degrees north. Here ſpying a ſhip, they chaced and took her, ſhe belonged to the Portugueſe, and came from Liſbon in company with two caracks, and three galleons, bound for the Eaſt Indies, which ſhips ſhe had loſt at ſea. The galleons were ſent to guard the coaſt, and prevent other nations from trading there. The Engliſh took out of her 146 pipes of wine, and 176 jars of oil, beſides twelve barrels thereof, and fifty-five hogſheads of meal. This proviſion, which was a great help to them in the whole voyage, the admiral diſtributed impartially among the ſhips, to every one his portion.

On the laſt of June, the wind being at ſouth-eaſt, about midnight, they paſſed the line, and loſt ſight of the north-ſtar, thus holding on their courſe ſouth-ſouth-weſt, with a ſouth-eaſt wind, they doubled the Cape St. Auguſtine at about twenty-ſix leagues diſtance. On the 20th of July, they were got into nineteen degrees forty minutes ſouth, the wind inlarging daily to the eaſtward. Here they unloaded Gueſt, which carried the victuals that the four ſhips could not receive in England; after which, they took her maſts, ſails, and yards, and broke down her higher buildings for fire-wood, and ſo left her floating in the ſea. On the 24th of July, they paſſed the tropic of Capricorn, the wind being north-eaſt-by-north, holding their courſe eaſt-ſouth-eaſt. And now by reaſon of their long continuance under the line, (occaſioned by their ſetting out of England ſix or ſeven weeks too late, to make a quick voyage) many of their men fell ſick. Therefore, on the 29th of July, being in twenty-eight degrees and a half, the admiral wrote a direction to the governor of each ſhip, to repair either to Saldanna or St. Helena, for refreſhing. They came into thirty-degrees ſouth, on the 1ſt of Auguſt, where they met with the ſouth-weſt wind, to the great comfort of the men; for by this time many of them were fallen ſick of the ſcurvy; ſo that all the ſhips, except the admiral's, were ſo thin of men, that they had ſcarce enough to handle the ſails. This wind laſted till within 250 leagues of the Cape of Good Hope, and then changed to the eaſt. Thus it held fifteen or ſixteen days, to the great affliction of the men; for now the few who were well before, began alſo to fall ſick; whence the want of hands were ſo great in ſome of the ſhips, that the merchants took their turns at the helm, and went aloft to take in the topſails, as the common ſailors did. But at length a fair wind coming about again, on the 9th of September, they reached Saldanna; where the admiral advancing foremoſt, came to anchor, and then ſent his boats to help the reſt of the ſhips, which were in ſuch a weak condition, that they were hardly able to let fall an anchor.

The admiral went on board them, carrying a ſufficient number of men with him, and hoiſted out their boats for them, which they were not able to do for themſelves. The reaſon why his crew were in better health than thoſe in the other ſhips, was owing to the juice of lemons, of which the admiral had brought ſome bottles to ſea with him, which he gave to each as long as it laſted, three ſpoonfuls every morning faſting, not ſuffering them to eat after it till noon. (This remedy will have a better effect, if the party keep to a ſhort diet, and wholly refrain from ſalt meat; which ſalt meat, and being long at ſea, is the only cauſe of this diſeaſe.) By theſe means the admiral cured many of his men, and preſerved the reſt, ſo that although his ſhip contained double the number of the reſt, yet he neither had ſo many ſick, nor loſt ſo many men as they did. They were greatly helped by this care of the admiral, who likewiſe went ſoon on land to ſeek refreſhments for them, where meeting with ſome of the country people, he gave them divers trifles, as knives, pieces of old iron, and the like, making ſigns to bring him ſheep and oxen; for he ſpoke to them in the cattle's language, which was never changed at the confuſion of Babel, and which language they underſtood without any interpreter.

After he had diſmiſſed the people, very well contented with their preſents, and kind uſage, order was given, that certain of every ſhip's company ſhould bring their ſails on land, to make tents for their ſick men, alſo to raiſe works for their defence againſt any attempt of the natives, in caſe they ſhould take diſguſt. The admiral preſcribed alſo an order for traffic with the people; which was, that whenever they came down with the cattle, only five or ſix men appointed for that purpoſe, ſhould go to deal with them; that the reſt (which were never to be under thirty muſquets and pikes) ſhould not come near the market by two hundred yards at leaſt, and ſhould always ſtand drawn up in a rank, with their muſquets on their reſts, to be ready againſt all accidents. This order was moſt ſtrictly obſerved and kept, ſo that no man durſt go to ſpeak with any of the natives, without ſpecial leave.

The third day after their arrival, the people brought down beef and mutton, which they bought for pieces of old iron hoops; as two pieces of eight inches each for an ox, and one piece of the ſame length for a ſheep, with which they ſeemed to be well contented. In ten or twelve days they had of them 1000 ſheep; and forty-two oxen, and might have been ſupplied with many more, if they had wanted them. But within twelve days, they ceaſed to bring them any more cattle; after this, the people often came to viſit them, and when the Engliſh made them ſigns to bring them more ſheep, they pointed to thoſe that had been bought, which the admiral cauſed to be kept grazing upon the hills about their tents. For this reaſon, as the Engliſh judged, the natives thought they would have ſettled there, and therefore brought them no more. During their ſtay here, their refreſhment was ſo good, that all the men recovered their health and ſtrength, except four or five. Theſe added to thoſe they loſt before their arrival, amounted to 105 men; and yet it was judged, the remainder were ſtronger when they left this bay, than at their departure from England; the men were ſo well inured to the ſouthern climates.

On the 24th of October, the admiral cauſed all the tents to be taken down, and the men to repair on board the ſhips. Being there ſupplied with wood and freſh water, on the 29th, they put to ſea, paſſing out of the bay by a ſmall iſland, that lies in the mouth thereof; which is exceeding full of penguins, ſo that ſhips might refreſh there, if there was no other place for the purpoſe. Over the bay of Saldanna, there ſtands a very high hill, flat like a table, and is called the table; ſuch another diſtinct mark to know an harbour by, is not to be found in all that coaſt; for it is eaſily diſcerned ſeventeen or eighteen leagues at ſea.

Sunday morning, the 1st of November, they doubled the Cape of Good Hope, having a freſh gale at weſt-north-weſt. On the 26th, they fell in with the head-land of St. Lawrence, ſomewhat to the eaſt of Cape Sebaſtian; and being within five miles of the ſhore, ſounded, and found twenty-five fathoms. The variation of the compaſs was little more or leſs than ſixteen degrees; for in an eaſt and weſt courſe, the knowledge of the variation helps much, eſpecially in this voyage. From the 26th of November, till the 15th of December, they plied to eaſtward, as near as they could lie; always ſtriving to get to the iſland of Cerne, which in ſome charts is called Diego Rodrigues: but after coming to the iſland of St. Lawrence, they ſtill found the wind at eaſt, and eaſt-ſouth-eaſt, and eaſt-north-eaſt, ſo that they could not fetch it; and to ſtrive long, in hopes of change of winds, might have been of bad conſequence, ſince the men began again to fall ſick of the ſcurvy. However, the captain of the vice-admiral, adviſed the admiral to put into the bay of Antongile, in order to remove that diſeaſe with oranges and lemons; the ſame was approved of by him, and council called for that purpoſe. On the 17th, they had ſight of the ſouthermoſt part of St. Mary; and next day having anchored between that iſland and St. Lawrence, they ſent their boats to land at the former, where they had great ſtore of the above-mentioned fruit. But while they rode here, there aroſe ſo great a ſtorm, that three of their ſhips were driven from their anchors. It continued ſixteen hours, after which, the ſhips returned and weighed anchor again.

Iſle of St. Mary

"This iſland of St. Mary (ſays the author) is a high land, and full of woods. The people are black, the men very handſome and tall; they have curled hair, only before on their foreheads they ſtroke it up, as the women do in England, ſo that it ſtands ſome three inches upright; they go quite naked, only covering their private parts; are eaſy to converſe with, yet ſeem to be very valiant, their food is rice, and ſome fiſh, yet the voyagers could get but a ſmall quantity of the former, for the time of their ſtore was far ſpent, and harveſt was at hand. There are two or three watering places on the north part of the iſland, but none of them very commodious; yet, with ſome trouble, there is water enough to be had. Beſides the rice and fruits above mentioned, nothing was to be had, except a ſmall quantity of goats milk; they ſaw only one cow, and that the people drove away, as ſoon as they perceived the Engliſh to land. Seeing therefore, that there was ſo little refreſhment to be had, and the place ſo dangerous to ride in, the admiral gave order to ſail immediately to the bay of Antongile; the time of year being ſpent the eaſterly winds came againſt them, and the men ſick. On the 23d of December, they left St. Mary's, and on the 25th, entering the bay of Antongile, came to anchor in eight fathoms water, between a ſmall bay and the main, in a very good and ſafe road.

The day after, landing in the main iſland, the people ſoon repaired to them, and by ſigns informed them of the five Dutch ſhips, and that they had bought the moſt part of their proviſion; however they entered into barter with the Engliſh for rice and hens, oranges, lemons, and plantanes, but they held them all at a high rate, and brought but a ſmall quantity. This market was near a great river, into which they went in their boats; thoſe appointed to be buyers landed, the reſt remained in the boats fifteen or twenty yards off; where the natives could not come at them, always ready with their weapons in their hands, to take in thoſe that were on ſhore, if occaſion were. They trifled away ſome days before they could bring the people to deal; for all thoſe of the ſouth and eaſt parts, are very ſubtle in buying and ſelling, ſo that unleſs you hold a ſtrict hand with them, you will hardly bring them to trade at all; for they will ſhift you continually to give a little more; and if you comply, none will ſell under that price; ſo that care muſt be taken not to give more to one than another. The admiral ſeeing this, commanded a meaſure to be made of almoſt a quart, and ſettled how many glaſs beads ſhould be given for every meaſure. The like order was ſent down with reſpect to oranges, lemons, and plantanes; the number to be given for every bead, was fixed, nor were they to deal on other terms. The merchants, after a little holding off, conſented, and their dealing was frank, without any diſpute. —— They bought here fifteen tons and a quantity of rice; forty or fifty buſhels of their peaſe and beans; great ſtore of oranges, lemons, and plantanes; and eight beeves, with many hens. While they rode in this bay, they put together a pinnace of 18 tons, brought out of England in pieces; and cutting down trees, (which grew there in abundance) ſawed them into boards, and ſheathed her. She was of uſe to go before the ſhips, at their arrival in India."

1602

In this bay, there died out of the admiral's ſhip, the maſter, mate, the chaplain, and the ſurgeon, with ten common men; out of the Vice-admiral, the maſter and two others; and out of the Aſcenſion, by a very great miſchance, were ſlain, the captain and the boatſwain's mate; for when they were carrying the maſter's mate out of the Dragon, on ſhore to be buried, the captain of the Aſcenſion took his boat to attend the ceremony: and as it is the cuſtom at ſea, to diſcharge ſome pieces of ordnance at the interment of any officer, the gunner ſhot off three guns, and the balls being in them, one ſtruck the Aſcenſion's boat, and killed the captain and boatſwain's mate: ſo that theſe two, who went to ſee the burial of another, were both buried themſelves. The diſtemper which the reſt died of, was the flux, which, (in the author's opinion) was occaſioned by the water they drank: for it being winter, when it rained very much, the country was overflowed; ſo that the water was not wholſome, as it ſeldom is in thoſe hot climates, during the rains. This diſeaſe is often caught by going open and cold at the ſtomach; which the men would often do when they were hot. The ſhips left this bay on the 6th of March, and the 16th, fell in with an iſland called Roque-Piz, in ten degrees, thirty minutes ſouth. Hither the admiral ſent his boat to look for a road, but ſhe found (for the moſt part) deep water, where the ſhips could not ſafely ride. In coaſting this iſland, it appeared very fair and pleaſant, very full of fowls, and cocoa-nut trees, and there came a fragrant ſmell from the ſhore, as if it had been a garden full of flowers; and as the boats went near the ſhore, they ſaw abundance of fiſh, and the fowls came flying about them ſo cloſe, that with their oars they killed many, which were the fatteſt and the beſt they had taſted all the voyage; beſides ſo very numerous, as to have ſerved many more ſhips than they had with them. On the 30th of March, 1602, being in ſix degrees ſouth, they went over a ledge of rocks; looking overboard, and ſeeing them under the ſhip, above five fathoms deep, they were much amazed, the accident was ſo ſudden and unexpected: but ſoon after they tacked about they found eight fathoms; and ſo held on their courſe eaſt. One of the men from the top ſaw an iſland to the ſouth-eaſt, five or ſix leagues off, being but low land. This they judged to be Candu, although by eſtimation, they were not gone ſo far to the eaſtward: thirteen or fourteen leagues beyond this, they fell upon another flat of rocks. Then caſting about to the ſouthward, and ſailing twelve leagues farther, they found other rocks; ſo that examining divers ways, they diſcovered flats of rocks round about them, with twenty or thirty, and in ſome places forty or fifty fathoms water in the midſt of them. Here they were for two days and a half in exceeding danger, and could find no way to extricate themſelves. But at laſt they reſolved to ſail northward, and in ſix degrees forty-three minutes, found ſix fathoms water. The pinnace always went before them ſounding, with orders to make ſigns what depth ſhe had, that they might follow her. Being delivered

out

1602 out of this difficulty, they held on their courſe with variable winds, till the 9th of May, about three in the afternoon, they had ſight of the iſlands of Nicobar, and bearing in, anchored on the north ſide of the channel; but the wind changing to the ſouth-weſt, they were forced to leave their anchors, and remove over to the ſouth ſide, under a ſmall iſland that lies near the ſhore. Here they met with very little refreſhment, except freſh water, and ſome cocoa-nuts, yet the people came on board in long canoes, each of which would hold 20 men, and brought gums to ſell inſtead of amber, whereby ſeveral were deceived.—They brought alſo hens and cocoa-nuts to ſell, but held them ſo very dear, that few were bought: they ſtayed here 10 days, placing their ordnance, and trimming their ſhip, that they might be in readineſs on their arrival at their firſt port, which was not far off.

"The 20th of April they ſet ſail for Sumatra, but were hindered by the currents and the wind, which blew hard at ſouth ſouth-weſt. Thus beating up and down, the ſhips ſprung two leaks, which forced them to go to the iſland of Sombrero, 10 or twelve leagues northward of Nicobar. Here, (ſays our author) we in the admiral's ſhip loſt an anchor, the ground being ſo foul, (incumbered with abundance of counterfeit coral, and rocks) that they cut their cable. The people of theſe iſlands go naked, having only the privities wrapped up in a piece of linen, which comes about their middle like a girdle, and ſo between their legs. They are all of a tawny complexion, and paint their faces with divers colours. They are well made, but very fearful; for none of them would go on board the ſhips, nor even the boats. The admiral reported, that he had ſeen ſome of their prieſts, or ſacrificers, who wore garments, but fitted as cloſe to their bodies, as if they had been ſewed up in them: upon their heads was a pair of horns turned backwards, which, as well as their faces, were painted green, black and yellow; and behind them a tail, hanging down, much in the ſame manner, that the devil is painted in England. Demanding why they went in that attire, anſwer was made him, that in ſuch form the devil appeared to them in their ſacrifices, and therefore the prieſts his ſervants were ſo apparelled."

"This iſland is full of trees which, for their height, bulk, and ſtreightneſs, will ſerve the largeſt ſhips for maſts. Leaving Sombrero on the 2d of June, they had ſight of Sumatra, and the 6th anchored in the road of Achin, about two miles from the city; where they found 16 or 18 ſail of different nations, ſome of Bengal, others of Calicut, called Malabars, Guzarats, Pegus, and Patans. There came to them two Dutch Merchants who had been left to learn the language and manners of the country. Theſe told them they ſhould be very welcome to the king, who was deſirous to entertain ſtrangers; and that the queen of England was renowned in thoſe parts, on account of the great victories which ſhe had obtained againſt the king of Spain. The ſame day the admiral ſent Captain Middleton, with four or five gentlemen to attend him, to wait on the king, and inform him, that he was ſent from the admiral of thoſe ſhips, who had a meſſage and a letter from the moſt famous queen of England, to the moſt worthy king of Achin and Sumatra. He was alſo deſired to aſk whether it was his royal majeſty's pleaſure to give the meſſenger audience, to deliver his meſſage and letter, with a ſafe conduct for himſelf and his people, according to the known laws of nations. The captain was very kindly entertained by the king, who gladly granted his requeſt, and aſked him many queſtions; after which he cauſed a feaſt to be made for him, and at his departure gave him a robe and Calico turban, wrought with gold, which was a mark of ſpecial favour here. As to the admiral, his will was, that he ſhould ſtay one day on board his ſhips to reſt himſelf after the fatigues of the ſeas, and the next to land to receive his audience, that he might venture with as great ſecurity as if he were in the kingdom of the queen his miſtreſs; but that if he doubted his royal word, pledges ſhould be ſent him, to his full ſatisfaction. The 3d day the admiral went on ſhore, accompanied with about 30 attendants. At his landing, the Dutch merchants met him, and conducted him to their houſe, as it was appointed; for he would take no houſe of his own, till he had ſpoken with the king. Soon after, a nobleman coming, ſaluted the admiral very politely, and having declared that he came from his majeſty, demanded the queen's letter. This the admiral refuſed to comply with, ſaying, it was the privilege of ambaſſadors, in thoſe parts from whence he came, to deliver their letters to the princes themſelves, and not to any who repreſented their perſons. On this the nobleman deſired to ſee the ſuperſcription, which he read and copied; he wrote alſo the queen's name, and looked very earneſtly upon the ſeal; after which he with great courteſy, took his leave, to make report of what was paſſed.

"Soon after the king ſent ſix great elephants, with many trumpets, drums and ſtreamers, alſo a conſiderable number of people to accompany the admiral to court, ſo that the preſs was exceeding great. The biggeſt of the elephants was about 13 or 14 feet high, and had a ſmall caſtle like a coach upon his back, covered with crimſon velvet. In the middle of it was a great gold baſon, covered with a piece of ſilk, exceeding richly wrought, under which the queen's letter was put. The admiral was mounted upon another of the elephants. Some of his attendants rode, others went on foot; but when he came to the court-gate, there a nobleman ſtopped him, till he went to know the king's farther pleaſure; but ſoon returning, deſired the admiral to enter. When he came into the king's preſence, he made his reverence, after the manner of the country, declaring that he was ſent from the moſt mighty queen of England, to congratulate his highneſs, and enter into a treaty with him of peace and amity. As he was going on with his diſcourſe, the king interrupted him, ſaying, —I am ſure you are weary with the long journey you have taken. I would have you ſit down and reſt yourſelf; you are very welcome, and ſhall have whatſoever you can in reaſon demand, for your miſtreſs's ſake: for ſhe is worthy of all kindneſs and ſincere dealing, being a princeſs of noble diſpoſition; for ſo much fame ſpeaks of her.——The admiral perceiving the king's mind, preſented him the queen's letter, which he readily received, and delivered the ſame to a nobleman ſtanding by him. Then the admiral made a tender of the preſent, which was a baſon of ſilver, with a fountain in the middle, weighing 205 ounces; a great cup of ſilver; a rich looking-glaſs; a head-piece, with a plume of feathers; a rich embroidered belt to hang a ſword in, and a fan of feathers. All theſe were received by a nobleman of the court; only the king himſelf took the fan into his own hand, and cauſed one of his women to fan him with it, as the thing, which among thoſe of the preſents pleaſed him moſt. The admiral then having again ſeated himſelf on the ground, as the manner is, a very great banquet was ſerved up. All the diſhes were either of pure gold, or another metal in great eſtimation among them, called Tambayk, being a mixture of gold and braſs. During this entertainment, the king, as he ſat aloft in the gallery, about a fathom from the ground, drank often to the admiral in arrack. This liquor is made of rice, and is as ſtrong as any of our aqua-vitæ: a little ſuffices to make one ſleep. The admiral perceiving the ſtrength of it, after the firſt draught, with the king's leave, drank either water alone, or mixed with it.—The feaſt being ended, the king ſent for his damſels to come and dance, and his women to come and play on muſic to them: theſe women were richly dreſſed, and adorned with bracelets and jewels. This is reckoned an extraordinary favour, for they are not uſually ſeen of any, but ſuch as the king would greatly honour. The king gave the admiral a fine white robe of callico, richly wrought with gold, and

a very fine girdle of Turkey work, and two criſes, or daggers, all which a nobleman put on in the king's preſence. In this manner he was diſmiſſed, with many great courteſies, and one ſent along with him to make choice of a houſe in the city, were the admiral ſhould think moſt convenient; but at this time he declined the favour, and rather choſe to go on board his ſhip, leaving the king to conſider of the queen's letter. The next time the admiral went to court, he had a long conference with the king, concerning the ſame, with which the king ſeemed to be very well ſatisfied, ſaying, That if the contents came from the heart, he had good cauſe to think well of it; that for the league her majeſty was deſirous to make with him, he was very willing to concur. Laſtly, that as to the demands relating to trade, he had given two of his nobles orders to confer with him about it, and promiſed that what her majeſty had requeſted, would be granted. With this ſatisfactory anſwer, after another feaſt, the admiral departed; and next day ſent to the nobleman the king had named to him, to know their time for the conference. One of them was the chief biſhop of the realm, a man well deſerving of the great eſteem which both the king and people had for him, for he was very wiſe and temperate. The other was one of the antient nobility, a perſon of much gravity, but not ſo fit for tranſacting buſineſs as the biſhop. The parties having met at the time appointed, matters were talked over between them. The conferrence was held in Arabic, which both the biſhop and nobleman underſtood very well. On this occaſion a Jew, brought from England, who ſpoke that language perfectly, was of great ſervice to the admiral. This latter having made ſeveral demands, concerning the freedoms for the merchants; the biſhop aſked him what reaſons he had to offer that might induce the king to grant them; on which the admiral alledged the following: the queen's affection and friendſhip; her worthineſs, in protecting others againſt the king of Spain, the common enemy in thoſe parts, and her noble mind in refuſing the offer of thoſe countries.

He added, that ſhe did not ſuffer any prince to exceed her in kindneſs; that her forces had gained many victories over the Spaniards, and hindered the attempts of the Portugueſe againſt thoſe parts;—that the Grand Signor had already entered into a league with her majeſty on honourable conditions. The admiral next laid down reaſons, drawn from the advantages ariſing from commerce. He alledged that the king could not but be ſenſible of the proſperity which trade brought upon all countries, and the increaſe that occurred to the revenues of the ſeveral princes, by the cuſtom of commodities; that ſovereigns grew renowned and formidable, in proportion to the wealth of their ſubjects, which augmented by commerce; that the more kindly ſtrangers were entertained, the more trade flouriſhed; and conſequently the prince became more rich. That with regard to Achin in particular, the port lay well for the trade of Bengal, Java, the Moluccas, and China; which countries, having vent for their merchandiſe, would not fail to reſort thither with them; that by this means, as the king's power would improve, the trade of the Portugueſe, and their great ſtrength in the Indies would gradually diminiſh: and that in caſe his majeſty ſhould want any artificers, he might have them out of England, only ſatisfying them for their voyage, and allowing them liberty to return when they thought fit; that any other neceſſary which his country afforded, ſhould be at the king's ſervice, preſuming that his majeſty would not demand any thing that the queen could not with pleaſure conſent to, or that ſhould be contrary either to her honour, the laws, or her leagues with Chriſtian princes. The admiral demanded farther, that his majeſty ſhould cauſe immediate proclamation to be made, that none of his people ſhould abuſe any of the Engliſh, but that they might carry on their trade peaceably: and this laſt requeſt was ſo effectually granted, that although his ſubjects were ſtrictly prohibited to walk by night, yet the Engliſh might go both night and day without interruption; only if any of them were found abroad at unlawful hours, the juſtice brought them home to the admiral's houſe, and there delivered them." 1602

The conference being ended, the biſhop deſired the admiral to let him have a memorandom in writing of his reaſons, and the privileges he demanded in the queen's name, for the merchants, in order to ſhew to the king; telling him, that within three days he ſhould have his majeſty's anſwer. After this, ſome diſcourſe paſſed, relating to the affairs of Chriſtendom, and then with much congratulation they broke up for that time. Having taken care to ſend his demands, (which were partly drawn up before hand) to the noblemen; the next time he went to court, as he ſat before the king, looking at cock-fighting, (which was one of the chief diverſions of that monarch) he ſent his interpreter with his obedience to his majeſty, deſiring him to be mindful of the buſineſs about which he had conferred with his nobleman. Hereupon the king called the admiral, and told him, that he was careful of his diſpatches, and would willingly enter into treaty with her majeſty, ſaying, that on his part it ſhould inviolably be kept; that as for the demands and articles he had ſet down in writing, they ſhould all be drawn up fair by one of his ſecretaries, and authorized by himſelf. Accordingly, within five or ſix days they were delivered to the admiral by the king's own hand, accompanied with many kind and gracious expreſſions.

This league of peace and amity being ſettled, the merchants went continually to provide pepper for lading their ſhips, but there came in but ſmall quantities, on account of the laſt year's ſterility. Therefore underſtanding by ſome of the natives, that at a port called Priaman, about 150 leagues from thence, in the ſouth part of the iſland; they might load one of their ſmaller ſhips, they ſent the Suſan thither, appointing Mr. Henry Middleton captain and chief merchant in her. They were alſo much grieved that Captain John Davis, their principal pilot, had told the merchants before their coming from London, that pepper was to be had here for four Spaniſh rials of eight, the hundred; whereas it coſt them almoſt twenty. The admiral, on this account, was perplexed how to load the ſhips, ſo as to ſave his own credit, preſerve the eſteem of the merchants who employed him, and keep up the reputation of his country, conſidering how diſgraceful it would appear in the neighbouring nations if they ſhould return empty from the Indies. Beſides, the Portugueſe ambaſſador watched every ſtep they took, although he was no way acceptable to the king. Soon after this, there came to their houſe to ſell hens, an Indian belonging to the Portugueſe captain, who came with a cargo of rice, from the port of Bengal. As this captain lay in the ambaſſador's houſe, the admiral miſtruſted the Indian came only as a ſpy; however, he ordered that he ſhould be well uſed, and that they ſhould always buy his hens, giving him a handſome price. At laſt, the admiral took occaſion to talk with him, aſking whence he came, and what country he was of; and in the courſe of the converſation, underſtood that he ſerved a Portugueſe, and then propoſed that he ſhould let him know the motions of the Portugueſe ambaſſador, promiſing

* The laſt time of his being at court, having leave to ſettle a factory, and build a fort at the entrance of the harbour, under pretence of ſecuring the merchants goods, becauſe the city was ſubject to fire. The king perceiving his deſign, gave him this anſwer: "Hath your maſter (ſays he) a daughter to give my ſon, that he is ſo careful of my country? He need not be at the charge of building a fort; for I have a fit houſe within land, about two leagues from this city, which I will ſpare him for the uſe of his factory, where they may dwell without fear either of enemies or fire; for I will protect them."

1603 promiſing to give him his liberty for that ſervice. The Indian went away very well pleaſed, as was viſible by his countenance, and the quickneſs of his pace. And by his means, whatever the ambaſſador did all the day, they were ſure to hear it either that night, or next morning, and the man carried the matter ſo warily, that neither any of the ambaſſador's houſe, or of the Engliſh themſelves, knew what he came about; for he had all the neceſſary qualifications of a ſpy, being ſuſpicious, crafty, cautious, and ſubtle, never truſting any to hear what diſcourſe he had with the admiral, but delivered his mind to him alone, and that in ſo careleſs a manner, as if he had anſwered the admiral's queſtions innocently, and without deſign; for he ſtood in fear of the Engliſh, leſt they ſhould betray the ſecret of his coming to ſell hens, which ſerved to colour his coming to their houſe.

Next day the admiral was ſent for to go to court, where the king diſcourſed with him, about an ambaſſage the monarch of Siam had ſent him, about the conqueſt of Malacca, and what forces he would aſſiſt him with by ſea, if he undertook that ſervice; for the king of Sumatra was able to fit out a great number of galleys, provided he had four or five months warning before hand. This propoſal the admiral ſeconded with many reaſons, and took occaſion to mention how inſolently the Spaniſh ambaſſador carried himſelf; and that his coming was only as a ſpy, to diſcover the ſtrength of his kingdom. "I know well, (ſaid the king) for they are enemies of mine, as I have been to them; but how came you to know ſo much?" The admiral anſwered, that the ambaſſador had planted ſpies about him, to obſerve all his actions, and pry into his deſigns; among other things, that he had got a draught of his ſhips, with intent to ſend it to Malacca, and procure force from thence, to ſet upon them unawares. The king ſmiled to hear the admiral talk at this rate, and ſaid. "You need not fear any danger from that quarter; for all the ſtrength they have at Malacca, is not able to do thee any harm," the admiral anſwered, I do not fear their ſtrength as to what they can do to me; but it may prevent my attempts againſt them; for if they ſhould have notice of the time I mean to go to ſea, they will be ſure to keep within their ports; ſo that I ſhall not be able to come at them. "Is it ſo?" ſaid the king, "Yes, (ſaid the admiral) and therefore I would intreat your majeſty, to detain two of the ambaſſador's ſervants, who, within three days, ſets out for Malacca, taking their way not directly from hence, but by another port of yours, where they are to hire a bark for the purpoſe, becauſe they may be ſure not to be intercepted; and if your majeſty arreſts them there, you may be privy to ſome of their plots and deſigns." "Well, ſaid the king, let me know of their departure from hence, and then you ſhall ſee what I will do for you." The admiral took his leave very well pleaſed; and having learned the ſecret from the hen-merchant, appriſed the king of it. The time being come that the ambaſſador's two ſervants were to depart with the draughts, and their maſter's letters, they went to a port about twenty-five leagues from Achin, where, having agreed for their paſſage, they embarked; but as they were going over the bar, a mile from the city, a frigate went after them, and cauſe their bark to lower their ſails, that the Juſtice might ſee their lading; as ſoon as he got on board, perceiving the two Portugueſe, he aſked them whence they came, and whither they were going? They anſwered, they came from Achin, and belonged to the Portugueſe ambaſſador. "But, ſaid the Juſtice, you have robbed your maſter, and run away like thieves with his goods, therefore I will ſend you back to him, to anſwer for yourſelves." In the haſte of ſearching them, they loſt their draughts and letters; their trunks were alſo broke open; and they ſent bound to Achin, to be delivered to the ambaſſador, in caſe they belonged to him. The admiral had ſome intelligence of what had paſſed, and the next time he went to the court, the king called to him, and ſaid; "Now, what ſay you? Are you contented?" the admiral made him obeiſance, and gave him hearty thanks for his clemency, and kindneſs towards him. After ſome other diſcourſe, the admiral departed; meanwhile, the Indian came daily to ſell his hens; and, as the admiral ſuſpected, and he himſelf afterwards confeſſed, not without his maſter's conſent. By this time the ſummer was paſt, and September come, the ſeaſon in which the admiral meant to go to ſea, in order to ſupply his neceſſities. And now fell out the greateſt croſs of all to his deſigns. The ambaſſador himſelf had obtained his diſpatch from the king to be gone; which the admiral being appriſed of, went to court, and coming where the king was ſeated to view the ſports that were made for his diverſion, he ſent his interpreter to deſire the honour of an audience. The king immediately called for him, and demanded his errand. "It has pleaſed your highneſs, ſaid the admiral, to do me many favours, and therefore I am emboldened to requeſt one kindneſs more at your majeſty's hand." "What is that, ſaid the king ſmiling, are there more Portugueſe going to Malacca to hinder your meaſure? yes, ſaid the admiral, the ambaſſador himſelf, (as I am informed) hath your majeſty's diſpatch to be gone at his pleaſure; and is determined to depart within five days. "And what would you have me do, ſaid the king?" "Only to detain him ten days, replied the admiral, till I am gone with my ſhips." "Well ſaid the king, and laughed, you muſt bring me a fair Portugueſe maiden when you return, and then I ſhall be pleaſed." With this anſwer, the admiral took his leave, and made all the haſte he could to be gone; leaving the merchants under the king's protection till he returned, with directions, in the mean time to levy what pepper they could, to help out the Aſcenſion, which was more than three quarters laden: yet he would not leave her behind him, riding in the port, but took her with him; for he rode but in an open place. Three ſhips being ready, a captain of a Dutch ſhip, who was in the road, deſired he might bear the admiral company, and take part in this adventure. His ſhip was about 200 tons; but he had as little money to buy commodities as the Engliſh: and therefore was glad of a help, accepting of an eighth of what ſhould be taken, which was offered him. The admiral having taken his leave of the king, and preſented to him Meſſrs. Starkey and Styles, two of the chief merchants, left behind to provide pepper during the cruiſe, his majeſty graciouſly took them into his protection; after which, on the 11th of September, the ſhips ſet ſail towards the Streights of Malacca.

The ambaſſador detained.

But now we muſt relate in what manner the king dealt with the ambaſſador of Portugal, he being very eager to be gone. After their departure, he every day urged to have his diſpatch granted: but ſtill upon one occaſion or another, his paſſport was delayed. At length, (twenty-four days after the admiral's putting to ſea) the king ſaid to him, "I wonder you are ſo haſty to be gone, ſeeing the Engliſh ambaſſador is at ſea with his ſhip? he is ſtronger than you; and if he ſhould meet you, may do you a miſchief." "I value him not, replied the ambaſſador, for my frigate is ſo nimble with ſail and oars, that if I have but her length before him, I will defy all his force." "Well, (ſaid the king) I am the more willing you ſhould depart, ſince I ſee you confident of your ſafety: whereupon he had his diſpatch to be gone. This delay proved very ſerviceable to the Engliſh: for if the ambaſſador had left Achin earlier, all ſhips would have had advice of them, by frigates ſent from Malacca; but as the intelligence was ſtopped, they lay within twenty-five leagues of that city itſelf, without the matter being known.

On the 3d of October, lying off and on in the Streights of Malacca, the Hector ſaw a ſail, and calling to the reſt of the ſhips, they all deſcried her. It being towards night, direction was given to ſpread a mile and a half from each other, that ſhe might

not paſs them in the dark. The ſhip fell with the Hector, which hailed her, and ſhot off two or three pieces of ordnance. This giving the reſt of the ſhips notice, they all drew about her, and began the attack with their great ſhot, which ſhe returned. But when the admiral's ſhip came up, he fired ſix guns together out of his prow; and then her main-yard fell down. After that, there was no more firing on either ſide; the admiral being fearful of ſinking her by a ſhot between wind and water. At break of day, the captain with ſome of the reſt entering their boat, Captain Middleton in the Hector, which was next her, called them to him, and then brought them on board the admiral, to whom they ſurrendered their ſhip and goods. After this, he cauſed all the chief men in their prize, to be diſtributed on board his ſhips, and placed on board her four of his own men; who ſuffered none elſe to enter the veſſel, for fear of pillaging: becauſe they were to anſwer for whatever ſhould be miſſing, out of their wages and ſhares; for the ſhip was unladen ſolely by its own boatſwain and mariners, without any aſſiſtance from the Engliſh; only they received their goods into their boats, and carried them on board ſuch ſhips, as the admiral appointed. By this order, rifling and pillaging was wholly prevented, which otherwiſe, could hardly have been avoided. In five or ſix days, they unloaded 950 packs of calico, and other merchandiſes, ſhe had in herlikewiſe much rice and other goods, of which however the Engliſh made ſmall account. After this, a ſtorm ariſing, they ſet all her men on board; and then left her riding at anchor. This ſhip came from a place called St. Thomas, in the bay of Bengal, and was bound for Malacca. When they intercepted her, above 600 perſons, men, women and children, were on board; her burthen being 900 tons. The admiral would never go on board her, that he might give no ſuſpicion, either to the mariners preſent, or the merchants at London, of diſhoneſt dealing, to ſerve his own intereſt. The admiral was very glad of this lucky circumſtance which ſupplied all his occaſions, and enabled him to load as many more ſhips, if he had them; ſo that now he was at a loſs, not for money, but for a place to leave the reſt of the goods in ſafety, till the return of the ſhips from England. On the 21ſt of October, the admiral returned for Achin. By the way, a great water-ſpout fell not far from the admiral, and put them in great fear.

A ſhip taken.

They caſt anchor in the port of Achin, on the 24th of October, where the admiral went on ſhore, and found all the merchants in health; who greatly commended the entertainment they had received in his abſence from the king: therefore the admiral by way of gratification, choſe out ſuch things from among the prize-goods, as he thought might be moſt to the king's liking, and preſented them at his firſt going to court. The king receiving the preſent, welcomed the admiral, and ſeemed very joyful for the good ſucceſs he had againſt the Portugueſe: but jeſtingly ſaid, he had forgot the moſt important buſineſs he had requeſted at his hands, which was the fair Portugueſe maiden. The admiral made anſwer, that he met with none deſerving of the honour to be ſo preſented. The king ſmiled, and ſaid, "If there be any thing in my kingdom, that may pleaſure you, I would be glad to gratify your good will." After this the admiral commanded the merchants to put on board the Aſcenſion, all ſuch pepper, cinnamon and cloves, as they had bought in his abſcence; which was ſcarcely the ſhip's full lading: but at that time there was no more to be had, nor that year to be hoped for. He deſired them likewiſe to repair with their things on board, being reſolved to go for Bantam in Java Major; where he underſtood he ſhould meet with both a good ſale for his commodities, and plenty of pepper, at a much more reaſonable price than at Achin. The admiral, before his departure, went to court, to notify it, and had a long conference with the king; who delivered him a letter for the queen, written in Arabic. They left Achin the 9th of November, being three ſhips, the Dragon, the Hector, and the Aſcenſion. They kept company two days; and then the admiral diſpatched his letters for England, by the Aſcenſion: ſhe ſteering her courſe towards the Cape of Good Hope; and they along Sumatra, for Bantam, to ſee if they could meet with the Suſan, which had orders to lade at Priaman. In their way, they fell among ſome Iſlands in the night, wondering when the day approached, how they got thither without ſeeing them. They were near the ſhore and all low; the ſea alſo full of flats and rocks, ſo that they were in great danger before they could get clear. Keeping their courſe, they paſſed the line the third time; and came to Priaman on the 26th of November. Here the Suſan had provided towards their lading, about 600 bahars of pepper, and ſixty-ſix of cloves. Their pepper indeed coſt them leſs than at Achin; but none grows about this port, on the contrary, all is brought from a place eight or ten leagues off in the country. This place, (Priaman) produces no other commodities; only there was good ſtore of gold duſt, and ſmall grains; which they waſh out of the ſands of the rivers; after the great floods, that fall from the mountains, from whence it is brought. It is a good place for refreſhing, and quite healthful; the air being very good, though it lies within fifteen minutes of the line. Having taken in proviſions, the admiral ordered the captain of Suſan, to haſten her lading with pepper, and ſo to depart for England. After which, on the 4th of December, he ſhaped his courſe towards Bantam. On the 15th, they entered the Streights of Sunda, and came to anchor under an iſland, three leagues from that city, called Pulo Panſa. Next morning, they entered the road of Bantam, and ſhot off ſuch a peal of ordnance, as had never been heard there before. On the 17th, the admiral ſent Captain Middleton on ſhore, to let the king know that he was ſent by the queen of England, and had both a meſſage and a letter from her, requiring his majeſty's ſafe conduct and warrant to land, in order to deliver the ſame. The king anſwered, that he was very glad of his coming, and ſent a nobleman back with the captain to welcome the admiral, and accompany him to ſhore. Being arrived at court, he found the king, (who was a child of ten or eleven years of age) ſitting in a round houſe with ſixteen or eighteen noblemen about him, in ſome kind of ſtate. The king welcomed him, and after ſome diſcourſe about his meſſage, delivered the queen's letter into the king's hand, with a preſent of plate and ſome other things; which the king received with a ſmiling countenance, and referred the admiral (for further conference) to one of his nobles, who was then protector. After talking an hour and a half upon different matters, that nobleman received the admiral and all his company, under the king's protection; inviting him to land, where he might buy and ſell without any moleſtation, aſſuring him that he ſhould be as ſafe as if he were in his own country, and this all the reſt of the nobles confirmed.

1602

The king, having given the admiral leave to chuſe a houſe where-ever he thought fit, that was his next care; ſo within two days, the merchants brought goods on ſhore, and began to ſell; but one of the king's nobles coming to inform the admiral, that it was the cuſtom of the king, to furniſh himſelf before his ſubjects. The admiral was contented, having been appriſed, that he would give a reaſonable price, and pay very well. The king being ſerved, the merchants went forward in the ſales; ſo that in five weeks time, they ſold more goods than would pay for the lading of both the ſhips. They brought from thence 276 bags of pepper, each containing 62lb. which coſt five rials and half an eight, beſides anchorage and the king's cuſtom. The anchorage for both ſhips coſt, by agreement made with the Shah Bandar, or governor of the city) 1500 rials of eight, and

1603 and the cuſtom was one rial of eight, upon every bag. They traded very peaceably, although the Javans are reckoned as errant thieves and pilferers, as any in the world. But the admiral, after he had received ſome inſults, was authoriſed by the king to kill whoever he took about his houſe in the night; ſo that after four or five had thus been made examples of, they lived in tolerable peace and quietneſs, yet continually kept careful watch every night.

As faſt as they bought their pepper, they ſent it on board; ſo that on the 10th of February, 1603-4, Their ſhips were completely laden, and ready to depart. But, in the mean time, Captain Middleton of the Hector, fell ſick on board. It was a rule obſerved by the admiral, from the beginning of the voyage, that while he himſelf was on ſhore, the captain of the vice-admiral kept on board, becauſe both ſhould not be once abſent from their charge. The admiral hearing of his ſickneſs, went to viſit him, and found him weaker than he himſelf perceived. This, his experience in theſe hot countries, had taught him, and ſo it happened with captain Middleton, who, although he was then walking up and down, died at two o'clock the next morning. Now the admiral reſolving quickly to depart, ordered a pinnace of about 40 tons, (which he had) to be laden with commodities, and putting in her 12 men, with proper merchants, ſent her for the Moluccas to trade there, and ſettle a factory, againſt the return of the next ſhipping out of England. He alſo left 8 men, and three factors in Bantam, appointing the principal of them, Mr. William Starkey, to ſell ſuch commodities as were left behind, and provide lodging for the ſhips againſt their next return. Going to court to take his leave of the king, he received a letter and preſent for the queen, of ſome Bezoar ſtones, which were very fine: and for himſelf a very fine Java dagger, in much eſteem there, beſides a good Bezoar ſtone, with ſome other things, and then was diſmiſſed in a very handſome manner.

"On the 20th of February, ſays the author, they went on board and fired their guns, and ſet ſail for England. The 22d and 23d, they were in the ſtreights of Sunda; and on the 26th got clear of the iſles there and the land, holding their courſe ſouth-weſt, ſo that the 28th, they were in eight degrees four minutes ſouth. On Sunday the 13th of March they paſſed the tropic of Capricorn, their courſe moſtly the ſame, with a briſk gale at ſouth-eaſt. On the 14th of April they were in 34 degrees, judging Madagaſcar to be north of them. The 28th they had a very violent ſtorm, which forced them to take in all their ſails, and continued a day and a night, with an exceeding great and raging ſea; ſo that it ſeemed ſcarce poſſible for a ſhip to live in it. However, they weathered it, and made a ſhift to repair all the damages they had received; but their ſhip proved leaky all the voyage after. By the 2d of May they had another great ſtorm, which continued all night, the ſea beating ſo violently on the Dragon's quarter, that it ſhook the iron-work of her rudder, which next morning broke quite off from the ſtern of the ſhip, and ſunk: this ſtruck a fear into the hearts of all the men; the beſt and moſt experienced of them, not knowing what to do, and eſpecially, ſeeing themſelves in ſuch a ſwelling ſea, and in ſo ſtormy a place, (that the author thinks there are few worſe in the world.) Now the ſhip drove up and down in the ſea like a wreck, whichever way the wind carried her; ſo that ſometimes ſhe was within three or four leagues of the Cape of Good Hope, and then was driven by a contrary wind, to almoſt 40 degrees ſouthward, into the hail and ſnow. This was another great misfortune, the cold weather pinching them exceedingly, ſo that their caſe was very deplorable and deſperate. Yet all this while the Hector induſtriouſly kept them company, which was a comfort to them, and ſometimes the maſter of her, came on board the Dragon.—At laſt it was concluded to put her mizen-maſt out at the ſtern port, to try if they could ſteer the ſhip into ſome place where they might make another rudder; but this device was to very little purpoſe, for when they had fitted it, (the ſea being ſomewhat grown with lifting up the maſt) it ſo much ſhook the ſtern, and put all in ſuch danger, that they made what haſte they could to get it into the ſhip again, and were very glad when they had brought it about. They were now ſenſible, that unleſs they could make a new rudder, and hang it, they muſt periſh in thoſe ſeas; but how to perform it was the difficulty, the ſhip being of 7 or 800 tons, and in ſo dangerous a part of the ocean; yet neceſſity compelling them to try means, the admiral ordered the carpenter to make one out of the mizen-maſt; but this obſtacle aroſe, that with their rudder they loſt moſt of the irons which faſtened it, yet they went forward, and one of the men dived to ſearch what irons remained, but he found only two whole, and a broken one. However, the rudder being finiſhed, and finding a fair day, they faſtened it on, and proceeded on their way homewards; but within three or four hours after, the ſea took it off again, and they had much trouble to ſave it, with the loſs of another of their irons; ſo that now they had but two to hang it by, and the men grew deſirous to quit the ſhip, and go on board the Hector: this the admiral oppoſed, ſaying, he deſpaired not to ſave the ſhip and the goods, as well as themſelves, by one means or other. On that he went into the cabin, and wrote a letter for England, to ſend it by the Hector,* which he ordered to depart and leave him there, without letting one of the company know of it. The letter being delivered, the admiral expected the Hector would have left him in the night; but ſeeing the ſhip in the morning, he ſaid, Theſe men regard no commands.——She ſtill kept two or three leagues from them; for the maſter, who was an honeſt good man, loved the admiral well, and was very loth to leave him in ſo great diſtreſs. Yet ſeeing it now was neceſſary they ſhould exert themſelves, the carpenter made the rudder again ſo firmly, that they began to be in hopes of getting at length into ſome port of relief. Now they had been driven up and down in theſe great ſeas, and endured many more ſtorms than are here mentioned, ſometimes for one whole month together, ſo that the men began to fall ſick and diſeaſed: the wind alſo fell ſo low that they could fetch no part of the coaſt of Africa. Knowing therefore, that they had doubled the Cape of Good Hope, by the height they were in to the northward, they ſailed directly to the iſland of St. Helena. In their paſſage the main-yard fell, and ſtruck one of their men into the ſea, who was drowned. This was an unlucky accident. On the 5th of June, they paſſed the tropic of Capricorn; and the 16th in the morning had ſight of St. Helena. They bore along the ſhore to get the beſt of the road, and caſt anchor in 12 fathoms water, right againſt a ſmall channel, which the Portugueſe had built long before. Going on ſhore, they found, by many writings, that the caracks had departed but eight days before. Here they found good refreſhment of water, and wild

* "Right Worſhipful,

"What hath paſſed in this voyage, and what trades I have "ſettled for this company, and what other events have befallen "us, you ſhall underſtand by the bearer hereof, to whom, (as "occaſion may happen) I muſt refer you. I will ſtrive with all "diligence to ſave my ſhip, and her goods, as you may per"ceive by the courſe I take in venturing my life, and thoſe that "are with me. I cannot tell where you ſhould look for me, if "you ſend out any pinnace to ſeek me, becauſe I live at the de"votion of the winds and ſeas, and thus fare you well, deſiring "God to ſend us a merry meeting in this world, if it be his good "will and pleaſure. The paſſage to the Eaſt Indies in 62 deg. "and a half, by the north-weſt on the American ſide.

"Your loving friend,

"JAMES LANCASTER."

wild goats, but they are hard to come at, without good directions for the purpoſe. The courſe the admiral took was this, he appointed four of the beſt ſhot's-men he had to go into the middle of the iſland, with four men to attend on each, to carry the goats that were killed to the rendezvous; and twenty men went every day to fetch them to the ſhips, taking care not to make any ſort of noiſe, that might fright the animals; and by theſe means the ſhips were plentifully ſupplied. While they ſtaid there they put their ſhips in order, and ſearched their rudder, which they hoped would laſt them home. All the ſick men recovered their health, by refreſhing with goats and hog's fleſh, which they had great need of; for they ſaw no land during three months, but were continually beating the ſea.—The 5th of July they ſet ſail from this iſland, ſteering north-weſt, and on the 13th paſſed by the iſland called The Aſcenſion, in eight degrees. No ſhips touched there, it being quite barren, and without water, only it had good ſtore of fiſh about it, but a deep ſea, and ill riding for ſhips. 1604. From hence they held their courſe in the ſame direction, the wind being ſouth and ſouth-eaſt, till the 19th, and then paſſed the Line. On the 24th they were in ſix degrees north, and by eſtimation 150 leagues from the coaſt of Guinea; then bearing away, north-weſt by north, till the 29th, they had ſight of the iſland of Fuego. Here they were becalmed for five days, ſtriving to paſs to the eaſtward of it, but could not, for the wind changed, and came about north-eaſt, ſo they ſtood weſt north-weſt. On the 7th of Auguſt, 1603, they were in 16 degrees, and the 12th paſſed the Tropic of Cancer, in 23 degrees and a half, holding their courſe northerly; on the 29th they paſſed the iſland of St. Mary, the wind fair. The 7th of September they began to ſound, judging the Land's End of England to be forty leagues diſtant; and on the 11th came well and ſafe into the Downs.

THE VOYAGE OF CAPTAIN HENRY MIDDLETON, BEING THE SECOND EQUIPPED BY THE EAST INDIA COMPANY.

THIS voyage was performed by Captain Henry Middleton, in the Red Dragon, admiral; the Hector, Captain Sufflet, vice-admiral; the Aſcenſion, Captain Colthurſt, and the Suſan, (the captain's name unknown) which was loſt on her return.

Having taken leave of the company, the ſhips departed from Graveſend the 25th of March, 1604, and about the 20th of December following, after various accidents, arrived (the men being very weak) in Bantam road. There paſſed many compliments between them and the Hollanders, who ſaluted each other with their great guns; and the laſt day of the year, the admiral of the Dutch dined on board the Dragon. The following day the Engliſh admiral went on ſhore with a letter and a preſent from the king of England, to the king of Bantam, which were with great ceremony received by that young monarch, who was but 13 years of age, and governed by a protector. The 16th of December, the admiral came on board from Bantam, to proceed on his voyage for the Moluccas, ordering Mr. Sufflet to go home in the Hector. The 7th of January following, they anchored under the ſhore of Veranula. The people here bear a deadly hatred to the Portugueſe, and therefore had ſent to the Hollanders for aid, promiſing to become their ſubjects, if they expelled them. In ſhort, the latter preparing to aſſault the caſtle of Amboyna, ſummoned the Portugueſe in the prince of Orange's name, to deliver it that day by two o'clock, which they refuſed: yet in the end, after many attacks, it was ſurrendered to them by compoſition: after which, the governor of the town, by order of the Dutch, debarred the Engliſh from trading there.——The war continuing between the Ternatans and Tydorians, the firſt were aſſiſted by the Dutch, the latter by the Portugueſe. Soon after, the Engliſh being under the iſland of Tydore, diſcovered two galleys of Ternate, between Pulo Conally and Tydore, in full ſail between them, waving with a white flag, that they might ſtrike and ſtay for them. At the ſame time, ſeven galleys of Tydore came rowing between them and the ſhore, to aſſault the Ternatans. The admiral ſeeing the danger they were in, lay by the lee, to know what the matter was. In the foremoſt of thoſe galleys was the king of Ternate, with many of his nobles, and three Dutch merchants, who being in great fear, implored the admiral, for God's ſake, to ſave them, and the other galley, wherein was ſeveral Hollanders, from the Tydorians, from whom they expected no mercy, if they were taken. On this the admiral ordered his gunner to ſhoot at the Tydore galleys; yet they deſiſted not, but boarded the latter within gun-ſhot of the Engliſh, and put all in her to the ſword, except three who ſaved themſelves by ſwimming, and were taken up by the Engliſh boats. The admiral being determined to go for Tydore, the Dutch intreated that he would not let the king of Ternate and them fall into their enemies hands, from whom he had ſo lately delivered them; promiſing, in return, vaſt quantities of cloves, and other commodities of Ternate and Maken; but they did not keep their promiſe.

On the king of Ternate's going on board the Dragon, he trembled for fear: this the admiral ſuppoſing to be the effect of cold, put a black damaſk laced with gold, and lined with unſhorn velvet on his back, which, at his departure, he had not the manners to reſtore, but kept it as his own. The admiral arriving at the Portugueſe town in Tydore, the governor of the fort ſent one Thomas de Torres and others, with a letter, intimating that the king of Ternate, and the Hollanders, reported, that there was nothing but treaſon and villainy to be expected at the hands of the Engliſh; but that, for his part, he conceived a better opinion of them, believing thoſe ſuggeſtions to be nothing but malice. What confirmed this, not long after, was, the admiral being at the king's town, ſent Mr. Grave on board the Dutch admiral, who gave him but a cool reception, and charged the Engliſh with having aſſiſted the Portugueſe in the laſt wars againſt the king of Ternate and them, with ordnance and other ammunition. This the admiral refuted by the teſtimony of ſome Portugueſe, who were taken priſoners by them in that action; and then being aſhamed of the ſlander, the Dutchman affirmed, he had it from a renegado Guzarat, but did not think it to be true. To complete their ingratitude, not long after, the king of Ternate ſeeming to affect the Engliſh nation, the Dutch threatened him, that they would forſake him, and join with his mortal enemy the king of Tydore, if he ſuffered the Engliſh either to have a factory, or any trade with his ſubjects: affirming, that they were thieves and robbers; that he would find them to be ſuch, and

1604 that the king of Holland was ſtronger by ſea than all Europe beſides; with many ſuch opprobrious ſpeeches againſt the Engliſh, and all other chriſtian princes. To which inſolent ſpeeches the admiral replied, "That what Hollander ſoever had reported them, lied like a villian, and that he would make his aſſertion good againſt any one who ſhould give out ſuch a report: affirming, that if the queen of England had not taken pity on them, they had been utterly ruined by the king of Spain, and branded for ſlaves and traitors." The following are the letters ſent by the kings of Eaſt India to King James of England; which are the moſt remarkable circumſtances in this relation.

1. The King of Ternate's Letter to the King of England.

"I HAVE heard of your majeſty's fame, by that great captain, Sir Francis Drake, who came in the time of my father, about thirty years ago; by which captain, my predeceſſor ſent a ring to the queen of England, as a token of remembrance: if the aforeſaid Drake had been living, he could have informed your majeſty of the great love and friendſhip between us, he acting in behalf of the queen, my father for himſelf and his ſucceſſors, and ever ſince that captain's departure, we daily expected his return, my father living many years after; and I, after his death, living in the ſame hope, till I was father of eleven children. In this time I have been informed, that the Engliſh were men of a bad diſpoſition; and that they came not as peaceable merchants, but to diſpoſſeſs us of our kingdom: which, by the coming of the bearer hereof, we have found to be falſe; a thing we greatly rejoiced at. And after many years expectation of ſome Engliſh forces, according to the promiſe of Captain Drake; here arrived certain ſhips, which we hoped had been Engliſh: but finding them of another nation, and being out of all hope of ſuccour from the Engliſh, we were conſtrained to write to the prince of Holland, to crave aid and aſſiſtance againſt our ancient enemies, the Portugueſe; and according to our requeſt; he hath ſent hither his force, which have expelled the Portugueſe out of all the forts they held at Amboyna and Tydore. Inaſmuch, as your majeſty has ſent me a moſt kind and friendly letter by your ſervant, Captain Henry Middleton, the ſame doth not a little rejoice us. And whereas Captain Henry Middleton was deſirous to leave a factory here, we were very inclinable thereunto. This the captain of the Hollanders underſtanding, he came to challenge me with a former promiſe, which I had written to the prince of Holland, that if he would ſend me ſuch ſuccours, as ſhould expel the Portugueſe out of thoſe parts, no other nation ſhould trade there but they: ſo that we were compelled againſt our liking, to yield to the Holland captain's requeſt for that time, for which we crave pardon of your highneſs, promiſing, that if any of your nation repair hither in time to come, they ſhall be welcome; and although the chief captain of the Hollanders doth ſolicit us not to hold any friendſhip with your nation, or give ear to your highneſs's letters; yet, for all their ſuit, if you pleaſe to ſend here again, you ſhall be welcome. And in token of our friendſhip, (and that) which we deſire of your majeſty, we have ſent you a ſmall preſent, a bahar of cloves, our country being poor, and yielding no other commodity, which we pray your highneſs to receive in good part.

TERNATE."

2. The King of Tydore's Letter to the King of England.

"THIS writing of the king of Tydore to the king of England, is to let your highneſs underſtand, that the king of Holland hath ſent into theſe parts, a fleet of ſhips, to join with our ancient enemy the king of Ternate, and they jointly together, have over-run and ſpoiled part of our country, and determined to deſtroy both us and our ſubjects. Now underſtanding by the bearer hereof, Captain Henry Middleton, that your highneſs is in friendſhip with the king of Spain, we deſire your majeſty that you would take pity on us, that we may not be deſtroyed by the kings of Holland and Ternate; to whom we have offered no wrong, although by forcible means, they ſeek to deprive us of our kingdom. And as great kings upon earth are ordained by God to ſuccour all thoſe who are wrongfully oppreſſed; ſo I apply unto your majeſty for aſſiſtance againſt my enemies; not doubting but to find relief at your majeſty's hands; and in caſe your majeſty do ſend hither, I humbly intreat it may be Captain Henry Middleton, or his brother, with whom I am well acquainted. God enlarge your kingdoms, and bleſs you and your councils.

TYDORE."

3. The King of Bantam's Letter to the King of England.

"A LETTER given by your friend, the king of Bantam, to the king of England, Scotland, France, and Ireland, deſiring God to preſerve your health, and to exalt you more and more, and all your council, and whereas your majeſty has ſent a general, Henry Middleton, he came to me in health, I did hear that your majeſty was come to the crown of England, which doth greatly rejoice my heart: now England and Bantam are both one. I have alſo received a preſent from your majeſty; the which I give you many thanks for. I do ſend your majeſty two bezoar ſtones, the one weighing fourteen maſſes, the other three; and God have you in his keeping.

BANTAM."

And after receiving theſe letters, the ſhips departed for England.

THE VOYAGE OF SIR EDWARD MICHELBURNE TO BANTAM.

THIS voyage was performed with two ſhips, the Tyger, of 240 tons, and a pinnace called the Tyger's Whelp; Sir Edward Michelburne commanding the expedition. But though he belonged to the Eaſt India company, he did not undertake the voyage on their account as we are informed in the relation.

On the 5th of December, 1604, ſetting ſail from Cowes in the Iſle of Wight, they came on the 23d, to the Road of Aratana, in the Iſle of Teneriffe; and on the 14th of January, 1605, they were troubled with extreme heat, lightning, thunder and rain, all night. They paſſed the line on the 16th, ſhaping their courſe ſouth-ſouth-weſt, for the Iſle Loronnah, with the wind at ſouth-ſouth-eaſt. Three degrees ſouthward of the line, they found amazing ſhoals of fiſh, and with their hooks, lines, and harping-irons, took ſo many dolphins, bonitos and other fiſh, that the men could not tell what to do with them. They alſo met with large flights of fowl, though in

the main ocean, called peſhoraboues, and alcatrazzes. They caught ſeveral of the former, which like to repair to the ſhips in the night, and will light upon a perſon's hand. The alcatrazze is a kind of hawk, that lives by fiſhing, and preys on the flying-fiſh, which ſometimes are ſeen in ſuch numbers together, that afar off they ſeem like a great flock of birds.

On the 22d, they anchored at the iſle of Loronnha, in four degrees ſouth; where going on ſhore, their ſkiff was overſet, by the violent breaking of the ſea; by which accident, Mr. Richard Michelburne, a relation of the admiral's, was drowned. On the 25th, their long-boat going to fill ſome empty caſks, had the ſame misfortune, and two more of the men were drowned. It was very troubleſome to get wood and water here; becauſe the landing was ſo dangerous, that they were forced to pull the caſks on ſhore with ropes, and ſo back again when filled. The commander going on ſhore to ſee the iſland, on the 26th, found nothing but a wild country, inhabited only by ſix negros. It was formerly well ſtocked with goats and wild oxen; but they have been deſtroyed by the crews of the Portugueſe veſſels, which water here, in their way to the Eaſt Indies; their ſlaves being left to kill and dry goats againſt their coming: ſo that the Engliſh could find but few. Turtle doves, alcatrazzes, and other fowl, were plenty, which they killed with their muſquets, and found to be very good meat. Here is alſo abundance of maiz, or Guinea wheat, and cotton-trees, with wild gourds, and water-melons.

On the 13th, in the morning, they deſcried the iſland, or rather rock, called Aſcenſion, in eight degrees thirty minutes ſouth: and on the 1ſt of April, ſaw land, bearing ſouth-ſouth-eaſt, though they reckoned they were forty leagues diſtant; yet, according to the variation of the compaſs, they were near the land, thirty leagues before they ſaw it. On the 2d, they were almoſt cloſe to the ſhore, ten or twelve leagues to the northward of the bay of Saldanna; and on the 3d, came to a little iſland, which Captain Davis took to be that lying five or ſix leagues from Saldanna. On this the commander, deſirous to ſee it, went thither in his ſkiff, accompanied with no more than the maſter's mate, the purſer, the author, and four men who rowed; but while they were on ſhore, a ſtorm aroſe, which drove the ſhip out of ſight for two days. Finding abundance of rabbits and ſeals there, they called it Coney Iſland.

On the 8th, they anchored in the road of Saldanna, and went on ſhore the next day. This country is well ſtored with neceſſaries, it abounds with oxen and ſheep (which are kept in great herds and flocks, as in England) wild deer, antelopes, baboons, foxes, and hares; alſo with oſtriches, cranes, pelicans, herons, geeſe, ducks, pheaſants, patridges, and divers other ſorts of excellent fowls. It is moſt pleaſantly watered with wholeſome ſprings, which deſcending from the tops of very high mountains, render the valleys very fruitful. Here is a kind of tree, not much unlike the bay; but of a fat harder ſubſtance, that grows cloſe by the ſea-ſide. The natives brought them ſo much cattle, that they carried freſh beef and mutton to ſea with them. For a piece of an old iron hoop, not worth two pence, they bought a great fat bullock, and a ſheep for two or three horſe-nails, or a bit of iron. The people who inhabit this fine country, are ſome of the moſt ſavage and beaſtly in the world. They go naked, wearing only a ſheep-ſkin on their ſhoulders, and a little flap of ſkin, which does not cover their nakedneſs. While the ſhips continued here, they lived upon the guts of the cattle, which the ſailors threw away; but they dreſſed them without cleaning or waſhing them of the filth; all they did was to cover them over with hot aſhes, and before they were warm through, they pulled them out, and after ſhaking them a little in their hands, eat the guts, excrements and aſhes, all together. They live generally upon raw fleſh, and a certain kind of root, which is very plenty here. By the good refreſhment that they found on ſhore (where they continued from the 9th of April, to the 3d of May) the ſailors, who had been weakened by the voyage, became as healthy and ſtrong, as when they firſt put to ſea. On the 7th of May, they were ten leagues ſouth of the Cape of Good Hope; and in the night paſſed over the ſhoals of Cape des Aguillas. On the 9th, there aroſe a violent ſtorm, which laſted forty-eight hours, and ſeparated their pinnace, accompanied with rain, lightning, and thunder, and often filling the ſhip with water. The Portugueſe called this place, the Lion of the Sea, on account of the extreme fury of theſe tempeſts, and the danger in doubling the Cape. On the 24th, being about eight leagues to the ſouth of the Iſle de Diego Ruiz, which lies in nineteen degrees forty minutes ſouth latitude, and ninety-eight degrees thirty minutes longitude; they propoſed putting in there; but the wind increaſing in the night, they changed their deſign. About this iſland, they ſaw a great many white birds, having in their tails only two long feathers. Theſe birds, and ſeveral others, accompanied them, with ſuch contrary winds, and violent guſts, as often ſplit their ſails, whilſt the ſhip boulting to and again, rather went to the leeward than advanced, the wind blowing ſtrong at eaſt-ſouth-eaſt. On the 3d of June, ſtanding their courſe for the Iſland de Cerne, they deſcried the Iſle de Diego Ruiz again, and made to it, deſigning to have waited there for a good wind: but finding it to be a dangerous place, on account of the rocks and ſhoals that lie about it, they durſt not come to anchor, but purſued their courſe for India.

On the 19th, they drew near the iſle of Diego Gracioſa, which ſtands in ſeven degrees thirty minutes, ſouth latitude, and in 110 degrees 40 minutes longitude, by computation. This ſeemed to be a very pleaſant iſland, and of good refreſhment, if there be any good anchoring place; but the wind being bad, and the tide forcing them to ſhore, they durſt not ſtay to ſearch ſufficiently. This iſland is about ten or twelve leagues long, abounding with birds and fiſh, and is entirely covered with a wood of cocoa-trees.

On the 29th, they deſcried land, which they took to be a cluſter of iſlands, locked in one, lying under the high land of Sumatra. Here the ſea broke with ſuch violence upon the ſhore, that they durſt not land, though the people made fires along the coaſt, as they thought to invite them.——Thoſe iſlands lie in two degrees north latitude. On the 25th, they came to an anchor, by a little iſland full of cocoa-trees, which had very few nuts upon them, ſome however they got, but could find no water. Three or four people appeared at a diſtance, who ſeemed to have been left there to gather cocoas, and make them ready againſt others ſhould come and fetch them. On the 26th, they caſt anchor within a league of a great inhabited iſland, called Bata, in twenty minutes ſouth. It abounds with woods and rivers; alſo with fiſh, monkeys, and a kind of fowl, ſaid to be that country bat. The author killed one of them that was larger than a hare, and ſhaped like a ſquirrel; only from each ſide there hung a large flap of ſkin, which in leaping from tree to tree, he would ſpread like a pair of wings, as if he flew with them. They are very nimble, and will often leap from bough to bough, taking hold of nothing but their ſails. Here they built their ſhallop, and for that reaſon they called her the bat. On the 29th, the author walking along the ſhore, diſcovered a ſail under a little iſland, about four leagues diſtance, which he was in hopes was the pinnace, mentioned before, to have been ſeparated in a ſtorm; but being ſent next day by the commander, along with Captain Davis, to ſee if it was ſo, they found three barks at anchor, whoſe men made ſigns to come on board, and to allure them, ſaid they had hens; ſome of them underſtood Portugueſe: but the Engliſh not being well provided, anſwered, that they would go and fetch money, and

1605

Saldanna deſcribed.

Flying Squirrel

1606 and next morning return and buy. Accordingly the next morning they did return, better qualified to talk to them; but the others had not thought fit to wait for them.

On the 4th of Auguſt they ſtood for Priaman; and on the 9th the ſhallop was manned, and ſent along the coaſt to look for the pinnace; and eſpying a bark, gave her chace; but when the crew perceived they could not get away, they came to an anchor, and in a boat eſcaped to an iſland. As the veſſel was laden only with cocoas, oil, nuts, and the like, they loſt her, imagining, the commander would not have been pleaſed with ſo poor a prize. The 10th and 11th, the ſhallop ſtanding cloſe along the main land, they eſpied eight praws, ready over-againſt a place called Tico, which they made up to, in expectation of finding their pinnace amongſt them; but although ſhe was not there, they were in ſome hopes ſtill, on being informed, that there was an Engliſh ſhip, at Priaman, not above ſix leagues off. With this intelligence they haſted on board the admiral, and acquainted him that they had not ſailed a league farther before their ſhip came on ground, on a rock of white coral, but having a ſtrong gale, they ſoon got her off again, without any hurt, and drawing near a rock off Priaman, they diſcovered their pinnace, whoſe captain and maſter met them half a league from the road in their ſkiff. At their coming on board the commander welcomed them, with a peal of his great guns, and having given each other an account of what had happened, during their abſence, they came to an anchor in five fathom water, very good ground, in the road of Priaman, which ſtands in 42 minutes ſouth latitude.

On the 14th the commander ſent the author on ſhore, with a preſent to the governor, and others, to ſee what price pepper was at, to buy freſh victuals, and to know whether their men might land with ſafety; but the governor durſt not ſpeak to him privately, by reaſon of the war then carried on, which made them jealous one of the other. The occaſion of theſe wars was this: The king of Achin having two ſons, kept the elder at home, intending him for his ſucceſſor, and made the younger king of Pedir, but the former being diſſatisfied at this, impriſoned his father, alledging, that he was too old to govern any longer, and made war on his younger brother. The Engliſh finding little good was to be done in this place, took in freſh victuals, and departed on the 21ſt for Bantam. The ſame day they took two praws, with only a little rice, which they quitted again: the ſailors ſeeing ſome leap over-board, and imagining they had all done the ſame, the firſt two men that entered were very much wounded by two Indians, who lay hidden behind their ſails, and then leaped over-board, ſwimming ſwiftly away. The next day they took a fiſhing-boat and let it go alſo, without doing it any hurt, only in the attack, one of the boatmen was ſhot through the thigh. On the 25th they diſcovered a ſail, and ſent their ſhallop, long-boat, and ſkiff, to ſee what ſhe was. As ſhe would not ſtrike to them, they attacked her, the fight continuing from three o'clock in the afternoon, till ten at night, when their pinnace coming up, ſhe yielded. She was a bark of about 40 tons, bound for Priaman, and loaded with ſalt, rice, and China ware: they towed her along with them all night; but in the morning the commander finding they were of Bantam, where the Engliſh merchants had then a factory, he let them go, not ſuffering any thing to be taken from them. On the 2d of September they met with a ſmall ſhip of Guzarat or Cambaya, being about 80 tons, which they took and carried into the road of Sillibar, in four degrees ſouth, into which road many praws continually come to refreſh themſelves: for there is good water, wood, rice, buffaloes, fleſh, goats, hens, plants, and freſh fiſh; but all very dear. The 28th they departed for Bantam, and the 23d of October came to an anchor in the road of Marrah, in the ſtreight of Sunda. Here they took in freſh water. "Here, ſays the author, is plenty of buffaloes, goats, cocks, hens, ducks, and other good proviſions, in exchange for which the natives chuſe to take calicoes, pintiadoes, and ſuch like ſtuff, rather than money, and if well uſed, will uſe you well; but you muſt watch them; for they think every thing well got that they can ſteal from a ſtranger. On the 28th they ſet ſail, and arrived within three leages of Bantam, which ſtands in ſix degrees 40 minutes ſouth, where they anchored. The Engliſh fleet, which they thought to have met with, was gone for England three weeks before; but the factors came on board, and was very glad to ſee them, and gave the commander an account how groſsly the Dutch, who were then in the road, had abuſed them to the king of Bantam, repreſenting them as thieves and reprobates, who came only to plunder them by artifice or violence, if they found an opportunity. They added however, the Dutch were ſo much afraid of them, that they durſt not come into the road, but kept two or three leagues off. The commander moved with this report, weighed anchor, and ſent the Dutch word, that he would come and ride cloſe by their ſides, giving them to underſtand, at the ſame time, that if they offered ſo much as to point a gun at him, or the leaſt inſult whatever, he would either ſink them or ſink by their ſides. There were of theſe five ſhips, one of 7 or 800 tons, the reſt of a far ſmaller burden. But of this meſſage, (notwithſtanding they came and anchored cloſe by them) they never had any anſwer: on the contrary, whereas the Hollanders were uſed to ſwagger, and keep great ſtir on ſhore, before the commander's arrival, they were ſo quiet after, that ſcarcely one of them were ſeen on land. The 2d of November they took leave of their countrymen, and ſtood on their courſe for Patane. In their way, between the Cherſoneſus of Malacca, and Pedra Branca, they met with three praws, which, for fear, ran in near the ſhore, wherefore the commander manned his ſhallop with 18 men, and ſent to requeſt them, that for his money he might have a pilot to carry his ſhip to Pulo Timaon, five days ſail from thence. But they ſeeing the ſhip and pinnace at anchor, about a mile off, not able to come nearer, bluntly refuſed; whereupon the ſhallop attacked them, and in leſs than half an hour took one of them; but the men, who were 73 in all, got on ſhore. Another, after having fought all night, yielded about day-break; ſhe was laden with benjamin, ſtorax, pepper, China ware, and pitch. The 3d praw got away, while the other was fighting. The commander, who came up in his ſkiff, a little before ſhe ſtruck, would not ſuffer any thing to be taken out of her, but two of the men for pilots, and then diſmiſſed the reſt, becauſe they were of Java. Theſe Javans are reſolute in danger; their chief weapons are javelins, darts, daggers, and a kind of poiſoned arrows, which they ſhoot from trunks: they are not expert in uſing them: moſt of them are Mahometans. Theſe had been at Palimbam, and were going home.——On the 26th, they ſaw certain iſlands bearing off them north-weſt, which neither they nor their new pilots knew; and the wind proving contrary, they put into them for wood and water. Next day they anchored within a mile of the ſhore, in 16 fathoms, good ground, on the ſouth ſide of the iſlands. Here, ſending out their boats, they found ſome of them to be ſunken iſlands, and nothing above the water but the trees, or roots of them.——All is a wilderneſs of woods, and a moſt uncomfortable place, having neither fruit, fowl, nor any kind of beaſt for victualling. Thoſe iſlands they took to be the ſame as the Broken Iſlands, lying ſouth-eaſt from the iſle of Bantam. However, in one of them they met with a pretty good watering place.

On the 2d of December, they weighed anchor and ſtood for Patane, as near as the winds would permit; for in theſe months, they found them to be very contrary, keeping ſtill at north-north-weſt, or north-eaſt. On the 12th, they obſerved a ſail near Pulo Laor, and

Several veſſels taken.

Sillibar road.

Marrah road.

Bantam.

Sunken iſlands

ſending their pinnace after, the neareſt ſtayed behind to have met with the other two, but in the night loſt them. Next morning they deſcried the pinnace and ſhallop, about four leagues to the leeward, with the other ſhip, which they had taken; and ſeeing that they were not able to join them, the wind and current being contrary, went to them, they found her a junk of Panhange, of about 100 tons, laden with rice, pepper and tin, going to Bantam. The commander diſregarding ſuch mean luggage, took only as much rice as ſerved for his proviſion, and two little braſs guns, which they paid for to their content; he alſo kept one man for a pilot, who, ſeeing him uſe them ſo well was willing to go. The other two pilots, which they took before out of the praws, being very unſkilful, he ſent back in the pink, after rewarding them for the time they had been with him.

On the 13th ſailing towards Pulo Timaon, which borders on the country of Panhange, they were troubled much with contrary winds and currents, for the ſea from the beginning of November to the beginning of April runs continually ſouthward, and from April to November back again to the northward. The wind alſo in the firſt five months is moſt commonly northerly; and in the other ſeven ſoutherly. All the ſhips of China, Patane, Jor, Panhange, and ſome other places, to the northward, come to Bantam, in the northerly monſoon, and return again during the ſoutherly one. By obſerving theſe ſeaſons, ſhips will be ſure to have wind and tide with them. Here they found ſuch violent contrary winds and currents, that they could advance but a league in three weeks.—Panhange, is a very plentiful country, and full of people of faſhion. There is alſo ſtore of ſhipping, and victuals are very cheap. It lies between Jor and Pantane, and reacheth along the coaſt to cape Tingeron: which is a very high point, and the firſt land that the caracks of Macao, the junks of China, or praws of Cambaya, do make, when bound for Malacca, Java, Sumatra, Jumbe, Jor, Greece, or any other part to the ſouthward.——Here, in their way to Patane, about the 27th they met with a junk full of Japans, who had been pirating along the coaſt of China and Cambaya. Their pilot being dead, and not knowing how to govern their ſhip in foul weather, ſhe was caſt away on the ſhoals of the great iſland Borneo, where they durſt not go on ſhore: for the Japans being feared as a bold deſperate people, are not ſuffered to land in any part of India, with weapons. Taking their ſhallops, after the loſs of their ſhip, they met with this junk, which belonged to Patane, of about ſeventy tons, laden with rice, and having killed all the people, ſave an old pilot, and furniſhed it with ſuch neceſſaries and arms as they ſaved out of their ſunken ſhip, ſhaped their courſe for Japan: but the badneſs of the junk, contrary winds, and unſeaſonableneſs of the year, forcing them to leeward was the cauſe of their falling in the way of the Engliſh. They were ninety men in all, a number too great for ſo ſmall a veſſel; and moſt of them in too gallant a habit for ſailors: beſides there was ſuch an equality of behaviour among them, that they ſeemed to be upon a level: for though one among them was called captain, they ſhewed him but little reſpect. Their lading was only rice; and, for the moſt part ſpoiled with wet: for their ſhip was leaky both under and above water. The Engliſh riding at anchor under a ſmall iſland, near that of Bantam, for two days treated them kindly: with a view to have learned the place and paſſage of certain ſhips, on the coaſt of China, in order to have made their voyage. But theſe men being hopeleſs, in that junk, ever to return to their own country, reſolved with themſelves either to gain the ſhip or loſe their lives. As there was a friendly intercourſe between the two veſſels, with preſents and feaſting: ſometimes twenty-five or twenty-ſix of the principal men would come on board the Engliſh ſhip, tho' not above ſix were ſuffered to have weapons.—The commodore intending to have the rice ſearched in the junk, ordered Captain Davis in the morning to poſſeſs himſelf of their weapons, and put the company before the maſt; for fear, in caſe any thing valuable was found, they might ſet upon the Engliſh and kill them: but Davis being deceived by their diſſembling carriage, would not ſeize on their weapons, though he was ordered twice to do it. At ſun-ſet, after long ſearch, and nothing found, ſave a little ſtorax and benjamin, the Japaneſe, ſeeing a fair opportunity, at a watch word agreed on between them, reſolutely fell upon the Engliſh in both ſhips at once. They ſuddenly killed and drove overboard all the Engliſh that were in their junk; and thoſe who were on board the ſhip ſallied out of the commander's cabin, where they were put, with ſuch weapons as they had, or could find there. Sir Edward being on deck, leaped into the waſte; where, with the boatſwain, carpenter, and ſome few more, he kept the enemy under the half deck.

1606

Japaneſe meet a junk.

Murder the crew.

The Japaneſe treachery.

The firſt they happened to meet with was captain Davis coming out of the gun-room, whom they pulled into the cabin; and giving him ſix or ſeven wounds, thruſt him out again before them.—— He died as ſoon as he came into the waſte, into which they preſſed moſt furiouſly to reach them with their ſwords. It was near half an hour before they could be driven back into the cabin, four or five of their leaders being ſlain; and four more before they were ſubdued. They often fired the cabin, by burning the bedding and ſome combuſtibles; and would have burnt the ſhip, if they had not been prevented, by beating down the bulk-head and pump, with two demi-culverins from under the half-deck. Theſe guns being charged with croſs-bars, bullets, and caſe-ſhot, and bent cloſe to the bulk-head, ſo hurt them with boards and ſplinters, that there was but one left out of twenty-one, it was ſurpriſing to ſee how miſerably their legs, arms, and bodies were torn; they were ſo deſperate, they never once called for quarter: only one leaped over-board, who afterwards ſwam back to the ſhip, and begged mercy; being aſked what was their deſign? He replied, it was to take the ſhip, and cut the throats of all that were in her. He would ſay no more, but at laſt aſked to be cut in pieces. The next day, being the 28th, when they were about five miles from land, the commander ordered the Japaneſe to be hanged: but he broke the rope, and fell into the ſea: whether he ſwam to land or not was unknown. They took their courſe to a little iſland to the leeward, where they anchored the 30th, ſtaying three days to mend their boat, and take in wood and water; in this iſland they found a ſhip of Patane, whoſe captain being aſked, whether the ſhips of China were come to Patane? He told them they were not, but would be there within a few days, for this reaſon they took him for their pilot, and purpoſed to wait there for the Chineſe ſhips.

Captain Davis ſlain.

On the 12th of January 1606, one of the mates, from the top-maſt, deſcried two ſhips, which came towards them; the Engliſh likewiſe advanced, and coming up with the largeſt in the night, after a ſhort fight, boarded, and brought them to an anchor. Next day the Engliſh having taken ſome of their ſilks, both wrought and raw, paid for them more than they were worth; after which they let them depart on the 15th, without touching their ſilver, though they had above fifty tons on board. This was done out of kindneſs, but becauſe they had hopes of meeting with the other Chineſe ſhips, which they lay in wait for, ſhaping their courſe back again, but the wind proving quite contrary, they could not proceed; and ſo were forced on the 22d to put into two ſmall iſlands to leeward, called by the Javans, Pulo Sumatra.——On the 24th a great ſtorm ariſing, their cable broke. The 2d of February five Holland ſhips ſailing homeward put into the ſame road. Captain Warwick, who was their general, having invited Sir Edward to dine with him, told him that the Engliſh merchants in Bantam, were in great danger every hour of being aſſaulted by the king of Java, on account

1607 count of the Chineſe ſhip which he had taken, whereby that monarch had loſt his cuſtom; and therefore requeſted him to go no farther, but ſail home with him; Sir Edward anſwered, that he had not as yet made his voyage, and therefore would not return. But weighing the caſe a little better, after the departure of the Hollanders, (which was on the 3d of February) and conſidering that he had but two anchors, and two cables left to truſt to, he thought proper to repair his ſhips, and return home with the poor advantage he had made. Accordingly he ſet ſail for that purpoſe, on the 5th of February; and the 7th of April, after a great ſtorm, had ſight of the Cape of Good Hope. On the 7th, they came to St. Helena, where they watered, and found refreſhment, as wine and goats, with which, and wild hogs, the iſland abounds, but is uninhabited. There are alſo great ſtore of partridges, Turkey-cocks and Guinea-hens. They departed on the 3d of May, and on the 14th, paſſed the equator. On the 27th of June, they arrived at Milford Haven, in Wales, and caſt anchor in Portſmouth road, on the 9th of July, 1606.

THE VOYAGE OF CAPTAIN WILLIAM KEELING, TO BANTAM AND BANDA.

IN this voyage were employed three ſhips, with 310 men; the Dragon, admiral, Captain Keeling chief commander or general; the Hector, vice-admiral, William Hawkins, captain, and the Conſent, David Middleton, captain.

On the 1ſt of April, 1607, the Dragon and Hector were fallen as low as the Downs; after their departure from thence, they met with ſeveral diſaſters. They paſſed the line in the beginning of June: when being come into four or five degrees of ſouth latitude, they were forced by guſts, calms, rain, ſickneſs, and other marine inconveniencies, to return northward. But miſſing the iſle of Fernando de Loronnha, to their great ſurpriſe. On the 30th of July, the commander conſulted with Taverner, the maſter, who was of opinion that they ſhould be obliged to return for England. His company beginning to be much diſeaſed, and being unable to reach Fernando de Loronnha; (water being their greateſt want, and a watering place ſo near) he called a council, and, after dinner, propounded what was fitteſt to be done. It was generally agreed, that they ought not to ſtand to the ſouth any longer. They therefore ſtood for Sierra Leona. On the 4th of Auguſt, in the morning, they ſaw many flowers, a ſign of land; and in the evening had ground from twenty-eight to ſixteen fathoms, oozy, but no ſight of ſhore. Having ſent out the ſkiff, to ride at a ſmall diſtance from the ſhip, in order to examine the ſet of the current, by the log line, ſhe found it ſet ſouth-eaſt-by-eaſt, two miles a watch; although ſhe rid wind road. They ſteered all this morning, eaſt, and caſt-by-ſouth, and had from thirty to twenty, and ten fathoms water, but no ſight of land, and the greateſt depth was oozy; the leaſt a yellow, ſandy ground. About nine, they eſpied land, being a round ſpot, moderately high, bearing north-eaſt, about eight leagues diſtant. They were at noon in the latitude of ſeven degrees fifty-ſix minutes, and ſteered all day eaſt; ſometimes one point northerly or ſoutherly, as their water deepened or ſhoaled; for they had often times above ten fathoms, and at the next caſt under ſeven fathoms, in pitty ground; and when they found ſhoal water, upon bearing up northerly, they inſtantly deepened; a ſign that they bordered upon the ſhoals of St. Anne. The author allows, ſince the preceding day at noon, fourteen leagues eaſt, and five leagues weſt, wind at ſouth and ſouth-by-weſt, and ſouth-by-eaſt. In the afternoon, they had ten, eleven and twelve fathoms water. The firſt land proved Ila Verde, being a very round land, and mark for thoſe bound for the place, from the ſouthward. About ſeven in the evening, they anchored in twenty fathoms water, hard ſand, having ſteered ſix leagues or more, to the north-eaſt, and north-north-eaſt. About ſix the next morning, they made ſail for the road; and had no leſs than ſixteen, fifteen, ten and nine fathoms, till they were north and ſouth with, and half a mile from the rock, (which lies about one mile and a half off the Cape, and one mile from the neareſt ſhore). They had ſeven fathoms very good ſhoaling, between them and the rock: and ſoon after they had paſſed it, they had twenty fathoms water, and ſhoaled to eighteen, ſixteen, twelve and ten fathoms, all the way in the road, bordering very near the ſouth ſhore; for there is ſand lying off the north ſhore about two miles or a league, from the ſouth ſhore, whereon the ſea breaketh. They rode in ten fathoms, good ground, the point of Sierra Leona bearing weſt-by-north, and the ſand-bank north-north-eaſt.——This afternoon, perceiving men, who beckoned them on ſhore, the commander ſent his boat, which leaving two hoſtages, brought four negros, who promiſed refreſhing. The ſkiff ſounding between the Dragon and beach, found fair ſhoaling, and two fathoms water, within two boats length of it. On the 7th, there came on board with the boat, negros of better appearance, having one Engliſhman in hoſtage; for two of them having made ſigns that the commander ſhould ſend ſome of his men up into the country, and that they would remain as pledges, he ſent Edward Buckbury, and his ſervant, William Cotterel, with a preſent, viz. one coarſe ſhirt, three foot of a bar of iron, a few glaſs beads, and two knives. They returned towards night, and brought the commander, from the ſaid captain, one ſmall ear-ring of gold at about eight or nine ſhillings ſterling. And becauſe it was late, the hoſtages would not go on ſhore, but lay on board all night, without requiring any ſecurity for them, the ſhip's boat being ſent, fetched five tons of freſh water, which is both very good, and eaſy to come by. On the 11th, the commander went fiſhing towards ſhore, where the people brought their women to ſee them, but were afraid the Engliſh would carry them away. He gave them ſome trifles, and bought a quantity of lemons, at the rate of 200 for a penny knife: wind at eaſt. On the 12th, he went again, but took little fiſh; the wind was from north-weſt to ſouth, the weather rainy. Next day it rained without intermiſſion, and they got fiſh enough for a meal; the commander bought an elephant's tooth of ſixty-three pounds weight, for five yards of blue calico, and ſeven or eight pounds of iron-bar. On the 14th, it rained all day. On the 15th, he went and caught, within one hour and an half, 600 cavallas, a ſmall but good fiſh. In the afternoon, with Captain Hawkins and a convenient guard, he went on ſhore to the village, where they bought 2 or 3000 lemons. He reckoned it a fair day, when they had three hours dry over head.

On the 20th, John Rogers returned, and brought him a preſent of a piece of gold, in form of an half-

moon, valued at about ſeven ſhillings ſterling. With an account that the people were peaceable, the chief without ſtate: the landing two leagues up; and the chief village eight miles from the landing place. On the 22d, they went on ſhore, where they made ſix or ſeven barricos full of lemon-water; the commander opening one of the company's firkins of knives to buy limes with. On the 7th of September, they went all on ſhore, to ſee if they could kill an elephant. They ſhot ſeven or eight bullets into one, and made him bleed exceedingly, as appeared by his track; but being near night, they were forced to return on board, without effecting their deſign. Although the commander often propoſed to obſerve the latitude of the road, both on board and on ſhore, yet his inſtruments being out of order, he never did: but the maſter made it by his obſervation, eight degrees; thirty ſix minutes north; the point of Sierra Leona bearing neareſt weſt, three or four miles off. He alſo found the variation to be one degree fifty minutes eaſterly.

On the 17th of December, about two in the afternoon, they ſaw the Table of Saldanna very plain; and ſtanding to make it till three, the commander cauſed the maſter to ſteer eaſt-ſouth-eaſt, and ſouth-eaſt-by-eaſt, to double the Cape. At that time the whole company being ſick, deſired to put into Saldanna, they ſtood for it, and about noon got into the road, anchoring in five and a half fathoms water; the weſt point bearing weſt-north-weſt, the iſland north-north-weſt, and the Sugar Loaf, ſouth-weſt. The weſtermoſt Cape-land, and Penguin iſland, bear ſouth-by-weſt, &c. There was a ſand-bank ſouth of the iſland, about a mile diſtant; and another half a league off to the ſouth-eaſt. Between the iſland and ſhore are ſeven miles diſtant. The Sugar Loaf and the iſle bear ſouth-by-eaſt, and north-by-weſt from the weſt point of the bay, half a mile off is a flat. The weſtermoſt ſouth-land, and point of the Sugar Loaf, bearing ſouth-ſouth-weſt, and north-north-eaſt. As ſoon as they anchored, the commander went on ſhore, finding the people very bold, but dear. There he met with theſe words engraved upon a rock, viz. "The 24th of July, 1607, Captain David Middleton, in the Conſent." On the 21ſt, he landed again, and bought 102 ſheep, 12 bullocks, and 2 calves, of which he allowed the Hector a ſhare. This traffic continued ſeveral days, in which time they bought ſome cattle. At ſun-riſe, on the 21ſt of January, 1607, they ſet ſail, and by ſix in the evening, were ten leagues weſt-by-ſouth from the ſouth point of the bay. On the 19th, the Dragon ſhipped a great deal of water at the helm-port, and at the hole in the gallery, about two hours after midnight which wetted ſome bales of cloth. Latitude thirty-five degrees twenty-two minutes, the author allows thirteen leagues ſouth-ſouth-eaſt, wind eaſt-north-eaſt, and north-eaſt; ſix leagues drift ſouth, and three leagues north-eaſt, wind weſterly. The too great quantity of goods, made the ſhip labour exceedingly. On the 17th of February, they ſaw the land bearing eaſt about eight leagues from them, and as it was judged, in the latitude of twenty-four degrees twenty minutes. They ſtood in till after ſix o'clock; at that time, being within four leagues of the ſhore, they flatted, the Hector being too near a-ſtern for them to ſtay. Then they tacked, they had no ground at eight or nine fathoms, which was no great wonder, for it was low ſmooth land. About noon, they were athwart of two ſmall iſlands, ſeeming to make a good road; wherefore, not knowing their latitude, they ſtood off till they could obſerve, it being nigh noon. On the 18th, latitude twenty-three degrees thirty-ſeven minutes. Therefore they ſtood in again, ſuppoſing this to be the place they ſought: but coming near the ſhore, and having ſent both ſkiffs a-head, they found ſix fathoms water, for which reaſon, they anchored in ſeven and half ſandy ground, about one in the afternoon, the two iſlands and breach bearing ſouth-weſterly a mile from them. There was an inlet about three leagues from them, eaſt-by-north, which the maſter ſuppoſed to be St. Auguſtine; and intending to ſearch the ſame; the commander called a council, where it was reſolved to make ſome ſmall ſtay at St. Auguſtine. The variation in this place was 15 deg. 30 minutes; and by another obſervation, the ſame morning, 15 degrees 26 minutes, he was obliged to obſerve over the land half a degree high, otherwiſe the variation would have reſulted ſomewhat more: on theſe two obſervations he had great dependance: it flowed eaſt.——On the 19th in the morning they weighed, and one of their anchors being faulty, it broke. They ſteered for the above-mentioned ſeeming harbour or bay, and found in their way from ten or twelve, to twenty fathoms, coming near the point in the height of the bay, they had no ground at 100 fathoms, till they were advanced far into the bay, when their ſkiffs, which were before them, found bottom. After this, they had from thirty to eight fathoms, and farther in deep water. They dropped one anchor in eighteen fathoms, and laid another in forty: for the ſouth ſhore was the deepeſt water, the other being made ſhallow by the coming down of the rivers. On the 20th they had 70 fathoms water at the ſhip; the bottom oozy. The land bore weſt-by-ſouth, and north; and to the north, lay certain ſhoals, with a ſand-bank to the north-weſt, ſo that they were but five points of the compaſs open to the winds; but the road is very foul ground, and deep water; beſides, there runs a ſtrong ſtream down the river continually. Captain Hawkins coming on board the Dragon, the commander being indiſpoſed himſelf, ſent him on ſhore, accompanied with both the ſkiffs, well armed. Towards night he returned on board, without having ſeen any people; but the freſh track of them was very viſible in a great many places. He left ſome beads and trifles in a boat which they found, to allure the natives. According to this account, there was little likelihood of refreſhing here: but the commander's fiſhers, from the other ſide of the bay told him, they met with a great number of bones of beaſts, and ſome with fleſh on them. George Evans, of the Hector, was bitten here by an alegator. The commander ordered water to be taken in without delay: and in the mean time propoſed to ſeek proviſions. It flows here neareſt eaſt, and higheſt, much water. On the 21ſt, having eſpied four natives, the commander ſent to preſent them beads, &c. whereupon they promiſed, by ſigns, to bring ſtore of cattle next day. On the 22d, the commander perceiving ſeveral of the inhabitants, went on ſhore, and found a ſubtil people. (Their bodies were ſtrong, and well proportioned; their privities only carefully covered with cloth made of the rhinds of trees). He bought one calf, one ſheep, and one lamb; but they would part with nothing but for ſilver. In the afternoon, he rowed up the river, as well to look for the beſt watering place, as otherwiſe, and found the water very ſhallow and brackiſh. On the 24th, he went on ſhore again, ſeeing one man there, and bought three kine, two ſteers, and four calves, which coſt nineteen ſhillings, beſides a few beads. The cattle which were buffaloes, are far better fleſh than thoſe of Saldanna. Theſe people are circumciſed, as ſome affirm to have ſeen.

1608

"On the 28th, (ſays the author) they departed. There lies a breach four miles from the north point of the bay, ſouth ſouth-eaſt. The place is deſcribed as very inconvenient for riding, the water being deep, and the ground pitty and foul, as appear by their cable cutting. On the 12th of March, lat. 15 deg. 50 minutes, they ſounded ſeveral times in the afternoon, and had no ground at 90 fathoms, and before eight, they had ground at 20, 28, 17, 16 fathoms, all within half a cable's length. Then they inſtantly tacked off, and had 19 and 24 fathoms; and the three laſt, had no bottom at forty fathoms. The ground was compoſed of ſmall ſingle ſtones, like beans, and the ſhip at this time was about five or ſix miles from

1608 from ſhore. This afternoon, having had a freſh gale at eaſt by north, they got ſomewhat to the north.—The 13th, latitude 15 degrees 45 minutes, it having been calm from midnight till eleven this forenoon, they loſt what they got the day before, and were driven ſouth as appeared by the land. They were at noon within three leagues of ſhore. The 14th, latitude 15 degrees 42 minutes, ſo that they were advanced north, three leagues, and judgment would have allowed at leaſt 15 leagues north north-eaſt, ſo that the author concluded the current ran ſwift, and ſet more ſouth than ſouth-weſt: for this morning, though hazy, they were not far from ſhore, having had ſight of land all along; whereas then, although it was much cleared, they could hardly ſee it. The 15th they were in latitude 15 degrees 40 minutes. They could not ſee the land, yet were but ten leagues from it. They knew not what courſe to take to get out of this current; for if they put off, and the current ſhould hold, the ſhips might be in danger from the iſland of Juan de Nueva; and by keeping the ſhore great hazards might accrue: beſides, where ſuch a galé ſtems not the ſtream, it is indiſcretion to continue.

"The Moors of this place alike affirm, that in ſome years, upon the coaſt of Mombaſa, Magadoxa, Pata, Brava, &c. pieces of Ambergris are found, weighing twenty kentals, of ſuch bulk, that men may hide behind one of them. They make yearly voyages from hence to the iſle of Comora, to buy ſlaves, and report the people to be very treacherous; having, at different times killed 50 perſons by poiſoning, and therefore reſolved to trade on board.—They ſaid there were eight Dutchmen upon Pemba, who had been there three or four years, two of whom turned Moors. They reckon this monſoon of ſouth winds to begin yearly the firſt of May, and the extremity thereof to continue 100 days. The moſt boiſterous weather (which they report to be wonderful) is in June and July: for on the 10th of Auguſt it begins to be leſs windy, and ſoon after north winds come, attended with much rain, for three or four months more; at which time moſt aloes is made, which is only the juice of ſemper vivens, put into a goat's ſkin, and ſo dried. The 3d of May the commander ſent on ſhore to weigh aloes, and received on board 1250 pounds, which coſt for the company's account 250 dollars. He bought in all 1833 pounds nett. The chief ſending to borrow 500 rials of eight, which he refuſed to lend; but preſented him with two yards of kerſey, and a very handſome knife. He had, at another time, 575 pound more of aloes, which coſt 115 dollars. Chaul, Dabul, and Danda Rajipuri are good and ſafe ports, and rich trading towns, upon the coaſt of India. At Saada, Ilbuki, Auzoane, Mutu, four of the iſles of Comora, there is abundance of rice, and the people are good: but Jughaze, and Malale, (two more of the ſame iſlands) produce very little rice; and the people are treacherous.

"Burrom, Makella, and Cayxim, are good harbours for both monſoons on the coaſt of Arabia, but no places of merchandiſing. Xael, or Zaer, has no harbour nor road for any time, but would vend iron and lead, a Turk being Aga; and they ſend by land for ſuch commodities to Cayxim, a day's journey to the weſtward; but there is no going thither at this time; that in both monſoons there is a continual extreme ſea-gale upon the coaſt of Arabia, and the current generally with the wind; there is no riding at the entrance of Surat, to have any ſhelter from the weſtern ſhore, againſt the weſtern monſoons, by reaſon of bad anchoring ground, and chiefly by the extreme violence of the tides, which overſet ſhips that are not aground. The road of Deliſa is a very good place to ride in ſecure againſt the monſoon. But what is ſtrange, two miles either to the eaſt or weſt from thence, it continually blows ſo hard that no ſhip can abide it; neither could the author aſſign any reaſon for it, except the diſtance betwixt the ſhips of the high mountains might cauſe it: for there was much low land betwixt them and the ſhore.

"On the 24th of June they departed. The 23d they ſaw an iſland, and about noon, two more; they left two to the north, and one to the ſouth, which is the biggeſt, and in the latitude of four degrees two minutes below the Line. The north part of theſe iſlands is a very high land, full of trees. In the mid-way, between the ſouthermoſt of the three, which are ten leagues diſtant north and ſouth. There is a ſand-bank lying from the eaſt end of the moſt northern (or middlemoſt) ſouth-eaſt, half channel over; to avoid this, they ſteered within two leagues of the middlemoſt iſland, by a very good paſſage, having the breach about three leagues to the ſouth. It lies very dangerous for thoſe who have no knowledge of it, to paſs by night. There ſeemed to be a paſſage between the two northernmoſt; but it is ſcarce league-wide. On the 26th they were half way between Priaman and Teku, about three leagues from the ſhore, where it was obſerved, that the two hummocks of Miku, with the high land over them, bore north and by weſt, and ſouth by eaſt, half a point eaſterly. There lies a ſhoal alſo four miles from the coaſt, bearing ſouth and north, with the ſaid high land, ſtanding north-eaſt by eaſt; from the road of Priaman, they had 45 fathom water, two leagues and a half from ſhore. There is an iſland about four leagues from the road, north-eaſt and ſouth-weſt. The three iſlands of Priaman, lie ſouth ſouth-eaſt, and north north-weſt, being diſtant each from the other, about a mile. In the afternoon they got into Priaman road, and ſaluted the town with five pieces of cannon. The governor ſent a goat to the commander, who returned it with a preſent of three yards of cloth alſo, one piece of blue calico, a muſquet barrel, and two ſword blades. He likewiſe beſtowed on the meſſenger, (who ſpoke Portugueſe) a piece of blue calico. There came another of Achin, with whom he held a long converſation in Arabic: and from his report, conceived great hopes of a beneficial trade. On the 29th the commander went on ſhore by times, ſhooting off ſeven pieces of ordnance: he went immediately to the governor's houſe, who preſented him with a buffalo, and appointed him to ſettle the price of pepper, with ſundry chief men. Theſe commiſſioners were about 60 in number, and he had many diſputes with them about weighing the pepper; he deſiring, that it might be done upon the iſland, and they inſiſting that it ſhould be weighed in the town. They demanded 50 dollars the bahar, which much diſpleaſed him; for the Achineſe adviſed, to offer but 16; but this was his craft, for being a merchant, his aim was to have engroſſed much pepper, before the commander ſhould have bought any; and then would have made him pay his own price for it. After much debate, the rate was agreed at 22 dollars and a half the bahar, beſides ſix per cent. cuſtom. He likewiſe, at length conſented to pay two other cuſtoms, or rather exactions, the one 160 dollars, the other, not much leſs. Writings were drawn between him and them. The night before, a man who ſpoke Portugueſe, lay on board the Dragon; and in behalf of the late governor's wife, (by him intitled queen) deſired the commander's aid in taking the town, offering him one half of it. But being acquainted with the fineſſe of Moors, and the thing not agreeable to his commiſſion, he refuſed to intermeddle; and in the morning ſent him on ſhore. He ſold cloth to the chief, for 159 maſſes of gold.—The town and lands of Priaman yield not, yearly, above 500 bahars of pepper; but adding the produce of the neighbouring diſtricts, as Baſſaman, Teku, Berus, and the mountains near the town, the whole amounted to 2500 bahars, which quantity will load two ſhips, and may be bought at a very reaſonable price, if a factory has the means to buy all the year: but their harveſt is only in Auguſt and September, and the grain is fetched away by the ſhips of Achin and Java only, the Gu-

zarats not being permitted to trade there by the king of Achin's expreſs command; ſo that a veſſel that touches at Surat, and having bought a parcel of blue calicoes, white calicoes, blue ſtriped and checquered ſtuffs, and ſome ſmall and fine pintadoes, ſhall leave a factory, may lay the beſt foundation for profit, one year againſt the next. The author, ſays, he cannot ſee how ſhips can call at Cambaya, and come to Priaman time enough in one year; beſides the king of Achin's letter muſt be procured, for their ſafer proceedings in thoſe parts.

On the 18th of September, in the morning, they departed, and next day at noon, were ten leagues weſt north-weſt, from the point to the ſouth of Priaman, having ſteered to the eaſtward of Illa de Friſteza. Before day, on the 20th, they ſaw an iſland a-head, and ſteered eaſt ſouth-eaſt, to get clear of it. They now went to the eaſtward of it four leagues; the iſlands of Sumatra being ſeven leagues from them. The 21ſt, 26 leagues, being allowed ſouth-eaſt by ſouth, they were within ſix or ſeven leagues of Sumatra; and weſt from them, about four leagues, was another great iſland. On the 2d of October in the morning, they ſaw land, which they took for the Salt Iſland, but it proved a round hummock upon Sumatra. They made ſcarcely any way, yet at noon, were in five degrees 55 minutes ſouth. The 3d they had ſight of Salt Iſle, bearing north-eaſt by north, four or five leagues diſtant. It lies in the latitude of ſix degrees, ſix minutes. When they ſaw it, they were within four leagues or leſs of the ſouth land, which bore eaſt ſouth-eaſt, the wind all night freſh at weſt, and north-weſt. The ſouth land conſiſts of four iſles; the weſtern part of it lies with the Salt Iſland, or roundeſt and higheſt iſland in the ſtreight of Sunda, ſouth-weſt by ſouth, &c. The neareſt of the ſouth iſlands being the weſtermoſt, is ſix leagues diſtant from the Salt Iſland. The Salt Iſland lies half-ſea over; and the diſtance betwixt Sumatra, and this ſouthermoſt land is 12 or fourteen leagues. This evening they had the Salt Iſland four leagues north of them. On the 14th in the morning they were within five or ſix leagues of the point, (including Bantam whole bay) eaſt north-eaſt from them. There were before they came to that point, two rocks full of trees, bearing north and ſouth, four miles diſtant, between which two they ſteered. The ſouthermoſt lies very near Java, and the northermoſt half way or more, between the point of Bantam and another low ragged iſland, which, with the other two to the northward of it, bear with the northermoſt rock. Weſt ſouth-weſt, and eaſt ſouth-eaſt, between which iſlands they did not know of any paſſage. They got into the road of Bantam where they found ſix Dutch ſhips, two were almoſt laden with cloves, and two more were to be laden with pepper. The commander found 13 Engliſh people alive, of whom two were merchants, and received a letter from Captain David Middleton. On the 6th, they paid the two Chineſe their wages, and releaſed them. The 20th he called his merchants together, and having formerly reſolved to return with the Dragon to England, upon ſpecial conſiderations, he now conſulted about employing the pinnace, not yet finiſhed; and it was reſolved to ſend her with Brown and Sidnal, for Banda; that John Herne, John Saris, and Richard Savage, ſhould remain at Bantam; and that ſo ſoon as the pinnace ſhould return from Banda, John Saris ſhould go in her to Sequedana, in Borneo. The 15th of November he ſent for Jaques Dermite, and diſcovered to them a deſign of the Javans to kill them, whereof he had received very particular information.

"On the 22d, the ambaſſador of Siam came to viſit the commander, and dined with him. He affirmed, that one might ſell 1000 pieces of red cloth, there in two days, and great quantities yearly; for they cloathed their elephants and horſes with it; that gold is plenty there, and good, being worth three times the weight of ſilver; there are there precious ſtones in abundance, and cheap; and that his maſter would account it a great happineſs to have commerce with ſo great a king as his majeſty of England, with whom, as he underſtood, the king of Holland was not to be compared. 1668

The commander took leave of the king, the governor, the admiral, the old Shah Bandar, alſo of Tangong, and of the Dutch, on the 25th, deſigning to ſtay no longer. The 2d of December at night, the merchants came on board, bringing a letter from the king of Bantam, to King James, and two picols of Canton, as a preſent to him. The 12th they diſcovered a ſail, before they got out of the ſtreights, which proved to be the Hector. Her captain ſtaid behind at Surat. By her they underſtood, that the Portugueſe had taken 18 Engliſh ſhips, among which were ſeveral of the factor's, and goods to the value of 9000 dollars. The 14th they got into the Bantam road again, being forced to a longer voyage or loſs of reputation. On the 16th there came a ſmall Flemiſh veſſel from Amſterdam, with news of peace between Spain, France, and the Netherlands, and that the end of his coming was, to order the Dutch to deſiſt from their deſign againſt Molucca. The commander appointed Meſſrs. Molineux and Peckham, to return for England, and took the reſt with him for the Moluccas. The 17th he removed into the Hector, and the maſters exchanged ſhips. The 21ſt he diſpatched Mr. Towerſon, preſſing his departure with all ſpeed. The 23d, the Dragon ſet ſail from Bantam.

On the firſt of January, about one in the morning they weighed, and with a briſk gale off the ſhore, got about the eaſt point, eaſt north-eaſt, from whence they rode three leagues; thence to another point ſouth-eaſt by eaſt, three leagues. Between the ſecond point lies a ſhoal, having little water for a great length; to avoid which it is beſt to ſteer half way between Java, and the iſles of Tonda, which are five leagues diſtant. To the eaſtward of the ſecond point, lies the iſland of Tarara, ſo cloſe to the ſhore, that it is not diſtinguiſhable at a diſtance. From the 2d to the 3d point, bearing eaſt ſouth-eaſt, there are four leagues, and a mile and a half off that point, north by weſt, lies the iſle Lakkee, betwixt which and the point, there is by report, but one fathom and three quarters of water. They rode at night in ſix fathoms, having the iſle a league off to the eaſt. The 4th they weighed, and ſteered within half a league of Lakkee, having ſeven or eight fathoms water. The iſland Lakkee, with the weſt point, including Jaccatra, bears ſouth-eaſt, four leagues diſtant. There is a dangerous ſand off the weſt point of Jaccatra, ſo that it is beſt to borrow off the ſaid iſland, which lies oppoſite to that point. The 8th the commander went and anchored far out before Jaccatra, the king having ſent the Shah Bandar to deſire powder and match; he preſented him 30 pounds of the former, and a roll of the latter. He bought of them for 45 dollars, a Portugueſe boy, (given to the king by the Dutch) who would by no means forſake Chriſtianity. The points as they rode, bore north-weſt, and eaſt by north, four leagues diſtant. The town and the higheſt of the eaſtermoſt hills, ſouth by eaſt, and the weſt hill ſouth by weſt. Since they left Bantam, they ſaw 30 or 40 iſlands. The 10th in the afternoon, they departed; and on the 12th, having ſailed 30 leagues eaſt by ſouth. They were at noon, two leagues ſouth-weſt by ſouth an iſland; ſouth and north, with which there is a ſhoal, three leagues from Java, called Los tres Hermanos, (or the Three Brothers:) the iſle lies 10 leagues from Java, but not ſo far eaſterly, as is projected in the charts, and bears with the higheſt hill they ſee upon Java, north by weſt. The 21ſt in the forenoon, they ſaw the land of Celebes: the 27th, in the morning, they were north and ſouth with a land lying 12 leagues, eaſt ſouth-eaſt, from the eaſt ſide of Cambaya: coming nearer the weſtern part, it proved two iſlands, lying eaſt north-eaſt, &c. The great iſland lay eaſt by north, five leagues off, making

Los trés Hermanos.

1608 three or four head-lands. There lies a round iſland eight leagues ſouth, from the ſaid head-lands. From the eaſtern point to another, north-eaſt, half north, there are three leagues, and to a fourth, north-eaſt by north, three leagues. Eight leagues ſouth-eaſt by eaſt, from the third point, lies a ſhoal ſix leagues long, as it beareth. The 28th, from the ſaid point north-eaſt, eight leagues, lies the iſland Ticabeſſa, (whereof they had ſight;) and to the north-eaſt by north, 14 leagues, is the eaſt or north-eaſt point or Buton. At night, a caraval, with 40 or 50 men came on board, ſent from the king of Buton, among whom were the king's uncle and ſon, who knew Sidnall and Spalding.

"On the 4th of February in the morning, about eight o'clock, they ſaw Burro, the eaſt point of which was north-eaſt by eaſt, ſeven leagues off, and the weſt point north-by-weſt, nine leagues off. The author for the ſpace of a few hours ran 12 leagues, north-eaſt, wind weſterly. The 5th, a conſultation being held, it was thought beſt to go for Banda, the winds not ſerving for the Moluccas. From the eaſtern point of Burro, to another, there are four leagues, eaſt and weſt. The Iſle Bloy lies ſouth and north from the eaſternmoſt end of Burro, four or five leagues. From Burro they ſaw Amboyna, which lies eaſt by north, 12 leagues diſtant, and is 10 leagues long, eaſt, to the eaſtward of which lie other iſles, eaſt and weſt, of good quantity. On the 28th, they got into the road or harbour of Banda, where the people and Dutch came to welcome the commander. There is a ſmall flat iſland, that lies to the north of Pulorin's eaſt end. Puloway, and the entrance of the harbour, bore weſt, northerly, three leagues diſtant. The two points of the ſouth, bear north, one quarter eaſt, &c. half a mile diſtant. Thoſe that are bound in, muſt keep on the north ſide, cloſe under the higheſt hill. They rode in ſix fathoms and a half water; the entrance of the ſound being weſt ſouth-weſt, one mile off them. Nera one mile north, and the low point of the round hill, one mile weſt. The Hope having been driven to the eaſt, came piloted in next morning. The 9th, the commander went on ſhore, and delivered his majeſty's letter to Nera, together with a preſent, being the beſt gilt cup with a cover, the beſt head-piece and gorget, and one of Mr. Buckes's muſquets, which coſt 25 dollars: it was received with the moſt ſtate that had been known; but they took till next day to conſider about the propoſals for ſettling a factory. The Dutch ſaluted at Captain Keeling's landing, and again at his going on board; he boarded with them. The 11th, he agreed for building their houſe. The 21ſt he went to Urtatan, to confer with the people, where he promiſed to be at Lantor the Sunday following. The 25th in the afternoon, he was called upon, and went to Lantor, where he delivered the king's letter; the ſmall gilt cup with a cover, the fine gilt target, one muſquet and a barrel, which they received with reſpect. Nekhada China (as the Dutch ſpy) came on board in the night, to adviſe the commander how to manage. Where the Dutch have a factory, let no man look for better meaſure; large gifts being more regarded than fair dealing.

On the 13th, thoſe of Lantor demanded for Serepinang, 140 rials of eight, and Captain Keiling required leave to ſell his cloth the beſt he could, by ſettling a price. The prieſt was ſent from the government to demand payment of what they called Rooba, before the Engliſh traded, which the commander refuſed, except upon condition that the whole country would bind themſelves to lade him with mace and nutmegs, within four months, at 100 dollars the catti. The prieſt taking time to conſider of it, the other anſwered that ſince he perceived they protracted the affair, waiting till the arrival of the Dutch, (which was now become doubtful, the monſoon being almoſt ſpent, and the eaſt winds beginning already to blow) he would not give more than 90 rials; on which the prieſt took his leave, who under a very fair outſide concealed abundance of guile. The 16th, there arrived three Dutch veſſels, which, without anchoring, fired thirty, ſixteen, and nine pieces of cannon. Two of theſe ſhips came from Ternate, having loſt Paul Van Carden, their admiral, with 74 men, taken by the Spaniards. The Dutch offered 5000 dollars for him; but reſtoring the fort of Machian, which he had formerly taken from them."

At length, the Engliſh came to an agreement with the Dutch, with regard to the preſent diſpute, and on the 23d, the commander made a ſecret agreement with the chief of Puloway, to ſend a factory thither; and were forced to lend them 300 rials, and gave as ſerapinang, 100 rials, with four Malayan pintadoes. Next day, the Dutch hearing of the agreement, ſought to prevent him. The 29th there arrived in the road ſix great ſhips, and two ſmall pinnaces. The commander ſaluted them with nine pieces of cannon, and they anſwered with three. The firſt of April, 1609, he received by the Hope, from Puloway, 225 cattis and three quarters of mace, and 1307 cattis and a half of nutmegs, which mace (ſo bought) he marked with B. for diſtinction; the 4th, going on board to cure one of his eyes, which by the heat of the nutmegs, watching, &c. was very ſore, he left the houſe and goods in the care of Auguſtine Spalding. There arrived from the Moluccas, two ſmall Dutchmen. And now the wind every morning, blew hard eaſterly. The 9th, the Dutch admiral, Williamſon Varhoef, went on ſhore to Urtatan; the fleet ſhot 40 pieces of ordnance: his ſhip but five. He delivered a letter from Count Maurice, without a preſent, which, when the people demanded, anſwer was made, (as the author was told) that they had one on board: but it was not yet reſolved what it ſhould be. The 10th, the Sha bandar, at the common requeſt, ſent for the letter, which being in Portugueſe, he peruſed, and found it only an inſtrument, binding the prince and ſtate to ratify ſuch agreements as their admirals and councils ſhould make with other powers. It was written on paper, ſealed underneath, and left open for all.

They began to bring their nutmegs on board, on the 11th, being conſtrained thereto by the Dutch, whoſe intentions was to go on ſhore within a day or two, ſo that the Engliſh could neither ſelect the beſt, nor let them be long enough in ſweat. On the 12th, at night, after the firſt watch, the ſtates ſent four men to deſire the commanders company inſtantly on ſhore; but he excuſed going till next morning, and then went betimes. The Shah Bandar of Nera, coming to viſit him on his landing, after much talk he propoſed (as he had often done before) the formal ſurrender of Banda, to the uſe of the king of England, before the Dutch landed, or began their fort. They ſeemed to like the propoſal well, promiſing to conſider, and give an anſwer the ſame day; but did not perform.

On the 15th, the Dutch, with twenty boats landed 1200 men; the natives fled. On the 18th, the commander went on ſhore, and ſending for ſome Dutch of note, complained of many wrongs he had received ſince their arrival, and demanded redreſs; adding, that although the Engliſh were not ſtrong enough to right themſelves, yet their king would not ſuffer his ſubjects to be injured by their means, without obtaining effectual ſatisfaction: the Engliſh commander at the ſame time told them, that notwithſtanding their behaviour, he could not help acquainting them, that the natives intended to poiſon their water; and had for that reaſon, warned him not to drink of it. They thanked him, and having been with their admiral, requeſted the commander from him to have patience, with regard to the affair of rice, till he had conſulted on the matter. On the 20th, the commander went on ſhore to fetch the rice, in part of Daton Puti's debt to the company, but the Dutch had diſhoneſtly taken it, notwithſtanding the admiral promiſed that he ſhould have it.

They invade Banda,

Then he thought to have ſupplied himſelf among the Javans: but they durſt not, although he offered more than the Dutch paid, alledging, that the Dutch had charged them not to ſell him any. At his return home, finding the perſon whom the admiral had formerly ſent to him, he deſired him to tell that commander, that he looked upon the taking of his rice, as a great wrong; and that if he were a gentleman, he would not ſuffer low people to abuſe him, as he walked among them. The perſon anſwered, that he was a weaver; on this the commander reproved him, being an Engliſhman in their ſervice. The commander took his praw, and went to Labatacca, where he found ſuch little buſineſs, that it appearing not worth while to keep there, he ſent his ſkiff to bring them and their goods away. He went to Cambay on the 22d, where the Dutch did the Engliſh much wrong, even in their own yard; when having ſeveral times complained without redreſs, the commander concluded that it was by order from the chief. On the 24th, the Dutch began their fort. Next day one of their pinnaces, which came from Puloway, could tell him no news of Brown there. On this he manned his ſkiff and went thither: but found little ſpice. However, the people deſired him to ſtay at Ayre Puti, promiſing to load his ſhip, and offered to make it death to any one who ſhould ſell one catti of ſpice to the Dutch. The commander ſhewing a diffidence, they having once before deceived him, they offered to enter into articles, and confirm them by oaths. Upon this he propoſed their bringing the goods on board, which they refuſed, fearing the Dutch. He then offered to ſend one Engliſhman in each praw, and to run the riſque if the Dutch took it. But they would not hazard their people. On the 6th, in the morning, having taken into his boat four ſuckles of mace, and many nutmegs, with three chiefs, in order to confer what to do. By the way, they declared, that if he would not deal with them, their ſpice ſhould rot upon the trees; and they would all die, before they would trade with the Dutch. "But (ſays the author) they are wicked and faithleſs Moors; neither know I what to do; for if I go to the Moluccas, I muſt loſe 2000 dollars owing here; and trade there is uncertain. On the other hand, ſtaying two months longer here, will prevent going to the Moluccas." However, at laſt he agreed with them. On the 29th, the chief being convened, after many proteſtations of ſincerity, they engaged by writing, to deal with him only, for all their ſpice at Puloway, and at Ayre Puti, and not to ſell or part with any to the Dutch. The Dutch offered 12000 dollars, to make peace with the inhabitants, and drive the Engliſh from thence, which they refuſed, and often earneſtly deſired the commander not to take it ill, that they permitted the Dutch to land and ſell their cloth, which they did upon a particular conſideration no way material to him. On the 4th of May, the commander went to Puloway, where he found the Dutch offered cloth at one third leſs than the Engliſh. He alſo met with 1000 cattis of nutmegs, and 200 cattis of mace, which they of Pulorin had ſold the Engliſh, without letting the Dutch have one catti of either. On the 8th, the Dutch there ſent to requeſt the conveyance of a letter and a ſick man on board their ſhips, which the commander promiſed: but his nutmegs being ready to load, Nakhada Goa, came from the chief to intreat him not to carry their man or letter; but ſtay alſo himſelf on ſhore, which he refuſed, and prepared to ſet forward; of which being informed, they ſent him word again by the ſame perſon, that if he went, they would ſeize whatſoever he left behind, and conſider the Engliſh as enemies; upon which he ſtopped. On the 9th, the people ſent, and deſired him to go on board in four days. As he was going to bed, there came a command that they ſhould not ſtir out of doors upon pain of death. Soon after, he heard that the Dutch were upon their knees to the people, on this, going out armed, he found them overcome with fear; and demanding the cauſe of coming on board ſo late? They anſwered, that one of them was ſhot in the leg, as he ſlept in their houſe, which cauſed them to ſeek the commander for help, and that they were intercepted by the way. He went home with them, and leaving three Engliſh with two of them in their houſe, brought two home with him. On the 10th, in the morning, he cauſed the goods of the Dutch (at their earneſt requeſt) to be brought to his houſe, at which the natives ſeemed offended. It was determined in council to kill the Dutch; but Nakhada Goa preſerved their lives. They were commanded by the natives not to ſtir out of doors, upon pain of death: their goods and money were regiſtered. The ſame evening, many praws filled with men, went from hence, and on the 12th, at night, one of them returned with news that they had ſlain the Dutch admiral and all his principal followers. Next day the commander had much trouble to keep the Dutch from being ſlain by thoſe of Campon Awrat, whoſe Shah Bandar had been ſlain by the Dutch. Two Dutch pinnaces arrived on the 14th, the iſlanders were in great hopes they would have landed; but the commander ordered his men to forbid them, and with much intreaty and danger, ſaved thoſe who were on ſhore, from being ſlain by the people of Campon Awrat, who came armed for that purpoſe. About noon he ſent away his ſkiff with letters from the Dutch on the iſland to thoſe on ſhip-board; and at night took great pains to preſerve the former, by keeping a careful watch. Next day the ſkiff returned with anſwers to the Dutch letters. On the 16th, the ſtates conſulted, and reſolved, that with the commander the Dutch ſhould be ſafe, but would not permit them to go on board their ſhips. He went on board, and brought more letters to the Dutch, and, at the harbour's mouth, was hailed by five Dutch ſhallops and other boats. On the 20th, in the evening, Simon Hoen, their vice-admiral, came on board the Hector, and gave the commander many thanks for the kindneſs ſhewed to the Dutch at Puloway. At his going away, ſeven guns were fired. —— On the 25th, he manned his praw, and went to Labatacca; where they deſired ſome perſons to buy their ſpice, which he promiſed them. The Dutch having pulled down his houſe, gave him, by way of ſatisfaction for it, about 150 dollars, beſides forty of the boards. When he was going to bed, Van Bergel, and Samuel King, came from the vice-admiral to let him know, that they had concluded to allow him a quiet trade at Labatacca, except at ſuch times as they ſhould come to ſurpriſe the ſame. They likewiſe deſired him not to take offence, if their boats ſearch his, to ſee if they aſſiſted their enemies. This he took very ill, and to prevent ſuch inconveniencies, propoſed to trade only at Puloway and Pulorin, provided they would pay him what debts Nera and Cumber owed him, amounting to 12 or 1300 dollars: they promiſed to give an anſwer the next day; and in the morning, Van Bergel brought him word, that he might trade at Labatacca. On the 31ſt, having gone there to forward buſineſs; about ſupper time, Van Bergel and Samuel King came on board. As they deſired to ſpeak with him in private, he went with them into his cabin; where, after many compliments, they delivered him a note from the vice-admiral, importing, that he would allow the Engliſh liberty to trade, but not to carry victuals and ammunition to the people, whom he held for enemies: alſo, that he required their boats ſhould paſs by his ſhips to be ſearched; that otherwiſe they ſhould be ſearched by force, and both ſhip and goods confiſcated. The commander anſwered, that he would follow his commerce; and that if the other injured him, it would fall heavy upon him: that he had ſome rice ſtill to diſpoſe of, and intended to ſell, if they did not obſtruct him. That for ammunition, he had in his ſhip not above twenty hand-guns, belonging to ſome poor men; the ſale of which he neither could, or would prevent, except they would

1608.

1609 buy them, in which case they should have them at a reasonable price. That as to submitting to their search, he could not do it without becoming a traitor to his prince; and that he would hazard both life and fortune, rather than his integrity should be called in question at his return to England. On the 2d of June, he sent the vice-admiral and council, a few lines upon the same occasion, by Augustine Spalding, seeking an amicable agreement. Next day, he received a note from the Dutch, who insisted on continuing their search; and offered to buy the hand-guns, but would not permit the rice to be carried. To which he returned by the messenger, the following answer.

"The Vice-Admiral, M. Simon Johnson Hoen, &c. of the Dutch fleet, may please to know, that to the end to take away all cause of quarrel from them to us, and shew the world our honest cause, and their wilfulness: whereas they will not permit my rice to be carried to Puloway, I will likewise therein consent to them, upon condition that they will revoke their supposed search; and to the end, they shall have some security for the performance, I will pass my yet unfalsified word: or if that (through your incredulity) be not sufficient, mine oath unto your deputies, or yourselves, generally at pleasure, to the same effect. But if herein you will not (through desire of quarrel with the English) consent to my reasonable request, then be pleased to know, that I will send it at what price or hazard soever. Concerning our ammunition, I write nothing; your purpose of buying the same being prevention to your doubts, which I pray let be done speedily for your own satisfaction. Thus I commit you to the Almighty, who prosper your honest proceedings, as I wish to mine own. From aboard the Hector, in Banda, this 3d day of June, 1609. WILLIAM KEELING."

They sent him their last resolution at night (having called four councils thereupon) which was, that they held their determination for the search. On this, the commander considering their intentions, and that the least violence would cause a total breach; that, in such case, sixty-two men could have no chance against a thousand, or more, and that their ship and goods would be in great danger, or at least be hindered in loading spices, their fort commanding all, he therefore yielded, as by constraint, to the search. The 5th he went with the last of his rice to Puloway, the Dutch having sent on board, and searched, to their great vexation: notwithstanding which, the ship at Lantor beckoned, and called them on board; he refusing, they said they would fire; but they thought better of it. On the 14th, going to Labatacca, he bought some spice, and put off some cloth. On the twenty-fourth, he went to Cumber, whence he stowed eleven suckles of mace. He went to Lantor the next morning to recover some debts, which were denied him. The 26th, he sent his great boat for Puloway, and went himself to Labatacca, whence he stowed two suckles of mace: next day the boat returned, with spice from Puloway. The Javans began to confer with the Dutch. The 29th he went to Cumber, whence he stowed fourteen suckles of mace. The 1st of July he went thither again to account with the debtors. The 2d, the Dutch (with all the strength they could raise, leaving the ships and fort weakly manned) went and took Labatacca, where they killed sixteen or twenty persons, and burned the towns, bringing away pots and pans.—He sent to Cumber on the 4th, but one of his Guzarats advised him to go thither no more, because they suspected he held intelligence with the Dutch. The 16th, before day, the Dutch, with their whole power, went to get eastward, and then burned several boats, and returning to take Salomo, they were there at much strife about landing, not who should go foremost, but who should stay longest on board; by which, and other misconduct, they were repulsed with the loss of six men, besides many hurt, among whom, the governor, Mr. Jacob de Bitter, behaved bravely. Afterwards, Matthew Porter, with others, going on shore, one sent the commander word by him, that the Dutch designed to seize him, and advised him to look well to himself, and the ship: the reason they alledged for this was, that the two preceding nights, the English made signs (which were answered by the people from shore) of the Dutch preparation to land. The 17th, the Dutch sent Van Bergel and Samuel King on board the Hector, requesting to know when the commander intended to depart. As he was delayed at Puloway, he could not satisfy them: then offering to make good all his debts if he would be gone speedily, he refused, saying, that the company would not feel so small a loss; and that he could not answer such desertion at home, especially after having staid till his lading was ready. They had likewise some talk concerning the pretended signals above-mentioned; affirming that the English made them two nights together, that many depositions were taken on this; also, that one of his men, was in their fort the day before. Being asked, why they made signs to the country, he answered, that they had reason so to do, since the country was so much indebted to them, and the Dutch gave them all the obstruction they could. The commander, provoked at their behaviour, also defied them to prove what they had alledged, and bade them go on their own way. However, that he might take off all ground of suspicion, he offered to go to Laboan Java, where he could neither know any thing of their motions, nor make signs to prejudice them. On the 28th, in the afternoon, the Dutch sent many of their chiefs on board him, who, at first, demanded kindly, Whether he continued in his former determination of lading there? Having answered, that he did, they desired him to resolve to depart in friendship: he replied, that now spice was ready, he hoped to get away in twenty days. They delivered him a letter from their Vice Admiral and Council,* to which they subjoined the following remonstrance.

"On the 18th of April, the worshipful Admiral Peter Williamson Van Hoef, having anchored with his fleet, in the island of Banda, and there being informed by the merchants of the united East India company, that they were, by the inhabitants of Banda, daily straitened and molested; and also sometimes dispossessed of their cloths and merchandise, which they took at such rates as they pleased, paying for them when, and in what manner they thought proper; whereby they became indebted to the East India company, above 20,000 rials of eight, without intention to discharge the same. And farther, that the people had lived in a very doubtful situation, being daily in fear, lest they should work their destruction, as they did but a few ago, having murdered our merchants, and by force take others; and, according to their custom, made heathens of them.

"Therefore the admiral aforesaid, was moved by all friendly means, to build a castle or fortress, that the people and merchandise might rest in better security, both against the Portuguese, and all other enemies; which, by most of the chief Orancayas, was consented to, and on this have we proceeded to erect a for-

* "The commander, Mr. William Keeling, may please to know, that it hath been, by our deputies, offered to him, that if he thought good to transfer over to us, the debts remaining among the Bandaneses, and then with friendship withdraw from the road with his ships (which himself heretofore hath partly made mention of to some of us) we are resolved to deal with him in that behalf: and although this reasonable proposal is by us made to him, to avoid quarrel, yet hath the commander aforesaid refused to accept the same; notwithstanding, we have sufficient occasion to command him, with his said ships, to withdraw from this Road and our fleet, out of the reach of the fortress of Nassau. And that the commander may understand the reason which moved us to the same, we have at large remonstrated the same."

a fortreſs, which being about half finiſhed, the Admiral Van Hoen aboveſaid, procured a convention of the chief Orancayas, and council of the iſle of Banda, to meet him and others of the council, at Ratu, there to have entered into a friendly treaty and agreement with them, to which effect, the admiral nominated the fiſcal, or juſtice of the fleet, beſides others of good account, as hoſtages, to continue at Reyacca, that they might, with leſs fear or reſtraint, come to meet him.

"Accordingly, the admiral, with ſeveral of his council, and a company of ſoldiers, the 22d of May, 1609, came to Ratu, the appointed place of convention. Being there, a Bandaneſe approached him out of the wood, who told him, that the Orancayas, and other chiefs of the iſles, were near at hand in the woods, but were ſo fearful of the ſoldiers, that they durſt not come to him; and therefore prayed him and his council to come to them, which they accordingly did, leaving his ſoldiers at the place of rendezvous, and being entered amongſt them, found the woods crowded with armed blacks, Bandaneſe, and Orancayas, who inſtantly ſurrounded them, and without much conference, treacherouſly and villainouſly maſſacred them, giving each of our chiefs not leſs than 20 wounds. This ſtratagem having ſucceeded, they preſently aſſaulted the company of ſoldiers, intending to have ſerved them the ſame; but they partly in fear, and ſuſpecting ſome treachery, having kept upon their guard, encountered the enemy, who at length, betook themſelves to their beſt refuge, with the loſs of ſome of their chiefs, and ſo fled to Cayas, and there had murdered the fiſcal, or juſtice aforeſaid, with the reſt of the hoſtages, beſides divers of our people, who were walking into the woods to gather cocoa-nuts; inſomuch, that on this occaſion, above 40 of our people were murdered by the Bandaneſe, contrary to their oaths and promiſes; which action provoked us to take all poſſible revenge againſt thoſe treacherous and inhuman iſlanders, and urge us to proſecute the preſent bloody war."—They conclude thus:

"We, by virtue of our commiſſion and patent of his princely excellency, order the Engliſh commander to withdraw with his ſhip our of our road and fleet, and beyond the reach of the artillery of the fortreſs of Naſſau, within the ſpace of five days, after the date hereof: and inaſmuch as we have conquered by force of arms the iſland of Nera, we alſo claim and hold the roads belonging thereto, as the road of Labatacca, &c. to be under our command, and will not permit any (during our war with the Bandaneſe) to anchor there.

"Accordingly it is ordained, and abſolutely reſolved upon by the vice admiral, and the reſidue of the council, in the ſhip of Hollandia, in the road of Banda, the 28th of July, 1609.

"Simon Jahnſon Hoer, Jacob de Bither, Henry Van Bergel, John Corneliſon Wytt, William Jacobſon, Simon Martens, Ruſger Tomaſſen, Marlahen, 1609, William Vandervort, alias Secret."

The admiral briefly anſwered to their remonſtrance by word of mouth, That he could not juſtify his departing in ſuch a manner, his lading being then ready; and that unleſs he was otherwiſe commanded than by words, he would ride there till he was laden, which would be within 25 days at fartheſt. They alledged, That this their notification to him was ſufficient; to which he replied, That raſh men often threatened to do, what they durſt not for their lives perform. He fired five parting guns. The 19th he ſent his ſkiff for Puloway, to look out for a road there. Van Bergel coming on board to ſearch the boat, the commander deſired him to tell the vice-admiral, that he would leave a factory at Puloway in caſe of conſtraint, and that without conſtraint he would not depart from thence. The 20th, about one in the morning, the ſkiff returned from Puloway, without any account of the debts or inventory of goods, which was the principal cauſe of his writing. He (who was ſent on the meſſage) brought word only, that the people were willing to pay their debts if he could ſtay 15 or 20 days; and offered him their beſt road at Puloway. The Dutch after this came to ſome agreement with him for the time of his ſtay, and for the debts: to which he was invited by the monſoon, and the trade which he already had. The firſt of Auguſt, peace was proclaimed betwixt the Dutch and the iſlanders, which was a melancholy argument of the Puloway men's breaking with the Engliſh. The Dutch ſent the commander a letter of credit, for diſcharging the debts left at Banda, payable at Bantam, and that evening fired nò leſs than 150 guns for joy of the peace. Upon the governor's earneſt intreaty he went to ſee the Dutch fort; it was mounted with 30 pieces of ordnance, of which eight were very good braſs demi-cannons. The 14th, having ſent his boat to fetch away goods, there returned with it a ſervant of Nachada Guzarat, by whom he underſtood, that the Puloways were reſolved not to let him have any more ſpice, except ſome little to gloſs over their falacy to the Engliſh; therefore he ſent his boat for Brown, and fired five guns to warn his people on board: the iſlanders not perceiving that he was offended at their ill-dealings. After the ſecond ſummons, Brown came, but without Spalding, whom they would not part with till the commander went on ſhore; therefore he ſtood again to the eaſtward, near the town, and the king of Macaſſar came on board him, bringing Spalding, and the three Dutch on board. The 10th he weighed a half hundred by his ordinary Banda beam, and it weighed nine cattis and a half; which it appears that the catti weighs five pound fourteen ounces and a half, avoirdupois. He weighed alſo the ſingle catti, which made five pounds fourteen ounces and a half, avoirdupois. The 11th, they anchored near Macaſſar, upon Celebes, being very deſirous to go thither, in hopes, as he was informed, of getting cloves there in exchange for cloth. The 12th, having ſent his ſkiff armed, to enquire whereabouts they were, he found, that Macaſſar was yet half a day's ſail to the north, and that three months before, a Dutch ſhip was loſt in ſight of the town; upon which report, they gave over the deſign of going thither. The 21ſt they anchored before Jaccatra, where they found the Banda, and Enkhuiſen, two Dutch ſhips, which brought the Engliſh in the Hope and their goods from Amboyna, having arrived eight days before. The 26th, coming near the point of Bantam, they met a praw with Ralph Hearne, ſent by Mr. John Saris, who had ready 3481 bags of pepper. Having got betimes in the road, Saris came on board the Hector in a Dutch boat. On the 23d the commander having taken in 4900 bags of pepper, propoſed leaving a factory, which was conſented to. The 27th he appointed a factory at Bantam, aſſigning the factor Auguſtine Spalding 50l. ſterling a year; and the reſt per month as follows: Francis Kelly, ſurgeon, 45 ſhillings; John Parſons 30 ſhillings, Robert Neal, 29 ſhillings, Auguſtine Adwell, 24 ſhillings; Etheldred Lampre and William Driver 20 ſhillings each; William Wilſon, 22 ſhillings a month; William Lamwell and Philip Badnedg 16 ſhillings each; Franciſco Domingo 20 ſhillings; Juan Sevron, and Adrian, Mr. Towerſon's boy, 10 ſhillings each a month. He alſo hired ſix perſons to go with him to England. The ſecond of October the commander took his leave of the governor, and deſired his favour to the factor, which he promiſed with much ſhew of ſincerity.

1609

Engliſh factory at Bantam

Early on the 3d he went on board in order to put to ſea. The firſt of November, having in 24 days run about 250 leagues from Bantam, they were in 25 degrees ſouth latitude, the needle varying 24 degrees. The 29th they had all day a ſtrong gale of wind, which, towards night, proved a ſtorm at weſt ſouthweſt from the northward, and put them to try their main courſe, continuing all night, and the next day. On this occaſion (as often before) they found the obſervation really to be true. That is, generally when

1609 when any eaſterly wind comes about to the northward, if it happens to rain, preſently veering round to the weſt-ſouth-weſt, it there ſettles. They were in thirty-two degrees and a half ſouth, when the ſtorm took them, and had about thirty degrees variation and upwards. On the 8th of December, early in the morning, they fell in with Tierra de Natal, ſix leagues off to the weſt, where the variation was about eight degrees and a half. They were at noon in thirty-one degrees twenty-ſeven minutes latitude, ſtanding ſouth-ſouth-eaſt, wind at ſouth-weſt, under low ſails. They met a Dutchman, and underſtood by him, that the Eraſmus, (a ſhip of the fleet, which left Bantam at the commander's firſt arrival there, in the Dragon) being very leaky at ſea, and left by the reſt, ſteered for the iſland Mauritius; and there unlading, left the goods, with twenty-five perſons to guard the ſame, till they ſhould be ſent for; the reſt of her company being now in this ſhip. He ſaid at Mauritius, there were two havens, one called the north-weſt, lying in ſomewhat leſs than twenty degrees; the ſouth-eaſt, in twenty degrees fifteen minutes. That all kinds of refreſhments were there to be had, as fiſh, with a number of fowls; here were hogs alſo, and the place was very healthful. That the iſland was between thirty and forty leagues in circuit: and the variation there twenty-one degrees north-weſting.

On the 22d, they were in the latitude of thirty-five degrees, twenty-eight minutes, and within ſeven leagues to the ſouth-eaſt of Cape des Aguillas, which roſe like two iſles; but coming more athwart, it appeared like three iſlands; two bays to the north, making three perſpicuous points, low, and ſeeming round; they ſounded about ſeven in the evening, and had ſeventy-ſeven fathoms water, oozy ground, being ſouth of the ſhore, five leagues at moſt: they obſerved the ſun's ſetting, and found ſmall variation, having twenty-eight degrees and a half ſouth of the weſt Azimuth; their latitude being about thirty-five degrees twenty-ſix minutes. On the 23d, they ſteered all night weſt-by-north, and weſt-north-weſt, with a freſh eaſterly gale; and in the morning, ſailed in ſight of the land, which was high, about eight or ten leagues diſtant. About noon, they were near the Cape of Good Hope, having ran between it and Cape des Aguillas, in ſeventeen hours. They were within three leagues of the Sugar Loaf, and ſtood off and on all night. On the 28th, they received by the Dutch boat, ſix ſheep (the fatteſt the author ever ſaw) from the iſland; the tail of one of them, was twenty-eight inches broad, and weighed thirty-five pounds. The commander alſo bought of the Dutch, a main top-ſail, (which his ſhip was in great want of) they were very ready in other reſpects, to ſupply his wants. He took fat ſheep left in Penguin Iſland, and left lean ones in their room: he left a note alſo there of his arrival, and the ſtate of his company, as others had done before. On the 10th of January, in the morning, his ſhip was under ſail homeward. All the time he ſtaid there, the wind had been weſterly and ſoutherly: and the two former times, that he was there, at the ſame ſeaſon, it blew eaſterly and was very ſtormy. On the 20th, they paſſed the Tropic of Capricon, about noon. The Dutch came and ſupped with him, and he fired three parting guns. On the 30th, before day, they ſaw St. Helena, having ſteered ſixty-ſix leagues weſt in that latitude. They anchored on the north-weſt ſide, a mile from ſhore, north-weſt from the chapel, in twenty-two fathoms, ſandy ground. On the 16th of February, they ſaw the iſland of Aſcenſion, ſeven or eight leagues weſt-ſouth-weſt from them. On the 28th, in the morning, the wind being pretty fair, they ſteered with the Dutchmen. On the 10th of May, they had very fair weather, wind ſouth-weſt, latitude forty-nine degrees thirteen minutes. Next day, betimes in the morning, the wind came at ſouth, and blew a hard ſtorm, which put them into their fore courſe. At night, they ſpoke with a Lubecker, who told them, that Scilly bore eaſt-by-north from them, thirty-eight Dutch miles. They gave him notice of the diſtreſſed ſhip. On the 9th, in the morning, they had beachy land to the north-north-eaſt, three leagues diſtant; and about ſun-ſet anchored in the Downs.

THE VOYAGE OF CAPTAIN DAVID MIDDLETON, TO BANTAM AND THE MOLUCCAS.

MR. David Middleton was Captain of the Conſent, one of the three ſhips belonging to Captain Keeling's fleet: but ſetting out firſt, and not meeting with the other two at the place of rendezvous, went on, and performed the voyage alone. The Conſent was a ſhip of 150 tons; and ſailed from the Hope, on the 12th of March, 1606.

On the 16th of July, 1607, they anchored in the bay of Saldanna, all their men in good health; only Peter Lambert, the day before, was killed by a fall from the top-maſt head. On the 21ſt, the captain and maſter went to Penguin iſland, three leagues diſtant from the road, where they ſaw an amazing quantity of ſeals and penguins. Here having bought ſome cattle, and refreſhed, about four in the morning, with very little wind, they left the road of Saldanna, their men being in very good health. They were loth to depart without the company of their admiral and vice-admiral: but not being certain of their arrival there, directed their courſe for St. Lawrence.

On the 27th of Auguſt, the wind being at north-weſt, they ſteered eaſt-by-ſouth, and at two o'clock, ſaw the land of St. Lawrence, or Madagaſcar, about ſix leagues off; then bearing north-by-weſt, at noon they obſerved the latitude to be twenty-four degrees forty minutes; and the variation at night, ſixteen degrees twenty-three minutes. On the 30th, at five in the afternoon, they anchored in the bay of St. Auguſtine, in ſix fathoms and a half, large gravel. They were forced to go to leeward, being to roomwards of the road, before they could get in, by reaſon of a great breach that lies off the bay; and then came in cloſe upon a track, having had ſeven, ſix and five fathoms all the way. On the 31ſt, the Captain, with Mr. Davis, went in their long boat to view the iſlands; and the author as they went, ſounded cloſe by the beach, and had ſix fathoms. One of the iſlands is very ſmall, like a bank of ſand; the other about a mile in length, and half in breadth. There is nothing upon either, but a little wood in the latter. On the 1ſt of September, they removed three leagues from their firſt place, within two miles of the mouth of the river, and rode in five fathoms and a half, very firm ground. It being very foul where they rode before, they broke one of their cables in weighing. On the 17th, having

having provided wood and water, in the morning about five they departed with a pleaſant gale, at eaſt-by-north. Coming out, they ſteered weſt and weſt-by-north, till they were clear of the breaches. They brought to ſea with them, four goats, three ſheep, and a young hiefer. They found there great plenty both of ſheep and beeves, for a ſmall value. This day, about three miles from the iſland, before the bay of St. Auguſtine, they obſerved the latitude twenty-three degrees forty-eight minutes. After they were clear of the breach, which lies to the northward of the iſle, they ſteered away ſouth-ſouth-weſt, and ſouth-by-weſt; ſometimes they had very fair weather, and a pleaſant gale at ſouth-eaſt-by-eaſt. On the 11th, having a freſh gale at ſouth-eaſt, and ſouth-by-eaſt, they ſtood towards the ſhore till midnight, and then ſaw a great breach, right-a-head, cloſe by them, but having the ſurf before they ſaw it, they tacked, and ſtood off again preſently. At noon, they found the latitude twenty-five degrees twenty-two minutes. On the 12th of November, in the morning, they ſaw an iſland, and bearing with the north-ſide, found it to be Ingana. It is about five leagues in length, lying eaſt-by-ſouth, and weſt-by-north. The eaſtern end is the higheſt land; and the weſtern full of trees: Its latitude is five degrees and a half, the variation four degrees, thirteen minutes. Having the wind at weſt-north-weſt, they proceeded without ſtopping, eaſt-by-ſouth, and eaſt-ſouth-eaſt, a pleaſant gale, but very much rain. On the 13th, in the morning, they had ſight of Sumatra, about four leagues diſtant. Saturday, the 14th, they anchored in Bantam road, about four in the afternoon; where they found the merchants in health, and all things in good order. Next day the captain went on ſhore, and ſpoke with Mr. Towerſon, concerning the ſhip's buſineſs, and agreed to have the iron and lead which they brought, carried on ſhore: after this, having refitted their ſhip, and taken in their goods and merchants, they ſet ſail for the Moluccas, where they arrived the beginning of January. The reſt of this month, and all the next was ſpent in mutual entertainments with the Spaniards, and Molucca princes. The reaſon was, the Spaniards durſt not permit them to trade, till the camp maſter had given leave; and he would not grant it, unleſs the Engliſh, in thoſe broils betwixt him and the Dutch, would do, or ſeem to do them ſome piece of ſervice, at leaſt, by accompanying their ſhips for greater ſhew: which the captain abſolutely refuſed to do, as being againſt his commiſſion. In the mean time, they carried on a private trade with the people by night; and in the day, made merry with the Spaniards. In the beginning of March, they were allowed an open trade: but within a few days this licence was countermanded again, and they were ordered to depart. Accordingly, March the 14th, they weighed anchor, and ſet ſail, trading a little by the way. On the 23d, having entered the Streights of Bengaya, where the captain propoſed to take in water, there came an Indian in a praw, haſtily from the iſland to the ſhip; who being aſked the queſtion, undertook to bring them to a watering place, on which they ſtood over for the eaſtern ſhore, and anchored about one in the afternoon, in ſixty fathoms water; where there runs a very ſtrong current. Here, while they were fitting out the boat with caſks; the Indian ſold ſome freſh fiſh for China diſhes very cheap. At night, their men brought water; but had a weariſome time of it, being five miles diſtant from the place where they rode. On the 24th, in the morning, they went again for more water, by day-break, the iſlanders of both ſexes came with above 100 praws, and brought plenty of very good fiſh, both dry and freſh; alſo both poultry and hogs, great and ſmall, which they ſold for coarſe white cloth and China diſhes, all very cheap: they brought alſo plantanes, caſſada roots, and many other fruits. In the afternoon, the king and the captain made each other preſents. Then the meſſenger, and all the reſt departed. About ten at night, in weighing anchor, they broke the flooks of both their ſtarboard anchors. Then ſailing away, with very little wind, at length they manned their long-boat, and towed the ſhip all night. On the 19th of April, the king ſent one of his brothers again, to know whether the captain was willing he ſhould come on board; being very deſirous to ſee both him and the ſhip; becauſe he had heard much of Engliſhmen, but never ſaw any. The captain ſent him word, that he ſhould think himſelf much honoured by his preſence. Soon after, the king came off in his caricol, rowed at leaſt by 100 oars, it carried ſix braſs guns; and had on board about 400 men with arms. He was attended by five caricols more, which had at leaſt 1000 men in them, the captain having ſent Francis Kelly the ſurgeon, as a pledge, which he demanded for his ſecurity, he came on board: where the captain courteouſly received, and treated him with a banquet of ſweetmeats. After which, he demanded what the king had to ſell, he replied, that he had pearl, tortoiſe-ſhells and cloth, made in the country, (as they ſuppoſed) of cotton ſtriped: but as he came into that part of the iſland only upon a party of pleaſure, and did not think to have met with any ſhip, he had brought none with him; yet that if the captain pleaſed to go to the town, which was about a day and a nights ſailing thence, he ſhould ſee great quantities of pearl, and any thing he had to ſell; adding, that becauſe the place was unknown to him, he would ſend a pilot to bring him thither. The captain and factors, upon conſidering the matter, thought beſt to accept of the kind offer, eſpecially as it was nothing out of the way to Bantam; and preſented him a muſquet and a ſword, with thanks for coming on board. The king made anſwer, that he had not any thing then about him, worth beſtowing on the captain, but that he would requite his kindneſs before his departure; and in the mean time, intreated him to accept of two pieces of cloth, which he received with many thanks: about three in the afternoon, the king took his leave of the captain, promiſing preſently to ſend him a pilot, who accordingly came on board; and at night, ſent a caricol to ſee if they wanted any thing, and to bear them company, with a boat for the captain. Then they ſtood away with a ſmall gale; but at night it was calm, and the tide againſt them: ſo they came to anchor in twenty-two fathoms water, and in the morning weighed again. On the 21ſt, about ten o'clock, the purſer, who had been ſent on ſhore the day before, returned on board with hens and cocoas, and told them, that the Indians had carried him to the king, who was very glad of his coming, becauſe he was the firſt Engliſhman he had ever ſeen. The purſer found him drinking and carouſing with his nobles, and the room hung about with heads of men whom he had ſlain in war. After ſome little ſtay, he took his leave and came to the caricol again, on board which he lay all that night. This night, the ſhip anchored in twenty fathoms water, the place not half a mile broad. On the 22d, in the morning, there being very little wind, ſhe was towed by her boat through the ſtreights, and as the tide was with her, ſhe made ſuch way, that about eleven, they came to anchor in twenty-five fathoms water, about one mile and a half from the town, where they waited the king's coming: but he came not that night. Here they ſent their boat on ſhore, and bought fiſh for their company. On the 23d, about one in the afternoon, the king came up under their ſtern, attended by forty caricols, and rowed round their ſhip, very gallantly ſet forth with their colours and pendants. After this, they rowed towards the town, and the captain complimented him with a volley of muſquets, and all his ordnance; then ordering his long boat to be manned, he well accompanied with Mr. Saddle their factor, and his followers, went to the town. The king likewiſe welcomed the captain with his great

1608

1609 great and ſmall ſhot, affirming that his heart was now at reſt, ſince he had ſeen the Engliſh, promiſing to do the Engliſh all the kindneſs that lay in his power; the captain having returned him thanks, for that time took his leave, and in the morning weighed, and anchored in about 27 fathoms water, half a mile from ſhore. The 24th in the morning there came on board a Javan who had a junk in the road, laden with cloves, from Amboyna; Mr. Middleton talked with him, and offered the captain his whole cargo.——The king invited the captain to take part of his dinner, entreating him to bear with the homely manner of his country: for their meat was ſerved up in great wooden platters cloſe covered with cloth. The king, the captain, and Mr. Siddal, dined together: there was plenty of victuals, their drink was very pleaſant, and the king was very merry. After dinner, they had ſome talk about the cloves they were to have had; and promiſing to come on board himſelf the next day, or ſend ſome one of his attendants, to ſee a muſter of all his cloth; then the captain expreſſing great thanks, took his leave. The 25th the king's uncle came on board to ſee their ſhip, and was kindly entertained. After him came the king's brother, and ſtaid to dinner with the captain, and then took his leave. The king himſelf came not as they expected, but ſent his ſon and the pilot, and had a view of the cloth, which they liked very well.

On the 26th the king and his ſon came on board, and dined with the captain, and had plenty of good cheer; the king was very merry, and deſirous to ſee a little dancing. On this ſome of the ſailors danced before him, and he was well pleaſed, both with their performance and the muſic. At night the king's uncle ſent the captain four fat hogs. The 27th, the king of an adjacent iſland came in his caraval, with his wife, and viewed their ſhip, but they could not intreat him to come on board. Their ſhip being fully laden with cloves, bought in this place of the Javans, the captain purchaſed ſome ſlaves of the king, one of whom, while they were buſy this night, ſtole out of the captain's cabin door, and leaping into the ſea ſwam aſhore. Next morning the captain ſent Auguſtine Spalding to acquaint the king with it, who preſently ſent him another. May the 2d, having given the town a ſalute for a farewel, they ſet ſail for their wiſhed-for port of Bantam. The 3d they had ſight of the ſtreights of Celebes. The 22d, they anchored in Bantam road, where they found not one European ſhip in the road: but there were four junks, which came from China, with taffatas, damaſks, and many other merchandiſes.

The 15th of July, 1608, the captain and merchants, having diſpatched their buſineſs, took their leaves, and ſet ſail homewards to their native country, where they arrived in ſafety after their long and tedious voyage.

THE VOYAGE OF CAPTAIN ALEXANDER SHARPEY, IN 1601.

THERE were two large ſhips employed on this voyags. The Aſcenſion, admiral, commanded by Alexaneer Sharpey; and the Union, vice-admiral; Captain Richard Rowles, lieutenant-general. As theſe veſſels ſeparated near the Cape of Good Hope, and the Aſcenſion was caſt away in the bay of Cambaya, ſo they may be ſaid to have made different voyages; of which we meet with different relations.* On the 14th of March, weighing anchor at Woolwich, they came into the downs, over-againſt Deal, three miles from Sandwich, where they ſtaid till the 25th, and ſailed to Plymouth; leaving which on the 31ſt with a fair gale, they arrived at Salvages, about 500 leagues from thence, on the 10th of April; and next morning came in ſight of the Grand Canaries. Caſting anchor the 12th at night, they fired a gun, for a boat to come on board; but the Spaniards apprehending they were part of a ſquadron of 12 ſhips of Flemmings, who were reported to be coming that way, inſtead of ſending any perſon to them, ſent into the country for a body of 150 horſe and foot to defend the place; nor could they be perſuaded otherwiſe, till two of the factors went on ſhore, and acquainted the Spaniards they were Engliſh ſhips which had touched there only to take in ſome neceſſaries.—Next morning, (as the manner there is) they fired another gun, and then the governor of the town ſent a boat to know what they wanted, which having acquainted him with, the anſwer was, that unleſs they came into the road, it was not in his power to relieve them. But the factors being examined on oath, as to the truth of the matter, had a warrant granted them for a boat to go on board the ſhips at pleaſure, and ſupply their wants. What they moſt wondered at was, the behaviour of thoſe on board two ſhips in the road, known by their flags to be Engliſh, who had not the kindneſs to appriſe them of the cuſtoms of thoſe ſubtile covetous people, as the author calls the Spaniards. On this occaſion he further remarks, That if a ſhip lie out of the road, no perſon, though of the ſame nation it belongs to, ſhall go on board it, without the conſent of the governor and council.†

The 18th of April, about ſeven in the morning, they ſet ſail, with a fair gale, which in three hours falling, heaving to and fro till the 21ſt, and then a briſk wind ſpringing up, the 27th, about two in the morning, they anchored at Mayo, about 300 leagues from the Canaries.——They determined to take in freſh water at a place called Bonaviſta; but having anchored there, they found it two or three miles up in the land, and not clear; ſo that they took the leſs. But there were other good commodities. At their arrival, they were told by two negros that they might have as many goats as they would gratis; and accordingly they had about 200, for both ſhips. They told them alſo, that there were but 12 men in the iſland, and that there was great plenty of ſalt growing out of the ground, ſo that if they pleaſed they might lade both their ſhips. Our author ſays it was excellent white ſalt, and as clear as ever he ſaw any in England.

They came to Saldanna, with all their men in good health, except two, who were touched a little with the ſcurvy, but ſoon recovered on ſhore. The ſame

* There are extant two accounts of the voyage of the Aſcenſion; one written by Capt. Robert Coverte, and the other by Thomas Jones; beſides other ſupplemental accounts.

† During the five days the admiral continued there, ſome of them went on board every day, and ate and drank with the Engliſh after their own manner. The governor had alſo a preſent of two cheeſes, a gammon of bacon, and five or ſix barrels of pickled oiſters, which he accepted of very kindly; and in return, ſent them two or three goats and ſheep, with plenty of onions. There they took in freſh water, canary, marmalade of quinces, oranges, lemons, quinces, white bread, and other proviſions.

day they had ſight of the Cape of Good Hope, 15 or 16 leagues from thence. At Saldanna they refreſhed themſelves excellently well, and took in about 400 head of cattle, beſides fowls, with plenty of various fiſh, and freſh water.

At Penguin iſland, five or ſix leagues from land, is abundance of fowls of that name, and infinite numbers of ſeals; with theſe latter they filled their boat twice, and made train oil for lamps. They took hence alſo 20 fat ſheep, left there by the Dutch, for a pinnace which they met 200 leagues from the Cape of Good Hope, and left ſix bullocks in their ſtead. At firſt coming hither, they began to ſet up their pinnace, launching her the 5th of September, and in ſeven or eight days after, ſhe was rigged and ready to ſail.—— The inhabitants of Saldanna, are a very beaſtly people, eſpecially in their feeding; for our author had ſeen them eat the guts and garbage dung and all; nay, the ſeals which the Engliſh had caſt into the river, after lying there for fourteen days, they have taken up and eaten, although they were putrified and ſwarmed with maggots, as well as ſtunk moſt intoleably, the native brought down to the ſhore. Oſtriches eggs, and ſome empty ſhells, with a ſmall hole in one end; alſo feathers of the ſame bird, and porcupines quills, in exchange for their commodities. They chiefly deſire iron, eſteeming old pieces of it more than either gold or ſilver. On the 20th of September early they ſet ſail, and that night being very dark and windy, loſt the Union and their pinnace, called the Good Hope. About five in the evening the Union put out her enſign, to what intent they could not imagine, but all that night ſhe lay at hull.

They proceeded next day, and having met with various changes of winds and often calms, October the 27th came into 26 degrees, the height of St. Lawrence, holding on their courſe with the ſame ſort of weather. On the 22d of November in the morning, they diſcovered two or three ſmall iſlands; and in the afternoon another, called Comora, a very high land. The 24th, having ſent their boat on ſhore, they met with five or ſix men of that country, who ſold them plantains. The next day they ſent the boat again; but a little before ſhe got to the ſhore, ſpying a canoe, with two men in it fiſhing, they went between them and the ſhore: however, not caring to take them by force, they ſhewed them a knife or two, which allured them into the boat. They then brought them on board the ſhip, and uſed them very kindly, giving one a turban to put on his head, and to the other a little glaſs, of a quarter of a pint full of aqua-vitæ, after which they ſent them on ſhore. The 25th, by help of their pinnace, (the wind hitherto failing) which towed the ſhip between the two iſlands, adjoining to the ſhore, they came to anchor in the evening, in between 17 and 20 fathoms water. On the 26th they ſent their pinnace on ſhore with a preſent to the king, by Mr. Jordan, their factor, who went himſelf alone with it, leaving only a pledge or two in the boat. It conſiſted of a pair of knives, and a ſaſh with a looking-glaſs and comb; the whole in value about fifteen ſhillings. The king received theſe ſomewhat formally, and, ſcarcely looking on it, gave it to one of his noblemen. However, he told the bearer, that if the commander would come on ſhore, he ſhould have any thing the country afforded; and bowed towards him in a very courteous manner, at his taking leave. It is probable, that after Jordan came away, the king examined the preſent better: for in the afternoon he ſent the commander a very fat bullock; the meſſengers were gratified with a couple of penknives, with which they thought themſelves royally rewarded. Next day the commander went, attended with twelve others, and carried a ſmall banquet, ſuch as a box of marmalade, both ale and ſome wine. Of theſe they eat before the king, who touched nothing; but his nobles eat and drank.—— After the banquet, the commander had ſome diſcourſe with the king, by his interpreter, concerning their wants; by whom the Engliſh underſtood, that the iſlanders had ſome dealings with the Portugueſe, of whoſe language he could ſpeak a little.—— On the 28th the king had determined to go on board the Aſcenſion, but his interpreter told the commander that his council and common people would not ſuffer him. Towards night Captain Coverte went on ſhore where the ſailors were cutting wood, and returned with the boat. The 29th the author went on ſhore again, with the maſter, Mr. Tindall, Mr. Jordan, and all the trumpeters. They were very kindly received at the water-ſide, by the interpreter, who brought them to the king. "He was then near his palace, (Says the author) very courteouſly bowed himſelf. He had for his guard when he walked about, ſix or eight men, with knives of a foot long, as broad as hatchets, and very ſharp, who went next his perſon; ſeveral alſo went before, and many behind him, for his defence.—— "Thoſe people ſeemed to be civil, kind and honeſt to ſtrangers; for a ſailor having left his ſword behind him, one of the inhabitants found it, and brought it to the king, who perceiving it belonged to ſome of the ſtrangers, told him, that if it appeared he came by it otherwiſe than as he declared, he ſhould be put to death. Next day, at their going on ſhore, the king's interpreter brought the ſword, and told them what his majeſty ſaid upon the occaſion. They ſeemed likewiſe to have a good form of government amongſt them: for at their meeting in the morning, they ſhook hands, and ſpoke to one another, which the Engliſh took for friendly ſalutations. They appeared very modeſt and ſtrait, with large limbs, and of a very comely appearance, both men and women. They are Mohametans in religion, and go almoſt naked, only they wear turbans on their heads, and cover their privities with a piece of linen. The women wear a piece of linen before, that covers their breaſts, and reaches to the middle; from the middle, to a little before the knees, another piece goes round them; and about their waiſts ſedges are tied, like a rowl, which hang down, and become them very well. They all go bare-footed except the king, who wears a ſort of ſandals. For his apparel, he had on a white wrought net cap, a ſcarlet veſt, with ſleeves, but looſe about him, and open before; he had alſo a piece of linen round his middle, and another round his ſhoulders to his feet. When the Engliſh were at the town, they brought them cocoa-nuts, fowls and proviſions in plenty, except freſh water, which was procured out of the ſands, in this manner: They make a hole, and as faſt as the water ſprings, they lade it out into their cocoa-ſhells, and ſo drink it. They brought ſome to the Engliſh, but none of them would drink of it, it looked ſo thick and muddy.

1600

They left Comora on the 10th of December; about two or three in the morning, they ſaw on a ſudden a low land, about a league off, with high trees on the ſhore; had it not been for theſe they would have taken the land for the ſhadow of the moon, which then ſhone, and ſo might have been caſt away before they perceived the danger. This they took to be Zanjibar, till by one of the natives they were informed it was Pemba, on ſight of which, they preſently tacked about, and at day-break ſtood in again with the ſhore, along which they ſteered for a harbour to anchor in. Meanwhile they ſent a gang with the pinnace to ſeek a convenient watering-place. The pinnace having got to ſhore, two or three of the inhabitants demanded in Portugueſe, who they were? And being told, Engliſhmen, they aſked again what they had to do there, ſince the iſland belonged to the king of Portugal? and were anſwered that they knew not ſo much, nor came with any deſign but to get water. As night came on, the boat returned. Next day it went on ſhore to the ſame place: but finding no people returned. Soon after the ſhip came to an anchor, about five or ſix in the afternoon, near two or three broken iſlands, cloſe by Pemba, in the height of five degrees 20 minutes. The pinnace went on ſhore on the 12th to the ſame place with Mr. Jordan, where he talked with ſome that ſpoke Portugueſe, but ſeemed not to be the ſame with

1609 the former: for they ſaid the king was a nobleman. Mr. Jordan told them, that although the ſhip was Engliſh, yet he was a Portugueſe merchant, and the goods were Portugueſe. Then they ſaid he ſhould want for nothing, and on this ſent a Moor with them to look for a convenient watering place, who, after ſome little ſearch, brought them to a ſmall hole at the bottom of a hill, between it and a ditch. They then carried the Moors on board, and next day going to watering, ſet him on ſhore. The report of his kind uſage brought down another, who could ſpeak a little Portugueſe, and ſaid he was one of the king's gentlemen. He alſo went on board, and was well treated. At his landing next day, he promiſed to bring him hens, cocoa-nuts and oranges, which he performed. Captain Coverte, with the maſter, Mr. Revet and others, went on ſhore, where they dined, and after dinner came two cavaliers, and a Moor ſlave, to the watering-place, where the men were filling the caſks, and aſked, whether any of the chief perſons of the ſhip were there? Edward Churchman made anſwer, That the maſter, and one of the merchants were on ſhore, whom, if they pleaſed, he would bring to ſpeak with them. At their meeting, they ſaluted each other after the Portugueſe faſhion. After ſome diſcourſe, the Moors demanded who they were? And being told Engliſhmen, that they were welcome, and that all which the iſland afforded was at their command. The Engliſh returned hearty thanks, but ſoon found how little acknowledgment they deſerved. They demanded in their turn, who the others were?

It was anſwered, that one of them was the king's brother, who inſtantly ſhewed them a ſilver ring, on which were engraved the number of villages and houſes in the iſland, and ſaid he was governor of all theſe places. Then the Engliſh aſked them whether there were any Portugueſe in the iſland? They ſaid, No; for that they had baniſhed them, becauſe they would have relief by force, and would make ſlaves of the people, which not being able to endure, they had continual war with them from the time of their firſt coming thither. In the mean time, the pinnace came to them, which had been at another place of the iſland for cattle, according to appointment, but was put off, till they could find an opportunity to execute their intended treachery. Thoſe in the pinnace told the reſt, that they had heard, at the place where they had been, that 15 ſail of Dutch had taken Mozambique, and put all the Portugueſe to the ſword. At this news (which came from Zanjibar) the cavaliers ſeemed to rejoice; which was another ſubtile train to bring them into the ſnare. When night drew on, they deſired the Moors to go on board, which they then declined, but promiſed they would the next day. Accordingly, December 17, the king's brother came with the two others, having had Thomas Cave, Gabriel Brooke, and Lawrence Pigot, their ſurgeon, for pledges. They were entertained very handſomely. Next morning the commander gave the chief two goats, with a cartridge of gun-powder, and ſome other trifles to the other two. Meſſrs. Revet, Jordan, Glaſſcock, and the author went on ſhore with them for the pledges; and at their landing with three or four more, ventured up to the houſes, where they found their pledges guarded by 50 or 60 men, armed with bows and arrows, ſwords and bucklers, darts and cutlaſſes; yet they were delivered to them; after which they immediately departed, accompanied with the king's brother, moſt of the Moors following them to the pinnace's ſide; and having viewed her, returned to the reſt. The Engliſh inſtantly entered the boat; and at their invitation, the king's brother went readily with them, where he was entertained with as much kindneſs as before. Towards night the maſter offered him a knife, with ſome other trifles, which he ſcornfully refuſed, and preſently went on ſhore in their boat, which gave them ſome ſuſpicion. On the 19th the long-boat went on ſhore very early in the morning for water; and having filled the caſks they ſaw the ſhip with her ſails out, being let down to dry: but the Moors imagining they were going away, the companion to the king's brother came to the boatſwain, and aſked the queſtion. The boatſwain, as well as he could, both by ſigns and otherwiſe, let him know, it was only to dry the ſails. While they ſtood talking, they perceived the pinnace coming, being then very well armed, and left off making any farther enquiry. Had not the pinnace appeared, it was believed they then intended to have cut off their men, and taken their boat; for two of them lay concealed about the watering-place, ready to have made the onſet, if the watch-word had been given. The pinnace being come on ſhore, and the men ſtanding upon their guard upon the ſands, the maſter ſent Nicholas White to tell thoſe of the iſland, that their merchants were landed. White paſſing by one of their houſes, perceived it to be full of people, and amongſt the reſt ſix Portugueſe. Preſently after, the companion of the king's brother came, and told Mr. Revet, that the merchants of the iſland were weary, and therefore deſired the Engliſh to go up to them, to ſee the cattle.——White only ſaw one bullock. But Mr. Revet deſired to be excuſed, and preſſed him to ſend down the bullock, ſaying, there were goods enough in the boat to pay for it. With this anſwer he was ſent away. The king's brother being then on the ſands, commanded a negro to gather cocoa-nuts to be ſent to the commander, and made choice of Edward Churchman to fetch them; whom they never ſaw nor heard of after. When they found none of the Engliſh would land, but ſtood upon their guard, they gave the watch-word; and ſounding a horn, preſently ſet upon their men at the watering-place, and killed John Harrington, the boatſwain's man, and much wounded Robert Buckler, whom they would have killed, but that being fired on by the ſhip, they retired. Buckler, though weak and faint, at length got up to the reſt, likewiſe two or three more of the men, by creeping and lying cloſe in the ditch, till they ſaw the boat, got alſo ſafe on board. The 20th in the morning, going on ſhore, with the pinnace and long-boat, very well armed, to fetch in their david, (which is a piece of wood or timber wherewith they haul up the anchor) a little beyond it, found Harrington's body naked, which they buried in a neighbouring iſland. At their coming to this iſland ſome of the natives made ſigns to them to beware of their throats, which they took no notice of at that time. The ſame day being the 12th, they ſet ſail, and about twelve at night, the ſhip was on the ſhoals of Melinda, or Pemba, which they were not appriſed of, but got off again. Next morning they purſued and took three ſmall boats, ſlightly built, called Pangayas, before another ſent from land could reach them. There were above 40 perſons on board the three, ſix of the chief of whom were judged to be Portugueſe, and the reſt known to be Moors. Theſe were pale and white, much differing from the colour of the Moors. Yet being aſked if they were Moors, they replied in the affirmative, and ſhewed their backs all written with characters. When the Engliſh inſiſted that they were Portugueſe, their anſwer was, That the Portugueſe were not circumciſed. As they could not ſtill be perſuaded to the contrary, ſome of the mariners ſpoke to them about the late treachery and murder of their men. This ſeeming to terrify them, they talked together in their own language, which made the Engliſh ſuſpect, they intended to make ſome deſperate attempt: for this reaſon the Engliſh looked carefully to the ſwords, which lying naked in the maſter's cabin, they alſo had their eyes upon them, they likewiſe took notice where Captain Coverte, and Mr. Glaſſcock had ſet their ſwords, ſtill expecting when the place ſhould be clear. This Captain Coverte perceiving, kept good watch; and being alone on the poop, they beckoned to him three or four times to come to them upon the ſpare deck, which he refuſed, for fear they ſhould have taken that opportunity to ſeize theſe weapons. The maſter, Philip de Grove, ſoon after coming upon the deck,

asked for their pilot, whom he took down into his cabin, and shewed his plat, which the pilot very earnestly viewed: but at his parting from the rest to go with the master, he spoke in the Moorish language, warning them (as the English thought) to be upon their guard, and make the assault as soon as he gave the watch-word. As it was supposed that the pilot had a knife about him, he was searched for it, but he nimbly conveyed it from one side to the other, and with it suddenly stabbed the master in the belly, and then cried out, which (possibly was the signal: for they immediadely began the onset on the deck, where the commander, Messrs. Glasscock, Tindal, and one or two more who happened to be there with them, had the good fortune to kill four or five of the Moors, and made such havock among the rest, that at length they had slain almost forty of them, and brought the rest in subjection; five or six of them however recovered a pangaya, by their exceeding swiftness, and escaped to shore; they swimming to windward faster than the pinnace could row after them. Glasscock, Tindal, and the master, were the only Englishmen hurt. The first had two wounds, of which one was deep in his back: Tindal having had nothing in his hand to defend himself, they aimed at his breast, but turning about, he received the stab in his arm; however they all recovered. On the 19th of January, they saw many islands, which the Portuguese called Almaisant, being nine in number. Next morning they sent their pinnace to one of them, to seek fresh water: but though they found none, they met with many land-turtles, and brought six on board. Then they sailed to another island, where they rode in twelve or thirteen fathoms water, and a tolerable good harbour, where they found refreshments.

On the 1st of February, they set sail with a fair wind till the 9th, when they passed the line: and on the 15th, betimes in the morning, came within sight of the coast of Melinda; next day, they came to an anchor, about nine in the morning in twelve fathoms water: and about two leagues from shore, they soon sent their pinnace to seek some refreshments, but they could by no means land: nor would the people of the country (being fearful) come within speech of them; therefore in the afternoon, the ship departed. On the 21st, betimes, they descried an island in the heighth of twelve degrees seventeen minutes, with four rocks or hillocks about three leagues off it. They had bore up a whole day and night to get to this island; but finding it barren and unpeopled, by sending their skiff on shore, they passed it, and the same day had sight of three islands more, about sun-set, standing in the heighth of twelve degrees twenty-nine minutes. Two were within a league asunder, and the third they found to be Socotra, which standing in twelve degrees twenty-four minutes. Here they arrived the 29th of March, 1609, and anchored in a fine bay the 30th, about ten in the morning. The islanders having on sight of them, made a fire; they sent their skiff on shore, but the people fled in great fear; having (possibly) been formerly some way injured by some who had passed that way. The men finding no likelihood of relief there, returned on board, and about five in the afternoon, the ship departed to find out the chief harbour. The next day, standing off to sea; the met with a Guzarat ship laden with cotton, calico, &c. bound for Aden. Hither they kept her company; because then it was a place of great trade. Arriving there on the 10th of April, those of the Guzarat ship who landed, told the governor, that an English ship was come to trade there. He sent his admiral to them, and the commander unadvisedly went on shore, where he and his attendants were received, four great horses waiting, and were carried before the governor with as much pomp as the town could afford. But the governor finding him to be a plain and simple man, put him in a house with a chiarus, or keeper, and many Janissaries or soldiers, to guard him; and kept him prisoner for six weeks. After this, the governor caused him to send on board for iron, tin, and cloth, to the value of 2500 dollars, promising to buy it; but when he had the goods on shore, he seized them for custom of the ship only. When he saw that he had got as much as he could, he sent the commander on board the 27th of May, and kept two of the merchants for 2000 dollars, which he said was for anchorage; but the whole company declaring against the payment, he sent the merchants up into the country, eight days journey, to a place called Sanaa, where the basha then lay. On the 28th, they were joined by the pinnace, whose master, John Lustkin, being dead; upon inquiry, the company told them, that he was knocked on the head with a mallet by Thomas Clark, with the consent of Francis Driver his mate, Andrew Evans, and Edward Hilles. These being asked upon what occasion they committed the murder, could assign no cause, except that they wanted a small quantity of Aqua Vitæ and Rosa Solis, which he was careful to preserve for the rest of the company, in case of necessity. On the 31st, a jury being called, the murderers were convicted, and Francis Driver and Thomas Clark were hanged in the pinnace. * 1609.

On the 3d of June, they weighed and sailed into the Red Sea, through the Streights of Mecca, which are about one league over, and about three in length, having eighteen fathoms water close to the island. Within the streights there lies a great shoal, some two leagues off shore, which ships must sail wide off. From thence there are about six leagues to Mecca, where is a good road and safe ground for vessels to ride in fourteen fathoms water. The port is never without shipping, it being a town of great trade, and frequented by caravans from Sanaa, Mecca, Grand Cario, and Alexandria. There is a great want of tin, iron, lead, cloth, sword blades, and all English commodities. It had a great bazar, or market, every day in the week. There is great plenty of fruit; as apricots, quinces, dates, grapes, peaches, lemons, and plantanes, which the author much wondered at, as the inhabitants told them they had no rain for seven years before, and yet there was very good corn at eighteen pence per bushel; besides plenty of cattle and fish. The town was governed by the Turks, and if an Arabian offended, he was severely punished, there being galleys for that purpose. They departed on the 18th of July, and passed the Streights, where they left two anchors; and from thence sailing to Socotra about the 5th of August, cast anchor over against the town of Siab, where the king resides. There one of the merchants went on shore, and gave him a present, desiring leave to buy water, goats, and other provisions, which he did not grant, because the women of the country were much afraid: but told him, if the English would go to a road five leagues off, they should have any thing the country afforded. Accordingly they went, and there bought goats, water, dragon's blood, Socotrine aloes, and other commodities

On the 18th, they set sail from Siab, with an anchor and a half, for Cambaya; and on the 28th, came to Moa, where one of the natives told them, that for twenty dollars, they might have a pilot to bring them to the bar of Surat; but this was refused. On the 29th, they set forward, thinking to hit the channel leading to the bar, but they came out of ten fathoms, first into seven, then afterwards into six and a half; then tacked about westward, and came into fifteen fathoms, the next tack brought them into five. Then some of the company asked, Whither the master would go? he answered, Let her go over the heighth and presently the ship struck: Captain Coverte immediatly went up and told him of it. Upon which turning about, he asked, Who durst say she struck? he

* The author observes that Edward Hilles was eaten by canibals at Madagascar, and the other died rotting where he lay.

1600 He had ſcarcely ſpoken, when ſhe ſtruck again, and with ſuch force, that the rudder broke off, which was loſt. Then they came to an anchor, and rode there two days; after which their ſkiff ſplit in pieces, ſo that they had only their long-boat to help themſelves with. However, they made ſuch ſhift, that they got the pieces of the former into the ſhip, and the carpenter fitting her up as well as he could, brought 16 men on ſhore. About ſix in the evening, on the 2d of September, the ſhip ſtruck, and began to founder: ſhe had preſently 26 inches water in the well. Then they plied the pump from ſeven to eleven, after which the water increaſed ſo faſt, that being no longer able to continue on board, they took to their boats. They left the ſhip without taking either meat or drink with them.* Between twelve and one in the morning they put off for the ſhore, which was at leaſt 20 leagues to the eaſtward. They ſailed all that night, and the next day without any ſuſtenance at all, till five or ſix in the evening, when they made a little iſland over the bar.

Our author ſays, "But juſt then a ſquall of wind taking them, broke the midſhip-thought of their long-boat, wherein were 55 perſons; yet they recovered their maſt, and the guſt ceaſing, went over the bar, and got into the river of Gandevee."

* The country people ſeeing ſo many men in two boats, they beat their drums, and ran to their arms, taking them for Portugueſe coming to attack ſome of their towns. This the Engliſh perceiving, and having, by chance, a Guzarat on board, they ſent him on ſhore to undeceive the inhabitants. As ſoon as they knew who they were, they directed them to the city of Gandeve, where a great man was governor, who, at their coming thither, ſeemed to be ſorry for their misfortunes, and gave them a very kind reception."—

Jones's Relation. Here Captain Coverte ends his account, we have extracted from the relation of Thomas Jones, beginning where the other ends his relation.—Being at Gandeve, they heard that their pinnace came into the ſame river before them, and was carried away by the Portugueſe, but that all the men had forſaken her, and were gone to Surat by land. The governor of this town was a Bannian.—The 7th they left Gandeve, to travel for Surat, about 40 miles diſtant, and the 19th came thither, where they were met by William Finch, who kept the factory; but Captain Hawkins, was gone to Agra, about 30 days journey diſtant, where the king reſided. The commander, and part of the reſt, having ſtaid till the end of September at Surat, then ſet out likewiſe for Agra, in order to return home by land, through Perſia: but the author not liking that courſe, ſtaid behind. While he debated with himſelf what method to take, he became acquainted with a Portugueſe Padre, of the order of St. Paul, juſt come from Cambaya, who propoſed to get him conveyed to England, or at leaſt to Portugal, which he punctually performed. Jones, Richard Mellis, John Elmor, and Robert Fox, departed from Surat the 7th of October, along with the Padre, and came to the ſtrong town and fortreſs of Daman, where once again, they ſaw the pinnace, called the Good Hope. From Daman they went to Chaul, and from thence to Goa, where they arrived the 18th of November. The 9thof January they embarked on board a carack, called Our Lady of Pity, being the admiral of a fleet of four ſail, upon the coaſt of India, and the 21ſt of March fell in with the land, in 33 deg. and an half, about five leagues to the eaſt of Cape Des Aguillas. Here they lay with contrary winds, till the 2d of Arpil, and then were encountered with a great ſtorm, at weſt ſouth-weſt, which blew ſo furiouſly, that they were forced to bear up ſix hours before the ſea, after which it ceaſed. The 4th of April they fell in with the land again, in 34 degrees, 40 minutes, and then lay driving backwards and forforwards with contrary winds in ſight of ſhore; ſo that they were twice within three or four leagues of the Cape of Good Hope, yet could not get about it till the 19th day of April, and then they doubled it, to their great comfort; for they were in great deſpair before, fearing they ſhould be forced to winter at Mozambique, which is a common thing among the Portugueſe. The 27th they paſſed the tropic of Capricorn, and the 9th of May they came to anchor at the iſland of St. Helena, which iſland ſtands in 15 degrees ſouth. Here they ſtaid till the 15th, watering, and then departing, paſſed the Line on the 2d of June. The 26th they were under the tropic of Cancer, with the wind at north-eaſt, which the Portugueſe call the General Wind; and the 16th of July ſuppoſed they paſſed by the weſterly iſlands (or Azores) the pilot not having ſeen any land ſince they left St. Helena. At length, they made the land of Portugal, being not above two leagues off the Rock of Liſbon, and the ſame day came to anchor in the road of Caſcaes. That day Jones went on ſhore in a boat, and ſo eſcaped the hands of the Portugueſe. He ſtaid in Liſbon ſecretly till the 13th, and then embarked in a ſhip bound for London, one Steed, maſter, which immediately ſetting ſail from the Bay of Wayers, they eſcaped; for the Portugueſe having had notice of their departure, ſent out a boat well manned, with a deſign to have taken the ſhip, and ſo carry them on ſhore: they got ſafe home the 17th of September, 1610, after an abſence of two years and ſix months from their native country.—

Arthor's account. In the mean time the Union, after being ſeparated from the Aſcenſion, in doubling the Cape of Good Hope, ſprang her main-maſt, and in the midſt of the ſtorm they were forced to fiſh it again. By this accident it ſeems they loſt the company of the admiral, and being at length out of hopes of meeting with either the ſhip or pinnace thereabouts, conſidering that the ſtorm continued, they ſhaped their courſe for the bay of St. Auguſtine, in Madagaſcar, in hopes of finding them there. In this, however, they were diſappointed. Therefore, after 20 days ſtay, in which time they refreſhed themſelves well, they ſet ſail for Zanjibar, in expectation of meeting their commander at that place. As ſoon as they arrived, they went on ſhore, and were kindly entertained; but at their next landing, ſeveral men broke out of ambuſh upon them, and killed the purſer, Richard Kenu, and one mariner, and took Richard Wickham, one of the merchants, priſoner: by great chance, however, the reſt got off the boat, and got on board. They put to ſea in the month of February, with the wind at north-eaſt and northerly, which was directly againſt them, as they deſigned to go for Socotra. Now having ſpent much time at ſea, without making any way, (and moſt of the men troubled very much with the ſcurvy) the captain went for the north part of St. Lawrence. His intentions was to put into the bay of Antongille, but they fell in with the weſt ſide of the iſland, where they entered an exceeding large bay, called by the natives Conquamorra, found the adjacent country fruitful and pleaſant. Here they propoſed to recover their men, and ſpend the unprofitable monſoon. They ſoon grew acquainted with the inhabitants, who at firſt appeared very friendly, and made them very kind profeſſions: on this the merchants often went on ſhore, and viſited the king, who was no leſs complaiſant. At length, Captain Rowles, accompanied with Mr. Richard, Reve, chief merchant, Jeffery Carlel, and three others, thought fit to go to the palace. Samuel Bradſhaw had often been

* About 10,000l pounds of merchandiſe lying between the main-maſt and the ſteerage, the commander bid the company take what they would. The author thinks they took among them 3000l. ſome having one hundred, ſome fifty, others forty pounds, ſome more, and ſome leſs.

† The people of this ſect are Pythogoreans, and honour the cow; they alſo obſerve the ancient cuſtom of burning the dead.

employed about buſineſs to the king: but at this time the captain having ſome other occaſion for him, he ſtaid on board, which proved happy for him; for as ſoon as they landed, they were betrayed to the inhabitants. By good fortune, the boats eſcaped: but they had ſcarcely got on board, when they ſaw a fleet of praws and large boats coming out of the river, rowing towards the ſhip. They made a very bold attack, coming up in the face of the ordnance, ſo that the Engliſh believed they would have taken them. The fight continued at leaſt two hours very deſperately; but the cannon being diligently plied by the gunner and his mates: at length half a dozen of their boats ſunk, which obliged the reſt to retire with ſpeed. They ſtaid in the bay 14 days after this, in hopes to recover their men again; but inſtead of that they loſt ſeven more, through a ſudden diſeaſe which happened to thoſe who worked ſo hard at the guns in the time of the action, and within two days they were all thrown over board. Theſe misfortunes coming together, they reſolved to make haſte away, and water ſomewhere elſe; but before they could depart, the enemy made another attempt, with ſtill greater numbers of boats, many of them very large, and crowded with men to a ſurpriſing degree. However, they liked the firſt entertainment ſo ill, that not caring to come near them a ſecond time, they returned on ſhore. The Engliſh perceiving their malice, and fearing ſome miſchief in the night, ſtood in for ſhore (where the Moors were) and gave them a whole broadſide for a farewel, the bullets entering among the thickeſt of them, and made ſuch lanes that they ſoon forſook their places, and got out of ſight as faſt as they could. They now put to ſea, and directed their courſe for Socotra; but for want of hulling-in betimes, the wind took them ſhort, ſo that they could not fetch it, but fell more to the eaſt, upon the coaſt of Arabia. This was about the fourth of June, and the winter monſoon being come, they durſt not attempt to go for Cambaya; neither could they find any good place in that road to harbour in, during the winter. Therefore, after hovering in ſight of the coaſt four days, not without danger of running on ſhore, they reſolved on ſome courſe for making their voyage. Upon this Griffin Maurice, the maſter, conſulting with the principal and moſt experienced men in the ſhip, they ſoon concluded to go for Achin, in hopes there to meet with ſome Guzarats, to barter their Engliſh commodities with. Therefore directing their courſe for that place, they arrived there the the 27th of July, and in ſeven days after had admittance to the king, to whom they gave a preſent. 1609
When Mr. Bradſhaw had been at court, and dealt a little with the merchants of Achin, he fell to trade with the Guzarats, giving them Engliſh cloth and lead in exchange for baſta's, black and white; which is the cloth they ſell in thoſe parts. After they had been here ſome ſmall time, they ſailed for Priaman, where they had a quick trade, which made ſome amends for the croſſes they met with before. They ſtaid and took in pepper, and at length laded their ſhip, which might have been done long before, if they had not been in diſputing among the company; for the ſailors would do as they pleaſed themſelves: but Mr. Bradſhaw uſed them with ſuch fair words, that at length they got what they came for. Here the maſter died. All buſineſs being ended, Mr. Bradſhaw ſent one Humphry Biddulph and Silveſter Smith, to Bantam, in a Chineſe junk, with ſome remainder of goods, which they could not ſell at Priaman nor Teku; and ſoon after Mr. Bradſhaw ſet ſail for England, in the Union, in the month of February.

By two letters, the one written by Bernard Cooper to his brother Hide, a merchant in London, (including one received from Bagget an Iriſhman) and the other by William Wilton, who appears to have been the maſter of a veſſel; it appears that the Union arrived in a miſerable condition off the coaſt of France, where the people of Odmen ſent off two boats to her. The crews found that ſhe was richly laden with pepper, and other India goods, but had only four men on board, (one of whom was an Indian) and three dead. The ſurvivors were ſcarcely able to ſpeak, but the boats brought the veſſel into the road of Odmen, from whence the advice was ſent to Marlaiſe, and forwarded by Hide to England. The letter-writer reſolved to viſit the ſhip in perſon with one George Robbins, but complained much of taking a journey at that time, and deſired a ſupply of money. However, he went as the other letter of Mr. Wilton relates: and it appears that there were ſaved from the plunder of the natives of Bretagne, about 200 tons of pepper, ſome benjamin, and ſome Chineſe ſilks, which they bought at Teku, in Sumatra, out of a ſhip of China; and on their return had met with Sir Henry Middleton, to whom they delivered ſome cheſts of ſilver.*

After the pepper and other goods were unloaded and dried, the veſſel being examined was found unfit for ſervice, therefore the guns, anchors, &c. were taken out, and the ſurvivors thus put an end to their unfortunate voyage.

THE VOYAGE OF CAPTAIN DAVID MIDDLETON, TO JAVA AND BANDA.

ON the 24th of April, 1609, Captain Middleton ſet ſail from the Tower, in the expedition, of London, and got ſight of Forteventura on the 13th of May. By the 10th of Auguſt, he had reached Saldanna, (or Saldania) and as ſoon as he had watered, immediately ſailed for Bantam.

Arriving there on the 7th of December, the captain was as expeditious as poſſible in getting the iron he had with him on ſhore. He then left Mr. Henſworth in the factory, and in the evening ſet ſail for the Moluccas.

He came before the town of Boton on the 8th of January; but hearing that the king was gone to war, and that there were but few people in the place, he would not anchor, but the ſame day went through the ſtreights. On the 9th, however they fell in with the Boton fleet. The king came on board them, and many civilities paſſed between them; but the prince informed him that a loſs by fire had diſabled him from furniſhing the Engliſh with ſpices, a vaſt quantity of which in ſtore were deſtroyed by that accident.

He took his leave in ſorrow, and the captain ſteered for the iſland of Bangaya. There he found that the people were fled for fear of ſome enemies; but who thoſe enemies were, he could not learn with certainty; for he ſuppoſed they retired from the Dutch, but a Dutchman told him they were in fear of the king of Macaſſar. The man who told him this, lived in great

* It is mentioned that ten Engliſhmen and four natives of Guzarat were taken out of the ſhip by a boat of Briſtol, and a Scotch veſſel.

1610 ſtate had a great number of women, and received the duties of the king of Ternate. He was a pleaſant companion and ſeemed to affect the manners of the natives and would not be commanded by any other Dutchman. The Engliſh met with good refreſhment here, and were in better health than when they departed from England.

Having ſheathed the long-boat to preſerve its bottom from worms, they ſet ſail on the 9th of January; but contrary winds occaſioned them to alter their intended courſe for the Moluccas, and ſtand for Banda.

They had ſight of theſe iſlands on the 5th of February, and uſed all their endeavours to reach them before night. Coming near, the Captain ſent his ſkiff to get intelligence of ſome of the natives, who ſent him word, that the Dutch would not ſuffer any ſhip to enter the road: that they would take all he brought (if ſuch things as they ſtood in need of) and make payment at their own pleaſure. That if any junk came with commodities ſaleable in the country, they were not permitted to ſpeak to the people; but were carried to the back-ſide of the caſtle, within muſquet ſhot, ſo that not a man could ſet his foot on ſhore, but a bullet was ſent after him; and that they had fifteen great junks which were detained in that manner: yet he ſtood into the road with a flag and enſign, and at each yard-arm a pendant, making a very good figure. The governor of the caſtle thinking it had been a Dutch ſhip, ſent out a pinnace of thirty tons towards the Expedition, but coming near, ſtood into the road before her; ſo that after they had hailed the captain, he could have no farther ſpeech with him. As ſoon as he was athwart of Lantor, he ſaluted the town, and anchored within ſhot of their ſhips. Soon after there came a Dutch boat on board from the governor, requiring Middleton to enter the road, and then to land, and ſhew him his commiſſion. The captain anſwered, that he was but newly come, and would neither ſhew his commiſſion, nor impart his buſineſs to the governor or any man. They farther aſked, Whether he was a merchant, or a man of war? He replied, that he would pay for what he took. Then they threatened him; but he told them that he would ride there, let them do their worſt, and hoped he could defend himſelf, and they returned in a great rage to the caſtle. The Dutch were no ſooner gone, than a crowd of people of Lantor, came on board, and bade him welcome. From them he underſtood the whole affairs of the country, which would have been willing to deal with him, if he could have procured leave of the Dutch, for they were then friends: but Puloway and Pulotronu, were at war with them. The captain knowing that there was good fiſhing in troubled water, took the opportunity to talk privately with a native of Puloway, who happened to be among them: this perſon he engaged for a little money, to acquaint thoſe of the iſland, that he would give them either ſilver or commodities for all their ſpice: that the Dutch and he were likely to be enemies; and that they need not fear but that he would get their ſpice on board. In the mean time there came the ſame boat from the caſtle, and another from the vice-admiral, with peremptory orders from the governor to Captain Middleton to come in. After keeping them to dinner, he told them that he would ride there, and run the danger of the road: that he knew both nations were friends in Europe, and that for them to be enemies there among ſtrangers would be ſcandalous. But they told him plainly, that he muſt not ride there: and if he perſiſted, they would fetch him in by force. His anſwer was, that he would ride there till he found the inconvenience of the road, (for they ſaid it was foul ground) and then come into the beſt part of the harbour: adding, that neither of their princes gave authority to their ſubjects to hinder the other from riding or going, at their own peril. The Dutch replied, that the country was theirs; "Then may I (ſaid Middleton) the more boldly ride here, for we are friends." So they departed in diſpleaſure. The ſame evening, he was about to land guns upon the ſide of a hill, where he rode, and began to fit the ſhip to fight with any that ſhould moleſt him. He alſo ſent out ſome to ſearch the bottom; which indeed proved to be nothing but rocks. ſo that there was no poſſibility of riding there with ſafety. Therefore the captain gave over his deſign of landing guns; and next morning ſent his ſkiff with Mr. Spalding, and the principal perſons of the ſhip with a letter to the governor: ordering them to ſay nothing more than he had written, and make no ſtay, but bring an anſwer preſently: for they rode very badly. The copy of the letter is as follows.

"May it pleaſe your Worſhip,

"With patience to conſider, that whereas you have many enemies, (and few friends in this place) I being a chriſtian, if your worſhip ſtand in need of any thing that I have, I pray you make bold to demand it, and I will be as ready to perform it to my power; for whereas there is amity between our princes at home, I ſhould be unwilling, that we their ſubjects, ſhould be at enmity here. Farther, foraſmuch as you command me to come under the command of the caſtle, I hope I have the privilege that both princes allow their ſubjects to come and go at their own pleaſures, and ſtand to the danger of the road at their own peril. And whereas you demanded to ſee my commiſſion; I am a gentleman, and willing to ſhew it upon equal terms; for if you will meet me ſecurely, as I would do you, appoint your meeting upon the water, in our boats, equally manned; or in any convenient place, where I may be as near my force as you are to yours. And whereas it is reported that a contract is to be made with the inhabitants of Lantor and your worſhip, my deſire is, that you would uſe me as an Indian for my money. Then ſhould I think myſelf much beholden to your worſhip, and am more willing to deal with you, than with them. Furthermore, foraſmuch as you be at enmity with the iſlands of Puloway and Pulorin, my deſire is to be reſolved, whether I may have their ſpice without your hinderance. Thus deſiring your anſwer to theſe particulars, and the ſame to be returned by the bearers, I bid you farewel. From on board my ſhip, this 7th day of February, 1610.

Your's, in friendſhip,
DAVID MIDDLETON."

The Engliſh coming to the caſtle, were brought to the governor, who was ſitting in council, and delivered the letter, which was read openly: but they would ſend him no anſwer but by word of mouth. They had in the road three great ſhips, of 1000 tons, and three pinnaces of thirty tons each; one of the ſhips, called the Great Sun, being unfit for ſervice, they determined that they ſhould clap the Expedition on board, and there be ſet on fire: for this purpoſe, they had ſworn ſeveral perſons to make her faſt with chains, and had put into her thirty barrels of powder to blow her up. She was to be manned out of the caſtle, attended with all the ſhips and boats to receive the men when ſhe ſhould take fire. The Great Horn was to go and ride within muſquet-ſhot of the Engliſh, and batter them while the frigates plied round to keep them employed on all ſides. Thoſe who landed, perceiving the ſpeed they made to warp out the Great Sun, came away as faſt as they could, to acquaint Captain Middleton with what was going forward. Upon which he thought fit to go and ſpeak with the governor himſelf, before he came to a rupture: ſo taking his commiſſion, he went to the caſtle, and was met at landing by the governor, and all the principal men, both of the caſtle and ſhips, and conducted through a guard of ſmall ſhot of 300 ſoldiers, who ſaluted him with three volleys, and the caſtle with ſeven guns. At length

length he came to the governor's houſe, where he ſhewed the firſt line of his commiſſion, but no more, and little of conſequence was done at this meeting. He afterwards offered 1000 pounds to procure a loading, but ſucceeded no better. Having ſet this matter on foot, he told the governor, now they were ſatisfied that he was no man of war, he would bring in his ſhip. He replied with the reſt, that they were ready to oblige him as much as lay in his power. It drawing late, he took his leave, and at his going into the boat, the governor ordered all the guns in the caſtle to be fired. As he paſſed by the ſhips and frigates, they fired guns till he got on board.

Next day being the 8th of February, he brought the ſhip into the road, and rode between their ſhips and the caſtle, ſaluting with his guns; and was anſwered from the caſtle and ſhips. As ſoon as they came to anchor, the governor, with all the chiefs of the caſtle and ſhips, came on board, and accepted of a dinner, ſuch as they could provide. Afterwards he talked about the lading, but could neither by argument, nor the offer of gifts, obtain leave to buy a ſingle pound of ſpice; the governor telling him plainly, that to grant ſuch a liberty, was as much as his life was worth. The captain finding there was no good to be done, determined to take in water, and try his fortune; but they would not ſuffer his boat to go on ſhore for water, without a man of theirs, to ſee that they had no conference with the natives. After he had got in water, he ſent Mr. Spalding to acquaint the governor that he would be gone; who much wondered whither the captain intended to go, the winds being weſterly. Having warped till he got ſea-room, he ſet ſail, the governor ſending three pinnaces to go out with him, one of which ſent her boat on board, to command him in the governor's name, not to go near any of theſe iſlands. Captain Middleton ſent him word, he would not be at his command, for he was going to Puloway as faſt as he could; bidding him ſend his ſhips to force him away, for that he would quickly drive the frigates farther off. The boat returned on board one of the frigates; and the captain cauſed the men to prepare to fight with the Dutch ſhips that were already fitted with their ſails brought to the yard for that purpoſe. He then called all his company to know their minds, and told them that if they would ſtand by him, he intended to make his voyage at thoſe iſlands in ſpite of the Dutch: promiſing to give amongſt them what things belonged to him in the ſhip; and a maintainance during life, to every man who ſhould happen to be maimed. They unanimouſly declared they were willing to ſtand the teſt: but the pinnace ſeeing them bring up their ſmall ſhot, thought it would not be ſafe for themſelves to guard him any longer, and therefore bore up for the harbour. While they were warping out, the admiral and lieutenant-governor of the caſtle, had been twice on board the pinnaces: but what they did there, was unknown to the Engliſh. The winds being weſterly, and a ſtrong current ſetting to the eaſt-north-eaſt, they drove a great pace: and the captain ſent Mr. Spalding in the boat with money, beſides the purſer's mate, and five more, to aſſure the people of Puloway, that they had parted enemies with the Dutch, and that they were ſent to know, whether they would ſell him their ſpice; that he would pay him money for it, and that as ſoon as ſome place was found for the ſhip to ride in, he would come himſelf either in a ſhip, or a pinnace that he had on board ready to ſet up. While his boat was abſent, there came two praws from Lantor, to know why he went away. The captain told them that the current had ſet the ſhip off. That he would willingly have gone to Puloway, if the current had not hindered him, and had ſent a factor there to buy ſpice. They ſaid, they were glad that he had not left them altogether. Then he deſired them to tell the inhabitants of Lantor, that he would give them money or commodities for all the ſpice they had, if they would ſell it him, rather than the Dutch, who came to take their country from them. One of them ſaid, that he would go to the iſland and ſee the captain's people, and then would ſpeak to thoſe of Lantor. 1608

At Mr. Spalding's going on ſhore, the country people flocked about, and welcomed him, but would make no bargain about the price, till Captain Middleton came himſelf. However, they offered to deliver ſpice upon account in the mean time. Upon this he ordered Spalding to hire him a pilot (if he could) to harbour his ſhip near at hand. Accordingly, he ſpoke to the inhabitants for one, and they hired him two, to whom they gave twenty rials, and the captain as much. The pilots coming on board the ſame night, he bore up for Seran, and came to a place called Gelagula, a tolerable good road, about 30 leagues from Banda. As ſoon as poſſible they took a houſe, and brought their pinnace on ſhore to ſet up, which they never could find time to do before; becauſe the ſeaſon of the year ſlipped ſo faſt away, and the monſoon was at an end. After labouring all that night to get her diſpatched, he named her the Hopewell. The 27th of March, they ſailed for Puloway, and arrived there the 31ſt, in the night, but could not lade any ſpice till they had agreed with the natives.

After the price was fixed, they loaded the Hopewell with mace, and ſent her away; but being too ſmall for the purpoſe, containing only nine tons, the captain was forced to hire a great praw, which was loaded with nutmegs, and ſent to the ſhip, where ſhe was built higher, to make her 24 tons, and twelve of the ableſt ſailors put on board. She made but one voyage, and then they heard no news of her for three months. The Hopewell in two voyages bringing no account of her, they took it for granted that ſhe had ſunk in the ſtorm, which aroſe in the return with the Hopewell, on board of which the captain was. He was much grieved to ſee the ſeaſon paſs away, without being able to get his lading over to the ſhip, nor durſt he bring the ſhip over to the iſland, as there was no riding for her. Thus all hope being at an end for ſix months, he made inquiry for other veſſels; and hearing of an old junk that belonged to Lantor, and lay near the Dutch ſhips, he went and bought her, and got ſuch help as he could to trim her. The loſs of his twelve men occaſioned great difficulties and delays, for moſt of the reſt were diſabled with ſore legs. Thus he knew not what to do, the iſland being in every reſpect in danger of being taken by the Dutch, who alſo meant to aſſaſſinate him, offering large ſums of money to rogues, to effect it, either by poiſon or otherwiſe; but he had ſome friends upon the iſland, who gave him private notice, and warned him to beware of ſuch men-ſlaves, for that they came to do him a miſchief. Upon this, he was obliged to get all the iſlands to draw to an head, to fit out their caracals to keep the Dutch pinnaces from coming on board. After this they kept their diſtance, and the iſlanders landing ſecretly upon Nera, cut off ſeveral of the Dutch, inſomuch that they durſt not ſtir out of the caſtle, except when there were a great number of them together well armed. Theſe iſlanders built a fort upon the ſide of a hill, from whence they ſhot into the caſtle, which galled the Dutch very much, and effectually hindered the pinnaces from coming out to cut them off, as often as they attempted it.

Captain Middleton was obliged to get away the junk unrigged, which he had bought at Lantor; for the Dutch ſeeing men at work upon her, ſent one of their ſhips to batter her to pieces, when ſhe would be in order; ſo that the night ſhe weighed, ſhe wanted much help to launch her, and was carried away upon rollers. They did this in the dark, and getting her out of ſight by day, brought her to Puloway, where, being nothing but the bare hull, they were forced to buy ſails, and every thing elſe for her. The captain ſent alſo to the ſhip, by the Hopewell, to fetch ſome rigging, and Mr. John Davis to carry her over, fitting her, as well as he could,

could, with the aid of ſome carpenters of the country. Three weeks being paſt, without hearing of the pinnace, he began to fear ſome misfortune had befallen her, and what was worſe, he knew he might wait long enough before they on board the ſhip could hire any veſſel to ſend to him, the Dutch having ſeized all that they had taken carrying victuals to the Bandaneſe. Therefore it was pretty fair weather, and the ſkiff was then at Puloway. Captain Middleton determined to go over himſelf, and make ſome ſhift, rather than let the time paſs without doing any thing: for he could not hire men to carry the junk, if he could have loaded her with ſilver. He hired three blacks, not having a man of his own that could ſtand on his legs, and with them put to ſea.——Being out of ſight of land, there aroſe ſuch a ſtorm, that they were forced to ſpoon before the ſea; yet they got ſight of Seran, but coming near the ſhore, the ſea broke ſo violently, that they loſt all hope of getting ſafe to land. Night approaching, they ſtrove all they could to keep the veſſel above water till morning; but the ſtorm increaſing, they found themſelves compelled to hazard all to put into the breach over a ledge of rocks. In this, however, they ſucceeded; yet no man durſt forſake the boat, for fear of being beaten to pieces againſt the rocks.

The next day, they got her on ſhore, and emptied her, being full of water, and every thing they had in her waſhed over-board. The blacks now came and told them, that they muſt put to ſea directly, if they meant to ſave their lives. The captain aſking one of them the reaſon: he ſaid, it was the cannibals country; who, if they got ſight of them, would kill and eat them: That they never ranſomed any men they took; and that if they were chriſtians, they roaſted them alive, for the wrongs the Portugueſe had done them. On this they put off and ſoon got a-head a good pace, and by day were clear of their watches. As they proceeded, keeping cloſe along ſhore, they ſaw the hulk of a bark; and rowing near it, found it to be the Diligence, with two Engliſhmen in her; they told him, that having come to an anchor there, in the late ſtorm, the cable broke, and ſhe drove on ſhore; and that Mr. Herniman was gone to the town, to get men to haul her up. On this, the captain himſelf landed, to get the governor to bring ſome help to ſave her; the land being crowded with people, who came on purpoſe to have pillaged her, he ordered his men to fire now and then, which kept them from coming near. When the captain came to the town, Mr. Herniman was gone by land to the ſhip, which was 12 miles off. Having aſked the governor for aſſiſtance, he ſaid, he would raiſe the country in two or three days: captain Middleton told him, that if it blew, ſhe would be loſt within an hour. One belonging to Puloway, who knew the bark, and was earneſt with the governor to ſave her, being there, plainly told the captain that the chief wanted to have her bulged, that he might get the planks to build him a praw.—Finding there was no help to be expected, but what came from the ſhip, he hired guides to follow Mr. Herniman, and took one of his own men for company. Half way, they came to a great water, which they were to croſs. As his man could not ſwim, the captain ſent his cloaths back, all but a ſcarlet coat, which the blacks were to carry over. They told him the river was full of alligators, and that if he ſaw any, he muſt fight with them, as they would kill him: and, for that purpoſe, the black carried a knife in his mouth. Middleton being weary not having ſlept for two nights, took the water before the Indians, knowing they would be over before him. The river being broad, and the current made by the great rains that had fallen very ſwift, the Indians would have had him turn back, but as he was more than half-way, he was very unwilling. He who carried the coat having a great cane, ſtruck the captain on the ſide: who, ſuſpecting it had been an alligator, dived under water; where the curernt got ſuch hold of him, that before he could riſe again, he was carried into the ſea, and thrown by the waves againſt the beach. He was waſhed backward and forward ſeveral times, till the Indian came, and giving him hold of the end of the cane, pulled him out, within a little of being drowned, having his back and and ſhoulder much bruiſed. After he had reſted himſelf for ſome time, he got on board, to the ſurpriſe of his company: and that night, ſent all that were able, to ſave the bark; which they did, with much fatigue. As for the people of the country, not a man was ſuffered to lend a hand; expecting the Engliſh would forſake her, and that ſhe would be all their own.

The Hopewell arrived the next day with her lading of ſpice. She had been driven to the eaſtward of Banda 30 leagues, in a moſt violent ſtorm; which continued long, and cauſed them to have a tedious paſſage to get to windward. The captain went from Puloway in the boat, and landed preſently; and Mr. Davis was lading as faſt as he could with a lame crew, the ſound being all employed about the Diligence. They preſently unloaded the Hopewell; and that night, captain Middleton ſet ſail in her, to ſee if he could get to Puloway, before Mr. Davis came away: for, as they told him the junk was very leaky, he was willing that the Hopewell ſhould bear her company, for ſhe had not a nail in her; and becauſe ſmiths of the country could not make nails, they having had none of their own, ordered him they employed, to make iron pins, which they diſpoſed of in moſt needful places. The captain of the Hopewell ſtriving to reach Puloway, was turned aſide by the ſtream, in a great ſtorm; for the ſtronger the wind, the ſtronger the current. Being forced to leeward they were long before they could reach the ſhip; and were obliged to ſeek the Seran ſhore, otherwiſe they had been quite blown away. The captain having in the ſeveral trips he made, ſtill fallen to the leeward of the ſhip, cauſed Mr. Davis to ſearch for ſome harbour, that for the future the veſſels that were provided, might come from Puloway directly to the ſhip: becauſe, when deep laden, they could not ſo eaſily ply to windward with their oars.—During the captains long ſtay from Puloway, and the iſlands of Banda, the natives had intelligence, that the ſhip had weighed anchor; and were perſuaded, that he was gone for fear of the Dutch, who were determined to come and ſurpriſe him. For this reaſon, the country people would not deal with the Engliſh any more, nor ſell them victuals, but began to abuſe and rail at them; ſaying, he was gone in the ſhip, and had left them on the iſland, after the example of the Dutchmen; and would, like theſe, return with a fleet, and take their country from them, and they determined to ſeize upon the houſe, and keep the men priſoners, upon a high rock. With this view, they ſent for the Shah Bander, that by joint conſent, they might take poſſeſſion of all the goods. When the Shah Bander came, Mr. Spalding went to acquaint him of the hard uſage of the iſlanders, who began to take things out of the houſe by force. The Shah Bander ſaid, they would take care that the Engliſh ſhould not do as the Dutch had done, and were determined to lay them faſt, for that the ſhip was gone, and their meaning was not good. In ſhort, all that Mr. Spalding could ſay, would not perſuade them but that he and the reſt, were left there by deſign. Next day, calling a council in the church, they reſolved to ſend the men priſoners to the rock: but news coming, while they were ſitting, that captain Middleton was in ſight in the Hopewell, they broke up their conſultation. At his landing, Mr. Spalding told him of their hard uſage to them, and the fear they were in. As the chiefs of all the iſlands ſat before their door, waiting for his coming, he aſked them the reaſon, why they dealt ſo ill with his people, in his abſence? They told him plainly, that

if he had not come as he did, they would have taken the goods, and confined the men; he then let them know the reaſon for removing the ſhip; adding, that it was no wonder the Dutch had built a caſtle to defend themſelves, when they dealt ſo with them; and had not only left men amongſt them, with commodities which the country ſtood in need of, but had alſo made the Dutch, who were their enemies; and endeavoured by all the means he could contrive, to do the iſlands good, as they very well knew. To this they anſwered, that he ought not blame them for being jealous of chriſtians, ſince both the Portugueſe and Dutch, for many years, had done as he had done, that in the end, they found their deſign was to take their country from them. However, at length they apologiſed for what had happened, and became good friends again, and the trade for ſpice went on briſkly.——Captain Middleton, after lading his ſhip, having ſome ſtock left, thought he could not do better, than to lay it out in the ſame commodities. Accordingly, he laded 30 tons more in the junk, and bought another of 40 tons (on the ſtocks) with ſpice to lade her: leaving Mr. Spalding to come in her, and Mr. Chapman for maſter, with ten others. After this captain Middleton went and took his leave of all the country, in a moſt obliging manner; and beſtowed ſeveral gifts for a farewel, intreating them to help Mr. Spalding, if he ſhould ſtand in need of their aſſiſtance; for that in his abſence he muſt rely on them. This they promiſed to do; adding many expreſſions of kindneſs. He was forced to convey over the Hopewell himſelf, and ſet ſail the twenty-ſeventh of September from Puloway, with the junk, having ſtaid a conſiderable time longer in the country than any Engliſhman ever did before. He arrived at the ſhip on the 10th; and after he was wholly laden, they ſet ſail from Keiling Bay the ſame day, without topſails, which had been blown from the yard, (where they had been ever ſince the ſhip came into the country, for fear of the Dutch, or other treachery) in her paſſage from the place where ſhe rode before, ſeven leagues to the eaſtward; Mr. Davis having removed her by the captain's directions. Holding on his courſe on the 19th of October, he arrived at Bantam road; here he found that Mr. Henſworth, and Edward Neetles, both died, ſoon after he left them; ſo that all the goods remained, and not a yard of cloth having been diſpoſed of to the Chineſe. Moſt of the company being ſtill troubled with ſore legs, and many ſickly, he left the unſound on board, under the care of the ſurgeon, and manned the junks with thoſe who were in perfect health. There came in a ſmall ſhip, which after having been at China, Japan, Ternate, Macian, Coromandel, Patane and Jor, went to Amboyna and Banda, to ſeek for lading; but not getting any, was forced to repair to this port, to lade with pepper. This ſhip, when at Banda, ſailing near Puloway, fired her great guns at once, one of whoſe ſhot paſſed through an Indian's houſe, and two ſuckles of mace in the Engliſh houſe, ſtruck the purſer's mate upon the ſhin, and entering a cheſt of fine pintadoes, ſpoiled many of them: it did not break the mate's leg, but the man was lame for ſix months.

Captain Middleton contrived matters ſo well at Banda, as to ſecure his own lading firſt; but although the Dutch had two great ſhips half laden before his arrival, they could not get one ſingle pound of ſpice afterwards. At the ſame time they were ſtark mad to ſee the Engliſh paſs by them daily with that commodity: therefore they determined with their ſhips, to take the iſland, and ſeize the ſpice, which they knew the captain had bought, at ſuch a time as they might eaſily have done it. But, their deſign miſcarried; for it proved calm when they were out of the harbour, they could not get in again, and it being at the time of ſpring tide, the ebb ſet the ſhip to the ſouthward of the iſland; and the pinnaces were obliged to follow the ſhips, for fear the caricals ſhould have taken them. After labouring with all their power for two days, to come back, they were forced to proceed for Bantam, to lade pepper. Having been long becalmed by the way, they ſaw a ſhip right to leeward, which they thought, could be none elſe but Captain Middleton: therefore it was agreed in council, to take him and all his ſpice; but what they deſigned to have done with the ſhip and company, he could not learn. It proved to be the Province of Holland, a great ſhip that was bound to Banda; and had been at the Moluccas, but could not get any ſpice; and were informed by the other two, that they came from Banda with them to lade pepper: —Thus the Engliſh eſcaped them.

Eight Dutch ſhips came to Bantam for pepper: and becauſe they were to ſtay a year for lading, they took in planks, and materials for making flankers, and ſtrengthening their caſtles at Banda, and Ternate, whither they went after Captain Middleton's arrival. His lame company being very weak, fell ſick, and his gunner, and one of his quarter-maſter's died, and three more ſoon after. Therefore the ſhip being fitted, the weſtern monſoon come, and no proſpect of the junks arrival before May, he reſolved to return. But if one of the junks had come, he would have remained in the country, and fitted her to go for Saldanna. As they did not, he thought it moſt for the company's ſervice, to leave the Indies, in order to bring home the ſhip, in caſe Davis and Clayborne ſhould die by the way. Three days before he quitted Bantam, four ſail (part of a fleet of nine ſhips) entered the road. They brought a great number of women to inhabit the places they had conquered: they were ſo very weak, that the other ſhip's company were forced to fetch them in one by one. —Captain Middleton having left a proper perſon in charge of the houſe, and orders for Mr. Spalding, (when he arrived) to undertake a voyage to Borneo, for diamonds, accordingly he departed for Bantam the 16th of November, and had a very good paſſage to the road of Saldanna, where he caſt anchor on the 21ſt of January, and took in water. He found that his brother Sir Henry Middleton, had arrived there the 24th of July, and departed the 10th of Auguſt. There he found the copy of a letter which Sir Henry had written to the company, and ſent home by a Dutch veſſel the day after he came into the road.—This is all material that is recorded of the voyage in this relation.

THE VOYAGE OF SIR HENRY MIDDLETON TO THE RED SEA, AND SURAT, IN 1610.

IN this voyage three ſhips were employed: The Trade's Increaſe, of 1000 tons, the admiral, Sir Henry Middleton commander; the Pepper-Corn, of 250 tons, vice-admiral, Nicholas Dounton, captain, and the Darling, of 90 tons: The Bark Samuel, of 180 tons burthen followed as a victualler.

On the firſt of May, 1610, the fleet anchored in the road of Cape Verde, under an iſland, where they found a Frenchman of Dieppe fitting up a ſmall pinnace. Next day the carpenters of all the ſhips went about repairing the mainmaſt of the Trade's Increaſe. Pulling off the fiſhes they found it in a very bad condition, and above the upper deck, about three foot, wrung more than half aſunder. Had they met with any foul weather, it muſt have gone by the board. The 4th, they began to unlade the Samuel, and ſent carpenters to cut down trees, having obtained leave of the Alcayde, who came on board, and dined with the commander, Sir Henry gave him a piece of Roan cloth, (bought of the Frenchman) and ſome trifles beſides.

On the 15th, having made an end of watering, and ſtowed all their boats in the night, they prepared to depart next morning. (The author ſays, Cape Verde was the beſt place he knew for outward-bound ſhips, the road being excellent and good, and fit for the diſpatch of any buſineſs, and well ſtocked with fiſh; beſides, it lay in their courſe.) Having conſulted with Captain Dounton, and the maſters, what courſe was beſt, they reſolved to hold on till they had paſſed the line, and then to ſtretch over eaſterly. Here they diſmiſſed the Samuel. They entered the road of Saldanna, on the 24th of July, and ſaluted the Dutch admiral with five guns, which he returned. There were two other Dutch ſhips in the bay, which came to make train-oil of ſeals, and had filled 300 pipes. This day he landed, and found the names of Captain Keiling, and others, in their return in January, 1609, alſo his brother David Middleton's, who came out in Auguſt, 1609, beſides a letter buried under ground, according to agreement between them in England: but it was ſo damp, that no part of it was legible. The 26th, they ſet up a tent for the ſick, and had them all on ſhore to air the ſhips. From this day, till their departure, nothing material happened. The 6th of September, before night, they came to an anchor in St. Auguſtine's Bay, where they found the Union in diſtreſs for proviſion. The 7th, the commander went on ſhore in his pinnace, to look for freſh victuals, but could get none; ſo returned with wood and water. On the 10th, coaſting the ſhore with a good gale, ſouth-eaſt, they reckoned the ſhip ſhould have ſailed at leaſt 26 leagues, yet went but 22 north, by reaſon of the current's ſetting to the ſouthward. The 12th, they ſteered between north north-eaſt, and north-by-eaſt; their true way weſterly one third of a point, latitude nineteen degrees forty-eight minutes. The current, theſe laſt four-and-twenty-hours, ſet to the northward, wind variable. The 13th, they ſteered with little wind and calms, for the moſt part north-by-eaſt, the true way north, one third part weſt, the winds as the day before. She ſailed 15 leagues more than was expected, occaſioned by the current's ſetting to the north-weſt; latitude by obſervation 19 degrees 10 minutes. The 20th at noon, latude 11 degrees, 10 minutes, the wind veering eaſterly, with calms, variation 12 degrees 40 minutes. This afternoon they ſaw the iſlands of Querimba, which are low and dangerous, being environed with rocks and ſhoals. The firſt of October they ſteered north-eaſt-by-north, 27 degrees, the wind for the moſt part ſouth-eaſt.

Holding their courſe for many days on the 17th, early in the morning, they ſaw the Duas Hermanas, ſix leagues off, north by weſt, the wind at ſouth-weſt; variation 18 degrees, 55 minutes. The 18th at night, they arrived at Socotra, and anchored in a ſandy bay, latitude 12 degrees, 25 minutes. In the evening they took with their ſeine great plenty of fiſh; wind eaſt. The 21ſt they plied for the road of Tamerin, the chief place of the iſland; but the wind being at eaſt, and eaſt by ſouth, it was the 25th before they could get thither. The latitude of Tamerin 12 degrees 30 minutes; the variation 19 degrees 18 minutes. The town ſtands at the foot of high rugged hills. The road is open between the eaſt by north, and weſt-by-north, they anchored in ten fathoms water, good ground. The 25th, the commander ſent Mr. Femel, well accompanied on ſhore, with a veſt of cloth, a piece of plate, and a ſword-blade to the king, who promiſed to ſerve them in every thing.

On the 26th, Sir Henry landing with the chief merchants, and a guard of armed men, was conducted to the king's houſe. That prince met him at his chamber door. Being entered, and ſeated by him in a chair, there paſſed many compliments, after which the commander enquired concerning the trade of the Red-ſea. The king commended it highly, ſaying, the people of Aden and Mocha were good people, and would be glad to trade with him. He added, that the Aſcenſion had diſpoſed of her goods at high rates, and came ſo light into the place, that ſhe took in a great deal of ballaſt. This account pleaſed Sir Henry, who then deſired to ſet up his pinnace; the king refuſing that liberty in this road, granted it at the place where they firſt anchored: he was apprehenſive that if they ſtaid to ſet her up in Tamerin, the merchants of other nations would be afraid to come thither. He gave free leave alſo to take in water, but ſaid he muſt pay very dear for wood, if he had any; adding, that thoſe of all other countries who came thither, paid for their water, but of him he would demand nothing. He had ſent all his aloes to his father, the king of Fartaque, in Arabia Fælix, whoſe chief city and place of reſidence was called Cuſhem. He confirmed the loſs of the Aſcenſion and her pinnace. Sir Henry aſked if they had left any letter behind them? he ſaid, he had, but that his ſervant had loſt it. He diſſuaded the commander from ſeeking trade in the country of Fartaque, for that he believed his father would not permit it: but adviſed him to go for the Red-ſea. They all dined with the king that day.

On the 17th of November, as they ſteered weſt-by-ſouth, and weſt-ſouth-weſt along the coaſt, about ten o'clock they ſaw a high-land, which they imagined to be Aden: it roſe like Abba del Curia, and might be ſeen a great way off. In the evening about ſix, they anchored in twenty fathoms water, ſandy ground, before the town; which ſtands in a valley at the foot of a mountain, and makes a good appearance. It was encompaſſed with a ſtone wall, and defended by forts and bulwarks in many places; but how provided he knew not. This night a ſmall boat came out to view them: ſtanding in, (the wind at eaſt-ſouth-eaſt) they were carried to the eaſtward by the current at leaſt twenty leagues, to their ſurpriſe; for they thought it would have ſet to the weſt. A ſmall boat from the town came on board on the 8th, with three Arabs, who ſaid they were ſent by the lieutenant governor, to know what nation they were of, and their buſineſs thither: adding, if they were Engliſhmen, they were heartily welcome; and that the year before, Captain Sharpey had been there, and from thence went to Mocha, where he made ſale of all his goods. One of them being aſked the name and character of the baſha: he anſwered, "his name was Jaffer Baſha, and that his predeceſſor was very bad, this little better: and that all the Turks in general were good for little." Aſking if Mocha was a good place for trade? they anſwered, "that there was a man in the town, who could buy all his merchandiſe." Sir Henry ſent his pinnace on ſhore, and John Williams, one of his factors, who ſpoke the Arabic language: they were kindly entertained. Having ſent the pinnace to get a pilot for Mocha, the town would not let them have any, without leaving three of the chief merchants in pledge. However, ſeeing the ſhips under ſail, they entreated Sir Henry to leave one for that port, promiſing to buy all the goods; he thought fit to leave the Peppercorn there, and ſailed with the other two for Mocha, therefore they did what they could to get into the road again, but could not, being carried to leeward with the current. Having anchored to the ſouthward of the town, Mr. Fowler and John Williams,

Williams, were ſent on ſhore, to tell them he would leave one of the ſhips to trade, provided they would let him have a pilot; they ſeemed very glad, promiſing to ſend one next day. On the 12th, Sir Henry ſeeing no hope of any pilot, though often promiſed one, about noon ſet ſail along with the Darling, for Mocha; the wind eaſt-ſouth-eaſt. They coaſted the ſhore, ſometimes weſt-ſouth-weſt, and weſt-by-north, in twenty-eight and thirty fathoms, following a ſmall ſail till they loſt ſight of her. On the 13th, they held on their courſe along the ſhore all that night, ſteering between weſt-by-north, and moſt by ſouth; their true way weſt. The next day betimes, they ſaw the head-land going into the Red-ſea, riſing like an iſland thirty leagues from Aden. After they had paſſed the Streight of Babelmandel, Sir Henry ſent his pinnace for a pilot, to a village on the north-ſhore, in a ſandy bay, which returned with a couple of Arabs, who took upon them to be very ſkilful.

The depth in the Streight was between eight and eleven fathoms water. Coaſting the land north-by-weſt, and north-north-weſt, in between eighteen and twenty fathoms: about four o'clock they deſcried the town of Mocha, and about five luffed in: but the wind being high, they ſplit their main top ſail, and hoiſting their mizzen, it ſplit likewiſe. Here the pilots ran the Trade's Increaſe on ſhore upon a bank of ſand. As the wind blew hard, and the ſea ran ſomething high, they were all in fear ſhe could not be got off. This night there came a boat on board from the town, with a Turk, a handſome man, ſent by the governor to know what they were, and their buſineſs. Sir Henry told him, they were Engliſh merchants, who came to ſeek trade. He anſwered, If they were Engliſhmen, they were heartily welcome, and ſhould not fail of what they ſought; for that Alexander Sharpey had ſold all his goods there, and they might do the like. As for the ſhip's going on ſhore he made nothing of it; ſaying, that it was common for great ſhips of India to run aground, and yet that he never heard of any that ſuſtained harm thereby. He made haſte back to inform the aga who they were, promiſing to return next morning, with boats to lighten the ſhip.

On the 14th, early, he returned with three or four Turks more, of which two ſpoke Italian. They brought the commander a ſmall preſent from the aga, with compliments, and offers of any thing the country afforded; ſaying, he ſhould have as good and free trade as they had in Conſtantinople, Aleppo, or any part of the Turk's dominions. There came with them four or five lighters, in which the Engliſh put any thing that came firſt to hand, to lighten the ſhip; Mr. Femel went on ſhore in one of them, before Sir Henry was aware, carrying all he had in the ſhip with him. They ſent all their money, elephants teeth and ſhot, on board the Darling, and laying out their anchors to paſs, in the evening they tried to heave her off, but could not make her ſtir. On the 25th, they did what they could to lighten the ſhip, ſending ſome goods on ſhore, and ſome on board the Darling; Sir Henry had a letter from Mr. Femel, giving an account of his kind entertainment by the aga; and that he had agreed to pay five per cent. cuſtom, for all they ſhoul ſell; and that what they could not ſell, ſhould be returned on board cuſtom free. He likewiſe received from the aga himſelf, a letter under his hand and ſeal, offering himſelf, and whatever the country afforded at his ſervice. About five o'clock they began to heave at their capſtanes, and at length got the ſhip afloat again. On the 19th, two boats came from Mr. Femel for iron, which the commander ſent; but wrote word, that he would ſend no more goods till thoſe already landed were ſold. Femel, in anſwer, informed him, that if he intended to trade, he muſt come on ſhore according to the cuſtom of the place, otherwiſe they would not be perſuaded but that they were men of war. The aga likewiſe ſent the interpreter to tell him, that if he was a friend to to the great Turk, and a merchant who expected to trade, he entreated him to land; alledging, that Captain Sharpey, and all the Indian captains did ſo. On the 20th, Sir Henry landing, was received at the water-ſide by ſeveral perſons of diſtinction, and with muſic, brought to the aga's houſe, where all the principal men of the town were aſſembled. He was received with all the marks of friendſhip imaginable. He was ſeated cloſe to the aga (all the reſt ſtanding) who loaded him with compliments and welcomes. Sir Henry delivered the king's letter with a preſent to the baſha, which he deſired might be ſent up with all ſpeed. He likewiſe gave the aga a preſent, which he received very kindly, aſſuring him, that he ſhould not have the leaſt moleſtation in his trade; and that if any of the inhabitants offered him or his people wrong, he would ſee them ſeverely puniſhed. After this, he cauſed him to ſtand up, and one of his chief men put on him a veſt of crimſon ſilk and ſilver, ſaying, he needs not fear any evil, for that was the grand ſignior's protection. Having taken leave, he mounted a fine horſe with rich furniture, led by a man of rank, and ſo, with the muſic of the town was conveyed to the Engliſh houſe; where he dined, and preſently went on board. The aga was very importunate with him to ſtay on ſhore, which he yielded to, in order to ſee his pinnace conſtructed.

The aga every day ſent Sir Henry ſome ſmall preſent or other with compliments; to know if he wanted any thing. On the 28th, he ſent twice to deſire him to be chearful; and acquainted him, that as ſoon as their time of faſting was over (which was almoſt expired) he would have the commander ride abroad with him to his gardens, and other places of pleaſure. The ſame afternoon Mr. Pemberton having gone on ſhore for cocoa-nuts, Sir Henry made him ſtay to ſupper: after which, being ready to go on board, the Turks would not permit him; ſaying, it was too late, but that in the morning he might go as early as he pleaſed. The commander ſent to intreat leave for him, but they would not grant it. All this time they ſuſpected no harm, but imputed it to over-much caution in the officers; who they ſuppoſed had done it without order, of which, he deſigned to have complained to the aga. Next day, at ſun-ſet, Sir Henry cauſed ſtools (as was his cuſtom) to be placed at the door, where he ſat with Meſſrs. Femel and Pemberton, to take the freſh air. About eight there came a janiſſary from the aga, to deliver ſome meſſage to him; but not underſtanding him, the commander ſent his man to look for one of his company, who ſpoke the Turkiſh language. When his interpreter came, he learnt the purport of the meſſage: which was, that the aga had ſent his ſervice, deſiring him to be merry, for that he had received good news from the baſha. As he was about to go on, Sir Henry's man returned in a great fright, and told them they were all betrayed; for that the Turks and his people were fighting at the back of the houſe. The Turk who ſat by, being deſirous to know what the matter was, they told him: he roſe up, and aſked the ſervant to ſhew him where they were. Several of the Engliſh ran after them, to ſee what was the matter, and Sir Henry himſelf ran after the reſt, calling as loud as he could, to return back and make good their houſe. But while he was ſpeaking, he was knocked down by one behind him, and remained as dead, till the extreme pain, in tying his hands behind him, brought him to his ſenſes. As ſoon as they ſaw him ſtir, they lifted him up, and two led him between them to the aga's; where he found ſeveral of the company in the ſame condition. By the way the ſoldiers pillaged him of his money and three gold rings: when thoſe who had eſcaped with life in this maſſacre, were brought together, and put in irons: Sir Henry with ſeven more, were yoked by the neck in one chain, ſome were fettered by the hands, others by the feet, and two ſoldiers were left to guard them. Inquiring into the affair,

affair, he was informed, that Francis Slanny, John Lanſlot, and ſix more were killed; and fourteen of thoſe preſent were much wounded: that their houſe had been ſurrounded with armed ſoldiers, who, at the inſtant he was ſtruck down, fell upon the Engliſh, who were quite unarmed and defenceleſs.

The Turks thus having ſecured their perſons, their next deſign was to take their ſhips and goods; for this purpoſe, about ten o'clock, they armed three great boats with 150 ſoldiers in them to take the Darling, which rode near the ſhore. That they might paſs for Chriſtians, they took off their turbans, and boarding her altogether, entered moſt of their men. This was ſo ſudden, that three of the Darling's crew were killed before they could get down; the reſt got to their cloſe fights; but by miſtaking their captain's commands, the Turks leaped into the boat, cut the cables, and drove off with the current. By this time the Darling's men had got their weapons, the Turks ſtanding very thick in the waiſt, hollowing and claſhing their ſwords upon the deck. One of the company threw a large barrel of gun-powder amongſt them, and after it a firebrand, which took ſo good effect, that ſeveral were burned. The reſt, for more ſafety, (as they thought) retired to the half-deck and the poop, where they were annoyed with muſquet-ſhot, and another train of powder, which ſo terrified them, that ſome leaped into the ſea, others hung by the ſhip-ſide, imploring mercy, which was not to be found; for the ſailors killed all they could find, and the reſt were drowned: only one man was ſaved, who hid himſelf till the fury of the fight was over, and then received mercy. The boats returning, brought news that the ſhip was taken, for which there was great rejoicing, and the governor ſent off the boats again to bring her up to the town; but when they came to the place where ſhe uſed to ride, they found her ſtanding off under ſail. Returning, they told the aga, the ſhip had eſcaped, and that they believed the Emirſal Bahr, (lord of the ſea) and his ſoldiers were all taken priſoners. This was very diſagreeable news to him; however, ſome time before day, he ſent their interpreter to tell them, that the ſmall ſhip was taken, which Sir Henry believed to be true; and after ſun-riſe, ſending for him, he went along with his ſeven yoke-fellows, to the aga, who aſked him, How he durſt be ſo bold as to come into this port of Mocha? He anſwered, That the cauſe of his coming thither was not unknown to him, having long before acquainted him with it; and that he did not land, but at his deſire, and after many promiſes of kind uſage. The aga inſiſted that it was not lawful for any Chriſtian to come ſo near their holy city; this being the port or door for it: and that the baſha had expreſs orders from the Great Turk, to make ſlaves of all Chriſtians who ſhould enter thoſe ſeas, even although they ſhould have his own paſs. Sir Henry replied, That the fault was his, for not telling him ſo at firſt, but deluding him with fair promiſes. The aga then gave him a letter of Captain Dounton's to read, which came from Aden, dated long before: the purport was, that two of his merchants and the purſer were detained on ſhore, and that they would not be releaſed without landing of merchandiſe, or paying 1500 Venetianos for anchorage; withal deſiring Sir Henry to adviſe him what he had beſt to do.

After he had read the letter, the aga demanded to know the contents of it; which, being told to him, he ſaid, that ſince the writing of it, the ſhip had left Aden, and was coming to Mocha; but in the way ſtruck on a rock, and was loſt, with all the goods and men. The aga then deſired him to write a letter on board, to know how many Turks were in the ſmall ſhip. Sir Henry told him, that it would be needleſs, ſince ſhe was in his own poſſeſſion. He replied, that ſhe was once in their hands, but had been reſcued by the great ſhip. This made ſome amends for the other bad news. The aga then preſſed him to write to them on board the great ſhip, to yield her into his hands; ſaying, he would let them have the ſmall ſhip to carry them home. Sir Henry ſaid, it would be ridiculous to write any ſuch thing, for that they, who were on board, and had their liberty, were no ſuch folks as, upon his letter, to give up the ſhip, and come on ſhore to be ſlaves. His anſwer was, that he knew if their commander wrote to that effect, they durſt not diſobey him. Sir Henry then told him plainly, that he would write no ſuch letter.

He then enquired what quantity of money was in the ſhip; Sir Henry ſaid, there was but little; and that not to lay out in merchandiſe, but to buy victuals. He then aſked what ſtore of victuals and water was on board? The commander told him, enough for two years, which he would not believe: he urged them once more to write for them to come on ſhore, and yield the ſhip, threatening otherwiſe to cut off his head. Sir Henry bid him do ſo; ſaying, that it would be doing him a great pleaſure, for that he was weary of his life; but to write ſuch a letter he never would, upon this, being taken out of his chain and collar, in order to be ſeparated from the reſt, a great pair of fetters was put upon his legs, and mannacles upon his wriſts. He was lodged all that day in a dirty dog-kennel, under a pair of ſtairs: at night, at the intreaty of Shermall, conſul of the Bannians, he was taken out, and placed in a better room, with one of his ſailors, who ſpoke Turkiſh. However, ſays the author, his bed was the hard ground, and his pillow a ſtone. His companions were grief of heart, and a multitude of rats, which, if he chanced to fall aſleep, ſoon awakened him with running over him."

The aga's lieutenant, and their drugoman came at midnight, and intreated him in very ſoothing terms to write on board, to know how many Turks were priſoners, and what were their names; but by no means to mention any thing relating either to the loſs of his men, or his own hard uſage: on the contrary, he adviſed him to ſay, that they were detained in the aga's houſe, till farther orders came from the baſha; and that they wanted for nothing. Accordingly, Sir Henry wrote, to the ſame effect they deſired him; but at the ſame time adviſed them to look well to their ſhips, and not to ſuffer any of their men to venture on ſhore, for fear of treachery. This letter they afterwards ſhewed to two or three of the other priſoners, to ſee whether Sir Henry had written according to their inſtructions. However, it was not ſent at that time, becauſe they could not get any body to carry it: yet, at length, they met with a man who undertook to deliver it on board, provided the commander would write to them to uſe him well. This man was born in Tunis in Barbary, and ſpoke good Italian. Sir Henry wrote the letter as they deſired, which was peruſed like the former, and next day ſent on board. The purport of the anſwer was, that all the Turks were ſlain or drowned, excepting one, whoſe name was Ruſwan, a common ſoldier, and that they were glad to hear the commander was alive; for Ruſwan told them, he thought all the Engliſh were killed. Sir Henry and the reſt continued in this miſery till the 15th of December, not hearing any thing from the ſhips, nor the ſhips from them. The aga often came to him, ſometimes by threats, at other times by fair means, urging him to write for thoſe on board to come on ſhore, and deliver up the ſhips; Sir Henry ſtill anſwering him as he did at firſt. He was particularly inquiſitive about their proviſions, having been in hopes that for want of water and victuals, they muſt at laſt be ſurrendered to him, knowing that they could not have wind to carry them out of the ſtreights till May. He ſaid, he wondered how ſo great a charge could be borne with ſo ſmall a ſtock. Sir Henry anſwered, that his nation had factories in ſeveral parts of India, which had ſtock enough to load them in caſe they had brought no ſtock at all with them, and that the ſtock they had was ſufficient to load his ſhip with pepper.—Thoſe on ſhip-board fared but ill themſelves though at liberty, riding in an open and wide

road, the wind blowing continually hard at ſouth ſouth-eaſt, incloſed round with ſhoals, and their water beginning to fail; becauſe they had ſtaved 50 tons to lighten the ſhip at their coming on ground: beſides, having nothing from land, put them to their wits ends, as not knowing well what courſe to take. At length, one John Chambers offered to go on ſhore to ſee what was become of the reſt, chuſing rather to run all hazards, than ſee men living in ſuch perplexity. On the 15th of December before-mentioned, being ſent with a flag of truce upon a ſmall iſland, a little to the windward of the town, having one of their Indians with him for his interpreter. They were brought before the aga, who aſked him, How he durſt be ſo bold as to come on ſhore without leave? He anſwered, That he was a meſſenger, and came with a flag of truce, which was permitted among enemies. The aga aſked, what meſſage he had to deliver? He replied, a letter to the commander; and ſaid he ſhould be glad if he would give him leave to ſee how his countrymen did. They examined him and the Indian very ſtrictly, as to the quantity of victuals and water in the ſhips; and their anſwer agreed exactly with Sir Henry's. They then brought him to the commander's cell; and, coming out of the light, it was a great while before he could ſee. He delivered the letter with watery eyes. After acquainting him in what manner he came thither, Sir Henry told him, he thought they would not permit him to return on board; for that not many days before, they had detained one of the Pepper-corn's men, who came from Aden with a letter to him. He anſwered, That he came with a reſolution to ſhare his ſufferings, if ſuch were their reſolutions. But contrary to his expectations, the Turks let him and the Indian return to the boat, with Sir Henry's anſwer, with leave to come again if they had occaſion. Next day Chambers returned alone, for the Indian was ſo frightened, that he durſt not venture. The commander's man ſent ſeveral things by him to his maſter, but the aga was his receiver, and kept them for his own uſe. This honeſt man having done all in his power, returned on board, and left him to his miſery. But when the captives leaſt expected it, they met with ſome relief: for on the 18th of December, there came from Zenan an aga, captain or chief of the Chiaous, with orders to bring up the Engliſh. As ſoon as he alighted he was deſirous of ſeeing the commander and the reſt. On this occaſion, there were three chairs brought into his room, in which Rejib Aga, Iſmael Aga, (the meſſenger from the baſha) and Jaffer Aga ſeated themſelves. Rejib Aga began by aſking him, How he durſt be ſo bold as to come into that country ſo near the Holy City, without a paſs from the Grand Signior? Sir Henry anſwered, That the king his maſter, was in league and amity with the Grand Signior, and that in the articles of peace between them, free trade was allowed the Engliſh throughout his dominions, of which Mocha being a part, they needed no paſs. He anſwered, This was the door of their Holy City, and that therefore, it was not lawful for any Chriſtian to come thither. He likewiſe demanded, Whether he did not know that the Grand Signor's ſword was long? The commander replied, That they were not taken by the ſword, but by treachery; and that if he and his people were on board, he cared not for the length of his, nor all their ſwords. The aga ſaid, It was proudly ſpoken, and again urged him to write a letter, commanding all the men to come on ſhore and yield themſelves to the baſha, to which he received the former anſwer. Iſmael Aga broke off this idle diſcourſe, by telling Sir Henry, that he came from the baſha with expreſs orders to conduct him and his people to Zenan (or Senaa,) adviſing him to ſend on board for warm cloaths, for that they would find it very cold in the mountain country. The commander intreated, that if poſſible, his men might be ſuffered to go on board; and that he and a few more might be ſent up. But Iſmael ſaid it was not in his power to grant it, for that it was the baſha's order they ſhould all attend him. However, Rijib ſaid, he ſhould have his deſire in part, and that only five more ſhould go with him, the reſt remaining where they were till further orders. The 20th, Captain Dounton, in the Pepper-corn came into the road from Aden, to whom Sir Henry wrote what he thought proper.

The irons were knocked off the legs of the Engliſh; excepting the carpenters and ſmiths, and ſome ſick men, who were not able to travel. On the 22d of December, the carpenters and ſmiths were kept there to build up the pinnace. The commander and 34 more were appointed to go up for Zenan, the chief city of the kingdom, where the baſha reſides. About four o'clock, they ſet out of Mocha, all the company being mounted upon aſſes, except Sir Henry and Mr. Femel, who had horſes. About ten at night, being ten or twelve miles from Mocha. Mr. Pemberton ſlipped away from them. The company miſſed him preſently, but ſaid nothing, except praying for his eſcape. About one in the morning, when they came to their inn, at a town called Mowſſi, they counted them, but did not miſs him; but next day, about four in the afternoon, when they ſet out, they counted them again, and found one miſſing. The aga on this, inquired of Sir Henry, what number of them ſet out of Mocha? He anſwered, he could not well tell, but thought there were 34. The aga ſaid, there were 35, and that now there was one leſs; the other replied, it was more than he knew.——Mr. Pemberton was moved to this attempt by ſeeing ſo many of them carried up together manacled, with a captain and a guard of ſoldiers to conduct them; from whence he concluded nothing could enſue but ſlavery or death. Sir Henry however, found ſeveral friends among them. There was one Hamed Aga, who ſent him many preſents, and adviſed him not to be dejected, for that his cauſe was good. He alſo ſent him and his people proviſion of bread for their journey, and his letters to Abdalla Chelabi the Chiaous. The conſul of the Bannians viſited Sir Henry every day, and never failed daily to ſend each man (being 50 in number) two cakes of white bread, and a quantity of dates or plantanes. He ſet out from Mocha two days before them, promiſing, at his departure, to do them all the ſervice he could with the baſha, which promiſe he well performed.

They arrived at the city of Tayez (four days journey from Mocha) on Chriſtmas day, and were conducted into the city, two and two in rank, as they do at Conſtantinople with captives taken in the wars: Their aga rode in triumph as a great conqueror, being met a mile out of the town by the chief men of the city on horſeback; and the road, for that ſpace, was lined with multitudes of people, who ſtood gazing at them. Thus they made their entry into all the cities and towns through which they paſſed. A lad of Mr. Pemberton's falling ſick in this town, was left with the governor; and from this time forward, Sir Henry obſerved it was very cold all the way from thence to Zenan, their lodging being the bare ground. He bought the men who were but thinly cloathed, furred gowns, otherwiſe he believes they would have periſhed with with cold. He was but ill provided himſelf, becauſe he could not be perſuaded, when he was at Mocha, that it could be ſo cold as they ſaid it was: but he found the ground covered every morning with hoar froſt; and at Zenan, which lies within 16 degrees 55 minutes of the line, they had ice a finger thick in one night; which Sir Henry could not have credited if he had not been an eye-witneſs of it. They were 15 days on the road between Mocha and Zenan. The 5th of January, two hours before day, they came within two miles of the city, where they lay upon the ground till after ſun-riſe, being ſo benumbed with cold, that when they got up, they were ſcarce able to ſtand. About a mile on this ſide they were met by the ſubaſha, or ſheriff, and about 200 men with drums and trumpets. They cauſed the ſoldiers to lead the way, and the Engliſh to follow one by one, at ſome diſtance from each other, to make the better

ſhow. Their gowns being taken from them, they were forced to march on foot in their thin and ragged ſuits. The ſhip trumpeters were placed next, and ordered by the aga to ſound; but the commander, who came after with Mr. Femel on horſe-back, forbid them. Their aga brought up the rear, riding in triumph, with a ſpare horſe richly furniſhed, led before him. "In this order, (ſays the author) they marched through the city to the caſtle, all the way being ſo crowded with people, they could ſcarcely paſs. At the firſt gate there was a large guard of ſoldiers: the ſecond gate had before it two great guns ready mounted. Having paſſed it, they came into a ſpacious court, twice the length of the Royal Exchange in London. The ſoldiers at the gate fired their pieces, and then they placed themſelves on each ſide the way, among many others, who were there when they came; the commander, as ſoon as he entered into the court, alighted, and was placed on one ſide with the men, where they had not been long before he and Mr. Femel, were brought before the baſha. It was their divan or council day. At the farther end of the area, they went up ſtairs of twelve ſteps. At the top, two great men came and took Sir Henry by the wriſts, and holding him very hard, led him to the baſha, who ſat at the upper end of a long ſpacious gallery, many nobles ſtanding on each ſide of him; others ſtood on either ſide, from the lower part of the gallery to the upper end, which made a good appearance. The floor was covered over with Turkey carpets. Sir Henry being come within two yards of him, was ſtopped. Immediately the baſha, with a frowning and angry countenance, demanded what country he was of, and what brought him into thoſe parts? The commander anſwered, That he was an Engliſh merchant, and being friend to the Grand Signior, came to ſeek trade there." The baſha ſaid, "It was not lawful for any Chriſtian to put his foot in that country; and, that he had warned Captain Sharpey, to caution thoſe of his nation to come no more thither." Sir Henry replied, "That Captain Sharpey was caſt away upon the Coaſt of India, and arrived not in England to tell them; that had they known ſo much, they ſhould never have got into the trouble they were in: He added, that Rejib Aga was the man who had abuſed him, by telling him his nation was welcome into the country; and that they ſhould have as free trade, as they had in any part of Turkey; that he had made him many other fair promiſes, as to their ſecurity; yet that, contrary to his word, he had aſſaulted them with armed ſoldiers, murdered ſeveral of his men, and taken himſelf, and the reſt priſoners."

"The baſha anſwered, that Rejib was but his ſlave, and had no power to make any ſuch promiſes, without his leave; that what had befallen him and his people, was by his order, purſuant to one of the like nature from the Grand Signior to himſelf, commanding him to chaſtiſe all Chriſtians who ſhould come into thoſe parts. Sir Henry told him; they had received great damage: and that if it pleaſed him to let him return to their ſhips, it would be ſufficient warning to his nation againſt venturing thither for the future. The baſha replied, he could not let him depart; but that he ſhould ſtay there and write to the ambaſſador at Stambol, and that he would write himſelf likewiſe to the Grand Signior, to know his pleaſure concerning them; and whether he would permit them to trade there or not. Upon this he diſmiſſed Sir Henry for that time, bidding him to go to the lodging appointed for him, and take with him four or five more, ſuch as he thought fit. He, and thoſe he made choice of, were conveyed to the keeper of the priſon's houſe; and the reſt carried to the common jail, where they were clapped in weighty irons.

"When they were firſt brought before the baſha, one of the lads, thinking Sir Henry was ſo led to have his head ſtruck off, and that it would be his own turn not long after, fell into a ſwoon with fear: and upon that ſickening, ſhortly after died."

On the 6th of January, the baſha's chiaous, or lieutenant of the kingdom, ſent for Sir Henry to breakfaſt with him; which being over, the commander gave him a very particular account, how treacherouſly and vilely he had been uſed by Rejib Aga. This officer bade him be of good cheer, and not think of things paſt, which could not be remedied: ſaying, he doubted not but all would be well in a little time: and that his beſt endeavours to ſerve him ſhould not be wanting. Shermal, the Bannian of Mocha, had made this man his friend. Sir Henry then departed with his keeper to priſon, where he was in better ſpirits than before.

On the 7th the chiaous ſent for him to his garden, where he feaſted him and Mr. Femel, telling him, that ſhortly he and his people ſhould be ſet at liberty, and ſent to Mocha, where he ſhould have redreſs of all his wrongs. He promiſed likewiſe to be his friend, and before many great perſonages, (both Turks and Arabs) declared what kindneſs he did him, was purely for God's ſake; but Sir Henry concluded, it was in hopes of ſome great reward. Hamed Aga's letter did them great ſervice. The ſame day there came to town a Moor of Cairo, who was an old acquaintance of the baſha's, and had lent him large ſums of money at his coming from Conſtantinople, when he was but poor. This man was next neighbour to the Engliſh at Mocha, when they were betrayed; and had a ſhip in the road, bound for India, which he greatly feared their ſhips would have taken, in revenge of the wrongs offered them: but they let her depart quietly, contrary to his expectation; ſo that he became their ſtaunch friend. He wrote a letter in their behalf to the baſha, wherein he blamed him much for uſing them ſo hardly: ſaying, he went a way by ſuch meaſures to deſtroy the country and its trade. At his viſit to the baſha, he not only repeated what he had written, but ſaid a great deal more upon the occaſion, adviſing him to return the Engliſh all their goods, and ſend them away contented.

Mr. Fowler, and eighteen more of the company, who arrived from Aden on the 17th, were afterwards put into a common dungeon in irons, and fed on brown bread and water by the baſha's order; but Sir Henry found means to ſupply them better. Sir Henry having agreed to give 1500 venetianos to forward his buſineſs, was afterwards conveyed before the baſha, who was prepared for the reception.

In this laſt conference the baſha behaved with affability to Sir Henry, and bade him keep up his ſpirits, and aſſured him that he and his people ſhould ſhortly be ſet at liberty, and ſent to Mocha, there to remain with twenty-nine more (the reſt being ſent on board) till all the ſhips of India were come into the port, and the wind ſettled weſterly, after which they alſo ſhould be ſent on board, and ſuffered to proceed to India: but Sir Henry in vain petitioned to have his goods reſtored, the baſha informing him that they were placed to the account of the Grand Signior; but repeatedly aſſured him that as to his people, they ſhould be reſtored to a man, and that even if he had a Turkiſh ſlave, that ſlave ſhould not be detained. He received the Engliſh commander's thanks, and apologiſed on his own part for what had paſſed, at the ſame time he gave the Engliſh to underſtand, if any more of his countrymen came into thoſe parts to injure the trade of the baſhas of Cairo and Swaken, they might expect to have their ſhips and goods confiſcated, and to be ſlain or made ſlaves, which he hoped would ſerve for a warning to them and other nations. At another viſit they made this Turk, giving him joy of his dignity, (he being created a viſir) they were well received; promiſes were renewed, and Sir Henry and Mr. Femel were admitted to the honour of kiſſing his hand.

In the mean time many of the Engliſh falling ſick, their commander ceaſed not his ſolicitations till he got their deliverance out of priſon. He was now informed that Rejib Aga had deſired the captives might

might be ſent to Aden, by which means, he ſaid, his town of Mocha and ſuch veſſels as might paſs the Streights of Babelmandel would be ſecure againſt any attempts of the Engliſh. But their friend the chiaous contrived to render this ſcheme abortive.

When the commander again waited on the baſha, he received another ſolemn warning for his countrymen to come no more into thoſe ſeas. Sir Henry however, begged that in caſe any of them ſhould come thither before his advices ſhould be received, they might not be betrayed or ill-treated. He could obtain no promiſe of this kind; but on his begging the baſha would write to Rejib Aga in his favour, received aſſurances that the aga durſt not injure him, the baſha ſaying, with great pride, "Is not my *word* alone ſufficient to turn a whole city upſide down? If Rejib Aga wrongs you, I will pull his ſkin over his ears and give you his head, is he not my ſlave?" And with this anſwer Sir Henry was obliged to be contented. After this, he commanded the chiaous to write his diſpatch, who, in the laſt place demanded an anſwer to the king's letter, but he could not get any.

Being returned from the baſha's he begged the chiaous would get him permiſſion to purchaſe a ſword, that he might not ride down as a priſoner, as he had come up. The Turkiſh chief hearing of this, ſent him one of his own old ſwords; but the chiaous was more generous, and the ſame morning preſented his Engliſh friend with 100 pieces of gold, which, added to fifty he had ſent him before, was no contemptible gift to one in ſuch a ſituation.

The priſon dues being paid, and all things got in readineſs for the departure of the Engliſh, Sir Henry having breakfaſted with the chiaous at his garden, received his diſpatches, and the next day took his leave, and left the place.

The city of Zenan (or Senaa) is deſcribed as being about the ſize of Briſtol. The houſes they found built of lime and ſtone, and obſerved that water and wood being far fetched, were dear there. The baſha reſided at the caſtle on the eaſt ſide. The houſe of the keeper of the priſon where Sir Henry Middleton was confined, was contiguous to the city wall; at the foot of it was a yard, where a great number of people, moſtly women and children, were detained as pledges to inſure the loyalty of their parents and relations. While the boys were little, they ran about at liberty, but when grown big, were fettered and removed to a ſtrong tower, there to be kept during the tyrannical governor's pleaſure. The women and children who remained in the yard, lived in cottages. The latter went almoſt naked, and were as wild as mountaineers.

Sir Henry, previous to his departure, had procured a letter from the chiaous for the purpoſe of getting a boy of Mr. Pemberton's delivered up, who was ſaid to have turned Mahometan. However, when he came to Tayez he demanded him, and produced the letter in vain, as that officer had only written to the aga to deliver him in caſe he had not changed his religion. After all, the youth had only been inſtigated to this change by threats, and received the ſeal of their Mahometan faith by an act of violence; but to plead all this was of no avail, and Sir Henry was obliged to give up the point.

He arrived at Mocha on the 15th of March, about five in the morning, after a journey of ſixteen days. Here Sir Henry learned that Mr. Pemberton, whom he never expected to ſee more, had lighted on a canoe, and got on board. The Arabs here behaved very civilly, welcoming the Engliſh, whoſe hard treatment by the Turks had not been at all pleaſing to them. Sir Henry, Meſſrs. Femel and Fowler, were brought before the aga, who received them with great ſeeming kindneſs, excuſing himſelf for what had paſſed, obſerving, that he had done nothing but what he had in charge from his maſter. The Engliſh commander, found there was no other way but to meet his diſſembling with equal diſſimulation, and accordingly, liſtening to the Turk, anſwered him mildly, but gave ſmall credit to his proteſtations. He was invited to feaſts, and otherwiſe flattered, but though a handſome houſe had been taken for him by the water-ſide, the aga, fearful of his eſcaping, removed him to another in the middle of the town, where he was ſufficiently watched and guarded at night, by a company of ſoldiers. Theſe, and other circumſtances, made that commander plan the means of eſcaping, which after a diſappointment, occaſioned by his being more careful of others than of himſelf, was however at laſt, effected in the following manner:

The Darling being arrived on the 6th of April, and the baſha with all his chief men riding out to his pleaſure-garden on the 11th; Sir Henry, glad of this opportunity, reſolved to put his long-determined deſign of eſcaping, in practice; for Hamed Aga, and others, had told him, that the baſha would not perform his word, unleſs he was forced to it. Sir Henry wrote a letter to Mr. Pemberton, ſignifying that he deſigned the ſame day to make his eſcape on board, conveyed in a caſk, and therefore deſired him to ſend the boat, with all ſpeed, well manned, and with liquor, to make his keepers drunk, which was accordingly done. Before he acquainted Mr. Femel with his intention, he made him ſwear to be ſecret, and uſe no arguments to diſſuade him from what he had reſolved upon. After this, he ſhewed what he had written to Mr. Pemberton, and then directed him to walk out, with others, to a certain place, by the water-ſide, where he promiſed (in caſe he got ſafe to the boat himſelf) to come and take him in. Sir Henry had appointed the carpenters, and others, to repair to the ſouthward of the town, where lay a boat near the ſhore, with maſts and ſails ready to take them in, charging them at the ſame time, not to embark themſelves till they ſaw the ſhip's boat put off from the bridge.

Matters fell out to favour Sir Henry's attempt: the ſubaſha, (who was their guardian, and left in town only to watch him) fell to drinking moſt greedily.—All things being ready, and the keepers drunk, about twelve at noon the ſubaſha returned from drinking, and retired to his quarters, at one end of the houſe, parted from the Engliſh only by a wall, the better to guard them. Sir Henry now put his project in execution. He ordered the carpenters to take others with them, and to go by two and two in the beſt manner they could, to avoid ſuſpicion. He directed Mr. Femel, and thoſe he had appointed to be taken in to the leeward of the town, to go two or three in a company along the ſea-ſide to the place, and there wait his coming. After he had given theſe directions, he was incloſed in his tub, and ſafely conveyed into the boat, which being done, he forced out the head of the caſk, and came on board, ordering the men to bear up with the leeward point, where he took in eleven perſons. But Mr. Femel and others, being rather too dilatory in ſetting out, were taken before they could reach the boat. For by this time the town was raiſed, partly by the indiſcreet running of ſome of the Engliſh, and partly by ſeeing the boat bear up to leeward, contrary to cuſtom. He might however have eſcaped with his company, had he come by land to the point, and not taken water ſo ſoon as others behind him, who were ſick and weak. Sir Henry came to an anchor, and in waiting for them, brought the boat aſhore, which put them all in much danger. He likewiſe ordered men to leap over-board, to reſcue Femel: but before they could get a pike's length from the boat, he and thoſe were apprehended. Mr. Femel being cloſely purſued by one perſon, diſcharged a piſtol in his face, and mortally wounded him. Sir Henry finding the whole town in purſuit of him, and conſidering he had a very narrow and ſhoal channel to paſs, between a ſmall ſandy iſland and the main, ſaw it was folly to ſtay any longer, therefore ordering the men to put forward, they luckily hit on the right channel, which quickly brought them into the deep water, and out of danger of their enemies. Thoſe in the

the Darling kept good watch on the tops; and as ſoon as they ſaw the boat under ſail, let ſlip, and bore up to leeward, to relieve them in caſe of need. By the time they got on board, the boat in which the carpenters were, coming in ſight, Sir Henry ſent the ſhip's boat to bring them on board, one of them who was appointed to come with them, ſtayed ſo long behind, that the boat was put off before he came up, and he thinking to ſwim on board, was drowned. About two hours after, two poor Arabs appeared in a canoe, but were ſo fearful that they durſt not come nigh the ſhip: till at length, being won by fair words, one of them entered and delivered the commander a letter from Mr. Femel: intimating, that they were in great danger of being killed by thoſe who apprehended them, but that ſome of the ſoldiers, bearing them good will, ſaved them, and brought them to the aga's, where they waited his coming home.

On ſight of them he looked very pale, and ſaid they ſhould all loſe their heads; aſking how they durſt attempt an eſcape? They ſaid they came out of England under the general's command, and did nothing but by his orders, which they durſt not diſobey. He again threatened them with the loſs of their heads, and cauſed them to be chained by the necks: but they were ſoon releaſed at the entreaty of Nakhada Malech Amber, Nakhada Mohammed, of Cananor, and others, and permitted to remain in their former houſe: but under a ſtronger guard than before. This proceeded from fear of their ſhips in the road, which were then under Sir Henry's command: who returned an anſwer, and ſent the aga word, that if he did not immediately ſend him all his people, and the ſhip-furniture, which he detained contrary to the baſha's order, he would fire the ſhips in the road, and endeavour to batter the town. He likewiſe ſent word to the Nakhadas, that he would not ſuffer any boat to go to their ſhips, without firſt coming on board his, to acquaint him with their buſineſs: nor let any thing be carried out of them, but by his leave and order.

After his eſcape, there was no ſmall diſturbance in the town. The aga not knowing what anſwer to make to the baſha, feared it would coſt him the loſs of his head. The ſubaſha, who had been Sir Henry's keeper, knew not whether he had beſt ſtay or fly for his life. The Emir al Bahr (or lord of the ſea) was in the ſame terror, being accuſed of conſenting to his eſcape: one of their porters took ſanctuary in a church, and would not come out till he had got his pardon. Moſt of the Nakhada's and merchants, in great fear of loſing their ſhips and goods, ſent preſents of victuals to Mr. Femel and the reſt, whom before they ſcorned to ſpeak to. At night Sir Henry ſent the boat well manned to carry the news to their ſhips, with orders likewiſe to come over with all ſpeed. He plied to windward in the Darling, when the tide ſerved, and rode a little without the great ſhip, ſo that he had her, and all the reſt, under the command of his guns.

On the 12th Nakhada Mohammed of Cananor came on board with letters, telling Sir Henry, that he was ſorry he went away in that manner, for that he was determined, within a few days, to have ſet him at liberty, and all his people: That he would deliver the furniture belonging to the ſhips, which were on ſhore, but could not ſend his people without an order from the baſha: That he had intreated fifteen days reſpite; and if, in that time, all his men were not put on board, they deſired no favour. The commander told him, that he likewiſe expected to have his pinnace reſtored, for that he would not leave the road without her. The Nakhada ſaid, "He would acquaint the aga with his demand, and doubted not but ſhe would be delivered up. Sir Henry yielded to his requeſt, upon his promiſe, that he ſhould have both men and pinnace within the time limited. He durſt not demand reſtitution or ſatisfaction for his goods, till he had recovered all his men from ſhore. Mohammed having acquainted the aga with the conditions, upon which he had obtained fifteen days truce, he was very angry, that Sir Henry had inſiſted on having the pinnace; and ſending for Mr. Femel and John Williams, aſked what the commander meant by demanding her, ſince ſhe was the baſha's by agreement with him? ſaying, "He might as well demand the goods as the pinnace; both which were put to the account of the Grand Signior." They made anſwer, That he could not well proceed on his voyage without the pinnace; but that for the goods, they aſſured him, he would never demand them. In the mean time, the Darling's cables, anchors, pitch, tar, and other materials, were brought from ſhore; and few days paſſed, but Sir Henry had ſome preſents of refreſhments from the aga, the dabutian, and others.

That morning early, a boat going from ſhore on board the innermoſt ſhip, the commander cauſed two guns to be fired at her, which brought her on board him. On threatening to hang them and burn their ſhips if they did ſo any more, they durſt not attempt the like afterwards.

On the 13th, near night, the Increaſe and Peppercorn came to anchor in ſight of the road, not able to get in, becauſe the leeward tide was againſt them. But next morning entering the ſame, Sir Henry went on board the Increaſe, where he was received with great joy.

The 18th, there arrived a ſhip of Diu, belonging to Shermal the ſhah bander, laden with Indian commodities, which Sir Henry ordered to ride near him; but next day, at the intreaty of Shermal, he licenced all the people (excepting ſome few to look to the ſhip) to go on ſhore. On the 21ſt, Mr. Femel wrote him word, that they had all been chained by the neck. The 25th, Nakhada Mohammed came on board, and informed Sir Henry, that the baſha had given order for the releaſe of his men and pinnace, promiſing to bring them next day; the Increaſe firing three guns at his departure. One day all the Engliſh at land were chained by the neck, and the next day releaſed: The cauſe of which uſage they could not learn.

Mohammed returned on the 26th, ſaying, the pinnace was launched: but the aga would neither deliver her nor the men, till Sir Henry had given him a writing ſigned by himſelf, and four or five more of the principal perſons in the ſhips, importing, that he would maintain perfect peace with the Turks (the aga's ſubjects) and Indians: that he would not meddle with any ſhips either in that ſea, or elſewhere, in revenge for what had paſſed; nor demand reſtitution or ſatisfaction for goods taken from him: which engagement was to be confirmed by oath. Sir Henry told him, That he was ſurpriſed to find he came every day with new demands; that as he had the day before promiſed abſolutely to bring him the pinnace and all his men, he took it for granted it would have been done; but that ſince he had not kept his word, he intended for better ſecurity, to detain him, and thoſe that were with him as hoſtages, till he had performed his engagement; deſiring him to acquaint the aga with it. Mohammed alledged, That he having undertaken this affair of his own accord, ſhould reap much diſcredit, and be laughed at for his forwardneſs, if he ſhould write to that purpoſe, and therefore declared plainly, that he would not write ſuch a letter, let what would happen, but promiſed, if Sir Henry would give him ſuch a writing as he demanded, and ſend him on ſhore, he would bring all his people on board before night. The commander, finding he could obtain nothing by compulſion, thought it beſt to yield to him in appearance, and give him ſome writing, though of a different nature from what he deſired. In effect, he cauſed a memorandum to be drawn up in Engliſh, containing a brief relation of the treacherous uſage he had met with in this country, and nothing elſe; which was ſigned by him and five more, as witneſſes of the truth of it, and he ſent advice to Mr. Femel, how he ſhould interpret it. Sir Henry thus delivered him the writing, but

refuſed

refuſed to ſwear; ſaying, his word ſhould be truer than a Turk's oath at all times.

Then Mohammed went on ſhore, leaving ſome of the better ſort of his company for pledges; and bade the commander hang them, in caſe he did not bring him all his company on board that night. Accordingly, he returned in the evening with Mr. Femel and nine others; Femel, Williams, and Cunningham were cloathed with paltry veſts. Another was ſent to Sir Henry, which they ſaid came from the aga. The nachada would have put it on his back, deſiring he would wear it as a favour from that thief; but the commander refuſed it, telling him, "That he ſcorned to wear any thing which came from ſo unconſcionable a dog, and his enemy, by whoſe order he had received ſo much wrong." Mohammed finding he would not take it, left it with his man, and ſo departed; carrying with him the Turk taken in the Darling, (who had remained on board the Increaſe till then) and promiſed to return in the morning with the pinnace. Accordingly on the 27th, he brought the pinnace, and aſked, If all he had promiſed was performed? The commander replied, No; for that he ſtill wanted a boy, whom they detained at Tayes, and had forced to change his religion: declaring, that he ſhould be delivered to him before he would releaſe the ſhips. Mohammed replied, that he would tell the aga, and return with his anſwer.

On the 28th, a writing was ſent the commander from the aga, whereby Nachada Mohammed and Shermal Shah Bander, bound themſelves under forfeiture of ſhips and goods, that the boy ſhould be delivered in twelve days, provided he would releaſe the veſſels. On which he gave them leave to unlade the ſhip of Diu, and viſit the other ſhips at their pleaſure. This night Mr. Femel died either of a calenture, or of poiſon given him by the Turks.

On the 1ſt of June, three boats laden with cotton were diſcharged out of the ſhip. This evening a ſtrong ſquall from ſhore broke their land-cable. The wind was ſo hot they could hardly endure it, and it obliged Sir Henry to fly to his cabin. Theſe hot winds are common in thoſe parts. He wrote a letter to the baſha in Italian, demanding reſtitution of his goods, and ſatisfaction for damages. He was anſwered afterwards as to his demand: but the letter was not underſtood, for want of an interpreter. He again laid an embargo on the ſhip of Diu, and would not ſuffer them to unlade any more goods out of her, till the baſha had ſatisfied him to the value of 70,000 rials of eight. The boy alſo was reſtored: but all this was not accompliſhed till ſeveral angry meſſages had paſſed between him and the aga.

This being ſettled, the Shah Bander demanded the 1000 venetianos promiſed the baſha's chiaous: but Sir Henry would by no means pay it, although he urged him much with his promiſe, and ſaid he ſhould be forced otherwiſe to pay it himſelf, for that he had paſſed his word for that ſum. The commander told him the officer had not performed his promiſe made him, to ſet him and his people at liberry: how the chiaous and he will agree (ſays Sir Henry) I know not, but I doubt he will be forced to pay it. Towards night the Shah Bander and the reſt having taken their leave, the commander cauſed three guns to be fired for his farewel.

On the 3d of July in the afternoon, the ſhips warped out of the road, and that night ſet ſail towards Aſſab, but could not get thither till the 5th, in the morning. On the 6th, Sir Henry landing, cauſed all the wells to be emptied and cleaned; for he had been often told at Mocha, that the Turks practiſed with the people of Aſſab to poiſon the wells. They were employed till the 13th, in watering and buying proviſions: nothing happening in the mean time worth notice. This day the king of the country, ſent three of his chief ſervants, attended by thirty ſoldiers, with a letter and preſent of refreſhments to him. The purport of his letter was, to congratulate the commander on his eſcape from his enemies, and welcomed him into his dominions; offering to ſupply him with whatever his country afforded; Sir Henry having feaſted and rewarded the meſſengers, ſent the king a preſent; conſiſting of a veſt of broad cloath, and a fine looking glaſs.

On the 17th, there came a veſſel from Mocha, wherein was Tokorſi the Shah Bander's man, and another Bannian; who brought ſome proviſions Sir Henry had beſpoken, and the money due to him; but a writing he had demanded to ratify the peace, was not brought. Tokorſi's excuſe was, that the baſha was ſo buſy in the wars, that he had not time to write; from whence it was manifeſt, that he intended to keep no meaſures with the Engliſh.

On the 24th, the fleet ſet ſail out of Aſſab road, to put in practice what Sir Henry had long before determined, which was to ply to the windward as high as the iſland of Comorin; and there wait for a great ſhip that comes every year, about this time, from Suez, richly laden for Mocha. By theſe means he propoſed to be ſufficiently revenged on the Turks. He was the more deſirous to meet with her, becauſe he underſtood that the baſha, and Rejib Aga had conſiderable ventures in her. From hence, to the laſt of this month, they plied to the windward, and the wind being contrary, they ſailed by day, and commonly lay at anchor all night. In this cruiſe they ran many hazzards for want of a pilot, and often narrowly eſcaped running on ground, which would have riſqued the loſs of all: at laſt the ſhip eſcaped them in the night; as they found on their return.

They ſet ſail on the 9th of Auguſt in the morning, and about eight in the evening, anchored three leagues ſhort of Babalmandel. On the 10th, the Darling and Releaſe, went out by the weſtern channel, which they found to be three leagues over from the Coaſt of Abyſſinia, to the iſland of Babalmandel. One third of the way from the iſland, they had no ground at forty fathoms, the channel being clear without dangers, and full of ſhoals and rocks, which rendered it unnavigable, as all the Turks and Indians reported, in order to make them believe there was no other paſſage, but through the eaſtern channel, which might be ſo fortified, that no ſhipping could paſs without being in danger. Between the Arabian ſhore and the iſle, is not a mile and a half: and on the land ſide, there lie ſhoals reaching a good way off.

The Increaſe and Pepper-corn, ſailed through the narrow channel. About four in the afternoon, they all met without the Streights, in nineteen fathoms, being about four miles from the Arabian ſhore. All this night they ſailed along the land.

From the 12th till the 27th, they had much wind, often contrary, and ſometimes calm, with a current ſetting ſouth-weſt, about four miles an hour: ſo that during this time, what they got when they had a favourable gale, they loſt, and more, when it fell calm, being carried back by the current.

The monſoon being far ſpent, Sir Henry deſired the nachada of Diu to help him with his boats and people, to take in ballaſt and water; which he, with others, moſt readily granted; proffering him all the water out of his ſhip: and employed his people alſo to fetch ſome from ſhore. The commander often ſpoke to the king to ſell him his aloes: but for a long time could bring him to no reaſonable terms. At length, with much trouble he bargained with him for all, paying dearer for it than Captain Keeling did for his. The Indians were alſo treating for it, which made him raiſe his price. The commander left letters with the king, which he promiſed to deliver to the firſt Engliſh who ſhould arrive there.

On the 3d of September, Sir Henry having finiſhed his buſineſs, the ſhips plied out of the road; having with much ado got a perſon out of the Diu ſhip, who took upon him to be a good coaſter, to pilot him to India. The 26th, between nine and ten o'clock, with a fair gale, they entered the road of Surat, and anchored by three Indian ſhips in ſeven fathoms. A mile from them rode ſeven ſail of Portugueſe frigates,

and thirteen more were within the river of Surat. Long before Sir Henry's arrival, the Portugueſe had intelligence that he was in the Red Sea, and bound for this place; ſo that their frigates were purpoſely ſent to hinder them from trading at Surat, or any where elſe upon the coaſt. A ſmall frigate came on the 29th from the admiral of the Armada, (as they termed it) in which was one Portugueſe and his boy; who brought an anſwer from the captain major to the commander's letter, ſent the day before; the purport of which, after ſome compliments, was, that he was glad the commander belonged to a king who was a friend; and that he and his would be ready to ſerve him to the beſt of his power, provided he brought a letter, or order, either from the king of Spain, or the vice-roy, for trading in thoſe parts; that otherwiſe, he was obliged to guard the port he had in charge, where the king his maſter kept a factory. Sir Henry returned anſwer by word of mouth, that he had a letter neither from the king of Spain, nor vice-roy, nor had any need thereof: for that he was ſent by the king of England, with letters and with preſents to the Great Mogul, in order to eſtabliſh the trade begun in thoſe parts: he likewiſe deſired, or rather demanded, that the Engliſh in thoſe parts might come on board. He beſtowed a veſt of broad-cloth upon the meſſenger, who promiſed to return the next day. Finding it was not poſſible, without a pilot, to croſs the bar (where the commander went to diſcover in the Darling) he returned in the evening, and anchored in the road. Going on board the Increaſe, he found letters from Nicholas Bangham at Surat (formerly a joiner in the Hector) who informed him, that the Engliſh had no factory there, and that he was thither from the aga by Captain Hawkins, to recover ſome debts; likewiſe, that he had letters from the captain, but durſt not ſend them on board, leſt they ſhould be intercepted by the Portugueſe. He made no mention of what became of the factors and goods. Sir Henry wrote to him, to ſend thoſe letters and farther particulars concerning their buſineſs.

The 3d of October, Chojah Naſſan, governor of Surat, and the governor's brother of Cambaya, ſent a meſſage to the commander with a preſent of refreſhments, offering to do him all the kindneſs they could, adding, that, for their part, they deſired to trade with the Engliſh, but could ſee no poſſibility of doing it, as long as the Portugueſe armada rode ſo near their fleet. He therefore adviſed him to go for Gago. But Sir Henry could not as yet determine which courſe to take. On the 5th the interpreter (who was a Bramin, or a prieſt of the Banians) came in a boat with a letter from Nicholas Bangham, and Captain Hawkins's letter from Agra, dated in April before, relating the manner of his being taken into, and put out of favour, by the Great Mogul; that monarch's fickleneſs in granting their trade, and afterwards denying it them, in favour of the Portugueſe. The ſame meſſenger alſo brought two letters, adviſing ſuch commanders not to land any goods, or hope for trade in thoſe parts.

Though Sir Henry had ſo little encouragement, yet he reſolved to try his utmoſt. By Bangham's letters he underſtood that Captain Sharpey, John Jourdaine, and others, were coming from Cambaya to Surat, to go along with him; and therefore determined at leaſt to get them on board. The proper Monſoon being paſt, the Indian ſhips, which rode by him, had given over their voyage to the ſouthward. The Bramin deſired leave to bring their ſhips into the river, but this the admiral would by no means grant. On the contrary, he deſired them to tell the governor, and the reſt of the owners, that their ſhips ſhould not depart till he and all the Engliſhmen at Cambaya and Surat were on board.

On the 22d of this month the Portugueſe had laid an ambuſh for the Engliſh that were ſent on ſhore, and when they thought they ſaw a fair opportunity, broke out from their hiding-place, running forward with impetuoſity, but in crowds and without order. There were about 300 in all who diſcharged their ſhot. The fire was returned by the Engliſh on ſhore, as alſo by the frigate, which being cloſe to the land, they retired on board. The enemy having received ſome damage, retired behind the hills, and ſwam from thence to their ſhips, in order to eſcape the danger. After this, when the Engliſh went in their frigate and boats on board their ſhips to Deadner, the Portugueſe came to anchor where they were before, and Sir Henry having taken the opinion of Captain Dounton (of whom mention will be made hereafter) as well as of others, the reſult of the conſultation was, that they ſhould ſtay no longer there, but return to Surat road, where the Trade's Increaſe then lay.

The viceroy's ſon now came into the river with 100 ſail of veſſels, ſome filled were, but the greater part of them merchantmen. At night Sir Henry ordered the ſhips that rode within, to come and anchor by him, leſt he might be endangered by the enemy, of whoſe force he was ignorant. At this time arrived Nicholas Bangham, who brought with him ſome refreſhments from Surat. On the 9th the ſhips riding without the land, Chojah Naſſan came down to the ſea-ſide, Sir Henry went to him with his frigate and boats, and the former promiſed to bring goods to trade with him within two or three days at fartheſt; as alſo to order the country people to bring in proviſions which they ſtood in need of.

The commander received a letter from Bangham on the 18th, intimating that there was little trade to be expected here; and this circumſtance, joined to Chojah Naſſan's breach of promiſe, naturally led the Engliſh commander to conclude all their former propoſals meant nothing, and that they durſt not allow him the liberty of trading, for fear of the Portugueſe. For this reaſon he wiſhed to abide by the reſolve that was made of going away as ſoon as poſſible. To this purpoſe he wrote to Bangham to come to him, but he could not get permiſſion from Chojah Naſſan, whoſe vigilance, however, at length he eluded, and eſcaped. As ſoon as he was miſſed, the chief, judging that he was gone to the ſhips, ſent one Jaddah, a broker, after him, with a letter from himſelf, and another from Mokrib Chan, in which both promiſed to come ſoon to ſee the Engliſh commander, who could have but little dependence on what was written, yet he thought proper to wait ſome time the event of theſe profeſſions. After ſome interruption from the Portugueſe at the landing place, who were obliged to retire, the Engliſh got their boat, and prepared to depart, as they had determined.

But on Sunday the 24th, Jaddah the broker came on board, and told Sir Harry, that Mokrib Chin was on the road. And ſoon after dinner, going to the ſhore-ſide with his frigate, he found Chojah Naſſan there, who ſent to let him know that Mokrib Chan would likewiſe come there preſently. The admiral in conſequence went on ſhore again with a proper preſent, and found the Chan waiting for him, together with Chojah Naſſan and a great company. They embraced each other at their meeting, and while the Engliſh ſhips ſaluted, which the Indian ſeemed to take very kindly. Afterwards they ſate down to talk together on carpets ſpread on the ground. Afterwards Mokrib Chan came on board, and ſtaid all night, which apparent confidence induced the Engliſh commander to think that he ſhould ſettle a treaty of trade to advantage. The Chan however ſeemed rather diſpoſed to conſult his own intereſt than any thing elſe, after he had buſied himſelf in buying knives and toys, he urged the general to open his cheſts, aſking for whatever there was in them that pleaſed him, and even taking away from other quarters of the ſhip, ſuch things as he liked beſt, without offering to pay for them. He behaved in the ſame manner on board the other ſhips which he viſited, and the commander then thought proper to comply with his humour.

After all this courteſy ſhewn by the Engliſh, they attempted to eſtabliſh a trade, but met with little ſucceſs,

ſucceſs, although ſamples of goods were ſhewn with the prices marked on them. The Indians were very full of tricks and evaſions. Chojah Naſſan managed the markets, and did every thing to ſpoil the ſail of the new comers commodities.

However Mokrib Chan came down again on the 8th of December, and after many ſalutations proceeded to make overtures towards trading, but Chojah Naſſan who conducted the buſineſs, rendered it of little advantage to the Engliſh. In the mean time, Mokrib Chan received diſpatches from his king, which it ſeems contained an order for him to reſign his government of Cambaya, (as Chojah Naſſan had loſt that of Surat.) Nothing now remained to the former but the cuſtoms of the laſt-mentioned city.

The new governor of Surat and Haſſan Ali came on board the Pepper-corn on the 10th, and afterwards went to ſee the Trade's Increaſe. By this time the lead was nearly landed, which was a principal article of trade, but the natives of Surat, who weighed all with their own weights, proved deceitful. And at length Chojah Naſſan inſiſted on having half the worth for his commodities in money, and the other half in goods.

As it is a cuſtom in ſome Indian countries that any bargain may be revoked provided it be done in 24 hours, Sir Henry had obtained a promiſe of Chojah Naſſan that he would abſolutely ſtand to his bargain. But ſtill doubting the ſincerity of this man's profeſſions, the commander thought to keep thoſe on board for pledges, till the agreements entered into were performed. Thoſe pledges were Chojah Naſſan and the Shah Bander, on board the Pepper-corn.

On the 24th the whole buſineſs was concluded, and in conſequence the pledges were releaſed. Three days afterwards a Jew came on board who brought a letter from Maſſulipatam, which was ſent by Peter Floris, a native of Dantzick, employed by the company, giving an account of his ſetting out in February, his ſafe and ſpeedy paſſage, and his arrival in the beginning of September. Mokrib Chan who had been out of town, returned on the 7th. Before he left the place he had confirmed the promiſes he made to the factory. But now he ſent for Mr. Jourdaine, and with a frown on his brow, aſked, What he did there, and why the Engliſh were not departed. He was anſwered, that he ſtaid, depending on his promiſe that a factory ſhould be eſtabliſhed, and that otherwiſe he ſhould not have been there. But the Indian replied, They ſhould not have any factory there, and added, that by their long ſtay he had been a very great loſer in regard to the cuſtoms; for which reaſon he ordered them in the king's name to quit Surat, and they departed accordingly.

They warped out with the Increaſe on the 9th of February, the weather being calm; and on the 11th in the morning ſet ſail for Surat road, and anchored there in the afternooon, by a new ſhip of that place, which was lately launched, and came out of the river, bound for the Red Sea. They weighed on the 12th, and, driving to the ſouthward, anchored again near a ſhip of Calicut, bound for Surat, out of which Sir Henry Middleton took a pilot for Dabul, whither he ſteered his courſe, and arrived in the road on the 16th, about ſix in the evening. The pilot was now ſent on ſhore in a fiſhing boat, with a letter to the governor. The letter was to intreat him to uſe the commander kindly, and trade with him. In the afternoon he received a ſmall preſent of refreſhments, both from the governor and Malech Amber, with many compliments, offering him any thing the country afforded, and promiſing to deal with him if he would ſend on ſhore. On this he ſent two merchants with a good preſent, who were bid welcome, and kindly entertained while they ſtaid there.

On the 24th, Sir Henry called a council, and propoſed the queſtion, Whether to go from thence directly for Priaman, Bantam, &c. or return to the Red Sea, to trade with the Indian ſhips bound thither? He alledged, that ſince they would not deal with them at their own doors, to which they had brought from far commodities proper for their country, and no where elſe vendible, he thought they ſhould do themſelves but juſtice, and them no wrong, in compelling them to barter, and give their indicoes, and other goods in exchange. It was the unanimous opinion, that they ſhould return to the Red Sea, for ſeveral reaſons: Firſt, in order to put off the Engliſh goods, and get others in lieu fit for their own country. Secondly, to take ſome revenge of the great and unſufferable injuries done Sir Henry, by the Turks, at Mocha; and, laſtly, To ſave the ſhip, which they heard (by the way of Maſſulipatam) was bound that way; judging, that otherwiſe ſhe could not poſſibly eſcape being betrayed. From this day to the 27th, they employed their time in getting freſh-water on board.

The Indians had bought all the red-lead, and it was actually delivered on ſhore, but afterwards diſliking it, they returned it.——In the evening, the Engliſh ſaw a ſhip in the offing. Two or three Malabars which made near them, told them ſhe was a Portugueſe veſſel, of Cochin, bound for Chaul; therefore the commander ſent the Pepper-corn, Darling, and frigate, to fetch her in, which they did on the 28th. Thoſe in the frigate having pillaged the mariners, he took their plunder from them, and returned it to the owners. Her lading was cocoa-nuts, and little elſe. This day was ſpent in ſearching her, but the commander could find no bills of lading. Some ſmall matters he took from her, on account of the injuries offered him by the captain, at the bar of Surat, in ſeizing his goods, and hindering his trade. That he ſuſtained no farther damage from them, was not owing to their good will, but for want of power, as appeared by the viceroy's letters, &c. before-mentioned. Sir Henry took an account of the things he had out of her, from under the hands of the principal men who were on board.

On the 25th of March they had ſight of the iſland of Socotra, and at four in the afternoon the point of Deliſſa, bore ſouth ſouth-weſt, ſix leagues off; variation ſixteen degrees. From the 24th at noon, till this day at noon, they ſteered north-weſt and weſt, and weſt-north-weſt, and weſt all night, thinking by day-light to have been near the weſternmoſt part of the iſland; but contrary to their expectation, they found they had gone but little a-head, though they had a freſh gale, as they had a great current againſt them. From noon, till four the next morning, they ſailed along the coaſt with a ſmall wind, and then it falling calm, the current carried them directly upon a peak, which lies four or five leagues from the weſtern part of Socotra. They were forced to anchor till they had a gale to carry them from it, which ſpringing up from the eaſt, about two hours after, they ſtoood to the weſtward, and at noon were four leagues from the rock, where they found a current ſetting to the northward. The 27th, ſhaping their courſe, weſt-ſouth-weſt, they met with a current ſetting to the northward. In the morning they were oppoſite Abba del Curia, and before night had ſight of Cape Gardafui, about ſeven leagues diſtant. From yeſterday noon, till this night, they ſtood in till midnight, and hauled cloſe of a wind to the ſouthward. The 28th, by eight o'clock, they were near the ſhore, midway between the two capes of Guardefui and Felix.

On the 22d of April, Mr. Pemberton came on board, and told the commander that he had been at Socotra, and that the king had ſhewn him a writing left there by Captain John Saris, (who was the commander of three ſhips) wherein an account was given of the time he left England, his places of refreſhing by the way, his arrival there, and proceeded from thence to the Red Sea, to ſeek trade. It was alſo mentioned, that he had peruſed a writing left there by Sir Henry, with reaſons to diſſuade him from going thither. Yet that having the Grand Signior's

paſs,

paſs, he hoped to meet with better entertainment than Sir Henry had done. The commander having heard this unexpected news, called a council, who reſolved to proceed as formerly they had determined; and indeed they had no other way left, for they could not get back till the weſterly winds came on, which could not be till the middle of May; thereupon the commander left Captain Dounton in the Pepper-corn, to to ſtay thereabouts, till the 5th of this month, in order to obſerve the ports of Aden, whilſt himſelf, with the Trade's Increaſe and Darling, went to watch the two-fold entrance of Babalmandel.——They ſteered from thence with the head of Aden, being about ſeven leagues off. About four they were in with Aden. From four o'clock this day, till the 3d in the morning, they had little wind: they ſteered along the channel, weſt by north, and weſt north-weſt. Towards the heat of the day, it began to blow, and they continued their courſe as before. About ſunſet they anchored in 20 fathoms, four leagues off the ſtreights, where they rode till next morning. The 4th, about eight in the morning, they ſet ſail, and about ten, anchored within Babalmandel, between Arabia and the iſland, in eight fathoms water. The channel is half a league over. As ſoon as they had anchored, there came a boat from ſhore on board the Trade's Increaſe, wherein was a Turk, and three or four Arabian ſoldiers. This Turk was chief of the place, ſent by the aga of Mocha to guard it. He promiſed the commander, if in caſe he thought fit to write a letter thither, to ſend it away by a foot-poſt, who ſhould return in three days, with an anſwer; upon that he wrote a letter to Captain Saris, to acquaint him with his reaſon for coming, and what he intended to do.

On the 6th there came in a veſſel of Zeyla, a place within the ſtreights on the Abyſſinian coaſt, bound for Mocha; her lading was mats. Sir Henry bought of her 12 ſheep, and ſo permitted them to depart. This day they had much rain. The 17th, before day, there came in a ſhip from Baſanor, which the commander cauſed to anchor by him. The ſame morning Richard Wickham, one of Captain Saris's merchants, brought ſellers from him; the purport of which he omitted ſetting down in his journal. He kept Wickham with him, on account of the commander's ſtopping the Indian ſhips, and returned an anſwer by a Turk who came in his company. The 8th in the afternoon, there arrived a ſhip of Diu, bound for Mocha. The commander ſent off his frigate to fetch her to anchor by him. She proved to be the ſame ſhip he had detained the year bear before in Mocha road. This day they rumaged theſe two ſhips, and took out ſuch goods as were fit for their purpoſe, which were brought on board the Trade's Increaſe. The 9th came in a ſmall frigate which was laden with Ollibanum, of which they bought part, and paid for it to their content in rials. They continued rumaging the Indian ſhips for more goods.—The 11th, the commander detained a ſmall bark of India. The 14th Captain Saris came into the road about eight in the morning, anchored with his three ſhips by Sir Henry. Having ſaluted each other with their guns, Captain Saris, Captain Towerſon, and Mr. Cox, (their chief merchant) came on board the Trade's Increaſe, where they ſpent all that day together. Captain Saris at parting, invited Sir Henry and others the next day to dinner with him. The 15th, Sir Henry and the reſt going on board the Clove, the captain ſhewed him the Grand Signior's paſs, and read it. They had a good deal of converſation on this occaſion. At laſt, by an agreement in writing, Captain Saris was to have one third part of what ſhould be taken, paying for it only as Sir Henry did, for the ſervice of his three ſhips in action; and leaving the diſpoſing of the ſhips afterwards to him, who had ſuffered the wrongs.

On the 16th, the ſhips coming in, Sir Henry ſent his frigate, and brought them to anchor; one was loaded with rice, bound to Mocha; the other was of Carapatan, near Dabul, and ſubject to the ſame prince, laden with pepper, which ſhip came from Achen, and was bound for Aden, but being chaced by Captain Dounton to leeward of the place, they propoſed to go for Mocha.

A ſhip of Cananor came in on the 18th: ſhe had been at Achen, and was bound for Mocha, laden for the moſt part with pepper. Next day there arrived two more from Surat, one called the Haſſani, belonging to Abdal Haſſan, bound for Joddah; the the other a ſmall ſhip of Sir Henry's old friend, Chojah Naſſan, bound for Mocha. They were brought to an anchor near the commander, who ordered their ſails to be taken from their yards, and kept ſome of the chief men on board himſelf. By them he underſtood, that the Great Mogul's mother's ſhip, called the Rhemi, would ſoon be there. The 20th, there came a great ſhip of Diu, laden with Indian commodities, bound for Mocha, and preſently after another of Dabul; ſhe paſſed by, but the pinnace fetched her back. Next day, Sir Henry ſent away paſſengers out of the Surat ſhips. About noon there arrived a ſmall veſſel from Calicutt, bound for Mocha, which was ſtopped with the reſt. At length, on the 23d, the Rhemi of Surat, the queen mother's ſhip, arrived: ſhe was bound for Joddah, and ſtopped with the reſt: in this veſſel there were 1500 perſons. In the afternoon Sir Henry delivered the ſhips their ſails, and ordered them to be ready betimes the next morning, to ſail with him for the road of Aſſab. The 24th, they all ſet ſail from the ſtreights, only the Thomas and Darling were left to ply up the Streights. They arrived at Crab Iſland about five o'clock, and came to an anchor in 12 fathoms water, where they rode all night, the wind at ſouth ſouth-weſt. Next morning, they ſtood in for the road of Aſſab, and about one o'clock caſt anchor in ſeven fathoms and an half.——The 27th, they fetched a large quantity of indico out of the ſhips of Surat and Diu. The Clove plying where the fleet was, Sir Henry cauſed a gun to be fired, which ſhe anſwered with another, and bore up for the road preſently after.

This relation ending here, we ſhall give a part of Captain Dounton's account, by way of ſupplement to the voyage.

"The firſt of April (ſays he) from midnight, till ſix o'clock, we ſteered weſt by ſouth, five leagues, at which time, by eſtimation, they were 18 leagues ſhort of Aden.

This day the commander ſent for Captain Dounton, Meſſrs. Lawſe and Fowler, to conſult about their ſeparation: at length it was concluded, that the Pepper-corn ſhould ply before the port of Aden, to keep all Indian ſhips from entering or ſtaying there. and put them by towards the Red Sea; whither the commander was to repair with the Trade's Increaſe.

"On the 2d, from midnight to ſix o'clock in the morning, when they ſhould have ſeparated, about eight leagues eaſtward of Aden, they found the Darling at anchor; ſhe had got before them by reaſon of their lingering for her four days: ſhe had done her buſineſs at Socotra, and left that iſland before the commander paſſed it; and got a day before him in her paſſage by the Saboyna, Abba del Curia and Mount Fœlix, where he lingered for her. She brought from thence the copy of a letter left with the king by Captain John Saris, who had under his command the Clove, the Hector, and the Thomas, ſignifying, that notwithſtanding the account Sir Henry gave in his letter, of the villainous treatment received in the Red Sea, yet with his ſhips was gone thither. Immediately, the commander, with the Trade's Increaſe, and Darling, departed towards the Streights, leaving Captain Dounton at an anchor, to execute the order before given him.

"The third, at one in the morning, they ſet ſail, and ſtood ſouthward, the better to diſcover; and thus all day kept up to windward of Aden. In the morning were ſeen three ſail, which were bound for

Aden, but ſtood away for him; ſo that he could not come near them all night. The wind blowing hard, he did not anchor, but lay a hull, to try how much the ſhip drove, which he found to be three leagues in ten hours, running thus far in. And the 4th, about ſeven in the morning, he anchored in 12 fathoms, three or four miles from the town of Aden. The 12th, in the morning, a little after midnight, they ſet ſail to croſs a veſſel they ſaw, and in the morning ſaw her riding at anchor, three miles to the ſouthward of them. She ſeeing them prepare to bear up with her, preſently was under ſail, and ſtood in with Aden; but between nine and ten o'clock, the Pepper-corn firing a gun at her, thoſe on board ſtruck their topſails, and ſent in her boat. They told the captain they were bound for Aden, and that their ſhip belonged to the Samorin, or king of Calicut, from whence they had been out 40 days; that they paſſed near Socotra, and touched at Mount Fœlix, where they ſaw the letter left there by the commander, for the Darling; as alſo a ſhip of Dabul, which came from Achen. The nachada of this ſhip, was called Abraham Abba Zeinda, her burden was 140 tons, and the cargo, according to their information, as follows: tameric, three tons, rice, 2300 quintals, jagaza, or brown ſugar, 40 bales, cardamum, ſeven bahars; dry ginger four quintals and a half; pepper, a ton and a half; cloth 31 packs, each pack containing five or ſix maunds. She had in her 73 perſons, for the uſes following: 20 to bale water, and other buſineſſes below; eight for the helm; four for the top and yard and other buſineſſes aloft; 20 boys for dreſſing ſeveral mens victuals; the reſt merchants and pilgrims.—— They being of the place whoſe inhabitants never wronged the Engliſh, the captain diſmiſſed them, without taking any of her goods, excepting two tons of water, which they ſpared him. However, as he would by no means permit them to go to Aden, they were very uneaſy; ſo that he was obliged to tell them, if they offered to attempt it, he would ſink their ſhip, and leave them only their boat to ſave their lives. Yet their unwillingneſs to depart, made him threaten them farther, that if they did not get away before any other ſail came in view, he ſhould be forced to ſink their ſhip to prevent their dealing with the Turks, his enemies. Upon this they ſet ſail, and ſtood ſomewhat off the land, but to leeward; ſo that he was under the neceſſity to keep plying off and on all day and night, for fear in the dark they ſhould ſlip into Aden. It muſt be obſerved, that as ſoon as any ſhip from the eaſtward or elſewhere, came in view, ſhe had notice given her by the governor of the town, of Captain Dounton's being on the coaſt, before he could come to ſpeak with her, and when he had the Malabar under command, the governor ſent a boat on board with ſeveral Turks, and two Turkiſh ſoldiers of the town, who had been formerly ſome of the inſtruments employed by Abdal Rahman Aga, to bind and torture the captain's men, then in their hands. Theſe, doubtleſs, came as ſpies to ſee what ſhip ſhe was, and ſo to colour their deſign, brought ſome fruit to ſell. As ſoon as they ſaw who their viſitants were, (for they knew them immediately) they would have put off their boat, and have gone; but the captain would not permit them, being come on board, he cauſed them to be put in mind of their cruel treatment of his people, but without uſing any harſh language; and when he thought they were ſufficiently terrified by the conviction of their own minds, he ordered them to be told, that they ſhould, notwithſtanding, ſee how far his nation exceeded the Turks in lenity; for that, although they had moſt cruelly handled his men, after inviting them on ſhore, under the moſt ſolemn promiſes of friendſhip and ſecurity; and, although he knew they themſelves had been concerned in afflicting them, yet he would let them go without doing them any injury. Therefore they departed, promiſing next day to bring more refreſhments. Next morning they ſent a boat with good fiſh, and promiſed to come again with better proviſions, which they were providing; but the Pepper-corn being under ſail, to put the Malabar to leeward, ſtood off too far for them to row to her. Had that ſhip ſtaid, the aga might have permitted them to perform their promiſes.

On the 14th in the morning, the wind at eaſt, they ſaw another ſhip of like burthen, bound to Aden. Having forced her to anchor, about ten o'clock, the captain ſent on board to ſearch her, and bring away ſome of her men, while he ordered his boat to be hoiſted out. By them he underſtood they were of Pormean, a town which was then tributary to the Great Mogul, who had abuſed the Engliſh nation, and who deſpiſed their king: the Nachada being a Bannian, Captain Dounton being at anchor with his ſhip, two miles from Aden, and finding by the Malabars working the day before, that if any other ſail, of ever ſo much importance, ſhould approach before he could finiſh his buſineſs with her, he muſt leave one or other of them, to go where ſhe thought fit; he therefore judged it better to ſend his own people to ſearch what he had in her, than examine thoſe who belonged to her. Thus, with great labour in rummaging before night fell, they had out of her 14 packs of coarſe dutty, of ſix corges a pack, and 36 ballets, containing ſo many of the like number of dutties; one ſmall ballet of candakinſmill, or ſmall blue pieces of calico, with 30 or more white baſtas, a little butter and lamp-oil. Theſe were all fit for them. The reſt of her lading were packs of cotton, which, next day, they propoſed to examine.

This day Maharim, Aga of Aden, ſent to the captain a preſent of hen-eggs, limes and plantains, which he would not look upon as ſuch, ſending word by the meſſenger, That the manifold injuries done his friends and nation at Aden the year before, had brought him there again to revenge himſelf, by diſturbing the Turks. And that his coming was not to merit favours at their hands, ſo he reſolved to receive none of their diſſembling courteſies: for ſince they cut the throats of the Engliſh, when they came to them in friendſhip, they could expect no real kindneſs from them now, that they came to put all the Turks in thoſe parts to a defiance. He added, with regard to the preſent, that as it was ſent, his people ſhould take them for their own uſe, giving as much as the things were worth. There likewiſe came on board, a fiſhing-boat with ſome freſh-fiſh, which the captain ordered to be bought for ſupper, always making the bringer eat part of what he brought."

On the 6th, in the morning, they deſcried a ſail to the ſouth of Aden, plying to the eaſtward. In the afternoon the pinnace being ſent to fetch her, brought her near. She was a jelba of Shaher, bound home, laden with grain, opium, and other commodities; beſides many pilgrims from Mecca, as paſſengers. Next morning they ſaw a jelba plying to the eaſtward between them and the ſhore; the pinnace being ſent to fetch her off, ſhe proved to be the ſame that had paſſed by the 17th and 22d. Of thoſe on board, for a trial, they bought nine pounds and a half of opium; and ſo again diſmiſſed them.

On the 28th, in the morning, they ſet ſail, plying off and on to windward of Aden, with the wind at eaſt. Next day in the afternoon, having deſcried two ſail ſtanding towards Aden, the captain ſent his pinnace well-manned, to bring them in; which by four o'clock on the 30th, was effected. They both belonged to a place on the Abyſſinian Coaſt, called Bandar Zeada. One was only laden with mats, the other with ſome mats and ſixty-eight ſheep with great rumps, which they bought, and ſo diſmiſſed them. They preſently ſailed into Aden; the wind at eaſt-ſouth-eaſt, and eaſt-north-eaſt.

On the 8th, with an eaſy gale of wind at north-eaſt-by-eaſt, they continued plying towards the Streights. At ten o'clock they deſcried the land on the Abyſſinian ſide, which appeared like an iſland, till

till they drew nearer. From thence they ſteered north-weſt towards the Streights, then, by eſtimation, ten leagues diſtant, which, towards four in the afternoon, they had ſight of. Here they lingered off and on, to ſpend the night. Daylight appearing, they ſtood in towards the Streights, at the entrance thereof, they perceived a ſmall ſail a-ſtern of them: therefore the captain ſtruck his top-ſails to ſtay for her, and ſent off his pinnace which brought the nachada and Malim on board. They were ſubjects to the Great Mogul, and belonged to a place called Larree, at the mouth of the River of Sindi. He bore up with them in a bay on the eaſt-ſide, and anchoring in ſeven fathoms; ſent his merchants to ſearch what ſhe was laden with. They found ſeveral packs of cloth, and many ſorts of ſeeds, beſides leather, jars of butter, and a great quantity of oil, ſome for eating and ſome for burning in lamps. As the captain could not keep her for want of water, ſhe having no paſſengers, and was uncertain of a wind, he reſolved to take out the packs of cloth fitteſt for their purpoſe, with ſome butter and oil for uſe in the ſhip, and ſo let them go on to Mocha. They had ſcarce ſet about this work, when, towards three in the afternoon, they ſaw opening the eaſt-land of the Streights, a veſſel of 200 tons; and immediately following her, a large ſhip, whoſe main yard was forty-three yards long. Theſe ſhips being very near, before they could be ſeen for the land, the great one, by the aſſiſtance of wind and tide, had got a-head of the Pepper-corn, before the captain could get out of the bay to croſs her; ſo that ſhe was brought to a ſtern chace: but drawing nearer, they knew her by her maſts and tops, to be the Mahmudi of Dabul, their friend: ſo that they were diſappointed in their expectations of a prize: yet the captain, knowing the pride of the nachada, would gladly have exerciſed his authority over him, becauſe he would never vouchſafe to viſit the commander, either in the road of Mocha or at Dabul: but finding the veſſel gain ground of him, he gave them one ſhot, and ſtood again with the other ſhip. This latter ſeeing the Engliſh follow the great one, ſtruck a-hull, thinking to loſe them by the darkneſs of the approaching night. Captain Dounton took her to be a ſhip of Diu, but when they came up with her, the men ſaid they were of Cuts Nagone, a place not far from the river of Sindi. She was laden with cotton, a few packs of calico, ſome butter and oil. The Captain having got ſome of the principal men on board him, cauſed them to edge up with him into ſhoal water on the Arabian Coaſt: where by lights he endeavoured to find out the Larree ſhip, in which he had left five men; and at night they anchored in twelve fathoms, four leagues within the Streights. Here the next two days, they took out of the Larree ſhip, ſixty-ſix bundles of calico (which, becauſe they were otherwiſe furniſhed for all their Engliſh commodities and needed it not, was delivered to them, with part of the butter and oil: only eight gorges of baſtas, for which they were paid). Theſe things being taken out, the captain put on board her paſſengers and pilgrims of the cotton ſhip, and ſent a letter by them to Sir Henry Middleton, in caſe they ſhould find him in the road of Mocha: but before they departed, the Engliſh ſaw a veſſel coming towards them, and becauſe the wind was not good, they ſent a canoe before, for expedition. The maſter informed the captain, that he belonged to Bandar Zeada, a town on the Abyſſinan Coaſt, half a day's journey weſtward from Bandar Caſſum; that he was bound to Mocha with mats: that going on ſhore, as he paſſed the Streights, he was told by one, who ſaid he had a letter for Captain Dounton, that his countrymen were gone to Aſſab, with eight or nine Indian ſhips: but that he who had the letter would not ſend it by him, becauſe he expected a reward, in caſe the captain ſhould be put back to the Streights. Upon this advice, the captain ſet ſail the ſame afternoon, but the wind not proving favourable, he was obliged again to come to an anchor.

It was about this time that Sir Henry, after many delays received the compoſition money already mentioned, and the Engliſh veſſels departed.

After paſſing Aden, Captain Dounton ſays, the ſhips came to Tekoa, where the Darling was, which had buried three merchants and three ſailors; and had moſt of their men ſick. ——

"Here (ſays the captain) they likewiſe heard of Captain David Middleton; of the four ſhips of the ninth voyage, whereof two were already arrived at Bantam: and of Captain Caſtleton's man of war: this gentleman, who had been here a little before, gave an account of fifteen ſail of Dutch already come, or near at hand, laden with ammunition: and of two ſhips of New-Haven, in France, come alſo to trade. Which news took away all hopes of repairing their tired-out, croſſed, and decayed voyage.

"On the 22d, Sir Henry Middleton finding ſuch little encouragement at this place, ſet ſail the night following in the Pepper-corn, towards Bantam, leaving Captain Dounton in the Trade's Increaſe, to remain till the 16th of next month. On the 2d of November, all the men of every kind, in Tekoa, went to the wars with Raja Buneſi, till whoſe return, no buſineſs was to be done on land. This day in taking up the wine, they found a conſiderable quantity run out, the caſks being rotten.

"On the 20th they fetched the remainder of the pepper weighed the day before, in which they diſcovered much deceit; for in ſome of the ſacks there were ſmall ſacks of paddy; in, ſome rice, and in ſome great ſtones: alſo rotten and wet pepper put into new dry ſacks; yet there was no remedy. Having got every thing on board, they ſet ſail near midnight, by the moon-ſhine, the wind at north-eaſt off the ſhore. They took care to avoid the two known rocks, three leagues from the iſland, one ſouth by weſt, the other ſouth by eaſt, having 26 fathoms between them, oozy ground; and for better ſecurity, ſteered back the courſe they ſtood the ſame day they came. As they ſtood off, the wind ſomewhat ſhrunk on them, yet they lay firſt weſt, then weſt by ſouth, and weſt ſouth-weſt, and laſt of all ſouth-weſt by weſt; the current ſet them ſomething ſouthward, their depths proportionably from 14 to 27 fathoms, all oozy ground. The next caſt they had four fathoms, and the ſhip ſet faſt upon a rock. Sounding, they found a-ſtern four fathoms, and on the ſtarboard midſhip, a quarter leſs than three fathoms, under the head three fathoms, and a ſhip's length off, five fathoms; on the larboard bow, a ſhip's length diſtant, they had ſix feet, in the midſhip 16 foot, under the larboard gallery 20 feet; and round about within a cable's length, deep water. She remained upon the rock from a little after three, till five o'clock, but the wind ſoon grew calm, and the ſea ſmooth; likewiſe the ſet or motion of the ſhip, (conſidering the place) was very eaſy. The water had ſo increaſed in the hold, that both their chain-pumps though plied hard, could not, for a long time, gain on it: but their main endeavour was, with the utmoſt expedition, to get out a ſtern anchor, which was let fall in twenty-ſix fathoms right a-ſtern, two thirds of a cable diſtant, in order to heave her off: which had ſo good effect, that before they could, with the capſtan, bring the cable tight, the ſhip was of her own accord ſet into deep water. This was no ſooner done, but they had a weſterly gale, which put them off a mile from the rock, where they anchored to wait for the boat, which brought their kedge after them; and though it was a clear day, they could not diſcern where the rock ſtood.

"At length the captain, after a conſultation, judged it proper to return to Tekoa, there to endeavour to ſtop ſuch part of the leak as they found to be in their ſtern. Accordingly they ſet ſail for the iſland, and at ſun-ſet anchored in the ſame place, which for their turns they deſired. This day, for a long time they kept both pumps going, but the water ſtill increaſed when the chain chanced to break, which often happened.

happened. The two pumps at once employed twelve men, and the labour was ſo extreme, that without ſhifting hands it could not long be continued: but the water being once brought low, one pump at a time has always been ſufficient to diſcharge it; and yet it tires all the people by often ſhifting: ſo that the captain found it required more than ordinary addreſs to appeaſe their murmurings and clamours.

"On the 22d, and the two ſucceeding days, they landed indico, cinnamon, and other things, endeavouring to lighten the ſtern, where they knew the leak was. They were thus employed, till the 8th of December, in ſtopping the leaks, which done, they ſet ſail from Tekoa, and, with the boats a-head, got over the bar, having four fathoms at low water. They got without the iſland by the help of a freſh gale at north-north-eaſt, north-north-weſt and north-weſt, which as the ſun got high, both dulled, and at laſt ſhrunk upon them: ſo that their courſe lying but ſouth-ſouth-weſt and ſouth-by-weſt, they came by eſtimation, near the rock which they had formerly ſtruck upon. They made diligent ſearch with boats a-head, and could diſcern no ſigns of it, the ſea being ſmooth; they then ſet away to the ſouthward, ſouth-by-weſt and ſouth, from ſun-ſet to ſun-riſing, the 9th day with a ſmall gale north-weſt-by-weſt. Afterwards, having ſteered ſouth-weſt-by-ſouth ten leagues, with the wind at weſt-north-weſt and weſt, they deſcried ſome part of a great iſland bearing ſouth-weſterly, and then ſteered away ſouth. This night they had much rain in guſts, with thunder and lightning, the wind was fickle, ſhrinking to the ſouth-weſt and ſouth-ſouth-weſt: it continued not long in that point, ſhifting to the ſouth-eaſt, eaſt-ſouth-eaſt, and eaſt; and again to ſouth-eaſt, they ſailed about eight leagues to ſun-riſe, at which time that part of the iſland which they ſaw the night before, bore ſouth-eaſt eight leagues off. Alſo to the eaſtward they had ſight of the high land of Sumatra, near twenty leagues diſtant. At noon they were in two degrees eleven minutes ſouth latitude. The northermoſt part of theſe iſlands, lies nine leagues ſouth-eaſt from the ſound they came through between the weſtern iſlands.

On the 20th, they arrived at Pulo Panian, the Pepper-corn having been fitted there. Sir Henry Middleton called a council to adviſe about the damages which the Trade's Increaſe had received upon the rock: the reſult was, that ſhe muſt be now ſtrengthened and careened, before ſhe could return home; (this commander died in this voyage at Machian, on the 24th of May, as was thought of grief, for the ſhip's being on ſhore, and the loſs of his men) and as this required ſo much time, that ſhe could not ſet forward this year; it was concluded to diſpatch the Pepper-corn immediately for England, to give ſome ſatisfaction to the adventurers."

The Pepper-corn being laden, on the 4th of February ſet ſail, and arrived on the 10th of May in the road of Saldanna, where Captain Dounton expected to have found all the ſhips, which formerly departed homewards; but he there met with only the Hector, and Thomas, two ſhips of the eight voyagers, and Captain Newport, in the expedition, employed in the 12th voyage, by help of whoſe men and coopers the Pepper-corn in four days took in all her water, intending not to ſtay to refreſh her men, in order to have the company homewards of the Thomas and Hector, which were to depart the next day. Accordingly, the 15th, at nine in the morning, they ſet ſail, with the wind ſoutherly, but being out of the bay, they were much delayed by contrary winds, which drove them ſouthwardly. This night the Expectation doubled the Cape of Good Hope, ſhaping her courſe towards Perſia, there to land Sir Robert Shirley, and his Perſian lady, with Sir Thomas Powel, and his Engliſh lady, all paſſengers, who were bound thither.

Towards evening the next day, the Thomas was fallen far aſtern; but the Hector with lofty ſail bore away. This nigt the Pepper-corn loſt their company, which, to recover, the captain ſtood to the ſouthward. He knew they could not run him out of ſight, and although he thought it againſt reaſon to ſtand in upon a lee ſhore, yet he bore up towards land, in order to ſeek them. Not ſeeing them, he delayed the time for them till the 19th, during which time the men were employed in repairing their weak and decayed ſails.

This day at ſun-riſing, Saldanna bore half a degree eaſt, diſtant 17 leagues, the weather being cloudy and dark, which continued the three following days. The 26th of June, as they came about the north-eaſt point, opening the road, and luffed in, with their anchors ready to let fall, they obſerved two caracks in the road, whoſe neighbourhood did not pleaſe Captain Dounton, neither durſt he venture to anchor by them, on account of their uſual treachery; therefore he ſtood off again by a wind, to deliberate for a while what to do. His intention was to have ſtood in again, to try whether they would be gone, concluding they might, upon a ſuppoſition, that he had more company near hand; but he found the current ſet the ſhip ſo faſt to the leeward, that he could hardly recover the road by two o'clock in the afternoon. Finding there was no other remedy, he ordered the ſailors to bear up the helm for England; his hopes being thus fruſtrated, both of refreſhing his weak and ſickly people, and regaining the company of the Hector and Thomas. The 15th and 16th, they had many ſhowers of rain; and the 18th they croſſed the line.

The 10th of September, they had a very ſtrong gale of wind, and a hollow ſea; but being unable to get into any part of the ſouth of England, they ſtood on their courſe, north-eaſt, in hopes to fetch Milford Haven in Wales, the ſooner to ſend letters to the company. The 11th, at five o'clock in the afternoon, they diſcovered the coaſt of Wales to windward, and the coaſt of Ireland to leeward, being a high hill between Wexford and Waterford. This night they ſpent with their head to the ſouthward, and next morning, finding it was not poſſible to fetch Milford Haven, the winds being contrary, he ſtood in towards the firſt coaſt, chuſing to go to Waterford, rather than any other harbour. The 13th in the morning, they diſcovered the tower of Whooke, the only mark for the river of Waterford, about three leagues diſtant. At eight o'clock they perceived a ſmall boat coming out of the river, which, being waſted, bound to Wexford, whom the captain hired to return, and give notice of his coming, to the lieutenant of the port of Dungannon, to prevent his ſtopping there, becauſe of the channel being narrow in that place, the ſhip might be endangered in winding up at anchor. At noon they got up into the river, ſo high as Paſſage. Here he found Mr. Stephen Bonner of Lime, being come with his bark to fiſh, who laying aſide his own buſineſs, was very diligent to provide for the eaſe and relief of the weak and ſick.

On the 18th, the captain ſent Mr. Bonner towards London, with letters to the company, to give them an account of his arrival and wants, deſiring they might be ſupplied. The 20th, Dr. Lancaſter, biſhop of Waterford, very kindly viſited Captain Dounton, bringing down with him his good cheer, and preached a ſermon on board. The 21ſt, Captain John Burrel came to ſee him alſo, and having proffered to lend him money to ſupply his wants, provided he could ſend ſomebody to Cork for it; he, on the 11th, ſent Mr. Mollineux along with the captain thither. The 22d Anthony Stratford, lieutenant of the fort of Dungannon, having hired a villainous fellow (whom, for his miſbehaviour, Captain Dounton had cauſed to be impriſoned in Waterford) to ſay what muſt bring him and his men within the ſtatute of piracy, obtained a warrant from the Earl of Ormond, and came to Paſſage, where he ſent to deſire the captain to ſend his boat well manned, to fetch him and ſeveral other gentlemen on board to ſee the ſhip. The boat's crew apprehended

hended the men, and preſently came on board; where, having arreſted the captain and his ſhip for piracy, he committed him priſoner to the fort of Dungannon, giving ſtrict charge that none ſhould have acceſs to him, without his warrant; and would have obliged thoſe, who by his permiſſion viſited the captain, to declare on oath, what diſcourſe paſſed between them. His man was ſworn not to carry letters between him and any one: they alſo examined ſeveral of the people this night upon oath, omitting nothing that might induce them to accuſe him. He continued in priſon till the 16th in the morning, at which time Stratford brought him a letter from Sir Laurence Eſmond his captain, inviting him to meet him (the knight) at Paſſage. They went together; and there the captain met Sir Laurence, accompanied with the biſhop of Waterford, come from the Earl of Ormond, to replace him in his charge; which, after much intreaty and perſuaſions, he yielded to. The 23d Mr. Mollineux, having ſent the captain's letters to the company, to acquaint them with the aforementioned affair, returned from Cork with money.

On the 25th Mr. Benjamin Joſeph, in a ſmall ſhip of Briſtol, came, and brought with him both men, money, and proviſions, to ſupply the captain's wants; which he took in with all ſpeed in order to be gone. The 6th of October he departed from the river of Waterford, the 12th in the morning he was abreaſt of Beachy; and by eight at night anchored in Dover road. The 13th in the morning he left Dover road, and at ten o'clock anchored in the Downs, near the Aſſurance man of war, ſaluting her with five pieces of ordnance. Immediately Mr. Cocket, the maſter, came on board, and again ſtopped his ſhip till farther order from the lord admiral: Upon this Captain Dounton ſent Mr. Mollineux to London, with letters to inform the company of it. The 17th Mr. Aderſly came from them with a letter for the captain, a releaſe for the ſhip; and Mr. Punniat, a pilot, to bring her about, the 18th in the morning, they ſet ſail; and at ſix o'clock at night anchored at Tilbury. The 20th, in the morning, they departed; and at ten o'clock came up to Blackwall. In the afternoon the deputy, and ſevetal of the committee, coming down, Captain Dounton delivered up his charge.—And thus ended the voyage to the Red Sea and Surat.

A VOYAGE to THE CANARIES, CAPE VERDE ISLANDS and BARBADOES, by CAPTAIN ROBERTS.

THE Engliſh, who had ſucceſsfully followed the track of the Portugueſe in the Eaſt, were early diſpoſed to ſail to the weſtern hemiſphere. The Canaries and Cape Verde iſlands, which the Portugueſe claimed the honour of diſcovering, though ſome of them were probably known to the ancients, under the name of the Fortunate Iſlands or Heſperides, were viſited by the Engliſh, who alſo founded ſettlements in the Weſt-Indies.

The voyage we are about to relate is one of thoſe which abounded in croſs adventures to the undertaker, but at the ſame time is ſuch as muſt, by its variety, prove entertaining to moſt of our readers.—

On the 14th of September, 1721, Captain Roberts contracted with ſome merchants of London to go to Virginia; and there, after taking poſſeſſion of a ſloop called the Dolphin, to buy a cargo to ſlave with on the coaſt of Guinea, from whence to proceed to Virginia or Barbadoes, as he judged moſt for the owners advantage. Captain Scott, one of the owners, being bound for Virginia in the King Sagamore, a ſhip of 22 guns, Roberts went on board him for ſo much of the voyage, and accordingly they ſet ſail from London: But being driven into Plymouth by contrary winds, they happened to be there when Lord Belhaven, who was going governor to Barbadoes in the Royal Ann galley, had put into that port. The wind ſoon after preſenting fair (though not likely to ſtand, the weather looking very unſettled) the Royal Ann ſailed, but had not been long out before ſhe met with hard and contrary gales of wind; and (as was ſuppoſed through the raſhneſs of the lieutenant) was caſt away upon the Stagg Rocks off the Lizard, wherein his lordſhip, and moſt of the crew periſhed. Captain Scott, with the author, ſtaid there near a month wind bound, and then ſailed, till they arrived at the iſle Du Sal. Here not meeting with any of the inhabitants, they made ſail about eight at night, and next day about ten arrived at Bona Viſta; where it had been reſolved upon to take in a cargo of ſalt: they anchored in the Engliſh road under the little iſland within the ſunken rock. Next day they went on ſhore to agree with the inhabitants for their aſſiſtance to bring ſalt from the ſalt-pans down to the water-ſide; as alſo to ſettle prices of goods, and of the iſland horſes and aſſes, which they were to take in after the ſalt. This done, they ſet all hands to work at making ſalt.

From hence they ſailed to the iſle of May, where they met with five ſail laden with ſalt-petre, for the Eaſt country up the Baltic, among whom they got ſome water, and alſo tobacco, which proved very convenient. Hence they made for St. Jago, and coming the length of Port Villa de Praya with all their ſails out, they could not luff into the bay, but were driven by the ſea to the leeward of the road: into which they did not go for three days, and by this means they left ſeveral of the aſſes. Being arrived at Barbadoes the latter part of March, 1722, their horſes and aſſes were in very bad plight, they could ſell but very few of the latter only; and had not a country gentleman given the feeding gratis, the cheaper way would have been to have knocked them all on the head, for it would have coſt more to have fitted them for a market than they would ſell for. Alſo the Canary wine they brought from the Teneriffe was ſold under the price of common Madeira: this being the wine the people were uſed to, though theirs coſt double and was twice as good. Meeting with theſe diſappointments Captain Scott reſolved not to proceed to Virginia, according to his orders, which Roberts not liking, he was diſcharged, at his own deſire, by the captain, the 24th of April; who, in lieu of wages and ſome money lent, bought a ſloop called the Margaret, for Roberts to trade with, promiſing a bill of ſale to hold part in her proportionable to the debt. In this ſloop the author, taking a cargo here for the coaſt of Guinea about Rio Grande, and the Cape de Verde Iſlands, ſet ſail about the middle of July, 1722, in company of Captain Scott, for fear of ſome pirates they heard lay at the Caribbees: However, he loſt ſight of Scott in a ſquall of wind three days after. In this paſſage, being confined to his bed by ſickneſs for ten days, they miſſed their way, either by ignorance or careleſneſs of the mate, ſo that wandering backwards and forwards a great while, at laſt they arrived at the iſland of du Sal,

about the middle of October. He came to anchor in the northermoſt bay of Palmera: and it being green turtle ſeaſon, ſent his boat to bring one on board, if there were any freſh caught. On this occaſion Captain Roberts obſerves, that the French often make a turtle voyage thither, ſalting them on ſhore, and drying them much after the ſame manner as they do cod at Newfoundland in the Weſt Indies. The ſhell they ſave for the French market, where it generally yields a better price than in England; eſpecially that of the turtle caught about theſe iſlands, which is of the thinneſt ſort, and extraordinary clear, as well as finely clouded. Beſides, ambergreaſe is often found in greater quantities at this iſland than any other of the Cape de Verdes, and did not the wild cats eat it, (as does alſo the green turtle) much more would be found than there is. In about two hours the boat returned, bringing a green turtle of between two and three hundred weight, and with it a black native of St. Nicholas, who told him, that the turtle was ſent as a preſent by his companions, of whom there were about 60, all natives of the ſame iſland, brought thither to catch and cure turtle, by a captain of a ſhip who, ten weeks before, ſailed to Bona Viſta for ſalt; but as he ſtaid ſo long away, they had no hopes of ſeeing him again, and therefore offered Roberts half their turtle, oil, ſhell, ambergreaſe, &c. to carry them, with the other half to St. Nicholas. Roberts being bound thither, promiſed to give them a paſſage for nothing, refuſing to meddle with the effects till he knew the right of the matter. This black ſaid he was an Engliſhman; but ſeveral places in England being named, knew none of them; at laſt Roberts named Bermudas, and then the negro told him he was of that iſland. Next day, about ſeven in the afternoon, he ſet ſail for St. Nicholas, carrying along with him ſix men, two women, and a ſucking child; but nothing more of theirs, than what was neceſſary for the voyage. They anchored by nine the night following, in Trefall road, in about ſix fathoms water. In the morning, the prieſt (who was a Portugueſe) came to him and ſaid, he had ſent the before-mentioned ſloop to the Iſle du Sal, with the blacks, to catch turtle; that ſome were his own ſlaves, and the reſt were hired, ſome at two, ſome at three or four dollars per month, and, that all the turtle, oil, ſhell, &c. was entirely his; but as he was afraid the ſloop was loſt, he agreed next day with Roberts, to fetch home the men and effects for 100 dollars, and a ſtout man ſlave, to be paid and delivered at his return, and before any of the goods were landed. Next morning he went from Trefall, which lies fifteen or eighteen miles from the town, along a ſteep rocky way, and anchored at Paraghiſi in the old road, being nearer the town than Trefall, and, for the moſt part, a level way; his intent being to truck with him for ſome of his corn, rice, &c. for cotton cloth; likewiſe for ambergreaſe, dragon's blood, &c. The black alſo that he brought from Sal, told him that all theſe windward iſlands of the Cape de Verde were in great want of proviſions, and that the famine had raged ſo in St. Nicholas, in particular, that within the laſt twelve months, there died 500 people merely for want of food, of which good part of his cargo conſiſted.—— However, he did not ſtay here, but reſolved to lay hold of the prieſt's offer, for fear his ſloop ſhould come, being ſatisfied he ſhould have time enough to make his market at St. Nicholas, after his return from du Sal, which, accidents excepted, would not take up above a week; nor did he fear any veſſel to ſpoil his market, it being the wrong time of the year, viz. the ſhifting wind ſeaſon. And though Captain Scott had been there, (as he heard) but ten days before, yet they could be ſupplied with very little proviſion by him.

The next morning, he turned up Curriſal, to recruit his wood and water; that being very commodious for this laſt, which runs there down to the ſea; but the wood was a long way to reach, over ſteep rocks; ſo that had it not been for four blacks aſſiſtance, (who were come on board with the prieſt) to go with him to du Sal, he thought his own men would never have found it, or got it down when found. The laſt turn was got on board at eleven o'clock at night; and it proving calm in the road, he could not weigh anchor as he deſigned; upon which, the prieſt, with his four blacks, being ſea-ſick, lay on ſhore. Next morning he roſe about day-break, as was his uſual cuſtom, but it continuing ſtill calm, as the day broke, looking out, he ſaw three ſail of ſhips off the bay, and making one of them plain with his glaſs, ſhe ſeemed to be full built, and laden; he took the reſt to be the ſame, and of her company, imagining they wanted water. He ſaw them bring to, then edging away, but could not perceive any ſignal made by them, all which confirmed him in his firſt opinion. But as ſoon as the weather cleared up, they made his ſhip, the middlemoſt ſtanding right in towards her; and as the ſun roſe, the wind increaſed, and backed more to the eaſtward, as is uſual there, after calm nights. As ſhe drew nearer he found her, by his glaſs, to be a ſchooner, full of hands, all in white ſhirts; and ſeeing likewiſe a great number of guns, he began then to be alarmed; but it was now too late to eſcape them; eſpecially as it held a calm within the bay, and they came in with the day-breeze as faſt as the wind would permit, carrying an Engliſh enſign, jack, and pendant. As ſoon as Roberts ſaw them, he hoiſted his enſign alſo. The other had eight guns, ſix pateraroes, and 70 men, and ſtretched a-head, hailed him, which Roberts anſwered. Then he aſked where the ſhip belonged to, and whence ſhe came? Roberts told him, ſhe was of London, and came from Barbadoes. He ſaid, Very well, he knew that, and ſo bringing too a-head of him, bade him ſend his boat on board of him, which accordingly Roberts did, with two hands in her.

The captain of the ſchooner, whoſe name was John Lopez, as he was told afterwards, but then went by the name of John Ruſſel, (pretending he was born in the northern parts of England) aſked the people, who came in the boat, where the maſter of the ſloop was? They anſwered, he was on board, and ſent them with the boat to know what he wanted. He aſked which was the maſter? They ſhewed him Roberts walking the deck, whom he treated with much abuſive language, and afterwards, completely pillaged the veſſel.

The prieſt and blacks were by this time got up the rocks, in order to eſcape into the mountains, which the pirates obſerving, Ruſſel aſked, if he knew who thoſe perſons were? Roberts acquainted him with their intended voyage to Du Sal; upon which he ſaid, the prieſt would never ſee his ſloop more, for they had taken her; but that her own gang, whom they had put on board her, had ran away with her, and 800 pounds in caſh, beſides other goods. He added, that the information he had received about the Author, and the probability of finding him at this iſland, joined to another, concerning 1600 dollars, which the prieſt and governor of St. Nicholas had hoarded up, was the only occaſion of their coming thither, having otherwiſe intended to go to Bona Viſta. Roberts having aſked from whom he had the intelligence, he named Captain Scott; and on his inquiring how it was with the captain? they told him, But indifferent; that they had burnt his ſhip, and put him on ſhore at Bona Viſta.

Ruſſel reſolving at any rate, to have the prieſt, determined to ſail down to Paraghiſi, to catch him from thence, and made Roberts pilot him thither, in his ſloop. The pirates on board her ſlipping her cable, left both that and the anchor behind, becauſe they would not be at the trouble to weigh. The other ſhips ſtill lay to in the offing: but as ſoon as they ſaw them make ſail down to leeward, the Roſe-Pink, which mounted thirty-ſix carriage-guns, commanded by Edmund Loe, who was their commodore, edged in towards them. Upon this, they doing the like, Ruſſel gave him an account of what

had paſſed, and of his deſign of landing that evening to take the prieſt and governor, if he approved of it, the commodore agreed; and, in his launch ſent ſome of the ſhip's company to reinforce the ſchooner's crew. Then they hauled in for ſhore again: and coming the length of Porto Lappa (which is a road or bay, lying about the middle beween Curriſal and Paraghiſi) one of the ſchooner's company ſwore, that to his knowledge, this was the beſt place to land at, and neareſt to the town. Upon this, Ruſſel ordered them to ſtand in for the bay; and when they were got within half a league of the land, went on ſhore in the boat, at the head of thirty-five men, ordering their veſſel to keep on their courſe, and anchor in the old road of Paraghiſi. Next day, Ruſſel and his company came down to them, with their prieſt, the old governor's ſon, and five or ſix negro men, their priſoners. They all immediately came on board, and weighing, ſtood off to the ſhips which were then lying too in the offing; and coming within call of the commander, he hailed them, and aſked, How all fared, and what luck? Ruſſel anſwered, he would wait on him on board, and give him a particular account. Accordingly the prieſt and the reſt of the priſoners, were put on board the launch, (Roberts alſo being ordered along with them, to pay his reſpects to Captain Loe, the commodore) and Ruſſel followed them in his own boat. When he entered the Pink, the company welcomed him on board, and ſaid, they were ſorry for his loſs; but told him he muſt pay his reſpects to the Captain, who was in the cabin; and waited for him. He was uſhered in by an officer, (the gunner, he thought) who acted with proper deportment as maſter of the ceremonies: though he did not remember ſuch an officer, or office; nor knew whether they were always ſo formal on board on ſuch occaſions. When they entered the cabin, the gentleman uſher, making a low reverence to the commodore, preſented Roberts, and then withdrew, leaving thoſe two alone. Captain Loe, with the uſual compliments, welcomed him on board, and told him, "He was very ſorry for his loſs: that it was not his deſire to meet any of his countrymen, (but rather foreigners) excepting ſome few, whom he wanted to chaſtiſe for their roguiſhneſs:" "But however, ſays he, ſince fortune has ordered it ſo, that you have fallen into our hands, I would have you be of good chear, and not be caſt down." Roberts replied, "He was alſo very ſorry that he had chanced to fall in their way; but ſtill encouraged himſelf with hopes, that he was in the hands of gentlemen of honour and generoſity: it being ſtill in their power to make this capture turn out no misfortune to him." The other ſaid, "It did not lie ſingly in his breaſt, for that all buſineſs of that nature was to be ſettled by a majority of votes in the whole company: and although neither he, nor he believed, any of the reſt, deſired to meet with any of their own nation, except ſome few perſons, for the reaſon above mentioned, yet when they did, it could not well be avoided, to take as their own what providence ſent them: and as they were gentlemen who depended upon fortune, they durſt not be ſo ungrateful to her, as to refuſe any thing which ſhe put in their way, for if they ſhould deſpiſe any of her favours, though ever ſo mean, they might offend, and cauſe her to withdraw her hand from them, who might thus, perhaps, periſh for want of thoſe things, which, in their raſh folly, they had ſlighted." Afterwards he made him drink with him, and renewed his proteſtations.

As it was now known that the quarter-maſter general Ruſſel was come on board with his priſoners, he was ordered to attend, and with the prieſt and the governor's ſon of St. Nicholas, entered the cabin. They were followed by the officers, and ſome of the moſt ſignaliſed villains among them, who ſtood faireſt for preferment. The cabin thus filled, Loe, after the neceſſary compliments, bade Ruſſel and the priſoners ſit down; and then aſked what news? On which, Ruſſel gave him an account of the whole affair: which was as follows. After landing thirty-five men, they immediately ſeized two of the natives: who were ſent by the governor to enquire (as uſual) whence, and upon what account they came. Theſe fellows they made their guides to the town; which, night coming on, and the road being uneven and rocky, they could not otherwiſe have reached that night. They got thither about nine o'clock, it being about twelve miles, by eſtimation, from the landing place; by this means they prevented any notice of their coming: and ſo were aſſured there was no booty but what they found. They went firſt to the governor's houſe, where leaving a guard, they paſſed along to the prieſt's, who they found had not been long returned from Curriſal. But though he had not the leaſt thought of this their ſudden arrival, till his own eyes confirmed it, yet he did not ſeem much ſurpriſed. He ordered what victuals he had, and wine enough, to be ſet on the table; telling them, he could not entertain them as he would, at ſuch an unſeaſonable time of night: but that they were welcome to what they found; and if they ſtaid till to-morrow, they ſhould be ſupplied plentifully with whatever the iſland afforded: Ruſſel thanked him, and told him, he came of an errand, and muſt perform it: which was that having poſitive information from very good hands, that both he and the governor had a quantity of dollars as well as gold hoarded up; that they were come to ſhare it with them, it being one great branch of their trade, not to let money lie moulding in old bags or cheſts, but to make it move and circulate whenever they could come at it. To this the prieſt without any apparent concern, replied, That whoever gave them that information, it was falſe. They ſaid, Seeing and feeling muſt prove whether it was true. The prieſt told him he was very welcome to make uſe of thoſe ſenſes for his ſatisfaction; and immediately ordered wax candles to be lighted; for they had no other, and thoſe were all conſecrated.

With theſe they ſearched every corner about the houſe, but found nothing, only twenty dollars, which he did not think worth while to take. From hence they went to the governor's houſe, and ſearched that as narrowly, but found ſtill leſs there. "After this, ſays Ruſſel, I diſpoſed of my men as I thought moſt convenient for refreſhing them after their fatiguing journey: but yet with due regard to our own ſecurity, by ſetting a watch, ordering the reſt to repoſe as well as they could, but not one of them to ſtir out of the governor's houſe: I gave them withal a ſtrict charge to be ready with their arms at a moment's warning, and not lay them out of their hands, or unſling their piſtols: which was punctually performed. Next morning, as we had not lighted on the booty according to information, which therefore was deemed falſe, we concluded to ſeize and bring on board, the governor, the prieſt, and four or five of the principal inhabitants for your ample ſatisfaction." Here Captain Loe, who ſat as demure and attentive all the while; on a ſudden ſtarted, as it were out of deep ſtudy, and interrupted Ruſſel in his ſtory: and a diſpute enſued about the money expected, in which Ruſſel ſeemed to have the advantage.

"He afterwards ſent to the prieſt to come to him at the governor's houſe: but the prieſt was fled with all his ſlaves, only an old woman, who told them this ſtory. Upon this Ruſſel ordered the governor, who was an ancient negro, to bring him in two hours time. The governor ſaid, he would do his utmoſt, but that it was impoſſible to be done in ſo ſhort a time, in caſe the prieſt was gone to the mountains, as he heard he was, it being very eaſy for him to remain there ſeveral months undiſcovered, notwithſtanding the moſt diligent ſearch. Ruſſel, without regarding his excuſes, aſſured him he would burn their town to aſhes. The governor anſwered, That he lay at their mercy; but hoped the innocent ſhould not ſuffer with the guilty, if his endeavours ſhould prove

fruitleſs. Ruſſel told him, The time was ſet, and the doom would not be deferred a moment after the expiration: but promiſed the prieſt ſhould not be killed or abuſed, provided he ſurrendered himſelf within the time limited. The governor having ſent immediately ſeveral parties of blacks on the hunt. Ruſſel in the mean time, ordered him to kill an ox, and dreſs it as ſoon as he could, and broach a pipe of wine for his men. In about two hours ſome of the blacks brought word, that they had found the prieſt, and that he had ſent them to let him know, he was coming to throw himſelf intirely upon his mercy: accordingly he came, and very ſubmiſſively aſked Ruſſel's pardon, ſaying, He repented that he ſhould be ſo fooliſh, as to ſneak away and abſcond, having no reaſon, as he believed, to do ſo, but his own groundleſs apprehenſions. The pirate bade him chear up, but told him, he had like to have ruined the whole iſland by his unadviſed flight; for that if he had not come as he did, he was reſolved, as ſoon as his men had filled their bellies, to have burnt the town to aſhes, church and all. The prieſt ſaid, He thanked God that he was come time enough to ſave them, and the captain for his clemency in deferring his vengeance ſo long: the more effectually to appeaſe whoſe wrath, he ſent to his houſe for wine, fowls, and an anker of rum. With this good cheer they made very merry, and kept open houſe, treating all the natives that came to them at the parſon's expence. When they had ſufficiently caroufed, Ruſſel told the prieſt and governor, that they and ſix more, whom he would chuſe, muſt go on board the commodore, The prieſt ſeemed much ſurpriſed at this news, and ſaid, He hoped he would not carry them away from the iſland, nor make ſlaves of them. Upon which Ruſſel told him, That he was a member of the Church of Rome as well as himſelf, and that no harm ſhould be done him, or any of his company: his intention being no more than to have the commodore ſatisfied by their own teſtimony, that the information he had received of their having ſo much money, was falſe. At this he ſeemed very well contented, and they went on board accordingly.

Captain Loe ſaid, he had behaved very well, and aſked the prieſt ſeveral queſtions, after which he directed the captives to be put on ſhore in the ſchooner, but Roberts was ordered to remain on board the commodore till his own and ſloops fate ſhould be decreed by the company. Mean while Loe ordered him a hammock with bedding, and told him, in the moſt generous obliging manner, that every thing in the ſhip was at his command, and deſired him not to go out of his uſual courſe as to hours, drinking, or company.

Next morning about eight, as he was walking the deck, one of the company came up to him, and bidding him good morrow, ſaid, he was ſorry for his misfortunes; adding, "I believe you do not know me?" which was true, for the author could not then call him to mind, or that he had ever ſeen him before. The man ſmiled, and ſaid, "He once belonged to him, when he commanded the Suſannah, (a frigate-built ſhip of 300 tons) in 1718. By this time there came up two more, who alſo declared that they belonged to the Suſannah at the ſame time; Roberts thought he did remember ſomething of them. They expreſſed ſorrow for his ill-luck, and promiſed to do all that lay in their power to ſerve him: they ſaid, "They had among them about forty or fifty pieces of white linnen, and ſix or eight of ſilk, beſides ſome other things; and that they would make what intereſt they could with their conſorts and intimates for gathering for him of what they could, and put all on board as ſoon as the company had decreed him his ſloop again." Upon this they looked about, as if they had ſomething to ſay in private; and ſeeing the deck clear, which is very rare in theſe ſhips, they told him with much ſeeming concern, "That if he did not take very great care, he would be forced to ſtay with them; for his mate had informed them, that he was very well acquainted with the Coaſt of Braſil, and they deſigned to ſtretch over thither; after ſcouring that of Guinea; but they had not a man among them who had ever been at the former. They ſaid there was but one way for him to eſcape being forced.

On this, injoining him to ſecrecy, ſince the diſcovery was as much as their lives were worth) they told him, that they had been at cloſe conſultation, whether they ſhould oblige him to go with them, not as one of the company, but as a forced priſoner, in order to be their pilot on the coaſt of Braſil, and that his mate had offered to enter with them; but deſired to defer it till they had determined his (Roberts's) caſe; that the mate being aſked whether he (the author) was married, ſaid he could not tell for certain, but believed he was not; that on this, they themſelves ſpoke in his behalf, as having known him for ſeveral years, and giving him the character of being very good to his men both for uſage and payment, and affirmed, that to their knowledge, he was married, and had four children. On this occaſion they told him, That they had an article among themſelves, to which they were ſworn, never to force any married man againſt his will to ſerve them; and therefore he ſhould be ſure to ſay, he was married, and had five or ſix children, for that nothing elſe could prevent his being forced; that his mate was as yet ignorant of their articles, for that they never expoſe them to any body till they are going to ſign them. They informed him farther, that there was one man who would fain have the company break through their oath on that head, inſiſting, that they might, and ought to do it, becauſe it was a caſe of neceſſity, as there was no poſſibility otherwiſe of getting a pilot for the Braſils, unleſs in their run along the coaſt of Guinea they ſhould find one ſo qualified, and within their articles; in which caſe, he ſaid, they might ſet him, (Roberts) on ſhore; but that till then they ought to detain him, but Captain Loe was againſt it.

He afterwards came on deck, and bidding good-morrow, ordered a conſultation ſignal to be made; it was a green ſilk flag, with the figure of a trumpeter in yellow, hoiſted at the mizzen peak, on which all coming on board, and into the cabin or ſteerage, or where they could, the commander told them, he only wanted them to breakfaſt with him.—Mr. Roberts being examined, told him of his family, which occaſioned a great diſpute between Loe and Ruſſel, the former wiſhed to excuſe him while the latter was of a contrary opinion; but the whole ended with a drinking bout.

Next morning, one of the three men who ſpoke to the author the morning before, came and excuſed his own and the other's reſervedneſs to him, on account of an article among them, which made it death to hold any ſecret correſpondence with a priſoner. He farther told Roberts, that he might thank his mate for this extraordinary diſpute; and, that he much feared, he would prove a rogue to him, and enter with them; in which caſe, ſaid he, if you ſhould get your ſloop, you'll be ſadly put to it to manage her, with only one boy and the little child. He heartily wiſhed they could go with him in her, but they ſaid, that could not be thought of, it being death even to mention it, by another article, which declares, "That if any of the company ſhall adviſe or ſpeak any thing tending to the ſeparating or breaking of the company, or ſhall by any means offer or endeavour to quit the company, that perſon ſhall be ſhot to death, by the quarter-maſter's order, without the ſentence of the court martial." He added, That till his mate had given Ruſſel an account of his being acquainted with the coaſt of Braſil, he ſeemed to be his beſt friend, and would certainly have prevailed with the company to make a gathering for him, perhaps not much ſhort in value of what they had taken from him; for that moſt of them had ſeveral pieces of linen, ſilk, ſpare hats, ſhoes, ſtockings, gold-lace, and abundance of other goods, beſides the public ſtore; it being a practice among them, to reſerve ſuch things for no other uſe than

to

to give to any they ſhould take, whom they were formerly acquainted with, or to whom they took a preſent liking. He ſaid farther, that he believed Captain Loe would be his friend, and do what he could for him; but that in oppoſition to Ruſſel, he could do but little, for that Ruſſel bore twice the ſway with the company, and was always more conſiderate to thoſe they took than Loe.

After this man left him, Captain Loe came up, and paſſing the uſual compliments, they took each a dram of rum, and diſcourſed on different ſubjects: for he was forced to ſeem pleaſed with every one, and join in diſcourſe with them on all topics, however diſagreeable, otherwiſe he muſt have incurred their diſpleaſure; in which caſe every one might have let looſe his brutal fury, and fell upon him either with his tongue or hands; for they made no ſcruple to kick and cuff, or otherwiſe abuſe their priſoners, merely for a little game. About ten o'clock Captain Ruſſel, with ſome more, came on board; and in an agreeable manner addreſſing himſelf to Roberts, told him, that he had been conſidering about his requeſt for his ſloop; but could not ſee how he ſhould go through with it. He ſaid, he believed Roberts was a man of underſtanding; but that, in this caſe, he ſeemed rather to be directed by an obſtinate deſpair than by reaſon: that, for his part, he did not think it conſiſtent with the credit and reputation of the company, to put it into his power to throw himſelf wilfully away, as he ſeemed determined to do; that therefore, as he had wiſhed him well, he had employed his thoughts all night about the affair, and believed he had hit at laſt on a way, which, without expoſing himſelf to ſo much danger, would turn out much more to his advantage than any thing he could poſſibly expect by having the ſloop; "And that, ſays he, is to ſink or burn your ſloop. In this caſe, continued he, I promiſe (and will engage to get the company to ſign and agree to it) that you ſhall have the firſt prize we take, if you like her, to be at your own uſe and diſpoſal; and if not, you ſhall ſtay till we take one you do like."

Roberts thanked him; but ſaid, "He did not perceive it would be of any advantage to him, but rather the reverſe, that he could not ſee how he ſhould diſpoſe of the ſhip, or any part of the cargo; for that nobody would buy, except he had a lawful power to ſell; and that if the owners of any ſuch ſhip or goods ſhould ever come to hear of it, then he ſhould be obliged to make them reſtitution to the full value; or, perhaps, be thrown into a jail, and run the hazard of his life." Ruſſel ſaid, "Theſe were but frivolous objections, and might be evaded; for, as for want of title to the ſhip, and fear of being detected, they could eaſily make him out a bill of ſale, and ſuch other neceſſary powers in writing, as would be ſufficient to juſtify his right to them beyond all poſſibility of exception. That as to his apprehenſions of a diſcovery by the owners, that might be as eaſily prevented: for they (the pirates) ſhould always know, by examination of the maſter, &c. as well as by the writings taken on board ſuch ſhip, (which they always took care to ſeize upon) who were the principals concerned in both ſhip and cargo, with their places of abode." He added, "that Roberts might have the powers and writings in another name, which he might go by, till he had finiſhed his buſineſs, and then could aſſume his own, which method would infallibly ſecure him from all poſſibility of a diſcovery." Roberts told him, "that he confeſſed there was not only a probability, but a ſeeming certainty in what he propoſed, as well as abundance of addreſs in the contrivance; but at the ſame time aſſured him, that were he poſitively certain that the affair would turn out ever ſo well, yet there was ſtill a ſtronger motive to deter him from accepting of the offer, and that was his conſcience; which, he ſaid, would be a continual ſting and accuſer. After this, Roberts expatiated on the neceſſity of reſtitution, and touched on ſome points which he thought might awaken in ſome, at leaſt, of his auditors, a ſenſe of repentance. On this occaſion ſome of them ſaid, he would do well to preach a ſermon, and would make them a good chaplain; others ſaid, No; they wanted no godlineſs to be preached there, and that pirates had no gods but their money, nor ſaviour but their arms." To do them juſtice, however, others approved of all he ſaid, and wiſhed that godlineſs, or at leaſt ſome humanity, were more in practice among them, which they believed would be more to their reputation, and cauſe a greater eſteem for them both from God and man. After this a ſilence followed, which Captain Ruſſel broke by employing all his little ſophiſtry to perſuade Roberts, that the accepting of any thing from them, which they had taken from others, could be no crime in him, though it might be one in them, ſince he had no hand in the capture, and was a conſtrained priſoner. As to the owners having ſtill a right; "Suppoſe (continued he) we ſhould reſolve to ſink or burn her, unleſs you will accept of her; now where is the owner's property, when the ſhip is ſunk or burnt? I think, the impoſſibility of his ever having her again cuts it off to all intents and purpoſes: and our power was the ſame, notwithſtanding our giving her to you, if we had thought fit to make uſe of it." Loe and all the reſt ſaid, they liked to hear them argue, and that Roberts was a match for Ruſſel, although, it ſeems he could ſeldom meet with a man to ſtand him; but the author puſhed the matter no farther, finding he began to be peeviſh, and as it was reſolved to give him his viſit again. However that night when they were drinking together, a diſpute aroſe about who was the rightful king of England, when Ruſſel attempted to fire on Roberts, and was diſarmed and confined for it. He was ordered not to offer the leaſt diſturbance again, nor concern himſelf with or about the author, till after he was on board the commodore, on pain of the crew's diſpleaſure, and alſo of being proſecuted as a mutineer: the gunner told Roberts, they would have put him on board the commodore that inſtant, but for an expreſs order among them, to receive no boat on board after eight or nine o'clock at the fartheſt. Next morning they carried him on board Captain Loe, and about four in the afternoon Ruſſel came with Francis Spriggs, who commanded the other ſhip, and after a little while told Loe, that the mate of the ſhip was willing to enter with them a volunteer; on this Loe aſked, How they ſhould do in that caſe? becauſe then the maſter of the ſloop will have nobody to help him, but one boy: for, ſays he, the little child is no help at all. Ruſſel replied, he could not help that. "But, ſaid Loe, we muſt not take all the hands from the poor man, if we deſign to give him his ſloop again; adding, that he thought in reaſon there could not be leſs than two boys and a mate. Ruſſel ſaid, the mate was a luſty, briſk, young fellow, and had been upon the account before. On this he ſaid, that he was but juſt come from on board the ſloop, and that the mate, in Sprigg's hearing, declared, that he was fully reſolved to go with them, and not in the ſloop, unleſs forced; and that his deſign, when he came out of Barbadoes, was to enter himſelf on board the firſt pirate he met with. "Beſides, continued he, he told me, the firſt day, that he was reſolved to enter with us." Loe replied, that to give a man his ſloop, and no hands to aſſiſt him, was but putting him to a lingering death, and they had as good almoſt knock him on the head. Ruſſel anſwered, As to that, they might do as they pleaſed, what he ſpoke now was for the good of the whole company, and agreeable to the articles, and that he would fain ſee or hear the men who dared contradict them. He ſaid, he was quarter-maſter of the whole company, and by the authority of his place he would enter the mate directly, and had a piſtol ready for any who ſhould oppoſe him. Loe ſaid, that with regard to what was law and cuſtom among them, as he owned what he now pleaded was, he would neither oppoſe nor argue againſt; but if they thought fit to take the man's mate from him, then they might let one of his men go with him. Ruſſel

anſwered, No; for that all the ſloop's men were already inrolled in their book, and therefore none of them ſhould go in her again. "Gentlemen, continued he, you muſt conſider, I am now arguing for the good of the company, as well as for the due maintenance and execution of the laws and articles: and as I am the proper officer, ſubſtituted and intruſted by this company with authority to execute the ſame; ſo, as I told you before, I have a piſtol and a brace of balls ready for any who ſhould oppoſe me therein;" and, turning to Roberts, he ſaid, Maſter, the company have decreed you your ſloop, and you ſhall have her; you ſhall have your two boys, and that's all; you ſhall have neither proviſions nor any thing elſe more than ſhe is now. And I hear ſome of the company deſign to make a gathering for you; but that alſo I forbid, by the authority of my place, becauſe we are not certain but we may have occaſion ourſelves for thoſe very things before we get more; for that reaſon I prohibit a gathering; and I ſwear, by all that is great and good, that if I know any thing whatever carried or left on board the ſhip, againſt my order, or without my knowledge, that very inſtant will I ſet her on fire, and you in her. "They diſputed this matter a little longer; but in the end Ruſſel, by dint of hardened villainy, and ſtern reſolution, carried his point, and about duſk they parted, each to his own ſhip, ſeveral profeſſing a kindneſs for Roberts, but none giving him a farthing, as he ſuppoſed, on account of Ruſſel's words; for otherwiſe this generoſity was very uſual with them. Ruſſel being ready, Roberts was directed to go in his boat, and as ſoon as they came on board, he ordered a ſupper. In the mean time, the bowl and bottle, with pipes and tobacco, being ſet on the table, he invited Roberts, and all his own officers, into the cabin: he there told him, he was very welcome, and bade him eat and drink heartily; "For, ſays he, you have as tedious a voyage to go through, as was Elijah's journey to Mount Horeb; and, as far as I know, without a miracle, it muſt be only by the ſtrength of what you eat now; for you ſhall have neither eatables or drinkables with you in the ſloop." Beſides all this, Ruſſel made game of him, ſaying, He might do without proviſions or ſails, as doubtleſs ſome miracle would be wrought in his favour. The gunner, however, ſeemed to have ſome remains of humanity; and among other things, bade Ruſſel take care he had not this to anſwer for one day when, perhaps, he might wiſh he had never done it. "But you have got the company's aſſent (continued he) I cannot tell how, and therefore ſhall ſay no more, only that I, and I believe moſt of the company, came here to get money, but not to kill, except in fight, much leſs in cold blood, or for private revenge. And, I tell you, Ruſſel, if ever ſuch caſes as theſe are any more practiſed, my endeavours ſhall be to leave this company as ſoon as I poſſibly can."

Ruſſel made no anſwer, but gave orders to have the mate and main-ſail brought away from the ſloop, and then told Roberts he would give him ſomething to remember him, which was an old muſquet, and a cartridge of powder, and two half-pound papers of tobacco; after which, with great ceremony, he was conducted over the ſide into his own boat, (which was ready) and directly put off; and meeting the ſchooner's boat, about half way between the two veſſels, according to Ruſſel's orders, they took their own hands out, and put his boys, whom they brought with them, on board him, and ſo made for the ſchooner. He ſhipped this mate at Barbadoes, who told him then, he had been mate of a New England ſloop, but being ſhipwrecked, loſt every thing, and indeed was almoſt naked when Roberts firſt met with him; however, he believed the man was not in debt, becauſe he himſelf was never troubled on that account, as the cuſtom is on that iſland, where they oblige the debtor to aſſign over his wages to the maſter, with a power to pay the debt, otherwiſe they will not ſuffer him to go off the iſland. Roberts bought his men clothes and inſtruments, with ſuch neceſſaries as were abſolutely requiſite for the voyage. He obſerved nothing in him tending to the common vices of ſea-faring men, eſpecially thoſe who have frequented thoſe parts, as ſwearing, drunkenneſs, debauchery, &c. He pretended to be a rigid Diſſenter, and ſeemed mightily averſe to the church of England, as by law eſtabliſhed, about which, they had frequently ſeveral arguments. He did not remember to have heard him ſwear all the time he was with him; and yet one of his boys told him, that after this very mate had acquainted the pirates with his reſolution, (or father returned to be a pirate again) he became worſe than the moſt profligate of them, in the frequency and horribleneſs of his oaths; and that he was almoſt conſtantly drunk while on board the ſloop, after the pirates had taken him. "I wonder, ſaid the boy, that Mr. Hunter, (that was the mate's name) ſhould be ſo barbarous as to leave you in this extremity, as ſome of the pirates on board told me; for he had acquainted them how kind you had been to him, and they refuſed at firſt to enter him; and believe, they would not have admitted him, if it had not been for Ruſſel."

On the 13th of October, at day-break, they went to rummage the ſloop, firſt ſweeping all the bread-lockers out, Roberts got near a hat full of duſt and crumbs of biſcuit: in another he found four or five hands of tobacco, with as many ſhort broken pipes. They had beſides left his fore-ſtaff, but with the thirty croſs only: likewiſe his bedding, which was quite uſeleſs to them: all but the captain, maſter, ſteward, and gunner, lying on the deck, or where they could. In the hold, there was about ten gallons of rum left in one hogſhead, and thirty pounds of rice in another, with a ſmall remnant of flour in the bottom of the flour caſk, but all the water they could drain from the caſk did not make above three pints. In the next place, looking at his ſails, he found the ſame jib that was bent, an old fore-ſail, and the old rent rotten main ſail above mentioned; which, however, lighting in their ſearch upon ſix needles, with ſome twine, and a couple of pawms, they went to work upon; but for want of ſtuff, cut off the firſt reef to mend the reſt, as far it would go, taking down the foot, and ſewing the bolt-rope. By good luck, they alſo found ſome old canvas in the mate's cabin. Thus employed, they lived for three days on raw flour or rice, with a dram of rum, and ſaved their little ſtock of water to make cakes with, of which they baked four little ones, and the fourth day divided one among them, which, with a dram of rum, was the beſt meal Roberts had made ſince he left the pirates.

On the 3d of November, he took two obſervations, and found himſelf in ſeventeen degrees north latitude; therefore ſteering as well as he could for the Cape de Verde Iſlands, he found himſelf on the 7th of November, by obſervation, in latitude ſixteen degrees fifty minutes north, about forty-ſix leagues by computation, off St. Anthony: and the night following, having a ſmart ſhower of rain, they ſaved about a gallon of water. But on the 10th, there ſprung up a moderate gale, which holding till the 16th, about ten that morning, they ſaw St. Anthony, which bore eaſt half a point northerly, about nineteen leagues diſtant, by judgment. It falling calm, in the afternoon they caught a large ſhark, but were forced to let it go again for want of proper care. However, another was taken ſoon after, which was very ſtrong, and with its tail ſhook the decks amazingly: that, however, was cut off, and it was killed. It was about eleven feet and an half long, and three hundred weight: on cutting her open, Roberts found five young ones in the belly all alive, each about the bigneſs of a ſmall whiting. Her liver was not of a blackiſh colour, as uſual, but of a bright grey. Preſently ſtriking a light with Ruſſel's gun, they ſet on the pot with ſea-water, and boiling this fiſh, made a very hearty meal of it: but having no ſalt, they cut the reſt into long thin ſlices, and dried them in the ſun. This gun, was thought at firſt

an uſeleſs preſent, and only accepted it becauſe he durſt not do otherwiſe; and having neither tinder-box nor ſteal left him, it would have been impoſſible for him to have got a fire without it. And having no candle, he made uſe of a live coal to diſcern the compaſs.

On the 17th, St. Anthony bore ſouth-by-weſt, about eight leagues diſtant. This morning they boiled ſome of the fiſh for breakfaſt, which made them very thirſty; but then they had a good ſtock of water, and ventured to drink a little; and for dinner, Roberts ſet on the pot with ſome freſh water, and a little rice, which being boiled ſoft, he thickened with flower, and then put in a piece of ſhark's liver ſhred ſmall, which ſoon diſſolved almoſt all to oil. This ſerved them inſtead of butter to their haſty pudding. They made a very hearty meal, and it reliſhed much better for being in ſight of land.

On the 19th of November in the morning, they ſaw St. Anthony, St. Vincent, St. Lucia, Terra Branca, and the Monte Guarde, the higheſt mountain of St. Nicholas. And on the 20th, they came to an anchor at Curriſal in ſixteen fathoms, about a quarter of a mile off ſhore. After he had ſtowed his ſails, he went in the boat to get in the end of his cable, which the pirates had ſlipped, having diſcerned it and the buoy on the anchor before he anchored. For this purpoſe he took a coil or two of ſmall rope in the boat to faſten one end to the cable, and bringing the other end on board, to haul the cable with it, and ſo ride moored till he moved from thence: but night coming on, he was forced to come on board without finiſhing his deſign. Then Potter begging to ſcull the boat on ſhore to fetch ſome water, he gave him leave; and preſently after, being quite faint for want of reſt, he went down, firſt ordering the boy to keep watch for Potter's return, and fell faſt aſleep. He awaked in a ſurpriſe, and called to the little boy, who not anſwering, he went up, and found him faſt aſleep in the gang-way, and looking about, could but juſt ſee the iſland. It was now about midnight, and he was not a little ſurpriſed to ſee himſelf again expoſed to the ſea, and in a worſe condition than before, being himſelf faint through wearineſs, and having loſt his only aſſiſtant. However, with a great deal of fatigue, he got into a ſandy bay, called Puttacco by the natives, where he anchored on the 22d of November. About ſun-ſet, ſeven blacks came from Paraghiſi, and brought two ten gallon caſks of water; ſaying they were ſea-men, and ſent by the prieſt and governor to help him; aſſuring him, that he might get up to Paraghiſi as ſoon as the windward current was made, which would be in about an hour's time; and when he talked of ſtaying for his boy at Curriſal with his boat, they told him that could not be this fortnight at leaſt, the wind being ſet in ſtrong trade. The blacks prevailing over his judgment, they heaved anchor about eight o'clock, in a moderate gale; but the wind increaſing, they ſtood along ſhore, and off, till they reckoned they were a-breaſt of a place called Porto Gavy, and then putting the veſſel in ſtays, the main ſail ſpilt ſo in the ſtaying, that he was forced to lower it down, for fear it ſhould be torn all in pieces, which ſo daunted them, that they were reſolved to quit the ſloop, and take to their boat, telling him, he had better go with them. Roberts uſed all the arguments he could think of to divert them from this reſolution; repreſenting on one hand, what inhumanity it would be to leave him without any help at all; and on the other ſide, ſetting before them the danger of ſuch an enterpriſe to themſelves; but it was in vain; they ſaid, Their chance could be no better if they ſtaid in a leaky ſloop without ſails, water, proviſions, &c. and often repeated, it would be better to periſh in ſight of their homes, than in a ſtrange place. Beſides, ſaid one of them, if you ſhould get to any land, you would want for nothing, but we muſt expect to be killed; or, at leaſt be made ſlaves during our lives, which would be worſe than death itſelf, and therefore, (continued he) I am reſolved, come what will, to truſt myſelf to the boat and St. Anthony, and doubt not but he will prevail with God to carry me ſafe."

Captain Roberts was at a loſs what courſe to take, on theſe blacks leaving him, gueſſing he ſhould not be able to fetch the Iſle of St. Mary, or St. Jago, and was then entirely unacquainted with St. Philip's and St. John's; and beſides, had no encouragement to ſteer for either; the ſea-draughts giving a very imperfect deſcription of them, and the pilots of thoſe parts being as much or more defective, making them both to be very dangerous; but he found afterwards moſt of their acconnts to be falſe.

The next morning, he ſaw eaſt-north-eaſt from him, Terra Vermilia, or Punta de Ver Milharee, as it is called by the inhabitants. And next day in the afternoon, to his great ſurpriſe, he heard the voice of men in the hold, and looking down the hatch-way ſaw three blacks, who called to him, and aſked, If he was at anchor? he told them, he was at ſea, and out of ſight of land: but was in hopes he ſhould fetch St. Jago. At this they ſeemed rejoiced, and got upon deck, and one of them ſaid, He was very well acquainted at St. Jago, St. Philip's, and St. John's, of which he gave proofs, and ſaid, he could direct them to any harbour in either of them: that St. Philip's was a plentiful iſland, but had bad riding, the ſea ran ſo high; but that at St. John's there was a very good harbour, which he was ſure he could direct him ſafely to. They all ſaid they were ſorry their comrades went away and left him, after they had drank off his rum; though the chief cauſe of their ſtaying, was, their having drank in the hold, till they fell down quite drunk.

After he had got his main-ſail up, he ſteered directly for the north point of St. Philip's; and at day break doubling the point, he bore more ſoutherly along the coaſt, till he came abreſt the Ghors: then ſeeing the iſland of St. John's, he ſteered directly for it, and as ſoon as he made the little iſlands, he ſteered (by the direction of his pilot) to the eaſtermoſt of them, which is the higheſt. When they had got abreſt of this, they ſteered for the north-eaſt point of the eaſtermoſt of the little iſlands, about ſouth-weſt-by-ſouth, diſtant near two leagues. Then Roberts began to aſk his pilot, whereabouts the harbour was? and found to his great ſurpriſe, by ſhewing every new place they came up with, for it, that he knew nothing of it. However, he now ſaying he was ſure they were not paſt it, they kept along the iſland, and at laſt diſcovered the harbour, but not till they were got to leeward of it. Upon this, Roberts aſked Nicolau, If there was no place to leeward that he might anchor at? The negro ſaid, No, and that if he did not put the ſloop on ſhore before he drove to leeward of Punta de Sal, he would not be able to do it at all, and they muſt all certainly periſh. Roberts aſked him what he would adviſe him to do? He ſaid, He would have him run the ſloop upon the rocks, and let every one make his eſcape as he could. Roberts told him that neither he nor his boy could ſwim. His anſwer was, That ſince they were got ſo near the ſhore, if he did not put the ſloop on ſhore, they could and would, whether he gave them leave or not. On this, Roberts ſaying, he had a gun ready loaded for any who ſhould offer to do any thing on board his veſſel againſt his will, Nicolau immediately jumped overboard, ſaying, He wiſhed him well, and the reſt with him; but that he would endeavour not to periſh himſelf, and ſo ſwam on ſhore. The captain, afterwards telling them of this man's ignorance, they began to curſe him heartily, and to wiſh that he might be drowned before he got on ſhore, or break his neck down the rocks in climbing up. Roberts told them he was in hopes yet of getting them ſafe to land, provided they would pump the water out of the ſloop: but they told him, they would neither pump, nor do any thing elſe, till they ſaw themſelves ſafe at anchor, and then they would do any thing he deſired;

making bitter imprecations never to leave him as Nicolau had done.

Roberts ran down along ſhore, and hauled in cloſe to Punta de Sal, ſo near, that about the point a man might almoſt have jumped on ſhore. His reaſon for venturing ſo near thoſe rocks, without being acquainted with them, was, that this point being the moſt leeward land of the iſland he could ſee, he did not know but the land might reach away on the other ſide of it; ſo that he ſhould not be able to haul in with it: alſo obſerving it to be a ſmooth ſteep rock, but poſſible however, to be climbed, and knowing generally ſuch ſort of rocks are ſteep to the water, his intention was, if nothing elſe could be done, to ſteer up to the rock, ſo that the boy and he might jump on ſhore, ſince to drive to ſea, if he could any way avoid it, would be the heighth of raſhneſs. But as ſoon as he opened the land on the other ſide of the point, he diſcovered a ſmall, deep, little bay, and huffing in about it, caſt his lead, which he had ready, and found thirteen fathoms, the next caſt twelve: the northern current (which ſet into the bay, and round the point) being made, helped to check him in, then he had ten, next nine, on which he cockbilled his anchor, and let go in eight fathoms water, even and clear bottom, though the ſhore looked ragged; which generally denotes foul ground. And now the blacks went overboard, and ſwam on ſhore. Three of the inhabitants came down at day break to the ſea-ſide, and hailing the ſloop, went on board; they were very civil to him, offered to get him water; and dreſs him a pompion, if he would go on ſhore: he told them he could not ſwim: they much wondered that a man ſhould venture to ſea, without knowing how to ſwim: he told them many of his countrymen could not, and that ſwimming was not common among the Engliſh, as it was among them.

They ſaid, It was very ſtrange the Engliſh uſing the ſea more than any nation, even more than the Portugueſe, who had taught all the world to be ſailors, as they were informed, ſhould not practiſe ſwimming: that for their parts, they accuſtomed themſelves to it from their infancy, even the women, ſaying they ſhould not venture down upon the rocks to fiſh, unleſs they could ſwim; for fear they ſhould at any time fall into the ſea, in which caſe they muſt needs be drowned.

The negros having brought him two calabaſhes of water, holding about ſix quarts. Roberts offered to dreſs ſome of his dried ſhark for them: but on ſight of it, they ſaid they took it to be the fiſh called Sarde; and aſked, if it would ſeize and devour a human creature. Roberts telling them it would, they, without any ceremony threw it overbord, and ſaid, they thought no man of any nation would eat a fiſh that fed upon human fleſh; but eſpecially the Engliſh, whom they took to be the niceſt and cleanlieſt people in the world. However, they pumped the veſſel dry for him, and he gave them each a ſmall dram of rum; telling them, he had only a little left by the pirates at the bottom of a caſk.

They thanked him and ſaid, they would rather he would keep it for himſelf, ſince, as he was uſed to it, he might want it the more; but as for their parts, they had never taſted any ſpirituous liquors before, although it was the beſt liquor they had ever met with; yet water being their only drink, was more natural to them; but there were ſome among them, they ſaid, knew it well enough. They had heard it related, that a pirate, called Maringwin, a Frenchman, having landed in this iſland, had a quantity of that ſtrong water, and was very free of it among the blacks: who drinking plentifully, for want of being uſed to it, went mad for that time. Some alſo falling ſick, died of phrenzy fevers. Notwithſtanding this, many now upon the iſland were almoſt every day wiſhing, that a pirate would come and take them with him to ſome country where they might have enough of that hot liquor to drink.

They much admired the hour-glaſs, and fore-ſtaff; and when he told them their uſe, they ſaid they believed all white men were conjurers. But he told them the contrary, and that ſorcerers were burned by the Chriſtians, which they ſaid was a good law.—— They told him that a great many of them could read, write, and caſt accounts, though they owned they had not the uſe of figures like the Engliſh, who, as they had been informed, exceeded all people in the world for navigation, phyſic, conjuration, and arithmetic. Next morning, about ſun-riſe, there was a great noiſe and calling, from the tops of the lower rocks, as if there had been an hundred people. The blacks ſaid they believed theſe were the fore-runners of the company, which the governor had ſent; but obſerved that the noiſe was multiplied by the reſounding of the rocks, which deceived the author, for they knew there was no more than two of them. In the afterneon, it began to blow, and looked dark, cloudy and heavy to windward, over the land, which is a certain ſign of a gale of wind. He got ſome of the blacks to ſwim with the end of a ſmall rope on ſhore, and by that to haul a cable's end, and make it faſt to the rocks, which they did, but ſo ſlightly that it ſlipped, and he could not prevail with them to try once more; ſaying, if the veſſel ſhould drive, (which he was afraid of) they would get him and his boy ſafe on ſhore, and, pointing to the croſs jack yard, which lay upon the deck, they ſaid, with that, they could carry him an hundred times farther than from thence to the ſhore to fetch Nicola Verde, and with no more help. The gale continued the next day, and about eight o'clock it began to blow very hard, the ſtaws coming down the rocks with an incredible fury, blowing ſometimes directly off the high, rocky ſhore, and ſometimes in counter-ſtaws to that on the land, which raiſed the water beyond what he ever ſaw a whale or grampus do. He could not tell what courſe to take; but with a great deal of difficulty, perſuaded the natives not to leave him, and ſo got that night over. In the morning it looked as it did the day before, and rather more fiery and red, and about nine or ten o'clock, it began to blow much harder. They were all wet with the ſpray that was thrown up into the air, like a water-ſpout, ſo that ſometimes they could not ſee the land, though it was ſo near, and ſo high. On the 29th of November, about twelve or one, the cable parted with a counter-ſtaw on the land, and drove them on a point of broken rocks which lay in the bay, and ſoon made a free paſſage through her bottom for the water. On this, the natives went on ſhore in a fright, but ſoon returned; and one of them carrying the little boy, the reſt offered to help him on ſhore alſo, and ſaid, they did not doubt, in the leaſt, to convey *him* ſafe, with the aid of St. Anthony, who, they were ſure, would aſſiſt them, becauſe they had ſaid their prayers before they came off. The natives, from the tops of the rocks, ſeeing the ſhip run foul of them, and the people in her take to the water, haſtened down to ſee what was become of them. Theſe were ſoon followed by others, who brought ſome pompions and milk in a calabaſh; and the ſtorm being a little abated, they ſwam off on light pieces of boards of the wreck, and finding a place about 16 feet above the flowing of the ſea, and about eight feet broad, with the rock over-hanging, they made a fire, and boiled ſome proviſions. Thus they paſſed the night, it proving moderate weather, beſides being clear and ſtar-light. Theſe people ſpent the next day in ſaving all they could of the wreck, and were very dextrous at the work; but were particularly careful of all the bits of planks where they found any paint, eſteeming that the richeſt ſtuff of all. They ſaid, if the maſt, boom, boltſprit, &c. could be any way faſtened, and ſecured till a calm day came, they could tow them up to the harbour, called The Ovens, and they might be ſerviceable to him one day or other. He told them they would, and if any ſhip happened to put in there that would want them, he could ſell them for ſomething which would be for their benefit, to help to pay them for this their kindneſs to him. They

ſaid,

ſaid they were glad they had been of any ſervice to him, and thought it their duty to ſerve ſtrangers in diſtreſs, notwithſtanding they were of different colours, and by others, they believed, accounted different creatures; yet they thought we were all of one ſpecies, and they were all men as we were, though they allowed themſelves much inferior to whites in every thing. Roberts told them, as to that, he did not ſee any difference, only in the colour, and he could not tell whether that might not be owing to the exceſſive heat of the ſun there; ſaying, if a white man and woman were to come and live with them, and go naked, and expoſed to the ſcorching ſun as they were, perhaps their poſterity, in three or four generations, might be changed to their complexion. They ſaid, No; for they had heard, that notwithſtanding their ſkin might loſe its whiteneſs, yet their hair would always hold its nature, and not be frizzled, like theirs, and they ſaid, moreover, there was a curſe laid on them, that they ſhould always be ſubjects and ſervants to the whites; a doctrine which the Portugueſe had probably taken pains to inculcate.

They continued, one or other of them, ſwimming about the wreck all day, and continually kept bringing off ſomething; and among the reſt two iron pots, at which they ſeemed much rejoiced. Swimming was their maſter-piece; they made no difficulty of paſſing from place to place this way, even as far as to the ſmall iſlands and back again, and ſaid, a man might remain ſeveral days in the water, if he were not ſeized with the cramp. They fetched up many things from the bottom, by diving, at which they were very expert; and the ſea being always ſmooth there in fine weather, (as this little bay of Punta du Sal lies on the lee ſide of the iſland) they can ſee all round very plain, in four, five or ſix fathoms, and in a rocky bottom, even to ten fathoms; ſtanding up to the middle in water. It is a common practice with theſe blacks, when they have done fiſhing, to ſtand on the rocks and throw ſtones into the water, and for others to dive and bring them up; and they account it nothing to dive five or ſix fathoms, and creep along the bottom for a minute, or more.—About noon they ſet on the pot with a pompion, and dreſſed ſome fiſh which the blacks had caught; ſoon after which, a meſſenger came from Signor Lionel Gonſalvo, the governor, with his compliments and excuſe for not coming himſelf, on account of a cold. He brought ſome pompions, and three or four potatoes, and promiſes of ſome wild goat or veniſon, next day. A little while after came a black from the prieſt, with the ſame compliments, but brought nothing with him to eat; and ſaid, his maſter deſired, if Roberts had ſaved any flour, to ſend him ſome, and if he had any ſtrong liquor alſo, his maſter would be no leſs glad of it, though he had not told him to aſk for any. And Roberts ſhewing him all he had left from the wreck, which were chiefly ſome pieces of board, and two iron pots; he ſaid, his maſter was more able to do him more ſervice than even the governor himſelf; and believed, if one of thoſe pots were preſented him, it would be very acceptable. Some time after came down one Domingo Gomez, ſon of Antonio Gomez, formerly governor of the iſland. He brought ſome pompions, bananas, a papah, and a cake of bread, made of bananas and maiſe. He ſaid his mother ſent the cake, and would ſend ſome milk.——Roberts talking of a return for theſe favours, they replied, they did not deſire any thing, but that he would continue his eſteem for them, and let his countrymen know how kindly he had been uſed among them; adding, that no other return would be required by any of the iſlanders unleſs the prieſt, who, they heard, was always very craving; and, therefore, they gave him this caution, for fear he might beg any thing of him, according to cuſtom. The captain ſaid, when he returned home, and gave his countrymen an account of their civility, he did not doubt but ſome of them would come and viſit them. Gomez anſwered, it might be ſo, if this iſland produced any thing fit for traffic; but that his father, and other old men, remembered ſeveral ſtrangers coming thither, moſt of them of the ſame nation called Pirates, (for they thought there was a particular people of that name) who had robbed the author; adding, That though they had uſed him ſo hardly, they were very civil to *them*; and would often tell them their iſland was very poor, that they lived very miſerable in compariſon of what the white men did in their own country; and that having no produce good for any thing, was the reaſon ſo few ſhips came to viſit them. Roberts obſerving one liſtening to his diſcourſe with more than ordinary attention, and looking at him, he obſerved he was not like the Guinea negros. This man, to his ſurpriſe as well as joy, anſwered in the Engliſh language, that the iſland might yield many valuable commodities, though unknown, at leaſt as to their uſes; as the gold, teeth, ambergreaſe, wax, and various kinds of dying woods in Guinea, were formerly; and that, at this preſent, the northermoſt part of that country, to his knowledge, produced ſeveral rich commodities, not yet known to the Engliſh to be there. Upon inquiry, he told Roberts his name was Charles Franklin, and that he was born at Caerleon upon Uſk, in Wales, that his father was a juſtice of peace, and he himſelf had been maſter of ſeveral ſhips out of Briſtol; adding that in a voyage to the Weſt Indies, he had been taken by his name-ſake Bartholomew Roberts the pirate, and being brought upon the coaſt of Guinea, made his eſcape at Sierra Leona, and got to a black prince up the river, called King Thome, who protected him from Roberts's perſecution; to whom he ſent word, that he had a thouſand ſtout men, or four times that number, who, tho' blacks, knew how to uſe arms as well as his, and were ready to give him a proper reception, if he offered any incivilities in his country. That the pirate upon this meſſage, thought fit to make off as ſoon as he had refreſhed, and purſue his intended voyage on the coaſt of Guinea, as far as St. Thomas, or Prince's Iſland. After Roberts's departure, Captain Plunket, governor of the Engliſh factory at Sierra Leona, hearing of Franklin, and taking him to be one of the pirates company, ſent to acquaint the king with it, and alſo, demanded him to be given up accordingly to the Engliſh juſtice, and the Engliſh right. The king made known to him this meſſage, and the difficulties it threw him into, as he was loth to diſoblige the governor, and the Engliſh nation. But the Welſhman laid before the king the dangers he might be in with the governor and the company, for want of proper vouchers of his innocence, (which he ſolemnly avowed) if they ſhould be ſevere, and likewiſe expreſſed a deſire to ſtay under his protection till ſome ſhip came thither, whoſe captain knew him.

On this, the king ſwore by his chief god, he ſhould not be delivered to any body, and accordingly rejected all ſolicitation, but deſired him to conſult his own ſafety in ſuch a manner, that no offence might be given to the Engliſh. Then he begged to be ſent farther into the country; being the more induced to this, by the reports he had from the natives, that the ports within land abounded with gold, which metal he had ſome knowledge of, having ſerved an apprentice-ſhip in Briſtol, to the goldſmith's trade. He alſo obſerved to the author, that though he was ſure nobody would, in the long-run, do him any harm, yet a great deal of trouble might be given on account of a name-ſake of the latter, who was a noted pirate, and had been advertiſed in the London Gazette. His chief motive for deſiring to be ſent up the country was, a notion he had, that there was gold within land at Guinea, and that moſt of the mountains abounded with it; more eſpecially between the latitudes of 12 or 13 degrees, both north and ſouth; and, perhaps, alſo as far ſoutherly as the land reached. His curioſity, he ſaid, was ſtrengthened by the opportunity he now had of giving them no room to ſuſpect him for a ſpy; for the inhabitants of theſe inland parts were very jealous, being prepoſſeſſed by the borderers on

the ſea-coaſt, with a fear of being carried off by the whites, as well as of their great power and ſubtilety. Theſe notions, he believed, were infuſed by the borderers, to ingroſs the whole trade into their own hands; it being alſo uſual with them to tell ſtrangers, that there is no gold in the inland countries, and that it is alſo contained in the ſands and ſhore of the rivers on the coaſt.

Theſe iſlanders (he ſays) have alſo a notion, that the white people have a new world, where they intend to reſide, which is inconceivably better than the old, but that they want ſo much done to it, that it will be many ages before it can be made fit for their reception; that they ſend all their moſt valuable things from their old world thither, the labour of which is carried on by the negros they yearly take out of Guinea; that all thoſe blacks muſt work very hard, without any intermiſſion or redemption, until the new world is completely fitted up in a very beautiful manner, and the white people are all ſettled there. But when that is done, having no farther ſervice for the blacks, they will ſend them home to inhabit this world, without ever moleſting them again.

Franklin came acquainted with theſe inlanders by his long reſidence among them; for he had prevailed with King Thoma to ſend him to King Bombolu, whither he went, attended by four of that prince's guards, and his ſtaff of ſtate, which ſerve as a credential. He informed Roberts, that he was ſeven days in his journey to King Bombolu's town, which was about ninety or one hundred miles off; that he travelled on foot, and ſtopped by the way at ſeveral of their towns, where they were uſed very courteouſly; that for the firſt four days he obſerved nothing of any conſequence; but after that, perceived gold among the inhabitants in very great abundance, yet durſt not make any inquiry about it, finding himſelf ſtrictly watched by his attendants, who, as he underſtood afterwards, had orders to give him no opportunity to make any remarks upon the country, and to carry him a deſart way as much as they could, and ſee he did not write at any time. For though King Thoma had, for this reaſon taken away all his paper before he ſet out, under pretence of keeping it ſafe till he came back, yet they had an opinion, that all the whites had a genius who would bring them at their call, any thing they wanted. Therefore, if they ſaw him have any paper, or offer to write, their orders were inſtantly to deliver him up to a certain king, who was, it ſeems, an enemy to them as well as to all the whites, on whom alone the geniuſes of white people had no power. "At length, continued he, we arrived at King Bombolu's court, where, after ſhewing the ſtaff of credit, and delivering my pretended errand, which was to open a trade with them, I was received with abundance of reſpect and honour by the king and his nobles, who ſhewed me every thing they thought might contribute to my diverſion; and there was gazing enough upon me, I being the firſt European that was ever remembered to have been ſeen in that town."

The author obſerving the two blacks, who were with them, very attentive to their diſcourſe, aſked one of them, if he underſtood Engliſh? He ſaid No; he heartily wiſhed he did; but was glad, however, they could underſtand one another. Franklin telling him that Roberts was his countryman, the negro was ſurpriſed, knowing Franklin to be a Gualego, or Welchman. Roberts having a great deſire to go up the town, not being ſatisfied with Franklin's objections of the impracticability of it, on the account of the ſteepneſs and height, as well as ſharp points of the rocks, aſked the negros their opinions, who confirmed what Franklin had ſaid; and told him what he ſaw, was not the hundredth part of the whole height, giving a very imperfect and extraordinary account of the iſland. Notwithſtanding this, when Franklin propoſed to explain it, they preſently took ſnuff, and one of them, raiſing his voice, and knitting his brows, ſaid he wondered Franklin ſhould pretend to give a better account than they, who travelled paths which he durſt not attempt. Franklin aſked pardon, making a great many apologies; and they ſeeing Roberts a little ſurpriſed and concerned at their reſentment, ſoftened their tone, and told Franklin they were heartily glad he could talk with, and divert the captain; and that he would have them carry on their converſation in what language he liked beſt; however, they ſaid, as the captain could ſpeak their language very well, they had rather he would talk in that, that they might benefit by the diſcourſe, yet were ſtill more willing to forego their own ſatisfaction for the ſake of his. This reſentment Franklin ſaid was owing to the jealouſy they had, that he ſtood better with Roberts than themſelves therefore it was thought fit to break off farther diſcourſe for that time.

The author now began to wiſh himſelf at the town eſpecially as both the governor and prieſt had ſent men down to invite them to their houſes. On this occaſion he overheard one, who ſpoke low, ſay, "If I were the captain, I ſhould rather chuſe to lodge with Signore Antonio Gomez, than with any one on the iſland, he having alſo a good ſtock of every thing to eat, and more plentiful than the governor;" "Aye, but ſays another, the prieſt has meat and fiſh oftener than Antonio Gomez or any body elſe." "It is true, ſays a third, but if the captain lives with the prieſt, he wil beg all his cloaths; and you all know what a covetuous man he is. We cannot make any of us a handſome cap, or have any thing elſe that is either fine or delightful, but preſently he is begging it from us."

While the author continued in this diſmal habitation, he was daily in danger of being killed by the ſtones that tumbled from the mountains early and late in the morning and evenings. This, as the blacks ſaid, was occaſioned by the wild goats going to their caves on the edge of the mountains, whoſe foot was at the top of the rock, under which they were: "For the land, ſays the author, riſes ſomething like the pyramids of Egypt: the foot of one mountain being, as it were, the top of another, till you arrive at the middle of the iſland, which is the higheſt; and tho' it appears with a rounding head, off the top of the ſea, yet it is rather flat, but, however, declining a little till you come to the edges, and from thence going ſteep down, ſomething like St. Paul's cupola." He was therefore deſirous of ſetting out for the town; and a day or two after, Domingo tying the boy behind him with a ſaſh, carried him up, and as ſoon as he returned, Roberts ſet out himſelf; but after they got to the firſt reſting-place, which was about the height of St. Paul's Cupola, it was ſo ſteep he could proceed no farther; and one of them ſearching about for the beſt way, broke off a very large piece of a rock, which was very near ſweeping down ſome of them in its way; and the noiſe and duſt frightened them alſo, that they were about deſcending, when Domingo called them to ſtop, and ſaid he would not truſt the captain down in the day-time; becauſe he ſaid the rocks were then more crumbly; ſo they lodged in a kind of gallery for that night, dreſſing ſome fiſh and pompions for ſupper; and in the morning, with great difficulty and hazard, got down to the old place again: ſoon after, Domingo, with ſome of the blacks, went to fetch the boat to carry the author to town by water. It was almoſt calm then, and about noon it grew quite calm, contrary to what it is on the weather ſide, as well to the ſouth-eaſt and north-weſt ſides of the iſland, where the nearer the ſun approaches the meridian, the freſher the gale blows, but on the ſouth-weſt ſide the contrary. The extreme heat of the ſun reflecting from the rocks, together with bad diet, fatigue, &c. threw the author into a violent fever, which bringing on a delirium, he lay here ſix weeks before he recovered ſtrength enough to be carried to the town. He was very carefully and affectionately attended all the while by the blacks, and one of them was unfortunately killed very near him by a piece of a

rock, which falling down, daſhed him in pieces.—The blacks returning with the boat, and ſeeing this misfortune, haſtened him away to Fuarno, where the governor's horſe coming for him in the morning, he rode up to his houſe, or hut, and was kindly received; but being engaged, by a promiſe to Domingo, lay at his father Antonio's. They had provided him a bed, which was ſomething extraordinary, conſidering the people and country. The four poſts were driven into the floor in a long ſquare; and four pieces of wood tied, between, to them, with banana cords, formed the head, feet, and ſides, three or four ſticks being laid acroſs at proper diſtances, and tied at each end to the poſts: over theſe was laid a hurdle, made of large cane-reed, the ſame ſort that is brought from Portugal, &c. and upon this, a quantity of banana leaves, which were covered with a banana mat; upon which were ſpread two white cotton cloths for ſheets, and over all a blue and white cotton cloth by way of counterpane. Here he lay two months before he was able to go abroad; and as ſoon as he got ſtrength, diverted himſelf with fiſhing, at which ſport they uſed to be out three or four days together, the negros carrying down wood for a fire to boil the fiſh, and roaſt their pompions; and ſalt they gathered on the rocks, being made by the heat of the ſun from the ſea-water lying in the holes.

Roberts having made all the inquiry he could, when any ſhip had touched at the iſland, was informed, that only two had put in there in ſeven years: one an Engliſhman, who bought ſome hogs; the other a Portugueſe carrying ſlaves from St. Nicholas to Braſil, and called for water; but was driven from his anchor by a ſtorm. As he had a mind to go to St. Philip's, where he was told ſhips often came, he got together all the remains of the wreck, and with the help of the natives, he built a boat of twenty five feet long in the keel, thirty feet between ſtem and ſtern-port, breadth at the main beam ten feet, depth about four feet ten inches. He caulked her with cotton and moſs, and paid the ſeams with tallow, mixed and incorporated into a putty, with aſſes dung and aſhes. There was this peculiar good quality in it, that being rubbed well in the ſeam, it hardened it in a ſhort time, ſo that the ſun did not melt it, neither would it waſh off again with the water, nor would the fiſh eat it off as they did the unmixed tallow, which beſides was pretty ſcarce; for they got but five pounds of tallow out of forty goats, and a tolerable fat cow. He now prepared to go, (and having picked up an anchor, left by the above mentioned Portugueſe ſhip) thence paſſed to Fuarno. From this place he went up to town to take his final leave, as he thought, of the inhabitants: but to his great ſurpriſe, Mr. Frafiklin, who had conſtantly talked of going with him, now he was ready, refuſed it, and gave him ſuch reaſons as he was forced to acquieſce with. He therefore ſet ſail with ſix blacks and his little boy, about two hours before day, taking the firſt of the northern ſtream, and choſe the morning tide, in order to get a croſs the channel before the day gale, which ſometimes blows in violent flaws down the Ghors. They got into the road, and ran down to Fonte de Villa, which is a ſandy bay; but he paſſed by it, becauſe the wind was pretty far northerly, which is an open wind there. He ran down along ſhore, and doubling the point at Nueſtra Signora, he anchored in the bay in ſix fathoms, this being alſo a clean ſandy bay, and the water, as the wind ſtood, ſmoother than at Fonte de Villa: but he ſtaid not there, being adviſed by ſome negros, who came from Thome Santee, to ſail down a little lower to a ſmall bay, called Laghate, where he might put the boat to the beach, and wade on ſhore: the ſea being very ſmooth, and little or no ſurf running on the ſhore, and they went with him to ſhew him the bay.

This Thome Santee, was commandant of the horſe, and was ordered by the governor to march along the cliffs as far as Nueſtra Signora, to defend the coaſt, in caſe Roberts ſhould attempt to land before they were ſatisfied what he was.

On this iſland of St. Philip's he found two black carpenters, who were brought up at the French Factory at Senegal, and had been five years at Nants to learn the trade; and finding his boat very leaky, he determined to go back with thoſe to St. John's (where wood was plentiful) to fit up his boat better, taking Captain Thome along with him, and ſome other paſſengers, he weighed from Laghate about an hour or better before the northern tide was made: and having the advantage of the ſouthern breeze, which laſted up to the point, with the help of both ſails and oars, they arrived there by the time that the flood ſet up to the northward, and then opening the point, they met the trade wind, and making two or three boards, got the length of Balleavilies a good while before the tide was done: but that being well ſpent, and the wind far northerly, fearing he ſhould not reach the Fuarno on a lee-tide, he anchored there, ſtaying to take a whole flood to croſs the channel: and the tide ſerving before day, he weighed about four o'clock in the morning, and got into the Fuarno of St. John's, a little after noon. That day he received ten cotton cloths for freight of his paſſengers, which made him a good foreſail, and repaired his jib: of the remainder, he made a pair of trowzers for himſelf, and a jacket and trowzers for his little boy. He ſtaid here two months before he finiſhed his boat, after which, he ſailed thence to St. Jago, but called at St. Philip's by the way to put on ſhore there Captain Thome and the Philippians. He ſtaid there three days to lay in proviſions and water, then weighed, and in in about ten days time, beat up to St. Jago; but ſays, had he not been acquainted with the ſet of the current, he could never have raiſed it. He reached a bay called Rivero des Bharkes, where he anchored; but finding no ſhips there, and alſo a great ſcarcity of ſalt, he determined to go to the iſle of Mayo for that commodity: he was alſo near half full of pompion, maiſe, &c. and was told the iſle of Mayo was almoſt famiſhed for want of ſuſtenance. Having taken in water, he concluded to go about the north-end of St. Jago, as he knew it by experience, to be the beſt way to gain the iſle of Mayo. After two days ſtay, he weighed, and anchored in the bay of Rivero de Plata; and with the next tide got to Porto Terrafall; and waiting thirteen days there for favourable weather: he at laſt weighed and got in a windward tide to Porto Facienda: but afterwards could not weather the point of the iſland, and was driven by the lee tide into an unknown bay. Over-againſt the bay were a great many rocks, the largeſt not a good ſtone's caſt in the length, moſt of them above water, extending about half a league off from the ſhore: but he got well in with ſome difficulty, and found a ſafe and pleaſant cave running in behind the point, above a cable's length wide, from which people could ſee no ſea, and were ſheltered from the winds. An elderly man came down to him attended by four ſlaves armed with lances. He very courteouſly aſked Roberts to come on ſhore; who told him he would come preſently, and in the mean time a water-melon was thrown into the water for him.

Roberts did not care much for truſting himſelf on ſhore with him at firſt, for that part of St. Jago conſiſts moſtly of banditti, who frequently fly thither, and ſometimes make incurſions upon the reſt: but ſeeing him accept his preſent kindly, which, with thoſe people is moſtly eſteemed as a token of friendſhip, he ventured on ſhore, where he was received with great formality by the old gentleman, who aſking whence he came, and whither bound, &c. told him that his name was Jorje Vharela the Jhuiſs; that he was the juſtice of thoſe parts, that all the land as far as could be ſeen was his eſtate: and that he had ſilver mines in his ground, but knew not how to extract the ſilver from the oar, and did not chuſe to ſend to the city for a ſmelter, for fear the mine ſhould

be

be diſcovered by the king of Portugal, and be ſeized by his army for him: adding, that this might perhaps, alſo be the means of making them loſe their privileges here, which had been preſerved ever ſince the iſland of St. Jago was inhabited; but promiſed to ſend for ſome of the ore for Roberts. When it came, it proved to be nothing more than a rock of a yellowiſh grey colour, conſiſting of ſlakes about the thickneſs of ſlate, full of ſhining ſpangles, which gliſtened in the ſun-beams like chryſtal glaſs. The native thanked his gueſt kindly for the melon, which was the more acceptable, he ſaid, on account of the ſeeds, which coming from abroad, the fruit would be always valued as a rarity; and in return, he gave him at parting, a fat goat and ſome milk.

Next morning Roberts weighed, and getting about the Bighude, which is the north-eaſt point of the iſland of St. Jago: about noon, the wind north-eaſt, he ſaw the iſle of Mayo: about three in the afternoon, Monte Pinoſa bearing ſouth-eaſt-by-eaſt; and anchored next morning at Forto Engleſe, or Yingdoſs, as it is called by the inhabitants: but finding no ſhips here, and the ſurge running high on ſhore, he weighed, in order to beat up to Calyete or Paaſcco, to windward of Calyete; but finding that not convenient, being a great way from the Salt-pans, he run down to the Calyete, and anchoring there, diſpoſed of his things, and had ſalt brought to him by the natives, for which he paid with ſome of his cargo from St. John's and St. Philip's. But the negros in the boat, taking it into their heads that this ſalt was intended to be carried with themſelves, to Barbadoes, they all ran away from him. However, he had not been long in this condition, before two blacks came and offered their ſervice to go with him. One was a native of St. Nicholas; and the other of St. Antonio. This laſt ſaid, he would make a better hand of his ſalt, if he went to that iſland; and thence to Du Sal, taking a gang to St. Anthony to kill turtle there, in order to ſell at St. Nicholas, which was ſtill very ſcarce of proviſions: he reſolved to take his advice, the rather, becauſe if he could not reach theſe iſlands, he might go at laſt to St. Jago.

Accordingly he ſailed that evening from Calyete, but the wind not favouring his deſign of reaching either St. Nicholas or Antonio, he bore down to St. Jago, running for the north-eaſt point: where finding a large bay, about two leagues or ſomething more to the ſouthward of the Bikhude. Here he anchored in a little ſandy cove. But the St. Antonio black told him, he did not like the place, for it was the wildeſt part of that quarter, where the banditti inhabited. His words were confirmed by a volley of ſtones, which was ſoon followed by a ſecond ſhower, and ſo continued, by a number of blacks from ſhore: ſo that they had certainly been deſtroyed, had not Roberts thought of mentioning Signore Vharela the Jhuiſs to them, as his intimate friend. Upon which, they all ſtarting up, aſked, if that was the veſſel that had been at Signore Jhuiſs Porto? and being aſſured it was the ſame, they were immediately pacified, and profeſſed themſelves his friends. However, he did not care to ſtay, but very early next morning got out; and, it being calm, rowed down directy for Porto Formoſa, where he ſtaid to take in wood and water. He was met here on ſhore by Antonio the principal gentleman thereabouts, who was attended by eight ſlaves with lances, two having each a piſtol, which they were obliged to carry, being ſo near neighbours to the Indians, of Terrafal: and when Roberts told him how he had been ſerved, he ſaid, it was the greateſt miracle in the world they had not been all killed; declaring, that, for his part, he would not have been in their place, for the iſland of St. Jago. This gentleman was a white, of the race of Portugal, was extremely civil, and ſent half a dozen of his blacks to cut wood, and carry it to him, and next morning ſent an aſs loaded with proviſion and fruit, and at parting, preſented him with many other things.

Early the next morning, he went from thence, and coaſting along ſhore, with a fair wind, ran down the length of St. Jago town into the bay: and proceeding lower, entered the harbour of Porto Madera. Here he moored with his anchor off, and a rope faſtened on ſhore to a rock, which was like a quay, having twelve feet at low water cloſe to the rock: but there being no inhabitants near, and but indifferent way to St. Jago town. He coaſted along down to Praya Formoſa; and touching there, and at St. Domingo, proceeded to Porto Laba, where he received a letter from the general of all the Cape de Verdes, with a man and horſe to carry him to town. Leaving his boat here, he rode up to it, about twenty miles by land. Here he was in hopes he had met with a chap for his boat, but upon ſight of her, the bargain went off.

The ſickly time of year now approaching, he was reſolved to make for ſome of the windward iſlands, eſpecially St. Nicholas, where there was a better proſpect of meeting with ſome European ſhip to carry him off, the ſeaſon of the year alſo concurring: for they expected a ſoutherly wind in a little time. So he diſpoſed of his ſalt as faſt as he could, to get on the eaſt ſide of the iſland, becauſe from thence he could hope for a weſterly wind, and the roads are alſo the ſafeſt. Having got a pretty good cargo of maize, for his ſalt, with ſome cocoa-nuts, plantanes, bananas, &c. He ſailed from Calyete St. Martyn, and getting the length of Porto Labo, intended to touch if poſſible, at Bona Viſta, where he knew there was a good market for his proviſions: but not being able to get thither, by reaſon of the northern ſtream, he ſtood for Porto Madera, where he waited eight days: and then having a ſoutherly wind, he ſtretched over for the iſle of Mayo, and about duſk was a-breaſt the Calyete, about two leagues offing. From hence, he kept to the eaſtward, coaſting along the iſland by two different ports; the iſlanders making fires at each place as he paſſed, in hopes he would land there. But he held on his courſe, till he thought himſelf paſt the Ghalloon, which is a ledge of broken rocks ſtriking a long way off from the north ſide of the iſland. After this, he ſteered as directly as he could for Calyete St. Jorje in Bona Viſta; but it falling calm, and meeting with variable light airs, he drove in the channel between the two iſlands, near three weeks, and being forced to bear away round the ſouth end of the iſland, he had an opportunity of obſerving the reef, which runs off from the land, at leaſt, a league and an half; ſo far off, he believes he ſaw the ſea break. It is a ledge of ſunken rocks and great ſtones; and from a mile's diſtance off to the ſhore are ſeveral breaks and channels to go through, having water enough for any ſhip. There was a great rolling ſwell, and the wind freſhened up, veering to the ſouth-eaſt, which made the ſea break there. At laſt he got into Calyete St. Jorje; however, there being no convenient quay or rock to land at, he got up to the Engliſh road two days after: where was a Portugueſe launch left by the pirates, and given by them to Domingo Gonſalvo, who lent her to the author. Having launched her, he brought her on board, and ſet all hands to get in ſalt, but this being the rainy ſeaſon, he was three weeks in getting a cargo: At this time, there came a ſail into this road, a ſloop belonging to Briſtol. The captain was very kind to Roberts, and would have had him gone with him, which he was very willing to do, till he came to underſtand the deſign of the voyage; which he adds, would no ways agree with juſtice, neither was it ſafe for the owners.

The author living well on board this ſloop, fell into a fever by change of diet, notwithſtanding all his precaution. In his ſickneſs he was carefully attended by the captain, who alſo at parting, gave him ſome medicines out of his cheſt, and ordered ſome bread to be put in the boat, and a dozen of wine, half a dozen of brandy, a piece of loaf ſugar, ſome butter,

oatmeal

oatmeal, flour, and what elſe he could then think would be neceſſary for him. He had the biſhop of St. Jago, and the viſitador general, with their attendants, on board, who were going their viſitations round the iſlands; and after that, the viſitador was to viſit all the coaſt of Guinea, under the king of Portugal. The biſhop, all the time, obſerving the friendſhip and freedom that paſſed between them, aſked the captain, whether Roberts was related to him. He anſwered, Yes; that he was a Chriſtian, a Proteſtant, a man, a countryman, and a better man than himſelf, though he had the misfortune to fall into the hands of pirates, and that his countrymen always uſed one another ſo.—After this, he preſently ſet ſail. The evening following, Roberts ſet ſail for St. Nicholas, the chief iſland for aſſes; which is the firſt commodity generally traded for in thoſe iſlands, and that commonly in November or December, thoſe that come in January, uſually loading ſalt. Here he arrived, and turned into a road called Porto Ghuy, there being leſs ſea tumbling than at Paraghiſi, whither he went the next day, and quickly diſpoſed of his ſalt, meaſure for meaſure, for maiſe, or Indian corn. It beginning to rain the day after his arrival here, Roberts was afraid of a ſoutherly or weſterly wind coming, which were all that could hurt him: but the blacks ſaid, he need not fear that, and ſhewing him a ſugar-loaf hill, called Monte Fradre, told him that miſty cap, which it was covered with, was always a ſign of a northerly wind. But, notwithſtanding this mariner's hopes, a ſtorm aroſe, which ſoon ſtaved the Balandra to pieces againſt the rocks: however, they all firſt got ſafe on ſhore out of her. After this, he went up the town, and having brought letters from the biſhop, whom he ſaw at Bona Viſta, to the two traders of St. Anthony, alſo from the prieſt, who attended the biſhop, (being the ſame that was at St. Nicholas, when the pirates took him there) to his ſucceſſor, the preſent prieſt there, he was very kindly received by them all; and the prieſt wanting wood to enlarge the choir part of his church, bought the wreck that was ſaved, and left here, for the uſe as abovementioned, for which he gave the author 10 dollars. It ſeems the prieſt ſaved it by charging them all at church, under pain of excommunication not to touch it; and pronounced damnation to every one who ſhould diſobey his orders.

Roberts receiving this money ſoon after, bought a large hog for a dollar and a half, and had it killed, and would not ſell the maiſe and feſhoons, which he got for his ſalt, (being about 50 buſhels) but for a large profit.——Here, falling into a tertian ague, he paſſed the time, or rather lingered on, till about the latter part of October, when, to his great ſatisfaction, news was brought of an Engliſh ſhip being arrived at the iſland, and that ſhe anchored at the port of Terrafal. While he was getting ready a horſe to go thither, he received a letter from the captain, whoſe name was John Harfoot, who happened to know him, at his firſt arrival, ſent that letter to invite him to come on board him, if poſſible, next day. He accordingly went, and aſſiſted the captain in diſpoſing of his cargo; and when they had finiſhed their buſineſs, they weighed, intending for Barbadoes, where Captain Harfoot was bound; but ran firſt to Bona Viſta, where he ſtaid four days; from thence he went to the Iſle of May, for two days; and then proceeded for the iſland of St. Jago, and anchored in Porto Praya: they there met with an Engliſh ſhip, come from the coaſt of Guinea, with a cargo of ſlaves, wax, teeth, &c. and bound for Liſbon. The captain's name was Muſes Durel of Pool, in Dorſetſhire, with whom, on his invitation, Roberts determined to take his paſſage, as being the moſt direct courſe to England.

The Cape de Verde iſlands, of which Captain Roberts has here given us a particular deſcription, as we have already obſerved, lie off the cape of that name. They were all deſert when the Portugueſe firſt diſcovered them, and firſt ſettled at St. Jago, the moſt fertile of the whole cluſter, conſiſting of ten, viz. du Sal, Bona Viſta, (or Boa Viſta) Mayo, St. Jago, Fuego, Brava, St. Nicholas, St. Lucia, St. Vincent, and St. Antonio. But ſome reckon fourteen, becauſe they include four other little iſles, or rather rocks in the number.

They take up a little above three degrees from the ſouth to the north, and the ſame number from the eaſt to the weſt, lying between 14 degrees 30 minutes, and 17 degrees 40 minutes of latitude, and between the 4th, and 7th degrees of longitude from Ferro.—— Sal, Bona Viſta, and Mayo lie moſt to the eaſt, from north to ſouth; St. Jago, Fuego, and Brava, to the ſouth, from eaſt to weſt; and St. Nicolas, St. Lucia, St. Vincent, and St. Antony, is to the north-weſt, in a range from ſouth-eaſt to north-weſt.

The air of theſe iſlands is extremely hot and unwholeſome, ſo that they are reckoned to be ſituate in one of the moſt unhealthy climates in the world: the ſoil of ſome of them is ſtony and barren, as particularly that of du Sal, Bona Viſta, and Mayo: Sal and Mayo, have a great number of wild horſes; Mayo, beſides wild horſes, has a much greater number of wild goats, and a prodigious quantity of ſalt.—— The other iſlands are more fertile, and produce rice, maiſe, or Indian wheat, bananas, lemons, citrons, oranges, pomegranates, cocoa-nuts, figs, and melons; there are ſome white cotton and ſugar-canes, of which they have a double crop. The goats generally bring forth three or four kids at once, and that often in the year; and the vines bear twice a year.

Goats and ſheep are their principal care, having few oxen and cows. [Dampier ſays, "Aſſes are a commodity in ſome of theſe iſlands, ſeveral Engliſh ſhips coming hither purpoſely to freight with them, and carry them to Barbadoes, and our plantations. Their wealth conſiſts in goat-ſkins, and ſalt, ſent from Sal, Bona Viſta, Mayo, and St. Jago."

There is ſuch plenty of turtle in thoſe iſlands, that yearly ſeveral foreign ſhips reſort thither to catch and ſalt them by whole cargoes, for the European colonies in America. In the wet ſeaſon they go on ſhore to lay their eggs in the ſand, which they leave to be hatched by the heat of the ſun. The inhabitants go out in the night, and turn them on their backs with poles; for they are ſo large, that there is no doing it with their hands. The fleſh of them, well cured, is as great a ſupply to the American plantations, as cod-fiſh is to Europe. Poultry and rabbits alſo increaſe here.

The chief trade of theſe iſlands, in 1693, was in ſalt, (and that at Mayo) which the Engliſh loaded for Newfoundland. Some Engliſh ſhips called likewiſe in their way to the American plantations, at this iſland, Bona Viſta, S. Nicholas, S. Vincent, &c. where they purchaſed aſſes very cheap, which as well as all other beaſts, go off well at Barbadoes. Captain Roberts obſerves, that there is found on moſt of theſe iſlands, a ſort of vegetable ſtone.

The firſt Portugueſe ſettlers, particularly thoſe on St. Jago, provided themſelves with negro ſlaves from Guinea to do their work; and, as it was uſual with them to atone for their ſins on their death-beds, by giving one or more ſlaves their freedom; theſe manumitted blacks being in a climate natural to them, increaſed a-pace; and not brooking the lordly and oppreſſive deportment of the whites, found means in time to get tranſported to the neighbouring iſlands, whither ſome of the whites, ſeeing their improvement, followed them; but the Portugueſe trade in thoſe parts declining, by means of other nations finding out the way to Guinea, and the Eaſt Indies, the blacks grew ſo much ſuperior in number, that they inſiſted to be put on an equal footing with the whites, who, rather than ſubmit to this, retired to St. Jago or Portugal, leaving but a few poor people behind, who were glad to join with the blacks on their own terms, and intermarrying with them, their deſcendants, by that mixture, grew from mulattos to be copper-coloured negros; ſo that now there is as great variety of negros on

theſe iſlands, as is to be met with throughout the whole coaſt of Guinea.

Thus all the iſlands came to be peopled; which being obſerved by the court of Portugal, the king beſtowed them among his nobles, reſerving to himſelf only St. Jago, (and afterwards St. Philip's.) However, the governor of St. Jago has the title of General of all the Cape de Verde Iſlands, and the coaſt of Guinea, from Rio Sanaga, to Sierra Leona, &c. The other lords ſtocking each his own iſland, with cows, goats, &c. leave the government to a deputy; their authority not being much, as the ſole power of puniſhing by fine, limb, or death, was lodged at firſt in the governor of St. Jago: but of late an officer, called an Ovidor, (much the ſame with the juſtices of aſſize in England) has been eſtabliſhed, who is veſted with all the civil juriſdiction, and has alſo the inſpection and management of the crown revenues, &c. the military part being reſerved to the general.

St. Jago is the clearing port for all ſhips trading from any part of the king of Portugal's dominions, to that part of Guinea; but notwithſtanding this, the crown revenues from this iſland are but ſmall, lying between Cape de Verde and Sierra Leona. However, he is not at much charge in keeping them; for as there is never a fortification but on St. Jago and St. Philip's, tnd none of any ſtrength, excepting that at the city of St. Jago, which was built by the Spaniards, when Portugal was under their dominion; ſo they are defended by their own militia, without any of the king's forces.

Our author ſays, "The ſea about theſe iſlands keeps a regular influx and reflux every ſix hours and ſome minutes; and that the ſpring and neap-tides, likewiſe keep their due courſes, unleſs when affected by the ſhifting winds, &c. which are more frequent here than in other parts; but let the weather be ever ſo calm, yet the ſea runs higher againſt the rocks, and even in the bays, about the full and change of moon, than in, or near the quarters. At theſe times the captain has taken notice, that in a ſtrong gale of wind, which cauſed a great ſea to run in the channel between St. Philip's, and St. John's, yet in the Fuarno (a bay in the latter) the ſea has been very ſmooth. On the contrary, near the full or the change, when perhaps it had been calm for three or four days before, and the channel almoſt as ſmooth as the Thames, yet againſt the ſhore the ſea heaved up in ſuch a manner, that even in the Fuarno there was no putting a boat on ſhore to the beach or ſtrand, without danger of being filled with water by the rolling and breaking of the ſea thereon; and although one might at the ſame time land ſafe enough at the quay, yet there the waves roſe and fell as if a great ſea ran without. "The flood ſets to the north-eaſt, and the ebb to the ſouth-weſt, unleſs checked or turned by the points or ſides of the iſlands, (the effects of which are found on the ſtream, (which he obſerved there, and is a rule for judging of the reſt." A good tide, both ebb and flood, runs between St. Jago's and St. Philip's, and a ſtronger between this and St. Nicholas to St. Anthony's, eſpecially the narrow channel between St. Lucia and St. Vincent, which, in ſpring-tides, run very ſtrong, viz. as faſt as it does in any part of the Thames, to Captain Roberts's thinking, for he had no conveniencies for knowing exactly.

The iſle du Sal, or of Salt, is the moſt windward of all the Cape de Verde iſlands, being ſituated, according to Captain Roberts, in latitude 17 degrees north, and longitude five degrees 18 minutes weſt, from the cape. It is clear all round of ſhoals and rocks, and affords tolerable good riding, except in the rainy ſeaſon. The road before the town of Palmera, is the moſt noted, looking like two bays, with a rocky point in the middle. This bay lies on the weſt ſide of the iſland, and is eaſily known by three palm trees, from which the name is taken; they are ſtill ſtanding, and are the only trees of the kind on the iſland. To the ſouthward of the bay, about a mile, or half a league, there is a little iſle, which is always white with fowls dung, as if covered with ſnow. Of the five hills that are upon du Sal, that to the north is the higheſt, and next to this, that to the eaſt, both which appear in the form of ſugar-loaves.

This iſland formerly, was well ſtocked with goats, cows, and aſſes: but about the year 1705, not long before Mr. Roberts went on ſhore, it was intirely deſerted, for want of rain, by all the inhabitants, except an old man who reſolved to die on it, as he did the ſame year. The drought had been ſo extreme for ſome time, that moſt of the cows and goats died for want of ſuſtenance; but rain falling, they increaſed apace; till about three years afterwards, they were again reduced by an odd accident: a French ſhip coming to fiſh for turtle, by ſtreſs of weather, or ſome other means, left behind her 30 blacks, which ſhe had brought from Saint Anthony's to carry on the fiſhery.

Theſe people finding little elſe, fed moſtly on wild goats, till they had deſtroyed them all but nine old he goats, which was then on the iſland, and kept generally upon the northern mountain. They killed alſo moſt of the cows; ſo that they were at laſt forced to eat aſſes. About 16 months after, an Engliſh ſhip (bound for the iſle of Mayo, to take in ſalt) perceiving the ſmoke of ſeveral fires, which the negros made, ſent her boat on ſhore, and thinking they might be ſome ſhip's company wrecked upon the iſland, put in there, and compaſſionating their caſe, took them all in, and left them on their own iſland of St. Anthony's.

This ſtory Roberts had from one of the ſame blacks. The St. Nicholas blacks, whom the captain brought off in 1722, told him, that there were then nine cows and bulls, and that old he goat above-mentioned, which they had ſeveral times ſeen, and a great many aſſes, but nothing near the number before the drought. At that time, a little feſhoon that was ſown a few years before in the valley of Palmira, was the only vegetable they had for food. This plant thrives there very well. It ſheds in October or November, and the ſeed finding a ſoft bed in the valley, lies unhurt till ſpring, when it ſhoots up again; and laying hold of the adjacent ſilk cotton trees, twines round them like hops in England, and is fit to eat about Auguſt. The ſilk cotton itſelf is of no great uſe; only in ſeveral of theſe iſlands the natives ſtuff beds with it: and the author obſerves, that it makes the beſt tinder of any thing he knew in the world: the wood yields a quick blaze, but is not laſting, and when well dried will quickly take fire by friction. The dates here are as good as any on the coaſt of Africa; but there is only one of the palm-trees that bear fruit.

Quantities of land-crabs and turtles are found thereabouts, like thoſe in the Weſt Indies. And among the fiſh, with which this place abounds, there is one ſort, (by the blacks called Mear) about the bigneſs of a cod, but thicker and much flatter, which will take ſalt, and cure as well as cod, which the author ſays, might be as conveniently ſalted here as at Newfoundland.

Ambergreaſe is often found here in greater quantities than upon any of the iſlands; Captain Dampier takes notice, that while they ſtaid here in 1683, one Coppinger bought a piece of falſe ambergreaſe, being of a dark colour, like ſheeps dung, very ſoft, but had no ſmell. One Read, a Briſtol man told him once, that he had taken up a piece that ſwam by the ſhip's ſide at Fogo, which was true ambergreaſe, and his maſter had enriched himſelf by buying it there. At Niquibars, the author had been informed, there was ſome very good; but both there, and at the gulph of Florida, from whence much of it comes, the natives counterfeits it upon this occaſion. The author ſays, "One Mr. Hill, a man of integrity, ſhewed him a bit which he (Hill) had from one Baker, whom he vouched to be a man of veracity, who found a large piece upon the ſhore, a little above high-water mark, in the bay of Honduras. Hill's piece came off this,

and was given him by Baker. It was of a dusky colour, almoſt black, about the hardneſs of a mellow cheeſe, and of a very fragrant ſmell.

Salt is made here in the crevices of the rocks, without art, by the heat of the ſun. Captain Cowley ſays that the Engliſh ſhips came often thither to load ſalt for the Weſt Indies, and that the ſalt ponds were near two miles long.

There is a ſort of fowl called the Flamingo: theſe birds are a large fowl, ſhaped like a heron, but bigger, and a reddiſh colour. Here they build their neſts, ſcraping the mud together, to make little hillocks a foot and a half high from the bottom, and ſtanding out of the water: they make them broad at bottom but bring them up tapering to the top, where they leave a ſmall hollow pit to lay their eggs in; and both in laying and hatching of them, they ſtand with their feet on the ground, and legs in the water, cloſe by the hillock, againſt which, having very long legs, they reſt, covering the neſt with their rumps. They never lay more than two eggs, and ſeldom fewer. The young ones cannot fly till they are almoſt full grown, but will run exceeding faſt, yet he had taken many of them. The fleſh of both young and old is lean and black, but very good meat, taſting neither fiſhy, nor any ways unſavoury. Their tongues are large, having a great knob of fat at their root, which is an excellent diſh. The young ones are of a light grey, growing darker, as their wings ſpring out, but never come to their right colour, or any beautiful ſhape, under ten or eleven months old. Theſe birds are very ſhy, and therefore hard to ſhoot: they keep together in large flocks, feeding in muddy ground, or places where there is little water.——

Bona Vista, or Boa Viſta, lies in ſixteen degrees ten minutes north latitude; and in five degrees fourteen minutes weſt longitude from the Cape; its length, from ſouth-eaſt to north-weſt, is eighteen leagues; and breadth from north-eaſt to ſouth-weſt, where it is the broadeſt, about fifteen miles. It was ſo called by the Portugueſe becauſe they counted it a good ſight, as it was the firſt of theſe iſlands which they diſcovered.

About forty years ago this was thought to be the moſt plentiful of all the iſlands, for cows, goats, hogs, horſes, aſſes, maiſe, pompions, ſeſhoon, water-melons, and potatoes. It ſeems, that in 1722, there were no potatoes growing here, and very little of any thing elſe: the cows were likewiſe all deſtroyed, except about forty, which belonged to the lord of the ſoil: but ſince that, Captain Manuel Domingo got an Engliſh ſhip to bring him a young bull and an heifer; which, when Mr. Roberts was laſt there, were increaſed to ſeven.

Moſt of the inhabitants have goats, the milk of which, helped out with fiſh and turtle, ſupplied them with food after the famine that happened there. For the reſt, their whole dependance was on Engliſh ſhips which came there to lade, and often hired ſome of them to work in the ſalt-pans, beſides their aſſes, and blacks to drive them, to bring the ſalt down to the ſea-ſide, for which they pay them in biſcuit, flour, old cloaths, or what elſe they bring with them for that purpoſe.

The men generally uſe the European dreſs, there being few that have not ſuits bought of the Engliſh, and have learned to make up cloaths of their cotton cloths. The women when dreſſed, wear cotton cloths, wrapped about them like petticoats; and tied with a girdle above the hips, and ſometimes without a girdle, the corner of the cloth only tucked in. Their ſhifts are made like a man's ſhirt, but are cut off ſo ſhort, that they do not reach low enough to tie under their girdle. The waiſtbands, collar and neck of the better ſort, eſpecially the younger ones, have figures wrought with a needle in ſilk of many colours; but the poorer, particularly the older ſort, take up with blue cotton thread for this work. Over their ſhifts they wear a jacket, with ſleeves to button at the arms not above four inches deep in the back part, but long enough before to tie with ſtrings under their breaſts: and over all a cotton cloth, by way of mantle, which the married women generally chuſe of a blue colour, and the darker the blue, the richer it is reckoned: but the maidens, and gay young wives or widows, wear blue and white ones, ſome figured, as they call it, others ſpotted. All this time the women wear no ſhoes nor ſtockings, except very few, and thoſe only on holidays; but ſome of the men are ſo uſed to both, that they can as little endure to go bare-foot, as any body. But though they appeared dreſſed out in ſuch order on holidays, yet on all other days, both men and women are in a manner naked: the women only wearing a ſmall cotton cloth wrapped round their waiſt which reaches to their knees; and the men nothing but the relicks of an old pair of breeches. They are very lazy, both men and women; and though this iſland yields more cotton than all the reſt put together, the ſhrubs growing in common, yet it is the worſt market of all, both for ſcarcity and dearneſs of cloths: for they will neither gather the cotton till they know of a ſhip or veſſel to buy it, nor will their women ſpin, but juſt as they want; ſo that when the cotton ſeaſon is over, there is ſcarce one hundred weight to be got, although, the author ſays, he is certain they might gather yearly, more than a good ſhip's cargo.

This iſland affords good ſalt; and the author made a cargoe of ſalt here, in the month of Auguſt, during their rainy ſeaſon, when the road was ſo wet and ſlippery, that the aſſes had much ado to carrry it down to the ſhip. The rain having melted all the ſalt in the pans, the natives whom Captain Roberts had employed to get him a cargo, cleared the pans of the rain-water, and filled them up with pickle; and in about three week's time he got ſalt enough made and heaped up. This iſland likewiſe yields Indico, which, growing ſpontaneouſly, as the cotton does, they can have it only for the pains of gathering. The misfortune is, that they have not the art of ſeparating the tincture, or making what is called the ſtone blue, as in the Weſt Indies, &c. but only pound the leaves of the ſhrubs while green, with a wooden peſtle and mortar, for want of mills to grind them; reducing it to a kind of pap, which they form into thick round cakes, or balls, and lay it to dry for uſe.

The vegetable ſtone is more frequently met with here than in the reſt of the iſlands: it ſhoots in ſtems, like the head of a cauliflower, or as the coral does. but is more porous, and of a greyiſh colour, much like the ſtones generated from ſhells. Some little ambergreaſe was found here, but it was dangerous dealing for it, the inhabitants generally adulterating it with a ſort of jelly, or excrement caſt on ſhore there. This iſland yields to that of Sal, for fiſh, all about; except at the rock called John Letton, where they are as plentiful as at du Sal, and there is no want any where.

Captain Roberts obſerved, that the people of Bona Viſta naturally love the Engliſh, and can ſpeak moſt of them a little of the language; and even ſome of the women made ſhift to underſtand him in it. The iſland is for the moſt part low land, but has ſome rocks, ſandy hills, and mountains.

Mayo lies in the latitude fifteen degrees twelve minutes north, and longitude five degrees twenty-nine minutes weſt from Cape Verde. It bears from Bona Viſta ſouth-by-weſt weſterly, about fourteen leagues. This low land, for the moſt part is like the former, but is diſtinguiſhed by three mountains, the ſouth-eaſtermoſt, which is the higheſt, being called Pinoſa; the northermoſt, St. Antonio. This iſland lies about forty miles eaſt-by-ſouth, from St. Nichola's; it is about ſeven leagues in circumference, of a roundiſh form, with many ſmall rocky points ſhooting out into the ſea a mile or more. There are two hills on this iſland of a conſiderable heighth: one pretty bluff, the other peaked at top. The reſt of the iſland is pretty level, and of a good heighth from the ſea. The ſhore all round has ſandy bays between the

the rock and the points. The whole iſland is very dry, and generally barren, the beſt of it being but very indifferent ſoil. The ſhips that lade laſt here will be obliged to touch at St. Jago for water; for at the bay there is none, not ſo much as for drinking. It is true there is a ſmall well of brackiſh water not half a mile from the landing place, which the aſſes that carry ſalt drink at; but it is very bad water. In the general drought, Mayo ſuffered as much as Bona Viſta, yet they have more cows, and theſe generally the beſt and fatteſt on all the iſlands. They have alſo moſt of them goats. They have fewer fiſh than at Bona Viſta, and but a ſmall quantity of turtle. Figs, and water-melons are their chief fruits. They have alſo calavances (a ſort of pulſe like French beans) and pompions for ordinary food. There are alſo ſome trees within the iſland, but none to be ſeen near the ſea-ſide, nothing but a few buſhes ſcattering up and down againſt the ſides of adjacent hills; for the land is pretty high from the ſea.

Though the inhabitants of Mayo never had the 10th part of the cotton that Bona Viſta had, and left a great deal of that for want of rain, yet they have ſtill more than enough for their own uſe, but are very idle in regard to its improvement. There is alſo a ſilk cotton found here; it grows on the ſandy banks that pens in the ſalt ponds, on tender ſhrubs three or four foot high, in pods as big as an apple, but of a long ſhape, which, when ripe, open at one end, parting leiſurely into four quarters, and at the firſt opening, the cotton breaks out of it. There are many ſorts of ſmall birds and fowl in Mayo; as pigeons and turtle doves; miniotas, a ſort of land-fowls, as big as crows, of a very grey colour, which are good food; cruſias, another ſort of grey-coloured fowls, almoſt as big as a crow, which are only ſeen in the night, (probably a ſort of owls) are ſaid to be good for conſumptive people, but eaten by none elſe. Rabeke, a ſort of large, grey, eatable fowls, with long necks and legs, not unlike herons. Here are alſo great curlews and Guinea hens, which the natives of theſe iſlands call Gallena Pintata, or the Painted Hen, called at Jamaica the Guinea Hen, where they love the dry ſavannahs and woods. They ſeem to be much of the nature of partridges, are bigger than Engliſh hens, have long legs, and will run apace, but cannot fly far, having large heavy bodies, with ſhort wings and tails. They are ſo ſtrong that one cannot hold them, and are very hardy. They have thick and ſtrong, yet ſharp beaks, but pretty long claws: their necks are long and ſlender, their heads alſo but little. The cock bird has a ſmall riſing on his crown in manner of a comb, of a dry walnut-ſhell colour, and very hard; he has a ſmall red gill on each ſide of his head like ears, ſtrutting out downwards, but the hens have none. The feathers of theſe birds are ſpeckled with dark and light grey, in ſmall round ſpots, very regular and uniform. They feed either on worms, which they find by taring open the earth, or elſe on graſs-hoppers, which are plentiful here. They are very good meat, ſweet and tender, the fleſh in ſome very white, but in others black; however, both ſorts are very good. The natives run them down eaſily with dogs.

The ſea is plentifully ſtocked with fiſh of many ſorts, viz. dolphins, bonettas, mullets, ſnappers, ſilver fiſh, &c. And here is a good bay to haul a line or net in, as the author found often by experience, dragging on ſhore at one time ſix dozen of great fiſh, moſt of them large mullets of a foot and a half, or two foot long. Here are alſo porpoiſes, and a ſmall ſort of whales, that commonly viſit this road. In May, June, July, and Auguſt, ſays Dampier, a ſort of ſmall tortoiſe come hither to lay their eggs: but theſe turtles are not ſo ſweet as thoſe in the Weſt Indies. Beſides the abovementioned productions, there is ſome little indico to be met with in this iſland, and ſometimes ſmall quantities of ambergreaſe are found. We are told, that the inhabitants ſalt the fleſh of goats, and export it in caſks, dreſſing the ſkins very neatly in the nature of Turkey leather. And it is ſaid, that 5000 of theſe ſkins are yearly carried into other parts. But the chief commodity of this iſland is ſalt, and Mayo is the moſt noted of all the iſlands for it by the Engliſh, many of their ſhips lading here in the ſummer.

Mr. Roberts tells us, there are two roads in the iſland for ſhips to ride; beſides ſeveral little coves, where a boat might run in, but not worth farther notice. Dampier ſays the inhabitants live near the bay, in the middle of the iſle, in three ſmall towns, (having a church and prieſt in each;) which, as he was informed, are ſix or ſeven miles from the road, on the weſt ſide (or Engliſh road) Pinoſa is ſaid to be the chief town, and to have two churches. St. John's the next, and the third Lagoa. The houſes are very mean, ſmall, low things. They build with fig-trees, here being, as the author was told, no other trees fit for the purpoſe; the rafters are a ſort of wild canes. The natives, even their governors and prieſts, are all woolly haired like their African neighbours, from whom they probably deſcended; though being ſubject to the Portugueſe, they have their religion and language. They are ſtout, luſty, well-limbed people, both men and women, fat and fleſhy; they and their children being very round and plump: though at the ſame time the iſland appears ſo barren to a ſtranger, as ſcarce to have food for its inhabitants; who, as Dampier upon enquiry was told by one of the people, amounted to no more than 230 perſons.

Captain Roberts obſerves, that theſe iſlanders are much the ſame with thoſe of Bona Viſta, but not ſo well affected to the Engliſh, and they dreſs juſt as the Bonaviſtans do; but that few of them have any holiday cloaths at all. When he was there in 1722, their number was computed at ſomething above 200: they were chiefly blacks, and the moſt hard-featured of all their neighbours; having but few mulattoes, and no whites at all among them.

The people of Mayo live very poorly, yet much better than the inhabitants of any other of theſe iſlands, St. Jago excepted. They depend for their trade and ſubſiſtance, chiefly on the Engliſh, who, in return for their aſſiſtance in lading the ſalt, give them victuals, ſome money, and old cloaths, viz. hats, ſhirts, and other things, by which means many of them are indifferently well cloathed; but ſome of them go almoſt naked. All the iſlanders are at that time, fully employed in getting ſomething or another; for they have no veſſel of their own to trade with, nor do any Portugueſe ſhips come hither, or ſcarce any but Engliſh, for whom they have a particular value.

When the ſeaſon for turtles comes in, they watch the ſandy bays in the night to take them, having ſmall huts, at particular places on the bays to keep them from the rain, and to ſleep in. This is another harveſt they have for food; for by report, there comes a great many turtle to this and the other Cape Verde iſlands. When the turtle ſeaſon is over, they have little to do but hunt for Guinea Hens, and manage their ſmall plantations. By theſe means they have all the year ſome employment or other, whereby they get a ſubſiſtance, though but little elſe. When any of them are deſirous to go over to St. Jago, they obtain a licence from the governor, and deſire paſſage in any Engliſh ſhip. The pirates have often landed on this iſland, and carried off not only cattle, but ſome of the inhabitants.

(In 1683, there came about a week before Dampier arrived here, an Engliſh ſhip, the men of which going on ſhore, under pretence of friendſhip, ſeized on the governor, with ſome others, and carrying them on board, made them ſend to land for cattle to ranſome their liberties; yet after this, they ſailed away with them, and poſſibly never brought them back again. The Engliſhman who did this vile action was one Captain Bond, of Briſtol, who, with moſt of his men, went over afterwards to the Spaniards, and had like to have burnt the ſhip Dampier was in, in the bay of Panama).

St. JAGO, or St. James's, is by ſome ſaid to be in length about 45 leagues; in breadth 10; in circumference 95. Others make its length about 20 leagues, ſouth-eaſt and north-weſt, and its breadth 10, eaſt north-eaſt, and weſt ſouth-weſt. It lies four or five leagues to the weſtward of Mayo, and is the chief, the moſt fruitful, and beſt inhabited of all the iſlands of Cape Verde, yet mountainous, and has much barren land in it. Captain Roberts obſerves that in the rainy ſeaſon, this more ſickly than the reſt, and dangerous to ſtrangers. At that time there were not many places in Guinea, except Cacheu, more ſickly than St. Jago; its unhealthineſs being ſuch, that it may properly be compared to where the plague rages. The ſouth-eaſt end of this iſland is flat land, but all the reſt, except Campo de Terrafal, riſes in mountains. Peak Antonio is the higheſt, lying near the middle, and at the diſtance of three or four leagues, but not nearer, ſhews itſelf above the reſt, on either ſide of the iſland. When you make the high hill of Terrafal to the eaſtward or weſtward, it ſhews at firſt like an iſland, till you are nigh enough to raiſe the low land, called the Campo, which joins it to the reſt. Here the Portugueſe ſettled firſt, finding it not only the largeſt, but the moſt fruitful of them all; as having the beſt ſeaſons, and conſequently the beſt paſture, and greateſt variety of fruits, and is refreſhed with pleaſant rivulets. Their chief land animals are their bullocks, which, according to account, are ſaid to be many; though they aſked 20 dollars a piece for them. They have alſo horſes, aſſes, and mules, deer, goats, hogs, and black-faced long-tailed monkeys. There are civet cats here; and that the monkeys are the beſt proportioned that are any where ſeen. Roberts ſays that St. Jago alone, of all the Cape de Verde iſlands produces this creature, and that they may be had in all parts of it. There are great numbers of ſmall oxen, hogs and goats on the iſland.—— The fowls were cocks and hens, both tame and wild; paraquites, parrots, pigeons, turtle doves, herons, hawks, and curlews, abound here. There is plenty of maiſe, feſhoon, Guinea corn, plantains, bananas, and pompions, for neceſſary proviſions; and for delight, there grow good oranges (both ſweet and ſour) lemons, tamarinds, pine-apples, muſk, and water-mellons, and mandyokes, and cocoa-nuts in abundance, beſides guavas, cuſtard or ſtar-apple; ſugar-canes alſo grow here, but they make little ſugar, contenting themſelves with molaſſes; they have likewiſe ſome grapes; and the author thinks, as well as the natives, that vines would do here very well, but for reaſons of ſtate, the king of Portugal does not ſuffer them to make wine. [Ovington ſays there are but few vines, and no wine made; all they drink coming from Madeira: others ſay from Liſbon. The ſame author adds cedars to the trees; and ſays the European herbs and plants grow very well here, but muſt be renewed every year.] They have plenty of cotton growing up in the country wherewith they cloath themſelves, and ſend alſo to Braſil. The cuſtard apple mentioned above, among the fruit, is as big as a pomegranate, and much of the ſame colour. The outſide coat is for ſubſtance and thickneſs, between the ſhell of a pomegranate, and the peel of a Seville orange, ſofter than this, yet more bitter than that, and is remarkable for being regularly ſtudded round with knobs. Within it is full of white ſoft pulp, ſweet and pleaſant, moſt reſembling a cuſtard of any thing, both in colour and taſte (whence it is named by the Engliſh.) It has, in the middle, a few black ſtones, or kernels, but no core, for it is all pulp. The tree that bares it, is about the bigneſs of a quince-tree; with long ſmall branches, thick ſet, and very ſpreading. The fruit grows hanging down with its own weight, at the extremities of the branches upon ſtalks, about nine or ten inches long, ſlender and tough, but large trees do not bear above twenty or thirty apples.

This fruit grows in moſt countries within the tropics. They have been ſeen all over the Weſt Indies, both continent and iſlands, as alſo at Braſil, and in the Eaſt Indies. The papah is found in all theſe countries. It is a fruit about the bigneſs of a muſk mellon, hollow as that is, and much reſembling it in ſhape and colour, both out and inſide; only in the middle theſe have a handful of ſmall blackiſh ſeeds, about the bigneſs of a pepper-corn, taſting hot alſo, ſomething like pepper. The fruit is ſweet, ſoft and luſcious, when ripe; but while green, hard and unſavory: yet their being boiled, it ſerves by way of turnips to ſalt beef, and is equally eſteemed. The papah-tree is about ten or twelve feet high; the body near the ground may be a foot and a half, or two feet diameter, and goes up tapering to the top. It has no branch at all, but only large leaves, growing immediately from the body upon ſtalks, which are longer as they grow farther from the top. The leaves are of a roundiſh form, with jagged edges. They begin to ſprout out about ſix or ſeven feet high from the ground; whence upward they grow thicker and larger, and at top are quite cloſe and broad. The fruit grows only among leaves, and thickeſt among the thickeſt of them: ſo that towards the top they are thick, as they can ſtick by each other; but are no bigger than an ordinary turnip: the larger fruit before deſcribed growing lower down, where the leaves are thinner. The fiſh at St. Jago is the ſame as at Mayo, and the reſt of theſe iſlands.

Captain Roberts ſays, there is abundance of that marcaſite, which the Portugueſe call Beur d'Ore, which is generally opake, though ſome is a little tranſparent. In the ſhade it caſts a dark blueiſh or purple colour, but when brought into the ſun, it ſhews the colour of gold, and appears very bright and glittering. The author was informed by ſome gentlemen, who had reſided for a time in ſeveral parts of Braſil, and had converſed with people concerned in the mines there, that there was certainly a gold mine, wherever any great quantity of this beur d'ore was found; the ſame gentleman likewiſe told him, that the colour made with this marcaſite looked as well as gilding. Another foſſil is a very curious red ſtone (or ocher) which is found here in a hill, on the north ſide: It is very much like chalk in England, but ſofter and ſomething heavier than powder, when ſcraped off with a knife, feeling as fine as the fineſt flour. It runs in veins, and next the ſurface is a common rock, which growing ſofter by degrees appears variegated, till you come to a vein of a brimſtone colour. This covers one of a fainter yellow, which is ſucceeded by a fleſh colour. The red prevailing in the next, grows fuller in one under it; after which the true vein appears of a deep but bright and lively red. He was ſhewn at Terrafal, a kind of yellowiſh, grey-coloured, luminous rock, full of ſhining ſparkles, which gliſtened in the ſun-beams like cryſtal.

This iſland enjoys the privilege of being the port of clearance for all ſhips trading to the northward of Sierra Leona to Guinea. [We are told the iſland of St. Jago was formerly inhabited by the Portugueſe, who were baniſhed to this place for murders, thefts, and other villainies: and Captain Cornwall ſays, they are no better than tranſports, who intermixing with a race of people from their plantations in Guinea, have but a very faint reſemblance in perſon, a coarſe affinity of language, and a natural indolence to avouch for their original, being grown perfect mulattos, tall, but not well-proportioned, eſpecially the women, who have alſo large lips, flat bodies, and vicious inclinations, being as infamous for levity as deformity. By this courſe amongſt their ſlaves, which are Guinea negroes, the people are in general become black, or at leaſt of a mixed colour, except only ſome few of a better ſort, viz. the governor, the biſhop, and ſome of the gentlemen and prieſts; they are ſaid to be a poor, lazy, ignorant ſort of people, and by religion Roman Catholics, as they are told; but that their ignorance and ſtupidity is ſuch, that they know little more than the name of religion. The negroes here wear only

a roll of linen about their heads, and a waiſtcoat (or barrafool) made of blue and white ſtriped or check-quered cotton. He was told, theſe were a good commodity upon the golden coaſt of Guinea.

A great number of young blacks are brought up at St. Jago for the prieſthood; and as ſoon as they have reſolved to be ſuch, they make an intereſt the uſual way, by friends, preſents, &c. to one of the dignitaries of the church, who takes them under his tuition; and after ſome time paſt, with little or no pains taken in their inſtruction, preſents them with a ſerious diſcourſe concerning the dignity, importance, and great difficulties of the ſacerdotal function, takes a ſolemn engagement of their tractable behaviour, and gives them his bleſſing. This entitles them to put on a ſtudent's habit, which is a long caſſock, and a cloak, both of black bays; and purchaſing a Latin grammar, and ſome catechiſtical books of the firſt rudiments of their religion, they labour hard to get all they can by heart, to be qualified for diſputing and bandying queſtions out of them, for which purpoſe they meet in ſome ſhady ſtreet in the evening: but their higheſt grammatical conteſts ſeldom riſe above the declenſions of nouns, few of them ever being ſo deep learned as to be able to form a verb thro' all the moods and tenſes. As ſoon as they have made a ſufficient progreſs in theſe books, they paſs a ſecond examination before the biſhop; who grants a licence to the higheſt for reading ſome higher compoſitions. And after ſome time ſpent in the ſame kind of exerciſes as before, they are examined out of theſe books a third time by the palaſtre, who is vicar-general, and firſt judge of the inquiſition, and dignified with the title of Doctor Theologiæ, though, perhaps, he knows little of it. This officer gives a certificate of the ſeveral qualifications of the candidates, the tenor of which depends pretty much upon the ſize of the preſents, &c. made him; and according to this certificate, the biſhop gives the ordination of the loweſt order, or ſubdeacon; and takes an oath of ſecreſy from them, as well with regard to thoſe myſteries (which as yet were none of the higheſt) they have already learned, as alſo all thoſe they ſhall be hereafter admitted to. Here they continue till merit or intereſt fits them to receive the ſecond degree or order, namely, of the Evangelic. Thus dignified, they have liberty to read and peruſe the liturgy, and may officiate in aſſiſting of maſs-prieſts, by reading of epiſtles and goſpels; and when regularly qualified, their chief buſineſs is to make all the intereſt they can to get a benefice.

Captain Roberts, ſailed round this iſland, and viſited all the ports, of which we meet with two accounts: one in the journal of his voyage; the other in the deſcription of the iſlands. We ſhall inſert both here; the firſt is delivered in the ſame order that he performed that little navigation. From the Fuarno, on the eaſt-ſide of St. Philips, he croſſed over to the bay of Rivera das Bharkas, in St. Jago. There he recruited his water, and concluded to go about the north-end of the iſland for Mayo; which though ſeemingly the longer, he knew to be the ſhorter way thither. Hence, therefore, he ſailed to the bay of Rivera de Prata (or Plata) and ſtopping there a lee-tide, the next windward-tide got to port Terrafall. Thence, with a windward tide, he reached Porto Faciendo. Next in one tide he made a bay, which having no name, he called Porto Signora Jorge. Hence he met with Signora Ihuiſs. This is a ſmall bay, with a great many rocks right againſt it of different ſizes; the largeſt not above two ſtones caſt in length, and moſt of them above water, extending from the ſhore about half a league. This made the entrance difficult; but when entered he found a ſafe, pleaſant running in behind the point, about a good cable's length wide, from which you could ſee no ſea. But was land-locked from all winds, and from five to three fathom water, a ſort of ſand and ooze mixed.

The ſame day, getting round the Bighude, or north-eaſt point of the iſland about noon, the wind changing in the evening he ſaw Monte Pinoſe on the iſle of Mayo. From Calyete in Mayo he returned to St. Jago, and fell in with a large fine bay to the ſouthward of it; which he called Porto Sine Noma. He anchored on the high land on the northern or weather ſide of the bay in a little ſandy cove; where ſounding with a ſtone ſlung to a fiſhing line, he found it pretty deep, and was within a ſtone's caſt of the ſtrand before he had ground. There was a large beach of ſmall pebbles, a ſign of clean ground, but the land was ſo high, that it made an eddy wind blow right into the bay; which increaſed in proportion to the gale on ſhore, as the ſun declined. He rowed out there to get into the true wind, and run down to Porto Formoſa, and from thence with the ſame wind down to the bay of St. Jago, thence down ſtill to Porto Madera. Here he moored with his anchor off, and a rope faſt to a rock, which was like a quay, having twelve foot at low water cloſe to it. There being no inhabitants near the port, and but indifferent road from thence to the village, he coaſted ſtill down to Praya Formoſa; and touching there and at St. Domingo, from thence proceeded to Porto Lobo, from whence he rode to the town, which is twenty miles by land, bad way: where, in diſcourſe with Signor Pedro Balderaveſſa, aſcertaining, that Porto Lobo, was a more ſecure port than Calyete, eſpecially in the ſhifting wind ſeaſon, that gentleman told him, that Calyete was always reckoned the ſafeſt port in all St. Jago.

From Porto Lobo he ran down the coaſt taking a view of the bay of St. Franciſco and Portate, and being ſhort of daylight to go to Calyete, he anchored at Villa de Praya till next morning, and then ran to Calyete: but expecting a ſouthern wind in a little time, he haſtened to get to the eaſt ſide of the iſland: becauſe from thence he could not only better ſail with a ſoutherly or weſterly wind, but the roads are ſafeſt alſo, for there is not one road on the lee-ſide of the iſland where a man can ride in ſafety, with a weſterly, or ſouth-weſt wind, except Calyete St. Martin: but then you cannot get out with thoſe winds; which however are the only winds you have to carry you up to the windward iſlands.

From thence therefore, he went back to Porto Praya, which lies near the ſouth-weſt point of St. Jago, is the firſt and moſt noted port, being diſtinguiſhed from the reſt by its pleaſant proſpect. The town and fort ſtands on a pretty high flat land in the middle of the bay, with a valley on each ſide, diverſified with cocoa nuts and palm trees. The beſt riding is beyond the iſland on the north-weſt ſide of the bay; which however, in the open part, is clean ſandy clay from fifteen to five or ſix fathoms, but within that tough ooze to three fathoms, and then ſand again: there is good watering here. About two leagues from Praya, weſt-north-weſt, lies Calyete St. Martin, a narrow cove not above a cable's length broad, and runs in from the weſtermoſt point about a quarter of a mile, having ſixteen or eighteen foot water within, you moore with an anchor off, and a ſtern faſt on ſhore to a tree in the middle of the beach, which is full of ſmall ſtones. there you lie ſecure all the rainy ſeaſon, and may water alſo. You muſt take a black on board at Porto Praya to ſhew you the place, being hard to find, although, there is no danger, but what you may ſee. The author in his voyage obſerves, that in the rainy ſeaſon this is the ſickleſt part of all the iſland. From Calyete to the city, (that is, Rebeira Grande, or St. Jago) is about four miles by land, pretty level, but very ſtony way. Before the city, which lies about a league by ſea to the north-weſtward of Calyete is a very ordinary road, being ſo very foul, that it is much if you lie there any time, but you cut your cable, or hook your anchor in the rocks, and leave it behind. Several veſſels have been loſt in this road, which is the reaſon that of late it has been frequented by few, except Portugueſe. The Dutch formerly

formerly touched here for refreſhments: but lately Porto Praya only hath been uſed.

River de Plata is a very good bay, all clean ground, in what depth you pleaſe, from three and a half to twelve or fourteen fathoms: and it is a better place to water at than Porto Praya, the ſtream running down to the ſea-ſide, where you may roll a caſk into the river, and fill it at the bung, without uſing bucket or funnel. You have all ſorts of refreſhments here, as fruit, roots, fowls, goats and cows, much cheaper than at Port Praya, or the city. He had ſeen a much better cow ſold here for 2500 reas, than you could have for 6000, or eight dollars, at Porto Praya; and maiſe is as dear again there as here.

The next conſiderable port is Terrafal, but yields no commodities for trade; and though it is a good road when in, excepting in the ſhifting wind ſeaſon, yet the turning up into it is very troubleſome. The next is Porto Faciendo, a large bay there, right oppoſite the beach, from ten to four fathoms water.

There are ſeveral coves and little bays betwixt this road and the Bikhude, which is the northermoſt point of St. Jago. This town is known by its churches, which are white-waſhed, and covered with red pantiles, and ſtand oppoſite the middle of the bay, on a riſing ground, with a valley in its ſouth and north ſide, well planted with cocoa-nut and palm-trees. The bay is clean ſandy ground, and affords ſafe anchoring in ten or twelve fathoms water. A little to the northward of the church there commonly runs a great ſea along ſhore, which is ſandy. This is one of the moſt plentiful places of St. Jago, for whatever the iſland produces; and the people are very free, like thoſe of St. John's. In coaſting along he met with ſeveral very good bays and harbours.

Captain Roberts ſaw all the places abovementioned, except one of the St. Domingo's, which is a village 12 miles within land from St. Jago. The city of St. Jago (or Ciudad de Rebeira Grande) lies three leagues to the weſtward of Praya. Dampier puts it on the ſouth-weſt part of the iſle, and in the latitude of 15 degrees north: but Captain Cornwall obſerved it to lie in 15 degrees five minutes. This town ſtands ſcattering againſt the ſides of two mountains, between which there is a deep valley, about 200 yards wide againſt the ſea: but within a quarter of a mile it cloſes up ſo as not to be 40 yards wide. With regard to the river in the valley by the ſea, there is a ſtraggling ſtreet, with houſes on each ſide, and a run of water in the bottom, which empties itſelf into a fine ſmall cove, or ſandy bay, where the ſea is commonly very ſmooth; ſo that there is good watering and good landing at any time, though the road be rocky and bad for ſhips.

The town conſiſts of two or three hundred houſes, all built with rough ſtones, having alſo one convent and one church. Philips makes the number of houſes about 200, and ſays there is a convent, a nunnery, and a good large church near the caſtle. This doubtleſs, is the cathedral, which Roberts tells us is a fine building: beſides which, there was a convent of Cordelier friars, who, it ſeems, are the only men on theſe iſlands who conſtantly eat freſh-baked and fermented wheaten bread, the flour being ſent them yearly from Portugal. They had very fine gardens ſtored with ſallading, and the beſt fruit on the iſland; and made a cut from the rivulet of Rebeira Grande, to bring the ſtream through their gardens, from whence the water was likewiſe conveyed almoſt to every part of the houſe, which was next to the cathedral, formed the beſt proſpect in or about the city.

Dampier obſerved when he was at St. Jago, that juſt by the landing-place, there was a ſmall fort, almoſt level with the ſea, where was always a court of guard kept. On the top of the hill above the town, there was another fort, which, by the wall that is ſeen from the road, ſeems to be a large place. They had cannon mounted there, but how many he knew not, neither what uſe that fort can be of, except for ſalutes.

Another author ſays, the number of guns is about 12, that the caſtle ſtands on the hill, on the eaſt ſide of the town, and makes a pretty good ſhew at ſea. After this, he ſurveyed the garriſon more leiſurely, and obſerved about eight ſmall houſes in it ready to tumble. On the brow of the hill was a little breaſtwork, thro' which peeped ſix ſmall iron minion guns, ſo much out of order, that they were ready to drop out of their carriages. Theſe are the half dozen ſmall pieces near the water-ſide, on the brow of a precipice overlooking the haven.

St. PHILIPS's iſland was diſcovered by the Portugueſe on the firſt of May, being St. Philip's and Jacob's day; and as St. Jago took the name of one ſaint, this iſland took the name of the other; Mayo receiving its denomination from the month, all three having been diſcovered at the ſame time. However, St. Philips commonly goes by the name of the iſland of Fuego, or Fire, being ſo called by all the Engliſh voyagers, except Roberts. The north eaſt point of it lies about 16 leagues, from the point of Terrafal in St. Jago, which mutually bear weſt ſouth-weſt, and eaſt north-eaſt. It is in the latitude of 15 degrees, 20 minutes, north, and longitude ſix degrees 54 minutes weſt, from the Cape de Verde. The iſland of St. Philip and St. John, being very little, or not at all uſed by the Engliſh ſhipping. The ſea draughts give but a very imperfect deſcription of them; that the waggoners and pilots of thoſe parts are every whit as much or more defective, making them both very dangerous, and the iſland of St. Philip in particular to have few or no inhabitants, and the roads or anchoring place very bad, which the author found to be falſe.

This iſland is much higher than any of the Cape de Verde iſlands, and is, as it were, one continued mountain up to the top; neither can thoſe who ſail along it perceive any valleys, for it ſeems to be one ſingle mountain, the valleys appearing only as gutters made by the waters, which run off the hills in the time of rain; but when a man is on ſhore, thoſe gutters then appear to be deep valleys, and their banks great high mountains. The chief mountains in St. Philip's are the peak, which is a volcano, and a great high mountain which runs along it from ſouth-eaſt, to north-weſt, and is little inferior in height to the pike. The peak or volcano, (from whence the iſland takes the name of Fuego) is a very high hill in the middle thereof. The top of it is ranged above two ſtories higher than the clouds, which are ranged each below the other on its ſides. This volcano burns continually, flames of fire iſſuing out of the top, which Dampier ſays are only to be diſcerned in the night, and then may be ſeen a great way off at ſea. Froger ſays, they ſaw the flame all night:—ſays Buckman, "What prodigious flames and vaſt clouds of ſmoak it vomits up continually, which we could perceive afterwards in a clear day, though we were above ſixty miles diſtant."—Captain Roberts ſays, "It is incredible what huge rocks are caſt out, and to what a vaſt height; the noiſe of which in falling again, breaking and rolling down, may very eaſily be heard eight or nine leagues off in a ſtill air, as he had experienced. The exploſion, when they are blown up, is like the report of a great gun, or rather thunder. He ſays, often in the night-time, the ſtones roll down the peak all of a flame; and the inhabitants told him, that they had ſeen brimſtone ſtream down its ſides like a torrent of water, and that ſometimes they might gather what quantity they pleaſed. They likewiſe gave him ſeveral pieces of it, which he ſays was like common brimſtone, but of a much brighter colour, and in the burning gave a much brighter flame." Sometimes this volcano caſts out ſuch quantities of aſhes mixed with cinders, that they cover the adjacent parts, and ſmother ſome of their goats. Yet, when this iſland was firſt diſcovered, it had no peak, nor was there any burning upon it, the peak growing but ſince the fire broke out; and by report of the ancient people, has viſibly increaſed in their time.

Conſidering that this iſland has no running brooks, and that freſh water is to be had in very few places, (inſomuch that the inhabitants in ſome parts are forced to go ſix or ſeven miles to fetch it) yet it is very fertile for pompion, water-melons, feſhoon, and maiſe; but for want of water, or low vallies, produces no bananas, plantains, or hardly any fruit trees, ſave wild figs. They have ſome few Guava trees planted in ſome of their gardens; alſo a crab orange and lemon; likewiſe lime, and a ſort of crab-apple. But they have here and there ſome good vineyards, whereof they make little quantities of an indifferent good ſmall wine, but they generally drink it all before it clears, or has done fermenting. The land is all taken up at preſent, only about the peak, and that great high mountain already mentioned, which runs oblique acroſs the iſland. The Portugueſe, who firſt inhabited it, brought negro ſlaves with them, and a good ſtock of cows, horſes, aſſes, and hogs; the king placing goats there, which run wild on the mountains (particularly the ſaid great one:) the profit of the ſkins was reſerved for the crown, and he that had the management of them, was called Captain of the Mountains, none daring to kill any of them but by his licenſe.

Captain Roberts tells us, That this iſland ſtood uninhabited a great many years after it was diſcovered, but the king of Portugal (ſome time after the fire had been extinguiſhed every where, but the peak) granted it to his ſubjects, who were willing to ſettle there, all the land to them and their heirs for ever. In conſequence of which, a great many went over and ſettled there: but as the cuſtom of St. Jago is in uſe here to free blacks at their death, they at preſent exceed the whites an hundred to one. It is probable alſo, that ſome free blacks from St. Jago, might have ſettled here, and that when trade decayed, ſome of the Portugueſe might have left this iſland, as they had done the other.

The free blacks, for the moſt part, are tenants to the whites, who have taken up moſt of the land, eſpecially near the ſea-ſide, ſome whites having 30 or 40 ſlaves, and ſome of the free blacks have ſlaves, whom they purchaſe for cotton cloths, which paſs there inſtead of money, a cloth being valued, and paſſing current among them, for one thouſand reas.—Moſt of the inhabitants of St. Philip's, are of the Romiſh religion; ſome pagan ſuperſtition being mixed with it by the mountaineer blacks.

The natives formerly planted cotton in abundance, and this was the greateſt market for cotton cloths of any of the Cape de Verde iſlands: here alſo the Portugueſe European ſhips uſed to trade for cargoes of barrafaols for Guinea; but, by the laſt drought, all their cotton ſhrubs, in a manner were dried up; ſo that what was the chief product of their iſland, is now a good commodity to carry there. On account of this ſcarcity of cotton here, and at St. Jago, the European Portugueſe underſtanding that the French ſhips were at St. Jago, they procured an order, that no perſons on either of thoſe iſlands ſhould, under a penalty, ſell cloth to any but ſubjects of Portugal, which orders are ſtrictly obſerved by the officers of cuſtoms at St. Jago, though not much minded at St. Philip's, by reaſon there are no duties paid at this iſland, and conſequently no cuſtom-houſe or office.

Since the trade of cotton cloths failed, they have ſold a great many ſlaves of the Portugueſe ſhips trading thither. But they are endeavouring to revive this branch again, by planting cotton; though for want of ſufficiency of rain, it does not thrive ſo well as it uſed to do. They had formerly a pretty good trade with the French for mules, a number of which they bred, and ſold cheap, but the dry ſeaſon deſtroyed almoſt all of them; ſo that they told Captain Roberts, that ſix years before, there were but two mules on the iſland. However, they began to breed them again. They had a great deſire to trade with the Engliſh, and would reſerve their commodities for them; ſaying, "That notwithſtanding the prohibition above-mentioned, yet they would ſell their cotton cloths to them, in caſe they would trade thither. The chief and only man for trade, when Roberts was here, was Captain Thomas Santee; but there was not one on the iſland, who could either ſpeak or underſtand Engliſh.

St. Philip's has but few places to anchor at, and but two where a ſhip can ride: for excepting at the Villa la Ghate, and two or three other places, the whole coaſt is ſuch ſteep, high, rocky cliffs, that there is no getting up to it. Captain Roberts ſailing from the Fuarno, in St. John's, got over to St. Philips, falling to the windward of the Villa, and ran down till he came to Fonte de Villa, a ſandy bay; thence proceeding along ſhore, he doubled the point of Nueſtra Singora, another ſandy bay; and anchored a little to the northward of the church. Here captain Thomas Santee came down with the horſe of the iſland, by order of the governor, who was alarm'd at the author's arrival. A little lower down he ran his boat into the bay of Laghate.

Fonte de Villa is the moſt noted road, which is oppoſite againſt the town, and is ſandy, except when a ſtrong north wind blows, which at particular ſeaſons ſweeps away the ſand, and leaves the rocks at bottom bare: and then it is not ſo ſafe riding as about the ſandy bay of Nueſtra Signora, which is to the ſouthward of the town, to the ſouthward of which, on the cliff, ſtands the church of Nueſtra Signora: From whence the bay and point took their name. This church appears ſomething like a barn: The outſide of the walls were ſeemingly as white as if they had been juſt white-waſhed, and the roof was covered with red pantiles. At the point, there is good riding with a northerly wind; and better, when the true north-eaſt or north-eaſt by-north trade-winds blow, being clean and ſandy at bottom, except when a ſoutherly wind blows ſtrong, or ſometimes by a ſoutherly ſea, which now and then runs here in the months of June, July, Auguſt, and September, when theſe winds do not reach home to the iſland, although our author believes they blow in the offing, and clear the ſand from the bottom of the rocks, as the northerly wind and ſea do at Fonte de Villa. Moſt of the whites, with the governor, live in the Villa; though moſt of them have their country houſes abroad in the country, on that part of their eſtates which they keep in their own hands, and manage by their ſlaves, which ſupplies them with food; and the rents of thoſe plantations, which they let to the blacks, are commonly paid in cotton cloths. The governor of St. Philip's was a Portugueſe, and formerly had been governor of a fort or factory belonging to the king of Portugal, on the Guinea coaſt.

It is to be obſerved, that the iſland of St. Philip was taken by Sir Anthony Shorley, in September 1596, who was a long while finding a proper place to put in at, and then could not land his men without extreme difficulty. The author of the voyage obſerves, that beſides water, they got nothing elſe here but infection.

St. Juan's, or St. John's, which is alſo called Braven, is ſituated in the latitude of fifteen degrees, twenty-five minutes north, and longitude ſeven degrees, two minutes weſt, from Cape de Verde; and the Villa of St. Philip lies eaſt from Fuarno, about ſix leagues.

This iſland is very high land, the mountains riſing one above another, like pyramids, yet being ſo near the iſland of St. Philip, it ſeems, in compariſon of that, to be low. It is fertile for pompions, water-melons, potatoes, bananas, maiſe, and feſhoon, as any of the Cape de Verdes, as likewiſe for cows, horſes, aſſes and hogs. Franklin told the author, that the whole iſland was a barren rock, having only a few cliffs of valleys ſpread with a thin coaſt of earth, where bananas, pompions, and potatoes grew pretty well. That they had plenty of feſhoons and wild figs, which ſerved them as food; that there grew many papa, and there the planters had maiſe enough, but they were very lazy,

lazy, which kept them very poor; that ſome of the inhabitants had cows, horſes, aſſes and hogs; of which laſt eſpecially they had moſt plenty, becauſe they ſeldom uſed any, except their public feaſts: and that there had been a conſiderable number of wild goats; but moſt of them were deſtroyed.

The privilege of killing theſe is entirely reſerved to the governor. This was done to prevent the breed from being deſtroyed. None are allowed to keep hunting-dogs here but the cauſidors, who are licenſed by the governor. When the governor has a mind to make a general hunt, all the iſlanders are ſummoned, and all the hunting-dogs are got together: theſe are between a beagle and a greyhound, but ſhorter legged, and clumſier, with large flapping ears. After the chace, they meet all together, and the governor parts ſome of the veniſon among them as he pleaſes, ſending home the reſt; which he afterwards diſtributes among the old and neceſſitous; as alſo ſome of the ſkins, reſerving the remainder for the lord of the ſoil.

The fleſh of the goats, as well as the other cattle of St. John's, is very lean, for the author wanting tallow to pay the ſeams of his boat, the governor (who encouraged the work) cauſed a general hunt to be made, in order to ſupply him therewith. On this occaſion forty goats were killed, which however, (it being a bad ſeaſon) yielded only four or five pounds of tallow, and that not clear of ſkin.

The iſland abounds moſt with ſaltpetre, of any of the Cape Verde iſlands: and the governor offered to procure Roberts a cargoe ſufficient to load with it, a bigger ſloop than that he left there, (which was of ſixty tons.) It grows in ſeveral earthy caves there, covering all the inſide like a thick hoar froſt, and in ſome places like icicles; alſo in ſome hollow rocks, they hang in ſtrings as thick as a man's thumb.

From ſome experiments made on certain acid waters, Roberts concluded that the place abounded with copper. And one time climbing the rocks on the ſouth ſide of the iſland, he perceived a rock which at a diſtance glittered in the ſun like burniſhed gold: and near to it, looked as if it was all thick gilt. He rubbed his hand againſt it but nothing came off; and when he ſcraped it with a knife, found it ſo thin that he could ſcarce collect any of it. He obſerved the rock underneath of a blackiſh colour; and that it was gilt only where the water run down from the mountains when it rained. Seeing another rock which glittered with golden ſpangles, he went, and found it full of gold fibres, ſome as fine as hairs, and others as thick as an ordinary needle. With his knife he picked out near a drachm weight, which was ſolid gold, as far as he could perceive by the eye. He got one little bit like a ſmall flatted wire, about half an inch long, by cutting and raiſing the end up. Not being able to get any more out of the rock, the vein running deeper in, he was forced to break it off, by bending it backwards three or four times; and breaking his knife with the experiment, he deſiſted, and came down again to his black mates, without taking notice to them of what he had ſeen. However, a little before he left the iſland, he told the governor of it; but avoided going to ſhew it him, and as it never was obſerved by any of the natives, he queſtions whether they ever found it. Here one meets with the Beur de Orre, already mentioned, but not in ſuch quantities, though altogether glittering, and of a golden aſpect.

Here is plenty of fiſhes, eſpecially about the little iſlands; where alſo ſome tortoiſe reſort at the ſeaſon for laying their eggs: but they are not much regarded for food here, any more than at St. Philip's or St. Jago, and yet at all the other iſlands they are accounted their moſt delicious food: as Roberts ſays, indeed they are. Angling was the chief employment of the natives: that for this reaſon they miſſed no opportunity of wrecks, or when ſhips touched there, to procure and ſave all the bits of iron wire, and the like, they could meet with, and that there was an old man, a native of St. Philip's, upon this iſland, who had a hammer and three or four files, with which and the help of charcoal, made of the wild fig-tree, he could bungle up a fiſh-hook out of an old nail, for which in exchange he had another nail, and a preſent of fiſh, from ſuch as had plenty of them. He added, that the fiſh were ſo eager, that a crooked nail would take them.

Almoſt all the fiſh thereabouts, have large and ſharp teeth, rather like ravenous land animals, than the fiſh on the coaſt of England: ſo that the inhabitants take care to hook them in the mouth, to prevent their cutting their lines, as they do in caſe they ſwallow their hook: their baits are crabs, limpets, or any other rock ſhell fiſh; and when they catch a fiſh, they make a bait of that; but crab is the ſureſt.—As Roberts often went out upon this ſport, he had an opportunity of ſeeing how the natives got their ſalt, which he obſerved was made by the heat of the ſun, on the ſea water lying in holes among the rocks, ſome thrown up by the ſpring, others filled at high water, which if not too deep, would be all turned to ſalt before the next tide. He had ſeen it even two feet thick of ſalt, and to the quantity of four buſhels, in a cavity not above five or ſix yards ſquare.

The natives uſed to get the ſalt firſt, and then gut, ſplit, and put it in heaps all night, in the morning ſpreading them in the ſun to dry, and they were ready to dreſs whenever they wanted, which was ſeldom oftener than once a day, towards night when they had done fiſhing. At the moſt uſual fiſhing-place, they generally left an earthen-pot, for they boiled their fiſh for the ſake of the broth, which they liked better than any made of fleſh.

Formerly a great deal of ambergreaſe was found about this iſland, but very little at preſent. Roberts was told, that about 30 years before, one Juan Carneira, a Portugueſe, who was baniſhed from Liſbon, for ſome crime, having got a little ſloop, traded among the iſlands, and lighted on a piece of ambergreaſe, of almoſt an incredible bigneſs, with which he not only procured his liberty to return before the term of his exile was expired, but purchaſed a plentiful eſtate, and that the rock (between the two iſlands) near to which he found it, is at preſent called by his name.—Captain Roberts tells us, the number of the inhabitants did not amount to 200 ſouls. The natives are blacks, and the moſt innocent and harmleſs, as well as ignorant and ſuperſtitious, of all the iſlands.

While the author lay ſick here, they ſupplied him with all kind of neceſſaries; every day ſome or other of the inhabitants would come and ſee how he was, and ſeldom or ever without a fowl, or ſome fruit for him. The governor himſelf uſed to viſit him almoſt daily, and every two or three days would ſend him a quarter of a wild goat, a ſide or a whole one. All this time he was lodged by one of the chief inhabitants, and when he was recovered, he found fifty-one fowls left of the preſents which had been made him.

Fiſh, as we have obſerved, makes a great part of their food, eſpecially the broth, which they look on as the beſt diet in a feaver. They make bread called cuſkus, of Indian corn pounded and boiled over the the ſteam of freſh water, to a pudding; then cut in pieces and dried in the ſun. The author repreſents the natives as equally ingenious and good natured.

The iſland has not been peopled above two centuries. It was for ſeveral years inhabited only by two black families, till about the year 1680; a famine raging at St. Philip's, ſome of the poorer ſort of negros got themſelves wafted over to the iſland of St. John, by a Portugueſe ſhip. Theſe were joyfully received by their fellow blacks, who having much increaſed the ſtock of goats, cows, and eſpecially hogs, which the Portugueſe had placed on all the iſlands when they firſt diſcovered them; and underſtanding that the new comers were brought hither by the Portugueſe, purely to prevent their being ſtarved, freely offered to load their ſhip with hogs, as a

reward for their charity. This drought ſo thinned their hogs, that finding, by the time the ſhip was loaded, there were but few left, they caught the remainder, killed ſome, and tamed the reſt. For the St. Philip's blacks ſoon introduced the notion of property, ſo that he who could kill, catch, or tame moſt, had moſt, by which means all the cattle on the iſland ſoon became divided among them, except the goats, which ſtill remain wild, but are claimed as the property of the lord of the ſoil, as are all the wild goats on the other iſlands. Theſe new comers taught the reſt to ſpin cotton, which grew naturally there, and to make cotton cloaths of it to wear, they going quite naked before, as moſt of the negros on the Guinea coaſt do. They had likewiſe informed him, in converſation, of the principles and notions, as far as they knew themſelves, of the Romiſh religion; a prieſt from St. Philip's perfected the work of their converſion.

Here, as in all theſe iſlands, the people are perſuaded, that whatever is given to the prieſts, is given to God, unleſs they dedicate it to ſome ſaint, on whom, in ſuch caſe, they think they lay an obligation to ſtand their friend, and for whom all the prieſts are alſo the receivers, as well as for God.

The governor of this iſland is juſticiary, and decides the little differences that ariſe among the natives, and if they are refractory, can ſend them to priſon, which is an open place, like the pound for cattle in England, only a ſtick laid acroſs the entrance ſerves for a gate.

"Here, ſays the author, theſe innocent criminals will ſtay without attempting to get out, unleſs very rarely, in which caſe the priſon-breaker, when caught again, is tied hand and foot, and a centinel ſet over him, and remains in priſon till he has ſatisfied his antagoniſt, and aſked the governor's pardon, who can keep him in hold during pleaſure. This is the whole extent of the governor's power, even in caſe of murder: however, the delinquent's friends are bound for his appearance, when a proper judge ſhall come from Portugal: but this had never happened, as far as could be learned. Sometimes for a ſmall crime, eſpecially if he be an elderly perſon, he is only confined to his own, or ſome other houſe, which is reekoned a great favour: for to be impriſoned is ſuch a ſcandal, that Tyburn itſelf is hardly ſo much dreaded by the criminals in England. The governor of St. John's, in 1722, was named Leuonal Gonſalvo, and was made ſuch by Thomas Santee, the procurador of this iſland.

The author obſerves, this iſland has but one good road, and that is rather difficult of entrance. "Here, ſays he, it is beſt mooring with afaſt aſhore, and not to ſwing, but have a ſmall hawſer aſhore, from the ſtern to the northward. In caſe a veſſel happens to come from the eaſtward, to this iſland, ſhe muſt take care not to run about to the ſouth end of St. Philip's; for then, with a common trade wind, ſhe cannot fetch the Fuarno, and hardly any point of the iſland. On the north ſide is another bay, called Faciende, de Agna, known by the banana trees, no valley but this being viſible from the ſea. The bay has a ſhingly beach, and veſſels may anchor near the middle, towards the north ſide in eight, nine, and 10 fathoms, clean ground and a freſh running water almoſt down to the beach. Farther down to the leeward on the ſouth-weſt ſide of the iſland, about a ſmooth, low point, but riſing high ſuddenly, is the Farrier bay, which is a double one, a high rock, dividing in two the beach, which is large pebbles, looking at a diſtance like ſhingles. This is a good bay, with a ſmooth landing-place, and a lake or baſon of freſh water behind the eaſtermoſt beach, which is conſtantly fed by the water from the mountains. This bay all over is clean ground, in ſome places ſand, but generally a ſtiff ooze, or clay, and commonly the ſea runs ſmooth on the beach.

There is a rock, on the north-weſt ſide, to which you may put the boat; and it would be a good riding place, were it not for the ſtrong flows which come down the valleys, which happen moſtly in November, December and January, and come ſo violent, if there be a gale of wind, that a ſhip cannot turn into it, or always ſtay there at anchor, if ſhe be in, as happened once to a Portugueſe veſſel; nor is the road ſafe in the rains and ſhifting wind ſeaſons, when the ſouth-eaſt and ſouth-weſt winds, to which it lies open, bring in a great ſea, enough, if ſtrong, to drive a ſhip on ſhore. For the reſt of the year it is good riding here; and in fine weather, eſpecially March, April and May, you have a ſoutherly ſea-breeze in the evening, and land breezes all night, and till ten in the morning. This road is moſt uſed, very few being acquainted with Fuarno. Scio is a fine ſandy bay, and difficult to come into, and without any water. There is likewiſe de Sal Point Bay, where Roberts loſt his ſhip. The reſt of the bays here are ſcarcely worth notice.

ST. NICHOLAS (or San Nicholao) is the longeſt of all the Cape de Verde iſlands, except St. Jago. Ilka Parta Paraghiſi lies from Palmora, in the iſle of du Sal, ſoutherly, about 30 leagues, and in north latitude 16 degrees 45 minutes, and weſt longitude ſix degrees 52 minutes, from Cape Verde.

This iſland is moſtly high land, the higheſt being a flat ſugar-loaf-like mountain, terminating at top with a rounding, not a ſharp peak. It is called Monte Gourda, and lies on the north-weſt ſide, but a good way up in the land, and may be ſeen on any ſide of the iſland at nine or ten leagues diſtance. The coaſt of this iſland is ſo clear from rocks and ſhoals, that a ſhip may run along from the eaſt point, till within half a league of the ſouth-weſt point, within call of the ſhore: yet, in the ſhifting-wind ſeaſon, no road on this iſland is good or ſafe; but when the true trade wind is ſettled, there are three or four indifferent ones. That which is near the town is Paraghiſi, where there is a bay, in which veſſels may ride off, ſingle, or moored, the wind always blowing from the ſhore, or may haul into the cove of Paraghiſi, and moor between four land-faſts.

The next is the road of Porto Lappa, which one cannot miſs finding, becauſe it is in the very midſt of the great bite, on the ſouth ſide of the iſland: the ground here is foul, and ſeveral anchors have been loſt by the cables being cut with the rocks. To the eaſtward of Porto Lappa, about half way between that and the eaſt point of the iſland, is the road of Curriſal, where is a river of freſh water, cloſe to the beach, very commodious for watering. The beſt anchoring is to the eaſtward of the beach, almoſt ſhort in. Then you are a-breaſt of Patra de Looma, or the Firy Rock, over which, being ſunk flat, the ſea always breaks, whence the author ſuppoſes it has its name.

This road is not ſo convenient for trading, being 16 or 18 miles from the town, and the way rocky, with many high and ſteep aſcents and deſcents.

The road moſt reſorted to, is Terrafal (or Trefal) on the weſt ſide of the iſland: it is beſt known by the great boats of the natives, ſome of which are always hauled up on ſhore there. A high, ſharp, rocky point riſes near a quarter of a mile ſhort of the ſea-ſide, in which ſpace it is low, ſandy, and in ſome places ſhingly ground, the ſhore being a pebbly beach. On each ſide of this point is a very deep gully, out of which come violent guſts of wind; and therefore when it blows a ſtrong gale, it is hard to turn up into this bay. To avoid theſe flaws, veſſels muſt anchor juſt againſt the point, between the gullies, where they may ride very eaſy under its lee, in from 16 to three fathoms. Water is to be had here by digging a well, almoſt any where on the low land, except the rainy ſeaſon has failed. But there is always good water in a valley about half a mile from the ſea, from whence the natives will bring it down. The town belonging to St. Nicholas, is the moſt populous and moſt compleat of any on all the iſlands, and although not built ſo large, nor the walls cemented with

lime or mortar, as the houſes of the city of St. Jago were, nor covered, not even the church, with any thing but graſs thatch; yet, for number of houſes, as well as regular ſtreets, it rather exceeds that city; but ſome time ago, Captain Avery, the pirate, touching here, the inhabitants ſome way diſguſted him ſo, that he burned their town.

The inhabitants, according to Captain Roberts, were computed to be about 2,000 ſouls before the famine, but when he was there, he ſays they did not exceed above 13 or 1400. They have moſtly an European Portugueſe prieſt, and it is as much as he can do ſome times to manage them. They are blacks, or copper-coloured, with frizzled hair, except a few of the French race, left there by the pirate, Maranghwin, and three old Portugueſe, and two or three old women.

The women here are by far more houſewifely and ingenious at their needles, than in the other iſlands. They are alſo more modeſt, never appearing out of their houſes, nor within bare before ſtrangers, as is common at St. John's, and except when they are abroad planting, weeding, or gathering in their harveſt, they are always at their needles, or ſpinning, if they have any cotton. The beſt Portugueſe is ſpoken here of all in the Cape Verde iſlands, and as the natives reſemble the Portugueſe moſt in their language, ſo are they like the vulgar ſort of that nation, errant thieves to ſtrangers, and very dangerous when they take an antipathy. Some who came on board Captain Roberts's ſloop, when upon this coaſt in 1722, and ſtole all his liquor, may be produced as an inſtance; for having obſerved the place from whence the boy brought a bottle of rum, which he ſent for to treat them, they made bold, ſeeing only thoſe two belonging to the ſhip, to fetch it themſelves, though Roberts forbade them, ſaying, that the leaſt they could expect, was to participate of what was in the veſſel; and that he ſhewed himſelf very ungrateful as well as niggardly, to think much of any thing they could eat and drink that was on board. At laſt, they had the aſſurance to tell him, that the ſloop and every thing that was in her, was as much theirs as his, ſince he was in diſtreſs, and muſt certainly have periſhed if they had not come from ſhore, and brought him and his boy ſome water; which after all, was falſe, Roberts being then ſafe at anchor, and as for the water, they had drank it all themſelves.

Captain Roberts obſerves, that there are the ſame ſort of ſands and ſtones here as at St. John's, and the natives have a tradition, that there is ſilver and gold in them, but cannot tell how to extract it; however, it is to be met with here only in a few places, but at St. John's almoſt every where.—— There is good nitre alſo on this iſland, and beur d'ore, but not in ſuch quantities or ſo glittering, as what is to be met with at St. Jago, or St. John's.

The ſoil, according to Roberts, is fruitful for maiſe; and the beſt feſhoon on all the Cape Verde iſlands he ſays is here, both white and black, likewiſe plantanes, bananas, pompions, water and muſk melons, lemons, limes and oranges, ſweet and ſour, they have a few ſugar-canes, of which they make moloſſes. They have vines alſo, of which they make a tartiſh wine.

This iſland was once very full of dragon-trees, which, when cut at a proper ſeaſon, yields the gum called *ſanguis draconis*, much uſed in medicines. They have a way of cutting off the branches, and boiling them in water, from which, they have an art to ſeparate the gum; but it is not near ſo clear, nor he believes, ſo good as the other ſort. It is a looſe grained wood, and hollow in the middle, the cavity going tapering upwards, ſomething like the bore of a pump. But when the pirate Avery had burned their town, for want of other wood, (moſt of their wild fig-trees, the only wood fit for that uſe, having been deſtroyed in building their boats) they were forced to cut down the dragon-trees to roof their houſes again; and moſt of them having chambers, they floored them with the boards of this wood; which made it ſo ſcarce, that Captain Roberts queſtions whether above twenty or thirty pounds of gum might be made yearly on this iſland.

They had great plenty of goats, hogs and fowls, before the late famine, which although it held there but three years, yet, while it laſted, was ſeverer than in any of the other iſlands. For St. Nicholas having but little trade, as it afforded no commodity for foreigners, but aſſes, which are likewiſe common to other iſlands, they are ſeldom viſited by more than one or two ſhips in a year; and there not being ſo great a demand for thoſe animals of late, in the Weſt Indies as formerly, they ſometimes have not had a ſhip for two years, which has obliged them to be more induſtrious than any of their neighbours.

It uſed to abound moſt with wild goats, as well as cows, which all belonged to the land proprietor. but this was before the famine had diminiſhed their ſtock; for ſince that, the people firſt ate their own hogs and tame goats, and afterwards deſtroyed the proprietor's ſtock of cows and wild goats; ſo that when the author was laſt upon this iſland, there were not above forty head of great cattle, and the ſtock of wild goats was ſo diminiſhed, that the governor told him, it would not be worth while to ſend a ſhip for the ſkins this three years to come.

Captain Roberts carried over to it, in his boat, a yearling heifer, from Bona Viſta, (which Captain Manuel Domingo beſtowed on him to kill on board for food) and would have given it to his landlord, Nicolau Gonſalvo: but the then governor would not let him keep it, under pretence that the lord of the ſoil had reſerved the liberty of keeping cows ſolely to himſelf; but, in reality, becauſe he was related to his predeceſſor, whom he did not like. Roberts therefore made a preſent of it to a relation of the governors, who, after making ſome difficulty, allowed him to keep it, under colour, that it was to be kept for the author againſt he came again.

The natives make cloaths of cotton, and buttons to imitate almoſt every pattern ſhewn them. They knit cotton ſtockings, tan goat and cow-hides, and make tolerable ſhoes, beſides the beſt cloths and cotton quilts of all the iſlands, which are too good for the Guinea trade. But as they do well for that of Braſil, the Portugueſe uſed to touch here for them, but the drought made that commodity ſcarcer. The chief trade ſeemed to be for turtle; the inhabitants being much addicted to catch them, as well as fiſhing. This they moſtly did in their boats at the iſlands of Chaon, Branca, St. Lucia, and St. Vincent, being the only people who built and uſed boats in theſe iſlands. They ſold their fiſh for ready money, or what elſe they ſtood in need of; and the Portugueſe, who traded with them for cloths and quilts to carry to Braſil as well as Portugal, uſed often to pay caſh for them, not having ſuch commodities as pleaſed the inhabitants. Theſe latter were generally ſupplied by the Engliſh and French who traded thither; and either exchanged their goods for aſſes, or ſold them for money, till the latter, as well as commodities, decreaſed them. The old Marquis des Minhas was formerly the lord proprietor of this iſland, St. Lucia, St. Vincent, and St. Antonio: but after his death, the king reſumed the three firſt into his own hands, the latter only being the hereditary eſtate of that nobleman.

CHAON, St. Branca and St. Lucia, are three iſlands deſtitute of either inhabitants or water, and the two firſt of cattle. The iſland, or rather the rock Chaon, lies from Terrafal weſt by north about three leagues.

ILHA BRANCA (or Blanca) White Iſland, is a high, ſteep rock, lying lengthways eaſt-north-eaſt, and weſt-north-weſt about two or three miles. The St. Nicholas men come here as well as to the road to fiſh. On the ſouth ſide there is a place where boats may ride, but ſo dangerous, when it blows from the ſtrong flames that come down the rocks, that the St. Nicholas

cholas men care leaſt to reſort thither, though there is ſo good fiſhing about it. The author ſuppoſes it took the name from a vein of white rocks, which runs under the high, dark, rocky land on the ſouth ſide, and appears at a diſtance like white ſand-hills. Between this and St. Lucia there is broken ground, with ſeveral rocks above or under water. This iſland produces the guana, a creature in ſhape like a lizard, well known in the Weſt Indies, but found on no other of the Cape Verde Iſlands.

St. LUCIA lies three or four leagues weſt-north-weſt from the north-weſt part of St. Nicholas. There is a good clean, ſandy bay on the ſouth-weſt ſide, and another on the ſouth-eaſt ſide. The iſland produces goats and aſſes, but no inhabitants. The channel between this and St. Vincent is very foul, and ſo full of rocks, that it is as unſafe to venture through it as the former.

ST. VINCENT on the north-eaſt ſide is low and ſandy: but the reſt is moſtly high land, with ſandy bays, and ſeveral roads to anchor at: one of theſe is Bahia des Ghat, is on the north ſide; it goes in north-eaſt, between two low, ſandy points; and the water is ſo ſmooth, that a veſſel may be ſafe on ſhore: but it is ſo difficult to come out with a trade wind, which blows right into the bay, or rather ſmall gulph, that no ſhips frequent it. In the north-eaſt bay, on the north-weſt ſide, over-againſt St. Antonio, is Porto Grande, a large bay, where ſhips may ride ſafe from all winds in ſix or ſeven fathom water, and anchor any where, for it is all clean ſand. It is eaſily known by a high rock, like a tower, off the bay, and clean all round. This is called the bay of St. Vincent; and the rock or iſland that lies at the mouth of it, The Sugar-loaf Rock.

Porto San Pedro is a clean bay or a road, about the ſouth-weſt point, where veſſels may anchor in what depth they pleaſe, in ſandy ground; but it is hard riding there, unleſs in moderate weather, on account of the ſtaws that come from the valleys. More turtle and fiſh were caught about this iſland, than any of the Cape Verde, except du Sal. Here is alſo a good ſtock of goats and aſſes, and almoſt as great plenty of nitre as at St. John's, but not ſo good. The author tried both by fire, and found the firſt always beſt, ſome fixed ſalt, but the latter burnt clean away, except what was generated near the ſea-ſide.

[Thoſe of Mr. Genne's fleet who touched at the firſt port in 1695, caught great numbers of good fiſh there: one ſort of which, called a bourſe, or purſe was very beautiful, having rays darting round from its eyes like a glory, and ſpeckled all over with hexagonal ſpots of a very bright blue colour. The whole refreſhment of the St. Joſeph's crew, while Frazer was there in 1712, was fiſh, of which they took plenty in the bay: but there is only one creek lying between two little points towards the eaſt-ſouth-eaſt, where the ſeine can be uſed; in other places the ſhore is rocky: but they made amends with the hook. There are mullets, rock-fiſh, pilchards, grunters, white-tooths, long-beaks, and another ſort which have a bat's tail, and round ſpots all over them. He deſcribes one which was ſix-feet long, and very like the petinbuabs of Braſil. He ſays likewiſe, that there were ſometimes taken bourſes, or purſes deſcribed by Froger. The coaſts of this iſland abound with turtle of different ſorts, ſome weighing between three and four hundred pounds weight. Theſe creatures lay their eggs on ſhore, covering them with the ſand, which alone hatches them in ſeventeen days; but it is nine more before the young ones are able to crawl down to the ſea, by which means three fourths of them become a prey to the birds. This iſland is very mountainous, and has very little freſh water or wood.

The crew of an Engliſh veſſel, after being diſappointed of water at the rivulet, penetrated a little farther, and met with ſeveral ſalt-marſhes, and, at length, upon the ſouth point of the bay, found a little gut of water, which ran down from the craggs to the ſea. They dug to make it run the better, but had much trouble to get it on board, the ſea being very rough, and tho' perfectly freſh water, yet it turns in ſeven or eight days. About two hundred paces from this they got wood, which was a ſort of tamarind, eaſy to fell, and near the ſhore. Mr. Gennes found about twenty Portugueſe from St. Nicholas, on the iſle of St. Vincent, who had been there two years employed in tanning ſkins of goats, with which the iſland abounds. They have dogs trained up for the purpoſe, which kill a dozen or fifteen each every night. Frazer tells us, that they found at the bay a few cottages, the doors of which were ſo low, that there was no going in but upon all fours; all the furniture here was only ſome leather budgets and tortoiſeſhells, which ſerved for ſeats, and veſſels for holding water. The black inhabitants had quitted them on ſight of the French, though they put out Engliſh colours. They ſaw two or three of them ſtark naked in the woods, but could not come to ſpeak to them.]

They found no game there, not ſo much as a beaſt, except wild aſſes and goats on the mountains, hard to come at: ſome few pintadoes, and no other birds. The ſoil is ſo barren it produces no fruit, only in the valleys there are ſome little tufts of tamarind-trees, beſides a few cotton and lemon trees: However, there were ſome curious plants, as the tythinallus, arboreſcens, or branched ſpurge; the male ſouthern-wood, of a moſt ſweet ſcent, and a very beautiful green, a yellow flower, and the ſtem of it has no leaves; the Palma Chriſti, or Ricinus Americanus, called Pillerilla by the Spaniards in Peru: the ſeed of it is exactly like the Indian pine-apple kernel: in Paraguay they make oil of it. They found houſe-leek of ſeveral ſorts, ſome of which had thick round leaves like a hazle nut; coloquintida apples, limonium maritimum very thick; lavender without any ſcent, dog-graſs, &c. And near the little rock was found very good ambergreaſe, ſome of which the Portugueſe had ſold to French ſhips, particularly the St. Clement.

ST. ANTHONY lies in 17 degrees 19 minutes north latitude and eight degrees two minutes weſt longitude from Cape Verde. It is both the weſtern and northern of all the Cape Verde iſlands. It is a very high iſland, and conſidering the very high mountains and low valleys, it contains as much ground, or rather rocks, as St. Jago, and has plenty of freſh water-brooks. There are in St. Anthony but two ports or roads where ſhips anchor; the beſt, called Terrafals, is to the ſouth-weſt end. It is a ſandy bay, and affords good riding; the way from thence to the town, and inhabited parts of the iſland, is ſo very long as well as difficult, that a ſhip might lie there a long time undiſcovered by the inhabitants. The other is a ſandy coaſt rather than bay, called Prayz Simune, it affords no ſhelter from the wind, which generally blows ſtrong through the channel between St. Anthony and St. Vincent; ſo that a ſhip is often forced from her anchor before ſhe can finiſh trading. However, it is tolerable good riding in fine weather and light winds, as well as pretty ſmooth landing. About half a league to the northward of the Chapple, near the Village, there is a little bay or cave, called Rivera des Trafo, where a boat may lie. It has a very good quay to land or load at, the water being ſmooth, and is ſheltered by the north-weſt point: there is alſo a ſtream of freſh water, and wood enough in the valley. The plenty of ſtreams that water this iſland, fertiliſe the valleys ſo, that St. Anthony yields to none of the Cape Verde iſlands, for maiſe, feſhoons, bananas, plantanes, potatoes, pompions, water and muſk-melons, oranges, lemons, limes, guara's, &c. and the greateſt of wine. A great deal of indigo grows here, and ſeveral great plantations are walled in and cultivated. The indigo ſhrub (or plant) grows ſomething like broom, but not ſo large, having ſmall, pale, green leaves, very juicy, in form reſembling that of box. Theſe leaves are ſtripped off in October or November, and

pounded

pounded into pap, which, when made up into cakes or balls, changes in dying, from green to a dark blue.

Cotton plantations are likewiſe cultivated, and cloaths made for the owners. The cotton ſhrub grows about the ſize of a roſe-buſh, but ſpreads more. The leaves are of a graſs green, ſomething like thoſe of ſpinnage, but broader and ſmoother; the flowers are of a pale yellow, which, after they blow away, are ſucceeded by round pods, incloſing the cotton, commonly in three cavities, wherein are alſo contained the ſeeds, which are black, and of an oval form, and in ſize much about the bigneſs of a French kidney-bean.

The valleys in this iſland are very woody. The dragon trees are very numerous, ſo that the dragon's blood is produced in great quantities.

They have aſſes and hogs, which are very large, as well as plenty of them, and a numerous ſtock of cows; beſides, the mountains are crowded with wild goats. On one of the mountains is found a tranſparent ſtone, called by the natives, Topaz; but whether the true topaz or not, the author could not tell. The Portugueſe of this, like the reſt of the Cape de Verde iſlands, are all of a dark ſwarthy colour, but yet a good-natured ſort of people, and very ſociable. Captain Roberts obſerved, that this iſland was then made a kind of ſtorehouſe for ſlaves. He ſuppoſes that when the Portugueſe had the Spaniſh trade, the then Marquis des Minhas, whoſe hereditary eſtate it was, ordered a cargo of negros to be brought from Guinea, and placed there, who were ſupplied at his expence, till they could maintain themſelves by planting, which they ſoon learned from the free blacks inhabiting there before. Theſe ſlaves, (ſays he) increaſed ſo faſt, that, notwithſtanding the great numbers of them who have been tranſported both to Portugal and Braſil, by the marquis's order, they make four fifths of the inhabitants. They have plantations, houſes, wives, &c. as the free blacks have, and ſome of the beſt places are cultivated by them for cotton, indigo, &c. which are all wrought by them, under the inſpection and management of a ſteward (or overſeer) placed there by the marquis. He is generally an European Portugueſe, and has the title of Capiteen Moore.

Thus they are divided into two parties, and very often difference happens between them, which ſometimes end in blood-ſhed. The free blacks valuing themſelves upon their freedom; and the ſlaves telling them they are only tenants at will, and in a worſe condition than themſelves, as being liable to be turned off the iſland, without knowing where to go, and will therefore be neceſſitated to yield themſelves ſlaves whenever called upon."

St. Anthony is a good place for taking in proviſions, they being very plentiful here. [Froger obſerves, that ſending their canoe from the bay of St. Vincent to St. Anthony's for proviſions, the men went to ſome country houſes near the road, where they got ſome fowls, with plenty of fruits, ſuch as figs, grapes, bananas, oranges, and water-melons. A few days after, they ſent again, by direction of the inhabitants (who promiſed to give notice of their coming) and brought from hence 1200 fowls, 100 pigs, and above 25 beeves, and a great quantity of fruit, for which they bartered old linen, beads, ſmall looking-glaſſes, ribands, knives, and ſome other trifles: theſe the iſlanders preferred to money, becauſe but few ſhips touch there; and even the king of Portugal, to whom the profits and produce of the iſland belong, does not ſend for three years together ſometimes to fetch them home.]

Captain Roberts, from whoſe account the chief part of this deſcription of the Cape Verde iſles is taken, ſeems to have been a man of ſenſe and ingenuity.—When here he found no likelihood of getting a paſſage home from the iſland of John, he applied to the governor to let him have an old boat of his to fit up, for going over to St. Philip's, offering to be the carpenter himſelf, and to find nails and ſails; the firſt he had ſaved out of the wreck of his ſloop, and the latter he propoſed to make out of his jib: but the boat having now lain above two years on the dry land, and being fallen in a manner to pieces, as well as rotten, the governor, out of regard for his ſafety, would not grant him his requeſt, alledging the danger of the channel between the two iſlands, from violent winds and ſtrong currents. He told him, however, that if he underſtood how to build a veſſel, he might build one new, large, and ſtrong, there being wood enough on the iſland, and that he did not doubt but all the inhabitants likewiſe would aſſiſt him as much as they were capable off: ſaying, that *they* would do all the laborious work, while he and Franklin might be employed in that part only, which *their* ingenuity he ſaid could not reach to. He added, that beſides the adz, which Roberts ſaved, they had three or four hatchets, and that they could handle them ſo as to cut down fig-trees, ſplit and hew boards out of them, and he engaged to ſupply him with boards and timber enough, of any ſort he would have. "My brother, continued the governor, who has been at St. Jago, is a good carpenter, he can work very well, and makes almoſt all our doors on the iſland, and has beſides made ſtools for the prieſts, which alſo ſeveral others in the iſland can do; and the chairs which you have ſeen at the prieſt's houſe ſhews he is a workman."

Roberts telling him he was afraid he ſhould not have nails enough (having only ſix or ſeven thouſand broken and whole, beſides a great many large ſpikes, ſome bolts, and other iron-work they had ſaved) the governor ſaid he was the beſt judge in that caſe; but that if he wanted, he might inſtruct the old farrier, who was alſo ingenious of himſelf, to forge ſome out of the old iron. But firſt, he would have the author promiſe to make a boat large enough to carry him over the channel of St. Philip's ſafely, without any danger, and that he thought, could not be leſs than twice the ſize, at leaſt, of his own boat.—Roberts ſaid, that to make a boat twice the length, breadth, and depth of his, would be to make one a great many times bigger than his boat; but he could not any way convince his excellency how that was poſſible.——

They now took a general ſurvey of the iſland, to find what tools were on it fit for the occaſion. They muſtered up three ſmall hatchets, a thing like a butcher's cleaver, two gimblets, one about the ſize of a twenty-penny nail, the other a very large gimblet, with a ſmall pin-mall, one claw hammer, and one like a cobler's hammer, and a double-headed hammer, about three pounds in weight, over and above what the ſmith had.

All the inhabitants were now ſummoned to meet before the governor's houſe, who made a ſpeech to them, ſetting forth the cauſe for which they met, how charitable an act it was to aſſiſt their gueſt. They anſwered, That he could not be more ready to aſk than they to grant, that they were wholly at Roberts's call, and that he might always command them.—They ſaid, they were very ſorry to think of his leaving them; but when they conſidered how unable they were to ſupply his occaſions, to his wiſhes, they could not deſire him to continue among them in miſery. They added, that they wiſhed their iſland produced thoſe neceſſaries, as well as pleaſure and delights which his country did, and then, perhaps, they would keep him with them by force, and think they did not wrong him: ſaying, when he talked on a retaliation, that they deſired nothing but his good opinion, and that for the continuance thereof, they would do any thing for him in their power. After this, they obſerved that thoſe who could uſe hatchets, would take their turns day by day, that the three hatchets might never be idle, and that the reſt might carry down the boards and timber, after it was hewed, and a little dried, to the place where he intended to build the boat. This was accordingly performed, and by the time they got a good quantity made, a large

piece of a ſhip's quarter was thrown on ſhore near Scio, which came luckily to help out the deſign. There being no convenient place there to haul it on land, becauſe of the rocks, thirty or forty of the natives faſtening linen to tow it by, ſwam with it, and got it, though with great difficulty, into a little cove between Scio and Piſoarce Picuana. This wreck being broke up, afforded a quantity of boards, timber, nails, ſpiking bolts, with a mizen-maſt, and ſtanding rigging, of which maſt he propoſed to make the keel.

But now our voyager began to be in doubt of his ability to perform what he had undertaken; yet reflecting on the diſgrace it would be to deſiſt, after giving ſo much trouble about it, he reſolved to proceed. Accordingly he went down with ſix or eight of the beſt carpenters, having ſeveral more hands to help as labourers, and ſome to fiſh for proviſions for the reſt. But juſt at they were going to begin, a new objection aroſe, which was likey to have put an end to the work; for next day the governor coming down, told Roberts he was informed, that he (the author) intended the boat to be but a little bigger than his, which was 20 feet long, and that in caſe this was true, he would forbid all his people to aſſiſt him; for that both he and Signor Carlos were of opinion, he would only caſt himſelf away through eagerneſs to get off the iſland. Roberts thanked him for his care, and aſſured him he intended to make her twice as large as his own boat; and agreed, if ſhe did not carry above twice as much, as his, to give her to the governor, and ſtay upon the iſland till a ſhip came.

As ſoon as his back was turned, Roberts meaſured out twenty-five feet for the length of the keel, inſtead of thirty, which he had meaſured before the governor; and, at his requeſt, his aſſiſtants promiſed to ſay nothing of it; but in going on with the work, being at a loſs for a ſaw, they furniſhed out an old ruſt-eaten one, and a file, with which he ſharpened it; while they ſtood over, admiring his ingenuity. In order to make the ſweeps, Roberts had contrived a pair of wooden compaſſes, and his workmen were greatly aſtoniſhed at ſeeing him fix the ſtern and the ſtern-poſt, becauſe he uſed a plummet to ſet them upright. He employed the wreck boards along the body of the boat, as they would not bend for any other part; but the nails began to diminiſh apace, ſo that having nailed her tolerably ſecure at the bottom, he was forced to faſten only the butt-end; and here and there, where neceſſity required, was obliged only to pin or trunnel them with the large ſpike gimblet. He had a half-deck abaft, a little above eight feet long, a forecaſtle from the ſtern aft, ſomething above ſeven feet. He laid in four beams that he double kneed, faſtening the knees of each end, one of which was a ſtanding knee; he bolted them with ſome of the ſmalleſt bolts, pointed, and boring the length of the pike gimblet, forced the reſt, by driving the bolt red hot.

After all this, there were left boards enough to deck her; but for want of nails, being forced at the latter end to make uſe of all the broken points, he frequently took the point of a nail, which was but little more in length than the thickneſs of a plank, and after he had driven it up, he drove it farther with a broken ſtump of a nail, till the latter had entered half way into the plank, that the point might the better take hold of the timber. How to make her tight was now to be conſidered. For this, he had ſome ſpare ropes, of which he made oakham, but he found that cotton and moſs did better. His method to try how the caulking held was, in the evening, after they had all left off work, to heave water againſt the ſeams within ſide; and where he perceived it went through, he caulked it over again. He finiſhed his maſt, and fixed the rigging, and the pieces of the jib of his former ſloop, made him a main-ſail. It was too narrow by a breadth and an half, but there was no help for it. His foreſail and jib were patched out of the pieces of the main-ſail, and of cotton cloth, given him by the natives.

His boom was made of his old gaff, by ſcarfing a hand-ſpike to it. His rudder was made thus: he got three eye-bolts, and ſharpening the points, drove them into the ſtern-poſt up to the eyes, which ſerved in the room of braces or gudgeons. Two or three days before ſhe was launched, four of the blacks with Nicolau Verde, went, and faſtening a rope to her anchor, which lay in Salt-Point bay, hauled it out from under ſome rocks: then floating it about a ſtone's throw, let it go again. When they ſaw it quite clear of the rocks, they brought it up to the ſurface, and then floated it away. This he was very much ſurpriſed to ſee them do, believing it impoſſible for four times the number to have ſuſtained the weight of the anchor, no leſs than two hundred and three quarters; beſides the ſtock, which, then being ſo much water-ſoaked, could not weigh much leſs than one hundred weight.

The governor, prieſt, and ſeveral women came down to the launching, which was performed very well, but the boat made as much water as two hands could keep clear by conſtant baling. Roberts ſtopped ſeveral places where it went in, but could ſee nothing of a conſtant leak, only under three of the floor timber heads, which he could not come at: however, he tightened it as well as he could, and went down to Ferrier to fiſh up an anchor with a hauſer, left there lately by a Portugueſe ſhip in a ſtorm. In the mean time he made a wooden hillick, which he faſtened to a ſtone, as the New-found-land fiſhing ſloops uſed, by means of his ſhrouds which he ſaved, and now ſpliced together, to the quantity of about-twenty-five fathoms.

Leaving the boat till the governor, by a general hunting, had killed goats to ſupply him with tallow to pay the ſeams of her, he went down to Ferrier for the anchor; where a black, called Fum-Fo-Roen, who had been on board the ſaid Portugueſe, playing in the water with ſome others at their uſual game of plunging and ſtriking with their feet in imitation of the threſher and grampus-fiſh, and diving from him who ſtruck at him, he happened to hit againſt the buoy, which was about a fathom under water. The ground being a tough, clammy, ſtiff ooze, or clay, covered over with ſoft ooze and ſand mixed, they were a long time getting out the anchor, which they afterwards brought to ſhore about a mile diſtant: and thus the whole was compleated.

Captain Roberts at length ſet ſail, and having viſited all the lower iſlands, came about to St. Nicholas; where ſtopping firſt at Porto Ghuy, and then at Paraghiſi, the people came down to welcome him, and bought all his ſalt, which was a good commodity then, it being their turtling ſeaſon. At Paraghiſi, there came a young man, who ſaid his name was George, that he was born in Devonſhire, and that he had been taken by Loe in his way from Virginia; and ſome months paſt had eſcaped from him at the iſland of St. Vincent, while that pirate was there refitting the Merry Chriſtmas, of London; which he had taken alſo coming from that plantation. This young fellow ſaid, he would lie in the veſſel all night, as it was likely to prove bad weather; which being agreed, and the boat ſecured. Roberts being very ill, was carried directly back again, where the blacks nurſed him, and the little boy being ſomewhat better than in the morning, choſe to be on board with George.

About eight that night, the wind blowing hard from the ſouth-weſt, with much rain, Roberts came down again from the quay, and hailed the boat to veer more upon the anchor cable; ſaying, otherwiſe it would be loſt, but could not make George hear: upon which, a black of St. Anthony (who was very faithful to him) ſaid, rather than the boat which had carried them through ſo many dangers ſhould be loſt for want of veering the cable, he would try to ſwim on board at the hazard of his life, and (notwithſtanding all the diſſuaſions of the other blacks, who told him the ſea ran ſo high, that he would be daſhed in

pieces againſt the rocks) watching an opportunity of the ſmoothest water, he darted himſelf from the edge of the rock, which was fifty feet above the ſurface; and got on board the boat: juſt before he jumped, a ſea waſhed over the bow of the boat, and frightened both George and the boy.

Perceiving Roberts chiefly concerned for the boy, they undertook for his ſafety at all events: but the cable breaking, the ſea carried the boat up ſo high on the beach, that ſhe lay undiſturbed for above a quarter of an hour. They had thus all time to get out of her. After the firſt fright was over, George went on board to ſave what he could, but preſently a great ſea rolling over her, ſo terrified him, that he made what haſte he could out of her again, with only a bottle of the Bona Viſta wine. Soon after another ſea ſtaved her to pieces.

The author, by ſitting out all night in the wind on this occaſion got a cold, which was one great cauſe of the tedious ſickneſs that held him till after his arrival in England, and gave him leiſure to write his hiſtory. The morning clearing up, gave him a full view of the ruins of ten or twelve months labour, which had been deſtroyed in one moment, and lay piled up on the ſhore.

The letters brought from the former prieſt of St. Nicholas to his ſucceſſor, and from the biſhop of the two prieſts, who govened St. Anthony, for the Marquis des Minhas, procured him great reſpect when he was there. Going to wait on the governor, as ſoon as he went up to the town, dinner was brought to table; which conſiſted of fiſh, fowls, goat's-fleſh, Indian corn-bread, plantanes, bananas, boiled pompion, &c. The fowls were baked in a pot, and looked very well, and as brown as if they had been roaſted; and the veniſon, or wild goat's-fleſh, and fiſh were boiled. There was alſo a calamow, which is a calabaſh cut in two, and ſerves inſtead of baſons and porringers: this was brought to him full of fiſh-water, being reckoned by them the daintieſt meſs they can give a ſick or weak perſon; but the author could not touch it. He lay at one Signor Gonſalvo's, who had been formerly governor, where all imaginable care was taken of him.

[When Captain Harfoot arrived (as has been already mentioned) Captain Roberts was very ſerviceable to him as a linguiſt, and having ſpoke to him in behalf of George, (who he ſaid, he believed would be glad to work for his paſſage to get off theſe iſlands). Harfoot conſented to take him on board, although he did not want more hands. At this, when Roberts told George, who was then at the town, he ſeemed rejoiced. Being come down, he hailed the brigantine, and Captain Harfoot ſent the boat for him; as ſoon as he was brought on board, Roberts obſerved his countenance change, but could not imagine the reaſon: however, Captain Harfoot ſoon made him ſenſible of it: for it ſeems, the year before, Loe took Capt. Harfoot at Bona Viſta, where this fellow was on board the pirates; and having been as active as the reſt in plundering his veſſel, was ſo daunted at the ſight of him, that he had no courage to ſpeak. The Captain, as ſoon as he had recovered memory enough to convince him, that he was the man, ſaid, in a paſſion, "You impudent raſcally villain, I admire how you dare come to aſk a favour of me?" The fellow looked very dejected, and by way of excuſe, alledged, that he was a priſoner on board with the pirates, and conſtrained to do what he did, as not daring to refuſe whatever they thought proper to command him. The Captain bade him hold his tongue, and tell them ſo who knew no better: ſaying, "That if he had not the impudence of the devil, or his maſter Loe, he would not come to aſk him any favour. He added, that if he was ſure to find a man of war to put him on board of, before he went from the iſlands, he would give him his paſſage to it." Then turning to Roberts, "If a man, ſaid he, ſhould take that villain on board, to carry him to juſtice, and ſhould meet any of his brother villains (meaning the pirates) he could expect nothing but death." After this, turning to George, who, to all this, replied not a word, he told him he ſhould go on ſhore again, and that if he met with any of his majeſty's ſhips, before he left thoſe iſlands, he would give them an account of him, and perſuade them all he could, to come and give him a paſſage to Tyburn: adding, that he hoped before long, to hear of his maſter Loe's receiving the ſame reward at ſome ſuch place."]

On the 15th of September, they left Porto Praya, and anchored at the city the next day, where they filled the remainder of the water they wanted, and took in the reſt of the neceſſary proviſions. About the 19th of November, they ſailed for Porto Cidade, and ſtretched away to the northward, but the ſhip proving leaky, were forced to put in at St. Lucia: where the captain letting go the anchor too ſoon, (there being only the fore-top-ſail handed) a guſt of wind came off the bank out of the Soundings; and being in a very bad condition, Roberts adviſed the commander to bring her down to Barbadoes, as the ſhorteſt, and the eaſieſt run.

There were on board her about 180 ſlaves, a Portugueſe ſupercargo, Scrivan, Cooper, and Signor Antonio de Barra, late governor of Cachea: which laſt objecting to Barbadoes, as being but an iſland. Roberts told him, true, it was an iſland, but he doubted whether he could have any thing at Liſbon, which was not at Barbadoes, except a king, a patriarch, a nobleman, and a biſhop: at which the governor ſmiling, they all agreed to go thither; the ſupercargo, Scrivan, &c. ſigning a paper to teſtify, as was neceſſary, their free conſent. Accordingly, making for Barbadoes, they arrived there in Carliſle bay, Chriſtmas day, 1724: and in leſs than three months, ſailing from thence, they came to Liſbon, where, meeting with Alexander Baxter, maſter of the Bricket Brigantine, who generouſly gave both him and the boy a paſſage: where they arrived the latter end of June in the port of London.

VOYAGES TO THE ISLANDS AND COASTS OF AFRICA, FROM 1420, TO 1730.

THE Portugueſe, who as we have already obſerved, were the firſt great diſcoverers of navigation, claim the honour of diſcovering the iſlands on the coaſt of Africa, and among them the Canaries, which are ſeven, or as ſome reckon eight in number, Madeira being generally accounted one of them. However, it appears that this was really diſcovered by accident by an Engliſhman and his beloved fair one.

It was in the reign of king Edward the third that one Robert Machin (or Maſham) falling in love with a beautiful young lady called Anne d'Arfet, had the mortification to find that her relations were reſolved to marry her to a nobleman whoſe diſtinguiſhed rank and fortune had biaſſed them in his favour. Vexed at this diſappointment (having been diſcharged from a confinement he was under, at the inſtigation of his miſtreſs's relations) he contrived to take the lady from her new ſpouſe and put off to ſea with her, in order to render a purſuit fruitleſs.

The lovers intended to ſhape their courſe for France; but

but Machin and his associates being ignorant of the art of navigation, were driven out to sea by a strong gale, and were greatly terrified at finding themselves exposed to winds and waves upon the boundless ocean.

However, after wandering for 13 days, they had sight of an unknown coast, and the adventurer, on falling in with it, carried his mistress on shore. He found the country agreeably diversified, with hills and vales, and it is said that several wild beasts came about him, without offering to do him any violence. Proceeding farther up the country, he came to a round meadow incircled with laurels, and watered with a small rivulet, which in a bed of fine sand, ran down from the mountains through it. On an eminence here they found a beautiful tree, under which they took up their abode, and afterwards built themselves huts in its neighbourhood. They now passed their time very agreeably, till a storm arose which drove their vessel from her anchor, and threw her on the coast of Morocco, where all the crew were made slaves.

Here our historians and voyagers differ. Some say, that the lady dying, her lover soon followed her, whilst others, as we have already observed in a former part of the work, assert that he went over to Africa, from whence the Moors sent him as a present to the king of Castile; however that might be, we find authority sufficient for supporting the fact, that the island was first discovered by one of our own nation.

But the complete discovery of the island of Madeira, hitherto known only by report, and confirmed by some of Machin's associates, redeemed from the Goals of Morocco, was left to the enterprising genius of Prince Henry of Portugal, that light of a gloomy age, who awakened the spirit of discovery, and was himself the great genius of navigation. This illustrious prince fitted out a fleet, the command of which was given to Juan Gonsalvo Zarco, who was ordered at all hazards to land at this island, which was rendered famous only by the death of the English lady above-mentioned.

The voyager in his way touched at Puerto Santo, where he was given to understand that an impenetrable darkness hung over the sea, to the north-east of the island. This however did not discourage him; he resolved to proceed, and penetrating the mist, which De Morales his pilot, who had been a slave in Morocco, assured him, was occasioned only by vapours arising from thick woods, happily landed according to his destination.

Doubling a point, to which Gonsalvo gave the name of S. Laurence: they sent on shore to reconnoitre the island, and found the tomb of the English lady. They saw no inhabitants nor any cattle where they landed, but saw birds, of various kinds, so gentle, that they suffered themselves to be taken by the hand; nor were there any venomous animals discovered upon the whole island.

Returning with this account to Portugal, in the month of August, 1420, it was resolved that Gonsalvo should return to Madeira, (as it was by this time denominated) in quality of Captain of the Island.

Accordingly he set out again in May, 1421, with his wife and family, and arriving safe in the road then called English Port, he named it Puerto del Machino, in honour of the first English discoverer.

In a fruitful valley, where there was the best harbour adjoining, and a sufficiency of water, this adventurer founded the town of Fonchial, and his wife Constantia dedicated there the first altar to St. Catharine.——

After the death of King John, his son and successor, in consideration of the great sums expended in discovering and peopling the island, by his brother Prince Henry, he gave him the revenues of it for his life; and, as a reward for his indefatigable endeavours, he gave to Juan Gonsalvo Zarco the title of an Earl, with a new coat of arms, which the family bear to this day.

"Some (says our author) comprise two islands under the name of Madeira, viz. that properly so called, and Puerto Santo; and it is common with us, as well as the Portuguese and Spaniards, at this day, to say the Madeiras. It is true, we do not at present, include both those islands under that denomination; but a former custom might have brought that mode of expression into use.

"This isle, which took its name from the great quantity of wood or timber growing on it, lies between 32 deg. 12 min. and 32 deg. 50 min. of north latitude. Dr. Fryer, in his account of the East Indies, &c. says, This is the largest island in the Atlantic ocean; but Teneriffe may dispute the advantage for size. Some moderns make this island 140 leagues, and others 160 in circuit; While Cado Mosta, more near the truth, allows it to be 140 miles. The same author observes, that it has good roads, but no ports. Puerto Santo, which is about 12 leagues distant, may be seen from it in clear weather."

Don Henry first sent letters thither, about the year 1431, under Tristan Tessora, and Juan Gonzales Zarco, whom he appointed governor, who had then shared the whole between them; the first having that half where Machino port lies; and the other the district of Fonchial. He also relates that the settlers, in order to clear the land, set fire to the woods, which happened to spread with such fury, as he had been told, that several persons, with their families, among whom was Gonzales himself, to save themselves from the flames, were forced to take to the sea, where they stood up to their necks for two days and nights, without sustenance. It was then inhabited in four places, viz. at Manchino, Santa Cruz, Fonchial, and Camura de Lobos. There were some other settlements, but these were the principal; which, in the whole, could muster about 180 men, including 100 horse. Their number is much increased since: for Mr. Atkins informs us, that in 1720, the island mustered 18,000 militia, which were kept in good order; and proved very faithful since the revolution in Portugal, in 1640, when it then shook off the Spanish yoke.

In 1601, when Moquet was at this island, it had two cities, the principal of which had two fortresses, the stronger was garrisoned with Spanish, and the other with Portuguese soldiers. This city, which he calls Madeira, and must be Fonchial, is situated in a valley and at the foot of a mountain; from whence he says, comes water in such abundance sometimes, as to cause inundations, which do much damage, carrying away bridges, houses, churches, and other edifices. The city has been as big as St. Dennis, (near Paris) but very populous, to which a great number of slaves contributed, who worked upon the sugar, without the city. The whole island was scattered over with pleasure houses. Ican de Chux, who married the niece of Don Christoval de More, viceroy of Portugal, was then consul for the French, who, as well as the English, Dutch and others, had many factors there. Fonchial is situate in a bay, on the south part of the isle, close to the south side, next to which, it is walled, and defended by cannon. Fresh water comes running into the sea in the middle of the bay, from under an arch in the wall. The shore consists of great pebble stones in the bay, and of rocks in other places. The eastern part of the road is foul ground, and ships ride at anchor within reach of the cannon.

The city is about an English mile in length, and three quarters in breadth. The bay lies in the latitude of 32 degrees 10 minutes north, and 10 degrees one minute west of the Lizard. The adjacent rural places are very mountainous, but, however, they rival the vallies in fruitfulness and delight. The town is refreshed by seven or eight rivers, and variety of rivulets, descending from the mountains, which, notwithstanding their height and steepness, are planted and improved as well as the most champaign in England. At the utmost top of the hills, the corn thrives well,

well, but the abundance of clouds that gather here, are prejudicial to the grapes.

Captain Uring, who was at Fonchial in 1717, says, "It is defended by two large forts, and a third upon a rock at a little distance from the shore, which is very strong by nature. On the back of the town, the ground rises gradually to the mountains, which spread several miles in form of a semicircle, the whole space being full of gardens, vineyards, and gentlemens country-seats, which make a very agreeable prospect likewise. There fall from the mountains behind the town many fine rills of water, that are conveyed by aqueducts for several miles, with which the inhabitants water their gardens and vineyards; it being let in at pleasure by means of cocks.

"The port is dangerous, especially in west and south-west winds, on which side the road lies open, and there is no anchoring under forty fathoms above a mile off shore, and that no where, but at the west end; so that when a swell from these quarters gives notice of a gale's coming, there is no remedy but to slip cable and to sea. The surf too is generally so great on the beach, that the common method of lading is to swim off the pipes to the launch, or also lade on the beach, and then run her into the water; for the same reason, the only good time for watering is before the season breeze comes on. There is a high rock, called the Loo, with a fort upon it, where small vessels may moor pretty safe from the westerly winds. But if the wind veers so as to turn their heads to seaward, all hands immediately take to shore, and leave the ship to make the best of it against the storm by herself. Nor are the lodgings on shore much easier than the road at sea: there are three towns in it, all on the southern side, viz. Marasylo, a small place, with a bay or harbour in the south-west end of the island, where there is good anchorage, in twelve, fifteen, seventeen, and twenty fathoms; Fonchial, in a large bay, near the middle, and Santa Cruz in another open bay or road beyond the former, toward the eastern point of Madeira; between which, and Santa Cruz, Machino, or Macham's town, must be situate, where we are told by our geographers, that there is a handsome church and cloister of Bernardines.

The air of Madeira is generally allowed to be very good and temperate and seldom disturbed; the heavens being commonly smiling and serene. On this occasion he observes, that as those climates which be between the thirtieth and fortieth degree of latitude, are generally free from excess of heat or cold; they therefore seem to best suited to the delights of human life, as well as accommodated to the constitution of mankind.

According to the best authors, this island is mountainous, interspersed with fruitful valleys. The highest parts, woods; which are haunts for wild goats: the middle, kitchen-gardens; and the bottom, vineyards. The roads are bad; for which reason the wines are brought to town in Hog-skins upon asses.

Though the country is mountainous, yet the soil is rich: and it produced, yearly, thirty thousand Venetian stares of Bread-corn: and the land yielded at first seventy to one increase; but is now reduced to thirty or forty for want of good husbandry.

It abounds every where with fine springs, besides which, there are eight rivers. This great plenty of water first suggested the idea to prince Henry of sending sugar-canes hither from Sicily; which being removed into a warmer climate yielded greatly, and four hundred cantaros (each an hundred and twelve pounds large weight of Venice) of sugar had been made to one boiling, and were likely to improve. They had likewise good wines for the time since their settlement, and plenty, so as to export large quantities. Among other vines some Malvasia (Malmsey) plants from Candia were brought hither, which succeeded very well. This soil proved so well-suited to the vine, that in general there are more grapes than leaves, the bunches very large, from two to four spans long. They had likewise the black Pergola grape, in perfection. And they began their vintage about Easter.

The main product of the island is grapes brought hither from Candia, of which there are three or four kinds, which make so many different wines: one is coloured like Champaigne of little esteem: another is more strong and pale, as white-wine; the third sort is rich and delicious, called Malmsey; the fourth is Tinto, equalling tent in colour, but far inferior in taste; it is never drank unless in other wines, with which it is mixt, to give them a tincture and to preserve them. And for fermenting and feeding them, they bruise and take a certain stone, called Jess, of which nine or ten pounds are thrown into each pipe. The Madeira wine has in it this peculiar excellence, that it is meliorated by the heat of the sun when it is pricked; for this end it is necessary only to open the bunghole and expose it to the air.

The product of the vine is equally divided between the proprietor and him who gathers and presses the grapes: yet for the most part, the merchant thrives and is rich, whilst the grape-gatherers is but poor. Among the merchants the Jesuits are none of the least considerable; they have here secured the monopoly of Malmsey, of which there is but one good vineyard in the whole island, which is entirely in their possession. Twenty thousand pipes of wine, by a moderate computation, may be reckoned the annual increase of the grapes; which number is thus exhausted and spent. Eight thousand are thought to be drank upon the island; three or four are wasted in leakage, and the remainder is exported mostly to the West-Indies, especially to Barbadoes, where it is drank more liberally than other European wines.

The ashes of the trees burnt by the discoverers gave a vast fertility to the sugar-canes, at their first planting, till a worm getting into the canes spoiled the increase; so that it was then intirely planted with vines brought originally from Candia, which yield the strongest wines: that called Malmsey is a rich cordial, the best made at the Jesuits garden in Fonchial. Their vintage is in September and October; and the yearly produce is about twenty-five thousand pipes. This wine is of two sorts; one brownish, and the other red, called, (as we have said) Vino Tinto, from a general opinion that it is stained, which, however, the inhabitants firmly deny. They are almost all limed; a preservative against the heat of the West-Indies, where no other wines keep so well.

This island affords peaches, apricots, plums, cherries, figs, and walnuts; and the English merchant allowed to reside and traffic here, have transplanted from England currants, gooseberries, filberts. All these are more kindly entertained in this soil, than many of their fruits are in ours, which is too cold and moist for rearing those of hot climates. The banana is with them in singular esteem, and even veneration, being reckoned for its deliciousness, the forbidden fruit; oranges and lemons abound in such plenty that they drop into their dishes, while people dine under their shade.

Citrons also grow here, of which the natives made a delicate sweetmeat, called Sucket, and load with it yearly, two or three small ships for France. The sugar, which in candying them, they make use of, and is often effectually prescribed against consumptions, is but rarely exported, because of its scarcity, which hardly supplies the necessities of the Island.

Among the trees, the cedar and nasso excelled; the first, is very tall, thick, and streight; and has a rich scent, it makes the finest boards, and is chiefly used for building, the nasso wood is of a very bright red-rose colour; and besides boards they made both long and cross bows which had a just spring, and were extremely beautiful, which were sent to the west. And they supplied all Portugal besides other places with boards.

The provisions here, are chiefly kid, pork, with sometimes a lean heifer, cabbages, lemons, oranges, walnuts,

walnuts, figs, yams, bananas, &c. the country ſending in what quantity they gueſs will be taken off, there being no fixed markets.

The ordinary food of the poorer ſort is little elſe in the time of vintage, than bread and ripe grapes. Were it not for this great abſtemiouſneſs, the danger of fevers, in the hot ſeaſon, would be rarely avoided, and the venereal exceſſes to which they are ſtrangely addicted, joined to the immoderate heat of the place, would be apt to put nature under various diſorders. Therefore men of the greateſt conſequence and fortune, ſeldom exceed the allowable bounds of drinking, and accuſtom themſelves to a very ſpare diet.

The people affect gravity (ſays the author) and wear black, in compliance with the clergy, who claim ſo much authority among them. But they cannot live without the ſpado and the dagger; thoſe inſeparable adjuncts, even of ſervants waiting at table, who proudly ſtrut with the diſhes in their hands, and a baſket hilt to a ſword, at leaſt, a yard long, even in the midſt of ſummer. Their houſes too are plain; for they are at no great expence either for building or furniture; ſome of them ſhoot up a little in height; in general they are flat-roofed; the windows are unglazed, and kept open all day, and cloſed by wooden ſhutters at night.

The fertility of this iſland is much abated from what it was in the time of its firſt plantation, and the continual breaking up of the ground has in many places impoveriſhed its productions, ſo that they are obliged to let it lie fallow for three or four years, after which time, if there ſprings up no broom, they conclude it quite barren.——The huſbands, ſet their wives an ill example, and the latter make no ſcruple to indulge their inclinations, when they find an opportunity, eſpecially with ſtrangers. This is imputed in a great meaſure to the parties marrying without a previous knowledge, or even an interview of each other.

"In treating about marriage, their principal inquiries are into the family, and deſcent of the lover, for preventing alliances with Moors or Jews, who are very numerous. To join in matrimony with any of them, is eſteemed a debaſement, eſpecially in a woman. Neither muſt any of them marry any Engliſh merchants (whoſe perſons are very acceptable to the beſt of families) unleſs the latter firſt change their religion. Sometimes indeed, an objection is made on account of fortune; for it has been known, that an inequality that way has been deemed by their ſubtile caſuiſts, a juſt plea for diſſolving the contract. Murder here has a kind of reputation; and it is made the characteriſtic of any gentleman of rank or faſhion to have dipped his hands in blood. The chief ſource of this execrable crime is the protection it receives from their churches; which ſort of ſanctuaries are very numerous, Fonchial being full of them; beſides many more diſperſed through their country plantations. The indulgence given to ſuch malefactors is the greateſt reproach to religion and humanity. It is enough if the criminal can lay hold of the horns of the altar; and the utmoſt penalty they inflict is baniſhment or confinement, both which, by large preſents, may be bought off. The clergy here are very numerous, and daily increaſe. Near the chapel belonging to the Jeſuits, is a certain hoſpital, much frequented by the natives, erected for the entertainment and care of ſuch as are infected with the venereal diſeaſe. Their churches are moſt commonly made uſe of for repoſitories of the dead. The corpſe is curiouſly dreſſed and adorned; yet in the interment, they mix lime with the earth to haſten the conſumption of it, by which means there is room made within a fortnight for a freſh body."

Puerto Santo was diſcovered about the year 1418, by the Portugueſe, on All Saints day, whence it takes its name; and Prince Henry of Portugal, firſt ſent inhabitants to ſettle there under Bartholomew Pereſtrellow, whom he appointed governor. It is about 15 miles in circumference.

This iſland bears good bread corn, and oats enough for its own uſe; but abounds with oxen and wild hogs, and there are rabits out of number. Among other trees it produces the dragon tree, the ſap or juice of which is drawn out at certain ſeaſons only of the year, when it iſſues into clefts, made with an ax, near the bottom of the trunk the year before. Theſe are found full of a kind of gum, which decocted and depurated, is the dragon's blood of the apothecaries: the tree bears a fruit that is well taſted, and round like a cherry, but yellow. Here are the beſt honey and wax in the world, but not in any great quantity. There is alſo plenty of good fiſh about it, ſuch as dentali, gilded fiſh, and others. It has no port, but good mooring in the road, which is ſheltered on all ſides, but between ſouth and eaſt, the winds blowing from this quarter, make it unſafe riding here.

In April, 1595, Captain Amias Preſton, with only 60 men, took the iſland and chief town, which was very handſome and large. The inhabitants fled with their goods to an exceeding high hill near the ſame, which the Engliſh durſt not attack. The enemy would have ranſomed the town, but it was burnt down in revenge of former ill treatment. The like was done by the villages on the iſland, which was at that time inhabited by old ſoldiers, whom the king of Portugal uſed to place there, to reward their former ſervices. In 1681, when Barbot ſailed that way, Puerto Santo had then on it ſome villages and hamlets.

Of the Canary iſlands in general, we have the following account. They moſtly abound in the neceſſaries of life, except water, which not being good, the inhabitants ſtrain it through filtering ſtones. The harveſt is commonly in March or April at fartheſt, and in ſeveral places they have two each year; and the author had ſeen a cherry-ſlip produce fruit in ſix weeks after grafting. Here alſo grows the Oriſelle, a plant that bears the Canary ſeed, and requires a great deal of care and management here, but grows in Holland, and other parts of Europe, without any trouble. The Canary birds which breed in France, neither ſing ſo ſweet, nor have they ſuch a variety of beautiful plumage, as here on their native ſoil. Beſides many other vegetables, there were beans, peas, and caches; a grain like maiſe, uſed for improving the land; papaus, cherries, guavas, pomkins, and extraordinary fine onions, with all ſorts of garden greens, and roots, pot-herbs, and ſallading, as well as variety of flowers. Of fiſh they have mackarel in plenty, beſides ſturgeon, which the poorer ſort feed on. They are likewiſe well ſtocked with deer and horſes. Theſe are the products of the iſlands in general, but in particular, Lanzarota exceſs in horſes; Grand Canaria, Palma, and Teneriffe, in vines; Forteventura for common dunghil fowls; and Gomera for deer.

Grand Canaria is the principal of all the reſt of the iſlands, not in fertility, but as being the ſeat of juſtice and government among them. There is a governor for the iſland only; beſides whom, here are auditors, who are ſuperior judges, and act jointly in commiſſion as the lord chancellor of any realm; receiving and hearing appeals from other iſlands. The city is called Civitas Palmarum. It hath a beautiful cathedral, with all the uſual dignities. For the adminiſtration of civil affairs in the iſland, there are ſeveral aldermen who have great authority, and a council houſe to themſelves. The city is beautiful, and the inhabitants dreſs very gay and rich. After any rain or foul weather, a man may go clean in velvet ſlippers, becauſe the ground is ſandy. The air is very temperate, and free from the extreme of heat or cold. They have two wheat harveſts, viz. in February and May. The grain is exceeding good, and makes bread as white as ſnow. There are in this iſland three other towns, named Telde, Galder, and Guia; alſo 12 ſugar houſes, called Ingenios, in which a great quantity of good ſugar is made. The growth of ſugar is in this manner: A good ſoil yields nine

in 18 years: First, they take a cane, which is called the Planta, and laying it along in a furrow, cover it with earth, ſo that by a ſluice they can let the water run over it. This plant, in the nature of a root, brings forth ſundry canes, which grow two years before they are fit to cut. They are cut even with the ground, and the tops, with the leaves called coholia, being chopped off, the bodies are tied into bundles like faggots, and carried to the ſugar-houſes, called Ingenio's. When they are ground in a mill, and the juice conveyed by a gutter to a great veſſel where it is boiled till is comes to a due thickneſs, and then put into earthen pots, of the mould of a ſugar-loaf, and placed in a purging-houſe to purge and whiten, which is done with a certain clay laid on the top. Of the remainder in the veſſel is made a ſecond ſort, called eſcumes; and of the purging liquor, that drops from the white ſugar, is made a third ſort, the remains of which is called panela, or netas: the refuſe of all the purging, is called molaſſes; and of that is made another ſort, called refinado. When the firſt crop is thus finiſhed, the canes of which, are called planta, then the ſtraw, (or withered leaves of the canes) lying all over the field, (or cane piece) are ſet on fire, which likewiſe burns the ſtumps of the canes cloſe to the ground: and thus, with good huſbandry, and watering, at the end of other two years, it yields the ſecond crop, called zoca; the third is called tertia zoca, the fourth quarto zoca; and ſo the reſt, till age cauſes the old canes to be planted again.

This iſland produces very good wine, eſpecially in the town of Teyde, and many ſorts of good fruits, as melons, pears, apples, oranges, lemons, pomegranates, figs, peaches of ſeveral ſorts, and many other fruits; but eſpecially the plantane. It is no timber-tree; it grows near the ſides of brooks, is very ſtraight in the body, and has ſurpriſingly thick leaves: which grows not on the branches, but out of the top of the tree, every leaf being two yards long, and almoſt half a yard broad; each tree has but two or three branches; and on them grows the fruit, which are thirty or forty in number, more or leſs; it is ſhaped like a cucumber; and when ripe, is black, being then more delicious than any conſerve. The plantane bears fruit but once, and then is cut down, another ſpringing up from the ſame fruit, and ſo on continually.

This iſland yields enough of oxen, camels, goats, ſheep, capons, hens, ducks, pigeons and large partridges. Wood is the thing moſt wanted. It ſtands in twenty-ſeven degrees north. It is thirteen or fourteen leagues each way, and about forty in circuit: according to the common opinion, it is the ſame which the ancients, particularly Ptolemy, called by this name. It is the moſt particular of all the iſlands, and its chief city, called Canaria, and Cividad de las Palmas, the capital of all the reſt.

Teneriffe, ſtands in twenty-ſeven degrees and an half north, and is diſtant from Canaria twelve leagues to the northward. It is ſeventeen leagues in length, and lies high, in form of a ridge of plowed land in ſome parts of England. In the midſt of it ſtands a round hill, called the Pike, or Peak, which is in heighth, to aſcend, fifteen leagues and more, and about half a mile in compaſs at the top; out of which, oftentimes proceed fire and brimſtone, being in form of a cauldron. Within two miles of the top, are nothing but aſhes and pumice ſtones, and, beneath that two miles, is the cold regions, covered all the year with ſnow. Somewhat lower, are prodigious large trees growing, called vinatico, which are exceeding heavy, and lying in water will never rot. There is likewiſe a wood called Barbuſano, of the ſame quality with many ſavine, and pine-trees.—Beneath theſe are woods of bay-trees, of ten or twelve miles long; where it is pleaſant riding among the great number of ſmall birds, that ſing exceedingly ſweet, eſpecially one ſort of them. This bird is very little, and coloured in all reſpects like a ſwallow, only it has a little black ſpot on its breaſt as broad as a halfpenny: he hath a more delightful note than all the reſt: but if he be impriſoned in a cage, lives but a ſhort time.

Teneriffe produces all the fruits that Canaria doth, and hath in common with the other iſlands, a particular kind of ſhrubs or ruſhes, out of which iſſues a milky juice, which ſtanding a little, thickens, and is very good bird-lime: but the tree called drago is peculiar to Teneriffe, grows on high rocky land, and by inciſion at the bottom, yields a juice like blood. This iſland abounds in corn more than all the reſt: and in fact, is a mother or nurſe, to all the others in the time of ſcarcity. There grows alſo upon the high rocks a kind of moſs, called orchel, which is bought for dyers. There are alſo twelve ſugar-works, called Ingenio's; but above all, there is a ſmall plot of land, about a league in compaſs, the like of which, perhaps cannot be ſhewn in all the world beſides. It lies between two towns, the one called Larotava, and the other Rialejo. This ſingle league of ground produceth ſweet water out of the cliffs, or rocky mountains; corn of all ſorts; all kinds of fruits; excellent ſilk, flax, wax, and honey; and very good wines in abundance: with great ſtore of ſugar, and plenty of fire-wood. This iſland exports great quantities of wines for the Weſt Indies, and other countries. The beſt grows on the ſide of a hill, called the Ramble. The city, called Laguna, ſtands near a lake, and three leagues from the ſea. It is handſomely built, and has two fine pariſh churches. This is the reſidence of the governor, and alſo of the aldermen, whoſe places are purchaſed of the king. Moſt of the inhabitants of this city, are either gentlemen, merchants, or huſband-men. There are four towns more, called Santa Cruz, Larotava, Rialejo and Garachuz.

This iſland, before its conqueſt, had ſeven kings, who, as well as the people, lived in caves, and uſed the ſame diet, and goat-ſkin cloathing, like thoſe of Canaria. The manner of burying their dead was thus: they carried the corpſe naked to a great cave, and there fixed it upright againſt the wall: and if he were of any authority among them, they put a ſtaff in his hand, and ſet a veſſel of milk by him. The author had ſeen three hundred of theſe bodies in a cave together, the fleſh of which was ſo dried up, that the body remained like parchment. Theſe people were called Guanches; and had a peculiar language, quite different from the Canarians, and ſo in the reſt, the inhabitants of every iſland had a diſtinct tongue, beſides the language common to all. The king of Spain receives from the iſles of Canaria 50,000 ducats yearly, for cuſtom and other duties. All the three are joined into one ſee, worth to its biſhop 12,000 ducats yearly.——

Teneriffe, though but the ſecond iſland, in point of precedence, is the chief, with reſpect to its extent, riches or trade. Sir Edmund Scory, ſays, this iſland has been called Nivaria, from the ſnow that encloſes the neck of the Peak of Teyda, like a collar: the name of Teneriffe being given it by the inhabitants of Palma, in whoſe language, Tener ſignifies ſnow, and Iffe, an hill.

At Santa Cruz, the beſt riding is not above half a mile from ſhore, in thirty, forty, or fifty fathoms, black, ſlimy ground: if there be many ſhips, they muſt ride cloſe by one another. The ſhore is generally high land, and in moſt places ſteep to the water. Between this and the watering-place, are two little forts; which, with ſome batteries ſcattered along the coaſt, command the road, which is ſtill farther ſecured by two other forts, that defended the town; being a ſmall place without walls, and fronting the ſea.

[The houſes, (in number about two hundred) are all of ſtone, three ſtories high, built ſtrong, and covered with pantiles. The beſt buildings in it are the churches and two convents. But all could not ſecure the Spaniſh galleons when here from Admiral Blake, though they hauled in cloſe under the main fort, the

walls of which, then carried the marks of his ſhot. Wrecks of the galleons lay there in fifteen fathoms, with the greater part of the plate. He cannonaded the town alſo, and did it a great deal of damage.]

About three miles off, up a pretty ſteep hill, lies Laguna. The land on each ſide the road is rocky, yet relieved with ſome ſpots of green flouriſhing corn. Theſe were terminated with ſmall vineyards on the ſide of the mountains, intermixed with abundance of waſte rocky land, producing nothing but wild buſhes and poiſonous canes.

The town exhibits a very agreeable proſpect, as it ſtands upon the ſide of a hill, and ſtretches its ſkirts on the plain behind. It is pretty large, and well compacted. There are ſeveral gentleman's houſes handſomely built: as alſo two nunneries, an hoſpital, four convents, (of their Saints Auſtin, Dominic, Francis, and Diego) ſome chapels, and two pariſh churches, both with pretty high ſquare ſteeples, which top the reſt of the buildings. The ſtreets are ſpacious, and tolerably handſome, though not regular, and the whole is ſet off with a large parade in the heart of the town, ſurrounded with good buildings. Many of the houſes are rendered more agreeable by gardens, laid out in parterres of ſallading and flowers, bordering round with oranges, limes and other fruits.

As the town ſtands high from the ſea, and open to the eaſt, it has the benefit of the true trade-wind, which is commonly fair, ſo that they ſeldom miſs the refreſhment of a briſk cooling breeze all day long, which comes over the plain, that lies on the back of it. ——— This is bounded to the weſt with mountains, from whoſe foot iſſues out a ſpring of freſh cool water, which is conveyed over the plain in ſtone pipes raiſed upon pillars, to a conduit on the ſide of the town. And near the other ſide to the eaſt ſtands a natural lake, or pond of freſh water, half a mile in circuit; which not only ſupplies the cattle, but is covered in the winter time by ſeveral ſorts of wild fowls, affording plenty of game to the inhabitants of the town, called Lagune from this lake. Upon the whole, conſidering the ſituation, its large proſpect to the eaſt, (from hence you ſee the Grand Canaria) its gardens, pleaſant plains, green fields, the pond and aqueduct, and its refreſhing breezes: it is a very delightful habitation; eſpecially for ſuch as have not much buſineſs far from home: for it is very troubleſome travelling in a ſtony uneven road, amongſt ſteep and craggy mountains, upon mules or aſſes, which are uſed alſo for carriages. The road from the port of Santa Cruz, to the Cividad de Laguna, lies up a ſteep hill. The city is beautifully ſituated in the middle of a plain, ten miles in compaſs, incloſed with high mountains on all ſides, except the north-weſt, lying upon a flat ſeven leagues in length to the ſea. The vapours exhaling from thence, being circulated among the intricate mountains, raiſe a wind, which often refreſhes the city from this quarter; beginning at twelve o'clock at noon, and holding till night, though it blows at the ſame time full ſouth-eaſt at ſea. This north-weſt breeze uſually comes on at twelve o'clock at noon, and holds till night, which is cool enough on account of the great dews then falling. Their houſes are built with ordinary rough ſtone, two or three ſtories high at moſt, and generally but one, in the ſkirts of the city, and they have no chimneys, not even in their kitchens, in which, they make only a flat hearth againſt a wall, and thus roaſt their meat. The town is well laid out, and the ſtreets very ſtrait. It has no walls round it, but is well ſupplied with water.

The famous Peak of Teneriffe, may be ſeen ſixty miles at ſea: it can be climbed only in July and Auguſt, being full of ſnow all other months, although there is no ſnow in other places thereabouts. It is three days journey up; and from the top, which is flat, all the other iſlands may be ſeen: from it much brimſtone is carried into Spain, of which the author had a piece given him by a ſkipper. Beckman ſays, it ſtands towards the middle of the iſland, riſing like a pyramid, or rather ſugar-loaf; but that he could not ſee the top becauſe of the clouds. It has the appearance of a heap of rough rocks, piled thus (it is thought by naturaliſts) from ſome ſubterraneous conflagration which had formerly burſt out.

There are three relations of this famous mountain, written by eye-witneſſes, and Engliſhmen, who all ſeem to have made the journey up it: the firſt was written by Sir Edmund Scory, Knt. a learned gentleman, who wrote obſervations of the peak, and other curioſities of the Iſland of Teneriffe. He ſays, "This great mountain of Teyda, commonly called the Peak of Teneriffe, ſtrikes one with amazement, both near and at a diſtance. It extends its baſe to Garrachuz, from whence it is two days and a half journey to the top, which, though it ſeems from below, as ſharp as a ſugar loaf (which it moſt reſembles) is yet a flat, the breadth of an acre; and in the midſt of that there is a gulph, out of which are caſt great ſtones with a prodigious noiſe, flame, and ſmoak. Seven leagues of the way up, may be travelled on aſſes or mules; but the reſt muſt be climbed on foot; and that not without difficulty; every one carrying his own victuals and wine with him. The aſcent of the hill for ten miles upwards from the foot, is adorned with the fineſt trees in the world, of divers ſorts; the ground being well watered with riplings running from ſprings, which joining at length deſcend in large torrents (eſpecially when ſwelled by the violent winter rains) into the ſea. In the middle it is intolerably cold; through which one muſt contrive his journey out ſo as to travel on the ſouth ſide, and in the day-time only. This region ends within two leagues of the top, where the heat is no leſs extreme than at the bottom. By the ſame rule the beſt way is to keep on the north ſide, and travel only by night. The proper time of the year is about Midſummer, as avoiding the torrents cauſed by the ſnow. And if the top is reached by two o'clock in the morning, a paſſenger may ſtay there ſome hours, but not after ſunriſing, a little before which there iſſues a ſtream of heat from the Eaſt, not unlike the ſteam of a hot oven.

"It is remarkable, that from the top the ſun appears much leſs, a little after it has aſcended the horizon, than when viewed below, and ſeems to clear, ſerene, and defecate; it never rains near the top, nor was there ever any wind upon it. Though the iſland is full of ſharp ragged rocks, to the number of twenty thouſand, yet from hence the whole appears as a plain, laid out in portions by borders of ſnow, which, however, are nothing elſe but the white clouds, that are many furlongs beneath.

"All the upper part is barren and bald, without tree or ſhrub upon it; out of which, on the ſouth ſide, there iſſue ſtreams of brimſtone into the neck or region of ſnow, which lies interveined as it were with brimſtone in ſeveral places. The fire from the volcano in the top of the mountain, breaks out oftenеſt in the ſummer time; and when a ſtone is thrown down, it reſounds like a veſſel of hollow braſs, ſtruck with the greateſt force by a prodigious weight.

"The Guanches thought it was Hell, and that the ſouls of their anceſtors, ſuch as were wicked, went thither to be tormented, while the good and valiant retired into the pleaſant valley, where the great city de Laguna now ſtands, with other towns about it, and indeed there is no place in the world that has a more delicate temperature of air, nor any country which affords a more beautiful proſpect than is beheld from the centre of this plain; which is fertiliſed by abundance of water falling along the crannies of the rocks, in little ſtreams down the mountains, till ſeveral joining, form rivers, which run along the plains into the ſea.

"The original of the Guanches are not certainly known, they were, and are, merely barbarous, and without

without letters; their language, which remains to this day among them in the town of Candelaria, has great affinity to that of the Moors in Barbary. Betancourt, the firſt diſcoverer of theſe iſles, repreſented them as mere pagans, ignorant of God; on the contrary, Sir Edmund aſſures us, what they held, there was a ſupreme power which they called by divers names; as, Achurahan, Achuhuchanar, Achguayaxerax; ſignifying, The Greateſt, the Higheſt, and Maintainer of all. When they wanted rain, or had too much, or in any other calamity, they brought their ſheep and goats into a place appointed, and ſevering the young ones from their dams, raiſed a general bleating among them, which they imagined would appeaſe the wrath of the Supreme Power, and incline him to ſend them what they wanted. They had ſome notion of the immortality and puniſhment of ſouls hereafter; ſince they thought there was ſuch a place as hell; and particularly, that it was in the peak of Teyda, as before-mentioned. They called hell, Echeyde, and the Devil, Guayotta, but had no commerce with him, that the author could obſerve.

"In civil affairs they had ſomething of order; they acknowledged a king, and themſelves his vaſſals, which they confirmed at marriage. They rejected baſtards, owned a right of ſucceſſion in the race of kings; made laws, and yielded ſubjection to them. The king held his reſidence in natural caves, or hollow rocks. For many years the iſland was ſubject to one king, called Adexe, who growing old, his ſons formed a conſpiracy againſt him; and, there being nine of them, divided the iſland into ſo many kingdoms. All their wars were made only to ſteal cattle one from another, and eſpecially the ſpotted goats, which are in great and ſacred eſteem among them. There is very little difference either in body, colour, or ſmoothneſs, betwixt the Engliſh fallow-deer, and their goats. With regard to marriage, the men uſed to aſk the conſent of the intended bride's parents, which being obtained, there was little more ceremony obſerved before conſummation, as far the author could learn; and what was ſo eaſily done, was as eaſily undone; for whenever they had a mind, they might ſeparate, and marry with others at their pleaſure; but with this reſtriction, that all children begotten after the divorce, were illegitimate, and eſteemed as baſtards; the kings alone, for ſucceſſion's ſake, being exempt from this cuſtom; for whom alſo upon that account it was lawful to marry with his own ſiſter. At the birth of a child, water was poured upon its head by a woman appointed for that purpoſe, who was, from that time taken into affinity with the family; nor was it lawful for any of that race to marry or cohabit with her. The young men uſed the exerciſes of leaping, running, throwing the dart, throwing a ſtone, and dancing, in which, to this day, they much pride and delight themſelves; and ſo great was their native virtue, and honeſt ſimplicity, that this was an invariable law among them, if any of their ſoldiers, either openly or in private, offered any rudeneſs to a woman, he was aſſuredly put to death. They were handſome in ſtature, well formed, and of a good complexion.

"On the ſouth ſide the people were of an olive colour; but on the north ſide fair, eſpecially the women, having bright ſmooth hair. Their common dreſs was a ſhort coat, made of lamb ſkins, without plait, collar or ſleeves, being faſtened together with ſtraps of the ſame leather. This was uſed equally by men and women, and was named their Tomarce; but the women, for modeſty's ſake, wore another covering under it like a long caſſock, made of ſkins, which reached down to the ground, holding it indecent for a woman to have her breaſts or feet uncovered. In this garment they lived; and in this they died, and were commonly burnt in it. For proviſion they ſowed barley and beans; wheat being utterly unknown to them. They roaſted their barley by the fire, and, grinding it in hand-mills, wet the flour with water, milk or butter: this they called Giffio, which they uſed for bread, and was their chief ſuſtenance. However, ſometimes they eat the fleſh of ſheep, goats, and hogs, but not commonly; for this was regulated on certain days, which they keep like the feſtival wake days in England. At theſe meetings, the king, with his own hands, diſtributed to every twenty of them, three goats, and a proportion of giffio, after which, every company came before the king, and ſhewed their agility in leaping, running, wreſtling, darting, dancing, and other ſports. During theſe times, the men had liberty to paſs to and from the enemy's country, and the enemies ſometimes would feaſt one with the other. When the ſeaſon for ſowing their ſeed came, the king laid out the land in lots to every man, which they ploughed up with goats horns, and uttering certain words, threw their ſeed into the ground. All other works were done by the women.

They had a kind of fruit called Mozan, about the bigneſs of a pea. At firſt it is very green, grows red as it ripens, and being full ripe, turns black much like a blackberry in England, only the taſte is exceeding pleaſant. They ſuck only the juice of them, which they call Joya; and they make a kind of honey of them called Chacerquem. They gather theſe mozans very ripe, and lay them in the ſun for a week, then breaking them to pieces, they are boiled in water to a ſyrup. This is their phyſic for a flux, and pains in the back: in both caſes, they uſe bleeding alſo in the arm, temples, and forehead, with a flint ſtone.

The ſecond journey up the peak was performed by ſome Engliſh merchants.——They ſet out from Orotava, a port town on the north ſide of Teneriffe, two miles from the ſea. They travelled from 12 at night till eight the next morning, and then got to the top of the firſt mountain, towards the Pico de Terroira. Here, under a very great and conſpicuous pine-tree they broke their faſt, dined and refreſhed till two in the afternoon, and then proceeded through much ſandy way, over many lofty mountains, but naked and bare, and not covered with any pine trees, as their firſt night's paſſage was. This expoſed them to exceſſive heat, till they arrived at the foot of the peak, where they found many large ſtones, which ſeemed to have fallen down from ſome part above. About ſix this evening they began to aſcend the peak; but after they had advanced a mile, finding the way no longer paſſable for horſes, they diſmounted, and left them with their ſervants. In this mile's aſcent, ſome of the company grew very faint and ſick, diſordered by fluxes, vomitings, and aguiſh diſtempers; and the hair of the horſes ſtood upright, like briſtles. Calling for ſome wine which was carried in ſmall barrels, they found it ſo very cold, that they could not drink it till it was warmed, although as yet the temper of the air was very calm and moderate; but when the ſun was ſet, it began to blow with ſuch violence, and grow ſo cold, that having taken up their lodgings under ſome large ſtones in the rocks, they were forced to keep great fires before the mouths of them all night. About four in the morning, they began to mount again, and being got about a mile up, one of the company was not able to proceed any farther. Here began the black rocks. The reſt purſued their journey, till they came to the Sugar-loaf, where they again met with white ſands. To encounter this difficult and dangerous paſſage, they were provided with ſhoes, whoſe ſoles were made a finger broader than the upper-leather. At laſt they gained the ſummit, where they found no ſuch ſmoak as appeared a little below, but a continual breathing of a hot and ſulphureous vapour, which made their faces extremely ſore. In this paſſage they found no conſiderable alteration of air, and very little wind; but being at the top, it was ſo impetuous, that they drank the king's health, and fired each his piece. Here alſo they eat. But their ſtrong water had quite loſt its force, and was become almoſt inſipid, whilſt their wine was more ſpirituous and briſk than before. The top on which they ſtood, being not above a yard broad, is the brink of a

pit called the Caldera, which they judged to be about a muſquet-ſhot over, and near 80 yards deep. It is ſhaped like a cone, hollow within like a kettle, and all over covered with ſmall ſtones, mixed with ſulphur and ſand. From amongſt theſe there iſſue divers ſpiracles of ſmoak and heat, which, when ſtirred with any thing, puff and make a noiſe, and are ſo offenſive, that the merchants were almoſt ſtifled with the ſudden iſruption of vapours upon the removing of one of theſe ſtones, which are likewiſe ſo hot, as not eaſily to be handled. They did not deſcend above four or five yards into the Caldera, on account of the ground ſlipping from under their feet, and the difficulty of getting down; but ſome have ventured to the bottom. They obſerved here nothing remarkable, except a clear ſort of ſulphur, which looks like ſalt upon the ſtones.

From this famous Peak, they could diſcern the Grand Canaria, 14 leagues diſtant; Palma 18, and Gomera, ſeven leagues; which interval of ſea ſeemed to them not much larger than the river Thames at London. Their view extended alſo as far as Ferro, above 20 leagues, and a great way beyond, over the ſurface of the ocean. As ſoon as the ſun appeared, the ſhadow of the Peak ſeemed to cover, not only the iſland of Teneriffe and Gomera, but even the ſea to the very horizon, where the top of the Sugar-loaf or Peak, diſtinctly appeared to turn up, and caſt its ſhade into the air itſelf, at which they were much ſurpriſed; but the ſun was not far riſen, when the clouds began to riſe ſo faſt, as to intercept their proſpect both of the ſea and Teneriffe, excepting only the tops of the adjacent mountains, which ſeemed to pierce them through. Whether theſe clouds ſurmounted the Peak, they could not ſay; but ſuch as were far beneath, ſeemed to hang above, or rather to wrap themſelves about it, as they conſtantly do when the north-weſt wind blows: this they call the Cap, and is a certain ſign of enſuing ſtorms. One of this company, who made this journey two years after, arrived at the top of the Peak before day, and creeping under a great ſtone to ſhelter from the cold air, after a little ſpace, found himſelf wet, and perceived it to come from a particular trickling of water from the rocks above him. They ſaw many exuberant ſprings, iſſuing from the tops of moſt of the mountains; and guſhing out in great ſpouts, almoſt as far as the large pine-tree before-mentioned. Having ſtaid ſome time upon the top, they all deſcended by the ſandy way, till they came to the foot of the Sugar-loaf, which, being ſteep, almoſt to a perpendicular, they ſoon paſſed. Here they met with a cave about ten yards deep, and 15 broad, in ſhape like an oven, having an hole at its top near eight yards in diameter: into this they were let down by ropes, faſtened round their waiſts, and held by their ſervants at top, ſwinging themſelves in the deſcent, till being over a bank of ſnow, they ſlid down upon it; they were forced to ſwing thus, becauſe in the middle of the bottom of the cave there is a round pit of water, reſembling a well, the ſurface of which is about a yard lower than the ſnow, but as wide as the opening at top, under which it lies, and is about ſix fathoms deep. They ſuppoſed this water to proceed not from a ſpring, but diſſolved ſnow blown in, or moiſture trickling through the rocks. About the ſides of the grot, for ſome height, there was ice or iceicles hanging down to the ſnow; but being quickly weary of this exceſſive cold place, and drawn up again, they continued their deſcent from the mountains, by the ſame paſſages they went up the day before, and about five in the evening, arrived at Oratava, their faces being ſo red and ſore, that to cool them, they were forced to waſh and bathe them in the whites of eggs, &c. [The perpendicular height of the Peak is commonly eſteemed to be about two miles and a half.] They found no trees, herbs or ſhrubs in all the way, but pines, and amongſt the whiter ſands a ſort of broom, being a buſhy plant; likewiſe at the ſide, where they lay all night, there was a kind of cordon which had ſtems eight feet high, and the trunk near half a foot thick, every ſtem growing as four-ſquares, and ſhooting from the ground like tufts of ruſhes; upon the edges of theſe ſtems grow very ſmall berries, which, being ſqueezed, produced a poiſonous milk: this lighting upon any part of the horſe, or other beaſt, fetches off the hair from the ſkin immediately. Of the dead part of this they made their fires all night. This plant is alſo univerſally ſpread over the iſland.——

On Tueſday, Auguſt the 13th, 1715, at half an hour paſt ten at night, Mr. James Eden, in company of four Engliſhmen and a Dutchman, with horſes and ſervants alſo made this journey.—They ſet forward from the port of Oratava, having a guide who had conducted all who made this journey for years. They came to the town of Oratava, at half paſt eleven, which is about two miles from the port. Here they got walking-ſtaffs to help him in aſcending the ſteep of the peak. At one, on Wedneſday morning, they came to the foot of a very ſteep riſing, about a mile and a half above the town of Oratava, where it began to clear up, and being full moon, they ſaw the Peak, with a white cloud, covering the top like a cap. At two, they came to a plain place in the road, which the Spaniards called Dornajito en al Monteverde, the little Trough in the Green Mountain, ſo called, he ſuppoſes, becauſe a little below this plain, on the right as they went there, is a deep hollow, at the upper end of which is a wooden ſpout ſet in a rock, and a deſcent a little lower, with a trough to receive the water, which comes from the mountains through the ſpout, and is very clear and cool.

After travelling a road ſometimes rough, and ſometimes ſmooth, they came at three o'clock to a little wooden croſs, on the left hand, which the Spaniards call La Cruz de la Solera, The Croſs of the Solera, being made with a piece of Solera, which is a long pole, having a hole at each end, which the Spaniards uſed to draw wood with, faſtening one end to the timber, and the other to the oxen. But why they were ſet up here, the author could not tell, unleſs ſomebody was killed thereabouts. At this place they ſaw the Peak before them; and though they had come up hill quite from the port, yet, in their opinion, it ſeemed almoſt as high here as there, the white cloud hiding the greateſt part of the Sugar-loaf. About half a mile farther, they came to the ſide of a hill, which was very high, rough and ſteep, the place being named Caravalla, ſo called, he ſuppoſes, from a great pine tree on the right hand, (there being many on both ſides of the road) which the guide deſired them to obſerve, having a great branch growing out, which, with the boughs upon it, looked like the forepart of a ſhip. Amongſt theſe trees, not a great height in the air, they ſaw the ſulphur diſcharge itſelf like a ſquib, or ſerpent, made of gunpowder, the fire running downwards in a ſtream, and the ſmoak aſcending from the place where it firſt took fire. They ſaw the like next night, as they lay under the rocks at La Stancha: but he could not obſerve whether either of them gave any report. Three quarters after four, they came to the top of this mountain, where grows a large tree, which the Spaniards call El Pino, de la Merinda; that is, The Pine-tree of the afternoon's meal. The fires made by travellers baiting here, had burned it at the bottom, from whence the turpentine had iſſued out. At a few yards diſtance, they had a fire made, where they refreſhed themſelves, and their horſes. A great many rabbits breed there among theſe hills, which are ſandy. There is alſo much ſand a great way up the Peak itſelf, and not far below the Sugar-loaf.

At three quarters after five they ſet forward again, and at half paſt ſix came to the Portillo, in Spaniſh, a Breach or Gap, from whence they ſaw the peak ſtill covered with a cloud at its top, about two leagues and a half before them, and the Spaniards ſaid, they were about the ſame diſtance from the port. At half an hour paſt ſeven, they came to Las Faldas; that is,

The Skirts of the Peak: from whence to La Stancha, which is a quarter of a mile up from the foot of the peak. They rode upon little light ſtones, not much bigger than one's fiſt, and a great many not broader than a ſhilling, which, out of the beaten track, went almoſt over the horſes hoofs. They cover the ground a great depth: for the author alighted, and made a hole, but could not find the bottom of them.

There are a great many large rocks, ſome of them two miles or thereabouts from the foot of the Peak; which, the Peak-man told them were caſt out from the top of the Peak, at the time it was a volcano. Many of them lie in heaps about ſixty yards long; and they obſerved, that the farther theſe rocks were from the foot of the Peak, the more like they were to the ſtone of common rocks: but the nearer the Peak, the more black and ſolid; and ſome of them, though not many, gloſſy like flint, and all extremely heavy. Thoſe, which ſhone, the author ſuppoſes retained their natural colour: but ſome looked like droſs out of a ſmith's forge; which, he makes no doubt, was occaſioned by the extreme heat of the place they came from. Some of theſe great rocks were thrown out of the Caldera, or kettle, on the top of the Peak, and others from a cave or ciſtern, which is a good way up the ſide of the Peak, and has by ſome been thought to have no bottom.

They arrived at La Stancha, at nine o'clock, about a quarter of a mile above the foot of the Peak on the eaſt ſide, where are three or four large, hard and ſolid black rocks: under ſome of theſe they put their horſes, and lay down themſelves to ſleep under others, having firſt refreſhed with a little wine. Meanwhile their cook dreſſed them a dinner, both roaſt and boiled, which, (after repoſing) they ate about two in the afternoon.

Eaſtward from the Peak, at four or five miles diſtance, there are ſeveral mountains, called the Malpeſſes, and one lying a little more to the ſouthward, called la Montano de Rejada; all which were formerly volcano's (though inferior to that of the Peak) as appears by the rocks and ſmall burnt ſtones that lie near them, juſt in the ſame manner as about the Peak.

After they had dined, they lay down as before to take a nap under the rocks: but not ſleeping very well, they got up again, and while the reſt ſpent the afternoon at cards, the author made it his buſineſs to admire the ſtrangeneſs and vaſtneſs of that great body, "It is (ſays he) very wonderful: Inſomuch, that it is impoſſible to expreſs to one, who never ſaw it, in what manner that confuſed heap of rubbiſh lies:" about ſix at night, they ſaw the Grand Canaria from La Stancha, bearing from them eaſt-by-north. About nine, after ſupper, they retired to their former lodgings; where, laying ſtones for their pillows, and their cloaks for bed-cloaths, they endeavoured to ſleep for a great while, in vain. Some lying pretty nigh a fire, complained of being burnt on one ſide, and frozen on the other: others were ſadly tormented with fleas; though it were ſomewhat ſtrange that they ſhould be found in a place where the air is ſo very ſharp and cutting in the night time. The author thinks they were brought thither by the goats, which ſometimes get under theſe rocks; and the rather, becauſe they found a dead goat in a cave at the top of the Peak. He ſuppoſes this goat ſtraggling up by chance, was benighted, and feeling the cold, got in there for warmth; where, meeting with too much of it, and a very ſtrong ſulphureous vapour, he was ſuffocated: for they found him almoſt dried to powder. Between eleven and twelve they got to ſleep, and awaking at one, their guide told them, it was time to prepare for their journey; upon this they aroſe, and in half an hour were all upon the march, leaving their horſes and ſome of the men behind.

Between La Stancha and the top of the Peak, there were two very high mountains, beſides the Sugar-loaf, each of which, is almoſt half a mile's walk. On the firſt the rubbiſh is ſmaller, and they were apt to ſlip back in ſtepping forwards: but the uppermoſt was nothing but a monſtrous heap of hard, rocky, great ſtones, which lie looſe, and are thrown together in a very confuſed manner. After reſting ſeveral times, they came to the top of the firſt mountain, where they refreſhed with a little wine and ginger-bread. Then they began to aſcend the ſecond, which is higher than the firſt, but better walking, becauſe of the firmneſs of the rocks. Having laboured up this for about half an hour, they had ſight of the Sugar-loaf, which they could not ſee before, on account of the interpoſition of theſe great hills. At the top of this ſecond mountain they found a way almoſt level, but bearing ſome ſmall matter up-hill: and about a furlong further, came to the foot of the Sugar-loaf, where, looking upon their watches, they found it to be juſt three o'clock. The night was clear, and in that place the moon ſhone very bright, but over the ſea they could ſee the clouds, which looked like a valley of a prodigious depth below them. They had a briſk air at ſouth-eaſt-by-ſouth, in which point it ſtood for the moſt part, during their journey. While they ſat at the foot of the Sugar-loaf, reſting and refreſhing, they ſaw the ſmoke break out in ſeveral places, looking like little clouds, which quickly vaniſhed, and were as ſoon ſucceeded by others. At half and hour paſt three, they ſet forward to aſcend this laſt and ſteepeſt part of their journey; and after refreſhing twice or thrice. Mr. Edens, with others, by running, completed it in a quarter of an hour: but the reſt, with the guide, did not reach the top till four.

"The top (ſays he) is partly oval, the longeſt diameter, lying north-north-weſt, and ſouth-ſouth-eaſt, and is, as nigh as he could gueſs, about 140 yards long; in breadth, about 110; within the circuit, is a very deep pit, called the Caldera, or Kettle, the deepeſt part of which lies at the ſouth end: it was, he thought, forty yards deep from the higheſt ſide of the Peak, but a great deal ſhallower from the ſide towards Garrachico. It is very ſteep all round: and in ſome places not leſs ſo, than the deſcent on the outſide of the Sugar-loaf. They went all to the bottom, where lay a great many very large ſtones, ſome of them higher than their heads. The earth within the kettle being rolled up long, and put to a candle, burned like brimſtone. Several places within-ſide the top were burning, as on the out-ſide has been already obſerved; and in ſome parts, turning up the ſtones, they found very fine ſulphur ſticking to them. At theſe holes, where the ſmoke iſſued out, it was ſo hot, that they could not endure a hand there long. At the north-eaſt-by-eaſt, within the verge of the top, was the cave where they found the dead goat: in which cave ſometimes the true ſpirit of ſulphur diſtils, as they were told; but none dropped while Mr. Edens was there. Before the ſun roſe, he thought the air as cold as he had ever known it in England in the ſharpeſt froſt: he could ſcarcely endure his gloves off. A great dew fell all the while till ſun-riſing, which they found by the wetneſs of their cloaths: yet the ſky looked thereabouts as clear as poſſible a little after ſun-riſing.

They ſaw the ſhadow of the Peak upon the ſea, reaching over the iſland of Gomera: and the ſhadow of the upper part, or Sugar-loaf, they ſaw imprinted like another Peak, in the ſky itſelf, which looked very amazing: but the air being cloudy below them, they ſaw none of the other iſlands, but Grand Canaria.

At ſix o'clock, on Thurſday morning, they came down from the top of the Sugar-loaf, and at ſeven they came to the ciſtern of water, which is reported to be without bottom. This the guide ſaid was falſe: for that about ſeven or eight years before, when there was a great volcano in this country, the cave was dry, and he walked all about it: and the deepeſt part of the water when the author was there,

here, was not above two fathoms. Mr. Edens gueſſed this cave to be in length, about thirty-five yards; in breadth twelve; and its ordinary depth fourteen, which the Peak-man told them was ſalt-petre. There was both ice and ſnow in it at that time; and the ice was of a great thickneſs, covered with water, about knee deep. They let down a bottle at the end of a ſtring for ſome of the water, which they drank with a little ſugar: but it was the coldeſt the author ever taſted. The ice being broken under the mouth of the cave, they could ſee the ſtones lie at the bottom, as it was very clear. A little to the right-hand, the ice had riſen up in a high heap, ſpiring like a ſugar-loaf, and there he judged the water came in. In their way back, three or four miles from the Peak, they paſſed by a cave, where there were a great number of ſkeletons and bones of men: and ſome ſay of giants: but they knew not how many bodies lay there, nor how far the cave extended. On the 15th of Auguſt, about ſix o'clock in the evening, they came home to the port from whence they ſet out, having thus ſatisfied their curioſity.——

The iſland is full of ſprings of freſh-water taſting like milk, which, in Laguna, where the water is not clear, they depurated by filtering-ſtones. The author confirms the account which Mr. Nicols gives of the manner of the interment uſed by the natives of theſe iſlands. He tells us, "That he went from Guine, to a town for the moſt part inhabited by ſuch as derive themſelves from the antient Guanches, in company of ſome of them to view their caves, a favour they ſeldom or ever permit to any, having the bodies of their anceſtors in great veneration, and being likewiſe extremely averſe to the diſturbing of the dead. But having endeared himſelf to them, by ſeveral cures which he had performed out of charity, for they are very poor, (and yet the pooreſt think themſelves too good to marry with the Spaniards) he obtained the privilege to viſit thoſe caves and bodies: otherwiſe, an attempt might have coſt him his life. The corpſes are ſewed up in goat's-ſkins with thongs of the ſame, in a very curious manner; particularly as to the ſeams, which are remarkably even and exact. The ſkins are made very tight to fit the corpſe, which for the moſt part, are entire: in thoſe of both ſexes are ſtill found the eyes, (but cloſed) hair on their heads, ears, noſes, teeth, lips and beards; likewiſe the pudenda all perfect, only diſcoloured, and a little ſhrivelled. The doctor ſaw about three or four hundred in ſeveral caves, ſome of them ſtanding, others lying on beds of wood, ſo hardened by an art they had, that no iron could pierce or hurt it.

Being one day a huntiug, a ferret, (which is much in uſe there) having a bell about his neck, ran after a coney into a hole, where they loſt the ſound of the bell. The owner being afraid he ſhould loſe his ferret, ſeeking about the rocks and ſhrubs, found the mouth of a cave; and entering in, was ſo affrighted, that he cried out. It was at the ſight of one of theſe bodies, very tall and large, lying with the head on a great ſtone, the feet ſupported with a little wall of ſtone, the body itſelf reſting on a bed of wood (as before mentioned). The fellow being now a little out of his fright, entered in, and cut off a great piece of the ſkin that lay on the breaſt of his body; which, the doctor ſays, was more flexible and pliant than ever he felt any kid-leather glove: yet ſo far from being rotten, that the man uſed it for his flail many years after. Theſe bodies are very light as if made of ſtraw: and in ſome that were broken, the nerves and tendons were obſerved, as alſo the veins and arteries, like ſtrings, very diſtinctly.

By the relation of the moſt antient among them, there was a particular tribe that had this art only among themſelves; which they kept as a thing ſacred, and not to be communicated to the vulgar. Theſe, who were alſo their prieſts, mixed not with the reſt, nor married out of their own tribe. But when the Spaniards conquered the place, moſt of them were deſtroyed, and the art periſhed with them; only they had preſerved by tradition a few of the ingredients uſed in this buſineſs, viz. they took butter mixed (ſome ſay) with bear's greaſe, kept for the purpoſe in ſkins. In this they boiled certain herbs, as a kind of wild lavender growing plentifully on the rocks; likewiſe an herb called Lara, of a very gummy and glutinous conſiſtence, found under the tops of mountains: thirdly, a kind of cyclamen, or ſow-bread: fourthly, wild-ſage, of which there is plenty here: and ſome others unknown, rendering it thus a perfect balſam. This being prepared, they firſt unboweled the corpſe, and waſhed it with a lixivium, made of the bark of pine trees; drying it in the ſun in ſummer, and in a ſtove in winter. This was repeated very often. Then, they began their unction both without and within, drying it as before. This they continued till the balſam penetrated into the whole habit, the muſcles in all parts appeared through the contracted ſkin, and the body became exceeding light. After this, they ſewed them in the goat-ſkins, as above mentioned. It is obſervable, that in the poorer ſort, to ſave charges, they took out the brain behind; they ſewed them up alſo in ſkins, with the hair on: whereas the richer ſort were put up in ſkins ſo finely and exactly dreſſed, that they remain extremely pliant and ſupple to this day.

Their ancient people ſay, that they have above twenty caves of their kings and great perſonages, with their whole families; yet unknown to any but themſelves, and which they never diſcover: laſtly, this author obſerves, that bodies are found in the caves of the Grand Canaria in ſacks, quite conſumed, and not intire as theſe in Teneriffe.—— They have earthen pots ſo hard, that they cannot be broken; of theſe, ſome are found in the caves, and are generally uſed by the poorer people that find them to boil their meat in. In order to give all the light we can into the embalming uſed by the Guanchies, we ſhall ſubjoin what Sir Edmund Scory ſays of the matter.

"The ancient Guanchies had an appointed officer, or embalmer, anſwerable to each ſex, whoſe buſineſs was to make a certain preſervation compounded of the powder of furzes, and a kind of rough ſtones, the rinds of pine-trees, and ſeveral herbs incorporated together, with goat's butter melted; and, after waſhing the dead corpſe, they ſtuffed it with this balſam for fifteen days ſucceſſively, laying it in the ſun to dry: the friends of the deceaſed keeping theſe as days of mourning for them. This done, they wrapped the body in goat-ſkins, ſewed together with great nicety, and carried it, thus made up, to a deep cave, to which none could have acceſs."

It is obſerved that Teneriffe abounds with wheat, and barley, and excels the reſt in plenty of all ſuch kind of proviſions, fruits and flowers, as grow upon any of the iſlands. Captain Roberts ſaw here a great coral tree, "perhaps the largeſt (ſays he) yet known in the world." Another voyager, beſides the dragon-tree and Aloes plant, mentions the pine, a native of Teneriffe. This tree yields a certain gum or pitch, which they extract in this manner: they lay the cleft wood croſs-ways over a pit, and then ſet fire to them at top, which forces the pitch to run out below.

The iſland produces three ſorts of excellent wines, Canary, Malmſey and Verdona, which may all go under the denomination of Sack. The vines which yield the Canary, are ſaid to have been tranſplanted hither from the Rhine by the Spaniards, where meeting with a better ſoil, inſtead of ſharp Rheniſh, they produce that delicious wine, vended all over Europe.

We are told by Captain Roberts that there is a gold mine lying within the Point de Negos. On which occaſion he obſerves, that a poor man, more haſty to get rich than his neighbours, was taken up on one of theſe golden mountains, with ſuch tools and inſtruments

ſtruments about him, as plainly ſhewed what he had been ſearching for, and that ſome gold alſo being found upon him, he was hanged but a few days before the author's arrival.

The vines, which produce the excellent wines peculiar to this iſland, all grow about the city, within a mile of the ſea, ſuch as are planted farther up in the land not being eſteemed, nor will they thrive in any of the other iſlands.

In ſome places of this iſland grows a ſhrub called Legnan, which is brought to England for ſweet wood. Here are likewiſe apricots, peach and pear-trees, that bear twice a year; and the Pregnada lemon, which hath a ſmall one within it, from whence it takes its name, is found here. They have ſome cotton and coloquintida. —— The roſes blow at Chriſtmas; here are good carnations; but no tulips will thrive. Samphire covers all the rocks, and the ground abounds in clover. Another graſs grows near the ſea of a broader leaf, ſo luſcious and rank, that it will kill a horſe, yet is not ſo pernicious to other beaſts. Eighty ears of wheat have been found to ſpring from one root; the grain of this kind is tranſparent like the pureſt yellow amber; and in a good year, one buſhel of ſeed had yielded a hundred.

The Canary birds, which are brought to England, breed in the channels, made by the water pouring down from the mountains, and are very cold. Here are alſo quails and partridges larger than thoſe in England, and very beautiful. Great wood-pigeons, turtles in the ſpring, and crows;—and ſometimes the falcons fly from the coaſt of Barbary. Bees proſper in the mountains exceedingly.

Of fiſh, there is the cherna, very large, and of a finer reliſh than any in England. The mero, dolphius, ſharks, and lobſters, which have no great claws, which are reckoned the very beſt ſhell fiſh in the world; they grow in the rocks five or ſix under one great ſhell, through the top holes of which, they peep out with their heads; by which, the ſhells being a little more broken open, they are drawn out. There is alſo another ſort of fiſh like an eel, which has ſix or ſeven tails, of a ſpan long, pointed to one body, and a head about the ſame length. Beſides theſe, they have turtles, and cabrido's, which are better than turtles.

Santa Cruz is a haven lying on the north-eaſt ſide; beſides which, there are three fine cities. St. Chriſtoval de la Laguna, Oratava, and Garrachico, already noticed.

The iſland is parted in the midſt with a ridge of mountains, and looks, in this reſpect, not much unlike the roof of a church, having the Peak for a ſteeple. The land is divided into twelve parts, ten of them are taken up in impaſſable rocky hills, woods, or vineyards, the remainder only arable land. In 1582, 5200 hannacks of wheat were gathered, beſides infinite ſtore of rice and barley. Four hannacks and a half make one quarter Engliſh. It is a rich ſoil, and with proper tillage would bare every thing that is valuable and rare. The vineyards are chiefly in Bona Viſta, Dante, Oratava, Tigueſte, and eſpecially the Ramble, which laſt produces the beſt wine of all. There are two ſorts, viz. Vidonia, and Malmſey. Vidonia comes from a long grape, and is a heavier wine; the Malmſey from a large round grape; it never ſours with heat, nor freezes into ice with cold. For fruits there are no where to be found better melons. Pomegranates, pomecitrons, figs, oranges, lemons, almonds and dates, honey, and conſequently wax, and ſilk of an excellent quality.

The north ſide abounds with wood as well as water. There grow the cedar, cypreſs, and bay-tree, the wild olive, maſtic, and ſavine, with beautiful palm and pine-trees, very tall and ſtrait. There are abundance of them all over the iſland; and all the wine-caſks and wooden utenſils are made of this wood. Beſides the ſtraight pine, there is another ſort which grows ſpreading like Engliſh oaks; this they call The immortal Tree, becauſe it never rots either under ground, or in the water. It is almoſt as red as Braſil wood, and as hard, but not ſo unctuous as the other pine. Here is alſo the dragon-tree; the trunk is very thick, and riſes vaſtly high, the bark being like the ſcale of a ſerpent, whence he ſuppoſes it had its name. The branches all iſſuing from the top are all wove in pairs like the mandragora; they are formed as round and ſmooth as a man's arm, the leaves about two feet long, growing as it were out of the fingers. It is not of a woody ſubſtance within the bark, but conſiſts only of a light ſpongy pith, with which they commonly make bee-hives. Towards the full of the moon, it ſweats out a clear vermilion gum, which they call Botter, and far more aſtringent than what comes from Goa, and the Eaſt Indies, which the Jews adulterate.

Teneriffe is the beſt peopled, for its bigneſs, of any iſland in the ocean, containing about 15000 inhabitants. According to ſome, it was reported the iſland could raiſe 12,000 men with proper arms and accoutrement.—As to the Spaniſh inhabitants, the people of quality are very affable and courteous, but the vulgar ſort, like thoſe in Spain, very proud and lazy.——

Gomera ſtands to the weſtward of Teneriffe, at ſix leagues diſtant. It is but a ſmall iſland, being no more than eight leagues in length, yet an earldom; but in caſe of controverſy, the vaſſals of the earl of Gomera, have an appeal to the king's judges, who reſide as above-mentioned in Canaria.

Here is one good town, called Gomera, which has an excellent port or harbour for ſhips, where the Indian fleet often take in refreſhments for their voyage. There is alſo grain with fruit ſufficient for ſupport of its inhabitants; and one ſugar-work; with great plenty of wine, with ſeveral ſorts of fruit, ſuch as Canaria and Teneriffe produce. This iſland yields no other commodity, but Orchel. It ſtands in 27 degrees north latitude.

Palma is 12 leagues diſtant from Gomera, north-weſt. It lies round, being in circuit near twenty-five leagues. It abounds in wine and ſugar. It has a handſome city, called Palma, where there is a great trade in wines for the Weſt-Indies, and other parts. The city has one church, and a governor, and an alderman to adminiſter juſtice. This iſland had alſo another pretty town, called St. Andrew's. Here are four works, where they make excellent ſugar, two of them are called Zauzes, and the other two Taſſacort; but the land yields but little corn, with which the inhabitants are ſupplied from Teneriffe, and other places. Their beſt wines grow in a ſoil called the Brenia, where there is made yearly 12,000 buts of wine, like Malmſey. It has great plenty of every ſort of fruit, as Canaria and Teneriffe have, and plenty of cattle.

About the year 1652, there broke out a volcano on this iſland, with ſo violent an earthquake, that it was felt at Teneriffe, where the noiſe of the flaming brimſtone was heard like thunder by the gentlemen who gave the account, as well as others; and the fire was ſeen for ſix weeks together, as plain by night as a candle in the room. A great quantity of aſhes and ſand were alſo carried ſo far as to that iſland.

Ferro, or the Iſle of iron, ſtands two leagues diſtant from Palma, north-weſt. It is but ſmall, about ſix leagues in circuit, and belongs to the earl of Gomera. It is ſituate in the latitude of 27 degrees.—— The chief commodities of this place are goats fleſh, and orchel. There was never a vineyard upon the iſland but one, which was planted by an Engliſhman of Taunton in the weſt, whoſe name was John Hill. It has no freſh water but what comes by rain, which is gathered in the following manner: In the middle of the iſland grows a great tree, with leaves like an olive. This tree is conſtantly covered with clouds, and they ſay the leaves drop very ſweet and wholeſome water into a great ciſtern, which is built under the tree. The water thus caught not only ſerves all the wants of the people, but there is enough alſo for

the cattle. Some obſerve that this tree is about two fathoms thick in the trunk, 40 feet in height, and extends its branches round to the diameter of 120. Dapper writes that the miſts or clouds which cover the tree at all times, except the hotteſt part of the day, caſt ſo great a dew upon it, that the leaves continually drop clear water, to the quantity of 20 tons in the day, which falls into two ſtone ciſterns, each twenty feet ſquare, and 16 hands deep, made for that purpoſe, on the north ſide of the tree. He adds, that the inhabitants call this tree Garoc, and the Spaniards, Santa, or Holy; that it is of a competent ſize, and has leaves always green, like the laurel, but not much bigger than thoſe of a nut-tree, and a fruit like an acorn in the ſhell, with a very ſweet and ſpicy kernel. For better preſervation, it is incloſed with a ſtone-wall.—This account is indeed extraordinary.

When the Spaniards, at the conqueſt of this iſland, found no ſprings, wells, nor rivers of freſh water, the natives told them, that they preſerved the rain-water in veſſels; for they had concealed the tree, covering it with canes, earth, and other things, in hopes the Spaniards, by this means, would be forced to leave the iſland. But this did not long remain a ſecret, for a woman diſcovered it to her Spaniſh gallant.

There is generally ſuppoſed to be but one tree concerned in collecting the water; but Sir Richard Hawkins introduces a great number to ſerve that purpoſe. He tells us, that the tree ſtands in a valley, ſurrounded by a thick wood of lofty pines, which, being ſhaded from the ſun a great part of the day, by the high mountains to the ſouth-eaſt, the vapours and exhalations riſing out of the valley gather into a cloud or thick miſt, which falls in dew upon the pines, and from them to this tree in the bottom, and ſo into a ciſtern or baſon built round the foot of it. This affords great relief to the people as well as the cattle. But, however the main ſupply in this article depends upon the rain, which they catch with great diligence, and reſerve it in ciſterns for that purpoſe.

Le Maire treats this account, which others have delivered ſo ſeriouſly, as a fiction. As he had formerly heard of this tree, when he was there he inquired into the truth of it, mentioning the particulars as above related; and the inhabitants he tells us, confirmed him in the opinion he had before entertained of it, that it was a mere fable. It may be objected, perhaps, to the account of Le Maire, that the inhabitants, he had made his inquiry of, were thoſe of Teneriffe, and not of Ferro itſelf, and that what follows ſeems to prove the fact in the main, viz. That ſome of the inhabitants informed him, that there was ſuch a ſort of trees in the iſland, but that they never furniſhed ſuch a prodigious quantity of water as was pretended.

A traveller, called Lewis Jackſon, ſaid he ſaw this tree in 1618, when he was upon the iſland; that it is as big as an oak, and has a bark as hard as timber, fit for beams; that it is ſix or ſeven yards high, with ragged boughs, and a leaf like a bay-tree, but white on the under ſide. It bears neither flowers nor fruit, is ſituate on the ſide of a hill, looks withered in the day, and drops in the night, (a cloud then hanging upon it) yielding water enough for the whole iſland. The water is conveyed in leaden pipes from the tree to a large reſervoir, which is intirely walled round with bricks, and floored with ſtones, from whence it is conducted (being carried up hill in barrels) to ſeveral leſſer ciſterns all through the iſland. The great baſon is filled every night.

The matter is thus left doubtful in regard to this circumſtance. Linſchoten indeed, ſays, "There is water to be had in ſome places towards the ſea-coaſt, but that it is ſo hard to come at, that it is of little uſe to the inhabitants; and that the ſoil is ſo dry, that there is not a drop of water to be met with all over the iſland beſides, exeept at the ſaid tree. He ſays alſo, that the iſland is unfruitful and barren." However, others, ſince he wrote, informs us, That this iſland produces corn, and ſugar-canes, plenty of fruit and plants, beſides great plenty of cattle, which furniſh the inhabitants with milk and cheeſe. There is a volcano upon it, which ſometimes has irruptions: it was ſeen for five days in November, 1677, and again in 1692, ſix weeks together, when it broke out with earthquakes.

LANZAROTA lies in 26 degrees of latitude, 18 leagues from Grand Canaria, ſouth-eaſt, and is in length 12 leagues. The only commodities here were goats fleſh and orchel. It is an earldom, and belongs to Don Auguſtino de Herrera, as earl of Forteventura and Lanzarota; but the vaſſals of all thoſe earldoms have, in caſe of any grievance, an appeal to the king's judges, who reſide in Canaria, Teneriffe, and Palma, where are boats laden with dried goats fleſh, which is a very good meal.

This iſland is about 13 leagues from north to ſouth, nine in breadth, and forty in circuit. Gramaya, in his deſcription of Africa, places the city Cayas here, which, together with the iſland, was pillaged by the Algerines, who carried away captive 1460 men.

Here is on the iſland a city of the ſame name, and lower down, on the eaſtern coaſt are two ports, one called Puerto de Navos, or the Port of ſhips. The other, Puerto de Cavallos, or of Horſes. They are bad havens, and about a cannon ſhot aſunder. The firſt of them, which is deepeſt, goes between two ledges of rocks, the channel being uneven and rocky, ſo that if the ſhip ſhould ſtrike, it would preſently be daſhed to pieces. There are no houſes near the ports; only at Cavallos there is a little church. They go from thence, between the mountains to the town; which is three leagues.

This place was taken by the earl of Cumberland in 1556, who ſetting forward on this expedition on Thurſday the 13th of April, 1596, had ſight of Alegranza, the moſt northerly of the Canaries, and ſoon after they deſcried three hills or iſlands, called the Grange, leaving all to the weſt, in the afternoon they came up with Lanzarota; and next morning anchored in a road, which bears eaſt ſouth-eaſt of the iſland, near a dangerous ledge of rocks.

The earl having been informed that the marquis, who was lord both of this town and Fortuventura, reſided here, and was poſſeſſed of riches to the value of one hundred thouſand pounds; diſpatched Sir John Berkeley, his lieutenant-general, being himſelf a little indiſpoſed, with a force of between five and ſix hundred men, to attack the town, which was ten miles at leaſt from their landing place. The way they went, in their opinion, was the neareſt, but a very bad road, full of ſtones and ſand. When they arrived at the town, they found it deſerted by the inhabitants, who had carried off almoſt every thing: they found, however, ſome excellent wine and plenty of cheeſe.

From hence Sir John ſent a detachment to the caſtle, a ſtrong fortreſs lying up hill about half a mile off the town; where eighty of an hundred Spaniards and iſlanders, who were in and about it; flying on their approach, they entered, and found above a dozen braſs guns, the leaſt baſes; but moſt culverins, and demi-culverins all diſmounted: and great heaps of ſtones laid in the moſt advantageous places. It was built of hewn ſtone, and flanked very ſtrongly and ſkilfully, both for offence and defence: with this remarkable contrivance; that the part or entrance into it, was raiſed about a pike's length from the ground, ſo that if they drew in their ladder, twenty might have kept it againſt 500. The town conſiſted of upwards of 1000 houſes, all poor buildings, generally but of one ſtory, covered only with canes or ſtones laid upon a few rafters, and over all a coat of dirt, which hardened by the ſun, became rain proof. There was a church without a window, the light coming in at the door only. There was no partition for a chancel, but ſtone ſeats along the ſides, and at one end an altar, with the proper furniture;——the people quite full of the Romiſh ſuperſtition.

"The inhabitants (says the author) were of a black complexion, very strong and active, tall, and as swift in that mountainous country, almost as their camels, nor could the English, whom they attacked in their march, ever come up with any of them. Their arms are pikes and staves; and when a piece is presented to fire at them, as soon as they perceive the cock or match fall, they throw themselves immediately flat upon the ground; and no sooner is the report heard, but they are up again, and sling their stones out of their hands, and charging with their pikes in a scattered way, each by himself, they very much annoy a regular battalion.

"The isle stretches north north-east and south-west; it stands in 28 degrees and some minutes north, and is parted quite through (as the Appenines mountains part Italy) by a bridge of hills, serving only to feed goats and sheep, which they had a pretty store of; as also of asses. But there were few cattle, fewer camels, and less gennets, and these too of no great stature. The valleys were very dry and sandy, somewhat like rye fields in England; but yet they yielded tolerable good barley and wheat; and they had two harvests every year."

FORTEVENTURA stands in the latitude of 27 degrees, 50 leagues from the promontory of Cabo de Guer, on the continent of Africa, and 24 leagues distant from Canaria, eastward. It is 15 leagues long, and ten broad, and belongs to the Lord of Lanzarota. It produces great plenty of wheat and barley, also of cows, goats, and orchel. But neither this nor Lanzarota have any quantity of wine of their own growth. On the north side lies a little island called Gratiosa, about a league's distance. The gut between is navigable for ships of any burthen. Its length, from south-west to north-east, is about 25 leagues; but the breadth is very irregular; for it consists of two peninsulas, joined in the middle by an isthmus, no more than four leagues broad, across which formerly there ranged a wall. The circuit is near 70 leagues, by reason of the two gulphs made by the isthmus.

It has three cities on the sea-coast, viz. Langala, Tarafalo, and Pozzo Negro. On the north side there is a haven, called Chabras; and another very commodious one on the west. And between this island and Lanzarota there opens a fine sound, big enough to receive the largest fleet on a rendezvous; but the coast, at the north-east end, is very foul, with many reefs that lie out, on which the sea breaks exceedingly.

THE VOYAGE OF ALUISE DA CADA MOSTO, IN 1455, ALONG THE COAST OF AFRICA, AS FAR AS RIO GRANDE.

WE have two voyages of Cada Mosto, one of which was that to Gambia, and Rio Grande, the other to the Cape Verde islands, as has been already described.

The author informs us, that he was twenty-two years of age when he set out upon this voyage; and had, before that, sailed in some parts of the Mediterranean, under the jurisdiction of the republic, and had been in Flanders, whither his intention was to have returned, in order to better his fortune; for his whole thoughts were bent on employing his youth in the acquisition of riches, that afterwards, with the experience he should have of the world, he might attain to some degree of honour.

Having resolved to return to Flanders with what little money he had, embarked on board the Venetian galleys, commanded by Captain Marco Zen, knight; they departed from Venice on the 8th of August, 1454. Being detained by contrary winds, near Cape St. Vincent, it happened, that Prince Henry of Portugal, was at that time lodged in a village called Reposera, near the Cape, having retired from the noise of business to this agreeable retreat, for the sake of his studies. Hearing of their arrival, he sent Antonio Gonsalez, his secretary, accompanied by one Patricio di Conti, who said he was a Venetian, and consul from the republic in Portugal, as appeared by his commission. He had likewise a salary from Prince Henry. These gentlemen brought some samples of Madeira sugars, Dragon's blood, and other commodities of the countries and islands belonging to that prince. They asked those on board the galleys several questions; and informed them, that Prince Henry had caused some desart islands lately discovered, to be inhabited, and that as a proof thereof, they had shewn them the said valuable productions. They added, That all this was nothing in comparison to greater things which that prince had performed, declaring, that since such a year, he had discovered seas which had never been sailed through before, and lands of divers strange nations, where wonderful things were found. That the Portuguese, who had been in those remote parts, had made great advantage by trading with the inhabitants, and gained 700 or 1000 per cent. They related so many things on this head, that the Venetians were very much astonished, and Cada Mosto in particular, being inflamed with a desire of visiting these places, asked, if the prince would suffer any person to go who had a mind? They answered in the affirmative, and likewise acquainted him with the terms required of the person who should undertake such a voyage, which was either to be at the whole expence of fitting out and freighting a vessel, or else at the charge of freight only; the prince providing him with a caraval. That, in the first case, he should, on his return, allow the prince one fourth part of his cargo, as a duty, the rest to remain his own property; and in the second case to divide whatever was brought from those places equally with the prince; and in case of no returns at all, then the whole expence to be defrayed by the prince. They declared, however, that it was impossible to make a voyage without great profit. They added, That the prince would be very well pleased with any Venetian who should undertake such a voyage, and shew him great favour; because he was of opinion, that spices, and other rich merchandise, might be found in those parts, and knew that the Venetians understood those commodities considerably better than many other nations.

Cada Mosto went along with the secretary and the consul to see Don Henriquez, who confirmed what they had told him, and encouraged him by promises of honour and profit, to go. The author being young, and of a constitution able to bear fatigue, as well as desirous to see those parts of the world, never

before known to any Venetian, and also to advance his fortune, accepted of the invitation. After this, he informed himself concerning the merchandise proper for such a voyage, and then returned to the galleys: where having disposed of all the goods which he had shipped for the low countries, he brought on board such things as he thought necessary for the expedition, and then landed; leaving the galleys to proceed on their voyage for Flanders. The Prince shewed great satisfaction at Cada Mosto's resolution, and entertained him very handsomely at Cape St. Vincent, where having waited a great many days; at length, the prince ordered him to rig a new caraval of about 90 tons burthen, of which one Vincent Diaz, a native of Lago, (a place about 16 miles distant) was commander. The caraval being ready, and furnished with every thing necessary, they began their voyage on the 22d of March, 1455, with a full wind at north-east, and by-north, steering their course towards the islands of Madeira. On the 25th, they came to the island of Puerto Santo, about 600 miles southward from the Cape whence they set out.

From Puerto Santo, which was discovered near twenty-seven years before; they sailed on the 28th of March, and the same day came into Monchrico, one of the islands of Madeira, forty miles distant.—As we have already described this and the seven Canary islands: we shall not trouble the reader with the voyager's observations on them, but shall only quote one of his observations on the customs of the nation, when he was in those parts. "These islanders, (says he) have the following remarkable customs. when their lords first enter on their new possession, some offer to die, in order to do honour to the feast. On which they all repair to the brink of a certain deep valley, where, after having performed some ceremonies, and said a few words, he who is willing to die for love of the new lord, throws himself into the valley, and is dashed to pieces. The lord, in return, is obliged to do great honour and service to the relations of the deceased. This account was confirmed by the Canary Christians, who escaped from among them.

"They are very active and nimble, great runners and leapers, being accustomed to traverse the cliffs of the mountains. They skip barefooted, from stone to stone, like goats; and sometimes take leaps, which are scarcely to be believed. They throw a stone with great strength, and exactness; so as to hit where they please. Both sexes know how to paint their bodies, green, red, and yellow, with the juice of herbs; and they look upon such colours as ornamental, as Europeans do fine cloaths." Cada Mosto was in two of the Canary Islands, viz. Gomera and Ferro: he also touched at Palma, but did not land.

Holding on his course towards Ethiopia, Cada Mosto, in a few days arrived at Cape Blanco, distant from the Canaries about 870 miles. It is to be observed, that in this passage, steering south, they kept a great distance from the African Coast, which was on the left hand, the Canaries being advanced far into the sea towards the west, the one more than the other. Thus they sailed till they had run two thirds of their way from the islands to the cape; and then kept closer to the left, till they got sight of land, that they might not pass the cape without seeing it; for afterwards no land appears for a considerable while. The coast runs in from this cape, and forms a gulph, called the Forna of Argin, from a little island situated in the gulph; and so named by the inhabitants of the country of Argin. The gulph enters about fifty miles; and has three other islands, to which the Portuguese gave names. The first they called Blanco, or White, on account of its sands: the second, the Island of the Garze, or White Herons; (for there they found as many of these birds eggs as filled two boats): the third, they called Cuori. They are all small, sandy, and uninhabited islands. In that of Argin, there is plenty of fresh water: but in the rest none.

It is said, that southwards from the Streights of Gibraltar, the coast, which is that of Barbary, is inhabited no farther than Cape Cantin: from whence to Cape Blanco, is the sandy country of Desart, (separated from Barbary by the mountains on the north) called Sarra by the natives; but on the south confines with the negro coast, and would require fifty or sixty days to cross; in some places more, some less. This desart reaches to the ocean, and is all sandy, white, and dry; the country low, and so plain, that it does not seem to be higher in one place than another, till Cape Blanco appears. It is a most beautiful cape, as being triangular, that is, having three points in front, about a mile distant from each other. Various sorts of large fish and exceeding good, are found on this coast: the Gulph of Argin is all over shallow, being full of shoals, boath of rocks and sands. There are great currents in this gulph; and no safe sailing but by day, with the lead in hand; and that according to the stream: two ships had been already lost on these shoals. Cape Blanco lies south-west of Cape Cantin.

Behind Cape Blanco, on the continent, there is a place called Hoden, six days journey on camels, from the shore. This place is not walled; but much frequented by the Arabs, and the caravans, which come from Tombuto, and other places belonging to the negros to this side of Barbary. Their provision consists of dates and barley; of which they have plenty. They drink camels milk, and that of other animals; for they have no wine. They have cows and goats, but not many, because the land is very dry. Their oxen and cows are very small in comparison to those of Italy. The inhabitants are Mahometans, and great enemies to Christians. They are never settled, but wander continually over the desarts. They frequent the countries of the negros, and visit that side of Barbary which is next the Mediterranean. They travel in great numbers, with a numerous train of camels, on which they carry brass, silver, and other things from Barbary to Tombuto, and the country of the negros: from which they bring gold and malhegetle. They are of a tawny colour. Both sexes wear a single white garment, with a red border, without any linen underneath, next their skin. The men have turbans on their heads, in the Moorish fashion; and always go barefooted. There are, in the sandy desart, many lions, leopards, and ostriches.

Prince Henry had made an ordinance, which was to be observed for ten years, on the island of Argin, viz. that no person should enter into this gulph, to trade with the Arabs, except such as were there described, and had habitations and factors on the island, who dealt with the Arabs that came to the coast and sell them several sorts of goods; such as cloth, stuffs, silver, frocks, tapestry, and other merchandise; and take in return, negroes and gold. The prince also caused a castle to be built on the island to secure the trade, and caravals from Portugal arrive there every year.

They have many Barbary horses, which they carry to the country of the negroes, and there barter with the great men for slaves, having from ten to eighteen for each horse, according to its goodness: they also bring wrought silks of Granada and Tunis; silver, and a great many other things; for which they receive plenty of slaves, and some gold. These slaves are brought to Hoden, from whence they are sent to the mountains of Bartea, and from thence to Sicily; part of them are also brought to Tunis, and along the coast of Barbary; and also the rest to Argin, and sold to the licensed Portuguese; every year between seven and eight hundred slaves are sent from Argin to Portugal.

Before this trade was settled, the Portuguese caravals, (sometimes four, and sometimes more,) used to come to the gulph of Argin, well armed, and, landing by night, surprised some fishermens villages: they even entered into the country, and carried off

Arabs

Arabs of both ſexes, which they ſold in Portugal. They ſailed in this manner along the coaſt to the river Senega, which is very large, and divides the Azanaghi (or Azanghi) from the negros.

The Azanaghi are tawny, or rather of a deep brown complexion, and live in ſome places on the coaſt, beyond Cape Blanco. They range the deſerts, and confine with the Arabs of Hoden. They live on dates, barley, and camel's milk. But as they are nearer the negro countries, they carry on a trade with them; from whence they have millet and pulſe, ſuch as beans for their ſupport. They are but ſmall eaters, and ſuffer hunger patiently.

Theſe Azanaghi have a cuſtom of wearing a handkerchief round their heads; a piece of which covers their eyes, with part of the noſe and mouth. They reckoned the mouth to be a thing ſhould be always kept out of ſight. They have no lords among them, but the rich are reſpected ſomething more than the reſt. The people are very poor, and egregious liars; the greateſt thieves in the world, and very treacherous; lean, and of a common ſtature. They wear their hair, which is black, frizzed over their ſhoulders, like the Germans, and oil it every day with the fat of fiſh, which makes them ſmell very ſtrong, yet they repute it very modiſh. The Azanaghi never heard of any Chriſtians except the Portugueſe, with whom they had war for thirteen or fourteen years; in which ſeveral of them were carried off and ſold for ſlaves. Cada Moſto affirms, that when they firſt ſaw ſhips at ſea (a thing never beheld by any of their anceſtors) they took them for large birds with white wings, that had come from foreign parts. When the ſails were furled they concluded that the ſhips were fiſh by their length; others believed they were ſpirits. The truth of what the author relates was certified by many Azanaghi, who were then ſlaves in Portugal, as well as by the Portugueſe, who frequented thoſe ſeas at that time in their caravels.

About ſix days journey by land from Hoden, there is a place called Tegazza, which ſignifies a cheſt of gold; where large quantities of rock ſalt are dug every year, and carried on caravels of camels by the Arabs and Azanaghi in ſeparate companies to Tombuto, and from thence to the empire of Melli, belonging to the negros. Being arrived here, they diſpoſe of their ſalt in eight days, at the rate of between two and three hundred mitigals (the value of a ducat each) the load, according to the quantity thereof; after which they return home with their gold.

"This empire (ſays the author) affords very bad nouriſhment for beaſts, inſomuch that out of one hundred which go with caravans, ſcarce twenty-five return. Neither are there any quadrupeds in this empire, for they all die. Several of the Arabians and Azanaghi ſicken and die likewiſe, through the exceſſive heat. They reckon it to be forty days journey on horſeback, from Tegazza to Tombuto; and from Tombuto to Melli, thirty. Cada Moſto having inquired of them, what uſe the merchants of Melli made of the ſalt? was anſwered, firſt, that a ſmall quantity of it was conſumed in their own country; for, that as they lay near the Line, where the days and nights are of an equal length, at certain ſeaſons of the year the heats were exceſſive, and putrified the blood; ſo that but for that ſalt, they would certainly die. There is no art in preparing it; they only take a piece every day, and diſſolve it in a porringer of water, drink it off; and by this means preſerve their health, as they imagine. The remainder of the ſalt is carried a long way in pieces, by men, on their heads, every piece being as much as a man can bear. The ſalt is brought to Melli in large pieces taken out of the rocks, each camel being loaded with two. There the negros break them in ſmaller pieces, for the conveniency of carrying on the head; and muſter a large number of footmen for that purpoſe. Theſe porters have a large fork in each hand; which, when tired, they fix in the ground and reſt their loads on. The negros are hired to carry it in this manner, for want of camels or other beaſts of burden, as before mentioned: and from what has been related, it is eaſy to ſee, that the number, both of the carriers and conſumers, muſt be very great.

"When they arrive at the water-ſide, the proprietors of the ſalt place their ſhares in hoops together in a row, every one ſetting a mark on his own: this done, thoſe of the caravan retire half a day's journey. Then the negros they went to deal with, who will not be ſeen nor ſpoken to, and ſeem to be the inhabitants of ſome iſlands, come in large boats, and having viewed the ſalt, lay a ſum of gold on every heap, and then withdraw. When they are gone, the negros, who own the ſalt, return: and if the quantity of gold pleaſes them, they take it, and leave the ſalt, if not, they leave both, and withdraw again. the other Moors then come on, and the heaps they find without gold, they carry with them, and either advance more gold to the other parcels, or leave the ſalt. In this manner they trade, without ſeeing or ſpeaking to one another; which has been a very ancient cuſtom among them." This account, the author owns, appears ſomewhat improbable; yet affirms, that he had it from ſeveral Arabs, and Azanaghi merchants, as well as other perſons, who were worthy of credit.

The ſame merchants being aſked why the emperor of Melli, being ſuch a great lord as they reported, did not find means, by friendſhip or force, to diſcover who theſe people were, that would not ſuffer themſelves to be ſeen or talked to? On this they told him, that not many years before, an emperor, having determined to get ſome of theſe inviſible beings into his hands, held a council on the occaſion: wherein it was ordered, that before the ſalt caravan returned from their half-day's journey, ſome of his men ſhould go and make pits by the water-ſide, near where the ſalt was left, that they ſhould hide themſelves; and that when the negros came to leave the gold on the ſalt, they ſhould attack them, and make two or three priſoners. This project was executed, and four were taken; the reſt having fled; three alſo of thoſe who had been ſurpriſed, were ſet at liberty by the captors, who judged that one would be ſufficient to ſatisfy the emperor's deſire, and that the negros would be leſs provoked. But after all, the deſign miſcarried, becauſe the priſoner would neither ſpeak (though talked to in various languages) nor eat any victuals; ſo that at four days end he died. This croſs accident was much regretted by the negros of Melli, becauſe their lord was thus prevented from obtaining his ends: and the captain having brought the emperor an account of the man's death, he received it with great diſpleaſure, and aſked, of what ſtature they were?——He was anſwered They were exceeding black, well ſhaped, and a ſpan taller than themſelves: that their under lip was thicker than a man's fiſt, and hung down on their breaſts; that it was very red, and ſomething like blood dropped from it; but their upper-lip was as ſmall as other peoples. The form of their lips expoſed to view their gums and teeth, which were larger than their own; and that they had great teeth in the corner of their mouths: that their eyes were large and black, in ſhort, that they made a terrible figure, blood dropping from their gums as well as teeth. Thus the ſucceeding emperors were prevented from making any farther attempts of this kind; becauſe, on account of the negro's death, his countrymen, for the ſpace of three years, forbore coming to buy any ſalt; as they uſed to do. Yet the emperor does not regard whether thoſe blacks ſpeak or not, if he has but the profit of their gold.

The gold brought to Melli is divided into three parts; the firſt, ſent by the Melli caravan to Cochin, which lies in the road to Syria and Cairo; the other two ſhares are ſent by another caravan from Melli to Tombuto, from whence the gold is ſent by diviſions; firſt to Toet, and from thence along the coaſt to Tunis in Barbary, within the Streights of Gibraltar;

and to Fez and Morocco, Arzila, Azafi, and Moffa, towns without the Streights, where the Italians and other Chriſtians had it from the Moors, in return for divers merchandiſes. In ſhort, this is the beſt commodity that is brought from the Azanaghi's country; for of the gold ſent to Hoden every year, as before obſerved, they bring ſome to the ſea-coaſt, and barter it with the Portugueſe at Argin. In this diſtrict no money is coined, nor do they ever uſe money any more than in the neighbouring countries, but all their trade is carried on by bartering one thing for another, and ſometimes two for one, while in their towns within land, they uſe little white ſhells, which are brought to Venice from the Levant, of which they pay certain numbers, according to the goodneſs of what they are to buy. They give the gold they ſell, by Mitigal weight, which is about a ducat in value.

The inhabitants of this deſart, have neither religion nor ſovereign, only thoſe who are the richeſt, and have the largeſt retinues, are lords, as is cuſtomary in many places. The women are tawny, and wear cottons that come from the country of the negros, and ſome of them frocks, which are called Alchezdi, but no ſmocks; and ſhe who has the largeſt breaſts, is reputed the greateſt beauty.

The men ride horſes in the Mooriſh faſhion, but have not many, for the barrenneſs of the country will not allow them to keep any, neither could they live long in ſuch great heats. The deſarts throughout are very hot, and have but little water, which makes the country dry and barren. It rains here only three months in the year; that is in Auguſt, September, and October.

The author was alſo informed, that in ſome years, large ſwarms of locuſts appear in this country: they are like graſs-hoppers, the length of a man's finger, and of a red and yellow colour. They appear ſometimes in ſuch clouds in the air, as to obſcure the ſun, covering the horizon as far as the ſight can reach, which is from 12 to 16 miles, and where they lodge they ſtrip the ground quite bare, which they look upon as a great peſtilence, but providence has ſo ordered it, that they ſeldom come above once in four years.

After doubling Cape Blanco, they continued their courſe to the river called Senega, which divides the deſart and the Azanaghi from the fruit lands and negros. Five years before Cada Moſto made this voyage, this river was diſcovered by three caravals belonging to Prince Henry, which entering it, made peace, and ſettled a trade with the Moors, ſince which time, ſhips have been ſent every year to traffic with them.

This river is large, above a mile wide at the mouth, and ſufficiently deep. A little farther, it has another entrance. Between the two there is an iſland, which forms a cape running into the ſea, and at each mouth there are ſand-banks and ſhoals, reaching about a mile from ſhore. From Cape Blanco, which is 380 miles of the river, it is called the Coaſt of Anterota, and belongs to the Azanaghi, or tawny Moors. The author was ſurpriſed to find ſo great a difference in ſo narrow a ſpace; for on the ſouth ſide of the river, the inhabitants are exceeding black, tall, corpulent and well made; the country is all green, and full of fruit trees, and on the other ſide the men are tawny, meagre, and ſmall of ſtature, and the country dry and barren.

The kingdom of the negros lies in the river Senega, and thoſe who inhabit the banks of it are called Jaloſs; all the country is low, not only to that river, but alſo beyond it, as far as Cape de Verde, which is the higheſt land on all this coaſt, and 400 miles diſtant from Cape Blanco. The king, who reigned in Senega, in Cada Maſtato Irine, was called Zucholin, and 20 years of age. This kingdom is not hereditary, but commonly three or four lords (of which there are many in the country) chuſe a king to their own liking, (yet always of noble parentage) who reigns as long as he pleaſes them. They after dethrone their kings by force, and the kings many times render themſelves ſo powerful, as to ſtand on their defence, which makes the government unſettled, as that of the ſultan of Cairo is, who is always in fear of being killed or baniſhed. Theſe kings are not like thoſe of Europe, for their ſubjects are ſavages, and very poor. They have no walled towns, but only villages, with thatched houſes. They uſe neither lime or ſtone for building, not knowing how to make the one or form the other. The kingdom is ſmall, extending (as the author was informed) no more than 200 miles along the coaſt, and the ſame within land. The king has no certain revenues, but the lords of the country to court his favour, make him preſents every year of horſes (which are very much eſteemed here, being ſcarce) together with furniture, and other beaſts, ſuch as cows and goats, alſo pulſe, millet, and ſuch like things. He likewiſe lives by robberies, and forcing ſome of his ſubjects and thoſe of neighbouring provinces into ſlavery, part of which he employs in cultivating the lands aſſigned him, and ſells the reſt to the Azanaghi and Arabian merchants, who trade with horſes, and other things, as well as to the Chriſtians, ſince trade has been open between them.

Every man here may entertain as many women as he pleaſes. The king has always upwards of thirty, and diſtinguiſhes them according to their deſcent and rank of the lords whoſe daughters they are. He keeps them in certain villages and places of his own, eight or ten together, each of them having a ſeparate houſe to dwell in, and a fixed number of young women to attend on her, with ſlaves to cultivate the land aſſigned her, that they may maintain themſelves with the produce thereof. They have likewiſe cows and goats, which the ſlaves alſo take care of; and thus they ſow, reap and live. When the king comes to any of theſe villages, he brings no proviſions along with him, theſe women being obliged to bear the expences of him and his retinue whenever he viſits them. Every morning at ſun-riſe, each of the women in the place he arrives at, prepares three or four covers of different viands, ſuch as fleſh, fiſh, and other dainties, according to the Mooriſh taſte, which are carried by the ſlaves to the king's pantry; ſo that in leſs than an hour, there are 40 or 50 diſhes brought; and when his majeſty has a mind to eat, he finds every thing ready to his hand. After he has eaten of ſuch diſhes as he likes beſt, the remainder is given to his retinue; but as this diet is never in plenty, they are always hungry. Thus he travels from one place to another, viſiting his women, by which means he has a very numerous iſſue; but from the inſtant any of his women proves with child, he goes near them no more. All the lords live in the ſame manner.

Theſe negros profeſs the Mahometan religion, but are not ſo well inſtructed therein as the white Moors, particularly the common people. The lords have always about them ſome of the Azanaghi for that purpoſe, or elſe Arabs, who come to reſide there. Theſe have inculcated, that it would be a diſgrace for them, who are lords, to live without obſerving any of God's laws, and to eat as the inferior people do, without any religion. It is owing to their never having converſed with any but the Azanaghi's or Arabs, that they are Mahometans; but ſince they became acquainted with Chriſtians, they are not ſo fond of that faith.

Theſe negros, for the generality, go quite naked, except covering their privy parts with a goat's ſkin, made in the form of a pair of breeches; but the lords, and thoſe who are able, wear cotton ſhirts of the product of the country, which is ſpun by their women. They weave pieces of cotton a ſpan wide, but never any wider, not having the art of making larger looms; ſo that they are obliged to ſew five or ſix of theſe pieces together, when they would make any large work. Their ſhirts reach to half their thighs, the ſleeves of which are large, but cover only half of the arm. They uſe cotton drawers, which hang down to the ſmall of the leg, and monſtrouſly wide, being from 30 to 35 and forty palms in circumference; ſo

that when tied on, they are full of plaits, and though like a ſack before, the hind part trails on the ground like a tail, reſembling large petticoats with a train. In ſhort, nothing can make a more prepoſterous figure in the world; yet they aſked the Europeans, if they had ever ſeen a finer dreſs? For in their own opinion, nothing comes up to it for elegance. Their women, married or unmarried, go naked from the waiſt upwards, and downwards they wear a piece of cotton up half the leg. Both ſexes go barefooted and uncovered, but weave their hair into beautiful treſſes, which they tie in various knots, though it be very ſhort. The men employ themſelves in women's work; ſuch as ſpinning, waſhing of cloaths, and the like.

It is very hot here, not being ſo cold in January, as it is in Italy in the month of April; and the farther one travels, the more the heat encreaſes. Both men and women waſh themſelves four or five times a day, being very cleanly as to their perſons, but not ſo in eating, in which they obſerve no rule. Although very ignorant and aukward in going about any thing which they have not been accuſtomed to, yet in their own buſineſs, which they are acquainted with, they are as expert as any Europeans can be. They are full of words, and never have done talking; and are for the moſt part, liars and cheats. Yet on the other hand, they are very charitable; for they give a dinner or a night's lodging, and a ſupper to all ſtrangers who come to their houſes, without expecting any return.

Theſe negros often make war among themſelves, and with their neighbours. They have no cavalry, for want of horſes; they wear no arms except a large target for their defence, made of the ſkin of a beaſt, called danta, which is very difficult to be pierced: and azagays, or light darts, in throwing of which, they are very dexterous. Theſe darts are pointed with iron, the length of a ſpan, barbed in different manners; ſo that they make dangerous wounds in the body wherever they enter. They alſo have a Mooriſh weapon, which is like a Turkiſh half ſword; that is bent like a bow, and made of iron, (without any ſteel) brought from the kingdom of Gambra by the negros, who thereof make their arms: and if they have any iron in their own country, they know nothing of it, or want induſtry to work it. They uſe alſo another ſpeared weapon, like our javelin: beſides which, they have but few arms; their wars are very bloody, for their ſtrokes do not fall in vain. They are exceeding bold and fierce, chooſing rather to be killed, than to ſave their lives by flight. They have no ſhips, neither did they ever ſee any before the Portugueſe came upon their coaſt. Thoſe inhabiting near the river, and ſome who live by the ſea, have zappolies or almaidas, made out of a ſingle piece of wood, the largeſt whereof carries three or four men. In theſe they fiſh ſometimes, and go up and down the river. Theſe negros are ſurprizing great ſwimmers.

Cada Moſto having paſſed the river of Senega with his caraval, ſailed along the coaſt to the country of Budomel, about 800 miles farther; the country between being all low land, and without mountains. He ſtopped at this place to know ſomething of the Lord Budomel, from whom the country took its name; certain Portugueſe, who had dealt with him, having repreſented him as a very juſt perſon, who might be confided in, as he paid for every thing he took. Our adventurer had ſome Spaniſh horſes on board, which were much eſteemed among the negros; beſides cloth, Mooriſh wrought ſilks, and many other commodities.

As ſoon therefore, as he came to anchor at a place called the Palm of Budomel, which is a road and not a port, he ſent his interpreter, who was a negro, to give their lord notice of his arrival, and the goods he had on board. Not long after, Lord Budomel himſelf, with about fifteen horſe, and an hundred and fifty foot, came to the ſea ſide, and ſent to deſire Cada Moſto to land, for that he would do him a piece of ſervice. He accordingly went, and was received with great civility. After ſome diſcourſe, the author delivered him ſeven horſes with their furniture, and every thing elſe that he wanted, which coſt in all three hundred ducats; truſting to his honour for payment, which he propoſed to make at his houſe, twenty-five miles diſtant from the ſhore; intreating Cada Moſto to go down with him to wait a few days, becauſe he was to pay for what goods he had in ſlaves. Cada Moſto readily agreed to go, induced as much by the deſire of making diſcoveries, as of being paid. But before they ſet out, the lord made him a preſent of a beautiful female black, of about twelve years old; telling him at the ſame time, that he gave her to him to ſerve him in his cabin. The gift was willingly accepted of, and ſent on board.

Budomel furniſhed the author with horſes, as well as every thing elſe neceſſary for a journey; and when they came within four miles of his habitation, gave him in charge to Biſboror, his nephew, who was lord of a little town where they had arrived. Biſboror took him to his own houſe, and treated him all the while he ſtaid there, (which was twenty-eight days) with great civility and good company. This was in November, during which time, he went often to ſee Lord Budomel, in company with his nephew, and obſerved many things relating to their way of living. He had the greater opportunity to make remarks, as he travelled back, as far as the River Senega, on account of the tempeſtuous weather; which ariſing on this coaſt, ſo that he could not go on board, he was obliged to ſend the ſhip before to this river, and go by land himſelf.

The author obſerves, that upon this occaſion, that being deſirous to ſend inſtructions to thoſe in the ſhip, to meet him at the River Senega, he enquired among the blacks, if any of them would undertake to carry a letter for him on board? to which ſeveral of them anſwered in the affirmative. The ſhip lay about three miles from ſhore; the ſea ran high, and there was a great wind; inſomuch, that he thought it impoſſible for any man to perform it, eſpecially as ſeveral ſand banks lay near the ſhore, and about half way, other banks, with a great current running between them, ſometimes backwards and ſometimes forwards, that it is a moſt difficult taſk for any man to ſwim through them, without being carried away by the ſtream. Beſides the ſea breaks over the banks with ſo much violence, that it ſeemed impoſſible to ſurmount ſuch obſtructions. Yet two of theſe negros offered to go, and having demanded what they expected for their labour? they anſwered, two mavulgis of tin for each of them, the mavulgi being worth no more than one groſſon, (a groſſon is about three farthings). At this price they undertook to carry the letter to the ſhip, and took the water winds. I cannot expreſs the difficulties, ſays the author, which they were to encounter with, in paſſing the ſand bank, in ſo high a ſea. Sometimes they were out of ſight for a conſiderable time, and I often thought they had been drowned. At laſt, one of them not being able any longer to reſiſt the violence of the waves which broke over him, turned back; but the other being ſtronger, after ſtruggling a long hour on the bank, got paſt it; and having carried the letter to the caraval, returned with an anſwer, which to me ſeemed very wonderful, and thence I concluded, that the negros of this coaſt muſt be the beſt ſwimmers in the world.

It has been already obſerved, that thoſe who are called lords, have neither caſtles nor cities. The king of this country has nothing but villages, with thatched houſes. Budomel was lord of one part of this kingdom, which is ſmall. Theſe are not lords on account of their riches or treaſure; becauſe they have none; neither is their any coin made uſe of among them; but they are conſidered as ſuch out of courteſy, and by reaſon of the great retinues, with which they are always attended; being reſpected and feared by their ſubjects, more than any Italian lords. The place of Budomel's reſidence was neither a walled

houſe

houſe nor palace; but, according to their manner of living, he has ſome villages aſſigned for the habitation of himſelf and his wives, with their reſpective families, becauſe he never fixes in one place.

The village, where the author reſided, was one of his habitations, and had forty or fifty thatched houſes built near one another, and ſurrounded with ditches and large trees, only a paſſage or two was left for entrance; and every houſe had a court, incloſed with a hedge.

This prince had nine wives in this place, and more or leſs in other villages. Each of theſe women had five or ſix young negros to attend her, with whom the lord may lie when he pleaſes; nor are the wives offended at it, it being the cuſtom, both ſexes being very laſcivious. They are very jealous, and ſuffer nobody to enter the houſe where any of their women dwell; nor would they even truſt their own ſons.

Budomel has always at leaſt 200 negros in his retinue; who change from time to time; ſome going and others coming in their room: beſides, many people repair from the adjacent places to meet him; at the entrance of his houſe, before his apartment, there are ſeven large courts, leading from one to the other, with a tree in the middle of each; where thoſe wait who come upon buſineſs. His family is diſtributed in theſe courts, according to the rank of the perſon; the moſt conſiderable being ſtationed neareſt; and the meaneſt the fartheſt from his apartment; which few approach, except the Chriſtians and Azanaghi, who have free admiſſion; more liberty being allowed them than the negros.

But (ſays the author) Budomel affects great ſtate and gravity, for he will not be ſeen, except one hour in the morning, and, for a little while, towards the evening, at which times he appears in the firſt court, near the door of the apartment, into which none but perſons of note are permitted to enter. The pride of theſe lords appears moſt in giving audience; for when any perſon came to ſpeak to Budomel, were his condition ever ſo great, he was obliged firſt to ſtrip himſelf ſtark naked, except the ſkins which covered his privities; then, the inſtant he enters the court he fell upon his knees, and bowed down his head as low as the earth. Laſtly, with both his hands he covered his head and ſhoulders with ſand. This is the manner in which they ſalute their lord; nor is there any perſon whoever, exempt from theſe duties, not even their own relations. The perſon, who ſolicits the audience, remains a great while in this penetential poſture, dabbing himſelf with ſand, and crawling on his knees, till he approach the great man. When the ſupplicant is within two paces of this lord he ſtops, and begins to relate his caſe, but ſtill continues to lay on ſand, with his head down, in token of great humility. All this while the lord ſcarce ſeems to take notice of him, being in diſcourſe with other perſons; and when his vaſſal has told his ſtory, with an arrogant aſpect makes the anſwer in two words. Such is his affected pride and grandeur, and ſuch is the ſubmiſſion paid him. Budomel however behaved with great compliance to Cada Moſto, and carried him into the Moſques; for, towards evening, he ordered the Azanaghi or Arabs, whom he always had about him, to ſay prayers. His manner was thus: being entered into the moſque (which was in one of the courts) with ſome of the principal negros, he firſt ſtood with his eyes lifted up, then he advanced two ſteps, and ſpoke a few words ſoftly. After which he ſtretched himſelf on the ground, and kiſſed it: the Azanaghi, and all the reſt, did the ſame. Then riſing, he repeated the ſame acts over again ten or twelve times, which took up half an hour ——. This prince's table, like thoſe of all other lords, and men of condition, is ſupplied by their wives, in the ſame manner as the king of Senega is furniſhed; each ſending him ſo many diſhes, they eat on the ground, without regulating the inferior people, out of a baſket, ten or twelve in a meſs.

No bread-corn, rye, oats, or wine, grows in the kingdom of Senega, or any of the negro countries on that coaſt, on account of the great heats: this they made tryal of by the ſeeds they had from the ſhip; for wheat requires a temperate ſoil, and frequent rains, which are wanting here. They have no rain for nine months in the year; that is, from October till June. However, they have large and ſmall millet beans, and the fineſt kidney beans in the world; they are as large as hazle-nuts, but longer than the Venetian, and ſpeckled with various colours, as if painted, ſo that they make a beautiful ſhow, the bean is large, flat, and of a lively red; there are alſo white beans. They ſow in July and reap in September, at which time rain falls, and the rivers are ſwelled.

They prepare the ſoil, ſow and get in their harveſt, all in three months time. They are bad huſbandmen, no lovers of labour, and ſow no more than what barely ſerves them the year round, for they lay up no ſtore of oats for ſale. Their method of turning up the earth is thus; four or five of them go into a field with ſpades, (inſtead of ſhovels uſed in Italy) and throw up the earth, running it not above four inches deep in the ground. This is all their plowing; but as the ſoil is ſo fertile and kind, it produces every thing they ſow, without any farther pains.

Their liquors are water, milk, and palm-wine, which latter is taken from trees (here very numerous) like the date trees, though not the ſame. They yield this liquor, (called by the negros Nighol) all the year round. Being tapped in two or three places near the foot, a brown water runs out, as thin as ſkim-milk, into the calabaſes, ſet from morning till night. It is exceeding good to drink, and intoxicates like wine, if not mixed with water. It is as ſweet the firſt day as any wine in the world; but the luſcious taſte goes off every day more and more, till at length, it becomes ſour. It drinks better the third or fourth day than the firſt, becauſe it purges a little, and is not ſo ſweet. Cada Modo drank plentifully of it every day while he was in that country, and liked it better than wine of Italy. This nighol is not in ſuch plenty that every body may have it at diſcretion; however, they all have ſome, eſpecially the chief men; for the trees are not planted in gardens like the fruits or vines of Europe, but grow in the foreſts, and is common to all.

They have ſeveral ſorts of fruits, like the European though not exactly the ſame; and notwithſtanding they grow wild, yet they are very good. Were they cultivated in gardens they would prove much better than thoſe in the northern climates; the quality of the air and ſoil being nutritives. The country is all plain and fertile, abounding with good paſtures, beſides an infinite number of large and beautiful trees, not known in Europe. Here are likewiſe ſeveral lakes of freſh water, not large, but very deep and full of good fiſh, which differ from ſuch as are found in Italy. Alſo many water ſerpents, by them called Calcatrici.—— They have an oil, which they uſe in victuals; but the author could not tell what it was made of. It is remarkable for three qualities, viz. the ſmell of a violet, the taſte of olive-oil, and a colour that dyes the victuals better than ſaffron. There is a plant here likewiſe that produces ſmall kidney-beans in great quantities.

There are no tame animals in the kingdom of Senega, except oxen, cows and goats; ſheep they have none, neither could they live in this hot climate, for theſe love a temperate air, and live better in cold than in hot countries. Indeed the negros who live in ſuch intenſe heat, have no occaſion for woolen cloaths. The cattle of this country, ſuch as they have, are ſmaller than thoſe of Italy. A red cow here is a rarety: they are in general black or white; ſome however are pied or mottled. Here are many ſorts of beaſts of prey, ſuch as lions, and leopards. Hares and ſome other ſorts of wild animals are found here. They have alſo elephants of a large ſize. The author makes the following remarks upon this animal. His ſize may very nearly be judged from his teeth, which are brought into Europe; of theſe, each elephant

has

has but two in the under jaw, like the wild boar, without any other difference, except that the points of the wild boar's teeth turn upwards, and thoſe of the elephant down. Cada Moſto had been told, before he ſailed to thoſe parts, that the elephants could not bend their knees, and that they ſleep ſtanding, which he declares to be an egregious falſhood; for that their knees may be plainly diſcerned in walking, and that they lie down and riſe like all other animals.

They never ſhed their large teeth before death, nor do harm to any man, unleſs provoked by him; in that caſe, the elephant attacks him with his trunk, which is in the place of a noſe, of an exceeding length. He can contract and extend the proboſcis at pleaſure, and will toſs a man with it as far as a ſling can throw a ſtone. It is in vain to think to eſcape by running, let the perſon be ever ſo ſwift, provided the elephant follows him in earneſt, and fetches large ſtrides. They are more dangerous when they have young ones, than at any other time; and have but three or four at a birth. They feed on leaves of trees and fruit, pulling down the large boughs, and bringing them to the mouth with their trunk, which is a very thick cartilage. The author could hear of no other animals in this kingdom, except the abovementioned.

There are ſeveral ſorts of birds in this country, particularly parrots, in great numbers. The negros hate them, becauſe they do great damage to their millet and pulſe. They ſay there are ſeveral ſorts of them; but Cada Moſto could ſee no more than two. The one, like thoſe brought from Alexandria, but a little ſmaller. The other ſort is much larger, has a brown head, neck, beak and legs, the body yellow and green. He had a number of theſe two ſorts, particularly the ſmall ones; many died; the reſt, being about an hundred and fifty, he carried to Spain, and ſold them for half a ducat a piece. Theſe birds are very induſtrious in making their neſts, which they build with bullruſhes and ſmall leaves of the palm, and other trees. The parrot chips out the ſlendereſt branch, at the end of which ſhe faſtens the bullruſh; to which, being about two ſpans length, ſhe ſticks her neſt, weaving it in a moſt beautiful manner; and when finiſhed, it hangs like a ball at the end of the bullruſh, having only one paſſage into it. Thus they continue to ſave their young from the devouring ſerpents, whoſe weight theſe ſmall branches cannot ſupport. There is plenty of others called Pharaoh's Hens in Europe, whither they are brought from the Levant.

The author went three or four times to ſee one of their markets or fairs, which was kept on Mondays and Fridays in a meadow, not far from the place he lodged. Hither repaired, with their wares, both men and women, for four or five miles about; and thoſe who lived at a greater diſtance, went to other markets nearer them. The great poverty of this people appeared in the goods found in theſe fairs, which were ſmall quantities of goods, a few pieces of cotton cloth, cotton yarns, pulſe, oil, millet, wooden tubs, palm-mats, and every thing elſe for the uſe of life.

They have no money or coin of any kind; all trade is carried on by way of barter, exchanging one thing for another, and ſometimes two or three for one, according to the different values. Theſe blacks, both men and women, came to gaze on Cada Moſto, as if he had been a prodigy; and thought it a great curioſity to behold a white man, for they had never ſeen any before; they were as much aſtoniſhed at his dreſs as his colour, being cloathed after the Spaniſh faſhion, with a black damaſk waiſtcoat and a cloak over it. They admired the woolen cloth, of which they have none, and ſeemed much ſurpriſed at the ſight of the waiſtcoat. Some catched him by the arms and hands, which they rubbed with ſpittle, to ſee if the whiteneſs was natural or artificial; and finding that his ſkin was not painted, their wonder continued.

In this country horſes are ſcarce, being brought from thoſe parts of Barbary next Europe, by the Arabs and Azanaghi. Beſides, the great heat will not ſuffer them to live long; for they grow ſo fat, that they cannot make water, and ſo burſt. They feed them with the bean leaves, which they gather after the beans are brought from the fields. Theſe are cut ſmall, being as dry as hay, and ſerve inſtead of oats; they give them millet alſo, which fattens them much. A horſe and furniture is ſold for from nine to fourteen ſlaves, according to his goodneſs and beauty.

When a lord buys one, he ſends for his horſe-ſorcerers; who cauſing a fire to be made of certain ſtalks of herbs, hold the head by the bridle over the ſmoak, while they repeat a few words. They afterwards have him anointed all over with fine oil, and keeping eighteen or twenty days, without ſuffering any body to ſee him, fix to his neck ſome Mooriſh charms, (which doubled-up, are like ſmall ſquare billets) covered with red leather.

The women of this country are very pleaſant and merry, and delight in ſinging and dancing, particularly the young ones. Theſe diverſions they take only at night, by the light of the moon. Several things belonging to the ſailors ſeemed wonderful to the negros, among which was the croſs-bow, but much more the artillery: ſome of them coming on board, Cada Moſto cauſed one of his guns to be fired off: which put them into a fright, their dread increaſed on his telling them, that one cannon ſhot would kill an hundred men: on which occaſion they ſaid, that it muſt be an infernal inſtrument. The ſhip and its contrivance offered them alſo matter of great admiration, as well as the maſts, ſails, ſhrouds and anchor. They took the port holes made in the ſtern, for real eyes, with which ſhe found her way by ſea. They ſaid the Europeans were ſorcerers, and not inferior to the devil himſelf: that travellers by land found difficulties in tracing the road from one place to another; yet they travelled by ſea where there were no tracks, which ſeemed much more difficult; and though they were ſo many days without ſight of land, yet they knew what courſe they ſteered. What they moſt of all wondered at, was to ſee a candle lighted in a candleſtick, which to them, who had never ſeen the like before, appeared both beautiful and ſurpriſing; for in this country they have no other light than that of the fire.

They ſuck out the honey from the combs, and throw the wax away as uſeleſs. The author having bought ſome of the combs from a negro, ſhewed how the honey was taken out; and then aſked if they knew what that was which remained? they anſwered, that they knew it to be good for nothing: but they were greatly aſtoniſhed when they ſaw it made into candles, and lighted in their preſence; ſaying, that the Chriſtians had knowledge of all things, which increaſed their reſpect for thoſe who were deſtined to do their countrymen ſo many injuries.

Budomel's country being examined, the author determined to double Cape de Verde, in order to make new diſcoveries, and try his fortune, ſtill farther: for before his departure from Portugal, he was informed by Prince Henry, that a perſon, well acquainted with the countries of the negros, had aſſured him, that not far from the kingdom of Senega, there was another called Gambra: out of which, according to the report of the natives, large quantities of gold were carried into Spain; and that the Chriſtians who ſhould go thither might enrich themſelves.

Cada Moſto having left Budomel, repaired to the caraval, and ſet ſail without delay. One morning he diſcovered two ſhips, and coming up with them, found that one belonged to Antoniotto Uſo di Mare, a Genoeſe gentleman, and the other to ſome gentlemen in the ſervice of Don Enriquez; who came in company with a deſign to paſs Cape de Verde, and ſeek their fortunes, by making new diſcoveries. As the author had the ſame views, he joined in company

with them, and all ſailed together ſouthward along the coaſt, in ſight of land, for the Cape, which they deſcried next day.

Cape Verde is high and beautiful, it runs into the ſea, and has two little hills, or mountains, at the point thereof. There are ſeveral villages of negros from Senega, on and about the promontory, who dwell in thatched houſes cloſe to the ſhore, and in ſight of thoſe who are ſailing. There are alſo ſome ſand banks that run off it, about half a mile into the ſea.

Doubling this cape, they came to three little deſart iſlands full of large green trees; and as they wanted water, they anchored at one of them, which ſeemed to be the largeſt and moſt fruitful, in hopes of meeting with ſprings; but on landing, they found no ſign of any, except in one place, which was of no ſervice to them. They met however, with ſeveral birds neſts, and eggs of different ſorts, ſuch as they had never ſeen before. They continued here all that day fiſhing with lines and large hooks, and catched a great number of fiſh. The next day they proceeded on their courſe, keeping always in ſight of land. This ſide of the cape forms a gulph. The coaſt is all low, and full of fine large trees which are continually green, that is, they do not wither as thoſe in Europe do, for the new leaves grow before the old ones fall off. Theſe trees are cloſe to the ſhore; it is a moſt beautiful coaſt to behold, and is watered every where by ſeveral ſmall rivers; but they turn to no account, becauſe great ſhips cannot enter them.

Beyond this gulph the coaſt is inhabited by two negro nations, the one called Barbaſini; the other Serreri, but not ſubject to the king of Senega, for they have neither king nor lord of their own; but one is more honoured than another, according to the condition and quality of the perſon. They will ſuffer no lord among them, perhaps to prevent their wives and children being taken from them and ſold for ſlaves, as they are in the other negro countries which have kings and lords. They are great idolaters without any law, and extremely cruel. They uſe bows and arrows more than any other weapons, whoſe wounds are incurable, if any blood is drawn by them, the creature immediately dying. They are exceedingly black, and well made. The place is full of woods, lakes and other waters, which are a great ſecurity to them; for they cannot be invaded but through narrow defiles, for which reaſon they do not fear any of the neighbouring lords. In former times the kings of Senega had attempted to reduce theſe two nations to their obedience, but were always worſted by them, to which their arrows, and the natural ſtrength of the country very conſiderably contributed.

Coaſting along with a good wind to the ſouth, they diſcovered the mouth of a river which is about a bow-ſhot wide, but not deep. To this they gave the name of Barbaſini, being 60 miles from Cape Verde. They ſailed along this coaſt by day, and at ſun-ſet always came to an anchor in ten or twelve fathoms water, about four or five miles from land. At ſun-riſe, they hoiſted ſail again, having a man continually on the top, and two at the prow, to ſee if the ſea broke over rocks or ſhoals. Sailing forward, they came to the mouth of another river, which ſeemed to be as large as the Senega. At the ſight of ſo fine a river, and very beautiful with trees down to the ſhore, they caſt anchor, and determined to ſend one of their negro interpreters to land, of which every ſhip brought ſome from Portugal. Theſe had been ſold as ſlaves by the lords of Senega, to the firſt Portugueſe who touched on their coaſt, were become Chriſtians, and underſtood the Spaniſh very well. They had them of their maſters, conditionally on their return to give each for his wages a ſlave to be choſen out of their ſtock, and when any of theſe interpreters could furniſh his maſter with four ſlaves, he was made free.

Having caſt lots to ſee which of the three ſhips ſhould ſend an interpreter on ſhore, it fell to the Genoeſe gentleman's turn, therefore he diſpatched an armed bark, with orders to the men not to touch on ſhore; but when they landed, the interpreter, who was charged to inform himſelf concerning the condition as well as government of the country, and if there was any gold or other things to be had worth coming for. The interpreter being landed, and the boat put back to ſome diſtance, ſeveral negros of the country came to meet him. Theſe, as ſoon as ever they perceived the ſhips approach the coaſt, lay in ambuſh with bows, arrows, and other weapons, in hopes of taking ſome of the ſtrangers.

After a ſhort diſcourſe with the interpreter, whatever the ſubject was, they fell furiouſly on him with their gomies, and killed him, thoſe in the boat not being able to aſſiſt him. When thoſe on board the ſhip received this news, it gave them great ſurpriſe; and concluding that thoſe who could commit ſuch a piece of barbarity on one of their own race, would treat them with more cruelty. They immediately weighed their anchors, and proceeded on their voyage to the ſouth, ſailing in ſight of the land, which improved in beautiful green trees, in proportion as they advanced, all the coaſts being low. At laſt they came to the mouth of a very large river, being no leſs than three or four miles wide in the narroweſt part, as they found they could ſafely ſail into it, they concluded to reſt there, to learn what kingdom it was. The next day being come to this river, which does not appear to be leſs than ſix or eight miles wide at the entrance, they judged it to belong to the ſo much deſired country of Gambra, and that near it they ſhould diſcover ſome rich land, when at once they might make their fortunes.

The day following, having but a ſmall breeze, they ſent the ſmall caraval before, well manned, with orders, that as their ſhip was ſmall, and drew but little water, ſhe ſhould proceed as far as ſhe could. If they met with any banks in the river's mouth, they were to ſound the depth, and if the river was navigable, then to turn back, and caſting anchor, give ſignals of the ſame. Having found four fathoms water they did as they were ordered. On this, it was thought proper to ſend another armed boat along with the veſſels, (which was but ſmall) into the river, with orders by no means to fight or diſpute with the natives of the country.

Theſe boats proceeded up the river, which they ſounded, and finding no leſs than 16 fathoms water for two miles, they advanced farther, and ſaw the banks of the river very beautiful, and full of trees; but as they perceived it made ſeveral turnings and windings into the country, they did not think proper to proceed any farther. In their way back, near the mouth of a little river, which ran into the great one, they ſaw three almeydas, each made out of one piece of large wood, lik a ſkiff. Though they were ſtrong enough to defend themſelves, yet in fear of being attacked with poiſoned arrows (uſed by all the inhabitants of Gambra, as the other negros had informed them) they took to their oars, making all poſſible haſte back to the ſhip. When they got on board, the almedyas, which followed them cloſe, were within arrow-ſhot. There were about 25 or 30 Moors in her, who ſtood for ſome time looking at a ſight quite new to them, but would neither come nearer, nor ſpeak, notwithſtanding all the endeavours that were uſed by ſigns to induce them; and at laſt they returned, having ſatisfied their curioſity.

About three o'clock, next morning, the two caravals, which ſtayed behind, ſailed with the current and a ſmall breeze, in order to join their companion, and entered into the river; hoping to meet with more humane people than thoſe they had ſeen before. They ſailed into the river one after another, the ſmall caraval being foremoſt, and by the time they had got four miles up it, they perceived themſelves followed by a number of almeydas, without knowing from whence they came. They tacked about, and bore down upon them, having firſt covered their ſhips in the beſt manner

ner they could, to ſerve as a defence againſt their ſuppoſed envenomed arrows. They made every thing ready to fight, though ill provided with arms, and ſoon met them. The almeydas came under the prow of Cada Moſto's ſhip, which was foremoſt; and dividing themſelves into two diviſions, took them in their centre. This gave them an opportunity to count their number, which was fifteen, and as large as barks. They ceaſed to row, raiſed their oars, and looked upon the caraval with wonder. There were about 150 negros, all well made, of a good ſize, and very black. They wore white cotton ſhirts on their bodies, and caps on their heads, like the Germans; but with a wing on each ſide, and a feather in the middle, by which they diſtinguiſh themſelves as warriors. At the prow of each veſſel there ſtood a negro, with a round target (which ſeemed to be of leather) on his arm; yet they neither attacked the caraval, nor did ſhe chuſe to begin the fight. Thus they continued peaceable till they ſaw the other two ſhips bear down upon them: then they dropped their oars, and ſhot arrows at them: the veſſel diſcharged four pieces of cannon at the enemy; the report of which, ſo ſurpriſed them, that they threw down their bows; and looking ſometimes one way, and ſometimes another, remained ſurpriſed to ſee the ſtones ſhattered by the cannon fall in the water near them. They continued in this ſuſpence for a conſiderable time: but ſeeing the cannon fired no more at them, layed hold of their bows, renewed the fight with great fury, approaching within a ſtone's ſhot of the ſhips. On this the ſailors began to diſcharge their croſs-bows at them. The firſt ſhot was made by the baſtard ſon of the Genoeſe gentleman, which, hitting a negro in the breaſt, he immediately dropped down dead. Thoſe in the almeyda took up the dart, and gazed on it with wonder, but did not give over the attack, which they carried on vigorouſly, and were ſo fiercely oppoſed by the caravals, that in a little time many of them were killed, without the loſs of one European. Obſerving the diſadvantage they laboured under, all the almeydas ſeemed to agree to attack the little caraval aſtern, which was both ill manned and ill armed. They executed this deſign with great fury, which Cada Moſto obſerving, moved forward to her aſſiſtance: and getting her between the two large caravals, they all diſcharged their cannon and croſs-bows at the almeydas, which made them retire. After this, they linked the three caravals together, and dropped an anchor that held them all, as it was calm.

They next attempted to have ſome talk with the negros, by means of their interpreters, who often hailed them. At laſt one of the almeydas drawing near, they aſked thoſe in her the reaſon for attacking ſtrangers, who came to trade with them, as they had done with the negros of the kingdom of Senega: that they were willing to be upon the ſame terms with them, if they thought proper, and were come from remote parts with great preſents to their king or lord, in behalf of the king of Portugal, who was deſirous of peace and friendſhip with him.

They then intreated the negros to let them know what country they were in, who was king of it, and what was the name of the river? adding, that they might freely come and take what goods they thought proper out of their ſhip: that they would take in return ſome of their commodities, in ſuch ſmall quantities as they pleaſed themſelves, and that in caſe they gave them none at all, they ſhould be very well contented. To this they made anſwer, That they had ſome intelligence of them before, and of their dealings with the negros of Senega, who they ſaid, muſt certainly be very wicked men, for deſiring to have any friendſhip with them: for they were well aſſured Chriſtians were men-eaters, and bought negros for no other uſe than to devour them: that for the ſame reaſon, they would have no manner of correſpondence with them; but would endeavour to kill them, and then make preſents of their effects to their lords, who lived about three days journey diſtant, and added, that the country was called Gambra. In this inſtant the wind began to riſe, and as they had diſcovered the evil inclinations of the negros, they bore down upon them; but they fled to the ſhore; and thus ended their war with them.

The commanders of the caravals then came to a reſolution to proceed about 100 miles up the river, in hopes of meeting with a better diſpoſed people: But the ſailors, who were impatient to return home, not caring to run any farther hazard, unanimouſly, and loudly oppoſed their determination: declaring, that they would conſent to no ſuch thing, and that they had done enough already for this voyage. Therefore being obliged to come into their meaſures, the next day they ſailed for Cape Verde on their return to Spain.

During their ſtay in this river, they ſaw the north ſtar but once, and that very low. In this place, the firſt of July, they found the night to be eleven hours and a half long, and the day twelve and a half. This climate is always hot, and the author was told that the rain which falls within land is warm, through the heat of the air. There is, however, ſome difference in the heat, which is ſometimes greater, at other times leſs. When this laſt is the caſe, they call it winter: for the rain begins in July, and continues all October, and falls every day about noon, when certain clouds riſe in the north-eaſt-by-eaſt or eaſt-ſouth-eaſt point, accompanied with much thunder, lightning, and a prodigious quantity of rain. In this ſeaſon the negros begin to ſow their grain, in the ſame manner as thoſe in Senega do. Their food is millet, pulſe, fleſh, and milk.

Cada Moſto could ſay nothing concerning the condition of the country of Gambra, as having been obliged to return to Spain without proceeding any farther; partly through the untractableneſs of the natives, who are a fierce, wild people, eſpecially thoſe on the ſea coaſt, and partly through the perverſeneſs of the ſailors, who had refuſed to follow them, and we find nothing more noticed till his return. ——

The next year he and the Genoeſe gentleman jointly fitted out two caravals, in order to return to that river. Prince Henry having heard of their deſign (which indeed they could not have undertaken without his leave) was highly pleaſed at it, and determined to ſend a caraval of his own along with them. Every thing being got ready for the voyage, they ſailed from Lagos, not far from Cape St. Vincent, in the beginning of May, with a proſperous wind. They ſteered for the Canaries, and made them in a few days: but as the wind continued favourable, they did not touch at them, continuing their courſe ſoutherly; the current, which ran to the ſouth-weſt, alſo favouring them, they ſailed at a great rate. At laſt, coming in ſight of Cape Blanco, they kept out to ſea, and the night following were taken in a great ſtorm from the ſouth-weſt, which made them ſteer weſt-by-north for two nights and three days, rather than turn back, in order to weather the tempeſt.

On the third day, they deſcried land, to the great joy as well as ſurpriſe of every one, to find it in thoſe parts, where they thought there was none. Having immediately ordered two men to the main-top, they diſcovered two large iſlands: this being made public, their ſatisfaction was ſtill the greater; for they were ſenſible, theſe iſlands were not known in Spain. As they imagined the places might be inhabited, and were eager to puſh their fortunes; they ſteered for one of them, which ſoon coming up with, they ſailed round part of it, till they came to ſafe anchorage. The weather growing calm, they ſent their boat well manned and armed on ſhore: the men landed, and having gone over ſome part of it, brought word back, that they could meet with no ſigns of inhabitants. Next morning to clear up all doubts, Cada Moſto ſent ten men well armed with guns, croſs-bows, and other weapons, ordering them to go to the

top of ſome mountains in view, and thence look out not only for people, but alſo for more iſlands. Theſe men having executed their commands, found no inhabitants, but an incredible number of pigeons, which they caught with their hands, ſuch ſtrangers were the birds to man, and brought great quantities of them to the caravals. What was of much more importance they diſcovered three other large iſlands, one of which was to the leeward toward the north, which thoſe in the ſhips did not ſee; the other two lay to the ſouth, and in their courſe, all within ſight of one another. Theſe men likewiſe obſerved ſomething like iſlands to the weſt, but at ſo great a diſtance, that they could not diſtinguiſh them clearly, neither did Cada Moſto care to ſail to them, leſt he ſhould loſe time, and meet with nothing but deſart iſlands, like thoſe he touched at. (The news of his having diſcovered theſe four iſlands, brought others this way afterwards, who, being deſirous to ſee how many iſlands there were in all, found them to be ten in number both great and ſmall, inhabited only by pigeons and other birds: but a fine fiſhery).

Proceeding on their voyage they ſailed from this iſland, and coming in ſight of the other two, ſearched for an anchoring place near one of them which was full of trees. Here they diſcovered the mouth of a river, and being in need of water, they came to an anchor, and landed in order to ſupply their wants. Some of the author's men went a little way up the river, and met with ſome lakes of beautiful fine ſalt, large quantities of which they brought to the ſhip: laying in what ſtock they thought neceſſary; as they did likewiſe of the water, which was exceeding good. Tortoiſes they found here in great numbers; they took a good many of them, whoſe ſhells were larger than a great target. The ſailors dreſſed them in different diſhes, as they had done before in the gulph of Argin, where alſo theſe fiſh are plenty, though not ſo large. The author, out of curioſity ate ſome of the fleſh, which ſeemed to be very good, and nothing inferior to veal, having a good ſmell and taſte. They ſalted a number of them, which proved good proviſion on the voyage. They caught alſo ſuch a large quantity of other fiſh about the mouth, as well as in this river, as is ſcarcely credible; and though they knew not the kind, yet it was large and well taſted. A veſſel of an hundred and fifty tons might ſail into the river, which was a full arrow's ſhot wide. Here they remained two days to refreſh, and took in the abovementioned proviſions, beſides large quantities of pigeons, which they killed without number. To the firſt iſland they anchored at, they gave the name of Bona Viſta, as has been already obſerved, being the firſt they had ſight of in thoſe parts, and to the other, which ſeemed the largeſt of the four, St. Jago, having caſt anchor there on the firſt of May.

Every thing being in readineſs for purſuing their voyage, they ſet ſail from theſe iſlands; and ſteering their courſe for Cape de Verde, arrived at Spedegar; and keeping within ſight of land, came afterwards to a place called, The two Palms, lying between Cape Verde and the river Senega. They knew the courſe ſo well that they doubled the Cape next day, and paſſing forward came once more to the river Gambia, into which they ſpeedily entered, and without any oppoſition from the negros or their almeydas, ſailed up the river, always by day, with the lead in hand. Such of the almeydas of the negros as they met with kept at a diſtance, and rowed cloſe to the bank of the river, not preſuming to venture near them.

About ten miles within the river they caſt anchor, on a Sunday morning, at an iſland in the ſhape of a ſmoothing-iron, where one of the ſailors, who had died of a fever, was buried; and as his name was Andrew, being well-beloved, they gave the iſland the name of St. Andrew, which it goes by.

Leaving this iſland they proceeded up the river, and ſome of the negro almeydas followed, though wide of them, being hailed, the interpreter ſpoke to them, and ſhewed them a few trinkets, which were offered to be given them, telling them that they might ſafely come near. One of them who came on board Cada Moſto's veſſel, was much ſurpriſed at the ſight of the ſails and rigging, theſe people making uſe of no ſuch tackle in the conſtruction of their almeydas.

Being aſked ſeveral queſtions relative to the country, this man ſaid it was called Gambra, and that Foroſangali was their lord, whoſe reſidence it appeared was at the diſtance of about nine days journey. This prince, he obſerved, was tributary to the emperor of Melli. And this man introduced Cada Moſto (after a paſſage of forty miles up the river) to the reſidence of a prince or lord called Battimanſa, with whom he adviſed them to enter into a treaty of peace and friendſhip. The autbor made him a preſent of a ſilken Mooriſh garment, and told him, that they came from the chriſtian king of Portugal, who wiſhed to enter into a treaty of commerce with their countrymen.

Battimanſa agreed, and received the embaſſy with much civility. A trade was afterwards eſtabliſhed, and cotton, cotton yarn, civet, and other commodities (beſides monkeys and baboons) were traded and bartered for, as alſo negro ſlaves and ſome gold; but the latter not in ſo large a quantity as Cada Moſto had expected.

Every day he ſaw his veſſels crowded with people of different complexions and of various languages, the negros continuing to go up and down in their almeydas with men and women on board, from one place to another. The natives here, like thoſe of other places already deſcribed, put great faith in ſorcery. But there are ſome Mahometans among them, the Moors having inſinuated themſelves by trade, or gained footing by force, along moſt part of the coaſts of Africa.

The natives of this country live nearly after the manner of thoſe of Senega. Their clothing is of cotton; and the women, when they are young, make figures on their necks, breaſts and arms, with the point of a hot needle. At a ſpring near the banks of a river, the ſailors found a very large tree full of holes and hollow, the branches make a large ſhade. There were other trees larger than this, by which the richneſs of the ſoil is eaſily conceived; the country being watered by ſeveral ſtreams.

The author ſays the country is full of elephants; but the inhabitants know not how to tame them, as in other countries. As they lay at anchor in the middle of the river, three elephants came out of the woods, and walked by the river-ſide: they put out their boat, and ſome hands to go to them, being at ſome diſtance; but on their approach, theſe animals returned into the woods.

Theſe were all the author ſaw alive. Afterwards a negro gentleman, out of complaiſance ſhewed him a young one dead, which this negro (who lived near the river's mouth) had killed after two days chace. Theſe people hunt on foot in the woods, with bows and aſſaguays only, which are envenomed. Their method is to place themſelves behind the trees, and ſometimes mount to the tops, leaping from one to another, in the purſuit of the elephant; which being a large animal, is wounded in many places before it can turn about, without having power to make any reſiſtance; though in an open field, no man durſt attack one; or could eſcape, were he ever ſo ſwift. But he will never hurt any perſon unleſs provoked to it.

The gentleman made the author a preſent of what part of the dead elephant he liked beſt; and gave the remainder to the huntſmen to feaſt on. When Cada Moſto underſtood that this elephant was eaten by the negros, he had a piece of it cut off for roaſting and boiling. Of this he ate, that he might ſay he had fed on the fleſh of an animal, which none of his country had ever done; however, he could not reliſh it; for he found it hard and of no pleaſant taſte. He brought one of the legs, and part of the trunk, to

the

the caraval, together with ſome of its hair, taken off the body, which was very black and thick, being a ſpan and a half long. [This hair, with part of the fleſh, ſalted on purpoſe, he on his return preſented to the prince, who received it with great pleaſure, as it was the firſt that came from this country, diſcovered by his own encouragement.]

It muſt be obſerved that the elephant's foot is round like that of a horſe, but without hoofs, which are ſupplied by a hard, black, and very thick ſkin, beſet with five nails on the forepart, which are round. The foot of this elephant, though young, was not ſo ſmall but that the ſole meaſured a ſpan and an half every way.

In the Gambra, as well as all other rivers on this coaſt, beſides the Calcatrici, and other animals, there is one called the River-horſe, of the ſame nature almoſt with the ſea-cow, which lives both in land and in the water. It is as large as a cow in the body, and has but ſhort legs with cloven feet, and a large head like that of an horſe, with two large teeth like the wild boar's huſks, ſome of which the author had ſeen above two ſpans in length. This animal getting out of the river, walks along the ſide like other four-footed beaſts, and was never before diſcovered by any of the Chriſtians that Cada Moſto could learn, except perhaps in the Nile. He alſo ſaw bats upwards of three ſpans long, and ſeveral other birds very different from thoſe in our parts, both in taſte and ſhape, but very good to eat.

Having left Battimanſa's country, in a few days they got out of the river, having ſtocked themſelves with a ſufficiency of commodities, they agreed to continue their courſe along the coaſt; but as they found themſelves too near the river Gambra, and the land ran a great way to the ſouth-weſt, as far as to a point which they took for a cape, they kept to the weſt, in order to gain the ſea, though the coaſt was very low, and full of trees. This being done, at laſt they perceived that it was not a cape, as they had ſuppoſed, the ſhore appearing ſtrait on the other ſide of the point. However, they ſailed at a diſtance, and kept good watch, as they diſcovered breakers upon it.

"Within three days afterwards, (ſays our author) they diſcovered the mouth of a river, which appeared to be about half a mile wide, and towards evening, ſaw a little gulph, which they took for the entrance of a river. But as it grew late, they came to an anchor, and ſailing into the gulph the next morning, found a river not much ſmaller than that of Gambra, (or Gambia.) Caſting anchor here, they agreed to arm two of their boats, and to ſend their interpreters on ſhore, in order to get intelligence relating to the ſituation of the country, and the diſpoſition of its inhabitants. The interpreter returning, brought word that the river was called, The River Caſamanſa, taking its name from a negro chief who reſided about 30 miles up the country. Having received this intelligence, they ſailed from this river the next day. Its ſituation was about 25 leagues from Gambra. They afterwards came to a cape about ſeven leagues diſtant, which was ſomewhat higher than the reſt of the coaſt. The front of it appeared to be red; for which reaſon it was denominated Cape Roxo: ſtill proceeding, they arrived at the mouth of two other large rivers, one of which they called S. Anne's, and the other S. Dominick's.

The next day they came to another large river, which appeared to be a gulph, and they perceived ſeveral beautiful trees on the ſouthern ſide of it. Having ſailed acroſs, they ſaw ſome iſlands in the ſea, and came to an anchor, as uſual, in order to get intelligence of the country. Two large almeydas came off to them, the day after they had anchored, and theſe rowed on board the ſhips. One of them was as large as a caraval, with about 30 hands in her, and the other had about 16. The Portugueſe obſerving that they came on with great eagerneſs, took to their arms, not knowing what their deſigns might be; and being thus prepared, waited their arrival. However, as they drew near, they hoiſted out ſomething white, as a ſignal of peace, which the Portugueſe anſwering, the negros came along-ſide. The largeſt of the two almeydas advanced towards Cada Moſto's veſſel, and ſeemed ſtruck with admiration as they contemplated its form, examining the main-ſails, yards, and rigging, with the moſt minute attention. The interpreter, by order, aſked them what place it was; but to the great mortification of the voyagers, as he could not underſtand a word of their language, no intelligence was to be gained. However, a few gold rings were bought here, the price of them being agreed upon by ſignals.

As our voyages found themſelves in a country where their interpreters could not poſſibly be of any uſe to them, they had little encouragement to proceed. In this river, called Rio Grande (which De Faria ſays was diſcovered by Nunnez Triſtan nine years before) they remained two days, and, during their ſtay there, experienced great contrarity in the tides and currents, which ſet in with ſuch violence, that it was with difficulty they bore up againſt them, having often three anchors a-head; and ſometimes they were forced to hoiſt their ſails, the current exceeding the force of the wind by its impetuoſity.

Leaving the mouth of this river, they directed their courſe towards two large iſlands, and ſome ſmall ones, that lay about 30 miles diſtant from the continent. Theſe two large iſlands were inhabited by negros: the country was low, but full of beautiful trees. But meeting with ſome difficulty as before in regard to language, Cada Moſto thought fit to quit them, and continue his courſe to Europe, where he arrived in ſafety, after a proſperous voyage.

VOYAGE OF THE SIEUR D' ELBEE, TO ARDRAH, ON THE COAST OF AFRICA.

THE Portugueſe, Engliſh and Dutch, had reſpectively viſited the African coaſts; the enterpriſing genius of the French would not ſuffer them to be idle. Guinea, the Eaſt and Weſt Indies were objects of their attention, and they failed not to make voyages to thoſe places with a view to eſtabliſh ſettlements in them. as well as in the weſtern hemiſphere, where they envied the ſucceſs of the Spaniards, who under the auſpices of Columbus, had added a new quarter to the globe.

The French Weſt Indian company, eſtabliſhed in 1664, finding the want it had of negro ſlaves, equipped two veſſels at Havre de Grace, viz. The Juſtice, and the Concorde, each of 250 tons, and carrying 32 guns. The Sieur d' Elbee, commiſſioner of the marines, was named commodore of theſe ſhips, and

went on board the Juſtice, having with him the Sieur du Bourg, who was appointed commander of the intended fort and factory on the coaſt of Ardrah. Amongſt the under factors who went on this expedition, was one Carlof, who knew the country by having reſided there in the Dutch ſervice, and was now entered into that of the French company. Theſe veſſels departing November 1, 1669, ſailed along the coaſt of Africa, and having touched at Cape Blanco, and ſeveral other places, came to an anchor in the road of Ardrah, January the 4th, 1670.

The next day the Sieur Carlof landed, and went to Offra. He was informed at Praya, by the governor, that the Dutch being appriſed of the company's deſign, uſed all methods to traverſe and ruin the enterpriſe. This governor did not fail, according to his ſovereign's orders, to diſpatch a courier to Ardrah, to notify to the court the arrival of the French ſhips, and the Sieur Carlof ſent off another with letters to Offra; he was moſt kindly received by the viceroy, and returned on board to give the Sieur D' Elbee an account of what he had learned by this journey. The Second of the Dutch factory came on board the Juſtice to compliment the commodore, and made him a preſent of freſh proviſions. Both his compliment and preſent were received, and though the commodore was ſecretly convinced of his ſecret ill will, yet he was regaled, and ſent back with preſents, as if he had been a real friend. The Sieur du Bourg landed, and went to Offra, where the Engliſh factor provided him a lodging and proviſions; for the natives were not allowed to furniſh any, till, by the king's orders, the trade was opened. The viceroy, however, received him with great civility. Three days paſſed without any anſwer from court. This ſurpriſed the Sieur Carlof the more, as he had written a letter to the king, reminding his majeſty of their ancient friendſhip, and that, in their youth, they had drank mouth to mouth, that is, out of the ſame glaſs; which, amongſt theſe people, is a ſort of pledge or token of perpetual friendſhip.

In the mean time the company's preſents for the king were landed. Amongſt theſe was a fine gilt coach, with a magnificent ſet of harneſſes, which ſort of carriage had been introduced by the Portugueſe.

It is the cuſtom of the court of Ardrah to make ſtrangers wait a long time for an anſwer. The king, in conſideration of his former friendſhip for the Sieur Carlof, was pleaſed to ſhorten the time. The deputy captain of his majeſty arrived at Offra, July the 16th, ten days after the date of the letters. He waited on the Sieur Carlof (who was at the Sieur du Bourg's lodgings) in the king's name, and told him, that prince was overjoyed to find any of his friends alive, who were worthy to ſee him; that he ſhould have that honour immediately; and that the king, to ſhew his remembrance of their former friendſhip, would not receive his preſents before hand, as he did of other nations: he added, that the king was well diſpoſed to favour the French, and grant them the ſame privileges enjoyed by other nations, and even greater, and that his majeſty had commanded the prince his ſon, and the great captain, to repair as ſoon as poſſible to Offra, and conduct him to court. This news, which the French took care to publiſh, greatly mortified the Dutch. Two days after, the hereditary prince, and the great captain of trade, arrived together at Offra. The Sieur du Bourg, attended by the Sieur Carlof, went immediately to viſit the prince. The meeting paſſed in mutual compliments, and, as it was late, no motion was made of buſineſs. Next day the prince, attended by the great captain, returned the viſit; and after the firſt civilities, told him, that he was ſent by the king his father to conduct him to Aſſem, (or Great Ardrah) but that firſt he would entertain and drink with him at the ſea-ſide; from whence, returning to Offra, he would proceed to court. After this viſit, the French had the liberty of buying from the natives what they wanted, not only on ſhore, but for the veſſels in the road, although they wanted little, having been plentifully ſupplied by the coaſt negros in the night. January the 20th, the prince was carried to the ſea-ſide, where a large tent had been erected for him. He was attended by the great captain of trade, the Sieur du Bourg and Carlof, the Engliſh factors, and the under clerks of the Dutch factory. He arrived at the ſhore about nine o'clock in the morning. As ſoon as he appeared, the Sieur d' Elbee, who was on board, ſaluted him with four diſcharges of twelve guns each, at ſmall intervals, after which he went on ſhore. As ſoon as the boat came near land, the prince ſent ſome of his retinue, who took him on their ſhoulders, and brought him on ſhore; others lifted up the boat with all the crew, and ſet it down twenty fathoms from the ſea, with as much dexterity as ſtrength. Theſe negros were all large and robuſt men, but quite naked, except a piece of cotton cloth round their waiſt.

After the Sieur de Elbee had advanced ſome paces, an officer deſired him in Portugueſe, to ſtop where he was; which he did, and all the people, who had crouded to ſee him, retired, out of reſpect, ſo that he remained alone with his attendants at the negro officer's. Soon after, they perceived a company of negros approach, who carried crooked ſticks, in the ſhape of an S, at the end of which were fixed little banners, which they ſhouted with, playing a thouſand tricks of dexterity. After theſe, came the drummers, their drums being painted and taper at each end. They beat well, and made an agreeable cadence. They were followed by others, who bore the inſtruments of poliſhed iron, like ſmall bells, on which they made muſic with rods jingling in concert with the drums; next came a large troop of comedians, or players, ſome dancing, others ſinging, and ſhewed ſeveral antic poſtures; ſome telling diverting ſtories, and amongſt them ſome had braſs and ivory trumpets of different ſizes, whoſe ſounds kept time with the other muſic. All theſe compoſed the prince's band of muſic, and always attend him, when he appears in ſtate. They paſſed in good order by the Sieur d' Elbee, entertaining him with their beſt trumpets. The officers of the prince's houſhold appeared next, at ſome diſtance at the head of his guards, who marched with their muſquets on their ſhoulders, and had by their ſides ſabres with gilt handles. Theſe were followed by the great equerry, or maſter of the horſe, who walked ſingle, richly dreſſed, his hat on his head, and bearing on his ſhoulders the prince's ſabre, as the ſword of ſtate is carried before the doge of Genoa. The prince came next, having borne over his head a large umbrella. He walked ſlowly, leaning on two of his officers; the great captain (or general) of horſe marched at his right ſide, and the great captain of trade on his left. He was followed by ſeveral of the nobles, or grandees, and the proceſſion cloſed with above 10,000 negros.

When the prince approached within ten paces of the Sieur d'Elbee, he ſtopped, and then the officers, who attended the latter, told him it was time to advance. He did ſo, ſaluting with a low bow, in the French faſhion, the prince, who preſented him his hand, and d'Elbee gave his to the prince, who ſqueezed it gently, looking at him ſteadfaſtly, without ſpeaking. D'Elbee was ſilent a moment, to expreſs his reſpect, and then made him his compliment in Portugueſe, which the prince, out of ſtate, had interpreted, though he both underſtood and ſpoke the Portugueſe well. He made uſe of the ſame interpreter, to tell the Sieur D'Elbee for anſwer, that he was glad to ſee him; that he would employ all his credit with the king, his father, in his favour; and that he thanked him for his obliging offers. After this, he took him by the hand, and made him walk by his ſide beneath the umbrella. He would ſee the boat which brought him on ſhore; he examined it with attention, and taking the flag which it had, cauſed it to be ſet up before his tent, where was drawn up a company of muſ-

muſqueteers, whoſe pieces were in good order, and they had all ſabres and pouches.

The Sieur D'Elbee and the prince converſed and dined together, after the manner of the country, and the latter on his coming out, cauſed ſeveral handfuls of bujis to be diſtributed to the people, from whom he received loud acclamations. After this, trade was open, and the French had full liberty to deal with the king's ſubjects.

The prince appeared to be about thirty or thirty-five. He had on but two pagnes or robes, both of which trained on the ground; one was of ſatin, the other of taffyte, with a broad taffyte ſcarf tied like a belt. The reſt of his body was naked. He had on a hat with red and white feathers, and red pumps on his feet.—At the Sieur D'Elbee's taking leave in the evening, the prince ſhewed him new civilities, promiſing him his protection to the French nation on all occaſions, and would even ſee him to his boat: which a number of ſtout negros took on their ſhoulders and carried into the ſea, beyond the large waves. The commodore ſaluted the prince with many huzzas, and his ſhip with four ſalvos of twelve guns each.

In the mean time the prince placed himſelf in his hammock, which was carried by two luſty negros. The Sieurs du Bourg and Carlof alſo got into theirs; and like him had umbrellas carried over their heads. The prince ſet out thus, attended by his guards, his muſic, and a great crowd of people. It was late before they reached Offra.

The next day, January the 21ſt, the prince attended by the two grand captains, paid a viſit to Du Bourg, and invited him to accompany him to Aſſem, ordering hammocks to be given him and Carlof. They ſet out on the 24th, and as they travelled in the prince's company, had the advantage of ſeeing the country by day, which is a privilege denied to all ſtrangers. The prince gave them a grand entertainment at Great Foro, a large village, which lies half way between Offra and Aſſem; and as they ſet out late, it was night when they arrived at the capital. They were conducted to an apartment in the king's palace, deſigned for the French, where the king ſent them their ſupper.

Mean time D'Elbee landed the merchandize, which was carried from the ſhore to Offra by negros. Theſe had twenty bujis for the journey: a ſmall rate for porterage, but proportioned to their burdens, which never exceeded two bars of iron, or a weight equivalent, which they call Tonge. The bar of iron here, is nine foot long, two inches broad, and one fourth thick. From Offra to Aſſem they tranſported the king's preſents, and the goods deſigned to trade with the grandees.

The Sieur Du Bourg had his firſt audience of the king, on the 27th of January, in which he appeared under the character of ambaſſador, from Louis the 14th and in that quality was introduced by the prince, the prieſt, and two great captains of trade and horſe. The king made him ſit down on a bed of cotton, placed near his armed chair. Du Bourg paid his compliments in Portugueſe, which, though the king underſtood and ſpoke perfectly well, yet he had his addreſs explained by his two interpreters, Matteo and Franciſco, who kneeled at his feet. The office of interpreter here is very conſiderable, but the leaſt miſtake or falſification is as much as his life is worth.

The king having given an obliging anſwer to the Sieur Du Bourg's compliments, the latter preſented his majeſty the coach and other preſents ſent him by the company, after which, he intreated his permiſſion to build a lodge or factory at Offra; engaging that four ſhips ſhould be ſent regularly every year to trade in his dominions. The king replied, With reſpect to trade, the Dutch ſent more ſhips annually than he could load, that the laſt year ſome had been forced to go away without their cargoes, that there were then actually ſix on the coaſt, and four at Mina, that only waited advice from their factory to come; ſo that he neither wanted ſhips nor merchandiſe: that the Dutch had made him very conſiderable offers to contract an alliance with him, in order to have an excluſive right to trade in his dominions; and that he had the greateſt reaſon to comply with them, as the Engliſh ſeemed to neglect his commerce, and the French, who had formerly traded with him, and kept their words no better, which was a fault he could not accuſe the Dutch with. His majeſty added, notwithſtanding all this, the great things he had heard of the king of France, and of the care one of his miniſters ſhewed to extend commerce, raiſed in him a fondneſs to merit the eſteem of ſo great a prince, by treating his ſubjects well: for which end he had given orders to his great captain for trade, to build a factory at Offra, to protect their commerce, and give them all the encouragement in his power. After this, the boxes of the richeſt goods were brought, of which the king had his choice, and the Sieur Du Bourg left the price to his majeſty. This compliment produced a good effect, and gave him an high eſteem for the French. Du Bourg falling ſick here, left the direction of the trade to Carlof, who immediately raiſed the price of ſlaves to eighteen bars a head, which before never exceeded twelve. This was a piece of policy deſigned to ruin the Dutch trade, who choſe rather to keep their goods in their hands, than not get as much by them as they had done before.

The Sieur Carlof ſent preſents to the queen-mother and the queen, after which, he traded for about 300 ſlaves, which he bought from the prince, the prieſt, and the great captains. Theſe ſlaves he ſent on board his ſhips. The deputy captain of trade alſo conducted ſeventy-five, which the king paid for the goods he had taken.

Proclamation was made through the country, on the 8th of February, of the liberty of trade for ſlaves granted by the king to the company. As this trade was ſettled at Offra, the king's receivers fixed the duty there, the ſame as at Aſſem, ſlaves bought from the king paid no duty.

By the 1ſt of March, the Juſtice having her cargo compleated, was ready to ſail, but waited for her conſort.—In order to forward matters, the Sieur D'Elbee took a ſecond journey to court, attended by the Sieur Carlof, with his domeſtics. They arrived before day at Aſſem. During the time of the Sieur D'Elbee's ſtay, he viſited the town and the adjacent parts, attended by two of the king's officers. On his arrival, he was carried to the French apartment in the palace, where the king immediately ſent him all ſorts of refreſhments: as meat, boiled and roaſt, bread of different kinds, as well as liquors. The prince, the grand prieſt, and other grandees did the ſame, ſo that he had proviſions enough for 200 people. As ſoon as it was day, he was viſited by all the grandees; but the prince ſent to excuſe himſelf from ſeeing him, on account of the death of one of his children. He was confined and ſaw nobody, which with them is a mark of extreme grief.

The king was in one of his gardens, ſeated in a damaſk arm-chair beneath a gallery, when D'Elbee was admitted to an audience. This prince called Tozifon, appeared to be about ſeventy, tall and big in proportion; his eyes large and lively, and in his countenance there was an appearance of penetration and judgment. He was dreſſed in two pagnes like under petticoats, in the Perſian mode, one over the other; the undermoſt was taffyte, the other of a pricked ſatin; a broad taffyte ſcarf ſerved him for a belt or girdle; the reſt of his body was naked. He wore on his head a ſort of night-cap of fine linen edged with lace, and over it a crown of wood, black and ſhining like ebony, of a fragrant ſmell. In his hand he held a ſmall whip, the handle of which was of black wood, and loaded with ornaments, the cord or whip being of ſilk or pete.

After the uſual compliments the Sieur D'Elbee intreated the king would allow the French to build a factory in their own way, the one being built too

little, and otherwiſe incommodious; and that he would give his orders for the ſafety of the directors and factors at Offra. The king replied, He took thoſe officers under his protection, and would take particular care they ſhould be ſafe, and have no cauſe of complaint; that he would iſſue his immediate orders; that the debts due by his ſubjects to the company ſhould be diſcharged in twenty-four hours; with regard to the factory at Offra, he would give direction to the prince and the two great captains to go in perſon there and augment the buildings; but that he could not allow them to build a factory in their manner, "You will (ſays the king) make a houſe, in which you will at firſt put two little pieces of cannon; the next year you will mount four; and in a little time your factory will be changed into a fort, that will make you maſters of my dominions, and enable you to give laws to me." He accompanied theſe arguments with ſo many apt and witty ſimiles, and ſuch an air of good humour and pleaſantry, that Sieur d'Elbee could not be diſpleaſed at ſo obliging and polite a refuſal. The king added, that he wondered the kingdom of France being ſo large and full of able workmen, the company ſhould load their veſſel with common merchandiſe, like thoſe brought by the Engliſh and Dutch. D'Elbee anſwered, That this firſt voyage being only to try the trade, the Company had judged it proper to ſend only ſuch ſorts of goods as the Engliſh and Dutch did; but that for the future they would ſupply his majeſty with whatever was rare and curious; deſiring he would be ſo good as to name ſuch things as would be agreeable to him. The king named a French ſilver-hilted ſword and cutlaſs, large looking-glaſſes the fineſt linen, and laced ſhoes and ſlippers of velvet and ſcarlet cloth, ſcented gloves, ſilk ſtockings, and ſome other things, which the commodore promiſed to bring or ſend him by the firſt veſſels that ſhould ſail after his return to France. After this converſation, the Sieur D'Elbee made his majeſty a preſent of a fowling-piece, and a pair of piſtols mounted with ſilver. The king received this preſent very agreeably, inviting him to go and ſee the prince his eldeſt ſon, ſaying, that on his account the prince would receive his viſit, though at ſuch a time of mourning. After this, he took the Sieur D'Elbee by the hand, and diſmiſſed him with ſuch marks of his favour as he had never ſhewn to any European before.

The king is ſo reverenced by his ſubjects, that except his ſon and the chief prieſts, nobody muſt appear before him, but with his face proſtrate to the ground, not ever daring to look up: only when obliged to anſwer, they raiſe their heads a little, but lay them down again as ſoon as they have done ſpeaking, as was done by the two great captains of trade and horſe at this audience. Only the prince and the chief prieſt are exempted from this ſubmiſſion. Theſe ſpeak to the king ſtanding, and have the privilege of entering the palace at all hours, day or night, without being ſent for.

The Sieur d'Elbee having, by the king's favour, been taken to the palace and gardens, viſited all the apartments except that of the women, where nobody is permitted to enter. He received the Sieur d'Elbee with a great deal of politeneſs; and on his account diſpenſed with the ceremony, which admits no perſon of diſtinction to ſee company during the time of mourning. The hall where he gave audience was large, and covered with a Turkey carpet. The prince was ſeated on a mat. He cauſed others to be brought for the Sieur d'Elbee and his two officers. After an hour's converſation, in which he aſſured the French nation of his protection and friendſhip. He called for liquors, and drank mouth to mouth with the Sieur d'Elbee, cauſing ſome to be preſented to the others; after which he roſe up. The Sieur d'Elbee took his leave and returned to the town the ſame way he came, alighting at the houſe of the chief prieſt, who had invited him to ſupper, and they had an entertainment which was heightened by muſic, which began about the middle of the repaſt. Voices, like thoſe of little children, were heard, as coming from a great diſtance, accompanied with the tinkling of little bells. The French commander obſerved with great attention. The great prieſt, who ſpoke Portugueſe perfectly well, aſked him what he thought of theſe voices? He replied, They are little children, who ſing well and keep good time to their inſtruments. "They are my wives," ſays the prieſt, "who give you this little diverſion: it is not the cuſtom here to ſhew our wives to any: but to convince you of the eſteem I have for the French, I will give you that ſatisfaction if you pleaſe." D'Elbee returned him thanks; and when ſupper was over, the prieſt conducted him up to a high gallery, which had a window looking into the hall where they ſupped. Theſe women were there, to the number of between ſeventy and eighty. They had only petticoats or ſacques, of taffyte, which covered them from the waiſt downwards, leaving the upper part naked. Some of them had taffyte girdles. They ſat on mats at the end and ſides of the gallery, pretty cloſe to each other, and one by one. The arrival of the pontiff and ſtrangers ſeemed to give them neither emotion nor curioſity. They continued their ſinging and muſic, ſtriking with little rods on their bells of iron and metal, which were cylindrical and of different ſizes.

There was a figure about the bigneſs of a child of four years old, and all white, at the corner of this gallery. D'Elbee aſking what image it was, the prieſt told him it was the devil's: "But the devil is not white, ſays d'Elbee." In making him black, anſwered the prieſt, you commit a miſtake; for I can aſſure you he is very white, having ſeen him and ſpoken with him ſeveral times. It is ſix months ſince he informed me of the deſign you had formed in France to open trade there. You are obliged to him, added he; ſince, purſuant to this advice, we have neglected the other Europeans, that you might ſooner have your cargo of ſlaves." D'Elbee believed what he thought proper, but would not diſpute the point with the prieſt.

This great prieſt was about forty; tall, well made, and of an agreeable aſpect. He wore the ſame dreſs with the king's principal officers; that is two large pagnes of ſilk ſtuff in brocades, one over the other; a large ſcarf like a belt: cotton drawers, pretty long ſandals, or a kind of pumps of red Spaniſh leather; a cap or European hat, a large hanger with a gilt handle faſtened at his girdle, and a cane in his hand. This he quits when he enters the king's apartments, whoſe prime miniſter he is, not only as to what regards religion, but in affairs of ſtate. He is the only officer who has a right to enter the king's apartment by day, and to ſpeak to him face to face without proſtration. He ſhewed the Sieur d'Elbee all the civilities imaginable, waiting on him to the gate of the palace, which he would not re-enter till he had ſeen him in his hammock. The ſame night, he was carried back to Offra, with the ſame eſcorte which had attended him to Aſſem.

The dominions of Ardrah are not conſiderable towards the ſea, ſince the kingdoms of Whidah and Pape have been diſmembered from it. Their extent along the coaſt is not above twenty-five leagues, but they run a great way in-land, as their bounds eaſt and weſt are the rivers Volta and Benin, which are 100 leagues aſunder. Its extent to the north and north-eaſt is yet greater: however, they ſay it can raiſe but 40 or 50,000 men, which is a ſmall number to 200,000, which the king of Whidah can aſſemble: but it muſt be conſidered, that the troops of the king of Ardrah are not militia, like thoſe of Whidah, but regular troops, conſtantly kept up, who only wanted fire-arms and good officers to be able to recover the revolted provinces, and other countries the king of Ardrah has a title to.

The

The people can neither read nor write. They uſe ſmall cords tied: the knots of which, have their ſignification. Theſe are alſo uſed by ſeveral ſavage nations in America. The grandees however, who all underſtand the Portugueſe language, both read and write it well: but they have no characters of their own.

All men of rank here wear two petticoats of taffeta, or other ſilk. They have alſo ſilk ſcarves in the form of a ſhoulder-belt. They uſually go bare-headed and footed, though they wear caps or hats, and ſandals or buſkins of leather, except in the king's palace. The common people are covered from the waiſt to the knees with a piece of ſerge, which makes two foldings, and the ends croſs over the navel. The labourers and poorer ſort have only a bit of cotton cloth or mat, which cover their nudities, and the reſt is all naked.

The women of rank have petticoats and ſcarfs like the men, but as they ſeldom ſtir abroad, they have generally nothing on their head or feet. The poor women wear ſhort pagnes.——They have a ſtrange cuſtom here. If a married woman proſtitutes herſelf to a ſlave, and the maſter of the ſlave is a greater man than the maſter of the woman, the woman becomes his ſlave; but, if on the contrary the woman's huſband be of greater dignity, the adulterer becomes his ſlave.

All the officers of the king's houſhold take the title of captain, joined to the name of his office. Thus the maſter of the houſhold is called Captain of the Table; the purveyor, Captain of the victuals; the cup-bearer, Captain of the Wine, &c. No perſon ſees the king eat; and when he drinks, an officer makes a ſignal with two iron rods, that all thoſe preſent may proſtrate themſelves on the ground. It is death even to ſee him drink, though inadvertently. The officer who preſents the cup turns his back, and gives it in that poſture. They ſay this is done to prevent any charms or ſorcery at that time. A young child, a great favourite of the king's, having fallen aſleep by him, and awaking at the noiſe of the rods, had the misfortune to look at the king while he was drinking; the prieſt ordered the infant to be killed on the ſpot, and ſome drops of his blood ſprinkled on the king's cloaths and body, to prevent any ill conſequences.

The king is always ſerved on the knee; and the ſame reſpect is paid the diſhes, either carried to or from his table, thoſe who ſtand in the officers way being obliged to proſtrate themſelves as they paſs. It is ſuch a crime even to look at the king's victuals, that the offender is puniſhed with death, and his family made ſlaves. Though the king has a great number of wives, yet but one has the title of Queen, who is ſhe that bears him the firſt ſon. Her authority over the reſt, whom ſhe treats rather as her ſervants than companions, is ſo great, that ſhe ſometimes ſells them as ſlaves, without conſulting the king, who is forced to paſs by the matter. An affair of this kind happened while the Sieur d' Elbee traded here. The queen having been refuſed ſome goods or jewels ſhe had an inclination for, ordered them up privately, and in exchange ſent eight of his wives to the factory, who were immediately ſtamped with the company's mark, and ſent on board. Theſe poor princeſſes had ſunk under ſo ſevere a ſtroke, if the Sieur d' Elbee had not ſhewn them ſome diſtinction, by treating them in a kind manner, ſo he carried them in good health to Martinico.

As to their religion, it is a confuſed heap of ſuperſtition, hardly worth that name. Their notion of a Supreme Being, are extremely confuſed and obſcure: they have no temple, nor any form of worſhip: they offer neither prayers nor ſacrifices. They are only concerned about what relates to this life, having no idea of a future ſtate.

The king's Fetiſhes, as well as thoſe of the ſtate, are certain large, black birds, like crows in Europe. The palace-gardens are full of theſe, who are well fed, but by no means ſo reſpected as the ſerpents are at Whidah. They only imagine, that if one of them ſhould be killed, ſome great misfortune would happen to the ſtate. Private perſons have their particular Fetiſhes, ſome a mountain, others a tree; ſome a ſtone, a piece of wood, or ſuch like inanimate bodies.

There is but one ceremony in all the ſtate, the deſign and reaſons of which are not well known. The great prieſts has a houſe in each town, where he ſends the wives of free people by turns, to learn certain exerciſes, which might be ſuppoſed of a religious kind, if there was any religion in the country. Here they ſtay five or ſix months, and are inſtructed by old women, who teach them a ſort of dance and ſong; they make them enter by companies, day and night, into a hall deſtined for this purpoſe, and after fixing on their arms and feet ſlight irons and pieces of copper to make a noiſe, they oblige them to dance and ſing with all their force. The dance conſiſts in ſtamping with their feet, and a violent agitation of their body, which is very fatiguing and difficult to ſupport. This they accompany with ſinging, intermixed with cries, which ſound like howlings in time and meaſure. They purſue this extravagant exerciſe, till they drop down with faintneſs, when their old miſtreſſes ſubſtitute in their place, a new band of ſcholars, who continue the diverſion, to the great diſturbance of thoſe who live near ſuch roaring ſeminaries. The Sieur d'Elbee had this misfortune, and could get no reſt night nor day, till he removed. He found at Aſſem, ſome Chriſtian negros, who came to beg chaplets of him, and ſeemed deſirous of hearing maſs, but he had not brought his chaplain with him. It is probable theſe negros had been baptiſed by the Portugueſe during their ſettlement in Ardrah, for there were none of that nation here then.

The trade of Adrah is chiefly in proviſions and ſlaves, the king has his choice of all goods either for payment of his duties or for the ſlaves he ſells. As to his people, there is a regulated taiff for trade, the price of goods and ſlaves being ſettled, ſo that differences ſeldom ariſe, and when they do, the king preſently adjuſts them.

The Juſtice having completed her cargo, the Sieur d'Elbee ſailed, leaving the Concorde behind. She wanted her full complement, and ſet ſail March 13th, for S. Thomas, to get more proviſions for ſo long a voyage as that to Martinico.

After the Sieur d'Elbee's departure, the Dutch growing envious of the French trade, and two veſſels of the nation arriving, the new-comers attempted to take down the French flag at Praya, which occaſioned a tumult: and the king being informed of the matter, forbade any flag to be ſet up by the people of either country, at the ſame time he engaged to ſend one Matteo Lopez, his interpreter, in quality of an ambaſſador to the king of France, and he accordingly fulfilled his promiſe.

The caraval ſet ſail afterwards with near 600 ſlaves, having on board the ambaſſador and a preſent for the king, and arrived at Martinico on the 13th of September, they were well received by M. Baos, governor of the iſland, and by the Sieur Peliſieur, director general of the company. As winter approached, cloaths were made for Matteo Lopez and his family after the French faſhion, and they were furniſhed with all the neceſſaries for the voyage. Thus provided, they embarked on the 27th of September, 1670, on board a ſhip of one of the company's ſhips, but being delayed by contrary winds, did not reach France till the 3d of December, when they anchored in the road of Dieppe, after a paſſage of ſixty-four days from Martinico.——

As ſoon as all things were got in readineſs, the ambaſſador went to court, whither he was invited by the king, who received him in ſtate. Being introduced to the royal preſence, he began his compliment by raiſing his head a little, and ſpeaking in Portugueſe, told Louis XIV. that the king of Ardrah, his maſter, having

having learned the wonders reported of his majesty, he sent to assure him how much he desired to gain his favour, by offering himself and his kingdom at his service. Louis made him rise, and observing the ambassador, who was in confusion, held a paper in his hand, asked what it was? The Sieur d' Elbee, who officiated as interpreter, replied, That the ambassador, fearing that the awe of his majesty's presence might disorder the speech he designed, had wrote it the day before, and bid him translate it into French, that it might be read if he thought proper. The king consented, commanding d' Elbee to read it a-loud. It was as follows:

"Sire,

"THE king of Ardrah and Alghemi, my sovereign, has nominated me his ambassador to your majesty, to offer you all that his kingdoms can afford, and his protection for all the ships you shall please to send thence, assuring you, that his dominions, ports, and trade, are entirely at your devotion, and open to all your subjects.

"To convince your majesty farther of his sincere desire of maintaining the friendship he intreats of your majesty, he has charged me to declare, that, for the future, the gentlemen of the company settled at Offra, shall pay no more than 24 slaves custom, instead of 80 they pay at present, which is less than the Portuguese formerly paid, or than the Spaniards, Danes, Swedes, and English pay, on account of the Dutch, who have long traded with them; but he has ordered me to assure your majesty of his protecting your subjects against the Dutch, and to keep his word exactly on that head. He also engages, the French ships in this port, shall, on all occasions, be preferred to the Dutch, and loaded before the latter begin.

"He has also directed me to inform your majesty when on occasion of a dispute between your subjects at Ardrah and the Dutch, in relation to the flag, the king judging the distinction due to so great a prince, placed the factor, your subject, on the right hand, and lodged him in his palace, the Dutch factor having only the left hand, and being lodged with the prince his son. On this account he desires to know from your majesty the honours you would have paid to your flag, that he may order them to be paid it throughout all his dominions.

"Amongst other things, the king intreats of your majesty, that you will send two religious men to instruct some of his subjects, who have a little knowledge of Christianity, which they eagerly desire to cultivate. He also has commanded me to present your majesty my two sons here before you, and beseech you to accept them favourably, which I shall esteem as the greatest happiness can befal me, by the advantages they must receive in serving so great a prince; likewise to join with them two hangers, two assaguays, a vest and carpet. He earnestly intreats your majesty to accept of these, and to believe, that if his country produced any thing more curious, or that he thought could be more agreeable to your majesty, he would send it with great pleasure, as he desires nothing more than to persuade your majesty, that his determinations are yours, as entirely as your own."

This speech the king heard attentively, and was pleased in answer, to tell the ambassador, That he was much obliged to the king of Ardrah, his master, for his compliments, as well as for sending him for his ambassador, whose person was very agreeable to him; that he accepted the offer he made him of his two sons, who should stay with him while he resided at Paris, after which he would take care of them himself; and that as to what related to trade, his majesty referred him to the company. And thus ended the royal audience.

The next day the Sieur de Berliese came at two o'clock in the afternoon, and introduced him to the queen, who received him in state. He and his four sons prostrated themselves before her majesty, were graciously entertained; and, as is customary on such occasions, were attended to and from their coaches by a crowd of people.

In the next place the ambassador was conducted to the old Louvre, to the apartment of the Dauphin, where he was received by the duke of Montaucier, who introduced him to the prince. He observed the same ceremonies as he had done to the king and queen. He made the prince a compliment, in which he took notice of the happiness of the duke of Montaucier, in being chosen to educate the first prince in the world. He told the Dauphin, that the great prince of Ardrah had charged him to assure him of his respect, and to desire his favour and friendship, which he would do all he could to merit. After this he presented the Dauphin some arms, sent him by the prince. The Dauphin having answered these compliments in a graceful manner, the ambassador retired, and was reconducted as the day before. He next visited the king's ministers, and the chief lords of the court; he also in return received a great number of visits, and all the civilities that could be paid. The king's comedians entertained him with their performances, which much delighted him. He often assisted in divine service, in the principal churches, and shewed a very edifying attention.

He had also an audience of M. de Lionne, secretary of state for foreign affairs, and told him in Portuguese, that as he had come from the king his master to offer the king of France his services and dominions, he thought it his duty to beg that he would contribute his best offices to promote the good correspondence between the two princes, which commerce he was about to establish, and he hoped this the rather, as he was assured of his particular merit, and the zeal he had for the honour of the king his sovereign. M. de Lionne replied in Spanish, that he would use his interest and care in any thing that related to the interest and service of the king of Ardrah, and wished to remain in the good harmony he mentioned. After this he asked him, what ports there were in his master's dominions, if his kingdom was large, and if he had often wars with his neighbours? The ambassador replied, That the states of the king his master were of no great extent along the coast, but ran so far in land, that they were a fortnight's journey to pass; that neither on the coast of Ardrah, nor in all Guinea, were any ports or harbours, but only roads where ships might find good anchorage; and as tempests were rare on the coast, ships suffered no great inconvenience from that defect; except the violent surf the sea made on the shore; that the king his master had powerful neighbours, with whom he was often at war, and on these occasions marched an numerous army, composed of horse and foot, well armed, and very well disciplined.

The ambassador, taking leave of M. de Lionne, who reconducted him to his coach, was carried to the hotel of the company, where, alighting, he was received by the directors in a body, and conducted to the hall, where they assembled. Being desirous to hear what they had to propose in relation to trade, and answer their demands as far as their instructions would allow, one of the directors, in the name of the rest, made the following proposals:

First, That the company's ships, trading to Ardrah, should have the preference to all other nations.

Secondly, That they should pay but 24 slaves for duties instead of 80, paid by the Dutch vessels; and that this duty should be reduced for the French to the old footing, as in the time of the Portuguese.

Thirdly, That the king of Ardrah should oblige those of his subjects who were the company's debtors, to make speedy satisfaction.

Fourthly, That their factors should not be obliged to trust any lord or grandee, if they thought him not in condition to pay.

Fifthly, That leave should be granted to cover their magazines and factory with tiles instead of straw, which expose all their goods to fire.

Sixthly, That the king ſhould be pleaſed to take the company, its factors and effects under his immediate protection.

On granting theſe articles, the company engaged to keep its warehouſe conſtantly ſtocked with goods, ſo that there ſhould be always merchandiſe to the value of 500 ſlaves in reſerve, over and above the common call, which ſhould ſerve as ſecurity in the king's hands; likewiſe to ſend ſhips yearly, to ſupply the trade, and to trade with no other prince.

The ambaſſador having attentively heard theſe propoſals, readily agreed that all ſhould be granted without reſtriction, excepting the firſt and fifth. With regard to the firſt, he ſaid, That if the company would deal for ſlaves, only with the king his maſter, he could aſſure them, they ſhould always have the preference, and their ſhips be loaded before thoſe of any other nation in the road. As to the fifth, he promiſed to uſe his beſt offices with the king to obtain it: but not being ſure of his maſter's intentions, he could not give his word for the ſucceſs.

All the reſt of the ambaſſador's ſtay at Paris, was employed in paying or receiving viſits, and he was every where treated with all the kindneſs he could wiſh; ſeveral perſons of quality made him preſents.

He had his audience of leave with the ſame ceremonies as at firſt, and was by this time ſo well accuſtomed to the French manners, that he appeared neither conſtrained in his actions nor diſcourſe, which greatly pleaſed the king, queen and dauphin. He left Paris about the middle of January, 1671, to go to Havre-de-Grace, where two ſhips waited for him. By the king's orders, his charges were defrayed, and all honours imaginable paid him on the road. When the king of France's preſents for his maſter, and for himſelf were brought him, he beheld them with amazement, ſo much was he ſurpriſed at their number, value and beauty, he ſaid, "There is but one monarch in the world. All things muſt yield to the king of France; my maſter will never believe what I tell him, he will even doubt what he ſhall ſee."

From this embaſſy of Matteo Lopez, the company, had it laſted, might have gained great advantages; but it was ſuppreſſed in a few years after; and the iſlands and all its conceſſions re-united to the crown. The Senega company, which ſucceeded in the trade to Guinea, neglected this ſettlement, having its particular reaſons for fixing at Whidah. Thus the French fulfilled the general remark of ſetting out well, but ſeldom continuing in the ſame courſe.

It appears that as to the preſents above mentioned, they were committed to the care of Carlof; and Lopez arriving in the road of Ardrah on the 1ſt of October, 1671, pretended they ought to be put in his hands, that he might deliver them. This, Carlof would not conſent to, ſuſpecting he would convert ſome part to his own uſe, as it afterwards appeared he had intended. His refuſal ſo incenſed the black ambaſſador, that he employed all his intereſt in the country againſt the French, and much diſtracted their affairs. This at length, obliged Carlof to take other meaſures, till he could ſpeak with the king of Ardrah who was then buſy appeaſing a civil war in his own dominions, which ſtopped all the paſſages for carrying down ſlaves to Offra; ſo that ſcarcely 200 had arrived there in fifteen months; a thing ſo prejudicial to the Dutch trade, that five of their ſhips were ſent back empty to Mina. Carlof having before driven ſome trade at Great Popo, ſettled there a factory of his nation, by permiſſion of the king, upon condition he would pay the value of twenty-eight ſlaves for each ſhip's cargoe the French afterwards took in there; whereas he had contracted to pay 100 at Offra. Going from Popo to Whidah, the king of that country gave him a very favourable reception, with aſſurance that he would always protect the French nation and intereſt. On which, removing the factory from Ardrah, he fixed it at Whidah, keeping the king his maſter's preſents to be ſent back to France. And thus the matter ended.

VOYAGE OF THE SIEUR BRUE, TO BISSAO AND BISSAGOS.

IT was in the year, 1697, that the Sieur de Brue, a French adventurer, who ſailed from France on a voyage of trade and diſcovery to the weſtern parts of Africa. He touched at ſeveral places, which as we have already deſcribed, we ſhall not here trouble the reader with all the particular incidents attendant on his voyage to thoſe parts. Let it ſuffice to ſay, that he ſailed from Fort St. Louis up the River Senega, and coming to the reſidence of the prince of the country, found that it abounded in gold, ivory, gum and other valuable commodities; the whole traffic for which, the Moors endeavoured to ingroſs. Here he found the people called Fulips, of whom he reports many wonderful things, in which like many other travellers he appears willing to magnify facts. He alſo viſited the kingdom of Galam, which lies to the eaſt of that of the Fulips, as alſo Bantam; and made enquiries concerning the country of Tombuta, which was ſuppoſed to abound in gold, but ſeems to have met with little ſucceſs in regard to this particular: and the French, according to his account, were quite ſucceſsful in the termination of their diſputes with the Engliſh African company, which ended in favour of the former nation.

One of the moſt remarkable occurrences in the Sieur du Brue's voyages, was an expedition to the Iſles of Biſſao and Biſſagos. The French had traded to the former of theſe places before the above ſcheme was projected: nevertheleſs a flouriſhing commerce, which they bade fair to eſtabliſh there, had ſo far decreaſed, that when our voyager arrived at Senega, he could not find one ſervant of the company that had been at Biſſao.

The firſt deſign that had been formed, was that of ſettling at a place called the Iſle of Bourbon; but, found, on examination, that it was too ſmall for their purpoſe. Therefore dropping their original deſign, they reſolved to ſettle a colony at Bulam. Soon after, the Sieur Cartaing was diſpatched to Biſſao, where he opened an advantageous trade with the natives, and was countenanced by the king himſelf. However, the ſickneſs of his people, and the exactions of the Portugueſe governor, forced this gentleman to return in September, 1699. This miſadventure occaſioned the Sieur Brue to reſolve on going in perſon, to a place where he imagined much good might be done to the commerce of his nation.

Accordingly he ſet ſail from Albrade, where he then was, on the 21ſt of February, 1701, in the company's ſhip the Princeſs, attended by the Eleanor de Rois, as alſo the ſloops Mignion and Irondelle, the Syren bomb ketch, the St. George brigantine, and the bark Chriſtina. About eleven o'clock, this fleet was near the Iſle de Chiens (or Dogs) and in the morning of the 22d, came near the Point Bayna. They ſailed in the morning, with the tide at ebb, and continued their

their courſe till the 28th, when the Eleanor made a ſignal at day-break that ſhe ſaw a ſail. The commander immediately chaced the ſtrange ſhip, which bore away ſouth-ſouth-weſt, in order to gain the channel between the iſles of Caſegut and Carache. In the mean time, the Sieur De la Rue, truſting to a Dutch pilot, had his ſhip run a-ground upon the ſands, but ſo gently that the ſhock was ſcarcely to be perceived, the chace being on ground likewiſe, the boats were immediately manned in order to board her, but ſhe ſtruck without reſiſtance. She proved to be a Dane, commanded by Louis Bateman, who was a native of Dieppe, but had ſettled at one of the Virginia iſles. Having ſecured the prize, all means were taken to get the Princeſs a-float, which deſireable end was accompliſhed on the 4th of March, and they afterwards came to an anchor under Point Bernaſel, in the Iſle of Biſſao, about ſix leagues to the weſtward of the Portugueſe fort.

The ſame night they diſcovered lights at ſea, from whence they concluded that they were ſtrange veſſels upon the coaſt. The next morning, they ſaw two ſhips at anchor to windward of the fleet. The commander hoiſted ſail, reſolving to examine them, and ſoon after perceived that they were Dutch. Upon this, the Princeſs ſhewing her colours, bore up with the largeſt, and fired a gun to bring her to, but as ſhe was prepared to fight, poured above eighty ſhot into her, which had great effect. At the ſame time, the Eleanor gave chace to the other veſſel, the crew of which, at firſt made a vigorous reſiſtance, but, in the end, were obliged to run their veſſel on ſhore, and betook themſelves to their boat for ſafety. The negros breaking looſe took the opportunity of plundering, and the French boats did not arrive time enough to prevent the confuſion. Nor was this all; thoſe on the iſland obſerving that the veſſel was left dry, made an attack on the French with their arrows, but were repulſed with loſs, and ſhe was got off the next tide.

They anchored with their prizes, on the 5th of March at the Portugueſe fort of Biſſao, and though by the diſplay of their colours, the Portugueſe governor could not miſtake them, yet a gun loaded with ball, was fired at them. This ſo much incenſed the Sieur De la Rue, that he would certainly have battered the fort, had not the commander interpoſed.

He ſent the ſloop Mignon, commanded by Mr. Le Cerf, to anchor in a creek, and reſolved, if ſhe ſhould be fired upon, to make a deſcent and attack the place. Accordingly the ſloop anchored ſo cloſe to the fort, that the governor Don Rodrigo de Oliverez de Alfonſo hailed her, to know whence ſhe came, and ordered the captain to come on ſhore. He landed accordingly, and was conducted to this commander, who underſtanding they were French, aſked if the Sieur Cartaing was on board. The other replied, That he would be there ſoon, but did not mention that he was on board, which was really the caſe. The governor then ſaid, That if he ſhould appear there, he muſt return quicker than he came, as no French ſettlement would be permitted on the iſle, nor ſhould any of the natives land there. And the conference being ended, he ordered the captain to go on board, and weigh anchor immediately.

M. Le Cerf returning, related all that had paſſed to the Sieur Brue, who the next morning, ſent Cartaing on ſhore in a boat well manned, with orders to compliment the governor in his name, and alſo to complain of the circumſtance of firing a gun at them loaded with ball. He went accordingly, and found the governor in a calmer humour than before, and willing to make excuſes for the accident which, he ſaid, had happened; but he ſtill inſiſted, that permiſſion could not be granted for the French to ſettle at Biſſao, as it was within the limits of the Portugueſe African company, and he had the king of Portugal's expreſs orders to ſuffer no foreigners to ſettle here. He ſent his alfere, or enſign, to the Sieur Brue that evening, with a meſſage to the ſame effect, and with great offers of his ſervices.

The Sieur Brue anſwered, that he was ſurpriſed the governor, who had reſided ſo long in this country, ſhould forget that the French had always traded to Biſſao, even before the Portugueſe had a fort here: that he ought to make a diſtinction between the French Senega-company and interlopers; ſince this company claimed, by a charter, a right to trade along the coaſt from Cape Blanco to Sierra Leona, excluſive of other nations, as he might ſee by the prizes the fleet had juſt taken: that the governor's beſt way, was to live in good intelligence with the company, and carry on his trade, without moleſting theirs, which could no way prejudice him or his maſter.

As the commander foreſaw, that the Portugueſe governor would uſe all his influence with the king of Biſſao, to obſtruct the ſettlement, he ſent De la Rue and Cartaing, the ſame day, to deſire an immediate audience of that prince. The king received theſe gentlemen civilly, and promiſed in a day or two to come to Biſſas town, and deliberate with his grandees and chief men about the ſettlement the general propoſed. On the ninth of March, the king coming early in the morning to his palace, or houſe near the ſhore, gave notice of it to the Sieur Brue, who immediately, went in proceſſion to wait on him, the march began with two trumpets, and two hautboys. The Sieur de Seganzac, captain, followed with his half pike in his hand, at the head of 25 ſoldiers well armed, with two ſerjeants and two drums. Next came the factors of the company, two and two, before the Sieur Brue, who walked between two captains of his ſquadron; the other officers followed with ſome ſervants in livery; and a body of ſailors, with their cutlaſſes, cloſed the march. The commander was ſaluted by all the cannon of the fleet on his going into the boat, and this diſcharge was repeated on his landing. In this order he advanced to a large tree between the Portugueſe fort, and the convent of St. Francis, where he found the king ſeated on a neat chair, dreſſed in a green mohair doublet, trimmed with ſilver frogs, at the breaſt and ſleeves. A fine cotton cloth ſerved him for breeches. He had on his head a red cloth cap, like a ſugar loaf, with a double row of hemp-cord round the bottom. This laſt is the mark of the abſolute power which he has of making ſlaves. Four of his wives ſat at his feet, and all his grandees ſtood round, but at ſome diſtance. Behind theſe were three tall negros, who played on an inſtrument, reſembling the German Flute. There were ſome elbow chairs placed oppoſite to the king. The Sieur Brue being come near hand, the king aroſe, and they ſaluted each other by ſeveral times ſhaking hands: the king repeating each time, with a ſmiling air, you are welcome. The king and general being ſeated, the former made a ſign to the French officers to ſit near him, and the Sieur Brue began his compliment, which was explained by the company's chief interpreter, who was kneeling between the king and Sieur Brue. The ſubſtance was, That the great reputation of his majeſty's juſtice and equity, together with the fame of his victories obtained over his enemies, having ſpread through Europe as well as Africa, the company who had been likewiſe informed of his kindneſs to ſtrangers, and care to make his people rich and flouriſhing by encouraging trade, and had from time immemorial traded to his dominions, were deſirous of eſtabliſhing a factory, and building the neceſſary ſtore-houſes and magazines for that end, in hopes that his majeſty would give his conſent, and grant them his protection.

The king anſwered civilly, That he thanked him for this viſit, and wiſhed to maintain a good correſpondence with the French; but that with regard to the ſettlement, the commander requeſted, he could determine nothing till he had firſt conſulted his gods, and in preſence of the Portugueſe governor, whom he immediately ſent for, atended by his alfere, or enſign, with ſix negros fuſileers. He called at the Church to pay his devotions, and ſoon after joined the company at the tree. The Sieur Brue took the opportu-

nity

nity of this ſhort interval, to ſhew the king the great advantages of opening a trade, and particularly with the company. The king and his grandees ſeemed to liſten to this diſcourſe with pleaſure; and when the governor arrived, he ſaluted the Sieur Brue complaiſantly, and paid his reverence to the king; who received him familiarly without riſing, but bade him ſit down. After a moment's ſilence, he ſaid to the governor, with a ſevere tone, "You told me the French were come hither to build a ſtorehouſe and a fort. Is this true, or is it your own invention?" He made anſwer, That it was not likely the French would build a factory, without fortifying it in ſuch a manner as to ſecure their effects: that the king of Portugal, his maſter, would never ſuffer this; and that it was contrary to the treaties made with his majeſty and his predeceſſors. The Sieur Brue replied to this, That what he requeſted was no new favour, but only a renewal of the ancient alliance between the two nations: that the unjuſt pretenſions of the Portugueſe, had forced the Sieur Cartaing to retire the preceding year; that the company had no intention to build a fort, or warehouſe of ſtone, but were ſatisfied to truſt their effects to the king's protection; and that it was the king alone, who was maſter of his own iſle, and had the power to do what he pleaſed, without conſulting other people. This anſwer ſeemed to pleaſe that prince, who told the Portugueſe governor, with a ſtern air, he wondered how he could pretend to preſcribe laws to him in his own dominions; that he hoped to ſhew that he was maſter, and would be controuled by none; and that if any preſumed to diſpute his commands, he knew what to do. With theſe words he took the Sieur Brue by the hand, bidding him follow him. He advanced at the ſame time with his wives and chief men, preceded by three flutes, to the ſea-ſide. There he ſtopped beneath a great tree, which the natives regard as a kind of deity, as it holds the images of their gods. The court made a large circle round it, while the king and his wives approached nearer to it. A prieſt of theſe idols, dreſſed in a parti-coloured jacket, like a harlequin, and hung with little bells, preſented the king the half of a large calabaſh full of palm-wine. The king holding it up with the palm of his right-hand, his wives joined theirs to ſupport it. All the grandees, who had room to touch it, did the ſame; and ſuch as had not, ſupported the elbows of thoſe who did. When the king addreſſing himſelf to the divinities that were placed in the niches of the tree, repeated M. Brue's requeſt, and aſked their advice what he ſhould anſwer, M. Brue was in no great pain about the oracle. He had taken care to ſecond a favourable anſwer by the preſents ſecretly given to the prieſt, the king's wives, and the chief grandees. The king having ſprinkled the tree with part of the wine, and poured out the reſt at the foot of it, commanded an ox to be brought, which the prieſt ſacrificed, by cutting his throat; and receiving the blood in the ſame calabaſh, he again preſented it to the king, who ſprinkled it on the tree with the ſame ceremonies: then having dipped one of his fingers in it, he came near M. Brue, and touched his hand, which, with theſe people, is an oath of perpetual alliance.

This ceremony being over, the king took the commander by the hand, and reconducted him to the former place of audience; where, being all ſeated again, and the muſic ceaſed as before, a profound ſilence enſued for ſome minutes: After which, the king addreſſed the Sieur Brue thus: "You are welcome: you have liberty to ſettle a factoty and warehouſes where you pleaſe. I make a perpetual alliance with you and your nation: I take you under my care and protection; and till your houſes are built, I will lend you mine." When the king had done ſpeaking, his wives, his grandees, and all the ſpectators gave a loud ſhout, which was anſwered by a ſalute of the commander's ſmall arms, and the cannon of the ſquadron.

The Sieur Brue roſe, and having thanked the king for his goodneſs and favour, cauſed the preſents to be laid before him ſent by the company. Theſe conſiſted of fine calicoes, liquors, coral, burning-glaſſes, Teleſcopes, and cryſtals, ſeveral fine pair of piſtols, with a ſilver-hilted ſword, in an embroidered belt, which the king immediately put on. The king's wives had alſo their ſeparate preſents, conſiſting of trinkets, and all the people were treated with brandy, which occaſioned new acclamations of joy. The king, at parting, gave his hand ſeveral times to the commander, and ſent his flutes, with ſeveral of his grandees and guards, to conduct him to his boat. The Portugueſe governor, who had withdrawn on hearing the oracle, waited for him by the way, and made him a cold compliment on the advantage he had gained, with many offers of his ſervice. The Sieur Brue anſwered, That the beſt way was for the French and Portugueſe to live amicably together, till the difference ſhould be decided by their ſuperiors in Europe, which the other promiſed to do.

At the governor's earneſt intreaty, Sieur Brue dined with him at the fort, where he was ſaluted with 13 guns. One of theſe being loaded with ball, and levelled too low, broke off the ſtones in the port-hole, which wounded the king's ſon in the thigh, and a nobleman in the arm. Though this misfortune was quite accidental, the negros aſcribed it to deſign, and conceived that the Portugueſe had done it out of ſpite for what happened. They made great out-cries, ran to arms, and began to aſſemble from all parts. M. Brue ſent the Sieur Cartaing immediately to acquaint the king of the truth, and to beg he would give orders to ſtop the tumult. The king heard reaſon, and by his authority ſtopped the diſorder. After dinner, the Sieur Brue accompanied the governor to the convent of the Cordeliers, where they were handſomely entertained, and from thence returned on board.

This fort was but inconſiderable, being only a large ſquare, walled with three ſmall baſtions, the fourth, having never been begun) but neither ditches, covered way, nor paliſadoes. The curtains were ſo low, and in ſo bad a condition, that it was eaſy to walk over them. It had 20 guns, mounted like field-pieces, and 20 fuſils, beſides thoſe of the garriſon, which was, or ought to have conſiſted of fifteen or hired blacks. Only the governor and his lieutenant were whites; the ſerjeant being an old black Creolian of St. Jago.

The Sieur Brue ſet all his men to work the next morning, hiring negros to cut the wood he wanted; and inſtead of ſtraw, covered the roofs of the warehouſe, and the director's lodge, with tiles he brought as ballaſt to his ſhips. He built the walls of a large cloſet with bricks, which he over laid with clay, and white-waſhed it, to prevent the negros ſuſpicion of any deſign. He inſpected the work ſo diligently, that in a month's time, the factory was in a condition not only to receive goods and officers, but alſo to defend itſelf if attacked; for he cauſed loop-holes to be made all round the houſes, placing them ſo as to defend each other; and, under the idea of providing water for the labourers, and remedying any accident by fire, he formed a ditch round the factory, ſix feet broad and as many deep, with a double thorned hedge on the outſide, which prevented all acceſs. He took care to ply the negro workmen well with liquor, that they might make no diſcoveries; all the loop-holes were cloſed on the outſide with clay, and white-waſhed like the reſt.

Afterwards the commander viſited the emperor of Biſſaos at his country-houſe, about a quarter of a league from the Portugueſe fort. This place conſiſted of a number of cottages, like a little village, incloſed with a ſtraw fence, ſo well wrought, that at a diſtance it ſeemed a wall. At the gate were about 20 or 30 ſoldiers, armed with ſabres, bows and arrows; within was a labyrinth of banana-trees, with neat cottages interſperſed here and there for the king's wives and children, his domeſtics and ſlaves. In the centre was a court or area, with an orange-tree in the

middle, ſo high, that its branches covered all the court. The king was ſet under this tree, with about a dozen of his wives and children. He was in diſhabille, having only a pagne round his waiſt, with his high-crowned hat, and his diadem, or wreath of hempen-cord. The princeſſes his daughters had their hair clipped pretty cloſe, and cut out in flowers of different ſhapes. The king, after ordering wooden chairs, like that he ſat on, for the commander and his officers, ſpoke in good Portugueſe, which the Sieur Brue underſtood. He preſented the company with palm-wine, in which he drank the commander's health. After this, pipes were brought, and the converſation laſted three hours.

The iſland of Biſſao is between 35 and 40 leagues in circumference. The proſpect of it is agreeable; the land riſing inſenſibly, from the ſea to the centre of the iſle. This may be diſcovered from the tops of the mountains, or rather hills, between which lie vallies; where the water collecting, form rivulets and ſmall rivers, which diſcharge themſelves into the ſea, after fertilizing the country. The whole iſland is cultivated, and interſperſed with groves of palm-trees, which afford an agreeable ſhade from the heat. Here are alſo very large orange trees, and near the coaſts ſeveral other ſorts, eſpecially man-groves. The inhabitants in general, plant near their cottages bananas, guavas, citrons, and other trees. The ſoil is deep and rich, producing rice in abundance, and maiſe of both kinds, which grows very large. They have alſo plenty of a ſmall grain reſembling maiſe, which is very white, and eaſily reduced to flour: this they eat with melted butter or greaſe, and call it Fonde. They make neither bread nor kuſkus of their maiſe, as they do at the Senega, but eat it roaſted. Some of them indeed, leſs indolent, make a ſort of bread of it called Batango, which is a flat cake, a finger thick, baked on an earthen griddle, as they do the Caſſava bread in America. This bread creates an appetite, eſpecially when eaten freſh with butter. Rice comes here to perfection, and they dreſs it well either with fowls or butter. The commodore ate ſome dreſſed by the king's wives and daughters that was exceedingly agreeable.

The oxen and cows here are very large and fat, and bear a good price; but milk and palm-wine are plentiful and cheap, as well as bananas, guavas, and other fruits. Banana-trees are in ſuch plenty, that one part of the iſland takes its name from them.—— The Portugueſe, who have planted manioc here, make good flour of it, as they do in Braſil. The negros are not fond of it, perhaps on account of the trouble in preparing it, ſome of them notwithſtanding cultivate it.

Their cows ſerve them inſtead of horſes, travelling well, as they have a natural pace: a cord paſſed through a hole made through their noſtrils, ſerves for a bridle, and guides them with a great deal of eaſe.

The inhabitants live in cottages diſperſed all over the iſland; for, excepting a ſort of village that the Portugueſe have round their pariſh church and convent, which were both ſmall, there is nothing like a town in the whole iſland. This latter and its chapel diſcovers a great deal of poverty, but are neat enough. The Pariſh church which ſtands between the fort and convent, is built by the ſea-ſide, juſt like the Portugueſe houſes, that is, of earth, white-waſhed, and covered with ſtraw. It has two or three little bells, but the revenues are too ſmall to ſupport ſecular prieſts. The pariſhioners conſiſted of about one hundred and fifty negro men and women, who call themſelves Portugueſe, though they are quite of a black complexion. The iſle of Biſſao is very populous, and would be much more ſo, if it were not for the frequent incurſions made by the Biafaras, Balantes, and Biſſagots negros, who often infeſt the coaſt; with this difference, that of the priſoners the Biafaras take, they ſell half to the whites, and ſacrifice the remainder to their god China, by way of thankſgiving.

The iſle of Biſſao, and part of the adjacent iſles and coaſts, are inhabited by the papal negros, eſpecially to the ſouthward of Cachoa. They are on ill terms with the Portugueſe, from whom, however, they have borrowed many cuſtoms. Their women have only a cotton pagne or wrapper about their middle, with bracelets of beads or coral. The girls go ſtark naked. Thoſe of quality have their bodies marked with flowers and figures in an agreeable regular manner, ſo that their ſkin appears like a piece of regular wrought ſattin. The daughters of the emperor of Biſſao, were marked ſo, without any other dreſs, but ſtrings of coral, and a ſmall cotton apron. The dreſs of their chief men differs little from that of the common ſort, being only a goat-ſkin paſſed between their legs, and tucked up behind. They carry in their hands a naked ſabre, and two large iron rings; theſe, inſtead of ſtones, have a large plate of the ſame metal, which ſerves inſtead of caſtanets. One of theſe they wear on the thumb, and the other on the middle finger, and by ſtriking them together, converſe without being underſtood by thoſe who have not the method. Theſe negros are excellent boatmen, and reckoned the beſt rowers on the coaſt. They make uſe of pagales, or ſmall wooden ſhovels, for oars, and in rowing, make a ſort of muſic with a chorus or burthen to it, which is not unharmonious.

The Papal negros who inhabit Biſſao, have a language peculiar to the people of that denomination, as well as their particular cuſtoms. Trade has contributed to civilize them much. They are idolaters, but their religion is confuſed; and not eaſy to know in what it conſiſts. Their principal idol is a ſmall figure they call China, of which they can give no account. It is not their only one, each taking ſome deity according to his fancy. Conſecrated trees they regard either as gods, or the abode of gods. To theſe they ſacrifice dogs, cocks, and oxen, which they offer them, after killing them, and ſprinkling the blood partly at the foot or round the tree, and on the branches. They cut the victims in pieces, the king, grandees, and people, each taking their part. The deity has only the horns, which are faſtened to the tree, till they rot or drop off.

It does not appear that there ever have been any civil wars at Biſſao, which is a mark of the people's ſubmiſſion to the prince; the people however are at continual war with their neighbours, whom they invade, as often as they think it for their advantage; ſuch as the Biafaras, Biſſagots, Balantes, and Nalus, who ſurround them on all ſides, either on the continent or adjacent iſles. All theſe people are brave in their way, and fight deſperately when puſhed. They know not what it is to make a ſettled peace, nor have they any great correſpondence with each other. The Europeans are far from deſiring to act as peace-makers amongſt them, which would be contrary to their intereſt, ſince the greater the wars are, the more ſlaves; to the ſhame of human nature!

When the emperor of Biſſao judges proper to invade his enemies, he ſounds his bonbalon, and immediately the officers of his troops repair, with their ſoldiers armed, to the place directed. There they find the king's canoes of war, of which he has a fleet of about 30. They put 20 men in each canoe, the commander of which is reſponſible to the king for his charge; and, if he ſhould loſe his canoe, runs the riſque of his life. The king ſeldom ventures his perſon in theſe expeditions, but he always conſults his images before he undertakes them, and makes a great ſacrifice, of whoſe fleſh none partake but himſelf, his prieſts, and his army.

As theſe wooden gods are generally in the king's intereſt, the anſwer is uſually favourable. They embark then full of hope, and order matters ſo as to reach the enemies country by night. They land without noiſe, and if they find any lone cottages without defence, they immediaely ſet hem on fire; and carry off all the inhabitants and effects to their boats, and

then embark. If the villages prove ſtrong, they are not fond of attacking them, but rather plant themſelves in ambuſcade, on the ways to ſome river or ſpring, and endeavour to ſurpriſe or carry off the natives. On the leaſt advantage of this kind gained, they return in as great triumph, as if they had obtained a compleat victory. The king has for his duties, and the uſe of his fleet, the half of the booty; the reſt is divided among the captors. All the ſlaves in general are ſold to the Europeans, unleſs they are perſons of ſome rank, whoſe friends can redeem them, paying two ſlaves, or five or ſix oxen. The adventurers never fail to make a parade through the iſle, ſhewing their wounds, and carrying their priſoners along with them. They do not uſe them ill like the Iroquois, and other people of North-America, but load them with reproaches, praiſing the victors to the ſkies, and preſenting them with pagnes, and other things, which they ſell for palm-wine to get drunk. They call this ovation; but if, on the contrary, they have, on theſe expeditions, met any conſiderable loſs or misfortune, the priſoners run a great riſque of being ſacrificed, eſpecially if the relations of the perſons killed be of rank, or are rich. Thoſe who are killed on theſe occaſions, are honoured in their funeral obſequies by ſongs and dances to the ſound of their drums. The women, who are the chief actreſſes on theſe occaſions, expreſs their deſpair and grief in a manner capable of inſpiring thoſe paſſions in all who behold them, they tear their hair and fleſh, and ſhriek like furies. When they are tired of this, they give them palm-wine in plenty; this affords them freſh ſpirits to recommence the ſcene, and ſupplies them with new tears, which continue flowing till the body is interred.

The emperor of Biſſao is very deſpotic. He has a ſingular method of making himſelf rich at his ſubjects expence. This is to accept the donation a negro makes him of his neighbour's houſe; of which the king takes poſſeſſion without farther ceremony, and the proprietor muſt either ranſom it, or build a new one. Indeed he has it in his power to revenge himſelf by ſerving his neighbours in the ſame manner, but in this caſe the king loſes nothing, having two houſes inſtead of one.

"When the king of Biſſao dies, his favourite wives, and a number of ſlaves are killed, and buried near the place of his interment, to ſerve him in the other world. After this, the body of the deceaſed king is put into a coffin made of reeds, carried by four grandees to the place of ſepulture. When they arrive there, they throw up the coffin in the air, and let it fall on the great men, who are proſtrated round it, and he whom it falls upon, is acknowledged king: they however confine their election to ſome relation of the royal family. Formerly they had a cuſtom of ſacrificing or burning ſlaves alive, to accompany their chiefs into the other world: but this cuſtom ſeems to be almoſt aboliſhed; the laſt king having only one buried with him, and the preſent emperor ſeems very much bent on intirely deſtroying it. One of his nobles being old and near his end, had choſen three young girls to be buried with him; but at his death, the king ſold them, and gave the money they brought to his heirs.

The emperor has an inſtrument of light wood, before-mentioned, called a Bonbalon, made like a ſea-trumpet, but larger, and twice as long. It has no cord; they ſtrike on it with a hammer of hard wood, and ſay the ſound will reach four leagues. The king has ſeveral of theſe along the ſea-coaſts, and up the country, with a guard to each; and when the king's bonbalon ſtrikes, they repreſent the ſame number of ſtrokes in the ſame tone, and ſo tranſmit his orders through the iſle, which are known by the manner of conveying them. All who diſobey are ſold for ſlaves, which ſevere puniſhment keeps them in awe; and the king turns their diſobedience to his own emolument.

While the factory was building at Biſſao, the Sieur Brue reſolved to viſit the iſle of Bulam, where he had once an intention of ſettling a colony, which was found impracticable, on account of the bigneſs of the iſle. For this end he ſet out with two boats, manned with Goree Lapots, and ſome Papel negros, who had been through theſe channels in their expeditions. He took alſo ſome pilots, whom he intended to leave behind him to examine the coaſts, in order to extend the company's trade. They ſailed out between the iſle des Sorcieres, or of Witches, and Bourbon Iſle; ſteering ſouth, in order to make the eaſt point of the iſle, called by the Portugueſe Formoſa, or the Beautiful. Its appearance is anſwerable to the name, being covered with large trees, except the ſhores, which are low and full of mangroves. The ſoil appears level and rich, but the country is not inhabited, having no freſh water.

The commander had a great inclination to land and examine it, but was obliged to defer it. It is about two leagues long and one broad. They compute the diſtance from the ſouth-eaſt point of Formoſa, five leagues.

In doubling the point of Formoſa, one enters the arm of the great river which ſeparates the peninſula of the Biafaras from the iſle of Bulam. The entry of this channel is a league broad; the ſhores are about on which the ſea breaks with more or leſs violence in proportion to the tides. As the Sieur Brue's deſign was to examine thoſe paſſages, he ſounded as he went on, and found, that between the weſt point of the peninſula of Biafara, and the eaſt point of Formoſa, there was from two and three, to ſeven fathoms water, and it was neceſſary to keep the mid channel, in order to avoid the banks, which contract it conſiderably, till one reaches the north-eaſt point of the iſle of Bulam. In ſounding here, his two boats ran aground oppoſite to each other: the channel between, and the ebb being ſo quick, that they were left dry, and obliged to keep a good guard, and wait the return of the flood to carry them off.

The Biafara negros are very alert at prey; and when they ſee any veſſels or boats on ſhore, ſeldom fail to attack them. On theſe occaſions, they faſten to their feet barks of trees two feet long, and ſeven or eight inches broad, which hinder their ſinking in the ooze, as the Canada ſavages do, to prevent their ſinking in the ſnow. Though the boats were too well manned to fear ſuch enemies, the crew continued under arms, till the return of the tide enabled them to purſue their voyage.

In doubling the north-eaſt point of Bulam, there is a creek or bay about three leagues broad and the ſame depth, in the midſt of which is three or four fathoms water. The banks are covered with mangroves. It is a good retreat for ſmall veſſels in bad weather. From hence to the ſouth-eaſt point, the coaſt is ſafe, and the anchorage good all along, for large veſſels: but it is neceſſary to be well acquainted with the tides, and the conveniences and inconveniences they bring. This the Sieur Brue experienced, for he had ſcarcely weathered the eaſt point, when the tide, which carried him there, turned againſt him, and ſeemed a tide of ebb. He immediately put in for ſhore; and following the example of a Biſſagots canoe, which had moored to the trees, he faſtened his boat in the like manner. In this place they paſſed the night, notwithſtanding their tents were much wetted; and ſuffered greatly by a violent ſtorm which followed, attended with rain, thunder and lightning; beſides irregular currents, which were ſo rapid, that they dreaded being driven from their anchors, and left on the coaſt, for there was no venturing to ſea, the night being ſo dark, nor could they diſtinguiſh the neareſt object, but by the lightning. At day-break the ſtorm ceaſed. The Biſſagots, who had ſpent the night on ſhore, in great pain for their canoe, having obſerved the boats, approached them. The commander made ſigns of friendſhip, and ſpoke to them by his interpreters. On this, three came on board, whom he treated kindly, making them drink, and giving them

them ſmall preſents, which ſoon brought the reſt, to the number of 15. The Sieur Brue having informed them of his deſign of going through the iſle, and hunting by the way, they readily offered themſelves as guides. He took ſix or ſeven of them, leaving the reſt with his boat, under pretence of aſſiſting his men, but in reality as hoſtages for their countrymen's behaviour. They left the place where they had paſſed the night, and doubling the eaſtern point of Bulam, found a great river about a league broad, and of a ſufficient depth for the largeſt veſſels. Here they ſaw plainly the cauſe of the contrary tides and currents they had met with.

The channel or river between the iſland of Bulam, and the peninſula of the Biafaras, make a part of Rio Grande, which ſeparates into two branches at the ſouth-eaſt point of Bulam. Hence it is, that the tide entering by two openings, the flood in the ſouth channel runs ſtrongly to the eaſt, forcing that flowing in by the north channel (which is narrower and ſhallower than the other) to turn back on itſelf, and cauſes theſe rapid, uncertain currents which obliges veſſels to caſt anchor, that they may loſe by the reflux, what they have gained by the flood.

The boats being moored along with the Biſſagots canoe, the Sieur Brue landed with 18 whites, 12 armed Laptots, together with ſeven of the Biſſagots; leaving an officer, with the reſt of his men, to guard the boats, and have an eye on the Biſſagots canoe, and the eight men left in it. When they had marched an hundred yards, and had gotten clear of the woods, which ſurrounded the coaſts, they found a pleaſant country, that ſeemed to have been inhabited, and is ſtill yearly cultivated by three or four hundred Biſſagots, who came here to make their plantations of maiſe, rice, and other pulſe, and return home when their harveſt is finiſhed. The land is pleaſant, riſing inſenſibly for two leagues from the ſhore to the foot of ſome hills, which ſeem as the baſis of ſome larger mountains in the centre of the iſles.

Theſe mountains are neither ſteep nor bare, but are all covered with large trees. Their ſides are very improveable, and the frequent valleys between them are watered by rivulets of good water, which the Biſſagots aſſured the commander, were never dry, even in the hot ſeaſon.

The ſoil is fat, deep, and rich, as appears by the large trees it produces. It abounds with palm-trees of all ſorts. There are alſo green oaks, both ſtrait and crooked, very fit for building ſhips or houſes; as alſo pear-trees of the ſame kind with thoſe in the iſles of America. This iſle of Bulam formerly belonged to the Biafaras, but the Biſſagots their enemies, liking the ſituation, had made ſo cruel a war upon them, that, after carrying off numbers of them into ſlavery, the reſt thought fit to retire to the continent. The conquerors however, have not thought fit to take poſſeſſion of their acquiſition, but reſort hither yearly, to the number of three or four hundred, during the months of February, March, April and May, to make their plantations, and after harveſt return home. If any are found here at other times, as happened now, they are only adventurers, who are come to infeſt the Biafara coaſt, or hunters who come here to kill elephants; one of theſe animals being a good prize to the negros, who, beſides the profit of his teeth, feaſt heartily on the carcaſe. It is this deſtruction prevents theſe creatures from multiplying here as otherwiſe they would do, there being no lions or beaſts of prey to moleſt them.

"Here are alſo on this iſle, birds of all kinds, both ſuch as breed here, and birds of paſſage. The adjacent ſeas are full of fiſh. Tortoiſes, and ſhell-fiſh of various ſorts are plenty; ſo that a man muſt be lazy if he cannot live well here.

The Sieur Brue ſpent four days in making the circuit of the iſle, and examining it. He returned weary to his boat, but very well ſatisfied with his journey, and confirmed in his opinion of the project he had propoſed to the company of eſtabliſhing a colony here like that of the Iſle das Vaccas, or of Cows, on the coaſt of Hiſpaniola. By his beſt computation this iſle of Bulam is eight or ten leagues long from eaſt to weſt; five broad from north to ſouth, and 25 or 30 leagues in circumference. Having ſurveyed it by land, he thought proper to ſail round it, in order thoroughly to know the bays, rocks, ports, and ſoundings of the coaſt. He ſet out with his two boats, well provided with freſh victuals, boiled or dried, taking the ſame courſe he did in coming. He tried the ſoundings, and could find no paſſage between Bulam and Formoſa. It is one continued bank on which the ſea beats violently, if there is the leaſt wind. The Sieur Brue ſent through it the Biſſagots canoe with two pilots, and kept in their place four Biſſagots. Though it was high water, the canoe ſtuck in ſeveral places, and the negros were forced to get into the water, to draw it through the rocks, or a hard kind of ſhoal. The canoe rejoined the commander's boats at the weſt point of Formoſa, where they waited for it, having had a quicker paſſage.

Theſe rocks continue to run from point to point, forming a ſemi-circle to the north-weſt point of Bulam. They found, within two cables length of theſe ſhoals, from eight to ten fathoms water. Purſuing their courſe between the iſle of Bulam, and that of the Biſſagots, which the Portugueſe call the Iſle das Gallinas, or of Hens, from the plenty of poultry there. Here is a channel a league broad, which looks like a ſtreight ſtreet of five leagues long, lying ſouth-eaſt and north-weſt, and has all through it from 12 to 26 fathoms water. Between the banks and ſhoals, which begin at the Iſle of Hens, and continue to a deſart iſle, lying to the eaſt ſouth-eaſt, of Caſnabac (another of the Biſſagots iſles) there is at two cables diſtance, four or five fathoms water.

The ſhoals on the iſle of Bulam, begin two leagues from the north-weſt point. This ſpace forms the weſt road, as commodious and ſafe for anchorage, as that to the eaſt. The banks or ſhoals appear again, and form a right angle, two leagues diſtant from the point of the iſle, with a line winding back, which terminates at the ſouth ſouth-eaſt point. Between this point and the rocks, and that of Tombali on the main, inhabited by the Nalus negros, lies the largeſt branch of Rio Grande, which was every where from 20 to 30 fathoms water. The Sieur Brue entered this branch between the point of Nalus and that of the three fountains. In this place it is two leagues broad; and after running a large ſweep to the ſouth, it takes a turn, and runs north-eaſt, till it is divided in two branches by the iſle of Biſaghe.

All this country, on both ſides of Rio Grande, is well peopled. In the night the French commander heard their drums beating on each quarter, whether out of diverſion, as is uſual, or that they ſuſpected his boats, and did it to ſhew they were on their guard. The banks of Rio Grande are covered with large trees, which induced the Portugueſe to come hither and build their veſſels. Amongſt theſe there is a tree called Miſheri, of which they make planks, which, beſides their being eaſy to work, are free from the worms, not only on this coaſt, where they are ſo pernicious to ſhips, but in different parts of Europe, Africa and America, whither they have been carried. The unctuous ſap, which this wood abounds with, and is extremely bitter, is what, in all appearance, ſecures it from theſe worms. The trees do not grow very tall, ſeldom above 20 or 22 feet high; but they are very large in the trunk.

The banks of the rivulets here, and the marſhy grounds, produce certain trees of a middle ſize, reſembling in wood and leaves the American mahot, the bark of which ſerves for hemp to caulk the ſhips. Inſtead of pitch, which they often want, they uſe palm-oil, mixed with quick lime, and boiled to ſuch a conſiſtence as neceſſary. With reſpect to cables, the country furniſhes certain reeds or bamboos, which grow in the marſhy grounds; theſe they cut, and leave to ſteep in water, after which, beating them, to ſepa-

the groſſer part, they weave them into good ropes. All they want here is proper wood and maſting; the miſheri being too ſhort, and the mangrove and palm too heavy. All the other trees are too brittle, ſo that they are forced to uſe the palm, and to prevent the ill effects of its heavineſs, they are obliged to have no top-maſts.

[It is ſtrange, as the country ſo eaſily produces cocoa-trees, that they make no uſe of the huſks to make ropes and tow, as they do in the Eaſt Indies.]

Having paſſed the iſle of Biſaghe, which is perhaps the country whence the Biſſagots take their name, when they had proceeded about a league, he found a ſmall river on the left, in which entering, after a league's ſailing, he reached Ghinhala, inhabited by Portugueſe, who have been ſettled here, from father to ſon, for a long time. Here he found a ſmall Engliſh veſſel, belonging to Sierra Leona, commanded by one Glick, who was owner and captain. He was of the Romiſh perſuaſion, and had married a rich negro woman there, with whom he got, beſides money, a large iſle in the river of Sierra Leona.

The village is ſituated on the right ſide of the river of the ſame name; which alſo gives its name to the kingdom, ſometimes called the kingdom of the Biafaras. This kingdom is conſiderable by the number of its Portugueſe inhabitants, white, black, tawny, and mulattos, who all ſeem to live at their eaſe, and have tolerable houſes: their antichamber, where they receive their viſits, being pretty well furniſhed. No ſtrangers ſee beyond this, in a country where the men are as jealous of their miſtreſſes as their wives, and generally keep both under the ſame roof; except in this article, they are very civil and complaiſant.—— The Sieur Brue employed two days in returning theſe viſits, and inquiring into the ſtate of trade here. The third day early, he ſet out, attended by twenty of his men, well armed, and ſeveral Portugueſe, who waited on him out of reſpect, and went a league to ſee the king of Ghinhala, or Biafaras. This prince being known by both titles.

The king, informed of his approach, waited his coming, beneath a tree before his tapada, or incloſure. He had round his waiſt a black pagne, with a black under coat, in the Portugueſe faſhion, a cloak of the ſame colour, black pumps, without ſtockings, and a great black hat on his head, ſo that he was all over black, except his teeth, and the whites of his eyes.

He received the Sieur Brue's compliments civilly, as well as his preſents, and touching his hand ſeveral times, aſſured him, the French ſhould be welcome to his dominions; that he would protect them, and trade with them preferably to the other nations; that he gave them liberty to ſettle where they would, and erect warehouſes and incloſures as they pleaſed. And the Sieur Brue mentioning his deſire to make a ſettlement at Bulam, which he knew belonged to the king, his majeſty ſaid nothing could be more agreeable to him than to ſee the Biſſagots, his enemies, driven from that iſland; that he would make the French a preſent of it with all his heart, and if it was too little, he would give them lands near the Three Fountains, ſufficient for their ſettlements. After ſeeing the Sieur Brue's preſents, he expreſſed his gratitude, ſent for palm-wine, drank to the commander, and obliged him to pledge him. The king took ſuch pleaſure in the Sieur Brue's converſation, that he ſeemed uneaſy he would not ſtay a few days with him at his court, where he regaled him after the country way.

After the repaſt, the Sieur Brue viſited the villages, which is large, and the country round is delightful, on account of the banana, and other trees, which ſurround the houſes, with incloſures of thorn and green reeds. The village is ſituated on the bank of a middling river, which comes from the eaſt, and falls into that of Curbali. The ſoil here is rich, and well cultivated, and in other hands, might be greatly improved. There is a good trade for wax, ſilver, and ivory, and a great number of elephants, which, notwithſtanding, the continual perſecution of the negros, multiply exceedingly.

In the evening, the Sieur Brue returned to Ghinhala, and reſted there the next day; the day after he went ſix leagues up the place, where the conveniency of wood has induced ſeveral European traders to build veſſels. There was then on the ſtocks a ſquare-ſterned veſſel, of about 100 tons, as there is nothing wanting here but maſting. Moſt of the villages along the river are inhabited by Portugueſe, ſometimes intermixed with negros, from whoſe huts their houſes are eaſily diſtinguiſhed by their ſhape and bigneſs. The trade here, beſides wax, ſlaves and ivory, produces large dried hides, cotton, ſome oſtrich feathers, gum of different kinds, and gold, which comes from the inland to the ſouth and eaſt, but from whence is not yet known.

The French commander returned to Biſſao, after making the neceſſary obſervations for a ſettlement advantageous to the company. Here he found his buildings in good forwardneſs, and while they were finiſhing, ſailed in the Corvettes, to viſit the iſle of Biſſagots.

"The iſles of Biſſagots (ſays the author) are 13 or 14 in number, the moſt conſiderable and frequented of which are Caſnabac, Ilhas das Gallinas, Caſegut, Carache, Aranghena, Paſagaya, or the Iſland of Parots, Formoſa, Babachoca, Baſaghe, Waranghe, and ſome others leſs known, becauſe not frequented.—— Each of theſe iſles is governed by a chief called a King, or who has at leaſt the authority belonging to that title. Theſe chiefs are independant of each other, and frequently at war, but they unite in making war on the Biafaras on the continent, whom they have driven from the iſle of Bulam, as has been obſerved. They have canoes large enough to carry 25 or 30 men, with proviſions and their arms, which are ſabres and arrows.

"The negros of theſe iſles are large, ſtrong and robuſt, though their ordinary food is but ſhell-fiſh, palm-oil, and palm-nuts, called Chevaux, chuſing rather to ſell to the Europeans their maiſe, rice, and other pulſe. They are pagans, and very cruel to their enemies. They cut off the heads of thoſe they kill in war, and after carrying them up and down in triumph, they ſkin them, drying the ſcalps and hair, with which they adorn their houſes, as a mark of their victories.

"They are paſſionate lovers of brandy; whenever a ſhip brings any, they ſtrive who ſhall be the firſt, and ſtick at nothing to get it. The weaker becomes a prey to the ſtronger. They forget the laws of nature; the father ſells his children, and if they can ſeize their parents, they ſerve them in the ſame manner. Every thing goes for brandy.

"Formoſa is the eaſternmoſt of theſe iſles, but deſert and uninhabited. The iſles das Gallinas and Caſnabac, lying at the head of the banks and ſhoals, which ſurrounds this cluſter of iſles, are fertile, well peopled, and have plenty of water. The ſhores abound with all ſorts of fiſh, and if the natives were a little more induſtrious in cultivating their lands, they might be great gainers; for all theſe iſles in general are good ſoil, and capable of maintaining large colonies.

The iſle of Caſegut is one of the moſt conſiderable. It is ſurrounded with banks and ſhoals, except at the two points, lying north eaſt, and ſouth weſt, where ſhips may ride in ſafety. It is reckoned ten or twelve leagues from the point of Bernafal, in the iſle of Biſſao, to the north-eaſt point of Caſegut, and but five to St. Martin. The natives of Caſegut are, without diſpute, the moſt civiliſed of all theſe iſlanders, which is owing to trade.—

When the fly-boat was moored, the Sieur Brue hoiſted his flag, and fired a gun; ſoon after, three men appeared on the ſhore, and made a ſignal to come on board. The boat went and brought them off. One of theſe was a chief of the iſle, and a near relation of the king, accompanied with two of his

kinſmen. He had only a pagne round his waiſt, and a hat. His hair was greaſed with palm-oil, which made it quite red. He ſaluted the French commander civilly, pulling off his hat, and taking him by the hand, by the interpreter, welcomed him to the iſland, and inquired after the Sieur de la Fonde, who had been his particular friend.

While the commander was treating his friend with brandy, a canoe approached with five negros, one of whom came on deck, holding a cock in his left hand, and a knife in his right; after kneeling a minute before the Sieur Brue, without ſpeaking, he roſe, and turning to the eaſt, cut the cock's throat, and placing himſelf on his knees, let ſome drops of blood fall on the Sieur Brue's feet; he did the ſame to the maſt and pump of the ſhip, and returning to the commander, preſented him with the cock. That gentleman ordering him a bumper of brandy, aſked him the reaſon of this ceremony. He replied, That the people of his country looked on the whites as the gods of the ſea; that the maſt was a divinity, that made the ſhip walk, and the pump was a miracle, ſince it could make water riſe up, whoſe natural property was to deſcend.

The Sieur Brue, after regaling the negro grandee, and making him a preſent, ſent him on ſhore. Next day he returned his viſit, and was met on his landing by this lord, who conducted him to his habitation, about 300 paces from the ſhore, built in the Portugueſe way, well white-waſhed, with an open portico before it, ſurrounded with lofty palm-trees, and furniſhed with neat wooden chairs and ſtools. After ſome converſation, and a regale of palm-wine, he walked to a building about 50 paces from his houſe, which the commander, to his great ſurpriſe, found to be a chapel, with an altar, benches, and a bell of about thirty pounds weight, faſtened to a tree near the door. He cauſed it to be rung, and told the Sieur Brue, he built that chapel for the uſe of ſuch Chriſtians as ſhould come thither; adding, that though he was no Chriſtian, he loved them, and that if any prieſt would come and live with him, he ſhould want for nothing. After this, they went together to the king, who reſided about a mile from thence, and received the commander graciouſly. He was a venerable old man of about ſeventy, his beard curled, and almoſt white, his eyes and mouth handſome, and his air majeſtic. He had only a pagne about his waiſt, and a hat on his head, with which he ſaluted the commander, taking him by the hand, and repeating ſeveral times, You are welcome and offered him free liberty to ſettle on his iſland. The Sieur Brue made him a preſent of ſome curioſities, and two ankers of brandy. The king taſted it, and found it much beyond the Portugueſe rum, which is often adulterated with water. The king's houſe was not ſo commodious as that of his kinſman, but it had chairs and tables. He kept, however, the company to dinner, and treated them with fowls boiled in rice, veniſon, beef, and mutton, tolerably well dreſſed. His palm-wine was excellent; and the commander's brandy was not ſpared; after which the king fell to ſmoking, and made the Sieur Brue ſmoke in the ſame pipe, the tube of which was near five feet long, and the bowl big enough to hold a quarter of a pound of tobacco. It was adorned with ſeveral rings and ornaments of pewter. The king preſented the Sieur Brue with two cocks, which, amongſt the negros, is the higheſt mark of diſtinction and reſpect, the cock being a bird conſecrated to their deities.

The iſle of Caſegut is near three times as long as it is broad. The land is rich and good, and, as far as the Sieur Brue ſaw, well cultivated. It abounds with polon-trees, lataniers, palm and orange trees, as well as maiſe, rice, pompions, peaſe, and other kinds of pulſe. There were near the king's houſes forty or fifty negros armed with ſabres and arrows, whom the Sieur Brue judged to be his guard. Caſegut, Carache, Caſnabac, and las Gallinas, are the only Biſſagot iſlands, where foreigners may trade ſecurely. At the others, it is neceſſary to be on the guard, and not venture on ſhore, and the Portugueſe have experienced this, even in trafficking with them on board. Strangers cannot be too cautious, eſpecially in the night. Above all it is requiſite to keep a ſtrict guard, and anchor ſo, that the veſſels are not left dry at the tide of ebb.

"If the natives of theſe iſles have ſlaves to ſell, or other goods, they bring them in canoes; and it is then proper to have the crew under arms on deck, and the guns pointed, and to ſuffer them to enter only one at a time. Notwithſtanding theſe hazards, there are uſually three or four hundred ſlaves bought here every year, from fifteen to twenty bars a head, and the trade, if rightly managed, is very improveable. The goods proper for the iſles are, yellow amber, baiſe, cloth, ſerges, red and yellow; brandy in large quantities, braſs and copper bells, and fowling-pieces, and yellow worſted, cotton cloths or pagnes; pewter plates, braſs baſons, linen of different ſorts, with ſome few glaſs beads, red and black.

"In 1687, the Sieur de la Fonde, who traded here, was plundered of ſome goods by the natives. While he meditated revenge, there put in here a French man of war, called the Lion, commanded by the Sieur de Montiſier; he propoſed to this captain to pillage the iſle, for which end they landed 200 men, without reſiſtance. The king, called Dukermenay, who found himſelf ſurrounded in his houſes, choſe to burn himſelf rather than ſurrender. The inhabitants fled to the woods and mountains; ſo that of two or three thouſand natives, the French could take but ten or twelve. This unlucky enterpriſe made the Sieur de la Fonde afraid of loſing all trade with theſe people; but he found means to manage matters, ſo as to perſuade them he had no hand it, but that it was done by pirates.

"The natives, eſpecially thoſe of faſhion, rub their ſkin with palm-oil, which makes them quite red. The women and girls have nothing about their waiſts but a thick kind of fringe made of reeds, which drops to their knees. In cold weather they put another of the ſame kind round their ſhoulders. They have, beſides, copper and pewter bracelets on their arms and legs.

"In general, the natives of Caſegut are well ſhaped, have good features, of ſhining jet black colour, and have neither flat noſes, nor broad lips. They are ingenious and lively, and were it not for their indolence might be eaſily taught arts; but they are ſo impatient of ſlavery, eſpecially out of their own country, that it is very dangerous to have them on board."

At his return from Caſegut, the Sieur Brue found his building almoſt finiſhed. The ditch was not quite made, but the hedge was planted round it, and he judged a night or two would bring it to perfection.

His firſt viſit was to the king or emperor, who received him with great marks of friendſhip and aſſurance of his protection to the company. His majeſty's wives and grandees made him many offers of their ſervice. He had reaſon, both now, and at his return to Africa in quality of director in 1723, to believe them ſincerely in his intereſt. He went next to viſit the Portugueſe governor, with whom he lived in as good underſtanding, as could be ſuppoſed between two commanders of oppoſite intereſts. Finding the Sieur Brue intended to lodge in his new factory, he earneſtly preſſed him to take an apartment in the fort. The commander excuſing himſelf on the diſtance between the fort and his building, the governor offered him the Franciſcan convent, which he declining on the ſame account, Don Rodrigo preſſed him to accept a warehouſe belonging to the Portugueſe company, which lay convenient; this he accepted of, and the governor had it immediately fitted up for his reception. The Sunday after, while the Sieur Brue was at maſs with the governor, who had invited him, he obſerved, that a picture over the altar bore the arms of the French company; he took notice of it

to the Portugueſe governor, as a proof, that his nation had a ſettlement here, either before, or at leaſt as early as the Portugueſe, ſince the picture ſeemed as old as the altar, or church. The governor replied he could not pretend to decide that matter, but he aſſured him that a king of Biſſao had ſent his ſon to the king of Portugal to acknowledge him for his ſovereign; and that this prince made a treaty, whereby he gave the Portugueſe the privilege of trading here, excluſive of other nations, and allowed them to build a fort. But this account appeared a fable to the Sieur Brue, becauſe the governor could neither tell the time when this happened, nor the names of the kings of Portugal or Biſſao, concerned in this tranſaction, nor even the date of the erection of the fort. All theſe rendered the governor's account very doubtful, and no way hindered the French commander from purſuing his ſcheme of ſettling a trade here, ſo as to ruin that of the Portugueſe; as it happened ſoon after. Theſe two gentlemen, however, kept a fair outward correſpondence, viſiting each other, dining often together, and making preſents. But notwithſtanding theſe civilities, the Portugueſe underſtanding that the Sieur Brue was about to depart, ſent him his ſecretary with a formal proteſt againſt the French ſettlement, in the king of Portugal's name. The Sieur Brue returned this compliment by a counter-proteſt, dated on board the Ann in Biſſao road, April the 16th, 1700. This paper war, however, no way hindered the two chiefs from keeping up a good intelligence together, and to agree to refer their differences to their ſuperiors in Europe.

The king of Biſſao being informed, that the Sieur Brue was preparing to depart, and intended to demand an audience of leave, came, April the 20th, with all his court, to viſit him in his new factory. The commander met him at ſome diſtance, and ſaluted him with all the guns of his fleet, which was ordered as cloſe in ſhore as poſſible, ſhewing him all honours, except ſuch as might be made precedents of. The king aſked him, if he was ſatisfied with his ſettlement, offering to change it, or augment it as he pleaſed. The commander expreſſed his thanks for the king's favour, aſſuring him, that both the company and himſelf relied on his protection. He made the king ſome preſents, particularly a cap of crimſon velvet, embroidered with gold, which his majeſty immediately put on.

On the 26th of April, this year the Sieur Brue went to take his leave of the king, who was then at his country ſeat. He ordered chairs for the commander and his company, beneath a tree, near the gate of his Tapade, or incloſure. He appeared ſoon after, having over his pagne a ſcarlet cloak, lined with calico, with a grey hat on his head. The Sieur Brue thanked him for all his favours, preſenting the Sieur Cartaing as chief factor, and the ſix others he left at Biſſao, deſiring him to grant them his protection. The king replied, he might depart with content, for that he took them and the factory under his immediate protection, wiſhing him a happy voyage, and deſiring he might hear from him often.

The ſame day the king ſent the greateſt part of his courtiers and his wives, to compliment the commander, and carry him proviſions for his voyage. They entertained him with a dance to the king's drums; and this monarch, ſo haughty to other nations, on all occaſions it is ſaid, ſhewed the Sieur Brue an uncommon degree of reſpect, and complaiſance.

The commander left the factors a ſurgeon, two interpreters, and ſome Laptots; likewiſe a bark, a brigantine and a ſtout boat, with ſailors, pilots, and all things neceſſary. In the factory he put arms, ammunition, and merchandiſe for trade, with European proviſions, leaving the Sieur Cartaing full inſtructions how to proceed. He particularly gave him charge to diſcover the adjacent coaſts, and in caſe the Portugueſe ſhould quit their fort, as was reported, immediately to take poſſeſſion of it, before the negros could demoliſh it.

He went to the fort to take his leave of the Portugueſe governor, on the 13th of April, who, as before, received him at the outer gate, his garriſon being under arms, and the drums beating a march, and waited on him to the ſhore.

Notwithſtanding the civilities of the governor of Biſſao, and his promiſes of waiting the deciſion of his ſuperiors in Europe, he employed underhand, all poſſible artifices to engage the Sieur Brue to pay the 10 per cent. he claimed on all goods imported here.—— The Portugueſe governor at Cachao wrote to the commander on that head, ſhewing him it was a ſure way to ſell more goods in 15 days, than he could otherwiſe do in a year. He was offered a conſiderable abatement in the duty; and repreſented how much the Sieur de la Fonde had gained by his trade, becauſe he made no ſcruple of paying theſe duties: adding, that as his Portugueſe majeſty had given him a licenſe to trade with ſtrangers, he wiſhed the French would ſeize this favourable opportunity, before he offered it to the Engliſh and Dutch. The commander replied, that he would immediately acquaint the French company with his propoſals, though it appeared both prejudicial to their intereſt, and ſubverſive of their privileges; that the Sieur de la Fonde's example was no reaſon why they ſhould recede from their rights, becauſe he acted like a private trader, only for his own benefit.

In the mean time, as the Portugueſe trade here was declining ſo as not to be able to defray the expences of a governor and garriſon, they withdrew their ſtorekeeper, and the governor of Cachao adviſed the king of Portugal to abandon and raze the fort. The Sieur Brue gave the French company notice of this, who wrote to the preſident Rouſſlee, then ambaſſador at the court of Portugal, and the Sieur Brue arriving at Liſbon in 1703, they jointly endeavoured to engage the Portugueſe miniſtry to ſell the fort, but they choſe to demoliſh it, which was executed in October the ſame year.

The convent was Franciſcan, ſometimes poſſeſſed by Cordeliers, ſometimes by the Capuchins, and at others by Recollets, (all of that order.) The pariſh was governed by ſecular prieſts ſent here from St. Jago. When theſe failed, which often happened, the Franciſcans ſupplied their places. There were three on the ſpot when the Sieur Brue was here, but although they were zealous to exceſs, yet they were preparing to retire from a field ſo barren of proſelytes, occaſioned by the bad example of the whites, their debauchery and vices being (as the author ſays) an invincible bar to the converſion of theſe negros.

However, they had the pleaſure to baptiſe a negro of ſome diſtinction, who ſoon after renounced his new religion, and died without any ſigns of repentance. His relations brought the body to be buried at the church, becauſe the deceaſed had been baptiſed; but the Recollets, who were then curates, refuſed to bury it, on account of the apoſtacy and final impenitence of the deceaſed. This occaſioned a tumult, which was at laſt appeaſed. The friends buried the corpſe in the church in ſpite of the prieſt, who forbore divine ſervice, looking on the church as prophaned. This ſevere conduct, which was judged ill-timed, drew on the fathers the public odium. The grandees loaded them with injuries, and would have expelled them the country, but that they were under the protection of the king of Portugal. At laſt the viſitor (or vicar-general at Cachao) being informed of the affair, and fearing ill conſequences might attend it, ſent a prieſt to Biſſao, with full powers to ſettle matters.

The expedient he fell on was, to take up the body ſecretly by night, and inter it elſewhere, after which he re-conſecrated the church with the ſame privacy. But this ſtep did not ſatisfy the Recollets; they publiſhed a manifeſto to juſtify their conduct, and went ſo far as to condemn all Chriſtians, who kept other Chriſtians, though blacks, as ſlaves; alſo to thoſe who ſold ſlaves to the Engliſh or Dutch, with whom they

they were ſure to enjoy neither religion nor liberty, tho' baptiſed. They inveighed in too open a manner, taxing their countrymen with hindering, by their irregularities, the progreſs of the Romiſh faith. Copies of this paper they ſent into Spain and Portugal, and carried it with them to Martinico, whither they were obliged to ſail in a ſhip belonging to the French company, in order to get a paſſage thence to Portugal, having ſo exaſparated the negros and Portugueſe at Biſſao, that it was not ſafe for them to ſtay longer. Their Manifeſto was as little reliſhed at Martinico, the governor of which deſired that they would keep it to themſelves, and not talk of thoſe matters while they ſtayed in that iſland.

The Sieur Brue, when he undertook a voyage to Geſves, arrived there juſt at the time that Captain Manuel Alvas, governor here for the king of Portugal, died. He was a Chriſtian negro, knight of the order of Chriſt, and the moſt generous perſon in the country, a quality rare amongſt the negros, but which he carried ſo far, that, beſides the kind reception he gave all ſtrangers, no perſon left his houſe without a preſent of one or more ounces of gold, according to his quality.

When firſt the Sieur Brue landed at Geſves, he went to the houſe of the deceaſed, to pay his compliments of condolance to the widow and children. As ſoon as his retinue appeared, they gave a ſignal to the mourners, who began their lamentations, as if the perſon was juſt dead.

The Portugueſe and negros uſe much the ſame ceremony on the death of the chief perſon of a family. It is hard to tell which has borrowed from the other. As ſoon as a principal perſon dies, all the women in the neighbourhood aſſemble; and when the number is not ſufficient, they ſend to him others. Theſe women attend the widow or children of the deceaſed; and, when any ſtranger comes, begin their lamentations in a mournful tone, weeping in cadence, and ſhewing an affliction beyond all conſolation, to thoſe who do not know that it is all grimace. At the end of each crying ſcene, theſe mourners are ſerved with brandy, and palm-wine, which they drink as chearfully as if they had been laughing all day. Thus they divert themſelves till a new company arrives, and then the ſorrow begins again.

The children of Captain Manuel in deep mourning, attended by their relations, ſat on mats. After the Sieur Brue had made his compliments, he ſat down by them, and for a while there was a profound ſilence. After this, palm-wine was ſerved up, and after drinking a few cups, the converſation turned on news, while the mourners, who were in another room with the widow, cried their beſt, drinking in the interval, and repeating the great actions of the deceaſed. The Sieur Brue roſe, after aſſiſting an hour at this doleful ceremony. The relations waited on him to the door, but the children ſat ſtill on their mats; the ceremonial cuſtoms forbidding them to riſe or quit their mournful poſture, lying half ſtretched, their heads reclined on their arms, except when they drank.

This ceremony is obſerved and renewed at every new viſit, and when much company comes, they are obliged to drink freely in order to cry heartily. The Sieur Brue was invited to the burial of Captain Manuel, at which all the Portugueſe aſſiſted, in long cloaks, with their long ſwords, and poinards, as already deſcribed. Before the deceaſed governor's houſe were eight field pieces or carriages, which were fired as the proceſſion ſet out; a gun fired from time to time as it paſſed, and a whole diſcharge made when the ceremony was over, when the company returned to the houſe, and were treated with palm-wine and brandy, after which they retired.

This captain Manuel always kept an apartment for the French factors, who came to Geſves; but the ſtate of his family did not permit the Sieur Brue to expect ſuch an offer. A Portugueſe officer, called Don Franciſco Colleo, ſent to intreat he would accept a lodging joining to his houſe. The Sieur Brue embraced the offer, but thought it firſt proper to viſit his hoſt. Coming near the houſe, he was ſurpriſed to hear a man, who bawled as loud as his ſtrength would permit. If any other voice had been joined, the commander would have thought ſome perſon was dying here. Entering, he found a tall lean man lying in a hammock, who was making a forced penance for the ſins of his youth. His wife, who was a negro, was polite, handſome, and very agreeable in converſation. She had fitted up, in the beſt manner ſhe could, the apartment deſigned for the Sieur Brue;——ſhe had ſet hammocks up, chairs, mats, a table, wood, and water, and prudently left his own ſervants to dreſs his ſupper. Luckily he had brought with him proviſions and linen, which are ſcarcely poſſible to be had here. It requires a good deal of trouble and ſearch to get a goat or a fowl. The Portugueſe, though ſo long ſettled in a fertile country, ſo eaſily improveable, yet want even the neceſſaries of life, living like the negros, or rather worſe. This general want of proviſions keeps them very temperate, their common food being the fleſh of river horſes, a meat which indeed has the look of beef, but a wild fiſhy taſte. They ſeldom have any wine but that of the palm, or any ſpirits but rum; which is ſo ſtrong, as well as of ſo diſagreeable taſte and flavour, that, in the Leeward Iſles, none but the negros, or common people will drink it.

Hunting might eaſily ſupply their want of domeſtic animals and poultry, the country abounding with monkeys, antelopes, deer, and other game, as well as birds of all kinds in plenty; but this exerciſe is too violent for the people, who prefer ſitting ſtill and doing nothing to all other pleaſures. The Flamingo birds are here in great numbers, and are ſo reſpected by the Mandingo natives of a village half a league from Geſves; that they flock in thouſands. Theſe birds are of the ſize of a Turkey hen, with long legs: their plumage is of a bright red, with ſome black feathers intermixed. They are but indifferent meat, unleſs one is accuſtomed to it; their fleſh taſting both oily and fiſhy. They make a noiſe that may be heard a quarter of a league. The French killed ſome few, who had ventured out of their aſylum; but were forced to hide them in the graſs, for fear of the negros, who would not have failed to have revenged the death of their conſecrated birds. On ſeveral places of this coaſt, eſpecially at Geſves, are found a ſort of water birds, of the gooſe or duck kind, called Spatula birds, from the end of their bills, reſembling that inſtrument of ſurgery. Their fleſh is better than that of the Flamingo.

The Rio Grande lies ten or twelve leagues to the ſouth of Geſves. There are between them two ſmall rivers, not much frequented. According to the wars which theſe people have with each other, and their ſucceſſes, the ſlave trade here is better or worſe. There is alſo ſome trade for ivory, wax, and gold.

In going up the Rio Grande, about eighty leagues above the mouth, there lies a nation of negros who love trade, called Nalus. Here is to be had a great deal of ivory, rice, maiſe, and ſlaves. Sixteen leagues from the Rio Grande, to the ſouth, lies Rio Nongue, where there is an annual trade for 300 quintals of ivory, at eight or ten bars the quintal, and about 100 ſlaves, from 10 to 15 bars a head. Rice is here excellent and cheap. Sugar canes and indigo grow naturally. They uſe this trade from the month of March to Auguſt, in order to have the advantage of the ſouth winds, as they return.

The country near Nongue produces a ſalt which the Portugueſe highly eſteem, as an excellent counterpoiſon. Its virtues (as they ſay) were diſcovered by an elephant. The negros, who hunt theſe animals here, ſhoot them with poiſoned arrows, and when the beaſt falls, they cut out the place the arrows ſtruck, and after diſembowelling the body, eat the fleſh. An elephant being wounded thus, the negros were ſurpriſed to ſee him walk on and feed, without diſcover-

ing

ing any marks of pain from his wounds. They knew not what to make of this prodigy, when one of them obſerved that the elephant went to the river's ſide and took up ſomething in his trunk, which he eat. They immediately went to ſee what it was, and found it a white ſalt, taſting ſomething like alum. Upon this they wounded another elephant, and obſerved that he cured himſelf in the ſame manner. The Portugueſe, who are always on their guard againſt poiſon, made ſeveral trials of this ſalt, and found it to be the moſt effectual and univerſal counter-poiſon yet diſcovered. Whether the poiſon be received inwardly or outwardly, a drachm of this ſalt diſſolved in warm water is aſſerted to be a ſpecific cure.

There are five rivers between thoſe of Nongue and Sierra Leona, viz. of Poughe, Tafali, Samos, and Caſſares. The people inhabiting this coaſt, are the Zapez, the Fulis. the Coholis, and the Nalus. The Zapez are divided into four tribes. All other nations are idolaters, and yet acknowledge one Supreme Being, though without paying him any divine worſhip, on account of his goodneſs. They are very ſkilful in poiſoning their arrows, ſo that a ſimple ſcratch of them is often mortal in half an hour. They underſtand counter-poiſons and ſell them. The chief trade here is for ivory, and a certain fruit called colos, which are much uſed by the Portugueſe to reliſh their water, as hath been before obſerved.

The Engliſh have a ſmall fort on the river of Sierra Leona from whence they trade up the country, even as far as the Fulis, to the Eaſt, from whom they get ſlaves, ivory, and even a good deal of gold; but it is not known where the laſt is produced, or from whence it comes. This river limits the conceſſion to the French Senega company, to the ſouth.

VOYAGE FOR THE DISCOVERY OF THE LAKE OF CAYOR, IN 1714.

THE Lake of Cayor, is about fifteen leagues from St. Louis. It is partly formed by the inundations of the river, to the north of which it lies; but when the floods abate, a great part of it remains dry, and then the Moors and Negros, who inhabit the banks, plant their millet and rice, which thrive wonderfully in theſe grounds, enriched with the ſlime of the river. This lake has not been much frequented by the French, at leaſt for forty or forty-five years paſt; ſo that little can be ſaid of it, but from the report of the Moors and Negros, whoſe authority is not wholly to be relied on. They ſay, it is of ſo great an extent, that thoſe who ſail in it are forced to make uſe of the compaſs. Although this particular may admit of controverſy, yet it is agreed to be much larger than that of Panier Fuli. Formerly a profitable trade was carried on here. The country round it is inhabited by the Moors, and the Negros, ſubject to the Siratic.

The different changes in the oompany having occaſioned the loſs of this trade, the Sieur Chambonneau, director in 1693, intended to revive it, and for that end ſent out a bark, with a factor and goods. This officer entered the lake, not without difficulty, the entrance being obſtructed with reeds, ſo ſtrong in ſome places, as to render a paſſage impoſſible. Having ſurmounted theſe obſtacles, and entered the lake, he took a ſudden fright on ſeeing a body of Moors armed on ſhore, at a village where he intended to anchor; ſo that he returned as he came, and gave ſuch terrible reports, that the director could find no perſons willing to undertake the voyage a ſecond time.

The Sieur Brue coming into the direction in 1697, reſolved to attempt the renewal of this trade; but his affairs did not permit him to do it till October 1699, when he ſent a bark, well armed, under a ſkilful factor, with a proper cargo, and preſents for the chief Moors. He had the precaution to engage previouſly in the company's intereſt, the chief Marbuts, or prieſts, who had promiſed to engage the chiefs of their nation to conclude a treaty of commerce. This bark arrived ſafely in the river of Cayor, which is a natural canal, by which the waters of the lake communicate with the Senaga, and thoſe of the Senaga, in its overflowing, enter the lake, where there is a trade for millet, peaſe, and other pulſe. A little above this village, the river begins to be obſtructed by large woods and bulruſhes, which lie ſo thick, and are ſo ſtrong, that the bark was ſtopped, though ſhe had a freſh gale, and the waters were at their height. The factor, who was accompanied by ſeveral canoes of the village of Graine, went in one of them to examine the breadth of the river, and ſeek a paſſage, but his little boat was ſoon prevented by theſe reeds, which in ſome places roſe two fathoms above the ſurface of the water, ſo that he was forced to return, and tow his bark down the river. In 1774, the Sieur Brue went on the diſcovery in perſon.

The rainy ſeaſon had ſet in late this year, and as the rains had been greater than uſual, the floods were proportionately ſo, which gave the commander hopes he ſhould have water enough to enter the lake, and examine it, as well as to make a treaty with the natives. At worſt he reſolved, if diſappointed, to viſit the ſettlements on the Senaga, and renew his friendſhip with the prieſts of thoſe parts.

The Sieur Brue left Fort Louis the beginning of November, and the ſame evening arrived at Bucſar, fifteen leagues diſtant. This place is an aſſemblage of different villages, built on a great plain on the bank of the Senaga. The negros here keep great flocks of cattle, and live more at their eaſe than their neighbours the whites; yet theſe latter, being ſomewhat cleanly, cannot be reconciled to the negro way of milking; ſo that when they go to a coral, or a herd, they carry their own veſſels, by which means they are ſure of good milk, that of the negros ſouring almoſt as ſoon as it is in their veſſels, becauſe they never waſh or rinſe them, from a notion, that the old milk remaining at the bottom, helps the new to cream. Some imagine the milk is ſweeter and richer here than in Europe. What is extraordinary, their cows give no milk after they loſe their calves, ſo that they kill but few here, in order not to loſe the milk. They make pretty good cheeſe; but their butter will not keep, which obliges them to ſalt it.

Their cattle here, and from hence to the ſea, are ſmall; but as one goes higher up the river, they grow larger. At night they faſten them by the hind feet ſtakes circularly placed round the incloſure, and in the midſt they place their calves, ſheep, and goats. Their cattle here are much infeſted with certain birds, which faſten on their backs, and if no care be taken, eat their way to the bone. He made no ſtay here, but was towed up as far as the Iſle of Palm Trees. A little higher, on the north ſide of the Senega, is the Marigot, or river of Cayor. It is fifteen leagues long, lying nearly north and ſouth; its conflux with the Senaga is about eight fathoms broad, and on the

fourth of November, had four fathom water; but the floods were fallen more than the commander expected, conſidering the ſeaſon: yet this did not hinder him from purſuing his voyage. The farther he advanced, he obſerved the Marigot grew broader and ſhallower. Hereupon he was conſtrained to anchor near the village of Graine, or Ingrin, about three leagues from the Senaga to the weſt, and on the left bank of the river Cayor.

This village belongs to Riquet, one of the grandees of the kingdom of Hoval, and related to the Brak. Although this is not his principal ſeat, yet he keeps wives and ſervants here, that when he comes he may not want attendants. He was there as the Sieur Brue paſſed by, and preſented him a ſlave. The commander went aſhore with him, and ſhot ſome Pintado birds. He found the country pleaſant, well improved, and free from gnats, which infeſt all the marſhy and low ground. They ſaw here a great deal of rice and maize in the low grounds, near the river ſide, and many pompions, for ſo the negros call water-melons, which in Spain they call paſteques. The French and Spaniſh melon, that is the red and green ſorts, come to perfection here. The negroes ſave the ſeed of theſe melons, and eat them after roaſting them in a pan full of holes.

That night the Sieur Brue lay on board, and next day Riquet paid him a ſecond viſit, with his wife, who preſented him a fat ox. This lady was well ſhaped, handſome, and had teeth ſurpriſingly white. The Sieur Brue aſking how ſhe preſerved them ſo well, ſhe replied, by rubbing them with a certain wood, of which ſhe preſented him a piece, and ſent him more. It is called Ghelele, and grows by the river-ſide, much reſembling our oſiers. The taſte is bitter. Riquet, her huſband, appeared to be about ſeventy-five, but ſtrong and healthy, had a martial air, and a great deal of vivacity in his eyes. He had diſtinguiſhed himſelf greatly in the wars between the negros and the Marbut Moors, having defeated the troops of the king of Morocco, in ſeveral rencounters.

After this viſit, the commander weighed anchor, and ſailed four leagues higher, to the village of Queda, on the right-ſide of the river, and ſubject to the Siratick emperor of the Fulis, whoſe dominions this river and the lake of Cayor ſeparate from thoſe of the Jalofs, or the Brak. The river grew very narrow here, and the water viſibly fell. There is a deep ditch in the Marigot, before the village of Queda, where large veſſels may lie afloat all the year round; but on going out, there is ſcarce water enough in the dry ſeaſon for the ſmalleſt bark.

The chief of this village came, as uſual to compliment the Sieur Brue, and bring us preſents. On the commander's conſulting him as to his voyage up the river, he replied, that unleſs he could finiſh it in forty-eight hours, he muſt defer it till the ſeaſon following, for the waters were never known to have fallen ſo ſuddenly before.

The next day, the commander received a viſit from the chief, or grandee of Cayor, who confirmed what the former lord had told him, and expreſſed a concern that he could not have an opportunity of entertaining him at his village, on account of the ſhallowneſs of the river. He aſſured the Sieur Brue, that if his barks came in the end of July or Auguſt, they might find a free paſſage, (for that the tops of the reeds would be then covered) as well as a very advantageous trade with the natives, who would be well pleaſed to ſave the trouble of carrying their goods over land to Arguin, Portendic, or the factories on the Senaga. He added, that if the commander would ſtay two or three days at Queda, he would furniſh him with maiſe and beans ſufficient to load his bark. The commander accepted this offer; and found him as good as his word.

The ſame day, a Mooriſh grandee, accompanied by two others, and ſeveral attendants, came on board. Theſe gentlemen were very tawny, they were bare-headed, and their hair was frizzled at the top, and twiſted behind. They had long beards with large muſtachos: their dreſs was like the negros; but their cotton cloths, or pagnes, were fine, cloſe woven, and of a fine ſhining gloſſy black. They were neither tall nor fat, but looked well, and ſeemed very polite. The principal made a compliment to the commander, and preſented him with two of the largeſt oxen that could be ſeen; but they were ſo wild, that he was forced to have them killed to prevent miſchief. The gifts of the two other Moors, were ſome fine pagnes. He did not fail to return their preſents, and kept them to dinner along with ſome of the negro lords, who drank brandy freely. The Moors were more ſcrupulous, and drank only hydromel. Theſe Moors had fine Barbary horſes, which they valued at 15 captives, or 450 livres. The next day by ſunriſe, there arrived above 500 Moors and negro merchants, with maiſe, rice, and beans in ſkins, loaded on camels, horſes, carriage-horſes, and aſſes.

The chiefs of Queda and Cayor fixed the price of the market. Their meaſure is a matas, or cube, containing about a Paris minot. The trade was tranſacted on board the bark, ſuffering only a few to enter at a time, to prevent confuſion. The earneſtneſs of theſe people to get goods, was ſo great, that ſome fell into the water, and the clamour was very much; yet there was no diſorder.

The Sieur Brue bought here 80 hogſheads of maiſe, rice and beans, for the value of 100 franks; beſides ſome ivory, oſtrich feathers, and ſome pounds of ambergreaſe; and yet he was obliged for want of room, to ſend back near 400 merchants. During his ſtay here, an accident happened, which retarded his voyage for ſome hours. This was the ſudden death of a principal man of the village. Scarce had a woman ſet her head out of the door, and given a cry, when the whole town was in as great an uproar, as if in France all the bells had been ſet ringing. In a moment terrible ſhrieks were heard on all ſides; the women come running out, and without knowing more of the matter, fell a taring themſelves, and ſcreaming as if they had loſt all their relations. But when it came to be known who the dead perſon was, they all ran to the hut of the deceaſed, and made a noiſe almoſt as loud as thunder. After ſome hours, the chief marbut arrived, waſhed the body, put on his beſt cloaths, and laid him on his bed, with his weapons by his ſide. The relations then entered one after the other, took the deceaſed by the hand, aſking ſeveral ridiculous queſtions. Then they concluded with tenders of their ſervices, and finding the dead made no anſwer to theſe civilities, they retired, ſaying, with great gravity, "He is dead." In the mean time his wives and children, leaving to others the care of his funeral, killed his oxen, and ſold his merchandiſe; it being eſſential, on theſe occaſions, to make folger, that is, to feaſt and rejoice after the body is interred.

The proceſſion was led by the gueriots, with their drums, and the men armed with all their weapons, followed ſilently; next came the body, carried by two men, and ſurrounded by all the marbuts they could aſſemble. The women followed, roaring, and tearing themſelves like bedlamites. When the body is interred in the houſe of the deceaſed, which is a priviledge granted to their king's and grandees, they make a ſhort proceſſion round the village, and when they come to the place where the grave is dug, the chief marbut approaches the body, and whiſpers in the ear, while four men hold up cotton cloths about it, ſo as to hide it from the view of the ſpectators. The bearers then puts it in the grave, covering it with earth and ſtones to prevent the wild beaſts from getting at it. The marbut next fixes the arms of the deceaſed on a pole, at the head of the grave, with a pot full of kuſcos, and another of water, which is to ſerve him for a year. This done, thoſe who held up the cotton cloths let them fall; and, at this ſignal, the women recommenced their lamentations, till the oldeſt or

chief marbut, orders the gueriots to beat a march to return to the village. That moment the grief ceaſes, and they fall to the feaſt as if nothing whatever had happened.

In ſome places they dig a trench round the grave, and plant a thorn hedge for its better ſecurity; for want of this precaution the body is often rooted up by wild beaſts in a night or two. In other places the funeral grief laſts ſeven or eight days; and if it be a boy, his companions run about the village with their ſabres in their hands, as if they were in ſearch for him, claſhing their weapons as they meet.

The French commander had much difficulty, tho' his bark was ſo ſmall, to get back into the Senaga, and from thence he returned to St. Louis, and thus ended the expedition.

A VOYAGE FOR THE DISCOVERY OF THE KINGDOM OF BAMBUK, AND ITS GOLD MINES.

THE Sieur Brue was the firſt of the French company's directors, who had advanced their affairs ſo much as to be able to diſcover from whence the gold came, which was brought down the Senaga, and carried to the Engliſh at Gambra, of which he had ſeen quantities, of 400 marks, arrive thither at a time. It was in proſecution of this grand deſign, that he made the voyage to the kingdom of Gulam, and reſolved to ſettle one or more factories there; in order to advance by degrees, and with prudence, towards the country of Bambuk, which may be juſtly called a Land of Gold, with which even ſome of its rivers abounds.

This enterpriſe was not very eaſy; for ſuch of the Mandigos, inhabiting Galam, as well as of the Saracalez, natives of that country, who traded to Bambuk, knew their own intereſt too well, to introduce ſtrangers, who would firſt ſhare the profits of ſo advantageous a commerce, and perhaps, when once eſtabliſhed, entirely exclude them. They were willing to trade with the French in their own country, but by no means inclined to admit them partakers in their trade to Bambuk, and the countries on the coaſt. As they were very jealous in this reſpect of the ſubjects of the Siratic, their neighbours, though of the ſame colour and religion, it was eaſy to imagine, they would be much more afraid of Europeans, whom they knew to be more enterpriſing, and conſequently more capable than any of carrying away this beneficial traffick. Beſides the people of Bambuk were perfectly well acquainted with the value of their country, and by long experience ſenſible how earneſt men of all complexions were to procure the precious metal which it produced, and of ſubduing the countries where it was found.

For this reaſon, they ſuffer none to enter their country, on any account, except a ſmall number of people, who bring them ſuch neceſſaries as they have not among themſelves; ſo that, excepting on the ſcore of commerce, no body can boaſt of having ſeen this country. Thoſe who have attempted it, have paid dear for their curioſity, and few or none have came back to give an account,

However, in order to engage the company, who were very cautious of throwing away their money, it was neceſſary they ſhould be aſſured that the gold, with which the Seracolez and Mandingos ſupplied the Fulis, the Engliſh, and the French, really came from Bambuk, and not farther off. In a word, it was farther neceſſary for their agents to diſcover the particular places where this metal was found, and the great quantities they yielded; as alſo to contrive means to ſettle there, and make themſelves maſters of them, ſo far, at leaſt, as to cauſe thoſe treaſures to flow ſolely through their own hands. A project both difficult and dangerous to execute.

There appeared no method ſo ſure to ſucceed in their deſign, as ſettling at Gulam; and the Sieur Brue would have done this in the year 1698, at a place near Dramanet, where he had traced out a fort, and alſo at the iſle of Caygnu, near the rock Felu, if he had been at full liberty to act as he pleaſed, and had had the men and other neceſſaries for theſe ſettlements, eſpecially the firſt; but even then he would have wanted the conſent of the company; who, although he took care to ſend them particular informations of whatever related to the execution of his project, yet were ſo long deliberating, that a ſmall reinforcement of men and other neceſſaries for one ſettlement, did not arrive at the Senaga till the middle of the year 1700.

The Sieur Brue, however, endeavoured to cultivate with care the trade of Gulam, as much as the ſmall ſupplies of goods he had would allow him. He had conſtantly ſent barks thither in the ſeaſon, and by preſents, as well as promiſes, he gained the friendſhip of the princes and grandees of that country, that they might aſſiſt him in making the ſettlement he intended, and give him an opportunity of ſending one of his factors into Bambuk, to get a thorough information concerning it. With this view he had left at Dramanet a lay Auguſtine brother, who was called Apollinaiſe; a ſurgeon by profeſſion, who had ſerved the company in that capacity for ſome years before his taking that habit, and ſince then had re-entered into its ſervice.

The Mandingos eluded all the offers he made to engage them to guide him to Bambuk, ſo that he was obliged to be contented with examining carefully the kingdom of Gulam, and part of that of Caſſon, till within four leagues below the fall of Govina, without being able to go farther, the negros of the country refuſing to let him proceed, on account of a war between them, which hindred them from accompanying him, or ſuffering him to paſs. He had better ſucceſs on the ſide of the river Faleme, which he went up as far as the ledge of rocks, oppoſite to Canary, and engaged in the French intereſt the lord of that village, who has ever ſince been a firm friend to the nation. The Sieur Brue had left Apollinaire an aſſortment of goods for trade, and ſtrongly recommended him to the chief marbut at Dramanet, who had taken charge of him, and promiſed to protect him with all his power. He was as good as his word, granting him a houſe, procuring him a ſale for his goods, and giving him all the information he was capable of, as to the trade of the country. This was all he could do during his ſtay here, of which he gave the company a circumſtantial account in a memorial he ſent, dated October the 8th, 1699. The company ſent back inſtructions, deſiring farther intelligence.

The good brother, judged it would be eaſier for him to go back to France, and anſwer the company's queſtions. He therefore left Gulam, and arrived at Fort St. Louis, September 16, 1700. In Novembe

ber following, he ſailed for France, with letters from the Sieur Brue to the company, acquainting them, That this religious, merited more than any of its officers, and adviſing them, not only to reward him in a diſtinguiſhed manner, but alſo to engage him to continue in their ſervice, by giving him ſome honourable poſt.

The Sieur Brue, as has been already mentioned, had traced out a fort near Dramanet, which he was forced to defer building, till he had the company's orders, and the neceſſary ſupplies. Theſe arriving in 1700, as hath been obſerved, he diſpatched one of his officers to begin the fort: but this officer took the liberty to change the ground marked out by the commander, under pretence of placing it more commodiouſly for loading and unloading the barks, built it ſo near the river, that it was carried away the next year by the floods, with a conſiderable loſs of the company's effects. This diſappointment was very vexatious to the Sieur Brue, becauſe it broke all his meaſures. He haſtened to remedy it, and gave orders to build a place for the ſecurity of the goods ſent to keep up the trade, which became every day more and more conſiderable. For this purpoſe, having pitched on a ſlip of land, more elevated than that the former fort was built on, they raiſed huts, and encloſed them with a tapada well terraſſed behind; where they mounted a few guns, till the Sieur Brue arrived, and made a more regular ſettlement: but he was called to France by the company the 12th of April, 1702.

The river Felame, according to the Mandingo merchants, ſeperates from the Senaga a little above Baracottra, a village where the Engliſh from the Gambra are often ſeen, or, at leaſt, free negros and Portugueſe, who ſerve them as Gromettos, that is, meſſengers or factors. They get thither by the river Gambra, which is a branch of the Senaga, but not navigable above Baracottra.

His ſudden return to France hindered him from making the intended ſettlement at Canara, which proved fatal to that of Dramanet: for the Mandingo Marbuts ſoon repented of having admitted the French: and finding the commander had left the country, they thought themſelves no longer bound by the perpetual alliance which had been made with him. Whether this change was wrought by finding ſome diminution in their trade, or that they were gained by the Engliſh, who concluded, that if the French puſhed their diſcoveries and ſettlements on that ſide, they would become abſolute maſters of the traffick with the negros and the gold trade: however it was, the Marbuts gave credit to the Guinea and other merchants of the Caravans, who repreſented the French as dangerous people, inſinuating themſelves by promiſes and preſents; but that being once ſettled, they would take off the maſk, and reduce the natives to a ſtate of ſlavery. What prejudiced them the moſt, was a letter, pretended to come from Sally, which confirmed the report, that the French were to be joined by an army of Moors from Morocco, who were to conquer the country, carry all thoſe able to bear arms into ſlavery, and oblige the reſt to work in the mines.

On this fort St. Joſeph was beſieged by a great multitude, before the officers, who commanded there, had the leaſt notice of the deſign. Unluckily at this very time, he had pulled down part of his incloſure, in order to enlarge it, and had been forced to diſmount the cannon of the fort; which lay open almoſt on every ſide, expoſed to the poiſoned arrows which the negros poured into it, without intermiſſion, both day and night. The factors and others, employed by the company, made a brave defence for ſeveral days, and killed numbers of the enemy: but their loſſes rather exaſperated than diſcouraged them; and they advanced in the night with faſcines, preſſing continually to burn the fort. They did not ſucceed, nor had the French one man killed or wounded: but as they were tired out with being continually under arms, and both ammunition and proviſions began to fail, the commander was obliged to make ſome propoſals to the beſiegers. Theſe, irritated by the loſs of ſeveral of their chiefs and relations, would harken to nothing, ſo that he was forced in the night, to get on board a bark, which lay under the fort, and after having got the ammunition, and all the beſt of the goods on board, ſet fire to the reſt the 23d of December, 1712, and thus loſt the rich trade of this country for five or ſix years.

The negros did not quit them yet, but followed them along the river, in hopes they ſhould be obliged to ſail near the bank in ſome places, for want of water in the middle; but the French choſe rather to diſmaſt the bark, and cut down even with the deck, than expoſe themſelves to that danger. Notwithſtanding theſe precautions, they were forced to come almoſt within reach of their arrows, as often as they met with ſhoals or ſand banks; and they continued in this embarraſs, till they got within the dominions of the Siratic.

After this, the affairs of the company were ſo perplexed, that nothing was done towards reſtoring fort St. Joſeph, till 1710, when the Sieur Muſtellier, firſt director of the fifth, or Rouen company, and 19th director and commander of the Conceſſion of Senaga, and the Coaſts of Africa, arrived at fort St. Louis, in May 1710. He next year ſet out on that deſign, but died the 15th of Auguſt at Tuabb, on the Senaga, before he arrived at Dramanet. The Sieur Richebourg, Governor of Goree, ſucceeded him; and tho' he enjoyed that poſt but twenty months, (having been loſt on the bar of the Senega the ſecond of May, 1713) yet he lived to ſettle a fortified factory in the kingdom of Galam; not at Dramanet, where he ought to have fixed it, but at Mancanet, a league lower. He might have avoided giving umbrage to the Mandinos of Dramanet, by driving no great trade till he had fortified the place effectually. For theſe people, though eaſily alarmed on the article of commerce, are yet honeſter men, though more powerful than the Saracolez. However, the ſituation of Mancanet is very agreeable, the air good, the anchorage of barks at the foot of the little eminence, on which the fort ſtands, is very ſecure, and defended both by the artillery and muſquetry.

The Sieur Brue returning to fort St. Louis, in April 1714, ſet about eſtabliſhing the commerce of Galam. He cauſed the fort of Mancanet to be finiſhed, which had the name of St. Joſeph; and at the ſame time had that at Canara carried on and compleated, which was called St. Peter's Fort.

Theſe beginnings gave room to hope for a happy iſſue: but they were partly ineffectual, becauſe they could do nothing in theſe factories, but receive and ſell the goods they brought, without being able to reap thoſe advantages from the riches of the country, which might be obtained by ſeeking them on the ſpot; the ſureſt way of carrying on a profitable trade, and preventing others from ſharing in it. But as for this end, it was neceſſary previouſly to have a perfect knowledge of the country and its mines, as hath been already obſerved, the Sieur Brue propoſed the attempting this diſcovery to ſeveral of his factors, adding very advantageous offers to encourage them to undertake it. Several promiſed him, but were as ready to break their word, when they came to underſtand the dangers and hazards of any whites entering the country of Bambuk; where the jealouſy of the negros, with regard to ſtrangers, was ſo great, and their ſtrictneſs in guarding the avenues ſo extraordinary.

The Sieur Compaynon alone (at preſent maſter-maſon and undertaker at Paris) was daring enough to riſk ſo perilous a journey. He was furniſhed with merchandizes proper for the country as well as preſents for the ſarims, or lords of the villages, and for ſuch other perſons, as might be able to aſſiſt him in the diſcovery he had in view. He took his meaſures ſo well, that he ſucceeded, and has the honour to be

the firſt white who was ever ſeen in theſe parts. None before him had ever penetrated ſo far, or acquired ſo perfect a knowledge of the country, through which he travelled ſeveral Times.

His firſt journey was in a direct line from fort St. Joſeph to that of St. Peter on the river Faleme.

He made another, following the eaſt ſide of that river from Onneca to Naye.

His third rout was acroſs the country from Babiacolam on the Senaga to Nettees and Tamba awra, places in the centre of the country, famous for the rich gold mines in their neighbourhood: ſo that in the year and a half, which he ſpent in travelling over that country, he croſſed it ſo many different ways, that he ſeems to have left but a few places unviſited. He viewed every thing that occurred with all the exactneſs a man of his genius was capable of; eſpecially when incited both by his own curioſity and the promiſe of large rewards, as well as by the deſire of being uſeful to his country, and doing a ſervice to the company that employed him. His good behaviour and preſents, eaſily gained him the eſteem of the farim of Canara: who conſidered him not ſo much as a ſervant of the company, as a virtuoſo who ſought to ſatisfy his curioſity, in viſiting a country he had heard ſo much of. This farim ſent his ſon to accompany him as far as Sembanara, in the kingdom of Conta. The farim, or chief of this place, was extremely ſurpriſed to ſee a white man for his gueſt, a colour he had hitherto been a ſtranger to. His ſubjects, who were equally ſtrangers to ſuch an object, were as much amazed as he at this ſtranger's boldneſs; and had given him but an ill reception, if the preſence of the ſon of the farim of Canara had not reſtrained them. The moſt paſſionate were for ſending him away, without giving him time to examine the country.

However, the chief being prevailed upon by the arguments of his friend's ſon, perſuaded the people their apprehenſions were groundleſs, and that they had no cauſe to ſuſpect this white man. He aſſured them, he was an honeſt merchant, whom it would be their advantage to encourage; theſe reaſons, backed by ſome ſeaſonable preſents to the moſt conſiderable people of the village and their wivee, produced a change in their tempers, and he ſoon gained as many friends amongſt them, as at firſt he had enemies.

But there were yet more difficulties to ſurmount, but he had the ſame to conquer in every place. Although he was always accompanied in his travels by ſome of the principal natives, yet he found wherever he went, the ſame jealouſies, and almoſt the ſame danger. He was obliged to anſwer numberleſs queſtions, to undergo tedious examinations, and would never have been able to have opened himſelf a way, but by dint of preſents. Sometimes even his reaſons and preſents joined, were too weak to diſpel the diſtruſt of the natives, who watched him in a very troubleſome manner, refuſing him the earth or ore of their mines, though he offered to purchaſe them at their own rate, aſſuring them, both by himſelf and his conductors, that he only wanted to make himſelf caſſots, or pipe-heads. They heard his reaſons, but could not believe them ſufficient to induce a man to travel ſo far, and run ſuch hazards; but that undoubtedly he muſt have ſome bad deſign, and wanted to ſteal their gold, or conquer their country, after he had ſurveyed it. The uſual concluſion was to ſend him back quickly, or to kill him, in order to deter other whites from following his example.

Having at Toraca bargained with a negro to bring him ſome ghingan, or gilt earth, from Sitabli, and to invite the country people to bring him caſſots, for which he would pay them well, his meſſenger met an ill reception; his demands being refuſed, and himſelf driven away, with orders to tell the farims of Toroca, his lord, that he was a fool, to let a white examine his country, and take his ore and earth, ſince it was evident he only came to rob him. The negro, in preſence of the farim of Toroca, delivered this anſwer to the Sieur Compagnon, who, without being diſconcerted, replied, that the farim Silabali was a fool himſelf, to be afraid of a ſingle white man, in the midſt of his country, and to refuſe to ſell him ſome of the earth, of which he had more than he could ever uſe. He then made the negro a handſome preſent. This generoſity was ſo agreeable to the natives, that it was the public talk of the country. Another negro quickly offered himſelf to go ſeek this earth for him by night, but Compagnon, who thought it policy to hide the deſire he had of getting ſpecimens of all the mines, pretended great indifference, ſaying only, that when they knew him better, they would make no ſcruple to ſell him their earth and caſſots. This produced a good effect, for ſoon after he got as much of both as he pleaſed. He had the ſkill to remove all the umbrage taken at his firſt coming into the country; and his winning behaviour, joined to his preſents, gained him the love of the farims and people in all the places where the mines lay, to ſuch a degree, that they made him preſents in return, and at laſt, allowed him full liberty to take as much ore, and make as many caſſots as he thought fit. The Sieur Brue, director-general, took care to ſend the company ſpecimens of all the mines, and caſſots of all ſorts, by the victory, which ſailed for Onaga, June the 18th 1717.

The greater part of mines produce gold in ſuch abundance, that it is not neceſſary to take the trouble of digging. They need only ſcrape the ſurface of the earth, waſh it in a bowl, and pour off the water gently, to find the gold in duſt at the bottom, ſometimes in large grains. The earth which produces this gold, is neither hard nor difficult to work; it is uſually a clay ground, of different colours, intermixed with ſome pits of ſand or gravel, ſo that ten men here can do more work than an hundred in the richeſt mines of Peru or Braſil.

The negros here have no notion of the fertility or barrenneſs of the lands, proper to produce gold, nor any rules for diſtinguiſhing the places which yield metals, from thoſe which do not. They only know, in general, that their country abounds in gold, and that in proportion as the ſoil is dry and barren, the greater hope there is of its yielding more gold. They rake and ſcrape up the earth indifferently in any place, and when they have the good luck to light on one which yields a good quantity of this metal, they continue to work there, till the quantity diminiſhes, or ceaſes, and then quit the place to go and ſeek another. They have a notion, that gold is a ſort of roguiſh or malicious being, which delights to play tricks with its followers; and for that end often ſhifts from one place to another.

By their ill management in their way of working the mines, they get but a ſmall part of the gold contained in the earth, which they dig out: only the groſſer parts falling to the bottom of the bowl, while the finer particles run over with the earth and water, which they gently pour off, after ſtirring the whole. The workmen in Europe, who clean the goldſmith's ſweepings, would get a good fortune by the water they pour off here.

The natives of this rich country do not ſearch their mines at all times, or when they pleaſe. This depends on the pleaſure of their farims, or lords of villages, when theſe judge it proper, either for the public occaſions, or their own private account, they give notice to their ſubjects, that ſuch a mine will be wrought on ſuch a day. Thoſe who have occaſion for gold, repair to the place, and fall to work; ſome dig, others carry away the earth, others bring water, others waſh it. The farim, and principal perſons keep the gold that is cleared, and ſee that the waſhers do not ſteal any of it; a fault which they are very ſubject to. The work being over, the gold is divided, the farim taking care firſt to ſeparate his own ſhare, which is always one half of the whole: beſides that, by immemorial cuſtom, all the grains above a certain ſize belong to him without exception.

When this work has continued as many days as the Farim chuſes, the workmen are diſperſed, and the mine remains untouched by his order.

Theſe methods of working will eaſily account for the irregular periods at which the gold is procured; and the almoſt continual want of proviſions, which prevails among the negros in theſe parts owing to the frequent diſcontinuance of their work. On all which accounts the Sieur Brué ſtrongly recommended ſettlements to be made, whereby the natives might be delivered from many impoſitions, and the Europeans ſupplied more regularly with that ſhining metal, which has at all times ingroſſed ſo much of their attention.

With regard to the mines diſcovered in this country, in conſequence of the Sieur Brue's project, we have the following account.

The Sieur Compagnon and thoſe who by their commander's order, went to diſcover the country after him, found no certain tokens of any gold mines: in proceeding up the river Faleme, from its confluence with the Senega to the village of Naye, at the diſtance of about fourteen or fifteen leagues, except at Furcharran, a ruined village two leagues north-eaſt of the river, and in the neighbourhood of a marrigot or rivulet, which falls into the Faleme. This rivulet is deſcribed as ſo ſhallow, that it is not even navigable for canoes, though the diſtance being ſmall, it might be eaſy to tranſport the gold ore on camels, to any ſettlement in its vicinity. Beſides the tokens of this gold mine, there was alſo obſerved the appearance of a very conſiderable one of white ſhining rock, which was concluded to contain a quantity of ſilver.

The ſecond gold mine which the Sieur Compagnon diſcovered, was to the eaſtward of the river Faleme abovementioned, twenty-five leagues from its confluence with the Niger, and about five leagues inland between the villages of Sambanura and Dallimulet. This was on a high ſandy ground, where the negros found gold only by waſhing the ſurface of the earth, taking it up as it lay, without any farther trouble in the acquiſition.

Not far from Segalla, a village 500 paces to the right of the Faleme, and about fifty leagues from its mouth, the ſoil was found filled with veins of gold.

Five leagues higher lay the mines of Ghinghi Farrand, where gold was found in great quantities. The Farim of Taroco having given the Sieur Compagnon permiſſion to take what quantities of this earth he pleaſed. Some that was taken up at random, being waſhed in a bowl in his preſence, a quantity of pure gold, which melted with eaſe, was found at the bottom.

All the rivulets that water this ſoil, and fall into the Faleme, bring down ſo much gold with the ſands, that the neighbouring negros during thoſe intervals, while their mines are ſuffered to reſt, come hither to the Faleme to gather it, as this manner of taking it is never forbidden by their chiefs. Near Ginghi Farrand the mountains are all of a ſoft gravel ſtone which appears covered with gold ſpangles. On being aſſayed, there were large pieces found perfectly competent to reſiſt aqua fortis, but which, as a farther proof of their value, diſſolved eaſily in aqua regia, depoſiting a bright yellow ſediment.

On the banks of the river Sannon, at the village of Nian Sabana, was a rich mine, plentiful and eaſy to work, but the ore required pounding and ſmelting, which the natives are not capable of doing, and being likewiſe mixed with arſenical ſulphurs, it was quite deſerted by a people equally fond of health, and averſe to labour.

"The richeſt mine (continues the author) which is at preſent diligently worked only by the natives, is near the centre of the country of Bambuk, between the villages of Tamba awra, and Netecco, thirty leagues to the eaſtward of the river Faleme, and forty from S. Peter's fort at Kaynera (or Canara) on the ſame river. It is ſurpriſingly rich, and the gold that it produces is very pure. This part of Bambuk, for wealth, exceeds all the reſt. The mines are ſurrounded by high, naked mountains, dry and barren; ſo that the natives having none of the neceſſaries of life but ſuch as they can purchaſe with their gold, are forced to work their mines with more aſſiduity than their neighbours and countrymen. Here may be ſeen ſhafts ten feet deep, a wonderful thing, where people have neither ladders nor props. However, they find much more gold at this depth, than nearer the ſurface. When the veins are mixed with gravel or ſome hard ſubſtances, experience has taught them to bruiſe the oar, in order to get at the gold. They would, in this caſe, get much more if they knew the arts of ſmelting or refining, nor have they yet been able to reach the principal vein of the mine. All this ſoil is argillous or a fat clay of various, vivid colours, as white, purple, ſea-green, yellow, of ſeveral ſhades, blue, &c.

"The natives here are the moſt ingenious makers of caſſots, or pipe-heads, in all that country. Gold ſands or ſpangles, ſmall or great appear every where. Theſe ſpangles are thin. They call the earth they get this ſand from, Ghingan, that is Golden Earth, or Gilt Earth; and although the caſſots are made of the earth, after being waſhed, yet it would be eaſy to extract gold from them, by the help of mercury. At Canara, near St. Peter's fort, is a ſmall river, the bottom and banks of which are covered with coloured rocks, or metallic marcaſites, whoſe weight and colour indicate ſome gold mines thereabouts, which the neighbourhood of this fort would render very eaſy to ſearch for, and poſſeſs when found. At Naye are two gold mines; that neareſt the river has been long ſince quitted, as being ſubject to inundations; and the negros did not care for the trouble of emptying the pits: but they have found another at a greater diſtance, on the right ſide of the river going up, free from any inconvenience.

"The village of Naye, which is pretty large, is but four leagues above fort St. Joſeph, which would facilitate either the conqueſt or purchaſe of this mine. About 20 leagues above Canara, to the left of the Faleme, is another gold mine, in the lands of Tomana Niacanel, which is rich, and the metal pure. Though it is eaſy to work, yet the negros have quitted it, from a ſuperſtitious notion, that all who meddle with it, except whites or women, will die. The women will not venture on it, as giving no credit to what their huſbands ſay on this head, ſo that it ſeems reſerved for the whites, and on this account would not be hard to purchaſe.

"In many other places there are evident marks of gold mines, particularly about 17 leagues from the confluence of Faleme, and the Senaga. The land for a good way on this ſide is dry and barren, being a ſoft gravel, divided into different ſtrata, of lively colours, like thoſe of Tamba awra, and Netecco, beforementioned."

Beſides theſe mines of gold, and that of ſilver already-mentioned, here are found in many places blue ſtones, which they ſay are certain ſigns of copper and ſilver mines. In effect, copper, lead, iron, and tin are found here, as well as the beſt load-ſtones, pieces of which have been ſent to France; although it may ſeem needleſs to think of theſe metals where gold is ſo plentiful. Iron is not only common and good at Bambuk, and through all Galam, as at Caygnu and Dramanet, but alſo in many other places deſcending the Senaga, as at Joel and at Donghel in the kingdom of Sieratic, where great quantities are got of it, ſo ſoft that the negros hammer it into kettles or pots, ſo that they buy no iron from the French unleſs it be wrought.

Rock cryſtal, tranſparent ſtones, and fine marble, are found in plenty throughout Galam; alſo an incredible quantity of coloured woods for inlaying, of the brighteſt ſort, beſides a great variety of ſcented woods."

The Sieur Brue laid before the company five diffe-

ferent ſchemes he had formed for a ſettlement in this rich country. The firſt was to conciliate the affections of the Farims, or chief men, ſo as to obtain their conſent to build forts in the country; of which he propoſed two on the rivers Faleme, and a third he intended to be of wood, ſo as to be moveable at pleaſure, to ſuch places or mines as the company ſhould work. In this fort were to reſide the director, with the officers, miners, ſoldiers, &c. neceſſary for the undertaking. But in his laſt voyage to fort St. Louis, in 1723, finding this project not agreeable to the impatience of his nation, he formed a ſecond, which he preſented to the company, and to Mr. Landavifieu, September the 25th the ſame year: by which it appears, that he thought 1200 men ſufficient for this conqueſt; and reckoned the expence of ſuch a body for four years would come to two millions of livres. He computed 4000 marks of gold, at 500 livres the mark, would reimburſe this expence, and that the mines would yield annually above 1000 of theſe marks. In this voyage we meet with the following deſcription of Bambuk.

This kingdom is of conſiderable extent. To the north it has a part of the kingdoms of Galem and Caſſon; to the weſt, the river Faleme, with the kingdoms of Contu and Cambreguda; to the ſouth of the kingdom of Macanna; and the countries to the weſt of Mandingo. Its eaſtern limits cannot be well aſcertained, as the countries of Gadua and Guinea, which are parts of it, are very large, and as yet little known to the Europeans.

The country of Bambuk, like thoſe of Contu and Cambreguda, is not ſubject to any particular king, though they bear the name of kingdoms; probably on account of their being formerly governed by ſovereign princes. At preſent, the natives are governed by the maſters or lords of their reſpective villages, whom, towards the river Faleme, they call Farims, that is, lords; adding the name of the village, as Farim Toraco, Farim Farbanna, &c. In the inner part of the country they call theſe chiefs Elemanni, or, by other appellations: all which titles given to their great men, though not ſo lofty as thoſe of emperor or king, yet inveſt them with much the ſame authority, and their ſubjects pay them the ſame obedience: always provided that they keep the laws and cuſtoms eſtabliſhed from time immemorial in this Ariſtocratical Republic, and do not pretend to invade them; for it would be dangerous to think of arbitrary power here. Theſe Mandingos, who are all of them marbuts, do not underſtand jeſting on this ſubject; and the leaſt that could happen to a Farim, Elemanni, or lord of a village, who ſhould take too much liberty this way, would be a ſhameful depoſition, or the pillage of his goods.

Theſe Farims or chiefs are independant of each other; but all are obliged to join for the defence of the ſtate, (or commonwealth) if attacked either in the whole, or in any of its members. The country is extremely populous, and has a great number of villages on the eaſt ſide of the river Faleme. The Sannon, Guianon, Manſa, and all other leſſer rivers, which fall into the Faleme, or the Senaga, have alſo many villages on the ſides: but the inland country is not ſo populous, becauſe thoſe parts of it that are not watered, are dry and very barren; as is common in a country like this, full of mines of gold, ſilver, copper, tin, and iron. The ſoil neither produces millet, rice, nor pulſe. They even want ſtraw and graſs to cover their houſes.—This barrenneſs of the ground is partly cauſed by the heat which is exceſſive: not only from the ſituation of the country, which lies in twelve and thirteen degrees north latitude, but alſo by its being incloſed with high bare mountains, which reflect the heat, and prevent the winds from ſufficiently refreſhing the air, and diſpelling the thick vapours that continually iſſue from a ſoil ſo deeply impregnated with metals and minerals. This renders the country extremely unwholſome and dangerous to ſtrangers; for the natives and other negros, who come here, being accuſtomed to this climate, ſuffer no great inconvenience.

"As Bambuk (ſays the author) produces ſome extraordinary animals and plants, it may not be improper to mention them. Of the firſt kind, are a ſpecies of white monkeys: theſe are of a brighter colour than the white rabbits in France, have red eyes, and eaſily tamed when young; but as they grow old, become as malicious and unlucky as others of this kind. It has not been yet poſſible to bring one of them alive to Fort St. Louis. The white weaſel is another animal peculiar to this country, which, like the European one, is a great enemy to poultry. The colour is of a ſhining ſilver. The negros eat them, and ſell the ſkins at the French factories.—The pigeons are entirely green, ſo that they are often miſtaken for parrots. There is alſo in Bambuk, and the adjacent countries, an extraordinary beaſt, called the ghiamala. It is moſtly found on the eaſt ſide of Bambuk, in the provinces of Gadua and Jaca. Thoſe who have ſeen it, report it is half as tall again as the elephant, but not near ſo large. It ſeems to be of the camel kind, reſembling it in its head and neck, and having two bunches on the back like the dromedary. Its legs are extravagantly long, which makes it appear ſo tall. They feed like the camel on thiſtles and briars, which makes them lean; yet the negros do not ſcruple to eat, when they catch them. The country of Bambuk has few grounds fit for paſturage, ſo that they have no oxen, but only a few ſheep and goats, which thrive always beſt in a dry ſoil. The ghiamala is very wild: he is provided with ſeven ſtrait horns, which, at his full growth, are each near two feet long. His hoofs are black, and reſemble thoſe of an ox. He goes ſwiftly, and can hold out a long time. The fleſh is ſweet and good in the opinion of the negroes.

The monoceros, or bird of Paradiſe, is alſo ſeen here. It is of the ſize of a cock, the plumage variegated, eſpecially the wings. The beak is hooked like that of the eagle, the talons large and ſtrong. On his head are two feathers, about three or four inches long, joining in a point like a horn, which has occaſioned ſome to miſtake it for a real one.

The ſandy parts of Bambuk produce an uncommon kind of peaſe. The ſtalk of theſe is about two inches in diameter, round, green, ſleek, and covered with a ſtrong rind. This is a creeper, and ſpreads much. It is common for them to extend five or ſix feet in length. The leaves, like thoſe of trefoil, about ſix inches long, ſpring in pairs, at five or ſix inches diſtance from each other. Between theſe lie the flowers of two different ſhapes: the firſt with an open calix, compoſed of five leaves, of a violet blue; about fifteen or ſixteen lines in length, and nearly the ſame in breadth, cloſe upon each other. Theſe are ſupported by five little green leaves, ſmooth and ſhining. The centre of this calix is filled with little ſtamina, about ſix lines long, of a deep yellow or orange colour, but have no piſtil. The flowers on the oppoſite ſide of the ſtalk are like thoſe of our common peaſe. The firſt flowers produce no cod, but the latter yield a ſtalk of five or ſix inches long, and near an inch in diameter, parted into ſeveral cells by a red pellicle; each of which contains a pea of the bigneſs of a muſquet-ball, of ſixteen to the pound. Theſe peaſe are round, of a marble-grey colour, hard and difficult to dreſs, unleſs ſteeped for ten or twelve hours beforehand in warm water. But as they grow wild, the negros make a ſhift with them; and, perhaps, like them better than thoſe which would coſt them more trouble in the cultivation. One thing extraordinary in this plant is, that the different kinds of flowers it bears are placed alternately on each ſide of the ſtalk.

"The abel-moſh, otherwiſe called the muſk-grain, or ambrette, grows plentifully and without culture, in Galam. The negros make no uſe of it. Even their women, who love perfumes, and are very fond of cloves, packets of which they hang round their neck, yet neglect theſe ſeeds (perhaps only becauſe no rarity) though they yield a ſtrong muſky ſmell and very

very agreeable, if rubbed gently. It is true, this odour goes off, but it is eaſy to renew it with freſh ſeeds, and at no expence. But cloves, which are a good commodity here, would be uſeleſs, if they ſhould take it in their heads to uſe their abel-moſh. When this plant enjoys a rich ſoil, it grows to the height of ſix or ſeven feet, provided it meets a tree to ſupport it; for then it ſurrounds and faſtens to it: if not, it falls and creeps along the ground till it reaches the height of about two feet. Its ſtalk is round, downy and white, tender and covered with ſlender ſprigs. The leaves are much like thoſe of mallows: they grow in pairs, but unequal; thoſe on the upper ſide: being larger than on the under. Theſe leaves are ſcolloped, and yellow indentures, though not deep, yet form ſharp angles, which makes them look as if prickled. They are flabby and thick of a bright green on the outſide, and poles underneath. They ſay theſe leaves, boiled in water, and formed into a cataplaſm, are an excellent remedy for tumours, which they ripen and break in a ſhort time. They are alſo ſovereign for contuſions and ſprains. They are faſtened to long ſtalks almoſt triangular, and very hairy, form the roots of which ſpring the flowers. Theſe are compoſed of five leaves, round at the ends, which form a wide calix. The outſide of them is of a bright gold colour, the inſide purple. From the bottom of the calix riſe ſeveral ſmall ſtamina, and a whitiſh piſtil, which changes into a pyradimal fruit with five angles; which is firſt of a pale green, then becomes brown, and when ripe, is almoſt black. This fruit contains ſeveral ſmall grey ſeeds, flattiſh on one ſide, of the ſhape of a kidney, and of an aromatic, amber ſmell, agreeable to thoſe who love perfumes.

To return to the Sieur Brue.—He had received ſuch complaints at Fort St. Louis of the continual inſults the company's ſervants offered there from one Badel, agent to Tonca Niama, both by forbidding trade, and otherwiſe, in order to oblige the factory to raiſe his duties as high as thoſe paid to the firatic, or to force them to quit the country: that at laſt, July the 31ſt, 1718, he thought fit to ſend the Sieur Charles, governor of the fort, directions to provide the place with proper neceſſaries for its defence, and then to puniſh Badel rigorouſly; not only by burning his village, but alſo ſeizing himſelf, wives and children, if he found an opportunity. It was likewiſe ordered, in caſe Tonca Niama took his agent's part, inſtead of correcting him, and refuſed to redreſs the company's wrongs, that he ſhould cauſe the bacerris (or chief men) to depoſe him, and get a new king choſen more agreeable to the company. Theſe orders, which were purpoſely not kept ſecret, alarmed the king, his alcair, and the bacerris, ſo that they dropped their demands, and at once became extremely obliging; only wanting a favourable opportunity to ſhew their reſentment, and things remained on this footing till the year 1722, when the alcair, with the bacerris of Mancanet, ſupported by Tonca Niama, recommended ill uſage, and carried matters ſo far that a factor returning from trading was murdered. As the governor, the Sieur Charpentier, was not in a condition immediately to revenge the injury, he thought proper to wait till the floods had brought the barks from fort St. Louis. As ſoon as they arrived, the Sieur Charpentier having aſſembled all his forces, attacked the village of Mancanet in December the ſame year, beat in open field the negros who had taken up arms, killing near ſixty, wounded double the number, and made 400 ſlaves. After which, plundering the village, he burnt it, and carried off all the cattle.

Tonca Niama and his bacceris were now obliged to ſue for mercy. For this end they employed the Marbuts of Dramanet, and the chief negro merchants, friends to the French, to mediate a peace. The Sieur Charpentier ſuffered himſelf to be long intreated, and in the mean time ſent down his ſlaves and booty by his barks to fort St. Louis. After this he yielded to the ſolicitations of the marbuts. The king diſowned the proceedings of the bacerris; and theſe having acknowledged their fault, and begged pardon, owned themſelves ſubjects to the French company, to whom they promiſed obedience. This treaty was ſworn to on both ſides with the uſual ſolemnities." ——

The Sieur Brue having been recalled to France ſoon after the loſs of the fort at Dramanet in 1702, as before related, ſeveral of the factors made a merit of writing to the company their ſentiments concerning a proper place for building a fort. Different opinions held them long in ſuſpence: ſome propoſed building it at the mouth of the river Faleme, in the Senaga, which advice ſeemed reaſonable enough, if it had been poſſible to execute it: Others were for Mancanet, but did not foreſee the ill conſequences of ſettling among a factious, turbulent people; others recommended the iſle of Caygnu; and the Sieur Brue liked the place well enough, provided there had been another ſettlement nearer the Faleme, proper to ſupport the reſt, as was that of Dramanet; and that the trade would bear the expence of theſe two factories, which could not be known under a trial of ſome years.

The Frere Apollinavie having been conſulted as a perſon both of experience and probity, declared, "that a better place could not be choſen than Dramanet; firſt, becauſe there was plenty of all ſorts of proviſions, a matter of great importance, as well for the ſupport of the company's ſervants as of the ſlaves, till the barks arrived to carry them down the river. Secondly, becauſe they would always be ſure of an advantageous trade at that place with the Mandingo Marbuts; and might, the year round, traffic for as much gold, ivory and ſlaves, as they had occaſion for, provided the factory was ſupplied with goods, and that the chief factor, as well as thoſe under him, were wiſe and juſt men; ſo that Guinea and other negro merchants might find, at their hands, the ſame civility which they received from the Engliſh at the river Gambra, in order to induce them to transfer that traffic thither. Thirdly, that although the Saracolez at Caygnu were deſirous of the French ſettling among them, yet as they were naturally evil-minded and turbulent, and their chief poor and greedy, it would be difficult to get out of their hands in caſe of a rupture. Fourthly, that indeed trade might be carried on at Cayghu in ſome better ſort than at Dramanet, becauſe the caravans from Bambara cana ſtop there, and the negro merchants would be glad to be ſaved the trouble of carrying their gold and ivory to the Gambra. Fifthly, that therefore till ſuch time as the ſettlement at Dramanet ſhould be in a condition to ſupport the charges of a factory at Caygnu, the trade of this laſt place might be preſerved and enlarged, by ſending barks thither at ſuch times as the merchants were on the road. Sixthly, that it would be eaſier to ſupport a ſettlement at Dramanet than at Caygnu, by reaſon of a ſcarcity of proviſions, owing to the ſloth of the Saracolez: ſo that it would be neceſſary to have a ſettlement at the firſt place, in order to ſupply the latter."

It muſt farther be obſerved, that when the river is at the loweſt, there is always a channel before Dramanet, half a league in length, with ſix or ſeven feet water, which is ſufficient for barks; whereas the river being too broad at Caygnu, there was ſcarce water enough for a canoe. It is abſolutely neceſſary for the French, if they would cloſely purſue the trade to Bambuk and the gold mines, to have two or three fortified poſts on the river of Faleme, particularly at Caygnu.

This place ſtands very advantageouſly, and belongs to a people who are friends to the French. It is but eighteen or 20 leagues from Dramanet by land, and little more by water. Accordingly a fort called St. Peter, was afterwards raiſed here, as has been already mentioned.

The Sieur Courbe, who in 1702, ſucceeding the Sieur

Sieur Brue in the direction, followed the plan he laid down, and uſed all his intereſt with the company to make this ſettlement at Caygnu; but he was recalled before he could get their conſent; and the Sieur Muſtellier, who ſucceeded him in 1710, wrote violently againſt this project, ſo that it was dropped. The Sieur Brue, at his return in 1714, reſumed his application, but never could bring the company into his opinion.

VOYAGES TO THE WESTERN COASTS OF AFRICA.

HAVING mentioned the French, we ſhall now ſpeak of the Engliſh ſettlements on the coaſt of Africa, for trading to which parts, Queen Elizabeth granted patents in 1592, on the particular application of ſome merchant adventurers. King James, in the 16th year of his reign, granted a new charter, under the great ſeal to Sir Robert Rich, and other citizens of London, as a body corporate, with an excluſive power different from all others; but they were ſo much injured in their trade by interlopers, that they were ſoon greatly tired of it.

King Charles the Firſt, in his 7th year, granted a new charter to Nicholas Criſp, Humphry Slaney and company, of the ſame kind with the former. In 1651, this grant was renewed, and confirmed to Rowland Wilſon and others, by the commonwealth of England; but during the confuſion of that time, the Dutch and Danes took the opportunity of increaſing their ſtrength on this coaſt; ſo that the African company, beſides the loſs of their poſſeſſions, ſunk their ſtock, and even the private traders, in ſhips and goods taken, were ſufferers to the value of 300,000 pounds. The parliament, on this repreſentation, in 1664, came to a reſolution to addreſs the king to take ſome effectual method of ſupporting the African trade, and checking the inſolence of the Dutch. But the king's remonſtrance had no effect, which was aſſigned as one reaſon of the firſt Dutch war in 1664. In the mean time, 1662, King Charles the Second had granted to a new company a charter of incorporation, by the title of The Company of Royal Adventurers of England trading to Africa; aſſigning for the limits of their trade, from the ſtreights mouth to the Cape of Good Hope. This company being juſt in its infancy when the war broke out, ſuffered greatly from the depredations of de Ruyter, who, with the Dutch fleet, took Cormentin caſtle, and Tacoravy fort, and ſeized the company's veſſels and effects, to the value of 200,000l.

The company, however, ſtill kept their footing in Africa; and by the third article of the treaty of Breda, in 1667, each ſide was to be reſtored to the places they held before the war; but as their affairs were in a declining condition, they agreed, in conſideration of a certain ſum, to ſurrender their charter to the crown; and the king, by letters patent under the great ſeal, dated September the 27th, 1672, eſtabliſhed the preſent Royal African Company of England; granting them, as the bounds of their conceſſion, from the port of Sallee in South Barbary, to the Cape of Good Hope. Though this company began with a ſmall ſtock, they exerted themſelves ſo effectually, that they greatly reſtored the face of the Engliſh trade on theſe coaſts; inlarging Cape Corſe Caſtle (the only fort the old company had left, and which they purchaſed for 34,000 pounds) and building forts at Acra, Dixcove, Winnebaco, Succand, Commenda, and Annamaboo, all on the gold coaſts, and three of them within muſquet-ſhot of the Dutch forts. They alſo purchaſed Frederickſburg fort from the Danes, built a new fort at Whidah, and met with great ſucceſs in the extenſion of their commerce.

On the northern coaſts, in 1673, the Dutch Weſt Indian company poſſeſſed the forts of Arguine; the French held the fort of St. Louis, at the mouth of the Senaga; and the Engliſh St. James's fort, on the Gambra, and a ſmall one at Sierra Leona, the trade of the coaſt being free to all the three nations, from Cape Blanco to Cape de Monte. In 1677, the French diſpoſſeſſed the Dutch of Arguine and Goree; which places being yielded to the French Senaga company by the peace of Nimeguen, they began to form pretenſions of an excluſive trade on this coaſt, ſeizing and confiſcating the Portugueſe, Dutch, and Brandenburgh ſhips, and interrupting all the Engliſh trade.

Soon after the revolution, began the interloping trade of ſeparate perſons on this coaſt, which helped not a little to prejudice the company's affairs. Theſe, beſides their ſiniſter traffic, lowering the price of European goods, and raiſing thoſe of the country, brought the company ſo low, that they were forced to apply to parliament for relief; but the prevailing opinion being then in favour of a free trade, the parliament in 1697, was induced to make the experiment of laying open the trade for the ſpace of 13 years to all adventurers, on their paying a duty of ten per cent. to the company, towards defraying the charges of their forts and caſtles, for the defence and preſervation of the trade. From this time their intereſt began viſibly to decline. In 1700 they laid a memorial before the parliament, to ſhew the prejudice they ſuffered by the ſeparate traders on the Gambra; and in 1705, entered into a treaty of neutrality with the French company, for their ſettlements on this coaſt between Cape de Verde, and Sierra Leona.

For the better ſupport of the French African trade, the king allowed the India company of Paris, an exemption from all duties for merchandiſe exported to Africa, and to the Dutch iſlands and colonies to America; an exemption from half the cuſtoms of all the goods and merchandiſe imported from Africa, and from half the cuſtoms of all ſugars and other merchandiſe imported from the French iſlands and colonies in America, being the produce of the ſale of negros there. Likewiſe an exemption from all tolls of any kind of goods and merchandiſe in France; a bounty of 20 livers, for every eight ounces of gold duſt brought into France.

The States General likewiſe grant their African company great privileges and immunities. As to the Engliſh, they have at preſent on the weſtern coaſt of Africa, only one fortified ſettlement, viz. St. James's Fort, within the mouth of the Gambra, on which depend ſeveral factories up that river. They had one till lately at Benſa iſland, and Sierra Leona river, but the factory was withdrawn before the ſame year, 1728.

The Gambra enters the ocean on the weſt coaſt of Africa, between Cape Verde and Cape Roxo, or to ſpeak more exactly, between Cape St. Mary's on the South, and the Broken Iſlands on the North. The breadth of the river, or diſtance between the Broken Iſles and Cape St. Mary's is ſix leagues. Theſe iſles are ſurrounded with a bank of ſand, which

extends to the river Salum, or Barſali, and of which the ſouth point, called the Red Bank, runs out two leagues into the ſea. From the ſouth ſide ſtretches another ſand, oppoſite Banyon point, whoſe ſhape has given it the name of the Banyon's Heel. This ſhoal has but a fathom or a fathom and a half water, with ſeveral points of rocks, on which the ſea beats ſo as to make them viſible at a great diſtance. It is by theſe marks, and three trees on the point of Cape St. Mary's, that one knows the mouth of the river in coming from ſea.

They reckon from the Broken Iſles to Charles Iſle, ten leagues; from thence to the point of Lamei, or Le Maine, two leagues; to Albreda two; and from Albreda to Jilfray, oppoſite to the Engliſh fort, half a league. In entering the river on the left or north ſide, there is a point on which is a tuft of trees, one much bigger and higher than the reſt, which they call the pavilion of the king of Barra. "The Engliſh, who, ſays Labat, treat with arrogance nations much ſuperior to the negros, have ſtooped ſo low as to ſalute this land-mark or pretended pavilion; which has ſo exalted this petty negro prince, that he exacts reſpect from all ſhips which enter the river, of whatever nation; and if they refuſe it, forbids their trade, and does them all the miſchief he can. The dominions of this prince are about eighteen leagues from eaſt to weſt, on the north ſide of the Gambra, being bounded by this river, and that of Janoc, at one of the branches or mouths of the river of Salum, or Barſali."

The Gambra is conſiderably broad here, being near three leagues; and, for fifty leagues higher, at Joar, it is reckoned a league broad, and is navigable to that place for a ſhip of forty guns and three hundred tons. A veſſel of one hundred and fifty tons may ſail too within a little of Barracunda, which is five hundred miles from the mouth. The tide runs up ſo far in the dry ſeaſon, that is, from December to June or July: the reſt of the year the river is impaſſable, on account of the floods, which the rainy ſeaſons bring down. Theſe render the ſtream ſo violent, that there is no ſtemming it with a fair wind; and beſides, it is impoſſible to tow the barks; becauſe the banks being under water, there is no footing for the men to go on ſhore. The Gambra, in this point, differs from the Senaga, where the navigation is beſt in the wet ſeaſon; there being then water enough to paſs the ſhoals and rocks, which interrupt the barks in the dry ſeaſon.

The right courſe into this river, when the entrance is open, is to ſteer for the point of Barra in five or ſix fathoms, till you bring it to bear ſouth-eaſt.—All ſhips that enter the river, as well as the Engliſh, fire three guns, by way of ſalute, to a tall, thick tree, called, The king of Barra's ſtandard; and the ſame they do going out. At each time they pay a bar of iron to the king or his officers, for the duty of anchorage. The river, in its way from Contori to the ocean has many windings, eſpecially from Cantor, and is much deeper than the Senaga, and the channel broader; but the tide, or current, leſs rapid. Yet the Gambra carries ſuch a freſh into the ſea with it, as is viſible eight or ten leagues from ſhore. The tide flows up as far as Barracunda, where dreadful falls obſtruct the paſſage of ſhips; but ſloops may run up two hundred leagues. The banks on both ſides are low, and interſected with many rivulets, which the floods run into. The channel, about the creek of Jagra, is from four to five fathoms deep, near four ſmall iſlands oppoſite to it.

James iſland being nothing but a fort of flat rock, without any creeks or proper places for careening, the Engliſh do this up the river of Bloc or Bintan, on the ſouth of Gambra, oppoſite the forty, at a place called Bloc; the reſidence of a prince who ſtiles himſelf emperor of Grand Cantor, and is always at war with the king of Bar. The French ſay the river of Bloc meets with that of Cumbo, which is ſome leagues to the weſt of it, making an iſland where they join; and that to the weſt of Cumbo there is another ſmall river called Rio Bravetto.

The village of Barifet is on the ſame river of Bloc, near its entrance into the Gambra, and is tributary to the king, or emperor of Cantor. The king of Bar, reſides ſome part of the year, at the town or village of Bar, ſaid to be on the north point of Gambra, near the Lofty Tree, called by the Portugueſe, Arvora da Marca, or, The Land-Mark Tree; which ſerves as a good direction to the European ſhips going in or out of the ſaid river. At other times the king preſides at the town of Anna Bar, ſeated about a mile farther up the land in a wood. From this village of Bar to the Eaſt, along the banks of the Gambra, are the villages of Grigou, Bubaculon, and Lamei, almoſt oppoſite to the Iſle of Dogs; and ſomewhat to the eaſt of them, thoſe of Albreda and Jilfray; where the Engliſh and French have their factories, and the Portugueſe, at the latter, a poor little church.

The ſource of the Gambra is uncertain. The reports and conjectures have been as many and various as thoſe which regard the Niger, of which it is by moſt authors reckoned a branch, as hath been already obſerved.

The Engliſh have, from time to time, endeavoured to diſcover the origin of Gambra, but they could never obtain any certain account beyond the falls of Barracunda, about 560 miles from its mouth; poſſibly for the ſame reaſons that have hindered the French from penetrating on the Senaga beyond the rock Govina. One captain Thompſon, and after him Jobſon, about 1618, aſcended the river 120 leagues above Barracunda; Vermuyden and others, about the beginning of king Charles the IId's. reign, went almoſt as far; Captain Stibbs, in 1724, went twenty leagues beyond that place; and, in 1732, the African company being deſirous to know how far the Gambra was navigable, as well as to open new branches of trade up the river, ſent over ſmall ſloops in frames for diſcoveries. Mr. Thomas Harriſon, one of their chief merchants, ſet out from St. James's Fort in a ſloop for that purpoſe, and returned from that Voyage the tenth of June 1732. On examination of the matter, Mr. Moore, our author, found that Harriſon himſelf did not go above Fatatenda, but ſent the ſloop's boat on the diſcovery, with Mr. John Leach; who, 22 leagues from thence, found a ledge of table rocks which ſeemed to croſs the river. This joined to his beginning to want proviſions, and undergoing ſeveral hardſhips obliged him to return without ſeeking a paſſage. It is ſaid, however, that by the tradition of the natives, the river is paſſable a great way farther up, to ſome large lakes. This is all we have upon the authority of the negroes. It appears indeed, that in this vaſt region there are many fountains, marſhes, lakes or brooks, which diſcharge themſelves either into the Niger, or the rivers which flow into it, as may be gathered from the countries being ſo well peopled; a proof of which is the great number of ſlaves from the inland-parts to the coaſt, beſides thoſe brought in by war and other accidents.

The countries of ſeveral negro princes who aſſume the title of king; lie on the north and ſouth ſides of the Gambra, the firſt on the northern ſide is Barra, The king of which is of the Mandingo race, and is tributary to the king of Barſali. In this kingdom, about ſix leagues from the ſea, is Charles Iſle, within a muſquet ſhot of Barra ſhore; on which formerly the Engliſh had a fort, now in ruins. There are two ſhoals of ſand and rocks in the river on the Barra ſide, one at Le Main Point, the other at Point Seaca, the firſt about ſix miles below James's fort, the latter a little above it. James's iſland lies oppoſite to Jilfray; from which a ſpit, of ſand and rocks, runs a good way to the north-north-weſt, uſually called, The Company's Spit. Several traders, particularly Liverpool ſhips, have run a-ground on it, but have been got off by the company's aſſiſtance, without

damage or charge; yet could not be prevailed on to give any written acknowledgement of the ſervice, alledging their owners had not ordered them to ſign any ſuch thing.

On the eaſt, lies the country of Badelu; in this laſt, over-againſt Tancroval, (in the kingdom of Caen, on the ſouth ſide) is an iſland, parted only by a ſmall gut of water from Badelu. The iſle uſed formerly to ſupply James Fort with ſtone; but, in 1733, Mr. Hall found them much nearer the fort. The king of Badelu is a Mandingo, and his country is 20 leagues in extent.—Sanjally is next, though a petty kingdom, is independent. The prince is a Mandingo, and his dominions extend four leagues along the river.

The kingdom of Barſali is adjacent, governed by a Jalof prince. This country begins at the ſea, where the river of the ſame name enters; and, ſurrounding the three kingdoms of Barra, Colar, and Badelu, extends for 15 leagues along the Gambra.—Joar, a town of great trade, lies in Barſali, about two miles from the river; the road on which lies, one mile over a pleaſant ſavannah, and the other along a narrow creek, to Cower, the port of it. The ſeparate traders generally come up to trade here, at a place called Rumbo's Point, about three miles above Joar, and the ſame diſtance from Cower; which laſt has the greater reſort of people, and the moſt trade of any town in the whole river.

Beyond the country of Barſali, is the kingdom of Yani, which is large and wide; and divided into two parts, one called Upper, and the other Lower Yani: each governed by a diſtinct king, the one a Jalof, the other a Mandingo. On the ſhore of this kingdom lies Bird Iſle, about twelve leagues above Joar, in which there is ſcarcely a tree, but it ſeems marſhy ground. Thirty leagues above this iſle, near the ſame ſhore, is a numerous cluſter of iſles, called Sappo: ſome of them pretty large, but not inhabited. One of them is called Le Main Iſle, about four leagues in length, on which are great numbers of wild beaſts and palm trees, which brings the natives often here to get palm wine, and to hunt.

Above Yani-marew, is the river Sami, which riſes a vaſt way inland. It abounds in crocodiles, and is ſaid to part Lower from Upper Yani. It enters the Gambra, between Bruckoe and Yamyamacunda. Theſe two kingdoms reach about eighty leagues along the river, and the next to them is Woolli, (or Walli, (through which country the merchants are obliged to paſs in their way to Cower, before-mentioned, which is a port to Joar. This country extends a great way up the river; but, at Fatatenda, the river is as wide as the Thames, and is navigable for ſloops of 40 tons, the tides riſing there three or four feet high. It lies about 500 miles up the Gambra, on the north ſide.

The firſt kingdom we meet with on the ſouth ſide, towards the ſea, is Cumbo. It extends about eleven leagues from Cape St. Mary's, at the entrance of the Gambra, to a place called Cabata River, noted for plenty of goats, fowls, and cattle. Fonia is next to this; it begins where the river of Cabata falls into the Gambra, and reaches to that of Vintain, which is about ſeven leagues along the river ſide, but inland; it is very large, and governed by two emperors of a Bangor race. Each prince has his diſtinct diſtrict; but their territories are much leſſened in extent, as well as people, by the great number of their ſubjects ſold into ſlavery to the Europeans. Fonia is bounded on the eaſt by the river of Vintain (or Binton) whoſe mouth is about a mile over, and which is navigable for ſeveral leagues. Three leagues from the mouth lies the town of the ſame name, ſituated in Fonia; and above that, on the ſame ſide of the river, is Jereja.—Oppoſite James Fort, near the main, on the ſouth ſide of the river, is an iſland, lately diſcovered to be ſuch, called Caboſhir Iſland, ſeparated from the main only by a large brook. This iſland produces great quantities of iron ſtone, with which James Fort is ſupplied.

Bordering on to Fonia is Caen, ſeparated only by Vintain river. It is governed by an emperor and a king, both Mandingos, who have their diſtinct revenues. In this country lies Tancroval, a large town, cloſe to the water ſide. Above that town, about three leagues, are a parcel of rocks, at a place, or port, called Tendebas, lying a good way out from the ſhore, which are dry at low water. This country extends about twenty-three leagues along the Gambra. Eaſtward of Caen, is Jagra, famous for labouring people, and abounding, on that account, with corn and rice. To this kingdom, which extends about 12 leagues, belongs Elephant Iſle, in the Gambra, four or five miles long, woody, and marſhy.

Yamina, which is next, extends 14 leagues, and then begins Eropina, a petty kingdom, extending 14 leagues farther, where it is bounded by Jamarrow. This kingdom is governed by a Mandingo emperor, and extends thirty-two leagues along the river. Here is a large town, called Brucoe, inhabited by Mandingos, who are ſtrict Mahommetans. Half a mile below this town is a ledge of rocks, dry at low water, reaching from the northern ſhore, five parts in ſix, acroſs the river, and leave ſo narrow a channel under the ſouth ſhore as makes it dangerous for large ſhips to paſs it; ſo that the company's ſloops are obliged to take the opportunity of ſlack water to go through this place, which is called Fulis-Paſs. In this empire, nine miles higher, near a town called Dubacunda, is another parcel of rocks, which reach from the ſouth ſide two-thirds a-croſs; and three miles yet higher, another chain of rocks, dry at low water; but there is a deep channel on the north ſide.

Tomani, which is next to this, is a large country, fuller of towns than any on the river. Here is the ſmall town called Yamyamacunda, where there is a conſiderable trade for dry goods. A little below this town, about mid-channel, are ſome rocks, but never dry; and oppoſite the factory, on the north ſide the river, about half a mile, is a ſtanding lake about two miles long, abounding in fiſh. This country extends along the river for the diſtance of twenty-ſix leagues, and is governed by a Mandingo prince.

Cantor begins beyond Tomani, on the ſouth ſide of the river below Fatatenda, is Colar, about 500 miles from Cape S. Mary's, to the ſouthward of Gambra river.

The countries on both ſides were originally divided into ſeveral ſmall kingdoms, ſubject to three greater. Thoſe on the ſouth ſide were ſubject to the king of Cantor; thoſe on the north, to the kings of Barſali and Woolly.

Fort James is the firſt and principal place of ſtrength in theſe parts, belonging to the Engliſh. It is ſituate on an iſland of the ſame name, which intirely commands the trade of the river. The ſecond is near the Gambra, on the river Cabata, in the kingdom of Cumbo, on the ſouth ſide. Jillifree [or Jilfray] lies oppoſite to James's Fort, on the north ſide. The company have a burial ground here, and pay the cuſtoms to the king of Barrah.—Vintain factory lies ſix leagues from the fort of Fonia, on the ſouth ſide of the Gambra, where the chief trade is for wax, ivory, and dry goods. On the ſame river, higher up, lies Jereja. This factory is about 14 leagues diſtant from James's Fort, and chiefly furniſhed with dry goods, in order to purchaſe wax, which however is of a very indifferent quality.

In the year 1730, Colar factory was ſettled on a river of the ſame name, in the kingdom of Barrah, on the north ſide of the Gambra. Still higher on the ſouth ſide in the kingdom of Kaen [or Caen] lies Tancroval, a large town where the company have a factory, the trade of which is chiefly for bees wax. Proceeding up the river on the north ſide, is the kingdom of Barſali, which we have noticed lies near Joar, and three miles to the eaſtward, is Cower, which is the chief place for trade. It has two ports on the river. There is a factory here; and the next is at Yanimarew (in the kingdom of Lower Yani) where

is

is a black factor, in order to purchaſe corn for James's fort.

Near the north ſide of Gambra, is Cutfejar. This ſettlement being overflowed in 1725, the company removed to Somi. On the ſouth ſide of the river, beyond this, in the kingdom of Tomani, lies the factory of Yamyamacunda, which was deſtroyed by the floods in 1733, but afterwards rebuilt by the company.

At theſe laſt places, the chief trade carried on is for elephant's teeth, and ſlaves. The higheſt factory on the Gambra is Fatatenda, in the kingdom of Woolli, which has an extenſive and pleaſant proſpect of the river, and of the country of Cantor, on the ſouth ſide, but the factories here having been ill uſed by the king of Tomani, the company withdrew this ſettlement in 1734.

James's iſland, which belongs to the African company, lies almoſt in the middle of the river Gambra, which is here ſeven miles wide. It is ten leagues from the river's mouth, and three miles from the neareſt ſhore. At low water, it is about three quarters of a mile in circumference, upon which there is a ſquare fort of ſtone already built, with four baſtions, and upon each are ſeven canons well mounted, beſides batteries which command the river. There are ſome good apartments in the fort, in which the governors, chief merchants, factors, writers, and enſign, &c. Under ſome of theſe are convenient ſtore-houſes. The whole is fortified with palliſadoes, and ſurrounded with the river. There are alſo barracks for the ſoldiers, and others for the ſervants. Underneath theſe ſtorehouſes, and under thoſe of the ſoldiers, are the ſlave-houſes. In the day there are three centries, one at the gate of the fort, one at the door of the public room, and another who walks round the fort to ſee what boats come to, and go from the iſland, of which they make a report to the governor. This fort was firſt erected by Sir Robert Holmes, about the year 1664, as a ſecurity to the Engliſh trade on this coaſt, who called it James's fort, in honour of the Duke of York, afterwards James the Second. The garriſon conſiſts generally of 60 or 70 whites, and as many Gromettos, or free blacks, in the company's ſervice.

This fort was firſt taken by the French, under M. de Gennes, in 1695, with a ſmall ſquadron of four ſhips, and two bomb-veſſels. At the iſle of Goree, he received by an Engliſh deſerter, an account of the ill condition of the fort, the garriſon being ſickly, and wanting proviſions, which encouraged him to make the attempt. He entered the Gambra, July the 22d, with Engliſh colours, and at five in the afternoon, anchored within a league of the fort, which he ſurrounded ſo with his boats, as to cut off all communication with the land. The ſame night a Portugueſe, called Don Carlos, who lived at Jilfray, came on board, and informed M. de Gennes of the ſtate of the fort, but the king of Barrah, to whom the French commander applied, declined entering into the quarrel. The 23d, the Sieur de la Roque being ſent to ſummon the garriſon, he was met by a boat, and conducted blindfold to the fort, where the lieutenant treated him ſplendidly, the governor being abſent, and ſent three Engliſh officers on board who were inſtructed to demand ſome days reſpite. This being refuſed, the Engliſh ſent him word the next morning, that they would defend the place to the laſt extremity.

At eight in the evening of the 24th, ſome bombs being thrown, which fell ſhort of their mark, the French commander ceaſed firing, waiting for the tide of flood for anchoring nearer. In the mean time the governor ſent a flag of truce to capitulate, and hoſtages were exchanged till the terms could be ſettled, which were ſigned the ſame day.

On the 27th, at break of day, M. de la Perriere, major to the ſquadron, gave notice to Mr. Hanbury, the governor, to prepare to evacuate the place. At ſix in the morning, M. de Fontenay, appointed governor by M. de Gennes, landed, and was met by Mr. Hanbury, who delivered up the keys, and was conveyed on board the Felicite, one of the ſquadron. The French flag was hoiſted, and Te Deum ſung, under a diſcharge of 37 guns. The next day a French officer was ſent to the king of Barrah, to demand the effects of the Engliſh at Jilfray, but he replied, That ſince the fort was ſurrendered, what was on ſhore belonged to him; but ſeeing that M. de Gennes was about to employ force, he ſent an alcali to tell him, he would have no diſpute, but would yield up the effects. The French general having deſtroyed the fort, the 27th of the ſame month, the Engliſh officers embarked for Cayenne, on their way home, and M. de Gennes left the Gambra on the 24th, and ſailed for Braſil.

The place being reſtored by the peace of Ryſwic, the Royal African company took care to rebuild it, intending to remount it with 90 guns, and to maintain a garriſon of 250 Europeans. However, the war breaking out afreſh in 1702, the French, the ſame year, found means to ſurpriſe it under Captain la Roque in the Mutine who was at the taking of it by M. de Gennes in 1695) accompanied by the Sieur de St. Vandrille, in the Hermione frigate. They took the fort, which they ranſomed for 100,000 crowns, carrying off 250 ſlaves, and a large quantity of goods. La Roque himſelf was killed in the attack. In 1709, the French made a third attempt, under M. Parente, with a ſmall ſquadron of four frigates, which took the fort, and a ſhip laden with ſlaves. After this, it was taken twice by the Engliſh pirates, who infeſted the coaſt of Guinea about 1720, of which the following is an account.

The firſt of theſe actions was performed by Howard Davis, who ſailing from Briſtol with Captain Skinner in the Cadogan Snow, was taken in 1719, near Sierra Leona, by England the pirate, who murdered the captain, and made Davis a compliment of the ſhip; but finding the majority of the crew averſe to the deſign, he was forced to ſteer for Barbadoes, where the cargo was conſigned, and on the information of the ſailors, put in priſon. However, as he had committed no piratical act, he was releaſed, and employed by Captain Woods Rogers in a trading ſloop, which being manned chiefly with pirates, they at Davis's motion, agreed to return to their old courſe of buſineſs, and choſe him for their captain. At firſt he had pretty good ſucceſs. Coming to St. Jago, the chief town of one of the Cape Verd iſlands, and being offended at the governor's ſuſpecting them to be pirates, he entered the fort in the night, but the governor holding out in his houſe, he quitted it, after doing the Portugueſe great damage. Hence he ſailed to the river Gambra, in order to attempt St. James's fort, where he told his men, there was always a great deal of money lodged. This, every thing conſidered, was a deſperate enterpriſe. The method he took was this, He concealed his men under deck, except as many as were requiſite to work the ſhip, ſo that thoſe from the fort might have no ſuſpicion. He then ran in cloſe to the fort, and hoiſted out his boat, with ſix men in ordinary jackets, in which himſelf, with the maſter and ſurgeon, dreſſed like gentlemen, went on ſhore. Being arrived at the landing place, he was received by a file of muſqueteers, and conducted to the fort, and being examined by the governor, he informed him, he was from Liverpool, bound to the Senega, for gum and teeth, but had been chaſed on the coaſt by two French men of war; adding, that their cargo was iron and plate. The governor told Davis he would let him have ſlaves to the full value of his cargo; and aſked if he had any European liquor on board? Davis replied, He had ſome for the ſhip's uſe, but a hamper was at his ſervice. The governor aſked him and his officers to dinner; he accepted of the invitation, and while it was getting ready, went on board, under pretence of giving ſome orders, leaving his companions on ſhore. Having made the proper obſervations for executing his deſign, during his

ſtay at the fort, he returned before noon with his boat's crew privately armed. He had given them inſtructions to converſe with the ſoldiers in the guard-room, and when he fired a piſtol as a ſignal, to ſecure the arms of the garriſon. Davis found the governor and his aſſociates, preparing a bowl of punch for dinner, and having taken his opportunity to ſecure him, fired his piſtol. On this his men ſeized the arms in the guard-room, making the garriſon priſoners, whom they locked up in the room. Davis then ordered the union flag on the fort to be ſtruck, which his men on board ſeeing, ſent him the reinforcement agreed on, ſo that he remained maſter of the fort without reſiſtance. Many of the ſoldiers in the company's ſervice entered with him, and thoſe who refuſed, he immediately ſecured on board a ſloop he found in the river. After this, he plundered the place, where he found to the amount of 2000 pounds in bar gold, and many other valuable effects, which he ſent on board, and then demoliſhed the fortifications.

The company ſent the Gambra Caſtle, Captain Ruſſel, in 1721, with a company of ſoldiers, commanded by Major Maſſey, to garriſon St. James's fort, which had lately been taken and deſtroyed by the pirate Davis. She arrived in the Gambra about May, and landed her men under Maſſey, on St. James's iſland, where Colonel Whitney the governor had juſt arrived. Both the governor and Maſſey were greatly diſſatisfied with the reception they met with from the merchants. Maſſey in particular was very loud in his complaints. George Lowther, ſecond mate of the Gambra Caſtle, having a pique againſt Ruſſel his captain, inſtigated the ſhip's company, over whom he had a great influence, to join with Maſſey in his diſcontent, and flattered him, that by ſecuring the ſhip, he would convey him back to England. Maſſey propoſing this to his men, they all ſeconded his deſign, on which he ſet guards on the ſtore-room; and after ſending on board all the proviſions, and diſmounting the guns, went on board Lowther, who had ſecured the ſhip in Ruſſel's abſence, and got ready to ſail, which he did the next day. Maſſey after this, turned pirate with Lowther, but ſoon after quitted that ſort of life, and returning home, was brought on his trial and was hanged.—James's Fort has ſince been fully re-eſtabliſhed.

A VOYAGE TO THE AFRICAN COASTS, IN THE SWALLOW AND WEYMOUTH, BY Mr. ATKINS.

THE Swallow and Weymouth that performed this voyage, the relation of which we have from Mr. T. Atkins, ſailed from Spithead, February 5, 1720, taking in neceſſaries for a double voyage down to the coaſt of Guinea, with an intention to deſtroy the pirates, who greatly infeſted thoſe parts, and deſtroyed their trade and factories. The African company's governor for Gambra, and other places, went under their convoy.——

As they paſſed the weſtern extremity of England, the author obſerved that from the equal depth of water found here, and from doors, windows, and roots of trees, formerly hooked up by the fiſhermen, it ſeems to have been in ages paſt, contiguous with the little rocky iſlands of Scilly, by a land called the Lioneſs, which had been ſeparated by ſome violent ſhock from the coaſt.

About the length of Cape Finiſterre they met with continual weſterly winds, very unuſual to the coaſt of Portugal. A day or two's ſail from Madeira, they fell in with the commodore Matthews, in the Lion, bound with a ſquadron of four ſail to the Eaſt Indies, for ſuppreſſing the pirates there.

The Swallow parted with the Weymouth on the 13th of November, bound with the governor and factors to Gambra river. Coming near the land of Cape Verd, they took up ſeveral turtles, who love ſleeping on a ſmooth ſurface, which they had now, it being calm. They ſaw alſo abundance of flying fiſh, and their perpetual enemies the Albecore and Dolphin. This laſt is a ſtrait fiſh, four or five feet long, with a forked tail perpendicular to the horriſon; plays familiarly about ſhips, is of a dry taſte, but makes tolerable broth. Theſe are ſeldom ſeen out of the latitude of a trade wind, and the flying fiſh never; theſe laſt are the bigneſs of ſmall herrings: their wings, about two thirds of its length, come narrow from the body, and end broad. They fly by the help of them a furlong at a time, when purſued, turning in their flight; they ſometimes dip in the ſea and riſe again, the wind making them by this expedient fleeter.—They ſteered ſouth-ſouth-weſt to avoid the ſhoals of Grande; and hawling in for the land again, waited till they came into the latitude of Sierra Leona, ſome other ſhoals lying on the north ſide of that river. The ſoundings in with the cape are gradual from ſixty fathoms, about twelve leagues off to thirteen. Cape Sierra Leona is known by a ſingle tree much larger than the reſt, and high land on the back of it. They anchored on the 7th in the third bay from the cape, which is very commodious for watering and wooding, and regular tides as any part of the channel in England. Going on ſhore here on the 18th, they viſited Signor Joſeph, who reſided there.

On the 28th of April they left Sierra Leona, and May the 1ſt, they were joined by the Weymouth from Gambra. She ran on a ſand on that river, and with great difficulty got off. Thoſe of the Swallow likewiſe, while at Sierra Leona, letting in water to the ſhip one evening had forgot the plug, till ſhe had five or ſix feet water in the hold.—At Cape St. Mary's, the ſtarboard entrance of the Gambra, they found no canibals, as is commonly reported among ſailors, but a civiliſed people, with whom they wooded this ſhip. They were off Cape Monte on the 4th, and the next day off Monſerada, both highlands; the former appearing with a double, the latter with a ſingle hummock, the country trending from them low and woody; about thirty-five fathoms water three leagues from ſhore.

From the latter came off a canoe with a cabobſhier, Captain John Hee, diſtinguiſhed by an old hat, and ſailor's jacket, with a greater number of thick braſs rings on his fingers and toes than his attendants. He ſeemed ſhy of entering the ſhip, for fear of being ſeized, his town's people having often ſuffered by the treachery of ſhips, and they as often return it, with cruelty, "which (ſays the author) has given riſe to the report of their canibals at ſeveral places, very unlikely any where, becauſe in that caſe they could neither have trade nor neighbours." The fetiſh they brought off, on this dangerous voyage, was a bundle of ſmall black ſticks, like a bundle of Aſparagus, put into a bag, knit of ſilk-graſs, and hanging over one of their ſhoulders,

ſhoulders, ſeeming to place a ſecurity and confidence in it. Atkins would have handled and taſted it, but found it put them in a fright; they making ſigns, to deter him, ſaying in their language, "If you eat, you will die preſently."

The diſtruſt on both ſides made their preſent buſineſs only begging old breeches, ſhirts, rags, biſcuits, and whatever elſe they ſaw; parting in a hurry, and calling to one another for that end, in a note like that which butchers uſe in driving cattle.

They anchored before Seſtos, on the 10th of May. The River is about half the breadth of the Thames, a narrow entrance only for boats on the ſtarboard ſide, between two rocks; which, on great ſwells and winds, make the ſhooting of it dangerous, the reſt of the breadth being choaked with ſands. Here may be purchaſed conſiderable quantities of rice, and the river abounds with fiſh.

The king, who commanded here, had the name of Pedro: he lived about five miles up the river. A ſample of negro majeſty. The royal preſent was ſent by a lieutenant and purſer. Arriving at the king's town, they were uſhered or thruſt, by ſome of the courtiers into the common hall, in order to wait the king's dreſſing, and coming from the palace, his public audience being always in the preſence of his people. After waiting an hour, his majeſty came, attended by a hundred naked nobles, all ſmoking, and a horn blowing before him. The king had a dirty red bays gown on, checkered with patch-work of other colours, like a Merry-andrew, and a fellow to bear the train; which was a narrow ſlip of culgee tacked to the bottom of the gown. He had an old black full bottomed wig, uncombed, an old hat, not half big enough, and ſo ſet conſiderably behind the fore-top, that made his meagre face like a ſcare-crow; coarſe ſhoes and ſtockings, unbuckled and untied, and a braſs chain of twenty pounds weight at leaſt about his neck.

The embaſſadors preſented him a gun, two pieces of ſhip-beef, a cheeſe, a bottle of brandy, a dozen of pipes, and two dozen of congees. But Pedro, did not ſeem pleaſed when he ſaw the preſent, as it conſiſted of ſuch things as he had not preſent occaſion for: aſking to take them back, and give him their breeches, ſullied a little with kneeling in the dirt: but on a conſultation with his miniſters, the preſent was accepted, and the officers diſmiſſed.

To give the king a good opinion of their generoſity they made it up to his ſon Tom Freeman; who, to ſhew his good nature, came on board un-invited, and bringing his flageolet, obliged them with ſome wild notes. Him they dreſſed with an edged hat, a wig, and a ſword, and gave him a patent on a large ſheet of parchment, creating him duke of Seſtos. This was taken ſo kindly by the father, that he ſent them a couple of goats in return, and ſent his younger ſon Joſee for further marks of their favour; whom they dignified alſo, on a ſmall conſideration, with the title of prince of Baxos.

In one of theſe towns, to which they had leave to go, ſome others of them paid a viſit to his majeſty, whom they found at his palace. The entrance was narrow like a port-hole, leading into what one might call his court yard; a little ſpot, and two or three huts in it, which were the apartments of his women. From this they peeped through another portico, and diſcovered him on the left-hand, upon a place on the outſide of his houſe, raiſed like a ſhop-board, and ſmoking with two or three old women (the favourite diverſion of both ſexes.) His dreſs and figure, with the novelty of the Engliſh, created mutual ſmiles for a few minutes, when they took leave with the Atti, hoo!

They left Seſtos on the 18th of May, and ſailing along a coaſt low like Holland, in two or three days reached Cape Palma; weighed from Jaque a Jaques the 28th; the 30th came before Baſſam; the 31ſt, before Aſſini, paſſing by that unfathomable place, called the bottomleſs-pit, ſeven leagues below Jaque a Jaques, where the depth is all over unfathomable, and three miles acroſs. The natives every where appeared ſhy of correſpondence till they came upon the Gold Coaſt. June the ſecond, they anchored at Cape Apollonia. At Jaque a Jaques they met with the Robert of Briſtol, Captain Harding, who ſailed from Sierra Leona before them, having purchaſed thirty ſlaves, of which Captain Tomba was one: he gave them the following melancholy ſtory: That this Tomba, about a week before, had combined with three or four of the ſtouteſt of his countrymen to mutiny, being aſſiſted by a woman ſlave, who telling him one night that there were only five white men on deck, and they aſleep, brought him a hammer at the ſame time to execute his treachery: he could only engage one more to follow him on the deck, beſides the woman, when finding three ſailors on the forecaſtle, he preſently diſpatched two with ſingle ſtrokes on the temples; the others rouſing with the noiſe, one of them ſeized Tomba, but was murdered by him in the ſame manner. But the laſt two out of the five taking the alarm, ſtood upon their guard, and their defence ſoon awaked the maſter underneath, who running up, took a handſpike, and felling Tomba with it, ſecured them all in irons.

Captain Harding only whipped the two ſtout ſlaves; but the three other abettors (though not actors, nor of ſtrength for it) he ſentenced to cruel deaths, making them firſt eat the heart and livers of one of them he killed. The woman he hoiſted by the thumbs, whipped, and ſlaſhed her with knives, before the other ſlaves till ſhe died.

They anchored at Axim, on the 6th of June, the firſt European factory belonging to the Dutch; and next day they came to Cape Tres Puntas. Moſt ſhips touch here for the convenience of water (which is more difficultly ſupplied above) each veſſel paying an ounce of gold for the privilege. John Conny, then the principal caboſhir, whoſe town lies three miles weſtward, ſent off a ſervant with his commiſſion, which was a large gold-headed cane, engraved with his name, to demand it. Their neglect in it, with ſome obvious ill treatment of the agent, brought John down next day with a poſſe, who ſeizing on their water-caſks on ſhore, carried ten or a dozen of their men priſoners to his town. The officer among them, endeavouring to diſtinguiſh the king's ſhip from othe s, got his head broke; John, who underſtood Engliſh enough to ſwear, ſaying at the ſame time, By G—, that he was king there. However, after ſome trouble, he accepted, in recompence, ſix ounces of gold, and an anker of brandy.

The Daniſh fort ſtood on a hill adjoining, which ſome few years ſince, having being relinquiſhed by them, and thereby falling into John's poſſeſſion, has occaſioned ſome conteſt between him and the Dutch; theſe laſt pretending a title of purchaſe in 1720, ſent a bomb veſſel, and two or three frigates to demand a ſurrender; but John being a bold and ſubtle fellow, anſwered, that he expected ſome inſtrument ſhould be ſhewn him to confirm the ſale; and even with that (ſaid he) "I can ſee no pretence but to the guns, the brick and ſtone of the building, for the ground was not theirs to diſpoſe of; they paid no rent for it (continues he) and ſince they have thought fit to remove, I do not deſign to tenant it out to any other white men while I live." This ſort of diſcourſe vexed the Dutch, who threw in ſome bombs and ſhot; and then raſhly landed forty of their men, under the command of a lieutenant to attack the town: they fired once without any damage, and then John, at the head of his men, ruſhing from under cover of the houſes with a greater force, cut them in pieces, paving the entrance of his palace, ſoon after, with their ſkuls.

This made him very exact with every body about what he called his dues, though juſt in trade; when the Engliſh had returned to a good underſtanding, the author with ſome other officers paid him a viſit. The ſoutherly winds made ſo great a ſurf, that their

landing was dangerous, nor to be performed by their own boats; but by canoes of his ſending, for which they paid them. John himſelf ſtood on ſhore to receive them, attended with a guard of thirty men, under bright arms; who conducted them to his houſe. This was a pretty large building, raiſed from the materials of the fort. It aſcends with a double ſtone ſtair-caſe without, of twelve ſteps; on that floor are three good rooms; one his armory, another his chamber, with a ſtanding bed in it; and a third for entertainment of gueſts, furniſhed with tables, chairs, &c. The way to it lay through two court-yards; the outer had houſes for officers and ſervants belonging to him; the inner, (a ſpacious ſquare) had a guard room and good armory fronting the entrance, with piazzas to accommodate his guards, and imitates in ſome meaſure the grandeur of the Pruſſian governors; with whom John had been a ſervant for ſome years. He was a ſtrong-made man, about fifty, of a ſullen look, and commanded the reſpect of being bare-headed from all the negros about him. He ſhewed very great civility to the Engliſh, who had returned his ſalute of ſix guns, and made up the breach of watering on his own terms.

Finding him chearful and familiar, they now ventured to aſk him what was become of the Dutchmens ſkulls that lately paved the entrance of his houſe? He anſwered, that about a month before their ſhips arrival, he had put them into a cheſt, with ſome brandy, pipes, and tobacco, and buried them. "For, ſays he, it is time that all malice ſhould depart, and the putting up a few neceſſaries with the corpſe, ſuch as they loved, is our way of reſpecting the deceaſed." The author learned, that it was cuſtomary with the rich, to ſacrifice a ſlave or two alſo at their funerals. The under jaw-bones of theſe Dutchmen, John ſhewed him ſtrung, and hanging on a tree in the court-yard.

This chief was no leſs vigorous in inflicting puniſhments, than exacting his dues. A few weeks before the ſhips arrival he had condemned a murderer, (although he ſeemed excuſable on the principle of ſelf-defence, which John did not underſtand) and made the criminal's own brother, who was one of his beſt ſervants, to be the executioner before his face, by tying a large ſtone, like a milſtone, about his neck, and throwing him into the ſea.

By his riches and power, John had ingroſſed the trade of the place: and by thoſe means reduced the traders profits to twenty per cent, a diſadvantage which themſelves contributed to, by underſelling one another.

The Engliſh left Cape Tres Puntas, on the 14th of June, and the 15th, anchored at Dixcove, an Engliſh factory. This, Succonda, Anamaboo, and others, though called factories, are the reſidence only of two or three people from the principal one of Cape Corſo, who have commiſſion for what trade they tranſact, beſides their regular ſalary.

On the 16th, they weighed from thence, and anchored next day before Cape Corſo caſtle, the Engliſh African company's chief fort; the reſidence of their governor, ſtyled director-general, two merchants, a ſecretary, chaplain, ſurgeon, factors, writers, miners, artificers, and a company of ſoldiers, with buildings and conveniencies inſide, for themſelves or ſlaves.

About the time of this voyage, the company had raiſed by ſubſcription, 392,400 pounds, and in December, 1722, made a call of five per cent, allowing the proprietors as had been aceuſtomed, a dividend of three per cent. In December, 1723, they expoſed to ſale 200,000 pounds ſtock, at thirty per cent. "Which, ſays the author, ſhewed their affairs had but an ill aſpect."

On the 26th of June they went to Anamaboo, a noted part for windward ſhips: the 28th, to Mountford; the 30th, to Barkee, and then Shalloe. Through the whole courſe from Sierra Leona, it may be obſerved, that wood, candles, or any other ſhip's neceſſaries are hard to get; the former, not from a want in the country (it being over-run) but an impaſſable beach, where there is no navigable river, and the diffidence of the negros, where it might be beſt ſupplied; and the other, becauſe merchant-ſhips do not expect a trade of that ſort, and therefore unprovided.

Paſſing by Accra, the River Volta and the Papan Coaſt, they anchored at Whidah, July the 4th. The whole coaſt was a ſtraight line, without gulphs or bays, is thick ſet with trees, having a tendency of the ſea with the wind, and every where a very rough and turbulent beach.

They paſſed by a high mount before they reached Accra, which the author was told has been ſeen to ſmoke like a volcano. For this reaſon, and becauſe it is the haunt of wild beaſts, it is called the Devil's Hill. But the moſt danger to travellers is from a prodigious number of apes, ſome five feet long; and monkeys, who attack ſingle paſſengers and drive them into the water, where theſe creatures are afraid to follow. They left Whidah on the 20th, and the 28th arrived at Prince's Iſland, belonging to the Portugueſe. In their approach they ſaw every day many whales, threſhers, and petrels. Here they cleaned their ſhips, heaving down by one another, but with the fatigue and heat together, as alſo the irregularity of the ſailors, buried three or four men a day for ſix weeks together.

They arrived very healthy; but the iſland furniſhing palm-wines, and the means of debauching at eaſy rates, and their tents alſo giving opportunity, the ſeamen ſoon ran into exceſs, which brought on a malignant fever, that reduced them in two months to deliberate whither they could proceed ſafely to ſea, without a return of men from England, the Weymouth not being able to purchaſe her anchors, and the Swallow with difficulty: but the author, as ſurgeon, judged it beſt to go, though in the moſt ſickly condition, ſince being thus removed from the cauſe of their calamity, (calms, heats, exceſſive and diſorderly living) whoever were viſited with the diſtemper, would find a criſis in recovery or death, which would ſtop the infection. Therefore, with the aſſiſtance of ſome men from a Dutch Eaſt-India ſhip, that happened to put in, they got under ſail. The fevers for want of neceſſaries turned in many to fluxes, and purſued them, with violence. The Weymouth, which brought out of England a complement of 240 men, having at the end of her voyage 180 dead upon her books.

On the 20th of September, they left Princes Iſle, and anchored the 28th at St. Thomas, about a league from the fort, which lies on the larboard point of the bay. This is the principal of the three Portugueſe iſlands on this coaſt. Hogs and fowls are exceeding cheap.

Happy it was for Mr. Rowry, the maſter of a Briſtol veſſel there, that the man of war came in; for his men had made him priſoner, and were diſpoſing of the ſlaves at a very eaſy rate with the governor, who rejects no ſchemes of profit. Rowry, who had been diſcountenanced by him on his mens complaint, was now heard indeed; but not knowing rightly the method of getting men to get away his brigantine in their company, he was obliged to have what price the governor would ſet on her and her cargoe, and took paſſage with them for Cape Corſo; where upon demand, he accompanied his leave with a handſome acknowledgement for his diet, and went home with the account.

They regained the Gold Coaſt in fifteen days from this iſland, and leaving it again, October the 5th, ſtretched with their ſtarboard-tacks to weſtward, deſigning to ſtretch as far to windward as poſſible, that if any pirate ſhould be on the coaſt, they might have them under their lee.

On the 20th, they fell in with Cape Apollonia, and the 23d, anchored at Axim, having met in the paſſage ſome ſprinklings, which they underſtood had been heavy ſhowers on ſhore. On the 24th, they

came

came to Cape Three Points, where neglecting to pay John Conny his duty for water, he ſeized ſome of their men till ſatisfied.

They departed on the 30th, and arrived next day at Cape Corſo, where they underſtood that the pirates under the command of Captain Roberts, had been plundering their ſhips down the whole coaſt, but were then thought to be gone off; the lateſt account of any who had ſuffered, being in Auguſt laſt: therefore being under no apprehenſion of their return, they divided the proviſions which had been ſent thither from England, to them, leaving the Weymouth, now diſabled to weigh her anchor; November the 10th, the Swallow ſtretched away to windward, and in a month's cruiſe repeated their viſits to Succonda, Dixcove, Acquedah, Cape Tres Puntas, Axim, Cape Apollonias Aſſini, Baſſam, Jaques, &c. Their deſign was to ſecure trade, air a ſickly ſhip, by purchaſing ſlaves, and impreſſing men from the merchant veſſels. Many prevented this, by running away from ill treatment, (as they called it) bad or ſhort diet; but as more went with the pirates on the ſame pretence, the author obſerves, ſailors are governed merely by caprice or humour in this reſpect.

They keeled and ſcrubbed their ſhip at Succonda, and at Dixcove they were informed, that the ſoldiers, who came under their convoy for the African company's ſervice at Gambra, had mutinied with Captain Maſſey, one of their officers, diſdaining the bad uſuage of the merchants who had the command of victualling them; that after nailing up the guns, they retired to the ſhip Bumper, which brought them over, and there by a joint conſent of George Lowther, the ſecond mate, and ſome of the ſailors, proceeded to ſea.

At Cape Apollonia, they found all their old acquaintance were gone. The queen, who two or three months before had ſent off a daſhi of four akkis, was lately with her people forced to remove to Aſſini. It ſeems the Santis or Aſſantis, on the rock of the Appollonians, being provoked by their frequent depredations, had lately been down and driven them from their habitations, through (themſelves ſaid) the inſtigation of John Conny, their neighbour and competitor. At Aſſini, therefore, they found them preparing to revenge this injury; they bought up all their trading arms at a good price, and gave a fowl for every flint they could ſpare, (there being no ſuch thing in the country). They are as fearleſs as any of their colour both in trade and war, and promiſed themſelves an amendment of their fortunes, which the author ſince then was informed they had accompliſhed againſt Conny.

At Cape Tres Puntas, they found the water pond almoſt dried up, though the wind at ſouth-eaſt had brought on two or three heavy ſhowers of rain. Theſe falling, conſtant thick fogs ſucceeded in the day; and what was very unuſual, at the diſtance they lay at anchor, they had dews in the night on board. The current ſet weſtward.

On the 6th of January they anchored at Mina, the Dutch African company's principal fort, and next day at Cape Corſo, which they left on the 10th, in purſuit of the pirates, the governor having received two or three expreſſes, informing him, that they had taken a ſhip near Axim, the place they had but juſt come from.

The pirate Roberts having ſtruck a pannic into the traders, the men of war were ſeveral times in their late cruiſe, alarmed with reports of their being again to windward, which kept them plying; but theſe reports being contradicted, and the raſhneſs of the attempt conſidered, they returned to their rendeſvous into Cape Corſo road, where they had ſcarcely arrived, before Phipps received intelligence, that they had taken a veſſel a few leagues off, and committed great cruelties. The pirates were well manned, having much increaſed their number by this double expedition, and the reputation of their ſucceſſes, the ſeamen every where entering with them, and when they refuſed, it was by report, rather through fear, than any deteſtation of the practice. They concluded therefore to follow them to Whidah, that being, next to Cape Corſo, the chief place for booty. Accordingly, January 15, arriving there, they learned that the pirates had plundered and ranſomed eleven ſail of ſhips, and left the place but two days before, on the report of their following them, when they miſſed of them by 24 hours. The 19th, they came before the Iſle of Princes, and found the Portugueſe ſtrangers to the news.

On the firſt of February, they anchored at the mouth of the river Gabone, a good harbour, they thought, for their reception, the navigation being difficult; but finding them not there, they departed the 3d, for Cape Lopez, where, arriving, they ſoon diſcovered the three pirate ſhips at anchor in that bay. One of them, which was upon the heel, righted at ſight of them, ſlipped her cable, and began the chace, bending ſome of her ſails as ſhe came out, by which they ſaw the raſhneſs of their enemy, who fell a prize to them before night.

On the 10th they got up with the cape again, and found the prize's conſorts very eaſy in the bay, where they ſtaid ſo long, that the purſuers doubted if they would move for them; but at length, as the men of war advanced, their eyes were ſoon opened, when all mad and frightned, they cut their cables, and ſet their ſails; up went the black flag, and in great deſpair, they continued a running fight, while only the chace guns could play upon them, and ſtruck preſently when a broad-ſide reached them, without the leaſt damage done to the Swallow; drunkenneſs, inadvertancy, and diſorder making them fall an eaſy prey. February the 12th, they anchored at Cape Lopez bay, ſeizing there the third pirate ſhip that had been deſerted by the hands, for their better eſcape or defence, in the other.

The pirates, ſingly, were men of courage, yet wanting diſcipline, and ſome director to unite that force, were a contemptible enemy, they neither killed nor wounded a man in taking, which muſt ever, in the ſame circumſtances, be the conſequent fate of ſuch battles.

They found in the three ſhips above 300 Engliſhmen, 60 or 70 ſtout negro ſlaves, a great plenty of trading goods, and a large quantity of gold duſt, to the value of 10,000l.

[The people, their wives and widows, who thought themſelves injured by it, petitioned the lords commiſſioners of the admiralty, the ſecretaries, and other officers of ſtate, for a recal of this grant. The officers joined alſo in a petition for the earl of Berkeley's interpoſition, to obtain for them the diviſion they might prove over and above what was ſuggeſted in obtaining the privy ſeal, but without any ſucceſs.

The number of priſoners gave a great deal of fatigue and uneaſineſs, during a ſix week's paſſage, leſt their ſituation ſhould prompt them to ſome deſperate attempt for their liberty. February the 18th, they were brought to their trials, when fifty-two were executed, ſeventy-four acquitted, twenty condemned to ſervitude, and ſeventeen committed to the Marſhalſea.]

While they ſtaid in the road, two officers paid a viſit to Mr. Butler the director general for the Dutch at St. George del Mina, three leagues to windward, he received them ſo much more kindly, that in 18 years which he had reſided on the coaſt, he had ſeldom been viſited by his countrymen, and of late not at all, which he imputed to the miſunderſtandings that were frequent between him and Mr. Phipps, on account of trade; they therefore could not pay him this compliment without offending the other. His table had ten diſhes, an extraordinaay ſhow in a place of ſuch ſcarcity, with variety of beer and wine, and an attendance of ſix negro ſervants, each wearing a gold chain about his neck, the largeneſs diſtinguiſhing grandeur, as fine cloth or lace does a livery. When dinner was over,

over, he gave them four gold rings each, (the make of the country) to remember him, and then ſhewed them his ſtore-houſes, large and well ſtocked. In the afternoon they retired to a ſummer-houſe in the garden, and in the evening his officers attended them to the boat, where they were ſtill followed with marks of undeſerved reſpect, three or four boxes of Braſil ſugar, (then a ſcarce commodity) and at putting off, a ſalute of nine guns. But they were not uſed ſo hoſpitably at the Engliſh caſtle. ——

They left Cape Corſe on the firſt of May, 1722, and on the third came down to Whidah. Here they took a ſailor out of a Portugueſe ſhip, that had been a confederate in taking Captain Rowry's veſſel, as mentioned before, at St. Thomas's; he, on the reflection of his crime, and fear of worſe evil, cut his throat. About this time the author was made purſer to the Weymouth, almoſt every body being dead who was fit for the office. He undertook it with reluctance, being unqualified himſelf, and neither cooper, ſteward, nor neceſſaries on board, but the indulgence he expected from a worthy commander, and ſome little advantage in quitting the ſurgeon's employ, were perſuaſives.

On the 5th, both men of war ſteered from Cape Lopez, to wood and water, (to go for the Weſt Indies) where they arrived the 26th. This is a ſafe and pleaſant bay; they anchored in 20 fathoms; the cape north-weſt by north; the watering-place ſouth by eaſt, each a mile and an half diſtance. Coming in, they brought the cape ſouth-weſt, to avoid what moſt charts lay down, the ſhoal called Frenchman's Bank, about a league and an half north north-eaſt from the cape; and there are other ſhoals between that and the main to the northward.

At Cape Lopez the people ſell one another, but few will venture on board European ſhips. Their familiar way of ſaluting is by claſping their hands two or three times to one another. To a ſuperior, the caboſher, or aged, they bend the knee, raiſing firſt their hands to the out parts of their ſhoulders, or arms, then patting the others hands gently three times, and crying Chamba each time, they fall back, clapping their own hands. To expreſs an extraordinary friendſhip, they raiſe your hand as high as they can reach. Many of them have borrowed names from the Europeans. They do not ſolicit this favour till after ſeveral views, they ſee ſomething to be admired, or think the perſons have ſome fancied ſympathy, or likeneſs with themſelves. As they come down in tribes to trade, each has a captain or leader, who loves to diſtinguiſh himſelf by an imitation of the European dreſs, and is often ſo awkwardly ſet out with hat, wig, and breeches, that he makes a much more ridiculous figure than any of his naked attendants.

Jacobus was one of theſe, he took on him the title of king, without knowing the meaning, and came on board the Swallow in a very antique figure, an old ſailor's wig turned upſide down, half a pair of breeches, jacket, hat, &c. yet he ſeemed reverenced much by the others; and in drinking, two of them always hold up a cloth before his face, that he might not be ſeen.

The cuſtom (ſays Atkins) ſeems to have a ſtate in it, and is borrowed, perhaps, from ſome neighbouring monarch, of Monomotapa. As Jacobus and his company grew drunk, (for they drank nothing but bumpers of brandy) this reſpect was laid aſide, and what was a great misfortune, the prince and his retinue beheld, with winking eyes, all their hovels on fire on ſhore. The occaſion was as follows: the ſhips having all their colours flying, and ſome guns fired in honour of the 29th of May, another leader on ſhore miſinterpreting it, as a particular reſpect to Jacobus, grew jealous, ſeized his houſe during the revel, his wives and his daughters, drank up all his brandy, eat all his victuals, thraſhed his people, and ſet both his houſes on fire.

Next morning, on unravelling the myſtery, the paſſion was over, and all became good friends again.—They have very little knowledge or uſe of fire arms, becauſe they have ſcarce any trade, their weapons being ſpears, arrows, and clubs; and it is a bloody battle among them when half a dozen of a ſide are knocked down.—Wood is ſold at the rate of a fathom for an old Guinea ſheet; their water free and eaſily come at; but is a ſtanding pool, and not ſo well taſted as from ſprings. Here they purchaſed wax for making candles, now exceeding ſcarce, and it is the moſt convenient place for ſhips of war at leaving the country.

Leaving Cape Lopez and the coaſt, on the 5th of June, they came in ſight of the iſland Annabona, the breezes ſmall at ſouth, and calms alternately. They cruiſed three or four days for their conſort the Swallow, which they loſt in a fog, and then went forward. July the firſt, they made Cape Auguſtine in Braſil, a Portugueſe colony, and anchored the 4th in Farnambuco-road, the next great port of trade in this province to Bahia.

The 12th they left Braſil, having found the trade-winds blow home, and increaſed in their ſtrength to this continent, bringing a dangerous ſwell into the road. Auguſt the 3d, they anchored in Carliſle Bay at Barbadoes, where they took in a ſupply of rum and proviſions. They left it the 9th, and on the 23d they arrived at Port Royal in Jamaica, where they found the Swallow had arrived a week before; but on the 28th, a hurricane drove the prize pirate ſhip on ſhore, blew away all their maſts, with other damages, that detained them here ſix months to refit.

Both ſhips having fixed their jury-maſts, on the firſt of January they left Port Royal, and anchored at the Kays. February the 7th, they left the Kays to make the windward paſſage, and worked up to Portmorant in ſix or ſeven days, a diſtance of 12 leagues, where the paſſage is, in a manner, gained, becauſe the lee of Hiſpaniola makes a ſmooth water, and intercepts the trade wind often in ſtaws to advantage. They met calms however for three or four days, but on the 17th got ſight of the little iſland Novaſia, where the people of Jamaica kill guanas. The 19th they put into Donna-Maria Bay, at the weſt end of Hiſpaniola; the uſual ſtop, eſpecially of the king's ſhips, in theſe parts for wood and water. They filled their caſks at a valley a mile ſouthward of the two brown cliffs, where is very good water, except in ſome winds, when the ſea gets over the bar. There are two other places nearer thoſe cliffs, and not ſo eaſily overflown. Here they bought ſome jerked hog's fleſh from two or three friendly hunters, belonging to Petit Guavas.—At leaving the bay, a ſtrong ſouth wind ſoon ſet them between Cape St. Nicholas and Maize, when they came into ſmall winds, and a current in their favour, made by the old Bahama-ſtreight and iſlands diſpoſed here.

The 26th, near the Iſland of Heniago, they recovered the true trade wind, eaſt half north; the 28th ſaw the rocks, called Hogſties, by their obſervations in 21 deg. 38 min. being ſomething more north than the charts. At noon they came round Atkin's Kays, (pretty high out of the water) and before night made Crooked, or Well Iſland. The laſt from which they took their departure, was Watlin's Kay, 24 degrees north, the trade wind continuing with them to the latitude of 32 degrees, but faint and weak from 27, cauſed, as ſuppoſed, by the conteſt between the variable wind and that.—From 26 to 37 degrees latitude, as far north as Virginia, they found every day large quantities of gulf-weed floating about the ſhip, and leſſening in proportion to the diſtance; ſo called from a conviction of its flowing from the ſhoals of Florida, and by being found 3 or 400 leagues north-eaſt, a-breaſt of the continent. This argues, the author ſays, in favour of a current, though inſenſible; or that it is longer or more to the northward than ſouthward in thoſe latitudes; and contrarily, in higher north latitudes, near the ſeas, the continent, have a tendency ſouthward, which is demonſtrated in thoſe iſlands of ice, that drive all the ſummer from the north-weſt, a-

along the coaſt of Newfoundland, even as far as New-England.

To the northward of Bermudas the winds grew variable, and as they advanced, ſtronger, having a very hard gale at north-weſt, to 68 degrees of latitude, which put them to a reefed foreſail for a fortnight, ſo great a ſea following, that they could not help dipping it up by tuns at their ſtern.

From hence they proceeded on their courſe, and arrived in England in the month of April, in the year 1725.

VOYAGES TO THE GOLD COAST, BY Mr. WILLIAM SMITH.

IN the year 1726, the Royal African company of England being willing to have an exact ſurvey taken of their ſettlements on the coaſt of Guinea, came to a reſolution to ſend a perſon fitly qualified for that undertaking, and accordingly, after an examination of his abilities, gave their inſtruments to Mr. Smith, dated Auguſt 11, 1726, impowering him "To take plans, draughts, and proſpects of all their forts and ſettlements; as alſo of all the principal rivers, harbours, and other places of trade on the coaſt of Africa, from the Gambra to Whidah.

Mr. Smith having received theſe inſtructions from the court of Aſſiſtants, embarked on Saturday, Auguſt the 20th, 1726, on board the Bonetta ſloop, Captain Livingſton, lying at Graveſend, in company with Walter Charles, Eſq; governor of Sierra Leona. On Auguſt the 22d, they ſailed through the Downs, with a fair wind, and on the 25th reached the Start Point, from whence they took their departure. They had for many days, north-eaſt winds and fair weather, till they got into the true trade wind, at north-eaſt, with which they paſſed the Tropic, of Cancer the fourteenth of September. Here they ſaw ſeveral whitiſh birds, having but one long feather in their tails. Theſe fly very high, and are called by the ſailors Tropic Birds, being only ſeen in the Torrid Zone, between the tropics of Cancer and Capricorn.

On the 22d of September they made the land ſix leagues diſtant, being a low ſandy beach, a little to the north-eaſt of Cape Verd, which they deſcried in four hours. Mr. Smith took a draught of this, as his firſt attempt in the company's ſervice. Next day, they got round the cape in ſight of Goree, a French factory; and the 25th, entering the Gambra, anchored at James iſland.

The next day landing, they were conducted to the caſtle, where they found the emperor of Fornia and his retinue, who ſaluted them by ſhaking hands after the European way, repeating in their language, "God bleſs you." Being ſeated, the author was diverted to ſee the emperor's grandees, and nobles of quality on the floor, like monkies, on their buttocks. An hour after his arrival, they all embarked on board their canoes, except the emperor, whom the governor complimented with his boat, men, and union flag, ſaluting him, at his departure from the fort, with five guns.

Some time before their arrival, there entered the Gambra, a Rhode Iſland built ſloop of 80 tons and ſix guns, called the Ark, commanded by one Edmonſon, who having ſeveral times communicated a piratical deſign to his crew, which they would not conſent to, they all, (except three white boys) went on ſhore at James's fort, and informed the governor and council, upon oath, of what they knew. Meanwhile, Edmonſon fearing a diſcovery, ſailed down below le Maine Point, beyond reach of the fort guns; where meeting the ſea-breeze and tide of flood, he was obliged to anchor, thinking himſelf ſafe there, at leaſt till morning. The ſuddenneſs of his departure confirming the ſailors depoſition, the gentlemen in council ſent the Gambra ſloop, manned with a ſtout crew of whites and blacks, to bring him back, and prevent his doing other miſchief. It was commanded by Mr. Orfeur, one of the company's factors.

This gentleman knowing the channel, took advantage of the midnight ebb to carry him below the Ark, without being diſcovered by any of Edmonſon's crew, who were but nine, viz. the three boys, and ſix ignorant, new purchaſed ſlaves. At day-break both ſloops weighed, and the pirate, knowing the Gambra-ſloop, was reſolved to force a paſſage. Mr. Orfeur being come within hail, called to Edmonſon to bring to, who made no anſwer, but by firing a brace of muſquet balls. This ſo enraged the blacks on board the Gambra ſloop, that they begged leave to fire on him, which Mr. Orfeur prevented, and again called to Edmonſon to ſtrike, but he diſcharged a loaded piece at the factor, who bade his men fire, and one of the black boys ſhot Edmonſon through the breaſt, on which the ſloop ran the Ark aboard, and took poſſeſſion of her. Edmonſon leaped into the river, and was ſeen no more. Mr. Orfeur brought up the ſloop, which lay at anchor in the river when Mr. Smith arrived.

Mr. Smith began the ſurvey he was ſent out to make on the 27th of September, which held till Monday October the 10th. He met with ſome difficulties in it; for the firſt day he went on ſhore at Jillfray, oppoſite James's iſland, he found the ſhore ſuch a deep ſwampey mud, it was hardly poſſible to meaſure or get from one ſtation to another: and there was no going on the dry land, it being ſo woody, that both the ſight and paſſage was intercepted. Beſides that, the trees ſwarmed with great black ants and venemous waſps.

The author being one day on ſhore at Bunior Point in the kingdom of Cumbo, near the mouth of the Gambra, in order to take the diſtance from thence to Barra Point, on the oppoſite ſide, the chief mate who was with him, being deſirous to ſee the method of taking inacceſſible diſtances, they landed on a ſandy, level beach, cloſe to a ſmall town, where they ſaw fifty or ſixty black cattle tied by the horns to ſome ſtakes drove into the ſand. While he was fixing his ſurveying inſtruments, ſome of the natives came down to the water-ſide to look at him, and not comprehending his theodolite, or meaſuring wheel, diſcovered ſome ſigns of fear. Mr. Smith did not regard this at firſt; but having occaſion for a ſtake or two to ſet marks, walked towards the cattle to chuſe a couple of good ones, upon which the natives, afraid of their cattle, ran and drove them up the country, alarming the town, ſo that the women and children ran to the woods, and the men came down in arms.

Mr. Smith aſking the company's ſlaves, who rowed the boat, the meaning of this, they told him, the natives were terrified at his ſurveying inſtruments, believing he had a deſign to bewitch them. Therefore, to guard againſt the worſt, the chief mate followed Smith with a loaded blunderbuſs, one of the ſlaves rolling the theodolite, which the natives endea-

voured to oppoſe, by running acroſs the paſſage, but not daring to touch it. The man who drove it, watched every opportunity to puſh the wheel at their legs, but they were too nimble for him ſkipping to the right and left like goats. When Mr. Smith had done his ſurvey, he returned to the place where the boat lay: and being very hot, ſat down under the ſhade of a large tree, ordering ſome punch to be made. The mate going down to the boat to fetch the ingredients, Mr. Smith, who was left alone, as ſoon as he was out of ſight, ſaw himſelf ſurrounded by the armed natives.

At laſt the mate appeared with a bowl of good punch, a draught of which, raiſed his courage ſo, that he gave a ſudden ſpring from the ground; at which the negros ran away in ſuch ſurprize, that ſeveral threw down their weapons and ſtood at a diſtance; believing, as he found afterwards, that it was in his power to deſtroy them. On this, Smith took up a gun they had dropped, and ventured to fire with powder amongſt them; but the piece ſcarcely went off before they were all out of ſight. The mate would have had him purſue his victory, but he thought it wiſeſt to return to the ſhore, and get on board the Bonetta. ——

On the 10th of October, he went with governor Rogers to viſit the king of Barra: who having been informed before-hand of their coming, met them about a quarter of a mile from his town, attended by about 400 of his ſubjects, ſeveral beating on large loud drums, others ſounding trumpets of elephants teeth, which all together made a war-like noiſe. The king welcomed them on ſhore, and conducted them to the town of Barra: his people expreſſed their joy by loud acclamations and firing of guns; with many ſtrange poſtures. At their arrival, the king cauſed his cannon to be fired, that lay diſmounted near his palace, which was a mud-walled cottage, thatched with palmetto leaves.

When they were ſeated, this prince ſent for his muſician, who played on an inſtrument called a ballafo. This inſtrument was well toned, and gave an agreeable ſound. His majeſty alſo for their diverſion, cauſed ſeveral natives to dance before them with drawn ſwords, which they flouriſhed with great dexterity. This done, the king made a ſhort ſpeech, expreſſing the regard the negros bore to white men, as far as their intereſt was concerned in encouraging them. When Mr. Smith took leave of the company, to finiſh his ſurvey, the king's brother and ſeveral of his noblemen would follow him. Going along, they aſked the king's brother who Smith was, and what he was going about, as he left the company ſuddenly? He told them, that Mr. Smith was a great, ingenious man, ſent by the company to meaſure all the kingdoms, iſlands, and rivers in Guinea. They replied, it was very proper, and that they were over-joyed he came to meaſure their country. To ſhew their approbation of the work, they made many grimmaces, running round Mr. Smith by way of compliment.

The Pagans, who are here more numerous than the Mahommetans, have no other religion but that of worſhipping their fetiſhes, for which any thing ſerves, a feather, a pebble, a bit of rag, a dog's leg, or the like. The word *fetiſh*, is to perform divine worſhip. They carry their fetiſh about them, which is ſo ſacred, that they will let no body touch it but themſelves. The day Mr. Smith dined with the king of Barra, he obſerved the muſician had on the top of his cap the tufts of a Crown Bird, which being very beautiful, he went to take it off his head, to look at it, but, to his great ſurprize, the man got up and ran away. It proved to be the muſician's fetiſh.

The languages on the Gambra, are ſo many and different, that the natives on one ſide cannot underſtand thoſe on the other, which is a great advantage to the Europeans, who trade there for ſlaves; becauſe the Gambrays, who are naturally indolent, hate ſlavery, and will attempt any thing for freedom.

On the 11th of October, Mr. Smith ſailed from the Gambrays, in the Bonetta ſloop, in company with the Byam Gally of Antigua, Captain Heſter, both bound for Sierra Leona. That day and the next they ſteered ſouth-weſt, and weſt-ſouth-weſt, to ſea, to avoid the ſhoals of Grande. The 13th, they ſteered ſouth for Sierra Leona. Next day they had a ſtark calm which continued fourteen days. The ſloops paſſed their time in viſiting each other daily, though their mirth was often interrupted by tornados which generally laſted an hour, and gave notice of their approach by exceſſive thunder, lightning, and dark clouds, which are ſucceeded by rains as heavy as water poured through a ſieve. This weather continues all the wet ſeaſon in Guinea.

Theſe tedious calms brought them into ſuch diſtreſs for water, that had they not been ſupplied by their conſort the Byam, they muſt have inevitably periſhed. During theſe calms they tried the current, which ſet north-eaſt one knot.

On the 3d of November they made land ten leagues diſtant, in twenty-five fathoms, which being very high, they ſuppoſed it to be the high mountain of Sierra Leona, and crowded ſail to come up with it before night. About eleven, they ſaw a ſail in ſhore, and perceiving ſhe lay by, to wait for them, it gave them apprehenſions, as knowing how buſy the pirates had been on this coaſt the preceding year. They put themſelves in the beſt poſture of defence they could, and held on their courſe till five in the afternoon, when they found the ſhip in queſtion was a friend, being the Queen Elizabeth, Capt. Creighton, bound from Sierra Leona to Rio Nunez, to trade for gold, teeth, and cam-wood. He, ſuſpecting by their ſtanding in for ſhore, that they were bound for Sierra Leona, lay by to let them know that theſe high lands were the Idoles, which are ſmall rocky iſlands, twenty leagues to the northward of Sierra Leona. After thanking Capt. Creighton for this kind information, they proceeded, and at ten next morning, diſcovered the Sauſaws, exceeding high land, twenty miles up the country. When they got a-breaſt of the Cape, which was about ſun-ſet, they hoiſted the union flag at the main-top-maſt-head, and ſaluted with ſeven guns, as did alſo the Byam. (All Guinea governors are by charter empowered to uſe the union flag in their reſpective diſtricts.)

Though it was night, they ſailed into the river, ſounding as they went. To prevent accidents, they hung out a light at their enſign-ſtaff, and the Byam kept one at her gibbon end. They kept cloſe under the high hills. When they got up as high as Frenchman's Bay, they ſaw two lights cloſe in ſhore: one belonged to a ſmall trading bark, the other to the Friendſhip ſloop of Barbadoes, Captain Croker; who ſeeing their two ſhips that afternoon in the offing hung out lights to direct them where to ride. As ſoon as they anchored, Captain Croker came on board the Bonetta, to know who they were, and then welcomed them to Sierra Leona. As they had only Madeira wine, their limes being expended, he ſent on board for a handkerchief full of limes, and gave them an account of the company's affairs at Bonal Iſland.

On the 5th, they found themſelves in a ſmall, pleaſant bay, ſurrounded with exceeding high hills, all covered with beautiful trees, full of various kinds of birds, who at day-break make the woods reſound. Captain Croker ſaluted the union flag with five guns, and had three in return. In this bay is extraordinary good water, which guſhing out of the rock, falls down like a ſpout, ſo that they could fill all their caſks without a tun-diſh. They watered here, and the bottom of the bay being clear of rocks, they drew their ſeyne, and got a great many mullets and other fiſh, alſo an alligator, which the negros devoured greedily.

They all went up to Benſe Iſland, on which there is a regular piece of fortification, mounted with twenty-two pieces of heavy cannon; beſides a battery under the fort wall, with eleven guns more. This is the

the reſidence of the governor; and Mr. Charles landing, took poſſeſſion of his poſt, and received the compliments which are uſual on that occaſion; though the author unluckily ſpoiled his; for not recollecting the name of the iſland, he mentioned out Barataria, (which is one of no repute) inſtead of Benſe.

On the 27th he began his ſurvey, meeting with no oppoſition from the natives, as at the Gambra, the inhabitants here being more uſed to the European manners and cuſtoms.

"It is not certain, (ſays the author) when the Engliſh became maſters of Sierra Leona, which they poſſeſſed unmoleſted, until Roberts the pirate took it in 1720; Plunket who was afterwards blown up in James's fort, being governor here. The caſe was thus: Roberts having three ſtout ſhips under his command, put into Sierra Leona for freſh water, and finding a trading veſſel in the bay of France, took her thence, and carried her into another near the cape, which is very deep, and has a long narrow entry. This the author in his ſurvey has called Pirate's Bay, becauſe when Roberts had rifled that ſhip, he ſet fire to her, and part of her bottom was to be ſeen at low water, when Mr. Smith was there. The next day, Roberts ſent up a boat well manned and armed to Governor Plunket, deſiring to know if he would ſpare him any gold duſt, or powder and ball? Plunket ſent word, he had no gold duſt to ſpare, but that as to powder and ball, he had ſome at his ſervice, if he would take the trouble to come for it.

"Roberts anchored with his ſhips the next flood, before Benſe Iſland, and a ſmart engagement followed between him and the governor for ſeveral hours together, till Plunket having fired away all his ammunition, fled in his boat to a ſmall iſland called Tomba, but being overtaken again by the pirates, was brought back again to Benſe Iſland, where Roberts ſwore heartily at him, for his Iriſh impudence in daring to reſiſt him; Plunket finding the bad company he had got into, fell to curſing and ſwearing faſter than Roberts, which raiſed much laughter among the pirates, who bade Roberts hold his tongue, for that he had no ſhare at all in the diſcourſe with Plunket; however, it is ſaid, that by mere dint of ſwearing, old Plunket ſaved his life. When Roberts had rifled the warehouſes he went on board, and ſailed out of the river next ebb, leaving Plunket again in poſſeſſion of the fort, which the pirates had much damaged."

The river Sierra Leona, is very broad at the entrance, being four leagues from the cape to Leopard's iſle, on the oppoſite ſide of the river's mouth. The middle is ſhallow indeed, being in ſome places dry at low water. For the deepeſt part of the channel lies cloſe in by the cape, and thoſe who enter muſt keep on the ſtarboard ſhore, ſailing cloſe under the high land, where they are ſure of regular ſoundings, and in all the bays good anchoring ground, but near the edge of the ſhoals, the bottom is uneven and foul.

In this river the company have another iſland, viz. Taſſo, which is large and flat, near three leagues in circumference. Here their ſlaves have a good plantation. The reſt of the iſland is covered with wood; eſpecially ſilk cotton trees of a prodigious ſize. It likewiſe produces other ſorts of cotton and indigo.

The river of Sierra Leona abounds with ſeveral ſorts of fiſh, moſt of them good, except the oyſters, which grow there on the branches of the mangrove trees. Theſe are found in ſhallow places, their branches having a material tendency towards the water. The author ſaid he cut off one of theſe branches ſo full of oyſters, barnacles, &c. that he could ſcarce lift it into the boat.

Captain Livingſton loſt no time during Mr. Smith's ſurvey, in ſending on ſhore the goods and arms deſigned for the uſe of the fort. But the ſhip wanting to be careened, and to get up a new mizen-maſt, they thought this a good opportunity to ſurvey the river Sherbero, and for that purpoſe obtained of the governor one of the company's ſloops, with proper hands; Mr. Charles having inſtructions from the company, as the other governors had, to give all the aſſiſtance to the ſurvey.

Mr. Smith ſailed from Benſe iſland in the Sierra Leona ſloop, on the 14th of November, Captain Kirkman, in company with the Jaquin ſloop, Captain Ridley who went with them, in order to get a knowledge of that river. The 16th, they reached the Banana iſles, the largeſt of which is well inhabited. Here Mr. Smith had found ſome white people who had quitted the company's ſervice, and ſet up for themſelves, having ſloops of their own, in which they traded northward, to Rio Pungo, and Rio Nunez for ſlaves, teeth, and cam-wood, by which means they had brought a conſiderable trade to theſe iſles, there being few ſhips bound down the coaſt, but what touched here.

They were becalmed at the mouth of Sherbero river, on the 12th, and ſaw ſeveral water-ſpouts near them. The next day they got up as far as a ſmall town, belonging to Mr. Zachary Cummerbus, a Mulatto, ſon of a late Engliſh agent on York iſland, where he was kindly entertained; but Mr. Smith being impatient to ſee the ſtate of the company's affairs on York iſland, proceeded directly up the river; and on the 20th landed on that place, where he found no white men, but one Mr. Holditch a factor, who was deſtitute of defence againſt the natives. They had paid him ſeveral viſits, and always took care to carry away what they liked of the company's effects. The fort was then in a ruinous condition.

The king of Sherbero hearing of Mr. Smith's arrival, came on the 21ſt with a train of at leaſt near 300 men to viſit him, bringing with him, by way of preſent, two quintals of rice, two goats, and a fine wild boar. In return, the author preſented his majeſty with two braſs pans, two pewter diſhes, a fathom of ſletias, (a thin ſort of linen cloth) and four bunches of beads, which he gladly received. The ſletias he tied immediately round his neck, with a double knot under his chin, the two ends hanging down before, over a ſurplice of Cape Morte, which was of cotton, ſtriped blue and white. Then the king pulled out of his boſom the buſhy end of a lion's tail, which he flouriſhed ſeveral times about, and made a long harangue, the meaning of which (as explained by Mr. Cummerbus) was, that the lion's tail was his majeſty's fetiſh, and that he flouriſhed it to ſhew his power, and the extent of his dominions; and, laſtly, that in his harangue he deſired ſome victuals to refreſh himſelf and his people.

The third day, after taking an inventory of the company's effects, and appointing one Allen a writer, to be aſſiſtant to Holditch, Mr. Smith ſaluted the king with five guns, and ſailed down the river. Holditch and Allen imagined on this, that the king would have returned to Sherbero; but finding themſelves miſtaken, and knowing his ſtay would be expenſive, they came to a reſolution to intreat his majeſty to return home. At this, the king fell into a great paſſion, ſwearing by his fetiſh, that the country was his, and that he only ſuffered the Engliſh to reſide on York iſland on certain conditions; that the ground, and all the goods on it belonged to him, and that he would make them ſenſible of it, as they had not paid him his cole or tribute.

To this Holditch replied, That it was not three moons ſince his cole had been paid, and therefore his majeſty could have no juſt claim on the company. This anſwer ſo enraged the king, that he ſtruck Holditch, and ſeizing Allen, dragged him to the water-ſide, and threw him into a canoe, ordering his people to carry him to Mr. Smith, and tell him, that he had ſent Allen to him, as having no buſineſs on York river; but as none would venture on the meſſage, Allen got leave to return to the fort. In the mean time, Holditch had written a letter, which he privately diſpatched by a ſingle man in a canoe, to acquaint Mr. Smith with what had happened, and that

the king was then loading his canoe out of the company's warehouſe, and unleſs prevented, would carry off all the goods.

The author, on receiving this letter, communicated it to Captains Kirkham and Ridley, giving it as his opinion, that they ought immediately to go to the aſſiſtance of Holditch and Allen; that they had nothing to fear, having a good ſhip mounted with eight guns, and therefore ought not to ſtand tamely by, and ſee the company robbed before their faces. Kirkham expreſſed his readineſs to ſecond Smith, being directed in his inſtructions from Mr. Charles to take his orders from him: but Ridley ſaid it was madneſs with ſix or eight men to attack three or four hundred. However Kirkham being reſolute, the other conſented, and accordingly they weighed, and having a ſtrong tide of flood, and the ſea breeze, ſoon reached York Iſland. By the way they charged all their guns with muſquet ball. The channel being bold, they came to anchor within twenty yards of the ſhore, on the outſide of the king's canoes, to whom and his people their arrival was no ſmall ſurpriſe; eſpecially when they ſaw Mr. Smith land, followed by the two captains, and two of the company's ſtout young fellows, all armed with cutlaſſes.

They marched to the old gate of the parade, which was then ſtanding, where ſtood about 100 of the king's negros left to guard it, all armed with guns, javelins, ſcimitars, ſtillettos, or cutlaſſes. Smith obſerved them terrified; for they opened to the right and left to let him march in. They proceeded directly to the factory houſe, where the king ſtood with his guards before the door. Theſe guards made ſome oppoſition: but Smith with Ridley forced a way through them into the houſe, where he was pleaſed to ſee a third white man with Holditch and Allen. This was one Wild, a ſoldier of the company's, who had that day come down the river. Mr. Smith then addreſſed the king (who underſtood Engliſh, and could ſpeak a little) in a ſtern manner, aſking him, Where all his canoes, loaded with the company's cam wood, were bound? The king made no reply, but Holditch and Allen poured out their complaints of the ill uſage they had met with from his majeſty. Smith aſked the king, If theſe allegations where true? but had no anſwer; on which he told him, He had given him a rope to hang himſelf, and ſeizing him by the collar of his new neckcloth, which he had ſtill on, he dragged him out of the houſe into the middle of the parade: where, before all his guards, he beat him over the back with his ſword, (an action very raſh and imprudent;) what followed was ſtill more ſo; for Mr. Smith afterwards carried him forcibly to the water-ſide and put him into a canoe, with orders to Ridley and Wild to carry him on board the ſloop, and put him in irons: but his ſubjects incenſed to ſee the king's perſon ſo uſed, oppoſed his being carried away: laying hold on the canoe, till the Engliſh, by wounding ſeveral of them, got her launched off. They even followed it into the water; and one of them had got behind Mr. Smith with a Turkiſh ſcimitar lifted to cleave his ſkull: but being ſeen by Ridley, he jumped out of the canoe time enough by a back ſtroke to diſable the fellow's hand, breaking his cutlaſs with the blow, which he replaced with the negro's ſcimitar. The natives now grown deſperate at ſeeing their king a priſoner in the canoe, guarded by Wild with a cutlaſs, and Ridley with his ſcimitar, attacked them very cloſely, ſo that Smith was ſcarcely able to defend himſelf. In the mean time the people on board the ſloop being alarmed, called on ſhore to know if they ſhould fire; but the boat lying next the veſſel, Smith would not permit it. It was now duſkiſh, and one of the natives was coming round in order to ſtab the author in the back: but Ridley gueſſing at his intention, advanced a ſtep or two forwards, and with a Portugueſe ſtilletto made a ſtroke at his face, which laid his mouth entirely open from ear to ear; on which account not being able to ſpeak, he ſet up a terrible bellowing. This ſo frightened his comrades that it gave Mr. Smith an opportunity of making a ſtrong thruſt at one who had borne hard on him, whom he ran into the thigh; on which the negro dropped his ſword, and ran off, the reſt following, whom they cloſely purſued to the woods. Ridley, in the mean time carried his royal priſoner to the ſloop; but when they had got along ſide of her, and Ridley, was buſy faſtening the canoe with a rope to the ſloop, the king ſlipping off his hat and ſurplice, unperceived ſtole into the water, and ſwam on ſhore. The captain having faſtened the canoe, ordered two of the men to come and draw his majeſty up; but they could find no more of him than his outſide caſe. Enraged at the diſappointment, they came directly on ſhore, and gave Mr. Smith the king's apparel, with an account of his eſcape. He by this time judging that this accident might be attended with unlucky conſequences, as the king had ſuch a number of armed men on the iſland, who, as well as himſelf were exaſperated at the treatment they had met with, he thought it proper to concert with the reſt of his company the proper meaſures for their ſecurity, and to prevent the enemy ſurpriſing Benſe factory. Their council was held in a large canoe, which lay under a mangrove-tree. It was there reſolved, (according to the author's propoſal) that Holditch, Allen and Wild ſhould repair to the factory houſe, and put their black people there, in a poſture of defence: that they ſhould walk all night on the parade, and if they ſaw any negro they ſhould directly fire at him; and that Mr. Smith, with the two captains, and the two Gromettas, ſhould take care of the company's effects on board the canoes, which were towed off and faſtened to the ſloop. Theſe being ſafe, and the two captains and ſlaves on board, who had directions to ſtay and fire on a proper ſignal, Mr. Smith returned on ſhore, intending to reinforce the garriſon of the factory, but by the way a ſhot from the woods grazed his left ear, and ſinged his wig. This put him into ſuch a fright that he ran to the factory, where, though ſeveral ſhots were levelled at him by the way, he got ſafe within the parade gates, at the diſtance of three furlongs from the water-ſide. Here he ventured to peep out, and could plainly ſee a large body of negros rallied under a great ſilk cotton-tree, which ſhewed him what an eminent danger he had eſcaped. Seeing the enemy in the ſame place, he called to Ridley on board the ſloop to fire two of his guns as near the root of the tree as he could; which had ſuch ſucceſs, that eleven of the negros were killed or mortally wounded. This diſperſed the enemy, who carried off the dead into the woods. Mr. Smith then gave orders to the white men to fire from the parade, if any number of men ſhould appear near the factory; and went to repoſe himſelf. Finding all things quiet when he awaked, he ventured down between two ſlaves to the water-ſide, and was rowed on board the ſloop, where he kept watch all night on the deck. About one o'clock Holditch called to him with the trumpet, to let him know he ſaw a body of negros marching up to the parade-gate, Mr. Smith ordered him to fire, which he did, and killed one and wounded another, who proved to be the company's linguiſt, Antonio. About three o'clock, Mr. Smith heard the ruſtling of a canoe near the ſhore, on which he ſent two ſlaves to ſee what the matter was; they diſcovered three men, who jumped overboard at their approach, and ſwam on ſhore amongſt the mangroves. The ſlaves brought the canoe on board, and at day-break one of the men brought Mr. Smith a lion's tail, found in the canoe they had taken, which he knew to be the king's fetiſh; whence he concluded that prince would have made his eſcape in the night, if they had not intercepted him.

Mr. Smith went on ſhore with Mr. Cummerbus, Ridley, and two others at ſun-riſe, to conſult about removing the company's effects from York Iſland. The firſt object he ſaw at entering the factory was Antonio, who lay on the floor, groaning with his

wounds. Mr. Smith, ſeeming ſurpriſed, Holditch told him, Antonio was amongſt the men he had directed him to fire at in the morning. Antonio ſaid, "It is true, maſter, I have two tongues, tongue for white man, and tongue for black man; I deſire to die; but I came that white man ſhould not kill black man, but be friends." Mr. Smith aſked, why he came in a hoſtile manner? He replied, there were ſeven; that the one who was killed, was a meſſenger from the king, with offers of peace, and the other five went back. Mr. Smith ordered his wounds to be dreſſed with ſome excellent ſalve he had brought from England, and told him he ſhould live if he had ſpoken truth.

They afterwards held a conſultation, and Smith propoſed removing the company's effects down to a town called Jamaica, in poſſeſſion of Mr. Cummerbus, as the place they were in, was no way defenſible, in caſe hoſtilities continued with the natives. Mr. Holditch objected that ſuch a removal might be prejudicial to the company, but declining to give his reaſons, it was thought proper to examine Antonio, before they determined. Holditch being named chairman, Antonio was called in, who appeared with many extravagant ſigns of ſubmiſſion and joy. By his account they learned, that the king had been impoſed on by his treaſurer, in relation to his cole, or tribute, of which, being ſenſible, he had ſent ſix of his ſubjects with Antonio, to acquaint the Engliſh with the error, and negotiate a peace; that the king had, in the mean time, ordered all his ſubjects to diſarm, and not ſhoot or offend a white man, on pain of death; he added, that his majeſty, with his attendants, were in great want of proviſions at that time.

The examination of Antonio was ſcarcely finiſhed, when one of the watch came and informed them, that a ſingle black unarmed, was coming from the woods; and that as he walked at certain diſtances, he threw himſelf proſtrate on the ground. Antonio rejoiced at this, leaping and crying, That he was a meſſenger from the king of Sherbero, who by proving the truth of what he ſaid, would be the means of preſerving his life.

The meſſenger being introduced by Mr. Cummerbus, informed them, "That the king his maſter, was ſorry he had offended the white men, by demanding of them cole which was not due, as he found by the confeſſion of his treaſurer, whom he put to death, as the cauſe of this difference. That his majeſty was deſirous to be at peace with the white men, and had ordered his ſubjects to lay down their arms, and forbid them to offend any white man on pain of death; adding, that the king and his company being ſhort of proviſions, begged their aſſiſtance, which ſhould be repaid when he returned to Sherbero." This meſſage agreeing with Antonio's information, ſaved his life; but as the envoy made no mention of the preceding embaſſy, Mr. Smith aſked him about it, and found it was as Antonio had ſaid, with this addition, that it was by Antonio's means this diſcovery concerning the king's cole was made.

The envoy being withdrawn, the king's meſſage was taken into conſideration, and it being the opinion, that it was againſt the company's general intereſt to remove their effects from York iſland, provided a ſecure peace could be made, they thought it would be proper to take advantage of the king's preſent diſtreſs to bring him to ſurer terms. It was therefore reſolved to ſend Mr. Cummerbus as their ambaſſador, to acquaint the king they were deſirous of living in good harmony with him and his ſubjects; but that as his majeſty had, by the ill counſel of his miniſters, committed hoſtilities, by attacking the Engliſh, and ſeizing the company's effects, they were determined, for their better ſecurity, to remove from York iſland to Jamaica town, in caſe his majeſty would not grant the following privileges to them: Firſt, that he would ſwear by his fetiſh, that he would not for the future viſit York iſland with more than 24 attendants, and theſe unarmed. Secondly, That if any negro or negros ſhould land on the iſland in a hoſtile manner, he or they ſhould be put to death. Thirdly, that when his majeſty's cole became due, no more than ſix perſons ſhould come to receive it. Fourthly, that thoſe Chriſtians or whites, who inhabited in Sherbero, ſhould have the free exerciſe of their religion.

When this had been reſolved upon, Mr. Cummerbus ſet out with the king's envoy for the woods, to execute his commiſſion, carrying with him the king's fetiſh, found in the canoe two days before. The king was ſitting at the foot of a ſilk cotton tree, ſurrounded by a crowd of his ſubjects. He roſe to meet Mr. Cummerbus, who, having paid his compliments, delivered his meſſage; to which the king replied, he was unwilling to be at enmity with the whites; that when he returned to Sherbero, he would hold a Syndic, and decree the privileges the Engliſh deſired; begging they would not remove from York iſland, and promiſing them ſlaves, cam wood, and ivory, to a good value.

Mr. Cummerbus being returned, and the king's anſwer conſidered by the council, it was in half an hour reſolved to remove the company's effects from York iſland to Jamaica town, for the following reaſons: Becauſe the king of Sherbero was a man whoſe word was not to be relied on; that York iſland was unfortified, whereas Jamaica town was a place of ſtrength; and their proviſions being much exhauſted, the peace offered them might, through treachery, prove their ruin; or, at leaſt, be an additional weight to the company. Beſides, the removal would at leaſt ſave the company the cole, or tribute, paid to the king.

Mr. Cummerbus returning to the king, kept him in talk till he heard the gun they had agreed on as a ſignal, when he told him, in an angry tone, he had been very impolitic in treating the Engliſh as he had done, by offering to rob the factory; that the Engliſh had already put the company's effects on board, to be carried out of his kingdom down to Jamaica town, of which the gun he had then heard, was a ſignal. The king ſeemed very uneaſy at this account, and his ſubjects began to mutiny. Mr. Cummerbus, attended by Antonio, repaired to a point of the iſland, where one of their canoes received him; but he left Antonio behind to watch the enemy. The canoe had not got far from ſhore, when ſeveral of the natives appeared in purſuit of him, and let fly ſome javelins and arrows at him. He could ſee their numbers increaſe, but was out of their reach in a little time. The next day towards evening, Antonio and ſix others, found means, in the hollow of a tree, to paddle down to Jamaica town, and informed them, that after Mr. Cummerbus's departure, a diſpute aroſe between the king and his ſubjects, that the king, to avoid their fury, ordered them to purſue Cummerbus, the ambaſſador, whom he accuſed as the cauſe of the Engliſh leaving York iſland, as appeared by their removing to his town of Jamaica, charging them to bring him dead or alive. This ſcheme had its effect, for while they were buſy in the purſuit, the king, (who dreaded their reſentment for loſing the advantages of the company's trade, might induce them to deſtroy him) took the occaſion to withdraw, and was never heard of more. The natives, who, at their return, found their king had abſconded, proceeded to chuſe a new one.

This new chief, whoſe name was Maximo, diſpatched a ſlave in a canoe to Sherbero, with orders to the caboſhirs to ſend a number of canoes directly to convey him and his people from the iſland. He then repaired to the factory, where he paſſed the night; and the canoes arriving the next morning, he embarked, after rejecting the propoſals of ſome of his nobles to burn the factory.

In the mean time, the ſloop with the company's effects arrived ſafe at Jamaica town. Here Smith went on ſhore with Cummerbus, and pitch on two good houſes, which he bought of him for the company's

uſe, at an eaſy rate. At his firſt landing, he was received by a number of people at the water-ſide, and Mr. Cummerbus ſpoke to two of his chief captains to bid the people to pay the author the higheſt compliments, which was done thus. They firſt ſurrounded him, and then two of them catching him up in their arms toſſed him on their ſhoulders and ran away with him to the town, roaring and ſqualling as if poſſeſſed; ſome leaping and ſkipping, others charging and diſcharging their muſquets as faſt as poſſible. At firſt Mr. Smith was afraid of ſome trick, but he was ſoon convinced they deſigned no ill, for they carried him thus, through every corner of the town, the women and children gathering to their doors and clapping their hands for joy. During this ceremony (which laſted about a quarter of an hour) Mr. Cummerbus had a drum beating, and a trumpet ſounding at his door, where Mr. Smith was at laſt ſet down, his bearers having ran him and themſelves out of breath; Cummerbus ſaluted him with a ſalvo of ſeven ſmall guns planted near his houſe, after which, he conducted him into a large open room, where the cloth was laid for dinner, or rather ſupper, it being paſt four o'clock. The table was ſerved with ſeveral diſhes of boiled and fryed fiſh, with roots, as yams and potatoes. The ſecond courſe of roaſt meat, was a fore-quarter of a young kid, as good as veniſon, and four large fowls. Mr. Smith never wanted plenty of victuals here, and tolerably well dreſſed. He found his ſtrong liquors himſelf, and when his ſugar was out, they drank Madeira wine.

Having ſettled the factory here, November the 29th, he ſailed, ſaluting the town with ſeven guns, which were returned in order. When they were under ſale, Captain Kirkham told Mr. Smith they had but eight bottles of Madeira left; which was no good news, a much greater quantity of liquor being neceſſary in theſe hot climates than in Europe. However, anchoring at low-water near a place where (as one of the Gromettas ſaid) ſome wild ſugar-canes grew, they ſent him and two ſlaves in the canoe, who in two hours returned with a bundle. Theſe they cut and preſſed, ſteeping them in water, till it was ſweet enough to make punch, for they had rum and limes on board. November the 30th they got out of the river's mouth, and anchored at the Plantain iſles.

Kirkham being acquainted with Meſſrs. Pearce and Sanderſon, who reſided there, took Mr. Smith on ſhore, who was in hopes of getting ſome knowledge of the country up the river, where the cam-wood grows, having hitherto had but a very imperfect account from the negros. Theſe latter told him, that when they ſailed a good way up the river Sherbero, they came into a very hilly country, where the river is very crooked, winding amongſt the hills, but not raiſed, except at two or three cateracts; that one of them is large, the river falling over the rocks, for twenty foot perpendicular, with a great noiſe; the two other falls being inconſiderable; that at the firſt they are obliged to go on ſhore and drag their canoes above the fall: that at the other, if their canoes over-ſet, the cam-wood ſinks to the bottom, and in the dry ſeaſon, they come and take it up, the channel being then quite dry. They always go up at the end of the rainy ſeaſon, which generally laſts five months, to cut wood and ſearch for teeth, returning with the next rains. They ſee many ſorts of wild beaſts, but ſeldom receive any hurt. Mr. Smith was informed, that a large branch of the river Sherbero emptied itſelf into the ſea near Cape Monte, but was not navigable for any veſſel by reaſon of the great bar near the mouth, called Shea-bar; otherwiſe it would be a ſhort cut from Sierra Leona to Cape Monte.

Sherbero River is a very plentiful place, and chiefly ſupplies Sierra Leona with freſh proviſions. Mr. Smith was diſappointed in the information he expected in the Plantain iſles; for going on ſhore with Captain Kirkham, they found Pearce and Sanderſon were gone in their ſloop, trading to the north for ſlaves, at Rio Pungo: however, they found Pearce's wife at home, like a good houſewife, with her women ſlaves about her, ſtringing beads, and counting bujis. She treated them kindly, and ſent ſome of her ſlaves to gather cocoa-nuts for them; and though ſhe had no ſugar, ſhe made them ſome good punch with fine honey, of which Kirkham, unknown to Smith, begged a pot to carry on board the ſhip.——

There is a ledge of ſunken rocks, that run off into the ſea, about a league to the weſt of theſe iſles, which may be eaſily diſcovered and avoided by the breakers. On the outſide of this ledge their ſloop lay about four miles diſtant from ſhore. It was duſkiſh when they left the iſle, and before they got a mile, it grew ſo dark, they could not ſee land, much leſs their ſloop; nor was there a ſtar to be ſeen. However, they rowed a long while up and down, uncertain which way they went. Mr. Smith at laſt grew uneaſy, and deſired Kirkham to lie by all night, for fear of running in the dark ſo far off to ſea, as to be out of ſight of land in the morning. However, fearing a tornado, they agreed to row a little longer, in hopes of ſeeing land, or the ſloop. About an hour after they found themſelves near ſome ſmall breakers, ſuppoſing them to be the ledge of rocks above-mentioned, which ſtretched from the ſhore to the ſloop. Keeping theſe to the right, they rowed along them, hoping they would guide them either to land, or to the ſloop; but when they reached the end of them, they could ſee no light from the veſſel. This was owing to Captain Kirkham's ſtaying ſo long on ſhore bargaining for a man ſlave, that night ſtole on unawares. And now they were ſuddenly ſurpriſed with the roar of ſome wild beaſt, which Mr. Smith ſuppoſed to be a lion. As the noiſe ſeemed to be near, they rowed towards it, and preſently ſaw the land, being a bright ſandy beach, with a few rocks upon it. Behind one of theſe rocks they juſt held their canoe, ſo that they were ſheltered from the ſwell of the ſea, but durſt not venture on ſhore, the noiſe of the wild beaſts increaſing.

It was now about two or three o'clock, and they had not been long there when it began to thunder and lighten, which was the fore-runner of a violent tornado. The tornado was followed by exceſſive rains. They had no ſhelter in their canoe, and durſt not ſeek any amongſt the trees, for fear of the wild beaſts. At day break it gave over. They found then that they were in Yawry-bay, two leagues to the northward of the Plantain-iſles, which they could plainly ſee, but no ſigns of their ſloop. This laſt misfortune was the more grievous, as there was no poſſibility of getting dry cloaths. In this ſad condition they agreed to row to the Banana-iſles then in ſight, four leagues diſtant, to refreſh themſelves at one Mr. Bonnerman's, and if they could hear nothing of their ſloop, to continue their voyage along ſhore in the canoe. They accordingly put off, and, though it was a long ſtretch for the poor hungry Gromettas, yet neceſſity made them row ſtoutly, till about ten o'clock, the ſea breeze met them in the teeth, and increaſed their toil and ſorrow. As it happened, neither laſted long, for ſeeing a ſail ſtanding in for land, they rowed up for her, and found ſhe was their own ſloop, which had been driven out to ſea by the violent tornado in the morning, and was returning to the Plantain iſles, to inquire about them, fearing ſome miſchief had befallen them. As ſoon as they got on board, they ran between the Bananas and Cape Shelling, on the main, and ſo proceeded to Sierra Leona, where they arrived next day, and at Benſe-iſland the day following. Here the author was ſeized with a malignant fever, which confined him to his bed till the 29th, nor was he able to get on deck till the 4th of January, which day they arrived at Cape Menſurado.

On the 18th of December, they ſailed from Sierra Leona, and on the 25th, anchored at Gallinas. Here lay the Queen Elizabeth, Captain Creighton, before mentioned, who invited Captain Livingſton to take a Chriſtmas dinner with him. A letter from one Benjamin Croſs, (third mate of the Expedition,

Captain

Captain Meltiſſe) who had been ſeized on by the natives of Cape Monte three months before, and detained there by way of repriſal for ſome of their men carried off by an Engliſh trader. Croſs hearing of the Queen Elizabeth's arrival at Gallinas, and being left by his own ſhip, wrote to Captain Creighton to redeem him; but he being bound for Sherbero, Capt. Livingſtone agreed to do it, when he got to Cape Monte, as he was bound down the coaſt after the Expedition.

The Friendſhip brig, of Briſtol, Captain Barry commander, came into the road the ſame day. He likewiſe dined on board the Queen Elizabeth; and, towards night, having drank pretty freely, inſulted the two captains, who returned proper marks of reſentment. This ſo enraged Barry, that he went on board his own ſhip and fired a ſhot at the Queen Elizabeth, which had like to have taken away her foreſtay; having alſo threatened Livingſtone to come on board and whip him. Livingſtone returned on board his own ſloop, to put himſelf in a poſture of defence; and perceiving the brig ſtanding for him, he fired ſeveral ſhot at her, which obliged her to ſheer-off.

They ſailed from Gallinas, the 26th of December, and arrived at Cape Monte on the 29th, where they ſtaid four days. In this time Livingſtone redeemed Croſs at the expence of about fifty pounds ſterling, and brought him on board the Bonetta, where he ſtaid till the 26th of January, when they arrived at St. Andrews; where there were ſeveral Engliſh and French ſhips: amongſt which was the Expedition, Captain Melteſſe, who repaid Livingſtone, and took Croſs again.

Mr. Smith obſerved at Cape Monte, that the natives who came off to trade with him, were very cautious of coming on board for fear of being trepanned; and even thoſe who ventured on board, if they ſaw any arms about the ſhip, immediately leaped into their canoe, and got on ſhore. They ſeemed to be very induſtrious, being all dreſſed in their own manufactory.——

They departed for Cape Menſurado, on the 2d of January, where they arrived the 4th, and anchored in eight fathoms water behind the Cape, about two leagues diſtant from the mouth of St. Paul's river, here they lay till noon next day. But ſeeing none of the natives came off to them, and being loth to venture on land, they weighed, ſailing as cloſe in ſhore as poſſible, in order to take a true ſurvey of the coaſt, which retarded their voyage, being obliged to anchor every night. On the 5th, they anchored before Rio Junco, in five fathoms water, and Mr. Smith went in his long-boat to take the ſoundings and bearings.

The next morning they weighed, and Mr. Smith proceeded on his ſurvey down the coaſt. January the 9th, they anchored off Rio Seſtos, where they lay ſix days in company with the Providence brigantine of London, Captain Cutler. This time Mr. Smith employed in taking ſoundings and bearings of the river. The natives here are civil enough to ſtrangers, though rather ſhy of the Engliſh. Proviſions are not dear, though very ſcarce, except rice, of which they bought a good quantity, and ſome fowls. The 14th they had a hard gale of wind at eaſt-ſouth-eaſt, which obliged them to let go their beſt-bower anchor, and lower their yards and top-maſts.

The next day, the weather being fair, they ſailed, and the 26th, they arrived at Santa Cruz, where they anchored in ſixteen fathoms. About an hour after, a canoe came off, and they aſked one of the negros, who ſpoke a little Engliſh, if they had any goats, hogs, or hens on ſhore? They were anſwered in the affirmative, which gave them hopes of finding proviſions plenty and cheap. Next day Mr. Smith and the chief mate went on ſhore, and were received by a great number of the natives at the water-ſide, who conducted them to the town: the houſes of which were built five feet from the ground. He imagined by the people's gazing at, and following them, that they were not uſed to ſee ſtrangers. However, the mate being deſirous to inquire about proviſions, went to the chief man of the town, who is a ſort of petty king, to obtain a liberty to trade; which granted and being at dinner, he deſired Mr. Carſe to ſit down and take part with him. Their dinner was boiled rice and Palm oil; and one of the lords in waiting gave Mr. Carſe a ſhell by way of ſpoon. When he had dined, the king bade him put his ſpoon in his pocket; which he did, but in coming away, the king told him he muſt not ſtir till he gave him a preſent inſtead of his ſhell. Mr. Carſe gave him ſome trifles out of his pocket, which he greedily took, and diſmiſſed him. They were diſappointed as to proviſions, here being nothing to be got but ſome Malaghetta pepper, and a few pine-apples.

On the 22d of January, they left Setra Crue, and on the 24th doubled Cape Palmas: About ſeven leagues to the north-eaſt of which, there is a town called Oſtend, where they were informed that the people of St. Andrew's, the next town, had lately made war upon Drewin and burnt it to aſhes, ſelling the men, women, and children very cheap to the ſhips then lying at St. Andrew's. On this account they paſſed by Drewin, and January the 26th arrived at St. Andrew's River, where they found the Expedition, Captain Meltiſſe, beſides ſeveral other Engliſh and French ſhips. They ſtaid no longer here, than juſt to ſurvey the Bay, and then proceeded along the reſt of the Quaqua coaſt, which extends from Cape Palmas eaſt and by north about 100 leagues to the river Mancha, by ſome called Rio Cobra, by others the Gold River. Theſe parts are not near ſo well inhabited as the Grain Coaſt.

They anchored five miles to the weſt of Axim, where is a pretty little triangular fortification, which mounts 11 guns, each angle having a battery, viz. the two to the land, three guns each, and that to the ſea, five. Here is a large, populous negro-town, built under ſhelter of the fort guns, as all the European forts on the Gold Coaſt have.

Seven or eight leagues ſouth-eaſt of Axim, is another large and beautiful fort, built by the Brandenburghers, but was in the hands of the Dutch, and well known by the name of Conny's Caſtle, as already mentioned.

They anchored near this famous caſtle in ſix fathoms on the 6th of February towards night, a Canoe came off from the Dutch chief, to acquaint them, that if they wanted wood or water, they might be ſupplied. On the 7th they departed from Frederickſburg, Dixcove, Secondi, and Commenda (at all which places Mr. Smith ſtaid to take ſurveys) On the 17th they anchored in Cape Coaſt road, where they found ſeveral ſhips. When they lay at James fort, they found a letter left by an Engliſh ſhip from Holland, directed to the Dutch general at El Mina, which they brought to Gape Coaſt; and Mr. Smith thinking this a good occaſion for him to take a view of that caſtle, went thither with Captain Livingſtone, in a large canoe, to deliver it to the Dutch general, who it ſeems, had pretty good intelligence: Mr. Smith imagining himſelf unknown and unobſerved, innocently walked out to look about him, but was immediately followed by the general, who pulled him by the ſleeve, and in an abrupt manner had him back to the great hall; where he told him, that though he came abroad to carry all Guinea in his pocket, yet he ſhould not take El Mina caſtle with him. This at firſt ſurpriſed him: but recovering a little, he told the general, he thought him a perſon of more knowledge, than to imagine a man could attempt the ſurvey of a place without proper inſtruments; and as he had none, he wondered how he ſhould ſuſpect it. On this, the general pauſed a little, and ſeeming concerned for his treatment of Mr. Smith, he deſired him and Livingſtone to ſtay and dine with him; which they conſented to. He then ſhewed Mr. Smith ſome unfiniſhed draughts left by the laſt Dutch ſurveyors, ſent by their Weſt-India company, on the

ſame

ſame ſurvey Mr. Smith had in hand. The work was well begun, but the undertakers had died, before they could finiſh the buſineſs.

They ſailed from Cape Coaſt on the 23d of March. As it was the latter end of the dry ſeaſon there. Water was ſo ſcarce in the garriſon, that they could ſpare none for their ſhips uſe: there being no water within eight miles of Cape Coaſt, but what they preſerve during the rainy ſeaſon, in a great vaulted tank or ciſtern under ground, to which all rain is conveyed from the ſops of buildings by leaden pipes. On the 24th, touching at Tantumquerri, the 27th, 1727, they anchored at Winnebah in five fathoms. Here they were ſupplied with good freſh water out of the tank of the fort, and though they drew ſeveral tons, Mr. Smith could not perceive they had lowered the water ſix inches, whence he concluded it had a ſpring in it, the bottom being an entire rock.

The 28th they ſailed from Winnebah, and on the 30th anchored at Achera in ſix fathoms. It being foul rocky ground, they bent their ſheet cable, in order to let go, in caſe their others parted. The landing-place is pretty ſafe, being ſheltered by ſome ſmall rocks which lie off before it, and break the violence of the waves. While Mr. Smith ſtaid at Achera, he, one evening, in company with an Engliſh factor, walked by the gate of the Dutch fort, where ſtood ſome of the Dutch gentlemen, who being known to the factor, he talked a while with them; but they, contrary to cuſtom, never aſked him in, or invited him while he was there. Smith ſuppoſes, they gueſſed who he was, and had orders from their general at El Mina, not to admit him, for fear of his making obſervations.

In weighing from Achera on the 3d of April, their cable parted, but they let go their ſheet anchor, which bringing their ſhip preſently up, they ſet ſail for Whidah. On the 5th, they croſſed the mouth of the great river Volta, ſo called by the Portugueſe on account of its rapidity, which is ſo violent that it cauſes a ripling, and changes the colour of the water, at leaſt eight leagues from ſhore. At day-break on the 7th, they came to anchor in Whidah road in ſeven fathoms water, and ſaluted the fort, which is more than a league from ſhore. They found lying here three French, and two Portugueſe ſhips. This is the moſt dangerous landing-place in all Guinea, the ſea breaking and rolling at ſuch a vaſt diſtance from ſhore, that no European boat can come within 200 yards of it, but muſt anchor at a good diſtance, and wait for canoes to come off, and carry the goods and paſſengers on ſhore. This the dextrous canoe men generally do with ſafety, though the contrary too often happens. Upon notice of their arrival, hammocks were ſent down to the water-ſide, and a large canoe came off to their boat to carry them on ſhore, which it did without any damage, but a little wetted. Mr. Smith was amazed, when they got amongſt the large breakers, to ſee with what dexterity the negros carried them through, and ran their canoe on the top of one of the rolling waves, a good way on ſhore. This done, they all leaped out, and dragged it up the beach ſeveral yards beyond the reach of the next returning wave.—

Ships trading here have always tents on ſhore by way of warehouſes, to ſhelter their goods. At Mr. Smith's landing, he walked up to one of the French tents, where the mate, who had the charge of the tent, being an Iriſhman, offered him a glaſs of brandy, which he accepted. There were a great many ankers piled up in the tent, which ſeemed all wet on the out-ſide; Mr. Smith aſking the reaſon, was told they had been driven on ſhore that morning from their long-boat, and that one of his men, venturing a little too far into the ſea after an anker, which was carried on ſhore, happened to be ſeized by a ſmall ſhark, whom he encountered with his knife, and diſengaged himſelf; but the return of the next wave, which ſet him a float, brought in two other ſharks, that in a moment tore him in pieces, and devoured him.

The hammocks being ready to carry them to the fort, they got in, and were taken over three rivers. Being arrived on the other ſide, they choſe to walk, the country being very pleaſant. The Engliſh and French have forts here within muſquet ſhot of each other, being compoſed of thick mud walls, moated deeply round. The Engliſh fort, which is very large, has good ſtrong batteries, mounted with 17 pieces of heavy cannon. Subordinate to this government is the factory of Jacquin, about 18 miles diſtant to the eaſt, and that of Sabi five miles diſtant to the north, which was then reduced to aſhes by the king of Dahome. His firſt conqueſt was that of Ardrah, fifty miles to the north-weſt of Sabi, in 1724. The king of Ardrah having at that time ſome dealings with Governor Baldwin at Whidah, and accounts not being ſettled, he detained one Mr. Lambe, an Engliſh factor, at Ardrah, in hopes to bring Mr. Baldwin to account. In this interval the city of Ardrah was beſieged by the king of Dahome's army, and after a ſtout reſiſtance taken, the king of Ardrah himſelf being killed at his palace gate. Mr. Lambe was brought priſoner before the king of Dahomey's general, who, ſurpriſed at ſo ſtrange a figure as a white man, ſpared his life, and carried him as a rarity to the king his maſter, who was then 200 miles within land, where never a white man had been ſeen before. —During his confinement here, he wrote a letter to Governor Tinker, who ſucceeded Mr. Baldwin at Whidah, and forwarded Mr. Smith the copy.

This prince, in the beginning of February, 1726, laying ſiege to the great town and city of Sabi, the capital of Whidah, where the king reſided, and the Engliſh, French, and Portugueſe, had factory houſes. In a few hours he ſerved the place as he had done Ardrah; only his majeſty of Whidah, who was very fat, thinking himſelf too bulky to fight, was conveyed away in a hammock by a couple of ſturdy negros, and ſo ſaved his life. The European factories were plundered, and the white men taken priſoners, and carried up to the camp at Ardrah, where the king of Dahome then was. When Governor Tinker was admitted to an audience, he told his majeſty his moleſting the whites could be of no ſervice to that country which was become his by conqueſt, but on the contrary, would deter all ſhips from trading there, and what would then become of his grandeur? The king ſaid, It was very true, and aſſured the governor he had given no ſuch orders to his general, but that he and the reſt of the Europeans were at liberty to return to their forts, as they did a few days after. But when the Engliſh and French governors were on their march through Sabi to Whidah, the Dahome general took occaſion to ſet the factory houſes on fire, before their faces, without the king's orders. This misfortune was a great grief to them, eſpecially to the French director, who had no deſign of returning to Europe, as governor Tinker had, but rather hoped to ſee Sabi rebuilt, and trade reſtored; but the general ſoon put an end to ſuch hopes. In order to train up the youth of his army to ſpare no blood for the ſake of plunder, this ſavage cauſed the boys of his camp (ſome of whom were not above ſeven or eight years old) to cut off the heads of the old and wounded ſlaves who were not fit for ſale.——

The city of Sabi was about five miles in circumference; the houſes neatly built, though only mud walls, covered with thatch, having no ſtone in all the country. However, the factories were built after the European manner, being lofty, ſpacious, and very airy, containing many neat, and convenient apartments. Each had a fine large open hall, with cool balconies, all upon the firſt floor, and underneath were the warehouſes. Theſe contributed very much not only to the comfort and ſatisfaction, but alſo to the health of the Europeans. The town was ſo exceeding populous, that it was difficult to paſs the ſtreets, though very broad. Here were daily markets ſtored with many ſorts of European, as well as African commodities, beſides variety of proviſions.

Near the European factories, there was a ſpacious place ſhaded with tall trees, under which the European merchants and captains tranſacted buſineſs as on a change. All theſe places were reduced to aſhes by the conquerors.

Before we conclude this account it may not be amiſs to bring the reader acquainted with the proceedings of the king of Dahome, as we find them related by one of our countrymen.

"At Whidah, before its diſſolution, there were two European factories. The road was a free port for all nations, and it was computed that above two thouſand negros were yearly exported from thence, and from the neighbouring places, by the Engliſh, French, Dutch, and Portugueſe, and that the people were ſo civiliſed by this commerce, that it was a pleaſure to deal with them. The greateſt inconvenience they ſuffered was, the thievery of the common ſort, who were very dexterous and bold in that practice: though if taken in the fact, they become ſlaves to the perſon robbed.

"By the cuſtom of polygamy, (it being uſual for a great man to have ſome hundreds of wives and concubines) the land was become ſo ſtocked with people, that the whole country appeared full of towns and villages, and being a very rich ſoil, and well cultivated, it looked like an entire garden. A long flouriſhing trade had likewiſe enriched the people, by which means they grew luxurious, and ſo effeminate, that though they could have brought at leaſt 100,000 men into the field, yet they were driven out of their principal city by about 200 of their enemies, and at laſt loſt their whole country to a nation they had formerly contemned.

"The king of Whidah coming to the crown about fourteen years of age, the government fell into the hands of the grandees; who, by indulging his humour, kept the power entirely to themſelves till this revolution, when he was paſt thirty years old. He was a very laſcivious prince, having ſeveral thouſands of women in his court, by whom he was ſerved in all capacities, for no other ſervants were allowed to be there. This weakneſs ended in his ruin; for the grandees purſuing each his particular intereſt, became ſo many tyrants, which divided the people; and ſo they became an eaſy prey to their common enemy, a far inland prince, the king of Dahome. This prince had formerly ſent to requeſt of the king of Whidah an open traffic to the ſea-ſide, offering to pay his uſual cuſtoms on negros exported, which being refuſed, he vowed revenge when opportunity offered. This threat was ſo much ſlighted then at Whidah, that the king told the author ſoon after, that if the king of Dahome ſhould offer to invade him, he would not uſe him when taken according to their cuſtom, which was, to cut off his head; but would keep him for a ſlave to do the vileſt offices.

"The king of Dahome being a politic and courageous prince, had in a few years conquered as far towards the ſea coaſt as the kingdom of Ardrah, the next inland country to Whidah, where he thought to have remained quiet till he had ſettled his conqueſt; but an accident ſoon called him again to arms, for the king of Ardrah having much injured his own brother, named Haſſar, the latter ſent privately to him, offering him a large ſum of money to revenge for him his brother's affronts. This the politic prince ſoon liſtened to; and the king of Ardrah diſcovering the deſign upon him, ſent news of it to Whidah, begging aſſiſtance: but the latter imprudently refuſed it, ſuffering the Ardrah army, of 50,000 men, to be totally deſerted, and the king himſelf taken: ſoon after which, he was beheaded in the conqueror's preſence, according to the barbarous cuſtom of the black princes.

"There was at that time in the country of Ardrah, a white gentleman, named Bulfinch Lambe, who having been ſent by the governor of the African company's ſettlement at Jaquin, on ſome buſineſs to the king of Ardrah, was detained by him, under pretence that the company owed him for a hundred ſlaves formerly ſent down to their factory. The king ſent word alſo to the governor, that if he did not forthwith diſcharge the debt, he would make Mr. Lambe. This the governor refuſing, Lambe remained a priſoner, (but very kindly uſed) about two years, till he was taken in this war by the king of Dahome.

"Being brought into the king's preſence (who never before had ſeen a white man) he was treated very kindly by his majeſty, who ſoon after gave him an houſhold, with many ſervants, and ſome of his near relations for wives. After he had remained thus near three years, he was at his own requeſt, diſmiſſed by this prince, with a noble preſent of gold and ſlaves, in order to go to Europe. Moreover, the inhabitants of the towns and villages he paſſed through, in his way to Jaquin, were ordered, by an expreſs meſſenger, to ſhew him all poſſible reſpect, and provide nobly for his entertainment.

This Lambe had always diſſuaded the king of Dahome from invading Whidah, as well on account of the great numbers of the inhabitants uſed to fire-arms, as of the aſſiſtance they would have from the whites reſident and trading there for their own intereſt. But after his departure, this prince finding by his ſpies, how much the great men and people were divided, and that the king was only a cypher in the government, marched againſt them. The firſt part of the country he invaded was the northernmoſt, of which a great lord, named Apparagah, was hereditary governor, who forthwith ſent to the king for aſſiſtance; but having enemies at court, who wiſhed his deſtruction, was refuſed; wherefore, after making ſome little reſiſtance, he ſubmitted to the king of Dahome, who received him very kindly. The conqueſt of Apparagah, gave the king an eaſy entrance into the heart of the country; but there he was obliged to halt at a river which runs about half a mile to the principal town of the Whidahs, called Sabi, (already mentioned) the reſidence of their king. Here the king of Dahome encamped for ſome time, not imagining he could have found ſo eaſy a paſſage and conqueſt as he met with afterwards: for the paſs of the river was of ſuch a nature, that it might have been defended againſt his whole army by 500 reſolute men. But inſtead of guarding it, theſe cowardly, luxurious people, thinking the fame of their numbers ſufficient to deter the Dahomes from attempting it, kept no guard; they only went morning and evening to the river ſide to make fetiſh, that is, to offer ſacrifice to their principal god, which was a particular harmleſs ſnake they adored and prayed to on this occaſion, to hinder their enemies from paſſing the river. This ſort of ſnake is peculiar to their country, being of a ſingular make, very big in the middle, rounding in the back like a hog, but very ſmall at the head and tail, which renders their motion very ſlow. Their colour is yellow and white, with brown ſtreaks. They are ſo harmleſs, that if they are accidentally trod on, (for it is a capital crime to do it wilfully) and bite, no bad effect enſues, which is one reaſon they give for worſhipping them. They have likewiſe an antient tradition, that they have always been delivered from any impending calamity, by imploring the ſnake's aſſiſtance. But however this fell out formerly, it now ſtood them in no ſort of ſervice; neither were the ſnakes themſelves ſpared after the conqueſt; for they being in great numbers, and a kind of domeſtic animals, the conquerors found many of them in their houſes, which they treated in this manner, holding them up by the middle, they ſaid to them, "If you are gods, ſpeak and ſave yourſelves;" which the poor ſnakes not being able to do, the Dahomes cut their heads off, ripped them open, broiled them on the coals, and ate them.

"But to return to the king of Dahome, he was ſo polite as to ſend to the Europeans, then reſiding at Whidah, to aſſure them, that if they ſtood mute, they ſhould not receive any harm, in caſe they proved con-

conquerors, but he would remove many impoſitions laid on their trade by the king of Whidah. On the contrary, if they appeared againſt him, they muſt expect his reſentment. This meſſage put them to a dilemma, for they would have gladly retired from Sabi to two mud-walled forts, belonging to the Engliſh and French African companies, which are within three miles of the ſea-ſide. However, finding this would have been reſented by the king of Whidah, as a diſcouragement to his people, they were obliged to remain in the town; never ſuſpecting the inhabitants would have ran away in ſuch a cowardly manner as they did, or that they ſhould ſhare the fate of war with them.

The paſs of the river being left without a guard to the care of the ſnakes, the king of Dahome's general ſent 200 men to ford it, which having done without oppoſition, they marched towards the town of Sabi, ſounding their muſical inſtruments. On this, the king being informed of it by the out-guards, who ran into the town, immediately fled with all his people, making no reſiſtance, and with a great number of his ſubjects went to an iſland on the ſea-coaſt, which was parted from the main land by a river; but a great many having no canoes, were drowned in attempting to ſwim to the iſlands near Popo, the next country on the ſea coaſt to the weſtward, and many thouſands, who ſheltered themſelves among the buſhes, periſhed afterwards by ſword and famine.

"The Dahome ſoldiers entering Sabi, immediately ſet fire to the palace, and then ſent their general word of their ſucceſs, who brought the whole army over the river, hardly believing his own eyes. Mr. Duport, who was then the African company's governor, told the author, that when the Dahome ſoldiers, who had never ſeen a white man before, came to his houſe, they ſtood in a maze, and would not venture near him, till he beckoned and held out his hand to them. On which they laid hold of him, and finding him a man in all reſpects like themſelves, except colour, ſoon laid aſide their reverence, and taking from him what he had valuable in his pockets, made him priſoner, with about 40 other white men, Engliſh, French, Dutch, and Portugueſe, who were ſerved in the ſame manner; amongſt them was Jeremiah Tinker, Eſq; who had but juſt before reſigned the African company's affairs to Mr. Duport, and deſigned to have embarked in a few days for England; but Signor Pereira, the Portugueſe governor, eſcaped from Sabi to the French fort. Next day after the town was taken, the white priſoners were ſent to the king of Dahome in Ardrah, about 40 miles off, hammocks being provided for them, as is uſual in this country. They were brought into the king's camp, and ſeparated according to their different nations; but for ſome days badly accommodated, till they obtained an audience of the king, who excuſed it by the common fate and hurry of war; but promiſed it ſhould be otherwiſe for the future. Accordingly, in a few days, they were ſet at liberty, without any ranſom, and ſent down to their reſpective forts, but could never recover what had been taken from them. The principal gentlemen were preſented with ſlaves, and his majeſty aſſured them, as ſoon as he had ſettled his conqueſt, he would make trade flouriſh, and have a particular regard to their intereſts."

The king of Dahome having deſtroyed Sabi, attacked and drove the king of Whidah to great diſtreſs, who retreating to ſome barren iſlands fortified the paſſes, and thus prevented his enemy's deſign of deſtroying him, who now contented himſelf with keeping poſſeſſion of the country, by an army encamped at Sabi. But, in time, this army dwindling, encouraged Captain Oſſue to ſettle himſelf near the French fort, about four miles from Sabi, truſting to its great guns for his protection. The king of Dahome having notice of this, reſolved to ſend an army to drive out Oſſue, who, upon that report retired, with many of his people, into the French fort, little thinking of the governor's treachery.

Next day, the Dahome army came down, and attacked the fort, which could not have availed much, ſince they had only ſmall arms; but it ſeems the thatch of the houſe took fire, which ſo alarmed the whites, who knew there was a great deal of gunpowder in the magazine, and no poſſibility of ſtopping the fire, that they fled to the Engliſh fort, within muſquet ſhot of their own; but the magazine blowing up, killed above one thouſand blacks, beſides wounding many. However, Captain Oſſue, and ſeveral of his people, eſcaped likewiſe to the Engliſh fort, where Governor Wilſon, the African company's agent, gave them proper protection. He alſo to prevent accidents, ordered all the houſes in the fort to be unthatched, and firing on the Dahomes, killed a great many, and kept the reſt at a proper diſtance.

The Dahomes ſheltering themſelves in the French fort, ſent thence to Governor Wilſon, to know the reaſon why he had fired upon their army; to which he replied, That ſeeing them come down ſuddenly, and fell upon his neighbours, he thought it the common cauſe of all the Europeans. The Dahomes anſwered, that when they came down, they had no deſign to attack the French fort, having no quarrel with the whites; but that the governor having taken Captain Oſſue and his people into it, contrary to his promiſe, obliged them to act as they had done. At the ſame time, they told the governor to his face, that he had firſt ſent to the king by a French ſurgeon, then reſiding with their maſter, to perſuade his majeſty to ſend an army down to deſtroy Captain Oſſue and his people, promiſing to give them no protection. This, though denied by the governor, yet gained credit by all preſent, who looked on it as a contrivance to get money from Captain Oſſue for protecting him; however, he met, (ſays the author) with a ſuitable reward afterwards, being killed by the Whidah's, whom he had ſo much injured.

As ſoon as the king of Dahome was informed of the taking of the French fort, he ſent to the governor, to let him know that he brought this misfortune on himſelf by his perfidy, for that he had no quarrel againſt his nation, therefore would order his ſoldiers to repair the fort, which had been greatly damaged by the powder; or if he did not deſire this, he might depart with all his Frenchmen, to his own country.

The king of Dahome having conquered and depopulated ſeveral countries within a few years, the king of Wimey's ſons, with other princes, whoſe fathers this country had taken in war and beheaded, fled to a far inland, potent nation, called I-os. The king of Whidah, after Oſſue's defeat, having found means of ſending meſſengers to the king. They and the others, who had fled to him for protection, obtained of him an army to march againſt the king of Dahome, whom they all looked on as a cruel deſtroyer of mankind. This nation of I-os fight all on horſeback, and living a great way to the north towards Nubia, they can only march ſouthward, but when the ſeaſon for forage and dry weather ſet in.

The king of Dahome had notice of their coming, and having formerly experienced the diſadvantage of his army, conſiſting of foot only againſt horſe, buried his riches, burnt his towns, and then fled to the woods and thickets with his people, which is a common thing among the negros for the weaker ſide to do when at war, having no fortified towns, as in Europe; ſo they that are maſters of the field, command the country far and near.

Thus the king of Dahome diſappointed the I-os; but Appragah and his people, lately conquered by the Dahomes, not moving in time, abundance of them were taken, with all Appragah's riches, and himſelf narrowly eſcaped, with only a few ſervants.

After this, the I-os marched on in queſt of the Dahomes, who ſtill ſecured themſelves by keeping in the buſhes, till the rainy ſeaſon came on; which obliged

obliged their enemies to retire, the Dahomes returned to their own country, and rebuilt their towns again.

About this time, Governor Wilſon departed from Whidah, and left in his room one Mr. Teſteſole; who had reſided there many years, but was no ways equal to him in prudence, as his unhappy fate will ſhew.

Though this perſon had been often at the king of Dahome's camp, where he was always uſed with great civility, yet now, believing the king reduced, he adviſed the Whidahs to re-enter their country. Theſe accordingly being aſſiſted by the Popos, through a view of re-eſtabliſhing their trade, raiſed together an army of 25,000 men, and encamped under the king of Whidah, near the Engliſh and French forts.

This the Dahomes knew nothing of, till the king ſent ſome traders down with ſlaves; they returned with news that greatly embarraſſed his Majeſty; for he had loſt many of his beſt ſoldiers, whilſt the I-os kept him in the buſhes, and beſides, had lately ſent an army into the country to take ſlaves; for he drives no regular trade in ſlaves, but only ſells ſuch as are taken in war. However, he extricated himſelf out of this difficulty by the following ſtratagem.

He ordered a great number of women to be armed like ſoldiers, and appointed officers to each company, with colours, drums, and umbrellas, according to the negro faſhion. Then commanding the army to march, the women ſoldiers were placed in the rear to prevent diſcovery. The ſurpriſe of the Whidahs at ſeeing ſuch numbers as they ſuppoſed, of ſoldiers, brought a panic upon the greateſt part of them, who cowardly flying, gave the Dahomes an opportunity of falling upon Oſſue's party with Popos, and ſoon obliged them to fly in their turn. The king of Whidah uſed all endeavours to ſtop his party's flight, wounded ſeveral with his lance, but all in vain, and at laſt to ſave his life, was forced to run into the dry ditch of the Engliſh fort, where, by the help of two of his ſons, he got over the wall, and ſo eſcaped the enemy's fury: but many of his people were killed and others taken.

This affair put Mr. Teſteſole under ſome difficulties, but at laſt he perſuades the king to leave the fort that night, and eſcape to his barren iſlands again: however, the king of Dahome being informed of all, and that the governor had been the occaſion of the revolt of the Whidahs, highly reſented it, and having ſurpriſed him, afterwards at the French fort, put him to death by torture.

This prince left a ſmall army at Sabi, and returning into his own country, many banditti of other nations reſorted to him; ſo that in a few months, he found his power as conſiderable as when he fled from the I-os.

Mean time it muſt be obſerved, that though his large territories of many hundred miles extent, in a fine country as any in the ſouth part of Africa, yet is he only a great king in name, for want of ſubjects; for having deſtroyed moſt of the inhabitants of the countries he conquered, his cruelty drove the reſt away to other nations. In the next place he gave his word to a great number of the former inhabitants of thoſe parts, that in caſe they would return, they ſhould enjoy their priviledges as before, on paying a certain tribute. This brought many thouſands to return into the kingdom of Ardrah. But as ſoon as they were ſettled, the Dahomes ſurpriſed them, and killed or took captive, all who could not eſcape. Hence no body will venture to truſt him, and the country in all probability, will remain a waſte during his life. By this means the trade of Whidah is almoſt ruined: for the far inland people having no markets, and the Dahomes uſing no trade but war, few negros are brought down to be ſold to the Europeans.

After Mr. Teſteſole's unfortunate fate, two white men running away from the Engliſh fort, informed the king that he might eaſily take it, there being only four whites left in the place. But he replied, He had no quarrel with the Engliſh nation; for that what had been done to the late governor, he had brought on himſelf by his imprudence; and he hoped the African company would ſend a fitter perſon to command the fort for the future.

Some time after this, conſidering he ſhould certainly be invaded by the I-os, as ſoon as the ſeaſon permitted, he ſent large preſents, together with one of his handſomeſt daughters, to their king. His ambaſſadors preſenting the great men at court with large pieces of coral (which the I-os eſteem above all things) obtained an advantageous peace: for confirmation of which, the king of I-os ſent a little while after, one of his daughters to the king of Dahome for a wife, who was received with great joy by the king and his people.

The king of Dahome having concluded a peace, as above related, with the I-os, being a reſtleſs ambitious man, marched far inland againſt a nation called the Yahus; who defended themſelves amongſt their woods and mountains till the rainy ſeaſon came on; the king's army mutinied, deſiring to go home: on which he put ſome of the principal officers to death, only for mentioning it to him. Upon this, ſome of his captains deſerted him, with many ſoldiers, amongſt whom was one of his ſons, who fled with 4000 men to the king of Wimey.

Finding himſelf in theſe circumſtances, he reſolved to make one grand effort on the Yahus; in which, though he prevailed, yet they made a brave retreat, where his wearied ſoldiers could not purſue them. So that the king returned ſoon after to his own country, with the loſs of moſt of his forces and his reputation.

Upon this, the people of Jaquin began to take heart, hoping he might at laſt be deſtroyed. There reſided at this place a Dutch gentleman, called Mynheer Hertog, who carried on a conſiderable trade into ſeveral diſtant countries, by means of a river that runs from Jaquin into the bay of Banin. This perſon, in conjunction with the king of Jaquin, ſtirred up the king Wimey, and ſeveral other princes, againſt the king of Dahome, and ſupplied them with ammunition: of all which he being informed, reſolved to be revenged. But the better to deceive them, gave out he intended a ſecond expedition within land; and accordingly ordered his general to march towards the inland parts; but in the night the army wheeled about, and with great expedition came by the way of Whidah to Jaquin, without being diſcovered, (though there were about 15,000 of them) till they were juſt entering the town.

The king of Jaquin, with many of his principal people, eſcaped in canoes (which were always kept ready for ſuch occaſions) to an iſland he had fortified in the middle of the river towards Appah, ten leagues to the eaſt; but he loſt all his riches, and his mother was taken. Mynheer Hertog alſo fled to Appah, but loſt every thing in the factory, then full of European goods to a very great value. However, the conquerors not ſatisfied with the rich plunder of the town, according to their barbarous cuſtom, made a terrible carnage of the people, and to complete the deſtruction of the country, ſet all the towns and villages on fire.

Several European gentlemen and factors were made priſoners on this occaſion, and, among the reſt, one Captain Robert Moor, who commanded the Squirrel galley. This gentleman (as well as the reſt in his factory) was obliged to walk on foot with the conquerors to Ardrah. The French and Portugueſe accompanied them, and were brought into the preſence of the king of Dahome, to whom Mr. Moor could not help making ſome remonſtrances (though evidently at the hazard of his life) on the ill uſage he had received at the hands of his majeſty's troops, and in particular remarked that he had no victuals; but this was ſoon remedied by the king's breaking up a caſk of beef with a hatchet, and ſupplying their neceſſities; though the Portugueſe thought nothing leſs than that the conqueror was about to execute them all with his own hands.

Having

Having refreſhed them, they were diſtributed according to their nations, under the care of ſeveral great men. Captain More and his people were delivered to Allegi, the Engliſh caboſhir, that is the perſon appointed to trade with them in particular, who treated them with great civility, but was ſeized and beheaded a few days after, though they could never learn the cauſe. More, and the other Europeans, continued a good while priſoners, till Mr. Dean, the African company's governor at Whidah, came to Ardrah, and obtained their freedom; thereupon a guard was ordered to ſee the captain ſafe down to Jaquin, but he choſe to go by the way of Whidah, from whence he took his paſſage to Jaquin on board a French veſſel.

It is to be obſerved, that the king of Dahome was by this time grown very jealous of the Europeans, and ſeemed to diſapprove their method of trading for ſlaves, which appeared by an extraordinary ſort of declaration he made as an overture for re-eſtabliſhing it, but which could hardly be underſtood as ſuch by the Engliſh, to whom it was addreſſed; namely, "That the natives might and would ſell themſelves to the Engliſh—*Condition of not being carried off.*"—A condition which he well knew would never be accepted.

Moſt ſenſible and humane men have conſidered the ſlave trade as a diſgrace to humanity in general, and to Chriſtianity in particular. The account given of it by ſuch as have been concerned in it, with their defence of the practice, may not be here improperly introduced to the conſideration of the reader.

Firſt, it is obſerved, that the negroes, by a long cuſtom, make ſlaves of all their captives taken in war, who were put to death before the ſlave trade was eſtabliſhed.—Moſt crimes are puniſhed by fines, which they, who cannot, or will not pay, are made ſlaves; but the latter claſs are redeemable by their friends, and conſequently ſeldom ſold to Europeans. Though the people on the ſea coaſt never ſell their children, but when they find themſelves reduced to great extremities; yet thoſe of the inland parts often adopt this practice, without being under ſuch neceſſity.

From what has been obſerved, they ſay, It appears that a number of uſeful lives are ſaved. They aſſert, that negros live much better than in their own country; are of great uſe if carried to the ſugar iſlands, where they can cultivate the lands better than the white people, and that is doing a ſervice to the negro nations to tranſport theſe ſlaves ſo as that they may not return again to their native country, whereas, on the contrary, they are much wanted by the European nations.

The concluding argument made uſe of by thoſe who are concerned in this ſavage trade for man's fleſh, is, That the advantages far outway the inconveniences, and at the worſt it will be found like all ſublunary things, a mixture of good and evil.

Yet it appears that the negros themſelves, who ought to be the beſt judges of their own happineſs, are of a different opinion. Moſt of the ſlaves are hardly uſed, and many, even where that is not the caſe, prefer death to that ſlavery, which is thus gloſſed over, with the ſpecious name of convenience.

Hence ariſe ſo many mutinies, hence the whole crews of European veſſels are ſo often cut off by the riſing of the negros, who hazard every thing to regain the liberty which they are deprived of by the moſt cruel of all policy.

According to the account of thoſe who declared in favour of this trade, theſe unhappy wretches are generally coupled together with irons, and often beat and buffetted about by the ſailors, and even uſed in ſuch a manner, that ſome of them conceive the Europeans to be canibals, who delight firſt in torturing them, and afterwards in feaſting upon their fleſh. They are kept confined below decks, except at ſuch times as it is neceſſary (to prevent their ſickening, dying, and infecting the ſhip's company) to come upon deck for the air in fair weather. They are fed indeed twice a-day, but often ſcantily, and always on the worſt of viands, ſuch as horſe-beans, where they are to be had, and the like coarſe fare. If we follow theſe poor creatures to the Weſt Indies, ſhall we ſee them better treated? Certainly not. Some few excepted, they are put to the hardeſt of labour, go naked in the fields, are driven about like dogs, and have only the force of cuſtom to reconcile them to their wretched ſituation. When this is conſidered, we may fairly infer that the ſlave-trade is the moſt unjuſtifiable traffic ever carried on by Chriſtians in any part of the world.

We ſhall couclude here, taking our leave of the Coaſt of Guinea, with a ſummary deſcription of thoſe parts of it, which have ſo often occurred in this work.

Guinea is a large extent of coaſt, reaching from the river Senaga, to Cape Lope Gonſalvo, and even as far as Cape Negrae. The name, which is unknown to the natives, and in uſe only with Europeans, was firſt impoſed by the Portugueſe; probably from the country of Ghenehoa, mentioned by Leo and Marmol, which firſt occurred on the ſouth ſide of the Senaga.

It is commonly divided into two parts, the North and South Guinea; the firſt extending from the Senaga to Sierra Leona; the latter from one of the capes above-mentioned.

South Guinea, which we come now to treat of, is ſubdivided into ſix parts, or coaſts, the Malaghetta or Grain Coaſt, the Ivory Coaſt, the Gold Coaſt. There are other diviſions of it, according to the fancy of navigators and geographers, but this ſeems the moſt juſt and natural.

The Malaghetta, the Pepper, or the Grain Coaſt, taken in its largeſt ſenſe, extends from Sierra Leona to Growa, two leagues eaſt of Cape das Palmas, the ſpace of 160 leagues. Others make it commence at Cape Monte, 53 leagues to the eaſtward of Sierra Leona; and ſome confine it between the river Seſtro and Growa, which reduces its extent to 55 leagues.

The coaſt from Tagrin, to the iſland of Sherbero, is encompaſſed by the Baixos de S. Anna, or Shoals of St. Anne, and runs ſouth-eaſt by ſouth, forming the large Angra, or Bay of St. Anne, which reaches almoſt to Rio de Gamboas. On the north ſide of this bay are the iſlands Bravas, or Bananas; the largeſt of them is the higheſt land, and affords wood, water and proviſions.

The five iſlands, called Sombreros, lie on the ſouth of the bay, producing plenty of oranges, lemons, piniento del cola, or rabo, a long pepper, wild wine-palms, and ſugar-canes; bananas, bees-wax, and cam wood; beſides angelim, a timber fit for building ſhips. The natives make ſoap with palm-oil, and palm-tree aſhes, which is ſo highly valued by the Portugueſe in theſe parts, that they will not ſuffer it to be exported to Portugal, leſt it ſhould undo the ſoap-boilers of that kingdom. The natives pretend there are gold and iron mines in their little iſland, and that they were ſeparated from the continent by an earthquake.

The depth of the bay is from five to eight fathoms mud. Four rivers run into it, whoſe banks are lined with man-grove trees, loaded with oyſters. The Rio Banquo is navigable for large ſhips; the reſt are not much frequented, the adjacent countries being overgrown with thick foreſts, and abounding with wild beaſts.

The Rio Gamboas is two leagues to the ſouth of the Sombreros, having a bar at the mouth. The town of Coucho lies 15 leagues up it, whither ſloops trade. From this river, to the Rio Sherbero, the coaſt lies ſouth-eaſt. It is formed by the iſland Sherbero and the continent, very large at the entrance. At the weſt end of Sherbero lie the three iſles of Tota, in a line. They are low and flat, with rocks on the north-eaſt ſide. Their produce is much the ſame as on the main land. They are called Plantain Iſlands by the Engliſh, from that plant.

The iſland Sherbero, as the Engliſh call it, is named by the Portugueſe, Farutha, or Furelloens; by the Dutch, St. Anne, or Maſta Quoja; and by the French, Crebera. It extends eaſt ſouth-eaſt, about 10 leagues, and is all over flat land. The country abounds in rice, maiſe, as alſo in bananas, potatoes, Indian figs, ananas, citrons, oranges, water-mellons, and the fruit cola. The inſulars are pagans, and uſe circumciſion.

The river Sherbero, called by ſome Madre Bomba, by others Rio Selboba, and Rio das Palmas, is very large, and riſing far within land, deſcends to the ſea through the country of Bulm Monu, a land full of moraſſes. It is navigable for ſhips of burden twenty leagues upwards, to the town of Bagas, or Baga, where the Engliſh have a factory, belonging to Bulam, and ſloops of 70 or 80 tons may aſcend 30 miles above Kedham, 250 miles from its mouth; but the channel grows narrower the higher one goes up, and in many places is almoſt choaked up with buſhes, which grow along the ſides; beſides, in April and May, the fit time for getting the cam-wood, of which there is great plenty, it has ſcarcely nine or ten feet water; but in Auguſt and September, after the rains, its depth is ſixteen or ſeventeen feet. The navigation is interrupted alſo by frequent tornadoes, at whoſe approach the ſloops muſt caſt anchor, or be faſtened to the trees growing along the ſhores, which are well inhabited by very civil people.

This river abounds with crocodiles, and water elephants, a wild and dangerous animal.

The lands of Silm Monu, are fifteen or ſixteen leagues farther, and beyond Silm, is Quuna Mora, a populous town, but the inhabitants not the beſt natured. It ſtands behind a great wood, not to be ſeen from the ſhips; is very large, but the houſes mean and low, excepting one in the middle of the town, where the principal negros hold their aſſemblies.

The adjacent country is very populous, the natives like thoſe of Sherbero, commonly wear a frock of ſtriped calico, having all the ſame cuſtoms and manners. The ſoil likewiſe produces the ſame kind of plants and animals with that iſland. The cam-wood here is a much better kind of red wood for dying than Braſil, and reckoned the beſt in all Guinea. It will ſerve ſeven times for uſe.

The Sherbero receives near the ſea, the Rio Torro at north-weſt, and Rio de St. Anna at ſouth-eaſt, both large rivers. The Torro overflows twice a year, but being ſhallow, and choked up with little iſlands, is navigable only for ſmall barks. From the ſouth point of the Sherbero river, to that of Galinhas, the coaſt ſtretches eaſt ſouth-eaſt, eleven leagues, flat, low, ſwampy, and marſhy, all covered with trees, and inhabited.

Rio de Galinhas, called by the natives Naqualabari, riſes in the lands of Hondo, and runs through the countries of Bulm Monu, and Quilliga Monu, to the ſea, having two iſlands in its mouth. It takes its Portugueſe name from the plenty of poultry. The Europeans bring from hence dry hides, and elephants teeth, brought down the river from Hondo, and Carudoba Monu, countries continually at war and the ſubjects to the king of Quoja, who reſides at Cape Monte. The tide runs very high to north-eaſt, along the coaſt, and the wind blows moſtly freſh from the north-weſt. The winter ſeaſon here is from May to October.

Rio Maguiba, the next river, denies entrance to large ſhips by a bar. The Portugueſe, (who call it Rio Nunez, and Nueva) traded to it formerly, as did the French: but at preſent, it is frequented moſt by the Engliſh, for elephants teeth, ſailing up to the village Dova Ruja. Higher up it is choaked with rocks and falls of water.

The coaſt from Rio Galinhas to Cape Monte, is low and flat, ſtocked with villages. The river Mavah, or Maffah, deſcends from the mountains, 30 leagues inland, near the Galvi negros, and running into a large and deep channel through the Danwate country, about a league on the north ſide of Cape Monte, is ſo choked with ſands, that it never enters the ſea above once a year, at the time of its overflowing.

This river before the conqueſt of Folgas, was inhabited by the Puy Monu negros, whoſe king Flamburre, commonly reſided at the village Jog-Wonga, on the weſt ſide, about a league and a half from the ſea: after he had quitted the town of Tomwi, at Cape Monte, to the Quojas. The king of the Folgas dwells on an iſland in the Lake of Plizoje, the better to avoid the inſults of the Dogas. The town Tochu lies oppoſite to Jog-Wonga, where Flamburre reſided for a time, when threatened to be attacked by the Folgas. Two leagues farther up the river, on the ſame ſide, is the village Tiji, where formerly lived Tiji, the brother of Flamburre. Two leagues higher on the ſouth-ſide, is Cammagoja, and a league behind it, Jerbofaja, over againſt which, the king had another village, from whence there is a road through the woods to Jera Balliſa, three leagues diſtant towards the ſea, belonging to Flamburre's eldeſt ſon.

The coaſt between Rio Maffah and Rio Maguibah, is full of villages and hamlets, where the negros make abundance of ſalt.

Cape Monte, called by the natives Waſh King, is diſcovered at a good diſtance from ſea, ſhewing like an iſland in form of a ſaddle, being a very high mountain, appearing like a lofty iſland.

[At three leagues diſtance, one meets with thirty fathoms water, black clayey bottom. The beſt anchorage is about three quarters of a mile north-weſt of the point, in eight or twelve fathoms, where veſſels may ride ſafe from the wind; but as the ſea is always rough on this coaſt, the ſailors are always obliged to wade, and carry the officers and goods on ſhore; the negro canoes, if not well manned, being apt to over-ſet.]

The land which is low, produces a ſmall quantity of yams, as alſo potatoes, and abundance of rice. The fruits here, as well as on the Gold Coaſt, are, panguavers, bananas, pine apples, &c. They are but indifferently ſtocked with cattle, having neither cows nor hogs, and but a few ſheep. Nor have they much poultry, but what they have is good. Here are numbers of elephants, tygers, harts, buffalos and other wild beaſts, and the river abounds with fiſh, which they catch with nets.

The courſe of Cape Monte river lies north-eaſt and ſouth-weſt, and it waters a very fertile country. At a hundred paces from the ſea, is a plain of ſeveral leagues extent, covered with oxen, cows, ſheep, goats and hogs, amongſt which the deer, roebucks, and antelopes graze peaceably. This plain is full of villages, abounding with poultry; ſuch as common fowls, pintadoes, or Guinea-hens, geeſe and ducks, which increaſe wonderfully. Millet, rice, maiſe, pulſe, are alſo equally plentiful: ſo is fiſh. The palma wine is excellent, and the air very temperate, from the north winds, and innumerable rivers of pure water, which run through the country.

The natives of Cape Monte are generally agreeable, mild, ſociable, faithful, diſintereſted, and very induſtrious. Their chief employments are, planting of rice, and boiling of ſalt, both which they are obliged to do for the king, whoſe ſlaves they are. They ſeldom are at war with their neighbours, chuſing rather, if any difference happens, to end the matter amicably. Each man marries as many wives as he can maintain, and as the women here work hard, their keeping is not very expenſive. They are very contented, and ſeem not much concerned at what liberties they take with other men. All acts of government are determined by the votes of their caboſhirs, who are the principal of the leading men at all towns, their experience or courage, having given them that ſuperiority.

The dreſs common to both ſexes here is the tomi, and the plaiting or braiding of their wool. The tomi

the women tie about their hips, and it falls half way down their thigh all round; but the men bring it under their twiſt, and faſten it juſt upon the girdling part behind. Both take great delight in twiſting the wool of their heads into ringlets with gold or ſtones, and beſtow a great deal of time and genius in it.

The natives of Cape Monte are cleanlier in their way of eating than the reſt of theſe nations. They uſe bowls made of a hard wood, and baſons of pewter or copper tinned, which they keep very neat: they roaſt their meat on wooden ſpits, but have forgot what the French taught them, to turn it about, for they firſt roaſt one ſide, and then the other.

It is certain the Normans had formerly a trade here, and the Rouen company, in 1626, a ſettlement; though it is at preſent uncertain how, or when they abandoned it. When the India company, in 1666, and 1669, ſent ſhips here, the king, then reigning here, received the French commander with great kindneſs, and converſing with him in French, granted him a free trade. This prince was a tall, venerable, old man of ſixty, called Fallam Boure.

The Engliſh and Dutch, and others who trade here, buy many fine mats and pagnes made of graſs, which are very beautiful, and of a bright yellow. Alſo great quantities of ivory of the ſame goodneſs as that of Sierra Leona. The teeth which theſe people bring from the north, are not ſo white, but much larger, ſome weighing 200 pounds weight. The Europeans buy here the ſkins of lions, panthers, tygers, and other wild beaſts, and about 1500 ſlaves every year. Theſe laſt are brought by the Mandingo merchants from the inland parts of Africa, for only criminals are ſold here, and for the king's profit.

Here is alſo ſome gold to be had, which is probably brought down by the ſame merchants; ſo that it would be worth while to have a factory here. The foreſts yield plenty of woods fit for dying, eſpecially in red. This wood the negros cut, and bring it to the ſhore in blocks of four or five feet long. The Engliſh, who buy a great deal of it, prefer it to Braſil wood, which was formerly ſo much eſteemed.

Cape Menſurado, is about ſixteen leagues diſtant from Cape Monte, there being a high land between them. This mountain, which is not near ſo high as the latter, is round and large, being almoſt ſurrounded by water. The ſide fronting the ſea, is ſteep and high, that to the land, more gentle and acceſſible. The top is level, and the ground much better than might be expected at ſuch a place. On the eaſt is a bay of conſiderable extent, terminated by a nigh land, covered with large trees. On the weſt ſide is another large bay formed by the river, whoſe mouth is in the middle of it. Theſe two bays are ſeparated by a long narrow neck of land. The cape lies in ſix degrees nine minutes of north latitude. That part which projects moſt to the ſea, runs ſouth-eaſt. A river ſmaller than the Menſurado, which comes from the eaſt, falls into the weſtern bay, and is navigable at high ſea for twelve or fourteen leagues. The water of it is always brackiſh, but it abounds with fiſh.

The Portugueſe call the river Menſurado, Rio Duro, on account of the cruelties of the natives when they maſſacred ſome Frenchman there. It runs firſt north-weſt for eighteen or twenty leagues, after which, it makes a turn to the north-eaſt. Its courſe after this is unknown.

The tide flows up the river Menſurado twenty leagues at the ſeaſon of the equinoxes, and eight or nine the reſt of the year. They obſerve, in the rainy months, the water is ſalt only about three leagues above the king's iſle, becauſe of the freſhneſs of the land floods. The river is very pleaſant, in ſome places as broad as the Thames at London; and fringed on each ſide with thick groves of mangrove-trees, which are always green.

Though it is uncertain how far the dominions of the king of Menſurado extends inland to the north and north-eaſt; it may be preſumed they are not ſmall, from the number of forces he can raiſe on particular occaſions. His limits to the eaſt are the Rio Juneo, twenty leagues from Cape Menſurado; and to the weſt, a ſmall river, half way between that and Cape Monte.

All this country is very fertile, gold is to be had here, but it is unknown where they get it, or whether it is the produce of the ſoil. They have as good red wood here as at Cape Monte, and ſeveral kinds of wood proper for being wrought in cabinet work. Sugar canes, indigo, and cotton, thrive here without cultivation. Their tobacco, (of the management of which, the negros are wholly ignorant) would be excellent, if it were carefully manufactured. The lions and tygers do not hinder their flocks from increaſing prodigiouſly; and their trees are loaded with fruit, in ſpight of the devaſtations of the monkeys: in a word, the country is rich, the commerce advantageous, and might be greatly augmented by thoſe who could cultivate the friendſhip of the people, for it would be in vain to think of making a ſettlement by force.

The natives are of a good ſtature, ſtrong, and well proportioned, have a martial air, and are very brave, as their neighbours have experienced, as well as the Europeans, who have ventured to provoke them. They are ſenſible people, who think juſtly, expreſs themſelves well, and underſtand their own intereſts as well as their ancient friends the Normans.

Their dreſs, cattle and fruits, are like thoſe of Cape Monte. The caboſhirs wear a ſtriped frock, reaching to the knees, and if they can get an old hat they are very proud of it. Elſe they wear a party-coloured ozier-bag upon their heads.

Their arms are lances about five feet long, with pointed iron-heads; ſmall bows, and arrows as ſlender as a reed, moſt of which were always poiſoned with ſome black ingredients, which, if it touches the blood kills inevitably, if the part affected be not immediately cut off: their arrows have no iron heads or feathers, neither do they ever ſhoot them point-blank, but at random, but notwithſtanding by this method they will come very near the mark they aim at. They carry ſquare targets of thin board, about four foot long, and two broad, with conveniencies on the inſide to hang them on the left arms, but ſo as their hand is free to manage their bow.

The country is very populous. The villages are large, and ſwarm with children, becauſe the women are very fruitful, and polygamy is allowed; beſides none of the natives (criminals excepted) are ſold for ſlaves.

In the midſt of each village, is a ſort of ſtage raiſed like a market hall, about ſix foot above the ground, to which you aſcend by a ladder. It is called the calde, or place of converſation. The floor and roof are like that of their houſes: it is open on all ſides. Here they meet to tranſact all their buſineſs: ſo that it is the exchange of this country, or rather a kind of negro coffee-houſe; the indolent go there to ſmoak and chat, the politicians to hear news. The rich have their mats carried there by their ſlaves to ſit down; others carry their own; ſome hire them from the king's officers appointed to take care of the place.

Their houſes are very neat, and their kitchen even with the ground; open on the ſide freeſt from wind, and walled on the other three ſides, with ſtakes covered with red clay, which binds well, though not mixed with lime, and laſts long. Their bed-chambers are raiſed three feet from the ground, to avoid the inconvenience of the dews. Theſe houſes reſemble pretty much our mountebanks ſtages in Europe.—The front is open, and the floor has a jutting out of five or ſix feet broad, where the negros, laid on mats, paſs the day with their wives and family. The walls of theſe chambers are of red clay near a foot thick. The roofs, raiſed like a tent, is covered with reeds or palm leaves, ſo cloſe interwoven as to admit neither ſun nor rain. To the right and left are two eſtrades

or benches, one foot high and four broad; on theſe are mats a foot thick, which are covered with cotton cloth, or calico, and ſurrounded with curtains of the ſame. At the upper end of this room, they place their trunks or boxes, and their arms upon the walls.

In the middle of their apartments, they raiſe a ſquare elevation of about ſix inches high, and two feet on each ſide, on which they keep a conſtant fire night and day; in the day to ſmoke, and in the night to drive away the flies, and defend themſelves from the cold and moiſtneſs of the air. There are as many chambers as the perſon has wives, with whom he lies by turns, and they are proportioned in bigneſs to the number of each family. The wife in whoſe chamber the huſband is to paſs the night, has her lord's ſupper ready. They have likewiſe places in which they ſtore their proviſions.

Their religion is a confuſed idolatry, often changing their divinities, or fetiſhes. Their adoration of the ſun is more fixed and conſtant, to whom they offer ſacrifices of palm-wines, fruits and animals. Formerly they offered human victims; but this cuſtom has ceaſed ſince they found the profit of ſelling their priſoners of war to foreigners.

Between Cape Menſurado and the river of Seſtos, there are ſeveral rivers; the firſt is that of Junco, (called alſo Rio del Punte) in five degrees, 50 minutes north latitude. The mouth or entry, lies ſouth ſouth-eaſt. It is known by three trees, on a ſmall riſing ground oppoſite three mountains, a great way in land. The mouth is broad, ſome ſay four or five hundred paces, but has little water. It is planted with trees on each ſide, which form an agreeable proſpect. All the ſhore is bordered with orange, citron, and palm-trees. The coaſters who trade here, uſually anchor at the mouth of the river, where diſcharging a gun, the negros light a fire on the point when they have goods to ſell, and this ſerves as the ſignal for trading.——

The country between Sierra Leona and the river Seſtos, is divided into ſeveral territories, particularly thoſe of Bulm, Silm, Quilliga, Hondo, Galas, Caradabo, Galivey, Folgias, Quoja, and ſeveral others. To each of theſe names is commonly added, either Monow, or Bercoma; Monu, or Monow, ſignifying people, Bercoma land, in their language.

Forty miles to the ſouth-eaſt lies Silm, where there are ſeveral towns ſeated on the river; and amongſt them the city of Quanamora, containing 5000 families, a treacherous people. The Sherbero, which is the chief river in the country, divides towards the mouth, into two branches: one running weſtward, the inhabitants name Torro; the other deſcending ſouth, the Portugueſe call Rio de S. Anna. Terro twice or thrice a year has but little water, and by reaſon of many iſlands in its channel, is navigable only for boats.

The country of Quilliga lies near the river Maqualbary, by the Portugueſe, Galinhas, (or of Hens) upon which, about 230 miles, dwell the Caradabo Monow. It riſes in the country of Hondo, more to the north. All theſe countries are ſubject to the king of Quoja.

The country inward from Wabcongo, or Cape Monte is called Quoja. It is inhabited by two diſtinct people, the Vey-Bercoma, and Quoja-Bercoma, which were both ſubdued by the Karows. The Vey-Bercoma are the remains of the ancient inhabitants of the river Maffah and Cape Monte, once a populous and warlike nation, extending as far as the country of Monow, but, at preſent, reduced to a handful of men.

The territory of Hondo is ſomewhat to the north of Galavey. It is divided into four principalities, Maſſillagh, Dedowach, Dangurro, and Dandi, the chiefs whereof are named by the king of Quoja, each having equal authority, and paying a yearly acknowledgment to him, by their envoys, in preſents of braſs kettles, baſons, qua-qua cloths, red cloth, and ſalt.

The Conde Quojas, that is, High Quojas, are neighbours to the Hondo Monow, and have a language different from that of the Quojas. The Folgias, and Monow countries are watered by the rivers Junk and Arveredo, which ſeparate the Folgias from the Karow Monow, although the king of Karow reſides near the country of Folgias, ever ſince their union, which with their conqueſt over the natives, occaſioned a great change.

The Folgias, as well as the Bulm and Silm, call the ſubjects of this emperor, Mendi, that is, Lord, the Quojas, Mendi-Monow, the People of the Land. This is to honour themſeves the more, as being his tributaries. But each of theſe petty kings has an abſolute authority in his own diſtricts, and can make war or peace without the conſent of the emperor, or any other of whom they hold.

The Quabi-Monows live about the river Seſtos. They were formerly ſubdued by Flenſire, king of the Folgias, but have ſince recovered their former condition, depending ſolely on the Monow emperor.

The vegetables, animals, &c. in this part, particularly the country of the Quojas, are much the ſame, as thoſe in the former diviſions of the coaſt.

Here is found the ſilla vandoch; it is the ſize of a hart, of a yellowiſh colour, blended with white ſtreaks; the horns about twelve inches long, with each a hole, through which the animal breathes. It is fleeter than a deer.

They have porcupines both great and ſmall. The quaggelo, is an amphibious animal, about ſix feet long, ſhaped and covered with hard, impenetrable ſcales, much like a crocodile. It defends itſelf from other beaſts, by erecting its ſcales, which are pointed at the end. It has a broad tongue, with which it catches piſmires.

They have four ſorts of eagles; and there are abundance of blue parrots, with red tails. Here is a little bird of the wood-pecker kind, about the ſize of a ſparrow, which by degrees makes a hole with its bill in the trunks of trees, there to neſtle and breed young ones.

The Jouwa, which is the ſize of a lark, generally lays its eggs in beaten paths and roads. The blacks believe, whoever breaks them, their children will ſoon die. They eat of all the birds abovementioned, except this laſt.

There is a great variety of fiſh along this coaſt. One has been ſeen of a monſtrous form on this ſide of Cape Monte. It was about eight feet long from head to tail, about a foot and a half in diameter, and four and a half in circumference. It had no ſcales, the ſkin was thick, hard, and rough, like that of the ſhark: it was taken with a large hook with an iron chain. When they got him near the ſhip, they flung a rope with a running-knot, round his tail, by which they drew him up, but took care to kill him before they brought him on board. The throat was large, armed with twelve teeth, ſix above, and ſix below, thick and ſharp, about two inches long; his ſnout extended half a foot beyond his under-jaw, and was a bone, covered with the ſame ſkin as his body, of a greeniſh colour, though the throat and lips were of a bright red. His eyes were large, red, and ſparkled like fire. Inſtead of gills, he had five gaſhes, or inciſions, on each ſide the body, which he opened and ſhut at pleaſure, and juſt beyond them, an extremely ſtrong fin, of a middle ſize. He had two others, leſs, beneath his belly, and one larger on his back. His tail was ſcolloped, thick, large, and ſtrong, and covered with the ſame ſkin. A ſhark approaching him while he was in the nooſe, he received a ſtroke with his tail, which ſent him away in haſte. Near the Cape Menſurado, the ſea produces alſo ſome fiſhes, as extraordinary as that above deſcribed.——

The blacks in general of both ſexes, are very luxurious, which occaſions diſeaſes, and ſhortens their lives. They are extremely fond of ſtrong liquors, eſpecially brandy, when given them, but will ſeldom buy any. The women uſe certain liquors made of herbs

herbs and barks to excite vicious inclinations. The natives, however, in thoſe parts, are generally well tempered, civil, and tractable, not apt to ſhed human blood, unleſs much provoked.

They live in great union and friendſhip, being ready to aſſiſt each other with cloathing or proviſions upon moſt occaſions; and often making preſents of ſuch things, and ſometimes ſlaves, or other goods of value. If a perſon dies and leaves not enough to bury him, his friends defray the charges. Altough they are not addicted to ſtealing from one another, they make no ſcruple to take whatever they can from thoſe who are ſtrangers.

It has been already noticed that they have many wives. The firſt wife called Makilmah, has a ſuperiority over the reſt. Their marriage ceremony is the ſame as in other parts; only it muſt be obſerved, that the bridegroom muſt make his bride three diſtinct preſents. Firſt, the foglo, or cola, conſiſts of a coral, or bugles; ſecondly, the jaſing, a few pagnes, or cloths; thirdly, the leſing, a trunk to put up her things; elſe a braſs kettle, a baſon, or, according to her quality, a ſlave. The bride's father ſends a preſent of one or two ſlaves, two frocks, a quiver full of arrows, a ſcimitar and belt, with three or four baſkets of rice. The huſband maintains the boys, the woman the girls. They ſcruple not to marry women who have loſt their virginity, provided they have good portions. Theſe blacks, as well as thoſe of Gambra, ſtrictly abſtain from their wives, as ſoon as they appear with-child.

They give names to their children ten days after they are born. On the day the boy is to be named, the father, attended by his domeſtics, armed with bows and arrows, walks about the town howling and ſinging, the inhabitants, as he paſſes, join him with their muſical inſtruments. After this, the perſon appointed for the ceremony, taking the child from the mother, lays it on a ſhield in the midſt of the company, and puts a bow into its hand. Then he makes a long diſcourſe to the people on the occaſion: after which, turning to the child, he wiſhes he may be like his father, induſtrious, hoſpitable, a good builder and huſbandman: that he may not covet his neighbour's wife, be a drunkard, glutton, or the like. Then taking up the child, he gives him a name, and delivers him to his mother or nurſe. Then they go hunting, and afterwards feaſt upon the game they have taken.

If a girl is to be named, the mother or nurſe bringing the child, where moſt of the people of the village are aſſembled, lays her on a mat on the ground, with a little ſtaff in one hand, and then exhorts it to be a good houſewife, a good cook, chaſte, and a dutiful wife; that her huſband may love her above all his other wives, and ſhe attend him at hunting; ſuch wiſhes being finiſhed, the name is given her.

The eldeſt ſon of the deceaſed inherits all his goods, wives and concubines; and he dying without iſſue, all falls to his younger brother if he has any. The other children are generally provided for by their father in his life-time, that they may not be reduced to poverty after his death. But if a man dies without male iſſue, the ſon of his brother is his next heir, though he ſhould have ſeveral daughters; and in caſe there is not a male left of a family, then the king becomes the ſole heir, but is to maintain all the daughters that are left behind.

The chief buſineſs of the blacks in this quarter, is tillage, for they are not much addicted to trade. They have few or no ſlaves to diſpoſe of: and the great number of European ſhips that paſs along their coaſts, ſoon exhauſt the teeth, wax, and little cam-wood they have.

The Quoja blacks between their harveſts, employ themſelves in fiſhing, hunting, or building: but none can hunt buffaloes without leave from the king, who has the moiety of that, and a third part of all other game. Water elephants belong wholly to the king or chief of the land, who returns the hunters what he thinks fit.

The houſes of the Quojas are all built round as at Ruſiſco. They have both open and fortified villages. The former called Fon Serah, are built in a circular form, incompaſſed with trees planted very near each other. The fortified towns called San Siah, have four coberes, a ſort of baſtions, through which they paſs in and out of the village, by a gate ſo low and narrow, that only one can paſs at a time. Over each gate there is a centry box, made of the branches of a tree, called Tambo Bangoela. Theſe towns are likewiſe incloſed with the tombo or wine palm, (which are long, thick, and very hard wood) faſtened to the ſurrounding trees, ſo that nothing can be ſeen through their incloſure: but at certain diſtances there are narrow lights, or loop holes, with ſhutters to ſhoot through on occaſion.

The river in the Quoja's country being choked with falls and ſand, ſo as to render canoes uſeleſs; they have a ſort of bridges, made with ſtaffs of tombo, tied together with a rope (of certain roots twiſted) on each ſide, and ſtretched a-croſs at the heighth of three feet, and faſtened to trees, to prevent paſſengers from falling into the water.

Their funerals in general are the ſame with thoſe of other blacks already deſcribed, though varying much in circumſtances and additional ceremonies. When the corpſe is well waſhed, they trim the hair of its head into locks, and ſet it upright, ſupported by props, and clothed in the beſt apparel that the perſon wore whilſt living; or had been given ſince dead, as is uſual; with a bow in one hand, and an arrow in the other.

Then the neareſt relations or friends make a ſort of ſkirmiſh with their arrows, which laſts a conſiderable while. That done, they kneel round the corpſe with their backs towards it, as if much provoked; and thus ſhoot their arrows round the world, as they call it, to ſignify they are ready to revenge the deceaſed againſt any perſon who ſhall offer to ſpeak ill of him; or might have been inſtrumental to his death. After this, they ſtrangle ſome ſlaves of the deceaſed, to attend him in the other world; who, by way of preparation, are feaſted with all the delicacies the country can afford.

During this time, the women acquaintance of the village keep about his wives, and throwing themſelves at their feet, deſire them to be comforted and dry up their tears.

After this, laying the corpſe on a board, or ſmall ladder, two men carry it upon their ſhoulders to the grave. With the body they caſt in the ſtrangled women and ſlaves, mats, kettles, baſons and other things belonging to the deceaſed; they cover all with a mat, and hang his armour on an iron rod, ſet up in the ground at one end of the roof, which they erect over the grave to keep off the rain; and every day for a long time after, they leave eatables and liquors there for him to feed on in the other world. If a woman is buried, they ſet up an iron pole, or rod, her baſons, and Dutch mugs in lieu of the armour.

They bury all of the ſame family in the ſame place, though the perſon die at ever ſo great a diſtance. The burying places are commonly in ſome forſaken or ruined villages, which they call Tomburoy. Of theſe there are many on the river Pligoge, and in the iſland Maſſah, behind Cape Monte.

Their reaſon for ſtrangling the perſons who are to be buried in the graves of men of note, is, becauſe they think human blood is too precious to be ſpilt or waſted on any account. They ſtrangle them with a bit of ſtring, by twiſting it about the neck. They alſo burn in their preſence, the remaining victuals that had been prepared to feaſt them before their exit, adjudging it to be ſacred.

This cruel cuſtom, however, begins to loſe ground; for generally at all places where it is practiſed, the people hide their daughters or children, as ſoon as the king's ſickneſs is thought mortal, to prevent which, thoſe who attend him uſe all precautions to conceal it. And when thoſe who have abſconded return to

their dwellings, they are ſeverely reproached with the want of courage, which among them is the greateſt affront; and told how unreaſonable it is, that they, who had eaten the bread of their lord or huſband, ſhould be afraid to die with him.

It is alſo cuſtomary for the neareſt relations or friends to keep a faſt after the funeral, of ten days, for the common ſort, which are called Bolli Guwe, and thirty days for a king, or conſiderable perſon. Such as keep this faſt make a vow, lifting up both hands, not to eat rice during that time, nor to drink any liquor but what is kept in a hole for that purpoſe in the ground, as alſo to abſtain from the company of women, and the women vow to cloath themſelves with nothing but white or black rags, to go with their hair looſe, and to lie on bare ground at night.

The faſt being over, the penitents lift up both their hands again, to denote that they have very punctually accompliſhed it. After this, the men go a hunting, the women, at their return, dreſs what they kill, and all together feaſt on it; laſtly, thoſe who have kept the faſt are diſmiſſed, with each of them a preſent of a baſon, a kittle, a cloth, a baſket of ſalt, or an iron bar, and other things.

No people among the blacks are ſo formal and ceremonious as the Quojas, and the ſureſt way to make them tractable, is to comply with their cuſtoms in general.

A woman accuſed of adultery, is to take the oath in order to clear herſelf. If afterwards convicted of perjury, ſhe is, in the evening, carried to the public market-place of the village, by her huſband, where the council is ſitting. They firſt invoke the Jannanin; they then cover her eyes, that ſhe may not ſee the ſpirits that are to carry her away, after which follows a very ſevere reprimand on her diſorderly life, with dreadful threats, if ſhe does not amend it; and ſo ſhe is diſcharged, after a confuſed noiſe of voices heard, expreſſing, that though ſuch crimes ought to be puniſhed, yet, ſince it is the firſt offence, it is forgiven, upon her obſerving ſome faſts, and mortifying herſelf; it being expected, that ſhe ſhould live ſo chaſte, as not to admit any boys, though ever ſo young, into her arms, nor yet ſo much as to touch the cloaths of any man.

If, after this, ſhe happens to relapſe, and is again convicted, perſons appointed for the purpoſe making a noiſe with a ſort of ſcraper, comes in the morning to the criminal's houſe, and brings her into the public place of the town. There they oblige her to walk three times about it, ſtill making a great noiſe, that all who are of the brotherhood of Belli, may ſee what is doing, and take warning, ſuch as are not of it, not daring ſo much as to look out, for fear the ſpirits ſhould carry them away. After this, they convey her to the holy wood called Belli; and from that time, ſhe is never heard of more, being probably ſacrificed there, but the blacks fancy that the ſpirits of the woods carry ſuch women away.

If a man is charged with theft, murder, or perjury, and the evidence is not clear enough againſt him, or that he is only ſuſpected of this or that crime, he is to take the trial of Belli, a compoſition made by the prieſt, with the bark of a tree and herbs, which is laid on the perſons hand. If he is guilty of the indictment, the blacks ſay it will preſently burn the ſkin; but that, if innocent, will be productive of no harm.

Sometimes the prieſt cauſes a perſon to drink a draught of liquor made of the barks of the nelle and quoni-trees, which are thick, and reckoned a perfect poiſon. If he be innocent, he will vomit it up immediately, but, if guilty, it will foam about his mouth, and thereby prove him guilty, and puniſhable with death.

They uſually execute criminals, thus convicted, in ſome remote place, at a great diſtance from their village: there the criminal kneeling, with his head bowed down, the executioner thruſts him through with a ſmall javelin. The body being fallen on the ground, he cuts the head off with an axe, or knife, and quarters it, delivering the limbs to the wives of the perſon executed, who commonly aſſiſt him at the execution, and are to caſt them on ſome dunghills about the country.

Theſe people acknowledge a Supreme Being, Creator of all things, but cannot form any juſt idea of him. The blacks of Bulm and Timna make ſtrange repreſentations of him. They call that Being, Canow, or Canuo, attributing to him an infinite power, univerſal knowledge, and to be preſent every where. They believe that all good proceeds from him, but not that he is eternal; holding, that another light or being, is to come to puniſh the wicked and reward the virtuous.

Theſe people believe that the dead become ſpirits, which they call Jannac, or Jannanin, that is, Patrons or defenders; their buſineſs being to protect and aſſiſt their former relations and kindred, which is the reaſon they put ſuch queſtions to their dead, as are beforementioned. Thus if a man happens to eſcape ſome imminent danger in hunting, at his return he ſacrifices as the grave of his ſuppoſed deliverer, an heifer, rice, and palm-wine, as an acknowledgment, in the preſence of the relations of the deceaſed, who dance and ſing at the feaſt.

When a man has received an injury, he repairs to the woods, where they believe thoſe ſpirits or ſouls reſide, and with their howls and cries, intreat Canow and Jannanin, to chaſtiſe the malice of the party whom he names. In like manner, when he finds himſelf in ſome difficulty or danger, he conjures the ſoul of his beſt relations to help him out of it. Others conſult them as to future events: for inſtance, whether any European ſhip will ſoon arrive and bring goods to traffic, or the like.

In ſhort, they have a very great veneration for theſe departed ſpirits, and rely on them as their tutilar gods. They never drink water or palm-wine, without firſt ſpilling a little of it, as a libration for the jannanin; and to aſſert the truth of any thing, they ſwear by the ſouls of their deceaſed parents. The kings themſelves do the ſame; and though they ſeem to have a great veneration for Canow, or God, yet, all their religious worſhip ſeems to be directed to thoſe ſouls, each village having a place appointed in the neareſt wood to invoke them.

Theſe blacks, at three ſeveral times of the year, carry abundance of proviſions, for the ſubſiſtence of the jannanin, into the woods and foreſts. And thither perſons in affliction repair, to implore the aſſiſtance of Canow, and the jannanin with very loud cries.

It is ſacrilege for women, maids or children to enter thoſe ſacred woods, and therefore they are made to believe from their infancy, that the jannanin would immediately kill them.

They ſay they have magicians and ſorcerers among them, as alſo a peculiar ſort of men, whom they call Sovah Munuſin, that is, Poiſoners and Blood-ſuckers. Theſe they fancy will ſuck the blood out of man or beaſt, or, at leaſt, corrupt in ſuch a manner, as to occaſion lingering and painful diſeaſes. There are others called Pilli, who, by their inchantments, they believe can hinder the rice from ſprouting or coming to maturity. They ſay the Sovah poſſeſſes ſuch, who being overwhelmed with melancholy, or grown deſperate through misfortunes, withdrew themſelves from the company of all other men into the woods and foreſts, where the Sovah ſhew them what herbs and roots are to be uſed in their inchantments, as alſo the geſtures, words, and grimaces, proper for thoſe wicked practices. Theſe men, when taken, are put to death. The blacks will ſeldom travel through the woods without company, for fear of meeting them, as well as the wild beaſts; and carry with them a certain compoſition, which, they fancy, preſerves them againſt the malicious Sovah, of whom they tell a thouſand unintereſting ridiculous ſtories.

When a perſon is ſuſpected to have died a violent death, the cuſtom is not to waſh the corpſe, till a ſtrict enquiry be made. To this effect, they wrap up ſome pieces of the dead perſon's garments, with the parings of his nails, and clippings of his hair; on theſe they blow the ſcrapings of cam-wood, faſtening the bundle to the peſtle, which two blacks carry about the place. Theſe are preceded by the prieſts, who beat with two hatchets, one againſt the other, and aſk the corpſe, where, when, and by whom, he was thus deprived of his life; and whether Canow, their deity, has taken him into his protection; when the ſpirit by moving the heads of the bearers of the corpſe, after a certain manner, as they pretend, give them to underſtand, that the Sovah Munuſin was the cauſe of it, they aſk him again, whether the ſorcerer is male or female, and where he lives? This the ſpirit alſo declares, in the ſame manner; and leading them to the place where the ſorcerer abides, they ſeize and put him in chains, to be examined on the charge laid againſt him by the ſpirit. If he perſiſts to deny it, he is compelled to take the kquoni, a horrid bitter drink; and if, after drinking three full calabaſhes, he vomits it up, he is abſolved; whereas, if it only foams out about his mouth, he is immediately put to death; his corpſe is then burnt on the ſpot, and the aſhes are thrown into the river. or the ſea, be he ever ſo great a man. This drink is compoſed of the bark of a certain tree, beaten in a wooden mortar, and infuſed in water. It is is a very ſharp, dangerous liquor, and commonly adminiſtered to the priſoner in the morning, in caſe of ſuſpicion of a high crime.

All theſe nations circumciſe their children at the age of ſix months, as a divine inſtitution practiſed time out of mind. Yet ſome mothers, through fondneſs, defer the operation till they are three years old, that they may bear it with greater eaſe and ſafety. They heal the wound with the juice of certain herbs.

Having mentioned Rio Seſtos, we ſhall give the reader a deſcription of that river and the adjacent country.

The entrance of this river from the ſea is full of rocks, which lie ſix feet under water, ſo that it is eaſy to paſs them with loaded boats; except two, which appear above water, and are to be avoided. The mouth of the river lies ſouth-eaſt, and north-weſt, about a league broad, with large trees on each ſide. The water is foul: there are ſome rocks under water, and ſome above. There is, however, in the paſs or channel on the ſouth ſide three fathoms water, and often ſix or ſeven, which is ſufficient for ſmall veſſels, boats may enter the river without any hazard.

The going in is between the point on the ſtarboard or eaſt ſhore, and the rock in the middle of the river. The entrance is about half a cable's length wide, and the depth thirty-ſeven and thirty-eight fathoms. When it is entered, it will be found a very fine river, where veſſels of an hundred tons may ride ſafe. About a gun-ſhot from the aforeſaid point, upon the ſame ſhore cloſe to the ſide of the river, is a well of good freſh water, where, for a few cawris, (the ſhells commonly called black moor's teeth) the negro women brought them water, and filled their caſks in the boat. The negro men being furniſhed with hatchets, will, for a ſmall quantity of the aforeſaid ſhells, cut fire wood enough, and bring it to the boats, but they muſt have a bottle of brandy now and then to encourage them; ſo that for expedition, this is the beſt place to wood and water at.

The ſource of this river is far within land on the north-north-eaſt, ſome ſay, it is navigable for barks for twenty leagues up. Higher it is full of ſands and rocks, which allow no paſſage but for canoes.

It is deſcribed as a fine pleaſant river. The banks on each ſide are thick ſet with trees. Several rivulets or ſmall ſprings diſcharge themſelves into it; and what adds to its beauty, is a multitude of villages along the ſides.

The country about Seſtos is very fertile, well furniſhed with poultry, rice, and millet; of this they make all their bread, which they carry in their canoes when they go a fiſhing. Here is good advantage to be made of rice, pepper, or ivory, which laſt is excellent.

The land here is low, level, and watered with many rivers: ſo that it is no wonder the ſoil is rich and fertile; and produces all vegitables in abundance; but the climate is unhealthy to ſtrangers, who are expoſed here to long and dangerous diſtempers. Beſides proviſions, which are cheap, the place yields ivory, ſlaves, gold-duſt, and above all, Guinea-pepper, which is the produce of the country.

They find in this river a kind of flints, like thoſe of Medoc in France; but harder, clearer, and of a better luſtre. They cut eaſier than a diamond, and, with a good foil, make a great ſhew.

About a cable's length from the mouth of the river, is a negro town, of about thirty or forty houſes, neatly built, and ſo high, that ſome of them appear three miles off at ſea. Theſe houſes have more ſtories than thoſe of Menſurado.

The town is large, and built after a different model from thoſe on the Grain Coaſt. They run up the houſes (ſquare or round) four feet from the earth. At that heighth is the firſt and chief room, to ſit, talk, or ſleep in, lined with matted rinds of trees, ſupported with ſtockades, and in the middle of it a fire-place for charcoal. This ſerves a double purpoſe, driving off inſects and vermin, and drying their rice and Indian corn. Of the upper loft they make a ſtore-houſe, that runs up pyramidal thirty feet; making the town at a diſtance, appear like a number of ſpires, each ſtanding ſingly.

About a league up a rivulet near the mouth of the Seſtos, is the king's village. It contains about thirty little houſes, built of clay, and incloſed with a mud wall, about five feet high. It ſtands on a riſing ground, juſt at the mouth of a little river, and the country round about it full of either banana, or palm-trees. Every houſe has an upper floor, and ſome two, neatly whitened within, twelve or fifteen inches above the ground, where the wall appears black, or red, round about it; but the ſtories are ſo low, that people muſt ſit or lie down. The floors inſtead of boards, are made of round ſticks, or boughs of palm-trees faſtened cloſe together, which renders it very inconvenient to walk on. The roof is compoſed of the ſame materials, ſet cloſe alſo, and covered with large banana and palm-tree leaves.

In the council houſe, built in the ſame manner, there is a piece of ſquare timber, about three feet long, on which was carved in half-relieve, the figure of a woman, and a child by her, but very indifferently done, and two ſquare holes cut-in pretty deep at each end of the timber, probably, to hold meat and drink for the uſe of the fetiſh; that being the place where they adminiſter an oath, or ſwear to the performance of contracts or agreements.

The king reſides conſtantly at this village, which wholly conſiſts of thirty of his wives, and their children, none elſe living there. The king's ſons, or his ſons-in-law, wear a long ozier cap, like their father; which is the only thing that diſtinguiſhes them from the common ſort, and peculiar to thoſe only of the royal blood: but in all other things they toil and work like ſlaves, when occaſion requires it.

The king of this place is very abſolute, but ſeldom puniſhes criminals with death, it being more to his advantage to ſell them for ſlaves.

The people here are very civil, and for a glaſs of brandy, will do you all the good offices in their power. They are tall, well-made, and ſtrong, and have a martial air; couragious, and often make incurſions on their neighbours, to take ſlaves to ſell. This hinders the negro merchants from trading here; and deprives them of the advantage their neighbours ſhare in the commerce for gold.

Moſt of theſe Seſtos negros are fiſhermen. Every morning there ſails out of the river a ſmall fleet of canoes, which diſperſe themſelves along the coaſt.

They fiſh with a line, and generally return home loaden. The king has a certain duty of ſo much out of what they catch.

Theſe people never cover their heads, bearing without any inconvenience the heavieſt rain, or moſt violent heats. The men and women here go the moſt naked of any on the coaſt, having at beſt only a ſlight rag tied about their middle. They breed abundance of cattle, and poultry of all kinds; not ſo much for their own uſe (for they live chiefly on fiſh, pulſe, and fruits, which are excellent) as to ſell to ſhips that frequent the coaſt.

The manner of ſalutation is the ſame along the coaſt. They take the perſon's finger and thumb into their hands, and putting them into a certain poſture, pull them hard and make them ſnap, crying when they have done, aquio; which is equivalent to, your ſervant with us.

Their marriages are not very ceremonious. Thoſe who are able to buy a wife, after agreeing with the woman, apply to the parents or relations, who haggle about the bargain. The price agreed on being paid, the wife is delivered. The huſband, after drinking ſome bottles of brandy with his new relations, conducts his new ſpouſe to the hut deſigned for her: where his other wives come to ſee her, and help her to dreſs the wedding ſupper. This being over, the huſband ſtays all night with the bride; who next morning goes to work with the reſt of the women, according to the ſeaſon.

The wife who brings the firſt boy, is regarded as the favourite and chief, but ſhe buys this dear enough; for ſhe is obliged to follow her huſband, and is buried alive in the ſame grave.

A French author who was witneſs of this ceremony, gives us the following account of it. "The captain or chief of the village, dying of a hard drinking bout of brandy, the cries of his wives ſoon ſpread the news through the town. All the women there ran and howled like furies. The favourite wife diſtinguiſhed herſelf by her grief, and not without cauſe. However, as ſeveral women in the ſame caſe have prudently thought fit to make their eſcape, the reſt of the women under pretence of comforting her, took care to watch her ſo cloſely, that there was no means of eſcaping the blow. The relations of the deceaſed all came to pay her their compliments, and take their farewell. After the marbut had examined the body, and declared he died a natural death, he, with his brethren, took the corpſe, waſhed, dried, and then rubbed it with fat from head to foot. After this they ſtretched it on a mat in the middle of the houſe. His wives were placed round it, and his favourite at the head, as the poſt of honour. Several other women made a circle round them. All theſe endeavoured to out roar one another, tearing their hair and ſcratching themſelves methodically, like people who knew perfectly the part they acted. Sometimes they left off and kept ſilent; at others they repeated the praiſes and great actions of the deceaſed, and then began their lamentations anew. This mock muſic laſted near two hours, when four luſty negros entering the houſe, took the dead body and tied it on a hand-barrow, made of branches of trees: then lifting it on their ſhoulders, they carried it through the town, running as faſt as they could, and reeling from time to time as if they had been drunk, with a thouſand ridiculous geſtures, very ſuitable to the exclamations of the wives of the deceaſed, and the other women who attended this whimſical proceſſion. The cavalcade over, the body was taken from the hand-barrow, and depoſited in its place. After which, the ſongs, the cries, and extravagancies of the women began again.

"During this, the marbut made a grave deep and larg enough to bury two bodies. He alſo ſtripped and ſkinned a goat. The pluck ſerved to make a ragou, of which he and his aſſiſtants ate. He alſo cauſed the favourite wife to eat ſome; who had no great inclination to taſte it, knowing it was to be her laſt. She ate ſome however, and during this repaſt, the body of the goat was divided into ſmall pieces, broiled, and eaten. The lamentations began again: and when the marbut thought it was time to end the ceremony, he took the favourite wife by the arms, and delivered her to two luſty negros. Theſe ſeizing her roughly, tied her hands and feet behind her, and laying her on her back, placed a piece of wood on her breaſt, then holding each other with their hands on their ſhoulders, they ſtamped with their feet on the piece of wood, till they had broken the woman's breaſt. Having thus at leaſt, half diſpatched her, they threw her into the grave with the remainder of the goat, caſting her huſbands body over her, and filling up the grave with earth and ſtones. Immediately the cries ceaſing, a quick ſilence ſucceeded the noiſe, and every one retired home, as if nothing had happened."

The language of the Seſtos negros is the moſt difficult on the coaſt; ſo that trade here is carried on much by ſigns, in which they excel. They preſerve many French words, which have been handed down to them by their anceſtors, who learned from the French the art of tempering ſteel, which they yet retain, and in which they have even made great improvements.

The French being expelled from all their ſettlements on this coaſt by the Portugueſe, tyrannizing over the natives; and the profits of their trade exciting the jealouſy of the Engliſh and Dutch, their power began to decline; ſo that by degrees they loſt moſt of their poſſeſſions and forts, and were forced to retire up the country, where, to maintain themſelves they married with the negros, from whence are ſprung the Portugueſe mulattoes and blacks, to be found along the coaſt. The European Portugueſe, out of policy and affection, acknowledge them in general for their countrymen.

Theſe African Portugueſe, by means of their alliance with the natives, trade freely every where. They have penetrated even to the Niger, by the north of the kingdoms of Gago and Benin. Thoſe ſettled on the river Sierra Leona, Junes, Seſtos, and Sanguin, trade frequently to the Gambra, as well as to the Caſamanſa, Rio S. Domingo, and Rio Grande. One of their traders, who lived 100 leagues up the river Sierra Leona, went almoſt every year to trade with the Mandingos on the Niger, beyond a conſiderable branch of it, which he believed to be the Gambra. It is certain, that theſe advantages, joined to the regard the natives have for them, would enable them to carry on an extenſive and rich trade, if they had European goods more regular, and dealt for themſelves inſtead of other nations.

The country abounds in rice, which yields ſuch a prodigious increaſe, that a large ſhip may be ſoon loaded, at the rate of about an half-penny a pound, but it is not ſo large, white, or ſweet as that of Milan, or Verona. The better ſort of people drive a conſtant trade in this commodity, Guinea pepper, and elephants teeth, though the laſt they have but in ſmall quantities.

Beſides ivory, Guinea pepper, and rice, are maiſe, poultry and cattle, all very cheap here. The dogs here, as in other parts of Guinea, are eaten by the blacks as good meat. There are but few ſwine, and the ſheep differ much from thoſe in Europe; they are not ſo large, and have no wool, but hair like goats, with a ſort of mane like a lion's, both on the neck and rump, alſo a bruſh at the end of the tail. They are very indifferent meat, but ſell there for a bar of iron each.

Theſe blacks are circumciſed, but can give no other reaſon for it, than that it is an ancient cuſtom, tranſmitted to them by their anceſters.

The Malaghetta, or Pepper Coaſt, extends from Rio Seſtro to Growa, a little beyond Cape das Palmas, about 55 leagues, being generally low flat land, and the ſoil clammy, fat, all over woody, and watered by ſeveral rivers and brooks, at the mouth of which lie villages of the ſame name.

From

From Rio Seſtos to Little Seſtos, (or Seſtro) are four leagues, ſouth-eaſt. Before this place there is a mountainous long rock, on which grows a high tree, with five other rocks to the ſouthward, and one to the northward.

The blacks here are generally fiſhermen, and there is little or no trade. About two leagues farther eaſt, is the point called Baxios Swino, running out into the ſea, and near it a great rock, white at top, cloſes to the land, which, at a diſtance, weſtward at ſea, looks like a ſail, eaſily ſeen from Seſtos road, in clear weather.

A little below this rock, is the village Sanguin, at the mouth of the river of that name, which falls into the ſea at ſouth ſouth-eaſt, and will carry ſmall ſhips twelve leagues up, though its entrance is very narrow, the banks being ſhaded with fine tall trees. The village contains about 100 houſes.

The Engliſh had formerly a ſettlement here, but abandoned it on account of the ill temper of the blacks. The king is tributary to the king of Rio Seſtos. He commonly wears a blue Mooriſh frock, and goes often on boaad the ſhips in the road. Formerly the Dutch and Portugueſe carried on a great trade here for elephants teeth and pepper, but of late, through the great reſort of ſhips, the natives have ſo extravagantly advanced the price, that there is little to be done worth while, which indeed is the caſe throughout all the coaſt of Guinea. In caſe of neceſſity, Sangwin is a convenient place for wood or water, and proviſions.

About a league and and an half eaſt of Sangwin, is the village of Baffa, where there is ſome little trade for elephants teeth, but much more for pepper. This place is eaſily known by a plain ſandy point, environed with rocks. Some of the blacks here, ſpeak a little Portugueſe, or Lingua Franca.

Seterna, or Serres, is about two leagues eaſt of Baffa, having ſome rocks out at ſea on the eaſt point, and a good trade for ivory and pepper. Not far off to the eaſt, in the village Taſſe, or Daſſe. Next follows Bottowa, a town ſituated on the ſhore, eaſily known by two great rocks, one appearing out at ſea about two Engliſh miles weſt of it, by the Portugueſe called Cabo do Sino; the other four miles eaſt of the town. It is diſtinguiſhed likewiſe by ſeveral high hills beyond it. Here is abundance of malaghetta, or pepper, which the blacks exchange for blue perpetuanas, pewter baſons, iron bars, and annabaſſeſs.

They uſually come on board to traffic, but ought to be well looked to; for they are dextrous thieves, and will never pay for what they buy, if the can any way avoid it.

The village Sino lies ſouth-eaſt from Bottowa, about a league and a half diſtant, and diſtinguiſhed by a great rock on a ſand point, running out a little to ſea, behind which is a fine large river, riſing far within land, as the black report, and not much inferior to that of Seſtos.

The village of Souweraboe, or Sabrebou, is a league from Sino to the ſouth-eaſt. That of Seſtro Carow five leagues from Sabrebou, is a large, beautiful village. The place is eaſily known by a head or cape of three black hills together, planted with trees, which at ſome diſtance at ſea, look like maſts of ſhips. The cape or point is encompaſſed with rocks, ſome of which run a little out to ſea: it is likewiſe known by two great rocks on the ſhore, about two Engliſh miles aſunder, the land being low and flat. Here is good watering, in caſe of neceſſity, in the bulging of the ſhore, which ſhows at a diſtance like a little bay.

The village Wappow, or Wapp, is five leagues from Seſtro Carow, is ſituated on a little river. It is known by a ridge of about twenty or more high ſtraggling trees, which appear on a flat, long, high ground, beyond the ſhore, with five palm-trees at the end thereof. It is remarkable alſo for a very flat iſland or rock near the coaſt, if not joining to it, invironed with other ſmall ones.

At the village within the river, as well as at Botowa and Seſtro Carow, the elephants teeth are commonly large. The country abounds in malaghetta, which they commonly carry on board ſhips in the road, in great large bull-ruſh baſkets, made in the form of ſugar-loaves.

Droe (Drue, or Drew) and Neffo, two other villages, are between Wappo and Grand Seſtro; they produce abundance of pepper. The blacks about Wappo and parts adjacent, are more tractable and better conditioned than thoſe farther weſt; but importunate enough in begging their daſhi, or preſent, before they deal. Their language can ſcarce be underſtood.

The ſea affords great variety of fiſh, much the ſame with thoſe on the Gold Coaſt.

The ſhore from Wappo to Grand Seſtro, or Seſtro Paris, ſtretches ſouth-eaſt-by ſouth. This laſt is a large village on the Rio das Eſcravos. The tide at low ebb carries along the ſhore, and at ſea on the return of flood.

Grand Seſtos (or Seſtro) is about two leagues and an half to the ſouth-eaſt of Droe. It is eaſily found out by a rock to the north-weſt, and by a cut in the coaſt, over which are three palm-trees up the land. The Dutch call it Balletjes-hoeck, from the name of a black who formerly lived there. To this town the French of Duppe, formerly gave the name of Seſtro Paris, becauſe of its greatneſs; being one of the largeſt and moſt populous in all Guinea. They had a ſettlement here for trading in Guinea pepper and ivory, (which are both very plenty) long before the Eaſt India pepper was known in Europe. But the Portugueſe having conquered Princes iſland in the Bight, over-run all the Guinea Coaſts, ſettling factories and driving out the French. This place is called Great Paris; and Petit Seſtro, a few leagues farther, Little Paris. The natives here ſtill preſerve their antient affection to the French.

It is three leagues and a half from Grand Seſtro to the village Goyane, or Goyava; four from hence to Goawai, and two more to Cape des Palmas. This cape had its name from the palm-trees to be ſeen from moſt places, eſpecially near the ſhore, and from the two hills that form the cape; which ſtands exactly in four degrees fifty minutes of north-latitude.

Behind the cape is a bulging in the coaſt, which is a good ſhelter for ſhips againſt the ſoutherly winds; about a league from it, is a great rock juſt by the ſhore; and from the point runs a ridge of ſhoals, or ſmall rocks, even with the water, a league into the ſea at ſouth-ſouth-eaſt, where ſhips in former times have been caſt away. There is likewiſe another bank two leagues farther out to ſea, about which, the tide runs very ſwift at eaſt, in nine or ten fathoms water.

Two leagues eaſt from the cape ſtands Goawa, where the pepper coaſt ends.—It is obſerved that the vapours ariſing from the many rivers and brooks along the coaſt, cauſes malignant fevers, dangerous to Europeans. This bad air is moſt pernicious about Cape Palmas, being ſometimes felt four leagues off at ſea; for, when the weather is foggy, it carries a perfect ſtink with it.

The country in general has plenty of peas, beans, pompions, lemons, oranges, bacchos, bananas, and a ſort of nuts, the ſhells very thick, and all of a round piece, without any peel within, like European nuts, which eat very luſcious and ſweet. Great numbers of cattle, goats, hogs, chickens and many other ſorts of fowls are found here. Their palm wine is excellent, as is likewiſe the dates, which they are very fond of. But the principal commodity on this coaſt, as has been ſaid, is the malaghetta, or Guinea pepper, it being very plentiful and cheap.

The plant which bears the Guinea pepper, according to the goodneſs of the ſoil, requires ſtrength enough to ſupport itſelf, and become a ſmall tree, or ſtandard, ſometimes for want of this, it is a creeping ſhrub, unleſs it be proped up, or can faſten to any

tree to ſuſtain it, in which caſe, like ivy, it covers the whole body. When it creeps along the ground, the ſeeds, though large, are not ſo good; for the higher its branches are expoſed to the air, the drier and ſmaller the fruit; but then it is hot and ſharp to the taſte, and has all the true qualities of pepper. The leaf of the maleghetta is twice as long as it is broad, and narrow at the end. It is ſoft, and of a lively green in the rainy ſeaſon; but, when that is over, it withers, and loſes its colour. When you bruiſe them in your fingers, they yield an aromatic ſmell like cloves, and the extremity of its branches have the ſame effect. There iſſues from the under part of the leaves, ſmall, curled filiments, by which they take hold of the tree, or prop. No good deſcription can be given of the flower, as it appears at a time when there is no trade on the coaſt. It is certain, however, that the plant does flower, and that the flowers are ſucceeded by the fruits, in the ſhape of angular figs, of different ſizes, according to the ſoil or expoſition. The outſide conſiſts of a thin ſkin, which dries, and becomes very brittle. It is uſually of a dark, reddiſh brown: the negros ſay it is poiſonous.

The ſeeds in this ſkin are placed cloſe together in order, divided only by a thin pellicle, which turns to ſmall threads of a ſharp, biting taſte, ſomewhat like ginger.

This grain is of the ſize of hemp-ſeed, the ſuperfices almoſt round, but angular, of a reddiſh colour before it is ripe, deeper when it comes to maturity, and black after it has been wet, in which condition they pack it up. This moiſtening of it produces a fermentation, and greatly diminiſhes its virtues: its taſte ſhould be biting and ſharp, like that of India pepper, in order to make it ſell well.

The rind or huſk of the berry is thin, firſt green, and when dry, of a fine ſcarlet, about the ſize of a fig, and ſoft, as not being filled with any pulp, but within it is the maleghetta, growing in four or five rows, and covered with a white film, which alſo ſeparates each grain or ſeed.

Before they ripen they are red, and of a grateful taſte. The beſt are the cheſnut colour, large, ponderous, and very ſmooth; the black are the ſmalleſt. They take their colour as they lie on board their ſhip, being put up green. The ſeed is neither ſo large nor round as the Indian pepper, but has ſeveral angles. The ſtalks of it taſte ſomewhat like cloves. There is another ſort of maleghetta, growing like large leaved graſs. That which is bought from the middle of November till March, is certainly a year old; for the new begins to bud in January.

They gather the fruit whenever the leaves begin to blacken at the end. This they dry, and ſell through the country in exchange for goods, by which they make large profit. The ſeeds have been long uſed in France, and other parts of Europe, inſtead of pepper, eſpecially when the latter is ſcarce and dear. The retailers alſo adulterate the India pepper exceedingly.

The maleghetta on the river Seſtos, grows on a ſort of ſhrub, and is the largeſt of all this part on the Pepper Coaſt. The buſhes are ſo cloſe together, that in ſome places at Seſtos, they look at a diſtance like thickets, or ſmall coppices. There grows alſo a fruit on ſhrubs, which, in taſte and figure, reſembles cardamums. At Benin, and in land, there is pepper like that of the Eaſt Indies.

The laſt ſort of pepper, called here Pimento, and in Europe, Spaniſh pepper, grows here in abundance, on ſhrubs almoſt of the ſame ſize, though ſomewhat lower than the gooſberry buſhes in Holland. There are two ſorts, great and ſmall, both at firſt green, and change, the ſmall to fine red, the large to a red and black. This fruit is much hotter than common black pepper, eſpecially the ſmaller ſort, which is not above a quarter as big as the other, but the trees grow ſix times as high, and ſpread conſiderably wider than the other.

The Dutch uſed formerly to export a great quantity of it yearly, loading whole ſhips; but it is now leſs ſought after. But this ſort of pepper being now little uſed in Europe, the trade of it is inconſiderable, moſt of their ſhips that ply on this coaſt, look chiefly for elephants teeth, of which the Engliſh and Dutch got the largeſt ſhare.

Before the coming of the Portugueſe, the merchants of Barbary came hither quite acroſs the continent, to fetch this pepper, and that from Barbary ſome quantity was tranſported into Italy, where it was called Grain of Paradiſe.

On the Pepper Coaſt the natives are very intemperate, and luxurious to exceſs, always talking of their indelicate amours. They are much given to pilfering, and, when on board ſhips, ſteal eatables or goods, nay even ruſty knives, broken nails, and in ſhort, every thing that come in their way. They are intolerrable in begging for a preſent.

The language of the blacks of this coaſt cannot be underſtood at all, trade being carried on by ſigns and geſtures. They are generally well ſhaped; and are very ſtrong and laborious. When they happen to meet from different places on board a ſhip, they take one-another by the arms, near the ſhoulders, ſaying, Toma, and letting the hands fall to the elbows, Towa: then take one anothers fingers, as thoſe of Seſtos, and preſs them, uttering the words, Enfanemate, Enfanemate; in ſignification, My friend, how do you do?

They have pretty good black-ſmiths who know how to harden and temper weapons, knives, &c. Others make canoes large and ſmall, very neatly. They are alſo good huſbandmen to improve their lands for rice, millet, and maleghetta, which is their chief dependance for food and trade.

Their taba, or taba-ſeyle, and by others, tabo-ſeyle, that is, their kings, are very arbitrary, and effect much ſtate when they go abroad, having an abſolute authority over their people, who pay them great ſubmiſſion. They are groſs pagans, praying to their Grigri, or images, and to dead men, to grant them a placeful and holy life in this world: they ſalute the moon with plays, ſongs and dances, and great admirers of what they ſuppoſe to be ſorcery.

The Gold Coaſt, of which our author treats, was diſcovered by the Portugueſe, though the French have diſputed their pretenſions, aſſerting, that this diſcovery was made by ſome adventurers of Dieppe in Normandy. However, it is certain, that the French traded to the Coaſt of Guinea at an early period. In the time of Prince Henry of Portugal, a ſhip was fitted out at Liſbon to make diſcoveries along the African coaſt, which veſſel was driven to an iſland in the Bite of Guinea, on St. Thomas's day, to which iſland they accordingly gave the name of that Saint. Here finding plenty of neceſſaries, they ſtaid to refit, and formed the firſt Portugueſe colony.

Theſe adventurers returned to Liſbon in the year 1455. King John the ſecond, to ſecure the trade of his ſubjects, ſent thither ten caravel in 1681, laden with all ſorts of materials for building a fort, and 100 maſons, under James de Azambuja. This commander, upon his arrival, ſent advice to Caſamanſa, lord of the country, with whom he had before concluded a treaty of commerce, deſiring him to come and ratify it. In the mean time he landed his men privately armed; he took poſſeſſion of a little hill, where there were about 500 houſes, not far from Caſamanſa's reſidence, as a fit place to build the intended fort. Here he ſet up a ſtandard with the arms of Portugal, on the feaſt of St. Sebaſtian, whoſe name was given to a valley where the Portugueſe landed. Afterwards Azambuja being informed of Caſamahſa's approach, ranged his men in order, and ſat down in an elbow chair. He had on a gold brocade waiſtcoat, and a gold collar ſet with jewels. All his followers were clad in ſilk, making a lane before him, that the black prince might admire his grandeur. Caſamanſa on his part was not wanting to ſhew his ſtate, which

appeared by a great number of armed blacks, with a mighty noiſe of trumpets, horns, tinkling bells, and other inſtruments, all together making a hideous noiſe. The principal blacks were dreſſed after their own manner when they go to war, and followed each of them by two pages, one carrying a buckler, and the other a little round ſtool, their heads adorned with gold after their faſhion.

After the firſt ceremonies and ſalutes, Azambuja made a long ſpeech, ſignifying the great affection which the king his maſter had for Caſamanſa, and deſiring liberty to build a fort for carrying on trade with his ſubjects, and rendering him terrible to his neighbours.

Caſamanſa, who was a man of good ſenſe, made ſeveral objections to the propoſal of building a fort, but was at laſt prevailed on to conſent to it. Next day, Azambuja ſet his men to work, and the maſons breaking ſome rocks on the ſea ſide, the blacks, whether out of ſuperſtitious veneration for thoſe rocks, or that they could not approve of erecting a fort in their country, began to ſhew their reſentment. This Azambuja perceiving, cauſed conſiderable preſents to be diſtributed among them. Being by this means appeaſed, the Portugueſe carried on their work with ſuch diligence, that the fort was put in a poſture of defence in leſs than twenty days, and the tower raiſed to the firſt ſtory; the materials brought by Azambuja being ſo fitted, that there was nothing to do but put them together. Soon after this he ſent home his caravels with a vaſt quantity of gold.

It was ſtipulated by the treaty of peace made at Alcazoves, in 1479, between Ferdinand of Caſtile, and king Alphonſo the 5th of Portugal, that the commerce and navigation of Guinea, with the conqueſt of the kingdom of Fez, granted by the Pope to the kings of Portugal, ſhould remain to them, excluſive of the Caſtilians, who engaged not to trade or touch in thoſe parts without permiſſion from the court of Portugal; and on the other hand, that the Canary Iſlands ſhould entirely belong to the crown of Spain.

But we find, that contrary to theſe articles of peace, the Caſtilians, in the year 1481, having ſent a fleet to trade on the Coaſt of Guinea, King Alphonſo diſpatched a ſquadron to obſtruct them, under the command of George Correa; who meeting with thirty ſhips of Caſtile on the Coaſt of Mina, after a ſharp engagement, obtained a complete victory, bringing ſeveral of them to Liſbon.

King John of Portugal, granted letters patent to ſome undertakers, himſelf joining in partnerſhip with them. Three ſhips were fitted out, and whether the fort was erected in 1471 or 1481, is not known (ſo uncertain are the Portugueſe hiſtorians). King John gave it the name of St. George, and afterwards granted many privileges and franchiſes to ſuch as ſhould be willing to reſide in it. He alſo gave it the name of a city, and cauſed a church to be built in it, dedicated to the ſame Saint. After this, he took the title of Lord of Guinea, and commanded that thoſe employed to make diſcoveries for the future along the ſouthern Coaſt of Africa, ſhould, at every place of note, erect a ſquare monument of ſtone, ſix feet high, with his arms on it, and two inſcriptions, one on each ſide in Latin and Portugeſe. Containing the year, month, and day when that diſcovery was made by his order, with the name of the captain who commanded ſuch expedition. He ordered alſo a ſtone croſs to be cramped into that pedeſtal; whereas in former times, they uſed to ſet them up of wood. Some years after, the king of Portugal formed a Guinea company, with the priviledge of an excluſive trade. At firſt they made a very conſiderable profit, and cauſed Fort St. Andrew to be built at Axim, another ſmall one at Acra, and a lodge at Sama, on the river of St. George, for the conveniency of ſupplying the garriſon of Mina with proviſions, which before was maintained by the king of Portugal: who reſerved to himſelf the right of appointing a governor and other officers, every three years, to gratify ſuch of his ſubjects as had ſerved him well in Europe and in Africa, in his wars with the Moors of Fez, without making their fortunes.

Thus the garriſon of this place, as well officers as common ſoldiers, came to be commonly compoſed of lewd and diſorderly perſons, (uſed to commit outrages, and to plunder) or of ſuch as were baniſhed Portugal for their crimes.

In the reign of Henry the third, of France, the civil wars there being at an end, the French began again to frequent the Pepper and Gold Coaſt, but could not prevail with the blacks of Mina to deal with them, thoſe people being deterred by the threats of the Portugueſe. On this they failed thence to Acra; upon intelligence that the negros, provoked by the barbarous uſage of that nation, had ſurpriſed their little fort, deſtroyed the garriſon, and razed it to the ground, in the year 1578.

From that time the Portugueſe credit and intereſt on that coaſt began to decline, after they had reaped all the advantages of the Guinea trade for above 100 years, and fell into the hands of the European nations; who, by degrees became ſharers of the wealth. But this was not without bloodſhed, particularly many of the French loſt their lives by the hands either of the Portugueſe or blacks, who received an hundred crowns reward from the former, for every head of a Frenchman they brought, which were expoſed on the walls of the fort.

Mean time the French, who had hitherto traded on the Maneghetta, or Pepper Coaſt, ſeeing the great profit the Portugueſe made by their trade on the Gold Coaſt, ſent ſome ſhips there alſo. But the negros durſt not deal with them, for fear of offending the Portugueſe as they freely owned. However, coming to Acra, the French were well received by the negros, who gladly traded with them, when they found they were enemies to the Portugueſe.

The Portugueſe finding other methods fruitleſs, ſent two ſtout ſhips from Portugal to guard the coaſt. With theſe they ſunk a ſhip from Dieppe, called the Eſperence, killing the greateſt part of the crew, and making the reſt ſlaves, in the year 1582. But no prohibition or force prevailing to deter the negros from trading with the French, the Portugueſe managed ſo as to exclude by force not only the French, but all foreign nations from trading on the coaſt. Not content with this, they fell on ſuch interlopers of their own nation as the hope of gain had brought here, confiſcating the ſhips and goods, and puniſhing the men with death. A Portugueſe ſhip that had then traded here, was, on her return to Liſbon, condemned to the king, and the crew put to death.

Not long after the year 1600, a bark, bound from Port-a-Port to Rio del Ardrea, was taken by the pirates. The crew put into the caſtle of Mina for freſh water and proviſions; but though they were Spaniards, yet the governor refuſed them this liberty, on account of their not having the king's leave to trade here, and even threatened them with ſlavery if they did not quit the coaſt.

The Dutch met with no better treatment from the Portugueſe, when they had an opportunity, but would not deſiſt from the Guinea trade, being encouraged by the mighty profit they found on that coaſt, to bear with the outrages offered by thoſe people, till at laſt they had their full revenge. For when the war broke out between the Hollanders and Spain, the former calling to mind the injuries done them by the Portugueſe, at that time ſubjects to Spain, took from them not only one half of Braſil, but likewiſe all the forts they had on the Coaſt of Guinea, driving them from that nation for ever, by forcing them to ſurrender the caſtle of Mina, in the year 1637; and that of Axim in 1643.

The Portugueſe authors ſay, the Dutch treated the blacks even worſe than themſelves had done, and that the latter gained more upon the blacks by drunkenneſs, giving them wine and ſtrong liquors, than

by force of arms, and inſtructing them, as miniſters of the Devil, in their wickedneſs: but that their diſſolute lives and manners, joined to the advantages which the Portugueſe of Mina, though inferior in number, had gained over them in ſome rencounters, had rendered them as contemptible among the blacks for their cowardice, as want of virtue. That they held, without any other right than force, the fort of Bantrae, four leagues from that of Axim; alſo the ſettlement of Cora, Coromantin, and Aldea del Tuerto at Commendo. That they peaceably enjoyed the commerce of Mina itſelf, where they purchaſed above two millions of gold yearly, and exported all that could be furniſhed them by the Fazars, and other inland nations: that the quantity of merchandiſe brought by the Dutch, and their cheapneſs, had made the barbarians more greedy of them; though ſome people would willingly have paid double for the Portugueſe goods, as ſuſpecting the Dutch to be of leſs value, buying them only for want of better.

When the Portugueſe of El Mina, found the Dutch trade on the coaſt increaſe to their great loſs, ſtill endeavoured to excite the natives againſt them. A Dutch ſhip, trading at Cape Corſo, was thus circumvented by the negros, who pretended to the captain, one Simon de Taye, that their king was coming on board to viſit him. The Dutchman ſent his boat on ſhore to receive the king; but the negros in their canoes ſurrounding the boat, attacked and killed the crew, except one or two, who by ſwimming eſcaped to the ſhip. This was done at the inſtigation of the Portugueſe, who alſo taught the natives how to adulterate their gold, and put it off to the Dutch.

The Portugueſe governor at El Mina, at this time engaged one Voctian, a great negro trader, who had large dealings with the Dutch, to betray ſome of them into his hands. For this end, ſome negros came on board a Dutch bark that was trading on the coaſt, and pretending friendſhip, informed them, that there was plenty of deer and other game where they lay. The Dutch on this, ſent three men on ſhore to hunt. In the mean time they talked in ſo friendly a manner with thoſe on board, who ſuſpected no harm, that they put out their matches; which the negros perceiving, fell ſuddenly on them, wounding and killing ſome, and throwing others over-board, ſo that they had all periſhed, if the carpenter, who was cutting wood, had not run to help them, with his hatchet falling on ſo furiouſly, that he forced them to eſcape by ſwimming. However, the three men, who went on ſhore, were ſeized by the negros, and carried to the governor, who kept them in ſlavery. The Portugueſe here having no power of putting any to death, without an order from the governor of Portugal, unleſs when a ſlave attempts to eſcape.

Five Dutchmen going in a canoe to Mawri, were by a calm detained at ſea near the caſtle, in 1599, which the governor obſerving, ſent ſome negros, who fell upon them, and wounding them, carried them on ſhore, where they cut off their heads, which they preſented to the governor.

In January, 1600, the Portugueſe, by the aſſiſtance of the negros, ſurpriſed another Dutch bark, but were ſo warmly received, that they were glad to get away.

The ſame year, the Commendo and Fetu blacks, animated by the Dutch, who ſupplied them with arms and other neceſſaries, roſe againſt the Portugueſe.

The Dutch now reſolved to erect ſome forts on the Coaſt of Benin and Angola. Then practiſing underhand, with ſeveral of the kings, that of Sabow gave them leave to build a fort at Mawri, three leagues eaſt from Cape Corſo, which they finiſhed in the year 1624, and gave the command to Adrian Jacobs, at the time the crown of Portugal was at war with the Dutch, but poſſeſſed by Philip IV. King of Spain.

In December, 1625, the Dutch made an attempt on the caſtle of Mina, with 12,000 of their own men, and 150 Sabow blacks, under the command of their rear-admiral, Jan Dirk Lamb, who landed at Terra Pequena, or Ampena, in the country of Commendo, but were totally routed by the Portugueſe auxiliaries, the blacks of Mina alone. Thoſe natives attacked the Dutch before they could form their body, at the foot of a hill, a little before ſun-ſet: the action was over before night, with the ſlaughter of 373 ſoldiers, and 66 ſeamen, beſides all the auxiliary Sabow blacks, and moſt of the Dutch officers. Their general being wounded, was reſcued by the Little Cormani blacks.

Some years after, the Dutch made over the property of fort Naſſau, at Mawri, to the Weſt India company, Nicholas Van Vpren, their general in that place, made intereſt from time to time, by preſents and promiſes, with the black kings along that coaſt, to drive the Portugueſe from thence, and ſettle themſelves in their room. He ſucceeded ſo well, as even to foment a diviſion among the Portugueſe garriſon of Mina. Having thus diſpoſed all things for a change, and gained the caboſhirs, and captains of the town to aſſiſt the Dutch in a ſecond attempt upon the caſtle: he ſent an account to the directors of the company.

Theſe gentlemen having ſome years before gained a footing in Braſil, by taking St. Salvador, and Bahia, had bent their thoughts on ſecuring a place of arms on the Coaſt of Africa; that being thus maſters of both points, on the two oppoſite continents, they might have the command of the ocean, and of the paſſage to the Eaſt Indies, and bring the whole trade into their own hands. They had often ſought out for ſuch a place of arms along the Coaſt of Africa, from Cape Verde, to the Cape of Good Hope: but failed in their ſeveral attempts, and particularly in that before mentioned, in 1625, againſt the caſtle of El Mina, which was reckoned the moſt convenient for their deſigns.

Prince Maurice, of Naſſau, a near relation to the Prince of Orange, arrived at Braſil with a fleet of thirty-two ſhips, (twelve of them men of war) carrying 2700 ſoldiers, being by the Dutch Weſt India company appointed governor general of that country, and of South America, where he made ſeveral conqueſts. Van Vpren being informed thereof, ſent a veſſel over to give him an account of the favourable opportunity then offered for reducing the caſtle of El Mina, and thereby driving the Portugueſe from the Gold Coaſt. Count Naſſau ſent him nine men of war of his ſquardron, under the command of Colonel Hans Coine.

This ſquardron arriving at Cape La How, on the Quaqua Coaſt, on the 25th of June, 1637, the commander immediately ſent advice to Van Vpren at Mawri, and proceeded himſelf with his ſquardron to Iſſeni. There he received that general's orders to bring his ſquardron to Commendo road, where he waited with two hundred canoes of blacks, and ſome tranſport ſhips. Mean time Van Vpren had gained over to his party, moſt of the youth of Commendo, to whom he promiſed a conſiderable ſum of gold, in caſe he reduced the caſtle by their aſſiſtance.

Thus the fleet proceeded towards Cape Corſo, and the forces landed the 24th of July, in a little creek, about half a mile weſt of the Cape. They were in all eight hundred ſoldiers and five hundred ſeamen, each carrying three days proviſions; beſides the auxiliary blacks, and marched in three bodies. They all halted at the river Dana, to refreſh. And Coine, who brought up the reer, being informed that a body of one thouſand Mina blacks was poſted at the foot of the hill of St. Jago, to oppoſe his taking poſſeſſion of it, which it was abſolutely neceſſary to do, as commanding the fort; he detatched four companies of fuſiliers to beat them off; but moſt of them were cut to pieces by thoſe blacks, who ſtruck off their heads, and carried them to the town.

Major Bon Garzon being ſent with another detachment, forded the river Dana, and falling on that body vigorouſly, obliged them to abandon their poſt,

which

which he took poſſeſſion of, with the loſs of four whites and ten blacks, the natives afterwards endeavouring twice to recover that poſt, were obliged to retire. Bon Garzon purſuing them down into the village, between the mountains, and the hill of St. Jago, where the reſt of the Dutch forces immediately joined him.

The Portugueſe, no longer able to keep the field, retired into the redoubt they had built on the hill of St. Jago, where they were ſoon after attacked. Colonel Coine having cauſed two ways to be cut through the thickets, which covered one ſide of the hill, the one leading on the river Dana, and the other directly to the redoubt itſelf; and two pieces of cannon and a mortar were brought up the hill, and mounted on an advantageous ſpot, which commanded the caſtle ſo entirely, that ten or twelve bombs the Dutch threw from thence, were very near falling into the place.

Another detachment of Dutch and Commendo blacks, was ſent out to attack the Mina blacks, and afterwards the weſt end of their town. The Commendo blacks attempting to drive away ſome cattle, had been cut to pieces, but for the conduct of their officers, who kept them cloſe in a body along the river Banja, which covered them. Next day the Dutch being reinforced from their main body, attacked the town of Mina, but were forced to retire, by the exceſſive fire from the caſtle.

The day after, the general, to prevent his enterpriſe from miſcarrying by delay, ſummoned the caſtle as ſoon as it was light, proteſting, that he would put all the garriſon to the ſword, if they refuſed to ſurrender immediately. The Portugueſe governor demanded three days to conſider of it, which being refuſed him, Coine the next morning drew up his forces on the hill of St. Jago, and threw ſeveral bombs into the city with little effect; but the following day, having cauſed his grandees to draw nearer to the caſtle, the Portugueſe beat the chamade, and ſent out two perſons to capitulate, the articles being ſuch as the Dutch general would impoſe, viz.

Firſt, The governor, garriſon, and all the Portugueſe, to march out that day, with their wives and children, but without ſwords, colours or any weapons, each perſon being allowed but one ſuit of wearing apparel.

Secondly, All the goods, merchandiſe, gold and ſlaves to remain to the Dutch, except only twelve ſlaves allowed the inhabitants.

Thirdly, The church ſtuff, which was not of gold or ſilver, allowed to be taken away.

Fourthly, The Portugueſe and mulattos to be put on board the ſquadron, with their wives and children, and carried to the iſland of St. Thomas.

The fort was delivered up to the Dutch, on the 29th of Auguſt, 1637, and in it they found 30 pieces of braſs cannon, 9000 weight of powder, and much other ammunition, but very little gold, and no great quantity of goods. This done, Coine returned to Mawri, with his forces, leaving Captain Walraeven with a garriſon of 140 men, beſides ſeveral blacks, who had taken an oath of fidelity to them.

Coine, to make his advantage of the conſternation, the ſpeedy conqueſt of the caſtle of Mina had ſpread along the Gold Coaſt, ſent a canoe with a letter to the governor of Fort St. Anthony, at Axim, the moſt important poſt the Portugueſe had, next to Mina, to ſummon him to ſurrender that place, before he came to attack it with his forces. This governor, who had more courage than that of Mina, conſidering that there was no great danger of a viſit during the rainy ſeaſon, anſwered, That he was ready to give the generul a good reception if he came, and was reſolved to defend the place to the laſt extremity. This reſolute anſwer obliged Coine to put off that enterpriſe to a more favourable opportunity, and the Dutch did not reduce Axim till the year 1642. Coine, on his return to the Braſil with his fleet, was received at Olinda, and at Arracife, by Count John Morice's command, under a diſcharge of all the cannon, and with all other marks of honour.

The Dutch now became maſters of the important poſt of Mina, and endeavoured to engroſs all the trade of the coaſt in their own hands; to that effect, Van Vpren was called thither from Mori, to make that his reſidence, as general of Guinea and Angola. He cauſed the caſtle to be repaired and enlarged, and, by degrees, made it much ſtronger, more beautiful, and of a greater extent, than when in poſſeſſion of the Portugueſe.

The Dutch at firſt treated the blacks at Mina and the reſt of the coaſt very gently, careſſing, and preſenting the chiefs of them with preſents; but when the Engliſh came to put in for a ſhare of the trade of that rich country, and endeavoured to make intereſt with the natives, in order to ſettle on their coaſts, the Dutch changed their former civility into ſeverity, to deter them from favouring their new rivals. They alſo ſeized the Engliſh fort at Cormentin, where the commander of that nation reſided, which was one of the motives for the war between England and Holland in 1666.

To curb the blacks along the coaſt, and to engroſs the whole trade, they erected ſmall forts at Boutro, Sama, Corſo, Anamabo, Cormentim, and Acra, under pretence of protecting them againſt their inland neighbours, who often harraſſed them by invaſions. With the ſame view they likewiſe laid duties on the fiſhery of the negros at Axim, Mina, and Mawri, forbidding them, under ſevere penalties, to hold any correſpondence, or to trade with other Europeans, as has been obſerved. In ſhort, they proceeded to lord it over them ſo abſolutely, as to take cognizance of all civil and criminal matters, and to aſſume the power of life and death, though at the ſame time they were obliged to pay yearly acknowledgements to the native kings for the forts they had there. For all theſe precautions, the blacks were not deterred from trading when occaſion offered, with other Europeans, whom the Dutch treated as interlopers.

[It ſeems the diſcontent of the Mina and Commendo blacks, as well as thoſe of Fetu and Sabow, was grown to ſuch a height, when Barbot was there, eſpecially thoſe of Mina, that they had actually broken with the Dutch, and kept their general cloſe confined to the caſtle, without daring to come on board for ten months, in which time they had twice aſſaulted it, though without ſucceſs, for want of underſtanding the art of war: they loſt about 80 of their men, and killed but four of the Dutch. While they lay thereabouts, 30 or 40 canoes full of blacks came every day from Mina and Commendo, complaining to him of the hardſhips the Dutch put upon their countrymen, ſome of whom were for a long time kept in the Bilbos within the caſtle, expoſed ſtark naked to the ſcorching ſun by day, and the cold dews in the night. Barbot himſelf ſaw three of them in that condition on the land batteries, ſhewed him by the then Dutch general, who had kept them ſo above nine months to puniſh their boldneſs and treachery, having been concerned in the conſpiracy of the Mina blacks at that time, to ſurpriſe and burn the caſtle of St. George; but their deſign being prevented, many of them, after firing their houſes, fled from Town to other places on the coaſt, the blacks both here, and at Commendo, entertained Barbot with their grievances, and importuned him to inform the French court at his return, how deſirous they were to ſee the French ſettled there, to protect them againſt the oppreſſion they lay under. Being one morning at breakfaſt with the general, with whom he was pretty familiar, as being an old acquaintance, he ſpied through the gallery window, ſeveral canoes of Mina, going on board the author's ſloop in the road, to trade. Hereupon he abruptly, in a paſſion, threatened to detain him, and ſeize his veſſel. Barbot, to pacify him, deſired him to ſend on board to know whether he had not left poſitive orders with the maſter, to ſell nothing to the blacks; adding, that the fiſcal was actually in the ſloop, to obſerve what paſſed. For his farther ſatisfaction, the author ſold him the remaining part of

the cargo for about ten marks of gold, at which the blacks, who were on board, were much diſpleaſed at his return.]

The Gold Coaſt contains fifteen kingdoms along the ſhore, which are Adouir, called alſo Socu, and Awina, Axim, Ancobar, Adom, named likewiſe Little Inceſſan, or Warſhes; Jabi, or Jabs; Commendo, or Guaffo; Fetu, Saboe, or Sabow; Fantin, Acron, Agonna, or Angwira; Acra, or Aquambous, Labbade; and Ningo, or Limpi.—— This coaſt ought to be reckoned to begin at Rio de Sweiro da Coſta, near Iſſini, being the firſt place where gold is purchaſed, and to end at Lay, in the country of Lampi, 13 or 14 leagues eaſt of Acra, where this metal is only to be had accidentally from the Amahow people, who live farther inland.

Theſe countries contain ſome, one, two, or more towns or villages, lying on the ſea ſhore, either under or between the European forts and caſtles. Theſe are only for the conveniency of trade and fiſhing; for the principal towns lie within land, and are very populous. Nine of theſe kingdoms are governed by their reſpective kings, or captains, as they were called before the Europeans came here. The other ſix are independent republics, under the direction of their own magiſtrates. The inland countries are governed by kings or lords.

In the neighbourhood of the river Ancobar, or Cobre, where the Gold Coaſt begins, there are a great number of villages, which compoſe the three different iſlands of Ancobar, Aborrel. and Agwira, the firſt a monarchy, and the other two republics.

For ſeveral years paſt, the Dutch had a fort in the country of Egwira, and drove a very conſiderable trade there; for beſides the afflux of gold brought thither from foreign parts, the country itſelf affords ſome gold mines; but the Dutch loſt their footing there in a very tragical manner. For the commander in chief of the negros being cloſely beſieged by the Dutch, as fame reports, ſhot gold inſtead of lead, hinting, by ſigns, that he was ready to treat, and afterwards trade with the beſiegers; but in the midſt of their negotiation he blew up himſelf and all his enemies at once. To compaſs this deſign, he engaged a ſlave by a promiſe of new cloaths, to ſtand ready with a lighted match, with which he was to fire the powder, when he ſaw him ſtamp his foot. This the ſilly wretch but too punctually performed, undiſcovered by any but one of the company's ſlaves, who obſerving it, ſilently withdrew in time, being the only one left alive to carry the news to Axim.

Eight leagues to the eaſt of Cape Apollonia, is a village which the natives call Akxem, and the French Axim. This country was once a monarchy. The arrival of the Brandenburghers divided the inhabitants, one part of them putting themſelves under the protection of the new comers, in hopes of more liberty; the reſt, who were the honeſter part, continuing under the Dutch. Before this time, Axim, extended ſeven leagues from the Rio Cobre, or Serpentine river, to the village of Boeſwa, a mile weſt of the Dutch fort, near the village of Boutry, or Butrow.

The ſoil produces abundance of rice, water-mellons, ananas, cocos, bananas, oranges, ſweet and ſour lemons, and other fruit, and ſallading. Their maiſe is not good, nor in great quantities, on account of the heavy rains that fall there.

Axim is governed by a body of Caboſhirs, who are the chief, and by the Manceros, or young men, elected thereto. The public affairs are managed by the former, but what concerns the whole land, as war and peace, and the raiſing of taxes (which ſeldom happens) fall under the immediate cognizance of both aſſemblies.

Axim has many fine large villages, all of them very populous, ſome ſeated on the ſhore, others farther inland. The chief near the ſhore that are called Achombene, at the Dutch fort of St. Anthony, and Pocqueſo near the hill Manfro at Cape Tres Puntas. The land is well cultivated, and the natives generally rich, by the great trade they drive for gold with the Europeans; but by the long wars between theſe people and thoſe of Ante and Adem, the trade has much declined of late.

The negros of Axim carry on a very conſiderable trade in gold, chiefly with the Engliſh, and Zealand interlopers, notwithſtanding the penalty incurred by ſuch as the Dutch catch in doing ſo; yet they find means by bribing the ſlaves ſet to watch them, to carry it on; ſo that the Dutch have not above the hundredth part of the gold here.]

Fort St. Anthony is ſeated on a large, high rock, running out from the ſhore to the ſea, like a narrow peninſula, with a round, high, rocky head, on which the fort ſtands, ſo encompaſſed with cliffs and rocks, it is only acceſſible on the land ſide, where it is well fortified with breaſt-work, a draw-bridge, and a battery of large guns, to cover the whole.

The firſt fort which the Portugueſe (who built this of St. Anthony) had here in the reign of King Emanuel, was in a little point on the ſhore, which they were forced to demoliſh on account of the attacks made by the natives, and remove to this rock. The Dutch diſpoſſeſſed them of it, January the 9th, 1642, and by the ſucceeding peace between Portugal and Holland, it was yielded to the Dutch Weſt India company, who ſtill poſſeſs it.

This fort, though not large, is handſomely built, being triangular, and ſtrong by nature. It has two batteries on the land ſide, and one on the ſea, with proper out-works, which, as well as the walls, are of the black ſtone of the country; low to the ſea, becauſe the rock there is high and ſteep, and higher to the land ſide. It mounts twenty-two iron guns, beſides padereros. The gate of the fort is low, and well ſecured by a ditch eight feet deep, cut in the rock, over which is a draw-bridge, defended by two padereros, beſides a ſpur that can contain twenty men, with ſeveral ſteps, or ſtairs, cut in the rock, to get up into the fort from the ſpur.

The chief factor's houſe is neatly built of brick, and high, being triangular, with three fronts, before one of which, on the weſt ſide, is a very ſmall ſpot of ground, planted with a few orange-trees.

The Dutch garriſon here is uſually twenty-five whites, with as many blacks, under a ſerjeant in the company's pay, and if well ſtored with proviſions, is able to reſiſt an army of the natives. One inconveniency here is, as in other forts on the coaſt is, that the violent rains in the wet ſeaſons moulder the walls, and require a continual charge to keep up the fortifications. For this reaſon, the Dutch have a lime-kiln near the village, where they make lime of oyſter-ſhells, which are in plenty here, ſufficient not only to ſerve this fort, but even El Mina, and their other fortreſſes.

The natives here make it their chief buſineſs to ſeek gold by diving, in which ſome are ſo ſkilful, that they will remain a quarter of an hour under water. But the violence of it, often ſubjects them to ruptures, and as they know not the uſe of truſſes, they ſoon die. Their way is to plunge in head-foremoſt, with a calabaſh in their hand, which they fill with ſand, or whatever they find at the bottom of the river, and this they repeat till they are tired, or think they have got enough. Then ſitting on the bank of the river, they put two or three handfulls of this ſand or earth, in a wooden platter, like a bowl, and holding it under water, ſtir it with their hand. This done, they ſift it, always covered ſlightly with water, that the water may carry of the lighter parts, while the gold, which is heavieſt, ſinks to the bottom of the bowl, where it lies lik a yellow, heavy duſt, ſometimes mixed with larger grains. This is what they call waſhed gold, and what is found at Axim, is reckoned the beſt on all the coaſt. This river of Axim, and thoſe which fall into it, muſt needs paſs near gold mines, the particles of which metal are carried down by their ſtream. After the great floods in the rainy ſeaſons, the negros

here get gold in greater quantities and larger grains than at other times. But they dare not ſell their gold to any other nation than the Dutch, or trade with any ſhips on the coaſt; for their villages are commanded by the cannon of fort St. Anthony. This the Dutch have contrived, under pretence of protecting them, but in reality, to monopolize the trade; which makes their government ſo odious along the Guinea Coaſt.

The Dutch Opper Keopman, or chief factor, here, is the next poſt on the coaſt, to the generalſhip of El Mina, and has a kind of ſovereign authority through the whole country of Axim, determining all cauſes among the negros, and all fines being paid into his hands; who diſtributes them to the injured perſons, firſt deducting his own fees, which are very large. For inſtance, if a black be fined an hundred crowns, his dues amount to two thirds, and the other third falls to the aſſembly of caboſhirs. But in caſes of murder, robbery, or debt, three fourths of the whole belong to the plaintiff, and the other fourth is for the factor and caboſhirs, who divide it into three parts, the former taking two, the latter one. The fiſhermen here, alſo, pay him the eighth of the fiſh they catch, which produces no inconſiderable ſum.

Three leagues eaſt of fort St. Anthony, is the hill Manfro, and near it the village of Pocqueſo, pretty large and populous; this is the ſame which we have diſtinguiſhed as John Conny's town.

The hill of Manfro, is very proper to build a fort on, being cloſe to the firſt point of Cape Tres Puntas, and here the Brandenburghers, or Pruſſians chief fortreſs is ſeated.

Cape Tres Puntas, was ſo called by the Portugueſe, from the three little heads, or hills, which compoſe it, and lie at a ſmall diſtance from each other; forming between them two bays, where veſſels may anchor. The tops of theſe hills are adorned each with a grove of tall trees, viſible at a great diſtance. It lies in four degrees ten minutes north latitude.

On the ſhore of the bays lie three villages, Acora, Accuon, and Inſiama, or, as the Engliſh call it, Dixcove.—Acora is at the bottom of the firſt bay, from the weſt. Accuon lies on the aſcent of the middle point of the Cape. And Dixcove, is in a little gulph, formed by the land, between the head or point, and Acron.

Some reckon theſe villages to belong to the king of Warſhas, or little Incaſſan; which lies between Axim and Anta. The whole country about the cape is hilly and woody. One ſort of timber here, is of a fine yellow, of which chairs, tables, &c. are made.

Beſides great Frederickſburgh, the Pruſſians have another fort and lodge in the neighbourhood. The fort is at Tacrama, or Crema, a village in the middle of Cape Tres Puntas, betwixt Great Frederickſburgh and the lodge. It was built by the Pruſſians in the year 1674, to ſecure the adjacent watering place. It mounts only ſix guns, to hinder the natives from trading with foreign ſhips within reach of them; the natives being entirely under the government of the Pruſſian director at Frederickſburgh. In 1701, the Pruſſian factor here ſuffered foreign ſhips to wood and water for ten pounds per ſhip.

The lodge, or little fort, called Dorothea, is at Acoda, about three leagues eaſt of the Cape. It was about the year 1690, enlarged by the Dutch, who had diſpoſſeſſed the Pruſſians of it in 1683, but afterwards reſtored it, by order of the company, about 1698. They have ſince conſiderably ſtrengthened and improved it. It is only a houſe with a flat roof, on which are two ſmall batteries, with about twenty guns; and a ſufficient number of apartments, ſlightly built, and too much crowded.

At Dixcove, properly called Inſiamo, the Engliſh built a ſmall fort in 1691, after they had ſeveral times diſputed the ground with the Brandenburghers, who, ſome time before, had ſet up their elector's flag there; but not finding it turn to account, quietly yielded it, and the Engliſh were ſix years in finiſhing it.

Smith, in 1726, found this a handſome, regular fortification, with four good batteries, mounted with twenty guns. This, and all the Engliſh forts, are ſubordinate to Cape Coaſt Caſtle, the chiefs being only allowed to carry a St. Gorge's flag, which is Argent, a croſs Gules; whereas thoſe who are governors, or generals by permiſſion, hoiſt the union flag, as at the Gambra, Sierra Leona, Cape Coaſt, and Whidah. At Dixcove there are two villages commanded by the ſame caboſhir; who, whenever the flag at the fort is diſplayed, hoiſts the St. George's flag at his houſe, to ſhew his attachment to the Engliſh. Here is a very ſafe cove, or landing place; and the gardens belonging to the fort are both pleaſant and profitable.

The kingdom of Anta, or Hante, begins at the village of Boeſira, eight miles eaſt of Acoda, and lying between Inſiama and the Cape at Broetroe; and extends eaſt to Sama, where it borders on that of the Jabs; on the north it has Adom, to the north-eaſt Mampe, on the north-weſt Egwira, on the weſt Inkeſſan and Axim, to the ſouth and ſouth-eaſt, the ocean. It is about ten leagues from eaſt to weſt, full of hills, covered with large trees, between which, lie ſpacious villages.

For ſeveral years this country was divided into the upper and lower Anta, of which Axim was reckoned the firſt. It was formerly potent and populous, being inhabited by a warlike, predatory people, frequently invading the Dutch: but their continual wars with the people of Adom, and others, have ſo infeebled them, that no footſteps remain of their priſtine glory.

But the war in 1691, betwixt the Anteans and Adomians, reduced it to a miſerable condition, and ſtripped it of moſt of its inhabitants. The few now left are ſo diſpirited, that they ſhelter themſelves under the Dutch fort, near Boutri, leaving the land wild and uncultivated. Before that war, the author walked through this country, from Axim to Boutri, and regaled his eyes with a proſpect of numerous villages, well peopled, a plentiful harveſt, and abundance of cattle. Boutri exceeds other places for healthineſs; for while he ſtaid there, fewer of his people died, in proportion, than any where elſe.

The moſt delightful part of the whole Anteſe land, lies between Acoda and Boutri, being watered by a freſh river which comes down from the country, and runs into the ſea by the Dutch fort at the latter place. The banks of it are adorned with fine tall trees, which quite overſhade it. The mangroves which grow on the ſides of it, under theſe trees, are full of oyſters growing on the boughs. This river is navigable four leagues up, but not higher.

The chief villages of Anta along the ſea coaſt, are Boutri, Poyera, or Petri-Grande, Pando, Tacorary, the largeſt of all, Sacundi, Anta, and Sama; all places of trade.

Boutri, or as it is commonly called Boutrow, and Broetroe, is ſeated on a little river at the foot of a high hill, on which the Dutch have a ſmall, irregular fort; it being an oblong, divided into two parts, and defended by two inoffenſive batteries, mounted with eight ſmall guns. This fort was erected by one Carlos, in the Dutch ſervice, with the conſent of the king of Anta, to whom it pays a ſmall tribute in gold. It was called Badenſteyn, and commanded the village of Broetroe, which is thinly peopled, and has but little trade, except that the inland blacks from Adom reſort here ſometimes with good gold.

The king of Anta reſides about four leagues from the fort inland, and is often at variance with thoſe of Adom, their territories extending between the rivers Cheina, or Sama, and Cobra, near twenty leagues diſtant from each other along the coaſt, and ſeem to go up the river Sama in a line, and then to turn with a narrow ſlip away to Cobra. The Dutch reckon the air of Boutri the wholeſomeſt on the Gold Coaſt.

Poyera, or Petri Grande, and Pandos, or Pampemay, two villages between Broetroe, and Tacorari, are inconſiderable for trade, being chiefly inhabited by fiſhermen and huſbandmen. The adjacent country yields plenty of maiſe. Theſe places are known at ſea by a vaſt rock near the ſhore.

Tocorari, (or Toccarado, as the Engliſh call it) the principal town on the coaſt, ſtands on the top of a hill, which juts to the ſouth-eaſt into the ſea, ſurrounded with ſeveral rocks, (to which the blacks pay their devotion) ſome above, and others under water, which run out two miles to ſea, as appears by the breakers. When theſe rocks are paſſed, the town is eaſily ſeen.

The Dutch had formerly a ſmall fort here, built on a hill at ſome diſtance from the town, called Witſen, which the Engliſh under Commodore Holmes took by ſtorm, in 1664. The next year the Dutch retook it under de Rutyer, who blew it up as a place of no conſequence, and putting the inhabitants to the ſword, burnt the town. The ruins of the fort are ſtill to be ſeen, the Engliſh, Dutch, Danes, Swedes, and Brandenburghers having poſſeſſed it ſucceſſively.

The natives here are famous for making the fineſt and largeſt canoes on the Guinea coaſt; ſome being 30 feet long, and ſeven or eight broad, of a ſingle tree, that will carry above ten tons of goods, with eighteen or twenty blacks to paddle them. Ships bound for Whidah, or Ardra, commonly provide themſelves with ſuch canoes. The price of one of the largeſt is about the value of forty or fifty pounds ſterling in goods. They are a treacherous people, and have little trade, though ſhips can ride ſafe in the bay, into which the river of St. George empties itſelf, a league to the eaſt of the town.

This coaſt affords vaſt quantities of large oyſters, the ſhells ſerving to make lime. Theſe the Engliſh uſed to fetch from hence for their forts, along the coaſt: but, in 1707, the Dutch general, purely to hinder them, built a fort of ſeven or eight guns there, and ſettled a factor, with a proper garriſon.

The town was ſo deſtroyed and burnt in the war between Anta and Adom, that only a few inconſiderable people dwelt there.

The village Saccundi is ſeated on the other corner of the bay, being as rich in gold, and as healthy a place as any on the coaſt. It lies ſixteen miles lower than Broetroe. Before the war between Adom and Anta, it was one of the fineſt and richeſt villages, as well in money as people, upon the whole coaſt; but the Adomeſe conquerors entirely burnt and deſtroyed it. Since then they began to rebuild it.

The land for eight or ten miles round about theſe forts, is not leſs agreeable. At this place, and behind Tocorari, four miles weſt of Saccundi, the valleys are ſo fine, that nothing can be more delightful.

The French had formerly a ſettlement here; at preſent the Engliſh and Dutch have each a ſtrong houſe or fort. The Dutch fort, called Orange, was erected before 1682, and the Engliſh had one ſome years after; both were of the ſame ſize, and a muſquet ſhot aſunder.

In September, 1694, the Dutch fort was ſurpriſed and plundered by the blacks, who alſo maſſacreed the crew of a ſmall Dutch ſhip that lay there. The firſt of June, 1698, the Engliſh fort underwent the ſame fate from the Antean blacks. It was built by Captain Henry Nurſe, agent for the company, as conſpicuouſly appeared from an inſcription in the wall.

About ſix years, the trade being at a low ebb, the officers of the Engliſh and Dutch forts at Saccundi, grew ſo jealous of each other, that they both lived in miſerable poverty, at the the expence of both the Engliſh and Dutch companies. Not long after, the Engliſh fort was burnt and deſtroyed by the Antean negros; the chief commander and ſome of the Engliſh being killed, and the reſt plundered of all their own and the company's goods.

In 1700, only the out-walls were left ſtanding. The Dutch being thus left maſters of the place, though but little to their advantage. The year before they traded here for a large quantity of gold, which the Engliſh underſtanding, made ſeveral attempts to rebuild their fort, but were always hindered by the Antean blacks. However, they at length ſucceeded.—The new fort is quadrangular, ſituated on a hill about fifty paces from the ſea ſide, between two Dutch forts, the one at Tocarari to the weſt, the other at Shama to the eaſt. It is built with brick and lime. The garriſon commonly conſiſts of fifteen whites, and twenty blacks. Smith, who was there in 1726, ſays it is much larger and ſtronger than that at Dixcove, though it has but the ſame number of guns, viz. twenty. The landing-place and gardens are as good, if not better. The country is indeed much the ſame, all along the Gold Coaſt.

Anta and Boari, are two ſmall villages between Saccundi and Sama, not of any note for trade, unleſs by accident. The country behind them is hilly and woody. Anta is only famous for the great quantity of palm-wine it produces, for which the blacks reſort here from fifteen to twenty leagues round, and export it all along the Gold coaſt. The ſoil is fertile in herbs, roots and fruits, and well ſtocked with goats and poultry. The ſtones here are of a dark and ruddy colour. The natives here are afflicted with canine appetites, thought to proceed from their drinking a ſort of palm-wine, called Criſca.

Sama lies on a hill, watered by the ſmall river of St. George, which runs into the ſea near its foot. It contains about 200 houſes or cabbins, ſo ſeated, as to form three ſmall villages together, one of which is juſt under the Dutch fort of St. Sebaſtian, ſo named by the Portugueſe, from whom the Dutch took it. The place is populous, but the inhabitants the pooreſt on the coaſt. They are almoſt all fiſhermen, and expert in their way. They form a kind of republic, governed by chiefs called Captains, under the protection of the king of Gavi, who reſides to the north-eaſt, ſome leagues from the ſea, is very rich, and much eſteemed by his neighbours.

The Dutch fort at Sama is about the ſize of that at Boutri, very ſmall, but a little longer: it has four ſmall batteries, and juſt as many guns as at Boutri. In the wars with England, it was in a manner levelled with the ground, being encompaſſed only with paliſadoes. The Engliſh, in conjunction with the Jab blacks, attacked it, but were repulled; ever ſince which, the Dutch have enjoyed it without interruption.

The river Shama, or Rio de St. Juan, is called by the negros, Boſſum Pra; they adoring it as a god, which the word Boſſum ſignifies. It waſhes the Dutch fort, paſſing by the Countries of Jab, Adom, and Jaffer. From thence the negros ſay it extended itſelf about 400 miles within land; it is a ſmall matter leſs than the Ancober, but wide enough, and lies ſo that boats loaded may conveniently come into it from the ſea, if the pilot be careful to avoid a rock near its mouth, which the ſailors call the ſugar-loaf, otherwiſe they are in danger of being ſplit. This river is very advantageous to the Dutch; for beſides ſupplying their ſhips with freſh water, it furniſhes the caſtle of El Mina with fuel for their kitchens and ovens; and wood neceſſary for ſmall ſhipping; ſo that the fort here is only valuable for its defence of the river.

The Dutch, on the unanimous report of the natives, that this river came down through countries rich in gold, undertook a diſcovery by water, and for that end ſent out a ſloop with ſix men well armed. Thirteen days after their departure, they returned, having rowed twelve days againſt a violent ſtream, and finding the river choaked with abundance of rocks and ſhoals under water, and exceeding large cataracts.

Near the mouth lies the ſugar-loaf, a dangerous rock, on which ſhips have been loſt for want of care, eſpecially

eſpecially in rough weather. There are alſo other dangerous rocks about half a league to ſea, on the coaſt between this and Boari to the weſt. The backs of the little territory of Tabew to the eaſt, ſomewhat inland, bringing down to Sama Cam-roots, fruit, and poultry.

The country of the Jabs or Yabbah, as the Engliſh call it, commences, a little to the eaſt of fort St. Sebaſtian, and runs a few leagues up to the inland and along the coaſt, to that of Commani or Commando. It is at preſent but a ſmall diſtrict, and not very potent, though the firſt kingdom which occurs in deſcending from the higher country.

The village Abrobi is the only remarkable place on the coaſt in this country, being ſeated in a bay which terminates at the Cape Aldea des Terres; Aldea, in Portugueſe ſignifying, a village. This village is divided into two parts, with large plains behind it, between the town and the hilly country, which makes the coaſt appear like double land off at ſea. The country abounds in corn and poultry, but there is not much gold except what is adulterated.

The kingdom of Great Commendo, Commani, Aguaffo, or Guaffo, borders weſt on the lands of Jabs and Tobou, north-weſt on Adom, north on Abramboe, eaſt on Oddena, or Mina, a little commonwealth between Commendo and Fetu, and ſouth on the ocean. It extends about five leagues along the coaſt, and is as broad as it is long. In the middle, on the ſhore, lies Little Commendo, or Ecki Tecki, as the blacks call it, or as ſome Europeans ſtile it, having Cape Aldea des Terres on the weſt, and Ampeni on the eaſt, with ſome ſmall hamlets between them.

This kingdom formerly made but one country with Sabu and Tetu, and waa called Adoſſenis. The chief town or reſidence of the king, is Guaffo, a large populous village or town of about 400 houſes, ſeated on a hill four leagues up the inland country from Little Commendo. The Dutch called Guaffo, Commendo Grande, to diſtinguiſh it from the Little Commendo.

The countries about Dixcove, Saccundi and Commendo, do not produce ſuch fine crops of rice, yet they abound with pleaſant, fertile valleys, and beautiful woody hills.

Behind Little Commendo, the country riſes gradually into ſmall hills, covered with trees, at the foot of which are ſmall plains curiouſly planted with fruit trees, and the land exremely well inhabited by a martial people; ſo that the king can raiſe, on occaſion, an army of 20,000 men. His guards uſually conſiſt of 500.

Little Commendo, ſo called by the Engliſh, French and Dutch, to diſtinguiſh it from Guaffo, named by the ſame nations Great Commendo, is called by the Portugueſe, Alea des Terres, and by the natives Ecki Tecki.

This town contained about 400 houſes, built on the ſhore, and watered by a rivulet, which falling into the ſea on the ſouth, forms a pretty channel or harbour for canoes. The eaſt ſide is low, the weſtern ſwellings into a hill, which being flat at top, is very convenient for a fort. The land riſes by degrees at the north end of the town (where the houſe formerly belonging to the French ſtands) into ſmall hills, at whoſe feet are fine fields and meadows, planted with variety of fruit.

Little Commendo was divided into three parts, containing together about 150 houſes; but moſt of it being accidentally burnt, many of the inhabitants moved to Ampeni, about the year 1675. Some parts of the town are ſeated on a rivulet, which runs into the ſea, forming a ſmall harbour at the mouth for canoes, on the weſt ſide of which is a head, or ſmall flat hill; the eaſt ſide is low land, but the landing difficult, by reaſon of the bar. The beſt time for going aſhore is in the morning.

The blacks here are of a turbulent temper, deceitful and crafty, and great thieves if not well watched. They are chiefly fiſhermen or brokers, it being a place of conſiderable trade for gold and ſlaves, by reaſon of the Acanez blacks reſorting here for European goods. Every morning there come out of theſe and other places on this coaſt, 70 or 80 canoes from each village, ſome a fiſhing, others to trade with the ſhips on the road; and return on ſhore about noon, when the freſh gales from the ſouth-weſt begin to blow, that they may land without trouble, and have time to diſpoſe of their fiſh, at Great and Little Commendo, where the inland blacks buy it for the country markets, thoſe of Grand and Little Commendo are ſo well furniſhed with corn, fruits, (eſpecially bananas) and roots at cheap rates, that the Dutch call it the Fruit-market.

The Engliſh fort at Commendo was large and quadrangular, with three ſquare baſtions, and one round; and within the fort is a large tower, built of ſtone and lime. It is ſeated on a level ground, fifty paces from the ſea, between two Dutch forts, Shama to the weſt, and Verdenburgh about half a mile to the eaſt.

Our author ſays, "Commendo is the largeſt and ſtrongeſt fort belonging to the Engliſh on the Gold Coaſt, except Cape Coaſt-Caſtle. It was mounted in 1726, with twenty-one guns, though there were ports for almoſt as many more. It has the neighbourhood of a very good Dutch fort within muſquet ſhot, but the chiefs have not always the beſt underſtanding together.

An Engliſh chief of Mr. Smith's acquaintance, having a little before had ſome diſpute with the Dutch chief, was attacked by him unawares under a great tree between the forts, and bravely defended his life by killing the Dutchman.

The Dutch fort was built by Mr. Swerts, in 1688, called Verdenburgh. It is a ſquare building, ſtrengthened with good batteries, on which may be conveniently mounted 32 guns, within ſo many ports in the breaſt-work; ſixty men may live in it, though at preſent there are not near ſo many, and but twenty guns. In 1695, the negros attacked it by night, when half of their twenty men were diſabled by ſickneſs, yet they were obliged to retire with loſs, after a fight of five hours, and loſt but two men in the action, tho' the negros poured their ſmall ſhot as thick as hail through the loop holes, which had no doors to them. At laſt one of them began to hack the doors with an axe; but being killed, the reſt precipitately ſheared off.

The general, to whom the Dutchman had notified his weak condition, ordered two ſhips to anchor before the fort, to ſupply him with men and ammunition. The captain of one of them, the day before the attack, for this purpoſe ſent his boat full of men, but they were no ſooner landed, than the negros fell on and killed ſeveral of them, even under the cannon of the fort. The guns were all found nailed up, in all appearance by the villainy of the gunner, who was ſent in chains to Mina. The general ſwore he would puniſh him examplarly; but inſtead of that ſoon ſet him at liberty, and preferred him to a better place. If the negros had then ſtormed the fort, they were in no poſture of defence; but going to eat, they gave him time to prepare for its ſecurity.

The merchandiſes here are glaſs beads of divers colours. Thoſe they divide into leſſer parts, poliſhing and boring them to ſell again; alſo ſmall braſs baſons, blue cloth, and linen of a good breadth, for which the country people have a great demand: yet here theſe goods are only ſold in ſmall parcels, ſo that on account of the daſhes or preſents to brokers and boatmen, this is the worſt place on the coaſt, eſpecially when many Dutch ſhips lie here together. The gold here is often adulterated, eſpecially that called Cracra gold.

When the Commanians are at war with their neighbours, there is ſometimes a briſk trade for ſlaves at Little Commendo, the negros ſelling them quickly off, to prevent the trouble and charge of ſubſiſting

ſifting there; as happened to an Engliſh ſhip here not many years ago.

Though the gold trade is not ſo conſiderable at this place, as others on the coaſt; yet the Normans had a factory there, the ruins of which the negros ſhow on a hill to the north. A modern voyager reports, that the king of Commendo, who reſides at Guaſſo, being informed a French ſhip was in the road, ſent the captain a preſent of refreſhments, and acquainted him that he would make no treaty with any European nation, while he had the leaſt hope the French would ſettle with him.

The natives expreſſed a great affection for the French, to Barbot. In 1682, the king ſent him his ſecond ſon as an hoſtage, if he would come up to Great Commendo to treat about ſettling in his country. Although at this time he had refuſed both the Engliſh and Dutch the liberty of building forts here. Barbot at his return, propoſed the matter to the French miniſtry, and adviſed Ampeni as the fitteſt place to build a fort to bridle El Mina. But it does not appear his repreſentations met with any ſucceſs.

In the year 1688, M. Du Caſſe came on this coaſt with four men of war, equipped at Rochfort, with a deſign of making ſome ſettlements here for the Dutch African company, eſpecially at Commendo, from the ſecret invitations of the natives, who hoped to revenge themſelves on the Dutch. Du Caſſe ſettled a factory at Commendo, and proceeded to Alampi and Whidah, with the ſame views. But a few months after he left Commendo by the inſtigation of the Dutch, a war happening with the Aguaſſos, they were routed, the king killed, and the factory pillaged: the French, being worſted, were obliged to fly for refuge to the Engliſh at Cape Corſo, ſince which they have made no attempt to ſettle on this coaſt.

A little farther to the eaſt, lies a place called Terra Piquena or Lari, where the Dutch in 1600 had no trade, on account of its being too near the caſtle of Mina. When the Portugueſe want any goods, they ſend ſome people of this town with gold to Commendo, which is but four miles diſtant acroſs the river, to buy them from the Dutch.

The village of Lari is inconſiderable as well as Ampeni. This laſt is the reſidence of one Cucumi, a Commendo black, who was ſent by the king of Great Commendo as his envoy to the king of France, in 1671, to invite him to ſend over and build a fort in his country, the Commanians having been long diſguſted with the arbitrary behaviour of the Dutch at El Mina, who had often made depredations by ſea on them, and burnt the villages on the coaſt, not daring to enter farther up the country.

The war of Commendo made a great change in the Dutch affairs. This place was in a flouriſhing condition, when, by the ill conduct of the Dutch, the Commanians grew diſcontented, and ready to break out into an open war. It was prevented for a time by the governor of El Mina's ſervant, brother to the king of Commani, who having been afterwards diſmiſſed, and ill-treated beſides, the Commanians ſoon found a pretence to come to a rupture; for in 1694, ſome miners ſent from Europe, were ordered to make an aſſay at a hill in Commani, about two miles above fort Vredenburgh. This gave offence to the negros, who pretended it was dedicated to one of their gods; and in a few days, when the miners ſuſpected nothing, they aſſaulted and robbed them of all they had; thoſe who were not nimble enough to get away, having been kept priſoners ſome time.

The Dutch complained of this ill uſage to the king of Commani, who proteſting innocence, laid the blame upon one John Cabes, a negro, who lived near their fort, and with whom they had a conſiderable trade, alledging, that he had done it in revenge of the ill treatment he had met with from a former governor. This was plainly a falſity, for Cabes was an arrant coward. However, the Dutch governor of El Mina, without farther enquiry, marched into Commania with ſome forces, in order to take ſatisfaction of John Cabes. Upon his arrival at John's village, the latter came out to meet him, (leading a ſheep for a preſent) and to clear himſelf of the charge; but ſeeing the El Mina forces fall upon his goods without any warning, he put himſelf in a poſture of defence, and ſome on both ſides were ſoundly beaten. After this, their affairs ran into confuſion. John Cabes, to revenge the injury, invited the Engliſh into Commani. He firſt gave them a dwelling in one of his ſalt pans, about four miles from the Dutch fort; and ſoon after ſettled them in the old ruined fort they formerly poſſeſſed. The Engliſh were afterwards well fortified there. This neighbourhood of the Engliſh had done great damage to their trade, which might have been eaſily prevented, if the general had not been ſo fiery and eager for war, in hopes to have got as much honour as Mr. Swerts did in 1687, who entirely ſubdued the Commanians, after they had loſt their king, and ſeveral of the greateſt men in the kingdom.

The general had prudently enough hired an army of Juffer and Cabeſterra blacks, for leſs than five thouſand pounds ſterling, which was twice as ſtrong as that of Commani; but imprudently threatening to pay thoſe of Fantin and Sabu a viſit, after he had chaſtiſed the Commanians, they joined the latter, and overthrew the Dutch, who loſt all their auxiliaries, and were ſo reduced, that they would never have been able to make any freſh attempt, if the negros had not fallen out among themſelves. By theſe means the king's brother, Tecki Ancan, the preſent king of Commani, came over to the Dutch with the blacks of Adom and other auxiliaries. This brought them into a ſecond engagement, in which the victory was long dubious; at laſt it ſeemed to incline to the Dutch ſo far, that their army fell greedily to plunder.

This being obſerved by Abe Tecki, the Commanian king, (who excelled all his countrymen in valour as well as conduct, and laid this bait) he marched towards them with freſh forces; but to deceive them, had their muſquets turned the wrong way; accordingly, the Dutch taking them for friends, continued plundering, till the king coming up, his men turned their muſquets, and fired ſo briſkly upon them, that they left their prey, and fled to ſave their lives, yielding the Commanians a ſecond complete victory.

That general's ſucceſſors prevailed on the Commanians not only to make good the damage the Dutch had ſuſtained in the war, but alſo to enter into an alliance with them; but the Engliſh knowing this tended them no good, inſinuated to the king, that conſidering his two victories, and their weak condition, he ought rather to expect ſatisfaction of the Dutch; adding, that he was then ſtrong enough to make them purchaſe a peace on his own terms; that they would make his cauſe their own, and aſſiſt him with proper neceſſaries. The king eaſily liſtening to this advice, renewed his old courſe, and did as much miſchief as ever.

The Dutch at firſt made uſe of fair means, but finding it only made him more outrageous, they treated with the Fantin blacks, at that time their friends, who in conſideration of three hundred pounds ſterling, ſtipulated to fight the Commanians till they were utterly extirpated.

The Dutch now thought themſelves ſecure, daily expecting the Fantins would take the field; but here the Engliſh again baffled their deſign; one of their governors, going from Cape Corſe to Fantin, prevailed with that people, for exactly the ſame ſum given them before by the Dutch, to ſtand neuter, which being oppoſed only by the Braffo, they ſoon diſpatched him, ſubſtituting another in his room.

The Commanians now began to inſult them more than ever; to remedy which, the Dutch agreed with the Adom blacks for leſs than five hundred pounds to aſſiſt them; but they falling out about the diviſion of the money, as well as thoſe of Acani and Cabeſterra, (who had alſo contracted to join the others) none of them would ſtir. Thus baffled, the Dutch caſt their

laſt anchor, and contracted with the Dinkira blacks for 800 pounds to take their part: but they falling into a war with their near neighbours, were obliged to neglect their agreement to defend their own country; however they were ſo honeſt as to return the money, excepting a little the meſſenger kept. The Dutch alſo got back the greater part of what they had given the Adom negros: but that which thoſe of Fantin had, could never be recovered.

They muſt now infallibly have begged a peace of the Commanians, had not a critical accident helped them to a more honourable concluſion. The before mentioned brother of the king of Commani had, (for ſome villainy, as it was reported) together with his wife and children, been ſent as ſlaves to Surinam by the former governor; but having been declared free by the company, were brought hither again. Upon his arrival, the Dutch employed him to ſound his brother; who finding him inclined to peace, they concluded one upon very honourable and good terms: but they had no ſooner began to reliſh the ſweets of their new tranquillity, when the Engliſh, for what reaſon is not certainly known, diſpatched the king.

This action brought on a great change of affairs on the coaſt. The Commanians became inveterate enemies to the Engliſh, reſolving at any rate to revenge their king's death. Tecki Ancan, on the contrary, having had a hand in his brother's murder, fled from the Dutch, and agreed with the Engliſh, to fall on the Commanians the firſt opportunity. The Dutch were invited to join them, but refuſed, having found war fatal to their commerce: however, they went on with their deſign, hiring the negros of Sabu, Acani, and Cabeſterra; with which auxilaries, Tecki Ancan engaged the Commanians; but with four times the number of men, was totally routed. The Commanians owed this ſignal victory to their general, Anno Tecki.

Notwithſtanding the ſtrict neutrality of the Dutch, the negro general ſent a civil meſſage to their governor, together with ſeveral ſkulls of his vanquiſhed foes, in token, that he had reſolved to live and die in the ſervice of the Hollanders. This meſſenger was diſmiſſed with thanks and preſents to the general.

The Dutch had here a fair opportunity to obſtruct the Engliſh and reſent their former injuries, by quitting Tecki Ancan, and joining the Commanians againſt them. But, inſtead of this, the governor liſtening to one Akim, a broker, a great villain, though his favourite, who continually buzzed ſtories into his ears againſt the Commanians, behaved ſo as to provoke them to offer the Dutch ſome injuries. This was what Akim wanted, as furniſhing him with new arguments for beginning a war againſt them; in which he ſucceeded ſo well, that the governor, without conſulting or imparting it to the council, reſolved to attack the people of Fetu, ſubject to the Commanians, when they came, under the protection of the Dutch, to market with their goods. Accordingly, this was barbarouſly put in execution, and they robbed them of all they brought, ſome being killed, and eighty made priſoners.

The pretence for this proceeding was, that the Fetu blacks had murdered ſome women of El Mina, as they were paſſing by them: but they gave ſolemn aſſurances of their being innocent, and repaired to market, as uſual, unarmed. The murder was more likely committed, by the contrivance and order of Akim himſelf, and Tecki Ancan, to ſerve their purpoſes. However, the gentlemen of the council were not willing to diſcover their ſentiments, becauſe the blame muſt have fallen on Akim, who might revenge himſelf on them.

By theſe practices, the Dutch trade at El Mina was at once ſtifled, and the Commanians and Fetuans became their profeſſed enemies. This ſo animated the Engliſh, that, inſtead of making peace with the Sabu blacks, the ſtronger of the two, they ſtrengthened themſelves to the utmoſt, and once more engaged the Commanians. Theſe, with their ſmall forces, behaved ſo well, that they had certainly have got the day, had not their general been wounded, and forced to retire; which ſo confounded them, that they fled in great diſorder, leaving Tecki Ancan and his followers an entire victory; the general and ſeveral principal men being killed or taken priſoners. By this ſucceſs, Tecki Ancan became king of Commani; and the Dutch reaped ſome ſhare of the advantage by it as well as the Engliſh.

The kingdom of Fetu, or Afuto, as it is called by Vaſconcellas, or Fetow, by the Engliſh, borders, to the weſt, on the river Benja and the country of Commendo, north on Atti, eaſt on Sabu, ending below the Daniſh Mount of Manfrow, and ſouth on the ocean. The kingdom is elective, and the chief town Fetu, is far up the country.

Fetu is 160 miles long, and about as many broad; beginning with the hill St. Jago, or the Salt River, and ending below the Daniſh Mount, paſſing by Cape Corſe.

This country, ſays our author, was formerly ſo powerful and populous, that it ſtruck terror into all its neighbours, eſpecially that of Commani, ſubject to it. But it is at preſent ſo drained by continual wars, that it is entirely ruined; and neither the king nor his nobles, dare ſtir without leave from him of Commani. This havock was owing to their diviſion in the laſt wars: part ſiding with the Commanians, and part with the Dutch. Whence they ſuffered a double loſs, and were very much diminiſhed in the laſt battle: ſo that not enough remained to till the country, which for fertility and pleaſantneſs, might be compared to Anta. Before the laſt wars, it abounded with fine, well built, and populous towns, enriched with large fields of corn and cattle, palm wine, and oil. The beautiful, tall trees on the hills, and in the valleys, and the freſh rivers in the country, do not a little adorn, and render it a fit ſituation for the chief ſettlements of the Dutch and Engliſh. The inhabitants moſtly apply themſelves, without diſtinction, to agriculture, ſome to fiſhing and boiling of ſalt; and others to trade on their own account, or as brokers for the inland blacks.

The countries about El Mina, and Cape Corſo, are much the ſame for beauty and goodneſs, but more populous, and the nearer towards the ſlave coaſt, the more delightful and rich the ſoil appears.

Twelve miles below Vredenburg, is the village or town of El Mina, or Mine: but as no gold mines are found within ſeveral miles about it, the Portugueſe probably gave it that name, becauſe they met here with a great affluence of gold from all parts.

The natives call it Oddena; it is very long, and indifferent broad. The houſes are built with rock ſtone, in which it differs from all other places, where they are uſually made of clay, or of wood. About 1684, it was very populous, and much ſtronger than at preſent; the inhabitants being then very terrible to all the negros on the coaſt: but about fifteen years paſt, the ſmall pox ſwept away ſo many, and ſince then, the Commanian wars, together with the tyrannical government of ſome of their generals, whereby they have been ſo miſerably depopulated, and impoveriſhed, that it is hardly credible how weak it is at preſent, (1701) it not being able to furniſh out fifty armed men, without the help of the European ſervants; and there is no place upon the whole Gold Coaſt without ſome of the negros of El Mina: for ſeveral, who were friends to the Commanians, fled to them, but moſt of them from the tyranny of their governors, and the above mentioned Akim.

The Mina blacks are handſome, luſty, ſtrong men, of a martial ſpirit, and the moſt civilized on the Gold Coaſt, from their long correſpondence with the Europeans. They drive a good trade along the Gold Coaſt, and to Whidah, by ſea. They are alſo dexterous at debaſing of gold, a trade they learned from the Portugueſe. Some of them are very ingenious in

the goldſmith's art, making ornaments and toys of gold, as buttons, plain, or in filligreen; curious hat-bands, and ſword hilts, with many other curioſities. They are alſo great artiſts in melting glaſs of all ſorts, into figures.

The river Benja runs inward towards the country for about two miles, the water of which is ſalter than the ſalteſt brine, or pickle, in very dry ſeaſons: but in the months of May and June, in the rainy ſeaſon, it is as freſh as freſh water. At thoſe times the freſhes fall from the circumjacent hills, as ſwiftly as a tide runs in from the ſea; ſo that this place is very convenient for water-mills, ſince the ſtream would eaſily turn one.

The caſtle of El Mina, already mentioned, is ſtrong, and well ſituated for protecting trade, lying near the centre of the Gold Coaſt, and the country near it abounding with cattle and fruits. The natural poſition of it is ſtrong, being built on a rock, waſhed on one ſide by the ſea, towards which it has bulwarks. It has alſo two more to the land ſide, but not ſo ſtrong, there being leſs danger of an attack from that quarter. Both the caſtle itſelf and out-works are of ſtone, neatly built. Towards the ſea the wall is lower, it being defended by the ſteep rocks on which it is founded. Thoſe to the land ſide are high, a ſpace being left to walk round the caſtle, which is near as big as that of Rammekins in Zeeland. The walls are encompaſſed with a deep ditch, dry towards the land, but the part next the ſea full of water. The eaſt part being deep enough to admit barks.

The caſtle has two gates, one on the eaſt ſide, the other on the weſt, of which, the latter is the largeſt and moſt beautiful. It has a draw-bridge, over which is a ſtone building, or tower, wherein is the governor's apartment. The eaſt gate, which is next the cuſtom-houſe, ſerves chiefly for importing or exporting of goods. In the centre of the caſtle is a large area, or ſquare, adorned with a new church. Their church ſtood formerly on an eminence without the walls; but, in 1596, one Charles Hutſor threatning to beſiege the caſtle, they demoliſhed it, and built one in the ſquare, more out of harm's way.

The Portugueſe bear this climate much better than the Dutch, which is owing to their temperance, and taking care of themſelves; but the women ſeldom live long here, being ſubject to diſeaſes, which ſoon carry them off.

The Dutch officers and ſervants in this ſettlement are, firſt, the ſoldiers with their commanders, out of which, formerly, the beſt qualified for merchandiſe and the pen, were choſen to ſerve the company as aſſiſtants: but through the miſconduct of one, who had advanced himſelf to almoſt the higheſt poſt here, the company have ordered, that for the future, no ſoldiers ſhall be preferred to aſſiſtants places. Though his office is the loweſt among thoſe concerned in trade or writing, the ſalary appointed for this ſervice is ſixteen guilders per month, and twenty more for board wages. His firſt ſtep to preferment, is that of under commiſſary, or under factor, with a ſalary of twenty guilders per month. By theſe ſub-factors moſt of the gold is received, for which they are accountable to the chief factor, or him to whom the trade of the place is entruſted in chief, who is alſo accountable to the company; the general accounts of the whole coaſt being kept at El Mina, where there is alſo a warehouſe keeper, who has all wet goods, as wine, beer, or brandy, &c. and all edibles, as fleſh, beans, peas, and oats, under his keeping, and is intruſted with the ſale of them: ſo that when a factor obſerves his ſub-factor, or warehouſe-keeper, inclined to extravagancies, he muſt watch him very narrowly, ſince the factor is obliged to make good all that is waſted by his deputies.

Out of the under commiſſaries, are choſen factors, to reſide at, and command the forts, and take care of the trade there, with a ſalary of thirty-ſix guilders, beſides an allowance of ten guilders for a ſervant or two, and twenty guilders board wages per month.

The oldeſt and moſt experienced of theſe factors is removed to Mowri, or Cormantin, with a ſalary of eighty guilders per month, if his election here be confirmed by the company; who, not without good reaſon, have reſerved the ſupplying theſe important poſts to themſelves, as well as that of the chief factor at El Mina, or the ſecond perſon on the coaſt, who has a ſalary of 100 guilders per month. Theſe chief factors have alſo the ſame advance on merchandiſes, and board wages as the other factors have: beſides which, the ſecond perſon has ten guilders per month allowed for a ſervant, and the general's, or governor-general's table is at his ſervice.

The chief factor of El Mina having ſerved that office ſatisfactory three years, has a good chance for the governor-general's place, when it becomes vacant. This is the higheſt poſt, having the company's authority over the whole coaſt, of which the perſon in it is director-general, with a ſalary of 300 guilders per month, and a large perquiſite advantage in all the company trades for, on the whole coaſt; ſo that in time of good trade, his poſt is very advantageous.

Beſides the officers employed in trade, are the following: firſt, the chief fiſcal, whoſe ſalary is fifty guilders per month, and ten guilders for a ſervant, beſides the liberty of the general's table. Though his ſalary ſeems ſmall, his perquiſites are large, if he be diligent: for all the gold, or commodities, unlawfully traded for on the coaſt is forfeited, of which his ſhare is one third, be the goods an European's or a negro's; beſides one third of the fines ſet upon the latter, and the forfeiture of wages inflicted on any offending officers, or ſervants, by the governor and council; all which together amount to a conſiderable ſum.

Next the fiſcal, the book-keeper-general takes place; whoſe province is to keep the great books, and the counter parts of the accounts of all the forts and lodges, or, in ſhort, to take care of all the company's accounts in this country. His ſalary is ſeventy guilders, beſides ten more per month for his ſervants; and, for a free table, he is allowed twenty-five guilders advance. He is generally aſſiſted by an under book-keeper, whoſe ſalary is thirty guilders per month, and two aſſiſtants. Next him, is the book-keeper of the garriſon, whoſe ſalary, equal to a ſub-factor's, is twenty-four guilders, though factors have thirty-ſix: ſo to make amends, he has the power of ſelling by auction, the effects of all perſons who die on the coaſt, for which he is allowed five per cent. He is alſo commonly helped by an aſſiſtant. Sometimes here is likewiſe a ſecretary, whoſe ſalary is fifteen guilders per month, and under him he has three or four aſſiſtants.

The laſt office is that of under fiſcal, commonly called by the reſt, auditor. His ſalary is twenty guilders per month, and to his ſhare falls alſo one tenth of all forfeitures.

In ſpirituality, they have only a miniſter, with a ſalary of 100 guilders, and a clark with one of twenty, per month, beſides which, the firſt has ten guilders per month allowed for a ſervant, and a place at the governor's table.

As there are not upon the whole coaſt, ſixty perſons in all, one third of which are aſſiſtants, theſe if they behave well, cannot miſs of being preferred to a good poſt.

The government is principally veſted in the director-general, as the ſupreme ruler; from whom all governors of the out-forts receive their orders, without which they cannot tranſact any important affairs. But difficult affairs, or thoſe of eſſential importance, are cognizable by, and ought to be laid before the aſſembly of councellors, or council compoſed of, viz. the director-general, the fiſcal, (in all other things beſides criminal caſes) the chief factors, the enſign, or ſtandard bearer, the accomptant-general, who jointly make up the council: to which are added, the factors of the out-forts, or councellors, occaſional or extraordinary.

In

In this council every man has the privilege of voting and debating freely; but as the director-general has an arbitrary power in all affairs on the coaſt, and can diſcharge any officer, and ſend him off the coaſt, without aſſigning the leaſt reaſon for it, therefore all the reſt with circumſpection watch his eye, and behave accordingly.

The little kingdom of Fetu has ſeveral villages or towns on the ſea coaſt, the chief whereof is Oegwa, at Cape Corſe, which lies in the latitude of four degrees forty nine minutes, north, and is famous for the beautiful caſtle the Engliſh have there.

This town lies on a riſing ground, defended by a large rock, on which the waves break ſo violently, it may be heard a great way off. It contains above five hundred houſes, and is divided by narrow, crooked lanes, along the deſcent, appearing like an amphitheatre from the coaſt. It is governed by a Braffo, and one Griffin a caboſhir, and lies wholly under the command of the caſtle guns.

Their houſes are built of mud, kept clean, and many of them furniſhed with chairs or ſtools, good mats to lie upon, earthen pot and pans, and ſeveral changes of tomis.

The town is noted for the plentiful market held every day, of all ſorts of proviſions, brought from the country, as alſo of conſiderable quantities of gold, from Fetu, Abrambo, Aſiento, and even Mandingo.

The town of Oegwa was formerly well peopled, but this, as well as all the others, has ſuffered very much in the Commanian war; beſides that, the multiplicity of Engliſh interlopers hath continually ſtript it of its inhabitants; for, when they call here, they always carry ſome of them to Whidah. They give names to their children moſtly by the days of the week they are born on; Quaſhi Yeday, Kuujo, or Sunday-Monday, Tueſday; and at Manhood, change it to ſomething expreſſive of their diſpoſition; Aquerro Okhu, Yokati, Titwi, that is like a parrot, lion, or wolf, &c. The ſame they do by white men, impoſing a name of their own chuſing.

They are of a warlike diſpoſition, though in time of peace, their chief employment is fiſhing. At this they are very dexterous, eſpecially with a caſt net, nor are they leſs acquainted with the hook and line for ground fiſh. They go a fiſhing every day during the dry ſeaſon, except Tueſday, which is their fetiſh day, or day of reſt. They frequently venture abroad in the rains, though they are ſometimes driven in again at the approach of a tornado, before they have been two hours abroad.

Cabo Corſo, as the Portugueſe call it, and Cape Corſe, or Coaſt, as the Engliſh have corrupted it, is formed by the ſhore jutting out a little, and making an angle, whoſe ſouth and eaſt ſides are waſhed by the ſea. About nine miles to the eaſt of El Mina, on this cape, is ſituated the Engliſh fort called Cape Coaſt Caſtle, being an irregular ſquare, two of whoſe ſides lie along the ſhore.

This is the principal fort and factory of the Engliſh company to which their ſhips continually reſort; and here they receive orders either by themſelves or with ſupercargos, where elſe to proceed.

The walls of Cape Coaſt Caſtle are high and thick, eſpecially on the land ſide, part thereof being of rock ſtone, and part of large bricks, which the Engliſh make at ſome diſtance from the place. The height of the walls is the ſtrength of this fort, ſufficient againſt any negro power; as they lately experienced in an attack the Fantins made upon the caſtle's dependants, who found their ſecurity under the walls.

The parade within, which is twenty feet perpendicular above the ſurface of the rock, forms a kind of quadrangle, being open on the eaſt ſide to the ſea, which makes it airy, cool and pleaſant, affording a fine proſpect of Queen Ann's Point, and the ſhips in Anamaboe road. On this platform are thirteen pieces of heavy cannon. The other three ſides of the ſquare are curiouſly built up, containing many beautiful, ſpacious, neat apartments and offices; particularly on the ſouth-ſide, a large, well built chapel, the back part of which joins to the caſtle wall, having the great body of the rock, called Tabora, on the ſide of it, which not only ſerves to break off the violence of the ſea, but is a good defence againſt an enemy on that ſide.

This caſtle has four flankers. The thirteen pieces of cannon on the platform, which are eight pounders, command the road and paſſage up to it; and the ſmall arms ſcour all the landing places behind the rocks which encompaſs it. On the battlement are ten guns, and twenty-five on the flankers, from a minion to nine pounders. On the rock Tabora, twenty paces from the caſtle, are four or ſix twelve pounders, in a round tower, which ſerves to keep the blacks of the town in awe, though otherwiſe it ſeems uſeleſs, the caſtle being ſo high, that its cannon can both ſufficiently protect or command the town.

This caſtle makes a handſome proſpect from the ſea, and is a very regular, and well-conſtructed fortification, being as ſtrong as it can be well made. At the entrance is a well-ſecured and large gate facing the town, and within which, is a ſquare, where four or five hundred men may very conveniently be drawn up and exerciſed, Its four flankers have a covered communication with each other; and over the tank is a noble battery of fifteen whole culverin and demi cannon, lying low, and pointing upon the road which it commands.

Our author obſerves, that the caſtle mounts altogether forty pieces of heavy cannon; and about 100 white men in garriſon.

This garriſon hath a military land officer to diſcipline and command them under the Agento. He is the lieutenant of the caſtle, but goes by the title of Captain. Every night at eight o'clock the gate is ſhut, where he appoints a good guard, and comes to the agent or merchant for the word.

The natural ſituation is on a round head jutting out into the ſea to the ſouth ſouth-eaſt, and its being encompaſſed on that ſide, and the ſouth-weſt by ſeveral rocks, and the ſea itſelf render it inacceſſible on that ſide, the waves of the ocean continually breaking on thoſe rocks. There being but one long ſandy beach to land forces, where one hundred men could eaſily repulſe a thouſand; and that if the fort could hold out three days, the army would want proviſions, it being eaſy to ſtop all the paſſes, and cut the men off from freſh water.

Yet notwithſtanding theſe advantages, this caſtle is not altogether ſecured againſt an enemy. The three great hills which lie near it to the north-weſt and north-eaſt of the town, are no leſs inconvenient to it, than the Daniſh mount was, before it came into the company's poſſeſſion, for there batteries might be eaſily erected to reduce it by any nation who were maſters of the blacks and their country. For this reaſon the Engliſh make it their buſineſs to keep them in their intereſt by preſens, beſides a monthly ſum paid the king of Fetu for the priviledge of the caſtle.

The lodgings and apartments within the caſtle are very large, and well built of brick, having three fronts.

The agents and factors have genteel convenient lodgings, and there are no better barracks any where. They lodge two in a room, and receive their pay duly once a week in gold duſt.

There is one ſpacious warehouſe, and ſeveral ſmaller ones; a convenient trunk or place for the ſlaves to live in by themſelves; a good forge, with ſmiths to make iron-work; a large kitchen to dreſs the proviſions, the factors keeping a very plentiful table; but they eat only twice a day, at ten in the morning and four in the evening. There are ſeldom fewer than ſixteen at their table, which, as our author was aſſured, ſtood the company ſome years from twelve to fourteen thouſand pounds.

The general's lodging communicates with the chapel, a capacious hall, which ſerves to preach and dine

in;

in; hence they can over-look what the company's ſervants are about. A curious contrived balcony runs along the buildings of the firſt ſtory, with handſome ſtair caſes on the outſide, at certain diſtances on each front, for a communication between the lodgings of the garriſon. Under theſe balconies are ſeveral ſhops. Next the agent's apartment is a large, ſtately hall. There are alſo ſpacious ſtore-houſes, and compting-houſes for the factors and other officers.

In the caſtle is kept a ſchool to teach the little black children of the town to read and write, in order to prepare them to be chriſtians: but the labour is loſt, for their parents will never give their conſent.

Near the great gate is a dungeon for the confinement of murderers, traitors, and ſuch malefactors, till an opportunity preſents of ſending them to England to be tried.

Under the ſquare, or place of arms, is a ſpacious vault, having an iron grate at the ſurface, to let in light and air on the ſlaves, chained and confined here, till a demand comes for them.

Under the battery is a curious tank, or ciſtern, containing 400 tons. It is a long ſquare cut out of a rock, and terraſſed over, with a convenient pair of ſtairs down to it. This tank, which is filled every rain, ſupplies not only the caſtle with water all the year, but frequently the company's ſhips. The method of filling it is thus: there being many channels made from the caſtle to the tank, as ſoon as it begins to rain, the bambay, (an officer ſo called) makes the negro ſlaves ſtop all the paſſages of the channels, and then ſweep the caſtle very clean. After which, he opens the channels into the tank, where the clear water runs in great quantities, the rains here being generally in long, and heavy ſhowers. Upon this tank, which is ſtrongly arched over, there is a moſt delightful walk by the aforeſaid battery.

The only landing place is juſt under the fortreſs, in a ſmall bay to the eaſt, where the ſtrand is clear of rocks, being a ſandy flat, on which the blacks run their canoes without danger. The way thence lies along the caſtle walls to the principal gate, looking weſt-north-weſt, up the country. It has neither ditch nor draw-bridge before it, nor ſo much as a portcullis; being only defended by the two round flankers on the land ſide, and a low, ſmall battery of ſix guns.

The anchoring place is two miles from the ſhore, where Agent Greenhill, in the year 1660, made frequent obſervation, that the variation was twenty degrees fourteen ſeconds, weſt. It generally flows here ſouth-ſouth-eaſt, and north-north-weſt upon the full and change. The water upon ſpring tide, riſes ſix or ſeven feet.

The caſtle expects to be ſaluted by all ſhips that anchor in the road of Cape Corſe, not by firing of guns, but by lowering the top-ſails down to the tops, and fires with ball on all ſuch ſhips, Engliſh or others, as omit to do ſo.

The company's ſhips are ſupplied with water from a large ciſtern in the caſtle, or from a large pond, lying at ſome diſtance towards the ſea, between Cape Corſe and El Mina; the blacks conducting the boats thither, and rolling the caſks backwards and forwards along the paths, amongſt the rocks, at a place called Domine.

When the tank is ſo low, that ſhips cannot be ſupplied with water from thence, they are forced to fill it at a ſtanding pool, called Domine's hole, a good diſtance from the caſtle, and roll it thence over craggy ſtones to the landing-place, where negros attend, for hire, to ſwim the caſks off to the long-boat, which lies about a cable's length off ſhore at an anchor, not daring to come nearer for the great ſwell that is conſtantly upon the whole coaſt. The negro ſwimmers watch a ſmooth, and roll the puncheons of water into the ſea till they float, then each ſwims after his caſk, ſometimes above, ſometimes under water, ſtill puſhing it before him, till they come to the boat. The merchandiſe and ſtores brought by the ſhips for the caſtle, are ſent in this long-boat as near the ſhore as they dare go, and are met by the canoes to unlade them. Theſe being flat bottomed, play upon the ſea until they perceive a ſmooth, and then with violence running themſelves on ſhore, take out the goods, and launch off again.

The director-general is ſupreme, or firſt perſon in the factory, at 2000 pounds per annum; two other merchants, at 300 pounds, and a ſecretary at 200 pounds, are what compoſe the council for the company's affairs, ſend factors to their outer forts, and ſupercargoes on board veſſels, to collect the trade, who are to tranſmit and make up their accounts here. The general ſupports a table for them; a chaplain and ſurgeon, with ſalaries of eighty pounds per annum, who have orderly meals, without any idle bottles.

Though the general has but one vote in buſineſs, yet it is tacitly conſented to, from his better allowance and power as governor, that he ſhall lead the others, who ſign only for their ſalaries: he therefore diſpoſes ſolely preferments to the factors and writers, who, as they pleaſe, or diſpleaſe, may be continued, or removed to advantage. For, as on ſervice for the fort they are allowed a commiſſion in trade additional to their pay; ſo in ſome of the outward ports, ſuch as Acro, or in a ſhip, they make conſiderable increaſe; while at others, Annamabo, or Dixcove, they find a great deal of trouble, wet lodging, ſcarcity of proviſion, and no profit.

The government of Cape Corſe caſtle, is ſometimes veſted in one perſon, with the title of Captain-general of the Engliſh ſettlements on the Gold Coaſt of Guinea. As for the council, it may be reckoned a cypher; the chiefs acting as they pleaſe, by the ſeeming conſent of a council, that does not oppoſe them, as being veſted with a full power by the company to diſpoſe of all employments at their pleaſure.

The town of Oegwa forms a ſort of triangle: two of its angles almoſt incloſe the caſtle, and the third extends a great length to the walls of the gardens, which lie north of it and the town; the way from the caſtle gate to the garden gate, lying through the middle of it.

Our author, who ſurveyed this ſettlement in 1727, ſays, that theſe gardens are pleaſant and large, being near eighty miles in compaſs, but have no limits or incloſure, except on the ſouth-ſide, next the town: the whole ſpace being called garden, as far as any walks are planted. They are very fertile, and produce every thing that grows within the Torid Zone.

The ſhore about Cape Corſe lies almoſt eaſt and weſt expoſed to the ſouth. The country is full of hills, not very high, but cloſe together; the valleys being very narrow, and covered with a ſort of low, but thick ſhrubs. The negros do not till above a tenth part of the ground, and yet in ſix months it is overgrown as before. Some impute theſe ſhrubs to the badneſs of the air, others to the rain-water in their pits, which ſtrains through the earth, and has a ſweetiſh taſte, with a mixture of acid, like vitrol; others aſcribe it to the exceſſive rains: but it has been obſerved, that it is not the wet alone which makes this country unhealthy; for the ſurface here is every where ſand or gravel, which is reckoned the moſt wholeſome ſoil, having under it a ſort of whitiſh marl, like fullers-earth.

Here is abundance of excellent large fiſh of ſeveral ſorts, ſmall poultry, and large Muſcovy ducks, at low rates. The mutton and kid, though plenty enough, is very lean and inſipid: but beef is ſeldom to be met with. The caſtle is well ſtocked with tame pigeons.

As to the air, not knowing that it is more faulty here than in other places on the coaſt; it is thought that the unhealthineſs may proceed from the ground being covered, as before mentioned, with ſhrubs; whence, in the valleys eſpecially, ariſes towards night and morning a certain fog, or miſt, which

may diſtemper the air; but it is ſaid the mortality here is chiefly owing to intemperance and bad diet. The air indeed is exceſſive hot, and ſo piercing, that it penetrates a man's body, much more than in France or England. It alſo corrodes iron much faſter.

In the neighbourhood of the caſtle are two forts, each juſt three quarters of a mile from it; one called Phipps's Tower, the other Fort Royal. The firſt is a little round tower, built by the governor, or General Phipps, from whom it takes the name, on the top of a ſteep hill, by the ſide of the gardens. It ſtands north-weſt from the town, and mounts ſeven guns.

Cape Corſe has always been a noted place for traffic, ever ſince the Europeans frequented Guinea. The French drove a conſiderable trade here, till they were interrupted by the Portugueſe of El Mina, who, in 1590, or 91, ſeized a French ſhip, killing moſt of the men, and making the reſt ſlaves. They did the like in 1592, by a boat belonging to an Amſterdam ſhip. However, in 1600, the natives of Mowri being at war with them, the Dutch trade of Cape Corſe, began to revive. Abundance of gold is brought from Fetu, Abrambow, and Mandingo, as well as other places, above 800 miles inland, by the native merchants, who take off, in exchange, a great quantity of goods, eſpecially linen, and braſs baſons of the ſmall ſort. The factory have every now and then, a large demand for ſalt, made and brought hither from Acra, before-mentioned.

Three quarters of a mile from Cape Corſe, is the negro town of Manfrow, and Fort Royal, called alſo Queen Anne's Fort, belonging to the Engliſh. It is built on a hill, named Dunſtein, or, The Daniſh Mount, becauſe formerly poſſeſſed by the Danes, who had a Caſtle there, named Fredrickſburgh, which was built by them (with the aſſiſtance of the negros) after they were driven out by the Dutch from Cape Corſe.

By the treaty made between the Engliſh and Danes, when they retook Cape Corſe from the Dutch, it was concluded that the latter ſhould have a fortified factory here.

Fredrickſburgh was ſeated on the hill which terminates in a point. The whole circuit was above 300 paces. It commanded the country round it, even Cape Corſe itſelf, which is not above a muſquet ſhot diſtant. The form of the plot on which it ſtood is round, but the fort itſelf was triangular, having three baſtions, one of which commanded the road to the ſouth, and the ſecond over-looked Cape Corſe to the weſt, and the third fronted the Dutch fort of Naſſau, at Mowri, on the eaſt. The fort of this hill, (which is not above 100 paces high, and has a winding aſcent) is ſurrounded by houſes of the negros.

The Danes had here in garriſon above 20 whites fit for ſervice, beſides Grometto blacks. It was generally obſerved, that of all the European nations on the coaſt, the Danes loſt more men in proportion, although ſettled in the beſt air. This is aſcribed to their ill diet, which, ſays the author, is worſe than that of the Engliſh at Cape Corſe; for they are often in want of money to buy neceſſaries, and great lovers of ſtrong liquors.

The beſt road for ſhips at Manfrow, is due ſouth of the fort, in thirteen or fourteen fathoms good anchorage ground, which the Engliſh at Cape Corſe pretend lies in their limits. The eaſieſt landing place is on the eaſt ſide of the hill; they put the boats to anchor without the rocks, waiting for the negros canoes from ſhore, to carry them over the breakers, which are ſometimes dangerous.

The Daniſh general has a fine ſpacious garden for his diverſion, on the north-eaſt ſide of the fort, above half a mile from it, ſtored with great variety of trees and plants, eſpecially orange and lemon-trees. In the midſt of it is a ſtately ſummer-houſe. The country behind the Daniſh mount is hilly, cloſe, and not much cultivated, but covered with ſhrubs and woods, through the indolence of the natives.

The vicinity of the Daniſh Mount at Manfrow is a great diſadvantage to the fortreſs, which lying under, and ſo near it, might with a large cannon be battered to pieces. The author has from this fort ſeveral times ſeen the men walking in the Engliſh place of arms at Cape Corſe. The Engliſh, who were ſenſible of this defect, endeavoured by all means to live amicably with the Danes, and at length purchaſed Fredrickſburgh from them. This fort was delivered by Mr. Harris Luck, their general, in the year 1685, to Henry Nurſe, Eſq; agent for the Royal African Company of England, and by them named Fort Royal.

Although this fort was then a very mean fortification, yet the Engliſh were very much pleaſed with the poſſeſſion.

Our author obſerves, that the Engliſh agents rebuilt and fortified this fort in 1698, and that had they perfected it according to the plan, it would have been one of the ſtrongeſt places in Guinea, being inacceſſible every way, (through the ſteepneſs of the hill) but by a narrow path, which one gun may defend; and even, though then ruinous, was, by its ſituation, capable of levelling Cape Corſe caſtle to the ground. It has mounted and diſmounted twenty-one guns, with which they take up or anſwer all the ſalutes in the road; which is very convenient for the ſick people at Cape Corſe, who are not much diſturbed with the noiſe.

The town of Manfrow, (or Manfro) is almoſt round, and lies below the Daniſh mount on the ſhore, ſeveral great rocks rendering any acceſs difficult. It is not very conſiderable, the negros being moſtly fiſhermen, labourers, or ſalt boilers, with ſome few brokers for the inland blacks.

Beſides the daily market town of Oegwa, or Cape Corſe, there is a conſiderable one at Abrambow, a large town, twenty-ſeven miles north, where, by the king of Fetu's appointment at a certain time of the year, there is a rendezvous from every part of the country for public dancing, and is termed the Dancing Seaſon, which laſts eight days. A great number of people repair hither, and ſpend the day, and moſt of the night in this toilſome diverſion. At the ſame time are decided all ſuits and controverſies which could not be determined by the inferior juſtices in their reſpective diſtricts. This ſupreme court is compoſed of the king Fetu, his doy, or prime miniſter, the jeroffo, and the braffo, with two Engliſh factors of Cape Corſe caſtle, choſen by the general, who are to have each as many new ſuits as the court ſits days. This article, it is reckoned, coſts the company 300l. a year.

The village of Aquaffow is very large, and lies weſt from Cape Corſe. It is a market where the blacks bring ſlaves to be killed and buried at the funerals of their kings.

The little kingdom of Sobu, (or Sabou) extends about two leagues in breadth along the coaſt, reckoning from the foot of the Daniſh mount, to about two miles below Mowri, where it joins to the country of Fantin to the eaſt, and about four leagues inland to the north. It is bounded by Atti to the north, and Fetu to the weſt.

Sobu produces great plenty of Indian corn, potatoes, yams, bananas, oranges, lemons, and other fruits, beſides palm oil; great quantities of which, eſpecially the latter, they export to Acra and Axim. The natives are reckoned the moſt induſtrious people on the coaſt, either in agriculture, fiſhing, or trading with the Europeans and the Accanez blacks, who bring down much gold here in exchange for goods, fiſh, and ſalt.

The father of the preſent king of Sobu, had long wars with the Atti and the Accanez blacks, his neighbours to the north, occaſioned by his intollerable exactions; but the preſent king being of a peaceable and leſs covetous temper, has appeaſed theſe troubles. The Atti blacks are more numerous than thoſe of Sobu; yet their being good at fire-arms, have often routed

routed them, and brought down ſeveral heads of both nations to the Dutch factory at Mowri.

The town of Sobu, the king's reſidence, lies about two leagues inland, and is a large populace place.

The firſt place on the ſea coaſt to Queen Anne's Point, a fort lately built of ſtone and lime, ſeated on a little hill within leſs than half a mile of Fort Royal, or the Daniſh Mount to the weſt; and two miles from the Dutch fort of Naſſau to the eaſt. It mounts ſix guns, and has a garriſon of five whites and ſix Gromattos.

The next place is the village of Icon or Congo, lying half a league within the Daniſh mount. Here are ſtill to be ſeen on two ſmall eminences, the ruins of a fine ſtore-houſe the Dutch had there.

Mowri lies eaſtward two miles from Congo, a ſmall league from Fort Royal, and two leagues and an half beyond El Mina. According to Artus, this town lies high, but is irregular and dirty, and has an inconvenient market-place, though it abounds with palm-wine and fruits. It belongs to the king of Sobu, who has a collector here. Great numbers of the inland merchants from Cano, and other remote places, bring hither much rough gold, as it comes out of the earth, and a great quantity of merchandiſe. The place was inconſiderable before the Dutch trafficked here, but has greatly improved ſince, and it is now the beſt place of trade on the coaſt.

The beſt landing-place at Mowri, is in a bay juſt under the cannon of the fort, on the eaſt north-eaſt, which muſt be by the help of canoes, as is practiſed in other parts of the coaſt.

The fort of Naſſau before-mentioned, is ſituated on a rock, whoſe foot is waſhed by the ſea. It was built by the Dutch, and was their chief ſettlement when the Portugueſe held El Mina; next to which, it is now the chief fort poſſeſſed by the Dutch. It is almoſt ſquare, the front being a little longer than the other ſides. It is provided with four batteries and eighteen pieces of cannon. The walls are higher than any fort, except El Mina, upon the whole coaſt. The Curtain, which takes in two ſea batteries, is ſo ſpacious and convenient, that ſuch a battery might be eaſily made, as the Engliſh have at Cape Corſe for commanding the ſea; but its greateſt ornaments and conveniences, are the four ſquare towers placed at the angles. It was formerly garriſoned by ſeventy or eighty men, whoſe number at preſent, though very much diminiſhed, is ſufficient to defend it againſt the negros.

This fort was built, in 1664, by order, and at the charge of the States General, and called Fort Naſſau, in honour of the family of Orange. It was built ſo as to command the town of Mowri, which lies round it like a circle, except on the eaſt ſide, where it is defended by the ſea. The States afterwards gave it to the Weſt India company. Its firſt ſtructure was ſlight, the batteries being only of turf, often ruined by the rains, which expoſed the garriſon to the inſults of the Portugueſe at El Mina.

The country of Fantin borders on Sobu to the weſt, the iron mount, two miles below Mowri, being its extremity. This hill is about a mile long, and has on its higheſt part, a cloſe ſhady walk. From the foot of this hill, Fantin extends northward. This country is bounded by Atti, Aqua, and Tonqua, eaſt by Acron, and on the ſouth by the ſea, along which it extends ten leagues.

The Fantineſe are naturally a treacherous cheating people, and particularly dexterous in counterfeiting gold. They drive a very great trade with all ſorts of interlopers, boldly in the ſight both of the Engliſh and Dutch, neither daring to hinder it, as they can raiſe a great force, and have it in their power to ſhut up the paſſes to the Acaneze and other nations northward, who drive a great trade on the coaſt, as well for European goods, as fiſh, and white ſalt; of this laſt great quantities are ſent to Acanez, for which that nation pays a certain duty in gold to thoſe of Fantin. Moſt of this ſalt is made in a large pond by the heat of the ſun, not a great way diſtant from the town.

The inland people employ themſelves in tillage and trade, and ſupply the markets with fruits, corn, and palm-wine; the country producing ſuch great plenty of maiſe, that great quantities of it are exported both by Europeans and blacks, who come hither from other parts. Here is a ſort of palm-wine called Quaker; it is ſold at double the price of the common ſort, and nevertheleſs is moſt greedily bought up. This land is alſo rich in gold, ſlaves, and all neceſſaries of life, but eſpecially in corn, in which they deal largely with the Engliſh ſhips. This great oppulency has made them ſo haughty, that, in the way of traffic, an European muſt conſider himſelf as their inferior.

Here is no king, a braffo, or leader, having the chief command. He is a ſort of governor, but his power is pretty much reſtrained by the old men, who are a ſort of national counſellors, acting perfectly according to their own inclinations, without conſulting the braffo. Beſides theſe, every diſtrict of Fantin has its own chief, who will ſometimes own the pre-eminence of the braffo, who has only the empty title of the Supreme Magiſtrate.

This country is very populous, and full of villages; the principal along the ſhore are, Anican, Annamabo, Aga, Cormantin, Amerſa, Little Cormantin, Aqua, Laguya, and Montfort, beſides ſome others of leſs note, from Montfort to Cape Ruyge-Haeck, all which villages contain about 4000 fiſhermen. The capital town is Fantin, which lies about five leagues inland.

The village of Anican lies on a little hill, two leagues eaſt from Mowri. The place itſelf is inconſiderable, and not worth anchoring at. The road lies half way between it and Annamabo caſtle, ſo that the laſt may be eaſily ſeen from it, though ſeated in low ground. The Dutch had a factory here formerly, but finding trade did not anſwer the charge, and that the Engliſh and Portugueſe had got footing there, they quitted it.

The Portugueſe, ſince the year 1679, caſt up a redoubt of turf for their ſecurity, the commander whereof, Lorenzo Perez Branes, had ten or twelve of his countrymen to defend it. His trade conſiſted of tobacco and pipes, Braſil, ſweetmeats, ſoap, rum, and ſuch like American commodities.

Two miles beyond Anican, and two leagues and an half from Mowri, and four from Cape Corſe, is Annamabo. It is a pretty large town, and the inhabitants are reckoned very bold and ſtout fellows, very treacherous, and great cheats. The gold here is moſt mixed with braſs of any in all Guinea; it lies about four leagues to the eaſt of Cape Corſe.

The Dutch repreſent it as the ſtrongeſt town on the whole coaſt, affording as many armed men as the kingdom in general of Sobu or Commani, and yet but a fifth part of Fantin.

The village of Annamabo, which is pretty large and populous, is divided into two parts; the one inhabited by El Mina fiſhermen, the other by thoſe of Fantin, who pay a duty to the Braffo of Annamabo for the liberty of fiſhing there. The natives are generally deſperate villains, and muſt be narrowly watched, and their gold well examined. The village lies under the cannon of the Engliſh caſtle.

At Annamabo the Engliſh have a ſmall, but very neat, compact fort, the road before which is always full of Engliſh ſhips. This place might afford a conſiderable gold and ſlave trade, if the Engliſh interlopers did not carry it very near all off, and the Zealanders take what the others leave.

The Engliſh here are ſo plagued with the Fantinian blacks, that they are ſometimes not ſuffered to ſtir out of the fort, and if the negros diſlike the governor, they uſually ſend him in a canoe, by way of contempt, to Cape Corſe; nor are they able to oppoſe it, but rather forced to make their peace by a preſent.

In 1701, it was reported, that the Dutch, contrary

trary to articles, aſſiſted the former with powder. September the 4th, being Sunday, the negros, in a tumultuous manner, approached the caſtle, ſhot at it, broke open the outer ſpur-gate, and ſet fire to the out-walls and corn-room; but the guns being ſmartly diſcharged, they ſoon quitted their ground; and in requital, that night, the Engliſh burnt the major part of their town. After twenty-two days outrage, the negros requeſted a truce, promiſing to compoſe matters to the deſire of the Engliſh. The king of Sobu came there as mediator. They objected to nothing that was propoſed, obliging themſelves to pay the damage done to the fort, and took their oaths to perform the agreement, giving up their ſons alſo as pledges. But ſoon after, having received aſſiſtance, they recommenced hoſtilities.

The Engliſh caſtle was lately built in the room of an old houſe which ſtood there in 1679: the mud-walls of which are to be ſeen before it. This is a ſmall, neat, compact fort, or rather a large, ſtrong houſe, defended by two turrets on the one ſide, and two flankers on the other next the ſea, all built of ſtone, brick, and lime, and ſeated on a rock; about thirty paces from the ſtrand. It has twelve good guns and two padereros mounted, and is commonly garriſoned by twelve whites, and thirteen blacks, under a chief factor. The lodgings within are convenient, with proper warehouſes.

The landing here is rather difficult, the ſhore being full of rocks, on which the ſea breaks dangerouſly. The ſhips-boats anchor cloſe by, and the people are carried on ſhore in canoes to a narrow ſandy beach, juſt under the full command of the caſtle, incloſed with which are houſes for the Grometto blacks, and others of the company's ſervants. This wall was to be pulled down when the caſtle was quite finiſhed, and one of brick built in the room of it. The country about Annamabo is full of cloſe hills, beginning at a good diſtance from the town. There are five together higher than the reſt, which are a good land mark to know this place, from ſome leagues to the weſt. Here is great variety of trees, affording a pleaſant proſpect: as alſo, the beſt palm-wine on all the Coaſt of Guinea, of the ſort called Quaker. There is likewiſe plenty of maiſe, and an infinite number of paroquets about as big as ſparrows, their bodies of a curious green, and their heads and tails of a moſt beautiful red; ſome of which the author carried to Paris, as preſents to ſome of the princes of the blood. Theſe birds are ſold for a crown a dozen, but ſo hard to keep, that not one in twenty ſurvives the voyage to Europe.

Here is good green cabbage; as alſo, papas, a green fruit, about as big as a little melon, which taſtes like cauliflowers. The greateſt inconvenience is the want of freſh-water, which they are obliged to fetch by their ſlaves from two leagues diſtance. The maiſe, or Indian wheat ſells there by the cheſt, at one akier of gold. The cheſt contains about three buſhels; when there is a great demand or ſcarcity, it riſes to twa or three akiers. In plentiful years, or times of peace, it has been ſold at ten, and even eight tahos of gold, which is not three ſhillings Engliſh. This factory was deſerted in 1730, but is neceſſary to be reſettled.

About half a league, or two miles from Annamabo, is Aga, a village on the ſea-ſhore, where formerly, as well as Annamabo, the Dutch had a fort; till by treachery they were forced out by the Engliſh, who, being jointly garriſoned with the Dutch, treated them barbarouſly. The company have planted their flag upon a negro's houſe here, and keep one factor to buy millet of the Fantinians, for their ſlave ſhips, but he finding greater profit in trading with the interlopers, can ſpare his maſter's ſhips but ſmall ſhare.

The Danes and Dutch had formerly a fort here. On the ruins of the former, the Engliſh have built a factory of turf, kept by two whites, and ſome Grometto blacks, beſides a factor, with the Engliſh flag. The Dutch fort was only a bare redoubt, deſtroyed by the Engliſh in 1665; being blown up the ſame day that the Dutch admiral De Ruyter, attempted to land at Annamabo: but in this he failed, being hindered by the great breaking of the ſea, and the fire of the Engliſh, aſſiſted by the Fantin blacks, from behind the rocks that cover the ſhore, and the cannon of the fort. The Engliſh at Aga, concluding that the Dutch would ſucceed at Annamabo, and then viſit them in their way to Cormantin, undermined the fort there, and left a match of ſuch a length to the powder, as they thought would laſt till the Dutch took poſſeſſion, but it blew up before they arrived.

Three leagues from Mowri is the village of Cormantin, called Little Cormantin, to diſtinguiſh it from another ſtiled the Great.

Cormantin before the year 1600, was a conſiderable mart, but then of little amount. The town lies on an eminence, and is remarkable for a tall tree in the middle of the market-place; having five little hills to the weſt, and the mountain Mango to the eaſt. The Portugueſe and French traded much here; and the Dutch did ſo too, till the natives began to adulterate their gold, which ſoon occaſioned the trade here to decay: ſo that now the inhabitants reſort to Mowri for what goods they want.

The village of Little Cormantin is only conſiderable for the fertility of the country round it, and the Dutch fort Amſterdam, which commands it. This was the chief reſidence of the Engliſh when De Ruyter diſpoſſeſſed them of it in 1665. It was much enlarged and beautified by the Dutch in 1681, and 82, being a ſquare fort, built with hard rock-ſtone and lime, ſtrengthened with three ſmall, and one large battery, mounted with twenty pieces of cannon. In the centre is a large ſquare tower, deſigned to have a cupola on it, where the flag-ſtaff ſtands.

There are good lodgings, and all offices for the commanders and garriſon, which conſiſts of twenty-five whites, beſides Grometta blacks. The breaſt-works are large, and the proſpect from the top of the tower delightful, over-looking all the ſea and country. It has alſo large convenient ciſterns for rain-water.

This fort is ſtrong by nature, as ſtanding on a high, rocky hill, in moſt places ſteep and craggy, and only acceſſible by a path cut into ſteps along the deſcent of the hill.

The Engliſh had a fort with four baſtions here, before it was taken by the Dutch in 1665. The former found means to recover it, but were again diſpoſſeſſed by the latter, who have ſettled a good trade there, as well as at Adja and Jamolia, where they have fortified factories. In the fort at Cormantin, is a large, ſquare building, flat roofed in the middle, which ſerves for a lodging to the governor, and for a magazine; and the platform at top will bear cannon. The country is rich in gold, yet the ſoil is good, and well peopled. The natives are induſtrious, and love trade, the art of which, as well as the œconomy, they have learned from the Dutch.

Great Cormantin, lies a cannon-ſhot below Fort Amſterdam, upon a high hill; is ſo large and populous, as juſtly to be called Great. All the inhabitants, beſides the traders, are fiſhermen, amounting to 800, or 1000 men. From this place, the country of Fantin reaches twenty-two or twenty-three miles along the ſhore, being all the way repleniſhed with ſmall villages, being very pleaſant paſſing by it in a canoe.

The lands about theſe Cormantines produces plenty of fruit and corn. The air is very wholeſome. The natives brew excellent beer, made of maiſe, or Indian corn, luſcious as ale, called petaw. They bake bananas in bread and biſcuit, and alſo maiſe for their common food.

Once Annamabo and Cormantin were two of the principal places of trade on the coaſt, for the Dutch and Engliſh, on account of the great reſort of the Accanez blacks, who came down in little caravans; but the difference that aroſe between theſe two nations

in 1664, and 1665, along the coaſt of north and ſouth Guinea, did them both great damage, obliging the firſt to retire to Mowri, and the Engliſh to Cormantin. Theſe latter were ſo ſevere to the natives, that they and the Accanez blacks invited the Dutch at El Mina, whoſe government they had been long uſed to, and liked to ſettle a factory at Agga, which was taken by the Engliſh in 1664, and blown up in 1665. The Engliſh on their part, to thwart the Dutch, endeavoured to corrupt the braffos of Fantin and Accanez, who took their money without performing the conditions agreed on; and finding the jealouſy between the nations, in point of trade, occaſioned their having goods cheaper, they encouraged the Engliſh to build a ſmall fort at Annamabo, to rival the Dutch at Mowri and Agga.

Mowri, Annamabo, Aniſhan, and Cormantin, are places where great quantities of European goods are vended, viz. linens, ſileſias, copper, iron-bars, old ſheets, brandy and rum, pewter-baſons, muſquets, bugles, beads of all ſorts, powder, &c. When Cormantin was taken from the Engliſh, as above mentioned, the Fantineſe, expreſſed great ſatisfaction to ſee the Dutch ſettled there again. Their reaſons were, that the Engliſh governor had incommoded them with his garriſon; and that they thought the Dutch ſold their goods cheaper. However, they gained a point upon the Dutch, who formerly agreed to give them a good ſum of gold, beſides 300 guilders, for every ſhip of the company's which ſhould trade there, (ſlave ſhips excepted) in conſideration of their aſſiſtance in recovering Fort Amſterdam, and other ſervices; but now they oblige them to pay for all ſhips alike. They alſo extort a good ſum yearly from the Engliſh.

After the reduction of Fort Naſſau at Mowri, and their diſappointment at Cape Corſe and Annamabo, the Dutch General, Falkenburgh, at a council of war held on board the admiral, moſt earneſtly preſſed an attempt on Cormantin. The enterpriſe being reſolved on, Valkenburgh ſent Du Ruyter a reinforcement of 400 canoes full of armed blacks from El Mina, with whom the Dutch fleet came to anchor in Cormantin road. The bay, though ſpacious, being dangerous to land at, and the coming out as bad, De Ruyter, on the 7th of February, 1665, ſent a detachment of 900 men, ſupported by the Mina blacks, to land at Annamabo, which the Engliſh had taken, as well as Agga, or Adja. Theſe forces approaching the ſhore, were ſo warmly received by the Cormantin blacks, poſted behind the rocks and buſhes, that the Dutch, unable to bear their fire, together with that of the caſtle, and ſuſpecting their deſign betrayed by the braffo of Annamabo, ſtood off to ſea, and rejoined their ſquardron.

De Ruyter, however, was not diſheartened with this repulſe: for the blacks of Annamabo, and Agga, who had been ſuſpected of favouring the Engliſh, ſent to aſſure him of their fidelity; promiſing next day to join his forces, and aſſiſt him in taking Cormantin Fort. They came and brought with them 3000 Fantin blacks, their allies, whom they had hired for that ſervice.

Theſe forces landing in a calm day, without any loſs at Agga, where they were joined by the auxiliary negros of Agga and Fantin. From hence they marched in good order, each black having a white handkerchief about his neck, to diſtinguiſh him from thoſe of Cormantin. About noon they arrived at the Engliſh fort, which Valkenburgh ſummoned to ſurrender immediately; and at the ſame time cauſed a body of his forces, conducted by ſome blacks of the town, whom he had gained, to advance to a riſing ground, juſt out of reach of the cannon.

The beſieged made a terrible fire, and frequent ſallies, which, for a while, ſtopped the progreſs of the van-guard; ſo many of the Dutch blacks being killed, that the paſſes were blocked up with their bodies. Moſt of this execution was done by 300 Engliſh blacks, commanded by one John Cabez. The main body at laſt coming up, moſt of theſe blacks were cut off, or retired precipitately to the fort. Valkenburgh then ordered the town to be ſet on fire; the ſmoke of which, for a while, took away the ſight of the fort from the Dutch, and threw the Engliſh into ſuch conſternation, that ſeeing the enemy approach with granadoes in their hands, and a mortar, to give the aſſault, they ſtruck their flag, and opened the gate; and the Dutch, according to their account, took poſſeſſion of the fort at ſo ſmall an expence as 62 marks of gold, which they paid the auxiliary blacks of Fantin, and the braffo and caboſhirs of Annamabo and Agga.

Amerſa, Aqua, Laguyo, Tantumquerri, Montfort, and ſome other ſmall villages to the eaſt on the Fantin ſhore, as far as Acron, have but an inconſiderable trade. Aqua lies on a little river two leagues eaſt of Cormantin. The land about it is low and flat, producing plenty of Indian corn; and there is wood and water for ſhips that want.

Laguyo is two leagues farther eaſt from Aqua, on a riſing ground, deſcending towards the ſhore. It has not much trade for ſlaves, and the gold is none of the beſt.

Tantumquerri lies ſeven leagues eaſt of Cormantin, of courſe three from Laguyo. This is a pretty, little, regular fort, having four ſmall flankers, mounted with 12 guns. It is pleaſantly ſituated near the ſea-ſide, but the landing-place is indifferent.

The ſmaller villages to the eaſt of this laſt are better frequented by Europeans; the inhabitants being poor fiſhermen, who carry their fiſh on board ſhips, as do thoſe of Laguyo and Montfort; yet theſe people talk of their great plenty of ſlaves and gold on ſhore, on purpoſe to keep ſhips longer in the road, that they may ſell their fiſh for pedlars ware and toys. The Engliſh ſhips chiefly ply on this coaſt as far as Acra.

Though the Engliſh and Dutch poſſeſſed Forts in Fantin, yet neither of them have any power there; ſo that when the natives are inclined to it, they ſhut up all the paſſes ſo cloſe, that not one merchant can come from inland to trade with them, and ſometimes hinder proviſions being brought, till a peace is concluded with them. The language of the blacks are almoſt one and the ſame from Axim to Fantin, all along the Gold Coaſt.

The country of Acron lies between that of Fantin and Augwina, or Agonna, on the ſea-ſhore, running eaſt to the famous cape, called Monte del Diablo. It is divided into Great and Little Acron, the former lying inland; as to its government, it is a republic. Little Acron is a kingdom. They are independant of each other, but live in perfect amity under the protection of the Fantin negros, enjoying peace, and cultivate their fruitful land ſo as to have a ſufficient crop for exportation.

The king of Little Acron, in our author's time, was a civil, good-natured man, about fifty, reputed one of the richeſt on the Gold Coaſt, though he dreſſed no better than his ſubjects. It is rather an anarchy than a monarchy, for the king can do nothing without the conſent of the chief men. The country abounds in deer, hares, pheaſants, partridges, &c.

Little Acron has a village on the coaſt towards the middle of it, called Apam. This village is very little, and was always inhabited by fiſhermen; but, as well as Acron, is well ſituated for trade; and if the natives were more tractable, might become a populous town. It ſtands a little way up a ſalt river, which runs juſt below the fort, riſing about four miles within land. It abounds both in fiſh and fowl, and is very pleaſant.

Apam lies under a ſmall fort, begun to be built by the Dutch, in 1697. It is called Leydſaamheyde, or Patience, from the great oppoſition given them, when building it, by the negros. It is fortified by two batteries, mounting eight pieces of cannon.

The country of Augwina, begins at or about Monte del Diablo, by the Dutch called Ruyge Hoeck, (diſtant

tant about a league from the ſalt river of Acron) and extends thence eaſt along the ſhore to Anonſe in Aquambo, or Acra. On the north it borders on Sonquay, and ſouth on the ocean, along which it ſtretches fifteen leagues.

The coaſt from Cormantin to Monte del Diablo, extends ſouth-eaſt by eaſt, about twelve leagues, thence to Barcu, nine leagues, and from Barcu to Acra river, nine more.

The country eaſt of Coecks Broot-Hill, is low and flat to the ſea, but hilly in land. Some leagues farther to the eaſt, it is woody, and the land dry. This country has the advantage of a very fine, large, freſh water river, abounding in oyſters and fiſh, and the banks of it furniſhed with monkeys and baboons, as large as any in Guinea.

The country of Augwina is as fertile and pleaſant as that of Acron in all reſpects. The people, who are fiſhermen, are bold, warlike, and verſed in working gold and ſilver. In our author's time, (1682) it was governed by a woman of great courage and wiſdom, who took the title of Queen. She was about thirty-eight years of age, and, to preſerve her power, lived unmarried.

Our author adds, that this is the ſole kingdom in Guinea, where the ſupreme power is hereditary to either ſex; and the next heir to the crown is her eldeſt daughter, her ſons being ſold for ſlaves, or ſo diſpoſed of as not to interrupt this female ſucceſſion. This daughter is early initiated in the ſame political practice, having a gallant purchaſed for her ſeparate amuſement. The inhabitants live peaceably under this government, ſeldom going to war. The Engliſh had a ſmall fort here for ſome time.

Augwina has ſeveral towns and villages along its coaſt, as Dajow, Polder's Bay, Mango, Winniba, Wiamba, or Simpa, Old Barcu, or Barracu, Jaccou, Innya, Lampa, Succamma, New Little Barcu, and Coecks Broot, a high round hill, in form of a ſugar-loaf, two leagues weſt from Acra. All this coaſt is dangerous with the breaking of the ſea.

The French ſay Mount del Diablo, abounds with gold, which after great rains, the blacks gather in great quantities, as it is waſhed down with the ſands. The Duch gave it the name of Ruyge Hoeck, becauſe being high land, they often ſaw it at a diſtance before they could reach it in ſailing from eaſt to weſt, the wind blowing conſtantly here for the greater part of the year at ſouth-weſt a freſh gale, and the tide ſetting at eaſt, ſo that it takes a long time to turn it up.

We are told of one Mr. Baggs, who, in 1700, died at Cape Corſe, where he was agent for the Engliſh, and was intruſted with a more ample commiſſion than any of his predeceſſors, for having informed the African company of this hill, and promiſed to dig gold or gold-oar out of it for them. To this purpoſe he brought all ſorts of neceſſary inſtruments along with him, but for ſome reaſon or other did not proceed in his deſign. An Engliſh voyager was informed, by a negro gold-taker, that he had ſeen this mountain ſmoke like a volcano; from whence, and being the haunt of rapacious wild beaſts, they have borrowed the name, and call it Devil's Hill.

Winniba, formerly called Wiamb, lies five leagues beyond Apam. It is a ſmall town, conſiſting of not more than twenty houſes. Round it are pleaſant fields, incloſed with good hedges, and full of Indian corn and good graſs. This country lying low, about a mile from the town, towards the inland, are many large lakes or ponds of water, on whoſe banks are many Guinea hens, with great variety of other fowls, and abundance of wild deer, which range the plains about theſe lakes.

Winniba fort ſtands on the aſcent of a hill, in the jutting out of the coaſt, agreeably ſeated among trees.

The Engliſh factory being a double ſtone houſe, was ranſacked by the blacks in 1769, and the factor had much ado to ſave his own and his people's lives, eſcaping by night to Cape Corſe, where he landed much wounded and covered with blood. This place is eaſily known from ſea, by the two Engliſh houſes yet ſtanding, without any roof on the ſhore, about 200 paces from Winniba.

This Winniba is a large, ſquare fort, with four flankers, all built of ſtone and lime. It mounts eighteen guns, and has commonly twelve whites, and twenty-eight Gromettas, with a ſuitable tank or ciſtern for water, and a ſlave houſe for 100 negros. It ſtands 120 paces from the ſea, within three miles of Shido to the weſt, and thirty-ſix miles from Acra to the eaſt.

Winniba Fort, is on the ſame plan and dimenſions as that at Tantumquerri; nor is the landing place any better. It ſtands on a riſing ground about fourteen yards from the ſea, having a handſome avenue of trees up to the outer gate. It has alſo a large ſpur, which contributes much to its ſtrength and uſe, being a ſafe place to ſecure their caſtle at night from the wild beaſts. There are alſo good gardens.

Barracu, or Barcu, lies on the coaſt ſix leagues eaſt of Winniba. It is ſituated on the top of a hill, where the French uſed to trade. Here the language, which is the ſame as on the gold coaſt hitherto, begins to change. The natives are ingenious, not only melting gold, but in working it into chains and jewels. They alſo brew a drink not unlike our ſmall-beer, which they call Pitow. Poultry are more plentiful and cheap here than on all the coaſt. They have alſo parroquets in abundance. They buy much iron from the Dutch, which they know how to work well, and make all kinds of arms or weapons for themſelves. The trade is now removed to Acra, where they go in their canoes to buy what goods they want. The land between is low and flat, remarkable for a broken tree in form of a gibbet, which the negros regard as a fetiſh.

Barcu is the chief town on the Augwina coaſt, and it is a proper place for a factory or fort for trade, the land being pleaſant and plentiful. This country was formerly in the Engliſh intereſt, by contract with the queen thereof; but the Dutch encroached ſo as to make a ſettlement at Barracu, where they have erected a ſmall triangular fort of twelve guns. Their chief at this place, in 1706, took ſeveral Engliſh goods from the traders, telling them he would always do ſo, if they bought from the Engliſh; but Sir Dalby Thomas the governor, recovered them.

While the Portugueſe prevailed on this coaſt, the French traded here, which is the reaſon why the blacks remember ſo many French words, eſpecially of the Norman dialect. Here are as many parroquets as at Annamabo.

Little Barcu lies about a league and a half eaſt of Barracu, on a ſmall river.

All theſe places of Acron and Augwina, are well ſeated for trade, if they are not at war with their neighbours, for when they are, little gold, and few ſlaves is to be had. The Acra blacks come down this coaſt to traffic, when they hear of ſhips that have good cargoes, ſuch as old ſheets, Coeſvall linen, bugles, iron and brandy. A good ſlave ſells here, as they do all along the coaſt, for a benda, that is, two ounces of gold.

The kingdom of Acra, or Acara, is tributary to the king of Aquambo. It is bounded on the weſt of Augwina, from which it is ſeparated by a ſmall river. To the north it has Aboura and Bonu, to the eaſt Labadde and Ningo; and to the ſouth the ocean, being 16 leagues in compaſs, and almoſt round, ſcarcely two leagues and an half lying on the ſea.

This was formerly eſteemed the laſt kingdom on the coaſt, becauſe they found no gold beyond the river Volta, which bounds it to the eaſt. It lies fifteen leages to the eaſt of Cormantin.

Acra was formerly a kingdom, but its inhabitants were conquered by their inveterate enemies the Aquambos, and driven to a place called Little Popo, which at preſent contains the great kingdom of Acra.

This happened in the year 1680 and 1681, when the country was ruined, and reduced to a tributary province.

The ſoil is a pale red, fat mould, producing little or no fruit, and very few trees; but it yields yams, and ſeveral ſorts of beans and peaſe. The country beyond the flat is hilly. Near the European forts are numbers of remarkable ant hills, which may not improperly be called turrets, and look at a diſtance, like the ſalt heaps in the Iſle of Rhe in France, at the beginning of the Kerring ſeaſon.

The land from the ſhore, to about three leagues inland, is pretty level and even, and is a good ſporting country for hares, rabbits, ſquirrels, wild boars, red and fallow deer, wild goats, pintado hens, and other fowl. What large and ſmall cattle they have, are brought from Labadde to the eaſt. Here are ſuch plenty of hares among the ſhrubs, which grow thick, that the blacks kill them with ſticks, and the Europeans take them with ſpaniels. In this country there are more lions, tygers, muſk-cats, leopards, and other ravenous creatures, than in any other parts of Guinea.

Here are thoſe deer, which are not above eight or nine inches high, and whoſe legs are not bigger than a ſmall pick-tooth quill. The males have two horns turning back on their head, two or three inches long, without branches or antlers; theſe are crooked, black, and ſhining like jet. Nothing can be more tame, pretty, or fond, than theſe creatures; but they are ſo tender, that they will not bear the ſea, and whatever care could be taken, none have been yet brought alive to Europe.

Acra contains many large towns within land, of which Great Acra is the chief. Little Acra is the middlemoſt of three maritime villages in this kingdom; the other two are Soco to the weſt, and Orſoco to the eaſt, each under the cannon of an European fort. At Soco is the Engliſh fort James; at Little Acra, Crevecœur, belonging to the Dutch; and at Orſoco, the Daniſh fort, Chriſtianſburgh, all three reckoned inferior to few of thoſe on the coaſt.

Theſe three fortreſſes are ſituated in the compaſs of leſs than a league and an half of ground, each on a rocky head land, advancing a little on the ſtrand. It is dangerous landing here, except at Acra, where it is eaſier at the firſt and laſt quarters of the moon, with the help of Bar canoes.

Soco conſiſts of about one hundred ſcattering houſes, it having been much enlarged in 1692, by the acceſſion of many families, who retired hither from Little Acra, when it was deſtroyed by the blacks of Aquambo: ſo that the year following, it became one of the fineſt and largeſt on the Gold Coaſt, ſeated on a level ground, regularly built. It has a great trade with the Engliſh, to the prejudice of the Dutch. Here ſtands James Fort, already mentioned, belonging to the Engliſh.

Little Acra, about half a mile diſtant from Soco, was a handſome and commodious market-town, well-governed and much reſorted to, before the Aquambos burnt it a few years ſince, leaving ſcarely ſixty houſes ſtanding, Fourri, King of Acra, choſe rather to live here than at Great Acra, which is up the inland.

At this place the Dutch have a ſtrong fort, called Crevecœur, ſituated about half a cannon-ſhot from James-Fort, on a rocky head-land; and though boats and pinnaces can come cloſe to the ſtrand in ſafety, yet the landing is well defended by the guns of the fort, and ſmall arms of the garriſon. It is ſquare, built with four batteries, which, as well as the curtains, are rock-ſtone and lime, neither very thick, nor very high: So that it could not ſtand much battering, and the Engliſh from James-Fort, though much ſmaller, might ſoon reduce it to a heap of rubbiſh with their cannon. Within it is a large, flat, ſquare houſe, with a platform, and on it a turret with a cupulo, on which the Dutch flag is diſplayed, as at all the forts on the coaſt, as ſoon as any ſhips appear at ſea. The lodgings are neat and convenient both for the officers and garriſon, which conſiſts of fifteen whites and 25 blacks. It has a handſome gate towards the north, overlooking the village of Little Acra, and the road to Great Acra. This gate is ſecured by a corps-de-garde and two barriers, but has no ditch or paliſado before, like the reſt of the forts on the coaſt, none excepted. The blacks being wholly ignorant in attacking caſtles, make theſe outward defences regarded as unneceſſary. It has 14 guns, and ſome padereros, on the batteries. The ſituation is ſuch, that it enjoys a better air than the other two forts to the eaſt and weſt of it.

Orſoco is not ſo conſiderable as it has been, having been deſtroyed by the Aquambos, and the inhabitants removed to Popo.

The fort of Chriſtianſburgh was built here by the Danes, and ſo called in honour of their king. It is a ſquare building, ſtrengthened with four batteries and twenty guns. It appears very beautiful, looking like one continued battery, as in effect it is; for the roof being entirely flat, the cannon may conveniently be planted on all parts of it.

In 1679, it was governed by John Ollricks of Gluckſtead, a worthy man, whom the blacks murdered at the inſtigation of a Greek, who lived ſome years under him. This villain ſoon after ſold the place to Julian de Campo Baretto, formerly governor of St. Thomas, for about 224 pounds.

The Danes at Frederickſburgh, near Cape Corſe, ſolicited the reſtoration of the place, and ſoon after, 1682, redeemed it for a ſum of money, reſettling their trade here, which they poſſeſſed till the year 1693, when the blacks ſurpriſed it in the following manner:

The Danes had committed ſome inſults on the king of Acra, who ſtudied revenge, and took the opportunity of the weakneſs of the place, by the death of ſeveral of the garriſon. The king obſerving that the Danes had great confidence in one Aſſemmi, a black, who had great intereſt in that country, and procured them much trade, engaged him in the deſign. Accordingly, Aſſemmi made the Daniſh governor believe he would bring him a conſiderable number of merchants at once to buy arms, adviſing him to raiſe the price. On the day appointed, Aſſemmi brought with him 80 blacks, whom the Danes admitted into the fort, ſuſpecting no treachery. When the blacks had agreed for the arms, and paid the price in gold, they loaded their muſquets with powder and ball, as if to try them, but ſuddenly fell on the garriſon, which conſiſted of about twenty-five or thirty Danes, who preſently yielded the fort. They immediately diſperſed the Danes up the country; after which the king of Acra and the blacks ſtripped the fort, taking a booty of about 7000l. The fort was given to Aſſemmi, who garriſoned it with his blacks, ſettling in it, and trading with all the European ſhips which come there, to great profit.

The conqueror kept poſſeſſion till two Daniſh ſhips arrived on the coaſt; to which, by means of a very conſiderable preſent to the king of Aquambo, but more by the Dutch interceſſion, it was re-delivered; but they were no great gainers by it; for to garriſon the fort, they left their fleet ſo poorly manned, that they became a prey to the pirates in the ſight of Guinea.

About a century ſince the king being gained by conſiderable preſents, which the Danes and Dutch made him, to grant them a liberty; at firſt, they aſked to build each of them a ſtore-houſe to ſettle a factor in, under the obligation of ſeven marks of gold yearly for each houſe. The houſes thus built, the Dutch and Danes never reſted inſinuating to the natives, that whereas they were continually expoſed to the aſſaults of their mortal enemies, the Aquambos, it would be for their ſafety, to admit theſe houſes to be turned into forts, to protect them and their families with their cannon. By this means they prevailed to have theſe places put in the condition they were.

The

The Dutch being the firſt who obtained this privilege of the king of Acra, bought a proper place for a fort, which they built with a ware-houſe of rock-ſtone, 62 feet long, and 24 broad. The floors were planks laid on joiſts, and the roof covered with tile; all the buildings being encompaſſed with bulwarks, and the walls made with port-holes for guns. Some time after the Danes, and at laſt the Engliſh, obtained the ſame liberty.

The forts, on ſome occaſions, have proved a good refuge to the natives, eſpecially in the year 1680. when the king of Aquambo conquered Acra; for had it not been for theſe retreats, few or none had been left alive, or in a condition to carry on the trade they now do, which is conſiderable, notwithſtanding a great number of families removed hence to Lay, Popo and Whidah.

At this place alone ſometimes more gold is received than on the whole coaſt beſides: and its traffic would be yet enlarged, if the negros of Aquambo and Akim would agree, as they generally are at difference. The latter pretending a feudal right over the former, and demanding an annual tribute of them, which thoſe of Aquambo will by no means ſubmit to; and the king, to ſecure his quiet, is ſubtil enough, by fair words and preſents, to ſow diſſentions betwixt the governing men of Akim.

The landing here is very dangerous, on account of the ſwell. The beſt anchorage is oppoſite to the Daniſh fort. The freſh ſouth-weſt gales, which blow here all day from May to September, (except in the rainy ſeaſon) bring in a violent ſea, the tide ſetting eaſt, very rapid with the wind, ſo that ſhips work hard on their cables.

In the wet ſeaſon, the tide ſets as the wind and moon rule it. For two or three days before and after the new and full moon it ſets to the weſt, as it does alſo after it has blown hard at north-eaſt, and eaſt-north-eaſt, and the wind returns to ſouth-ſouth-weſt, or ſouth-weſt; when tide for 24 hours will run upwards againſt the wind, as has been experienced, lying before Cape Corſe, Annamabo, Cormantin, and Acra.

Next in order beyond Accra, is Labadde, but ſo ſmall and inconſiderable, (being only four leagues in circumference) that it ſcarce deſerves notice, except that it touches on the ſea, between Acra and Ningo, and that only for a league along the coaſt. In this ſpace lie the two villages of Orfow and Labadde. The laſt is a large populous place, incloſed with a dry ſtone wall, ſituated amongſt fine meadows and plains. The inhabitants of theſe villages are generally huſbandmen, tilling their ground, and looking to their ſheep and ſwine, which they bring from Lay, and fattening them, ſell them at Acra and other places on the coaſt, to good advantage. They make ſalt of the ſea-water for their own uſe, but the trade is inconſiderable, here being little gold. The country is governed by a petty king.

The kingdom of Ningo (which by the French is called Lampi, and, by the Engliſh Lampa, or Alampo) borders weſt on Labadde and Great Acra, at Egwira, eaſt on Soco, and ſouth on the ſea of Guinea, extending about thirteen leagues along the coaſt, from Labadde to Lay.

The prince of Ningo bears the title of King of Ladingcour, though he and his ſubjects are dependants on the king of Aquambo, who rules them arbitrarily, puniſhing the ſlighteſt faults with inſtant death.

The country hereabout is indifferently populous, and fertile, but very well ſtocked with cattle, as cows, hogs, ſheep, beſides chickens, &c. all which are daily bought up very cheap by the blacks of the Gold Coaſt, to tranſport to the upper coaſt.

The remaining trade of theſe people conſiſts in ſlaves, which are alſo bought up by the above-mentioned negros, but moſt of them tranſported hence by the Engliſh, French, and Portugueſe ſhips. Sometimes the ſlave trade here proves very advantageous, eſpecially about the village Lay; but when the inland counties are at peace, no ſlaves are to be had, ſo that the trade being uncertain, the Dutch only touch here in paſſing, without any dependance on it.

Beſides trade, the inhabitants employ themſelves in agriculture and fiſhing, the firſt of which proves profitable; but the fiſhery, eſpecially that on the ſea, turns at moſt, but to ſmall account: for the ſhore here is very high, and of very difficult acceſs; wherefore it is ſometimes not to be come at with ſmall canoes; but this is abundantly made up by the lakes and rivers, which are very richly ſtored with good fiſh.

The principal villages in this country are Little Ningo, Tema, or Temina, Sincho, or Chinca, Brambo, Pompena, or Ponni, Great Ningo, Lay, or Alampi, and Occa, all barren places, and very difficult to land at. Thoſe moſt noted for trade are Sincho, Great Ningo, and Lay; though in 1680, the Dutch had ſome trade at Tema.

Chinca or Sincho, lies five leagues eaſt from Acra, a place much reſorted to from the beginning of the laſt century, when it was firſt known to the Dutch; though now the inhabitants apply themſelves much to fiſhing, to ſupply the market at Spiſe, a large town inland, for which they pay no duty to the king. The blacks here buy much linen, and ſeveral ſorts of cloth for the country trade, as do all the blacks along the coaſt from hence to Rio Volta. Their language differs from that of Acra. The land yields plenty of proviſions, and abundance of fine large oranges. They ſometimes catch thornbacks here fifteen feet long.

Great Ningo lies five leagues eaſt of Sincho, and like that can ſcarce be ſeen from the road; nor has it any notable land-mark, except the high mount, called Redondo, ſtanding due north of Lay, up the country. This place has ſometimes a briſk trade for ſlaves and gold, which is brought to the blacks of Ningo and Lay from Quaco, a country lying above them to the inland, abounding in that metal. The blacks of this village, and the country about, drive a great trade of cattle, which they fatten in their paſture grounds; and either the Gold Coaſt negros come to buy them, or they carry them thither, or to Acra, where they make thirty crowns of a bullock.

The town of Lay, or Alampi, is two leagues eaſt from Great Ningo, and appears from the road, at Mount Redondo, bearing north-north-weſt, ſix leagues up the country. Here is the beſt anchorage, the ground being ſand, mixed with very ſmall ſtones. This hill is very large, and ſhaped like a ſugar-loaf.

The ſhore about Lay conſiſts of high, ſteep cliffs next the ſea, in ſeveral places rent aſunder, and in ſome adorned with palm and other trees at ſome diſtance from each other. Before theſe cliffs run a fine, white, ſandy ſtrand, of a moderate breadth. The town ſtands on the aſcent of a little hill, looking towards the north, ſo that few of the houſes can be ſeen from the road. The inhabitants are civilized and fair dealers, but ſo ſuſpicious, they will ſcarce venture on board any ſhips, till hoſtages are firſt ſent on ſhore.

Alampi, which is a conſiderable place for ſlaves has been poſſeſſed by the African company for ſome years, having had a factory with five whites, ten Gromettas, and ſmall arms. They made ſome ſteps towards building a fort there, but the Dutch interpoſed with the natives, and it has been diſcontinued for ſome time.

When the Aquambo and Axim blacks are at War, here is commonly a great number of ſlaves to diſpoſe of, the priſoners taken on either ſide being ſold to the Europeans. The Axim blacks carry theirs to Lay, and the Aquambos, theirs to Acra, where they ſell them for cawris, or bujis, ſeyes, perpats, Coeſvelt-cloths, Sileſia-linen, bugles red and yellow, knives, fire-arms, powder, chintz, ſalampores.

One Santi, a famous black, uſed to manage this trade by the king of Lay's appointment, ſettling the price of ſlaves according to their ſex and age, and alſo of European goods: then hoſtages being given, he ſent the ſlaves on board by degrees as they came down from the inland country to the town, and received the goods in proportion to the ſlaves delivered; ſo that a ſhip was often furniſhed with 4 or 500 ſlaves in a fortnight or three weeks.

The French, Engliſh and Portugueſe chiefly frequent this coaſt for ſlaves and proviſions: however, at ſome times, when the inland country is at peace, here are no ſlaves to be had, the trade being quite uncertain.

The country of Ningo, Lampi, or Alampo, is flat and low, populous and fertile, well ſtored with cattle; as cows, ſheep, and ſwine, beſides poultry, which are continually brought up there to ſupply the Gold Coaſt. Their fiſhery is inconſiderable, the ſhore being high and inacceſſible; but the want of ſea-fiſh is made up by the great plenty in the lakes and rivers.

The people of Soco are chiefly huſbandmen, having no employment but that and fiſhing, though their fiſhery turns to little account on their coaſt till one comes to Acra. Very few of them are rich, unleſs it be the Lampi, Acra, or Aquambo-blacks, a number of whom are ſettled amongſt them, as well as at Lay, Ningo, Sincho, and ſo to Pompena, or Ponni, weſtward.

Beſides the four villages before mentioned on the Soco coaſt, there are ſeveral hamlets and cottages intermixed between them on the ſhore, but not of any note. Some authors reckon this country a part of the kingdom of Lampi. The maritime port of Soco is flat and low, riſing gradually inland, and very woody.

Rio da Volta was ſo called by the Portugueſe for its rapid courſe and reflux. Its ſource (according to a very modern author) is in the kingdom of Acam, bordering ſouth on that of Gago, in nine degrees north latitude; running thence through the country of Tafou, in which are ſaid to be mines of gold, and ſo downwards ſouth through Quaco, Aboura, Ingo, and other places. The coaſt about it is flat and low, but up the land it riſes into hills, and very ſteep mountains. The ſhore is bordered all along with a fine, large, ſandy ſtrand, forming ſeveral little bays, having nine fathoms water about a league out to ſea. The land is pretty open for ſome miles on either ſide of the river, from whence may be ſeen a great number of palm-trees placed at equal diſtances. The country farther up, is all woody, or covered with ſhrubs and buſhy trees.

This is a fine wide river, diſcharging its waters ſo violently into the ſea, that it is ſometimes viſible three or four miles from ſhore. How far it extends its courſe inland, the author knew not. The great freſhes, carry down continually great numbers of trees, which ſticking faſt in the mouth of the river, occaſion a very high ſurf of extraordinary violence, as well as lofty agitation of the waves; ſo that this place is paſſable with canoes but twice in the year, and that is uſually betwixt April and November, the weather being then calm on the coaſt, which generally is juſt before the rainy ſeaſon, when the reflux of the river is not ſo ſwift: but after the rains, it is not poſſible to perſuade a negro to venture, tho' they are conſtantly uſed to paſs in boats along ſhore, which here, by reaſon of the above mentioned ſurfs, they cannot do. In effect, the River Volta is remarkable for the rapidity of its ſtream, making a very great ſea upon the bar; and carrying itſelf off for ſome way unmixed: at two leagues diſtance it is only brackiſh. From hence begins the Papou (or Papo) Coaſt, low and woody. Having thus given the reader an account of the principal places in Guinea; we ſhall now proceed to cloſe our voyager's narration.

On the 20th of April 1727, they embarked from Whidah in the following manner: their canoe lay on the beach with her head to the ſea, and thoſe who were paſſengers ſtepping in, ſat down in the fore part, becauſe the after part is for the canoe men to ſtand to their paddles, being commonly 11 or 13 in number. When they were fixed in their places, the negros took hold of the canoe, and having watched an opportunity ran her off on the back of a wave; when leaping in, they handled their paddles ſo dextrouſly, that, before the return of the next wave, they had puſhed her out of danger of the ſhore breakers. This was not all, for about 30 yards off is a bar, where the ſea breaks more violent than on the ſhore: however, they got over this, on the outſide of which, 40 yards diſtant, lies a third bar, the moſt dangerous of all. Between theſe two rows of breakers (which roared like thunder) they lay by on their paddles near a quarter of an hour. At laſt the men ſeeing a great wave break on a ſudden, made a puſh towards it, and darted their canoe quite through the ſucceeding wave, which being pretty ſmall, only wetted them a little, and thus eſcaped the ſharks, which followed them in great numbers and got ſafe on board.

The next morning the 21ſt at day break, they weighed from Whidah, intending for Prince's Iſle to wood and water for their voyage home; and, on the 8th of May, arrived at that harbour. Here they bought up what freſh proviſions they could get, at a dear rate, took in water and wood, and careened their ſhip. The 16th they departed, and, on the 20th, croſſed the line, and paid as uſual. The 23d they deſcried Cape Lopez in one degree ſouth latitude, being the laſt ſight they had of the African ſhore. Here it was Sir Chaloner Ogle ſuppreſſed the famous Pirate Roberts, for which he was knighted. Mr. Smith ſaw ſeveral of his followers hanging in chains at Cape Coaſt.

When they had run down about four degrees to the ſouthward of the line, they came into the true ſouth-eaſt trade wind, and ſteered away weſtward, near 400 leagues in ſouth latitude: after which, they ſhaped their courſe north-north-weſt, croſſing the line again on the 5th of June. The next day they fell into the alternate calms and ſtorms that are always near the line at thoſe times of the year, eſpecially between the north-eaſt and ſouth-eaſt trade winds. At length, however, they got fairly into the true north-eaſt trade; and with a good gale, held their courſe about north-north-weſt, till July the 1ſt, when being in thirteen degrees, nineteen minutes, north, their ſhip ſprung a leak: finding ſhe made more water than their pumps could diſcharge, they were under no ſmall apprehenſions, being ſo far from land, and having no ſhip in company: however, the captain after a diligent ſearch, at laſt diſcovered a ſmall leak cloſe up by her ſtern, about a foot under water. It being impoſſible to come at it on the outſide, on account of the ſhip's dipping or pitching under water, they removed part of the cargoe, which raiſed her bow a little higher out of the ſea, and conſequently eaſed the leak.

However, as it ſtill continued, they reſolved to bear away before the wind, which they found much relieved the ſtrain the ſhip laboured under, ſo that they could juſt diſcharge the water with both pumps as faſt as it came in. They then conſulted what was beſt to be done, and according to the captain's propoſal, agreed to bear away for the Weſt Indies, for they were then in the north-eaſt trade wind; ſo that being in the latitude before mentioned, a weſterly courſe would carry them directly on to Barbadoes. Their diſtance by computation, was near 700 leagues: however, they reſolved to do their beſt to keep her above water as long as poſſible; and for that end, aſſigned each other their reſpect employments; the captain and mate were to take the helm four hours by turns; one Mr. Wheeler and the author were to take turns to dreſs the victuals, and make hot punch for the men at the pump, who were allowed three half pints each, every watch, to keep up their ſpirits; for which end the ſailors were divided into two watches, that after they had been nine or ten days in this extremity, the men

grew diſcouraged with exceſſive labour, and began to murmur, though they had every day freſh proviſions killed for them: but they endeavoured to hearten them as well as they could by the hopes of ſoon ſeeing Barbadoes. Their yawl, which was a good large boat, was on deck, but their long-boat having been ſtowed between decks, ſeveral were deſirous of having her brought up, and the ſails, maſts, and oars put on board her and the yawl: alſo all other neceſſaries: ſuch as compaſſes, proviſions, water &c. to be ready to take their boats in caſe of the worſt: others were very much againſt the propoſal, fearing ſome of their men, who are now grown deſparate, would take advantage of the night to run away with the long-boat and leave the reſt; which muſt have been attended with the loſs of the ſhip, it requiring all hands to keep her clear.

On the 16th of July, three of their men, who had the larboard watch from four o'clock till eight, fainted away at the pumps, and were carried like dead men off the deck; which occaſioned the ſtarboard watch to be called, before the bell rang for eight. This drove them almoſt to deſpair. However, Mr. Smith had provided ſome breakfaſt; and, as they were eating it, one of the men at the pumps leaped up, and cried as loud as he could, Land! Land! running about, like a madman, for joy. On this, neglecting their food, they looked out ſharp, and plainly ſaw the land, the moſt agreeable proſpect they had ever beheld. This was July the 16th, at nine in the morning, and proved to be the iſle of Barbadoes. At four in the afternoon, they anchored in Carliſle Bay, which was then full of ſhips. The ſame night, Thomas Leake, Eſq; the Royal African Company's agent there, came off to relieve their weary men at the pumps; and the next morning Mr. Smith went on ſhore to Mr. Leake's houſe. Soon after he was introduced, by his friend Dr. Warren, to his excellency Governor Worſley.

Mean time, on the 17th, their ſhip was hauled along ſide of a hull which lay in the bottom of the bay; and while ſome were employed in unloading the goods into the hull, in order to heave her down and ſearch her bottom, the reſt kept both pumps continually at work, which were now ſcarce able to keep her above water, though ſhe lay motionleſs in a ſmooth bay.

While Captain Livingſtone, Mr. Leake, and ſome other gentlemen, were one day abroad, the men pumped out a ſmall, half-conſumed young dolphin, without either head or tail, being about three inches and an half long, which the captain put into ſpirits of wine to bring home, being aſſured this little fiſh had lain ſome time in the leak, and kept out many tons of water, to which they owed the preſervation of their lives. In heaving the ſhip down, keel out of water, they diſcovered a large gaping leak, within two ſtreaks of her keel, where ſhe had left about four feet of her ſheathing. They ſtripped off all the reſt from that ſide of her bottom, but found no leak of any ſignification, till they had ſtripped the other ſide, when they had found a few ſmall ones. Her plank was all ſound and good, nor did her ſeams want any oakum, except about ſeven inches, where the piece of ſheathing was loſt.

Having refitted this veſſel, they left Barbadoes on the 18th of Auguſt, and when they had croſſed the north-eaſt trade, and come into the way of the variable winds in latitude 29 degrees north, they met with briſk gales at weſt and ſouth-weſt, which carried them at the rate of nine or ten miles an hour. September the 22d, they came into ſoundings of fine ſand, eighty fathoms water. The 25th they made the Lizard, and, with a ſmart gale at ſouth-weſt, came up the channel.

At day-break, on the 26th, they were abreaſt of the Iſle of Wight, when the wind changed to ſouth-eaſt, and blew ſo hard, they were obliged to bear away for Portſmouth; and though they made the proper ſignals, yet no pilot boat would venture off; however, their chief mate being well acquainted with the channel, undertook to carry in the ſhip, which he ſafely performed, and at eleven o'clock they anchored in Portſmouth harbour, September 26, 1727, having thus concluded their long and dangerous voyage.

VOYAGES TO, AND SETTLEMENTS IN BRASIL.

BRASIL was diſcovered by Don Pedro Alvarez de Cabral, by accident, as we have already obſerved, in the year 1500, and the diſcovery being thought of too much importance to be neglected, ſettlements were formed there at various times, and the new colonies flouriſhed amazingly.

In order to facilitate theſe eſtabliſhments, the crown had recourſe to the making very extenſive grants, to ſuch as had either an inclination to ſettle there, or a power of ſending others. Upon this plan it was that ſome of the chief nobility had lands allotted them, equal in extent to Portugal itſelf. This was to be improved, and rendered valuable at the expence of others.

John III. king of Portugal, in the year 1549, ungenerouſly revoked thoſe grants made by his predeceſſors to the original proprietors.

The ſame year he ſent over Thomas de Souſa, with the title of Governor-General of Braſil, who ſetting ſail with a fleet of ſix men of war, carried with him a great number of officers, both civil and military; a conſiderable body of ſoldiers, and ſix fathers of the new order of Jeſuits, to attempt the converſion of the Indians. He was inveſted with an entire new plan of power, adjuſted according to the view of the court, was ordered to build a new town in the bay of All Saints, and to take the neceſſary meaſures for ſecuring the colony againſt its enemies.

He arrived in the month of April, and ſoon began to execute his orders, making war upon the Braſilians, building the town of St. Salvador, and monaſteries for the Jeſuits.

What this governor could not finiſh, his ſucceſſor Edward Acoſta, ſaw compleated; ſo that in his time, the number of towns as well as inabitants, was doubled; he ſtrengthened the towns by raiſing better fortifications, a ſtep that became neceſſary, becauſe other nations began to think of ſettling in America, and ſharing with the Spaniards and Portugueſe the advantages ariſing from the colonies.

Acoſta demoliſhed the old fortifications, which were of earth, raiſed new ones of brick and ſtone, and furniſhed them with artillery. Nor was it long before the expediency of this new method of fortifying was juſtified by experience, as the French made more than one bold attempt to diſturb the Portugueſe in the poſſeſſion of this country.

In the reign of Henry II. of France, the affairs of that

that kingdom were in great confusion, the disputes between the Catholics and Calvinists being carried on to the utmost height, which made numbers of people desirous of leaving their native soil, to seek an easier and more contented situation in a distant country.

Among these was Nicholas Durant, lord of Villegagon, and knight of Malta, who having served at sea with great reputation, was made vice-admiral of Britany. Though this post was rather honourable than lucrative, it created him so many enemies, and he was so ill treated at Nantes, that he resolved to leave the kingdom, and carry a colony into some distant part of the world; and having received some tolerable accounts of Brasil, he drew up a scheme for fixing a settlement in that country, which he presented to Gasper de Coligny, admiral of France, requesting his assistance towards fitting out a squadron for that purpose.

The admiral therefore represented the affair in such a light to the king, that he obtained permission to fit out three large vessels, which after having taken a sufficient number of adventurers on board, sailed from Havre de Grace in the month of May, 1555, and arrived at Brasil in November following, after a troublesome and dangerous voyage.

At first they landed upon a rock, which they found uninhabitable, but marching farther within land, they fixed upon a very commodious spot of ground, almost under the tropic of Capricorn, where they built a convenient fortress, to secure themselves both against the Portuguese and the natives, and gave it the name of Fort Coligny.

When they were fixed, the Sieur de Villegagnon wrote the admiral a full account of his proceeding and situation: he described the country and its inhabitants: said it would be no difficult matter to maintain themselves there, and make it both a useful and a thriving colony; but remarked that such as were sent over to him must not expect the delicacies of Europe; that they had no other bread but what was made of a certain root ground to powder, no wine, much fish, and some venison; and that people who could content themselves with such provisions, would find a secure retreat at his fort in Brasil.

The admiral, on receipt of this letter, communicated it to the famous John Calvin of Geneva, who prevailed on a dozen zealous protestants of that city, to engage in the design of improving this new settlement. One Du Pont, a person of character and good sense, undertook the conducting this affair, in conjunction with two ministers, Peter Richer, who had formerly been a Carmelite, and William Chartier, both of them good men, but very great zealots.

These set out together from Geneva in the month of September, 1556, and went to Chatillon, where they were kindly received by the admiral, and by his assistance, joined to their own interest, they soon collected 300 men, who embarked at Honfleur on board three ships about the middle of November following.

They arrived at Fort Coligny on the 7th of March, 1557, and were received with great joy and satisfaction. But it was not long that things continued in this state, for the Sieur de Villegagnon and the Minister Richer, fell out about religion, and their disputes rose to such a height, that he drove Richer and all his adherents out of the colony, upon which they sailed up the Rio Janeiro, and established themselves upon the continent, where they remained about eight months, and then, being weary of the country, returned to France, where they did not fail to represent the Sieur de Villegagnon in the blackest colours, as an apostate and hypocrite; on which the admiral, who had no other view than serving the protestant cause by this establishment, finding the end not likely to be answered, determined to give himself no farther concern about it.

The Sieur de Villegagnon finding himself thus abandoned, lost all patience, and taking the best methods he was able for the protection of the colony in his absence, he returned to France, where he published an apology for his own conduct, in which he painted the ministers in as bad a light as they had placed him; but finding no good consequences arose from this proceeding, he retired to a commandary of his own order, and spent the rest of his days in writing against the Protestants.

The Portuguese in the mean time, seized this opportunity, to rid themselves of their new neighbours, and the very next year, Emanuel Sa, then governor of Brasil, cut off the French that were left behind, and destroyed their fort.

After this the Portuguese continued to enjoy their settlements quietly for a considerable time; till at length, a French Captain, named Riffaut, who had been cruising on the Spaniards, happened to touch at the island of Marignan, on the Coast of Brasil, and contracted so great an intimacy with the Indian Chief of the island, that he invited him to bring a sufficient number of his countrymen, to fix a settlement there, which he assured him would turn out to good account, and that he would assist him to the utmost of his power.

The French captain readily embraced this offer, and returning to France, he, in the year 1549, found means to fit out three ships, so effectually, that there was just grounds to hope for extraordinary success from the expedition: but before he could reach the intended island, his men mutinied several times, and on his arrival on the coast of it, either by accident, or by quarrels among his people, the largest of the three ships ran on shore and was lost, which obliged him to return to France, but some few of his people, among whom was M. de Vaux, chose to remain with the natives, who gladly accepted their company.

In the mean time the Dutch resolving to come in for a share in the new settlement equipped a strong squadron, under Admiral Willikins, and entering the Bay of All Saints, took St. Salvador, the capital of Brasil; but Philip the fourth, King of Spain and Portugal, caused a large fleet to be sent out, which arriving safe in the bay, found the town already blocked up by a land army. The garrison mutinied and the governor was obliged to surrender.

However, the Dutch determined not thus to abandon their design. In 1630, they again made good their footing on that continent, though not without some difficulty: the town of Olinda was now in possession of their countrymen, but closely blocked up by the famous Alberquerque. In the mean time Admiral Pater was informed that a Spanish and Portuguese fleet was at sea.

The Dutch admiral had but sixteen vessels; but jealous of the honour of his country, he was determined to fight at any rate; and therefore resolved not to wait for, but meet the enemy, which he accordingly did, in six degrees south latitude. As soon as they appeared in sight, the Dutch fleet seeing how unequal the dispute was likely to prove, ten of their captains bore away, and left the admiral with six ships only, to fight an enemy of almost ten times his number.

Admiral Pater had two flags under him, who, to their immortal honour, were two of those who staid with him; so that to six ships there were three admirals.

The engagement was long and bloody: several of the Portuguese vessels were sunk, and it plainly appeared, that if the other ten ships had staid, victory would have declared for the Dutch; but at length Admiral Thys, in the Prince William, was sunk, and not long after, a Portuguese man of war discharging a broad-side at the Dutch admiral, a ball fell into the powder-room, by which the ship was blown up, and that brave man lost. On which, the four Dutch ships that remained retired, but did it with so much courage and address, that they not only arrived safe at Olinda, but likewise carried off a Portuguese man of war they had taken.

On Admiral D'Oquendo's arriving on the Coast of Brasil, he contented himself with sending refresh-

ments and reinforcements to the army of Alberquerque, but made no attempt againſt the city of Olinda, and conſequently left things little better than he found them; which he excuſed from the great loſs he had ſuffered in battle, amounting in the whole, to no leſs than thirteen ſail, taken and ſunk.

In the month of October, he ſet ſail for Liſbon, but in his paſſage met with four Dutch men of war, who did not heſitate to attack him, though he had ſtill 40 ſail, and moſt of them large ſhips. D'Oquendo in this engagement, loſt the captain of his own ſhip, and twenty-two other captains, beſides his vice-admiral, three men of war, two frigates, and about ſeven hundred private men; ſo that he carried home the remains of a fleet, unfortunate from the beginning; and yet without any impeachment of his own character; the blame falling entirely upon the miniſters, who had obliged him, notwithſtanding his remonſtrances, to ſail, with ſhips which were not above half manned or equipped. The miniſters unable to remedy this misfortune, declared themſelves willing to do all in their power to repair it; and therefore orders were given for providing a larger fleet, and for equipping and manning thereof in a propper manner; the command of which, was given to Don Fredrick de Toledo, who had acquired great reputation; but after abundance of pains being taken, it was found that nothing could be done that ſeaſon, and therefore it was deferred till the following ſpring; when it was determined to ſend ſuch a force as ſhould put an end to the war at once; but as it was far eaſier to project fine ſchemes, than to execute them; ſo, notwithſtanding this famous admiral actually proceeded on his voyage with a large fleet, every way well provided, yet he effected ſo little, that authors have not even recorded the particulars of what he did.

From this time the Dutch arms were very proſperous in Braſil, and the amazing ſucceſs they meet with was ſuch as to induce the natives of Siara, one of the moſt northern captainſhips to declare for the Dutch, and offered to aſſiſt them againſt the Portugueſe, upon a promiſe of being left to the enjoyment of their freedom: whereupon a body of troops being ſent to join them, under Capt. Gartman, he, with the aſſiſtance of a Braſilian prince, reduced that whole diſtrict.

Count Maurice now reſolved to put in execution the repeated orders he had received from the Weſt India company, for attacking St. Salvador in the bay of All Saints, which was eſteemed the capital of Braſil: wherefore he embarked all the forces he could collect at Olinda, and on the 8th of April, 1638. landed with them in the bay of All Saints, thinking to have ſurpriſed the Portugueſe: but the count de Banjola, being in the neighbourhood with a ſmall body of regular troops, threw himſelf into the place, though the governor of it was his enemy; and it was on the enmity ſubſiſting between them that count Maurice founded his hopes of ſucceſs.

Count Maurice attacked, and without much difficulty made himſelf maſter of the ſtrong fort of Albert, that of St. Bartholomew, and the famous caſtle of St. Philip. This ſucceſs encouraged him to erect two batteries, to attack at the ſame time Fort Roſes, which covered the city on one ſide, and a horn work, which was its principal ſtrength on the other. Between theſe there was a piece of ground covered with ſhrubs and buſhes, where count Banjola adviſed the governor to poſt himſelf with four hundred men, while he made a ſally. This had the intended effect; for after an obſtinate diſpute, the Dutch, endeavouring to retire through that peace of ground, were attacked in the rear; and beſides three hundred of their beſt men, loſt four officers of diſtinction, and their principal enginger; upon which Count Maurice abandoned the caſtles he had taken, and made a haſty retreat.

The Spaniſh government having in the mean time, received an exact account of the ſtate of affairs in Braſil, came to a reſolution of repairing their late miſtakes, by ſending thither ſuch a fleet and army, as ſhould effectually put an end to the war, by obliging the Dutch to abandon all their conqueſts.

However the vigilance of the Count de las Torres was ſuch, that he put to ſea with a fleet of ninety ſail, large and ſmall, with 12000 men on board, in the month of January 1640.

Count Maurice, on the other hand, having aſſembled 41 men of war, waited for the enemy within four miles of Olinda under the Count, this laſt fleet was commanded by William Loos, a Dutch admiral of diſtinguiſhed bravery. The fleets meeting on the 12th of the ſame month, between the iſland of Tamara and the river Gojana, fought from one in the afternoon till night; the Dutch in this engagement loſt four men, one of whom was their Admiral Loos; but he was replaced the next day, by James Huyghens, who engaging the Spaniſh fleet a ſecond time, obtained conſiderable advantages.

At length after many ſtruggles on the 13th of June, 1641, they ſigned a league offenſive and defenſive, regarding the dominions of both ſtates in Europe, and a truce for ten years in the Eaſt and Weſt Indies: it was alſo ſtipulated, that commiſſioners ſhould meet in eight months in order to conclude a definitive treaty of peace, and to ſettle the pretenſions of both parties: but the Dutch took care to provide, that if this treaty ſhould prove ineffectual, the truce and free trade between both ſtates ſhould ſtill continue; only the Portugueſe ſhould be reſtricted from exporting any of the commodities of Braſil into Holland, and the Dutch were to be under the like reſtrictions reſpecting the dominions of Portugal.

Nevertheleſs there were continual bickerings between the two ſtates in this part of the world, till affairs were reduced to the ſituation which they now remain. The country diſputed being in poſſeſſion of the Portugueſe.

The country of Braſil may be reckoned 2000 miles from eaſt to weſt, and 2500 from north to ſouth, tho' even to this day the Portugueſe have hardly penetrated 500 miles in any part of it.

The northern parts of the country, which lie near the equator, are ſubject to great rains and variable winds, more eſpecially about the months of March and September, when they were frequently diſturbed by moſt dreadful hurricanes and tempeſts, which laying the country under water, render it very unwholeſome.

The part of Braſil which lies to the ſouth, is one of the fineſt countries in the world, in every reſpect: but the Portugueſe dominions are but narrow in this part, being bounded by the Spaniſh territories on the river of Plate.

The native Braſillians differ very little in ſtature or complexion from the Portugueſe: but they greatly exceed them in the ſtrength, robuſtneſs and vigour of their bodies. Some of them lived on plains, ſome in villages, and others moved from place to place according to their fancies. Their villages conſiſted only of three or four large houſes, not unlike our barns, in which a whole family or tribe lived together, under the authority of the eldeſt parent.

From the time the Dutch abandoned Braſil, the Portugueſe have ſuffered no ſhips to trade thither, except their own. All the trade of the five northern captainſhips, viz. Paria, Maragnan, Siara, Rio Grande, and Paraiba, is carried on at the laſt mentioned port, which lies on a river of the ſame name, at the diſtance of about five leagues from the ſea.

Paraiba is a fine and well peopled town, and there are annually ſeven or eight ſhips ſent thither from Liſbon and Oporto, of the burden of 200 tons each. Their lading conſiſts chiefly of ſugar, of which they make more in the northern captainſhips than in the ſouth: eſpecially ſince the diſcovery of the gold mines which has made the ſouthern inhabitants negligent with regard to cultivation.

The ſugar of Braſil was the firſt that was brought to Europe, the Portugueſe having erected their works in this country as early as the year 1580; and their being ſo long in poſſeſſion of it, has made them more careful in the management of their ſugar than any

View of St. SALVADOR, a City of South America.

other nation; ſo that even now the clayed ſugars from Braſil, are finer and whiter than ours, and yet the method of preparing it is no ſecret.

They alſo bring woods for the dyers uſe, ſeveral kinds of drugs, precious ſtones, and other valuable commodities from Paraiba, which is the leaſt frequented port of Braſil; however, theſe northern captainſhips are beſt peopled, and their inhabitants are eaſy in their circumſtances, though there has been as yet no mines worked in thoſe parts, notwithſtanding ſome Spaniſh writers affirm, that from the appearance of the ſoil on the ſides of the mountains, it is highly probable they are rich in ſilver.

The Braſil tree grows in dry barren places, and among rocks, is very large and thick, and the timber is generally crooked and knotty. It bears flowers of a very beautiful bright red, which have a very fragrant ſmell, and inſtead of hurting, as moſt perfumes do, it cheriſhes and ſtrengthens the brain. Though the tree is very large, it is covered with ſo thick a bark, that when the Braſilians have ſtripped it off, a tree as thick as a man's body, is left no thicker than the calf of his leg. The wood is very heavy, dry and hard; it cracks much in the fire, but ſcarce raiſes any ſmoke. That which is the thickeſt, ſoundeſt, and hardeſt, is eſteemed the beſt.

The Bay of Bahia, or as the Portugueſe call it, the Bay of All Saints, is about 12 leagues over; but in ſeveral places is ſcarcely navigable, on account of ſhoals and ſand-banks. In this bay there are ſeveral ſmall iſlands, on which the Portugueſe have plantations of tobacco and ſugar, and they have likewiſe very good fiſheries on the coaſts of the iſlands, and on the banks.

The city of St. Salvador is a fortified town. It lies at the entrance of the bay in 14 degrees ſouth latitude, and is at preſent the centre of the Portugueſe trade in this part of the world. It has a very fine port, which by a little induſtry, might be rendered more commodious.

St. Salvador is at preſent the ſeat of an archbiſhop, and is divided into upper and lower. We ſhall begin with deſcribing the latter, in which reſide all the merchants and people of buſineſs; and perhaps there is not in the world a place of its ſize of greater trade. It lies at the foot of a hill which is extremely ſteep. There is in it a royal arſenal, beſides the king's warehouſes and magazines, which are large, well filled, and kept in excellent order. There is likewiſe a very fine yard for building of ſhips, which are not only built here at leſs expence than in Europe, but are more ſerviceable than European veſſels, becauſe the timber has the peculiar advantage of the worms being unable to penetrate it.

The upper town is ſeated on the ſummit of a hill; the houſes are large, and tolerably convenient; but the inequality of the ground on which they ſtand, ſpoils their appearance, and renders the ſtreets very diſagreeable. The great ſquare is in the middle of the town, and the four ſides of this ſquare are taken up with the viceroy's palace, the town-houſe, the mint, and other public buildings, which are built of ſtone brought from Portugal, this country producing none fit for the purpoſe.

All other captainſhips which lie farther to the ſouth, carry on their trade by the Rio Janeiro, ſo called from its having been diſcovered in the month of January, in which is at preſent one of the moſt conſiderable rivers in the world. The banks of it are as beautiful and pleaſant as can be imagined; the climate fine; the ſoil is ſtrongly fertile, producing ſugar, indigo, tobacco and cotton, all in great perfection. It has been likewiſe found that European corn will grow there with very litle trouble; but on account of the gold mines, this and all other improvements have been diſcouraged, though independent of thoſe mines, this might be conſidered as the richeſt part of Braſil.

The city of St. Sebaſtian, is the capital of this country. There are ſeveral other conſiderable towns on the Rio Janeiro, all of which have a large ſhare of trade; as appears from the number of ſhips ſent thither every year from Portugal.

The king's fifth of the gold returned annually from Braſil to Liſbon, is about 300,000l. ſterling, ſo that the whole return is about a million and a half, to which, if we add what is privately brought to Europe without paying the duty, and which is exchanged with the Spaniards for ſilver, we may very reaſonably ſuppoſe that the annual produce of the Braſilian gold, is not leſs than two millions.

The captainſhip of St. Vincent lies ſouthward from that of Rio Janeiro; it is bounded on the north by the new captainſhip of Rio; on the ſouth by the new captainſhip, or that called Del Rey; on the eaſt by the ocean, and on the weſt by the moutains of La Plata, and countries inhabited by various ſavage nations.

The town of St. Vincent is ſituaetd in a very fine bay of the Atlantic ocean, and is a well fortified place. Not far from the north-weſt lies the town of Santos, which ſome eſteem the capital of the province, and which is as fine a port as any in the Weſt-Indies.

The captainſhip of Del Rey is the only one to the ſouthward of St. Vincent. It extends from the latitude of 28 to 34 degrees 30 minutes ſouth, being about 400 miles in length, but not above 100 broad in any part of it.

Their method of reckoning up their age is ſingular enough, they lay by a cheſnut every year, beginning the computation of the years with the riſing of a ſtar called Tacu, or the rain ſtar.

Perſons of the blood royal are diſtinguiſhed by their hair cut in a particular form, and by long thumb-nails, which latter is peculiar to the king, princes of the blood being allowed long nails on their fingers, but not on their thumbs.

The people in the inland parts of Braſil acknowledge a Supreme Being, whom they call Tuba, which ſignifies "Somewhat moſt excellent;" and they call thunder by the name of Tubakununga, that is, "a noiſe made by the Supreme Excellence." They have likewiſe ſome imperfect ideas of the general deluge.

With regard to futurity, they are of opinion that the ſoul does not die with the body, but is conveyed to certain pleaſant vales beyond the mountains, where they are to ſpend their time in ſinging and dancing, and to enjoy the greateſt pleaſures; but theſe rewards are only for thoſe who have diſtinguiſhed themſelves in performing great actions for the welfare of their country, &c. On the contrary, thoſe who have lived an idle life, they ſay will be tormented by evil ſpirits, for whom they have many different names, and of whom they are extremely afraid.

Theſe people have prieſts among them, whom they conſider as prophetic inſtructors, and whom they fail not to conſult in all affairs of conſequence, eſpecially thoſe of war.

Braſil, as our author obſerves, beſides leopards, tygers, and ounces, has ſome animals peculiar to the country, of which the following are the moſt remarkable.

The tapirouſſon, which though ſomewhat reſembling a cow, differs much from that animal in other reſpects; it has long horns of a reddiſh colour, ſhort neck, and long hanging ears, ſmall legs, and does not divide the hoof. The fleſh taſtes like beef. The hide when dry is almoſt impenetrable.

The cauti is ſomewhat like a badger; it is cruel and ravenous, and devours every creature it can maſter, though its chief food is birds and their eggs, and young ſerpents.

The porcupine is alſo a native of this country, where it is called Kuandu; it is about the ſize of an ape, with round, ſtaring fiery eyes. It is covered with quills inſtead of hair. Its chief food is fowl. The fleſh of the porcupine is eaten by the Braſilians.

The Armadilla is ſo called from being completely

covered with ſcales like armour. The head is like that of a hog, and it has a ſharp noſe and a ſmall ſharp tongue, with ſhort ears of a dark brown colour, it feeds upon roots and alſo upon all ſorts of carrion.

The ſluggard (or ſloth) is about the ſize of a fox: its head is round; and its mouth is conſtantly foaming, its teeth is ſmall and blunt, and its noſe is high and ſmooth; its body is covered with hair of an aſhen colour. It ſcarcely moves but by compulſion, dwells on trees, and hides itſelf from the approach of rain.

The ſenembi or land crocodile is common in Braſil. Its fleſh is ſaid to taſte like that of a rabbit.

The tamendua or ant bear, feeds on theſe inſects which it is ſaid to catch by leaving out its long tongue, till a number of them ſettle on it, and then drawing them in all at once.

Here are found variety of beautiful parrots, one ſpecies in particular (called the Tuin) which though ſcarcely bigger than a ſparrow, is perpetually talking and ſinging, and will feed out of the mouth of the perſon who breeds it.

The bird called the Guiranheugetta is about the ſize of a Goldfinch: its wings and back are blue, its belly and breaſt yellow, and it has a diadem of yellow feathers upon its head. It has the notes of many other ſorts of birds, and makes ſo great a variety of turnings and changes in its ſinging, that it forms a perfect concert of itſelf.

Braſil produces a kind of bats of the ſize of a crow, which have very ſharp teeth, and bite with great violence. Theſe build neſts in old walls, or in hollow trees.

The bill-bird is about the ſize of a pigeon, and has a ſaffron coloured crop about the neck, of three or four fingers in compaſs. Its bill, which is full as large as its whole body, is yellow on the outſide, and red within; and its feathers, which are yellow on the breaſt, and black on all other parts, are tipped with red.

There is a bird of a very odd appearance, called the Barn bird. Its bill is of a moſt amazing length; it has a crown of green and white feathers upon its head, one half of which, together with half the neck, has no feathers at all. It is about the ſize of a ſtork, and when ſkinned and boiled, is eſteemed tolerable good food.

Many ſorts of wild fowl are alſo found here, which differ but little from thoſe of Europe. Among the ſmall birds, the Braſilian humming-bird is the moſt remarkable, for though very ſmall, it makes a loud noiſe, and is of ſo variable a hue, that whatever way it is turned it changes its colour.

Among the different kinds of ſerpents found in Braſil, is the rattle ſnake, which is alſo common among the Engliſh ſettlements, but the moſt remarkable is the guaku or liboya, a ſerpent of a moſt prodigious ſize, of a voracious nature, and will leap out of the hedges upon men or wild beaſts. However it is not ſo venomous as other ſerpents, and the fleſh of it is eſteemed tolerable food.

The gekko is a ſerpent of a moſt venomous nature, and the bite of it proves mortal, unleſs the wounded part be immediately cut off or burnt with a hot iron.

The ſcorpions of this country grow to a very large ſize, and their ſting is venomous.

The lizards of Braſil, which are about four feet in length, are eaten with ſafety by the natives.

Among the ſpiders of this country, there is one ſort of a remarkable large ſize, which is uſually found in dunghills, or the cavities of hollow trees. Theſe weave webbs like other ſpiders; and if provoked, they wound with a ſting ſo ſmall as to be ſcarcely viſible, and yet ſo venomous, that it raiſes a bluiſh ſwelling, which is extremely painful, and if not prevented by a ſpeedy antidote, will even prove mortal.

Among the vegetables of Braſil, is the mandioca root, from which the Braſilians derive a great part of their ſubſiſtance; for being dried, powdered, and afterwards baked in the manner of bread, it ſerves for the common food of the inhabitants of a good part of America. This root is not unlike a parſnip, is nearly the thickneſs of a man's arm, and two or three feet in length. It has this peculiar quality belonging to it: that when eaten freſh, it proves a certain poiſon to the human ſpecies; but when roaſted, the eating of it is not attended with the leaſt ill conſequence; and though beaſts of all kinds feed and grow fat upon it, yet the juice proves pernicious to them as well as men.

The nara likewiſe is very remarkable; it bears a reſemblance to the ſempervivum; but its leaves are not ſo thick and full of prickles. In the middle of it there grows a fruit not unlike a pine-apple, which has ſomething of the taſte of the melon, but is much more delicious, and has a very fragrant ſmell.

The pocaire is a ſhrub of ten or twelve feet in height, the ſtem of which is conſiderably thicker than a man's thigh, and yet ſo tender, that one ſtroke of a ſword will cut it aſunder. The leaves are like thoſe of water ſorrel; they are commonly ſix feet in length, and very broad, but are exceedingly thin, and have only a rib in the middle to hold them together; on which account they are ſo torn by the winds blowing them about, that they hang in rags, and theſe ſhrubs when ſeen at a diſtance, look as if they were ſtuck with feathers. The fruit, which is called poco, is about the length of a man's hand, and like a cucumber both in ſhape and colour. The taſte of it reſembles that of a fig, but its delicacy is far ſuperior.

Here is alſo great plenty of ananas, or pine-apples, which, when ripe, are in this country, as yellow as gold, and of a very fine ſcent. Their taſte is ſuperior to that of the richeſt preſerved fruits, and the liquor drawn from them is as good as malmſy wine.

The pacoba, which is likewiſe called Adam's fig-tree, is very large; the ſtalks are ſoft and ſpungy, and the leaves very long, ſmooth, and ſoft like velvet. The fruit grows in cluſters like figs, at about a foot diſtance upon the main ſtalk, and one cluſter often contains two hundred. The fruit being gathered before it is quite ripe, and laid by to ripen, becomes yellow, and acquires a pleaſant taſte.

Braſil produces ſeveral ſorts of palm, and other fruit trees, likewiſe mulberries and dew berries, together with woods of various colours.

In effect, the greater part of this country is repreſented by voyagers as a paradiſe of nature, and well worth the conteſt which it ſo long occaſioned between two powerful ſtates. The Portugueſe are at this time ſenſible that in carrying their point, they have gained a moſt valuable acquiſition.

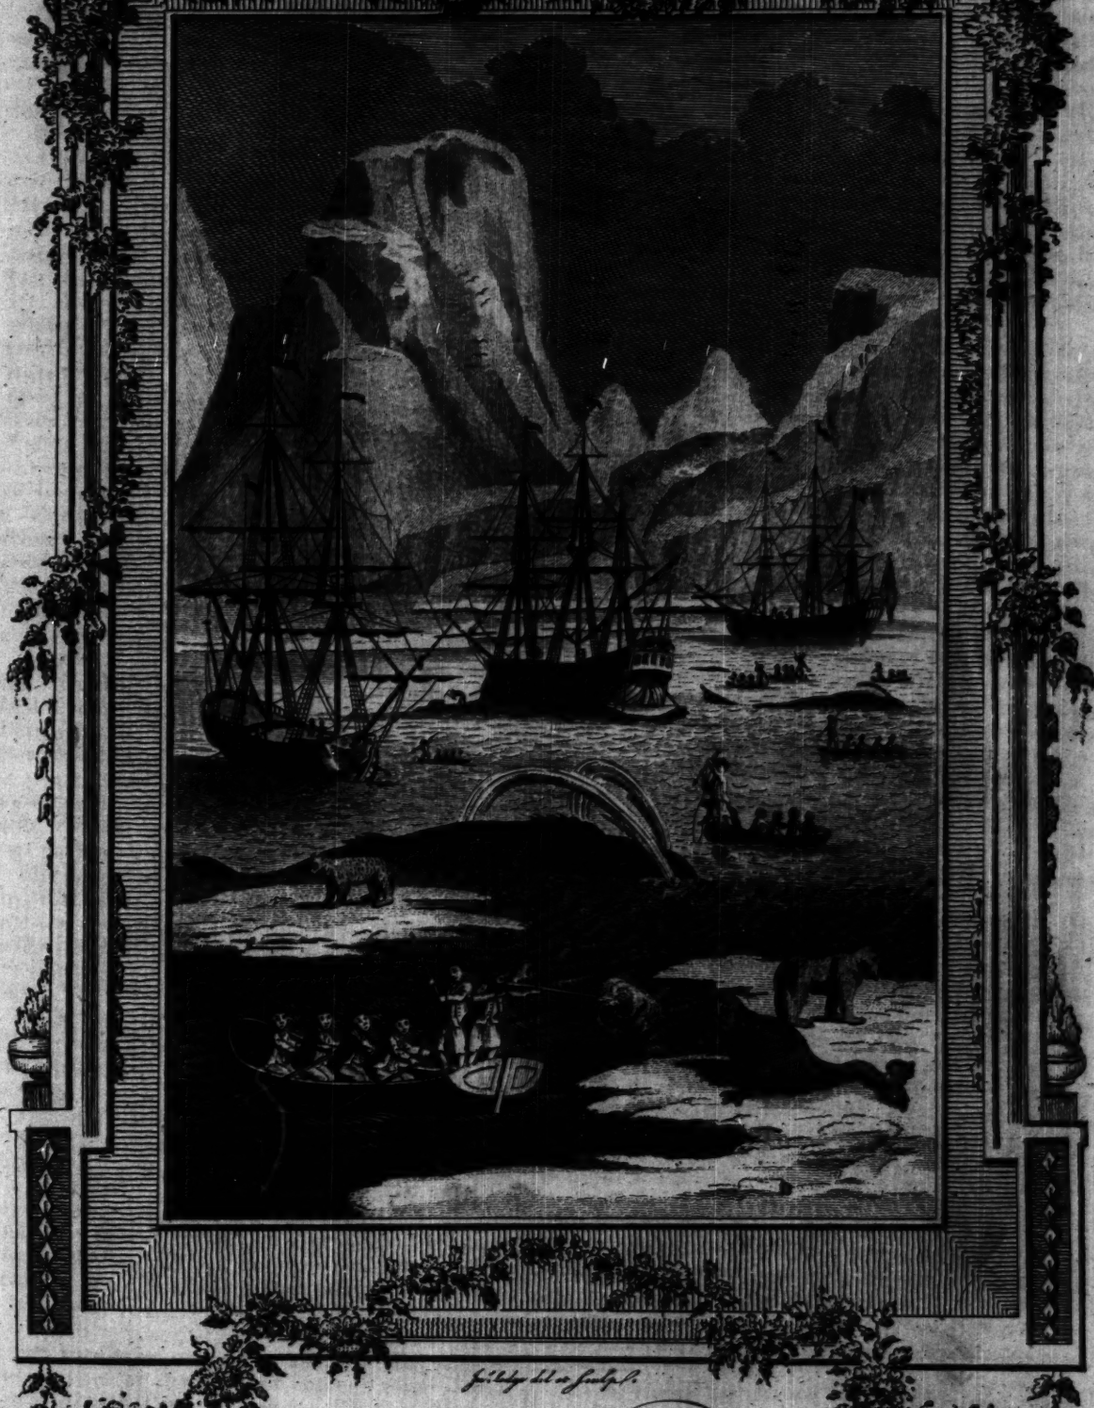
VOYAGES TO GREENLAND, WITH A DESCRIPTION OF THE WHALE FISHERY.

THE ſame ſpirit of diſcovery which animated the Portugueſe, ſpreading among other nations. Attempts were made at various times for the diſcovery of a paſſage by the north-eaſt and north-weſt to the Indies.

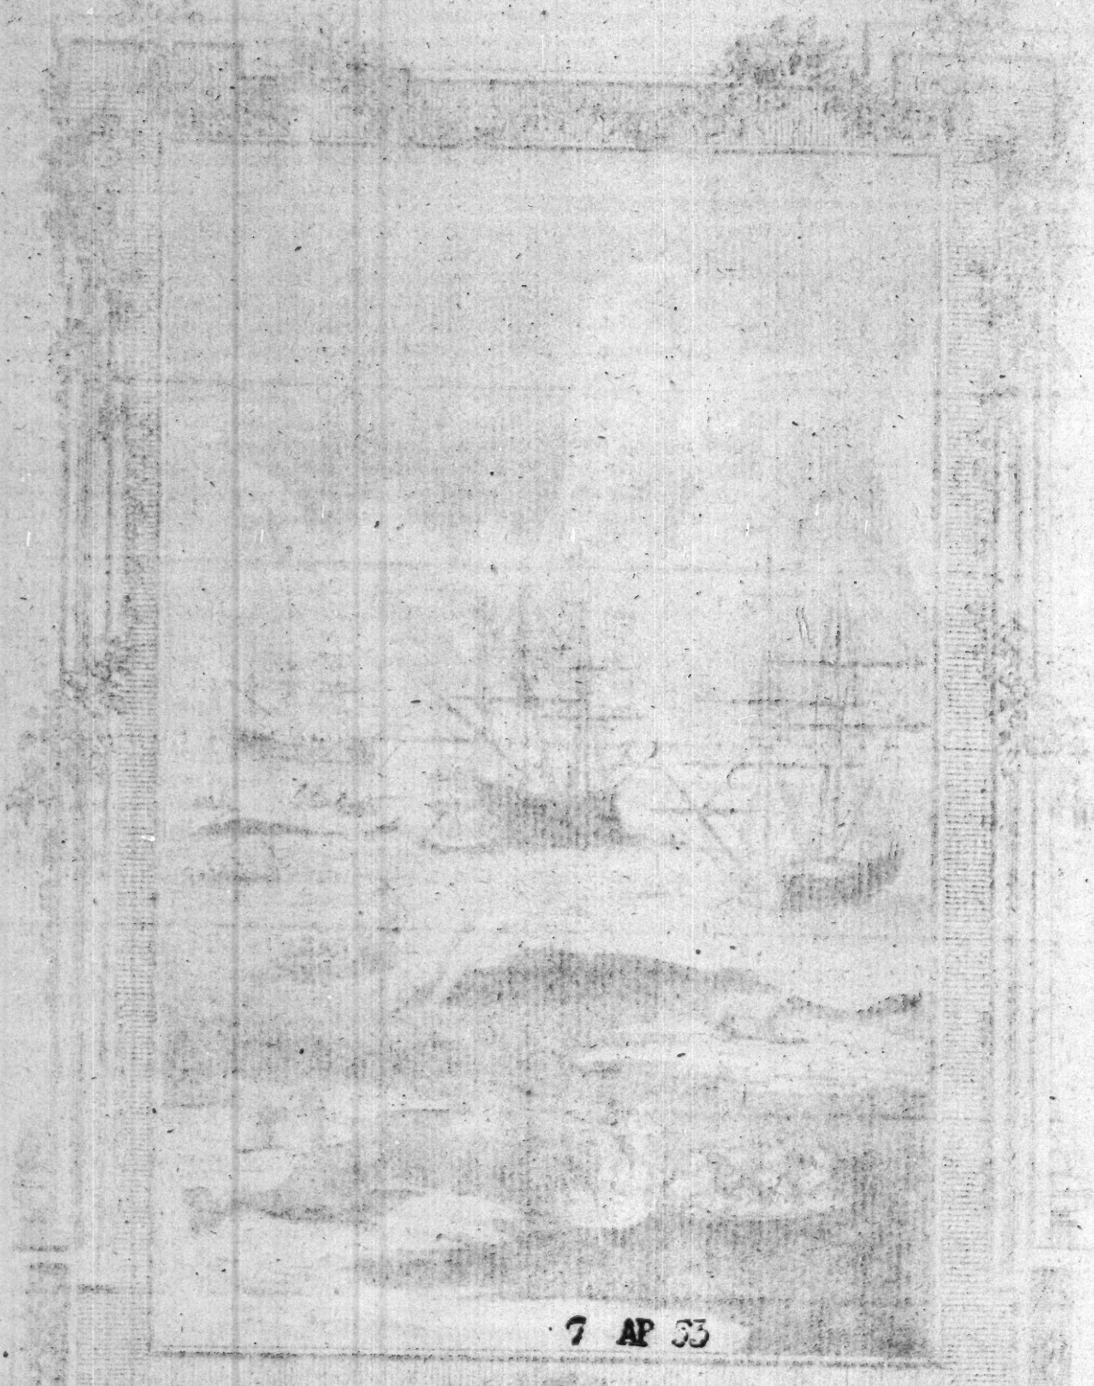
Among the reſt, the Engliſh were not backward. In the year 1553, under the reign of Edward IV. ſeveral perſons of conſequence entered into a ſociety, which they called, The Company for the Diſcovery

of

Engraved for Moore's Voyages & Travels.



View of the **WHALE FISHERY,** *&c. in Greenland.*



7 AP 83

of unknown Countries. The chief director of this company, was the famous Sebaſtian Cabot, who under the reign of King Henry VII. firſt diſcovered the northern part of America; from whence in ſome antient maps that part is called Sebaſtian Cabot's country.

This company equipped three ſhips, under the command of Sir Hugh Willoughby, an Engliſh knight, and Richard Chancellour, vice-commodore, with orders to endeavour to find out a paſſage to the north-eaſt through the Tartarean ſea to China.

Theſe three ſhips purſued their voyage together, without any ſiniſter accident, till they came to the heighth of Wardhuis and Lapland, where Richard Chancellour was ſeparated from the reſt by foggy and ſtormy weather.

In the mean time Sir Hugh Willoughby, after he had been toſſed up and down for a long time, did at laſt (according to the diary writ by his own hand) viz. on the 14th of Auguſt, come to an anchor near a country ſituate under the 72d degree, which country ſince has been ſtiled in many maps, Sir Hugh Willoughby's country. From thence he purſued his voyage along thoſe coaſts, till the ſudden approaching winter obliged him to enter a certain harbour, there to paſs the winter. At laſt, he himſelf was found frozen to death, with the crew of his two ſhips, conſiſting of 70 perſons, in an obſcure harbour of Lapland, called Arcina Kecea, being diſcovered by ſome Ruſſian fiſhermen, who accidentally came that way. His corps being brought home and honourably interred in London.

The Engliſh ſhips trading to Muſcovy becoming thereby acquainted with thoſe northern coaſts, had obſerved a great number of ſea-horſes in thoſe ſeas: ſo that ſeveral ſhips were ſent out from England to catch them, chiefly for their teeth ſake, which were ſold at a very dear rate in Muſcovy.

It was in the year 1593, that the Engliſh ſent the firſt time their ſhips to catch thoſe ſea-horſes. They landed in an iſland, called by the Dutch the iſland of Bears; by the Engliſh, Cherry-Iſle, from one of the chief directers of their company. The ſea-horſes are in great numbers thereabouts, of which they killed a great many, kept their teeth and made oil out of their fleſh. Which trade they continued with great advantage for ſeveral years after.

But in proceſs of time the ſea-horſes began to be ſhy, that as ſoon as they perceived any men they got into the ſea, which rendering the catching of thoſe beaſts the more difficult, and ſubject to great danger, the whales began to be purſued by the induſtrious mariners.

In the year 1612, the Engliſh ſent two ſhips more thither, who meeting with a Dutch veſſel which was ſent thither upon the ſame errand, they obliged them to return home without any booty.

The next following year, 1613, they purſued the ſame deſign with more vigour than before: for having obtained a patent from king James, forbidding all others, as well foreigners as natives (except the Muſcovia companies) to ſail to Spitſbergen; they equipped ſeven men of war, wherewith they chaſed the Dutch, French, thoſe of Biſcay, and even the Engliſh themſelves that were interlopers, from thence.

In the year 1614, the Dutch and Zelanders appeared near Spitſbergen with eight ſtout veſſels, under convoy of four frigates of 30 guns each: ſo that the Engliſh, who were but 15 ſtrong, durſt not enter into diſpute with them at that time. The ſame happened the next following year, 1615.

In the next following two years the Engliſh had the better of the Dutch; but in the year 1618, the Zelanders came with a ſtrong ſquadron, and diſputing the preference with the Engliſh, plundered their ſhips, and forced them to retreat.

The conteſt betwixt theſe two nations continued for ſome years after, till both ſides being weary of it, the paſſage thither was left free and open to all nations.

Spitſbergen is the moſt northern part of the world, which hitherto is come to our knowledge, being ſituated betwixt Nova Zembla and Greenland, and extends from 76 to the 80th degree. It is called Spitsbergen from its high and piqued mountains which are ſeen at ſea. Theſe mountains are of a coarſe ſand, intermixed with ſmall flat ſtones like our ſlates, and conſequently have no firm bottom.

The country itſelf is uninhabited, but affords three ſeveral kinds of four leg'd beaſts, viz. white bears, not inferior in bulk and ſtrength to our oxen, they live for the moſt part upon the ice. Beſides theſe, there are likewiſe foxes here, grey, white and black; and rein-dear, ſomewhat ſmaller than a ſtag, but very like them in ſhape, and every thing elſe, only their horns are not ſo ſmooth. Their food is a certain green moſs, inclining to a yellowiſh colour, which ſprouts out among the ſand and ſtones, being for the reſt not unlike that which grows upon trees. Some are of opinion, that deeper in the country there grows ſome graſs: and probably there may be ſome hot ſprings there, and perhaps alſo ſome grounds not ſo much expoſed to the ſnow, which affords ſome ſuſtenance in winter to thoſe beaſts.

In the beginning of June, when the foreign ſhips commonly make their firſt appearance on theſe coaſts, the country all over (as far as one can ſee) covered with ſnow; and the rein-deers are ſo lean, that they can ſcarce hang together; but in ſix weeks after, when the ſnow is melted away, they thrive to that degree, that they have two inches fat on their ribs. They do not fly from men, but rather meet them, and that ſo near, that ſometimes one may lay hold of them, or at leaſt cannot fail to hit them with a gun; at the noiſe of which the reſt diſperſe, but return ſoon after to the ſame place.

The country is exceeding cold; and though the whole ſummer is but one continued day, the ſun not going below the horizon for ſix weeks together; yet is this but a ſlender allay to the cold, which is there the more fierce, the more clear the ſky appears, as may be likewiſe obſerved with us in winter-time; the mountains eſpecially ſend forth ſuch cold damps as are intolerable. The air is frequently foggy here, to ſuch a degree, that one cannot diſcern any thing at the length of a ſhip; ſo that nothing but a thirſt after lucre could induce mankind to expoſe themſelves to ſo many inconveniences.

There are ſeveral kinds of whales in the frozen ſea, not to ſpeak here of ſome ſea-monſters, which are mentioned by ſome upon the very credit of the mariners who pretend to have ſeen them. The whales may be conveniently divided into the white and black ones. The black are again of two different kinds; for ſome have only one hole or pipe, and thoſe are all one ſort; out of the head of thoſe are taken the matter which is called by the apothecaries Spermaceti; others have two, and thoſe are again diſtinguiſhed by their different degrees of bigneſs. The biggeſt kind is called Grand Bay; the reſt are ſubdivided into five different ſorts, all which agree in this, that they have no fins on their backs. There is one kind which is never found without them, and for that reaſon has got the name of Fin-fiſh, but being a fierce beaſt, and commonly very lean, is not ſo much ſought for. The white whales are ſo called, becauſe their backs are covered with a number of white cockle-ſhells.

Every nation has its own ſtation or harbour, where they have fixed their coppers, huts, and other inſtruments, fitted for the boiling of the whale oil, which are always kept behind.

The manner of catching and killing of the whale is performed thus: As ſoon as they eſpy a whale, either from the ſhore or ſhip, they put out three ſhallops, manned with ſix men each, among whom is one, who being called the harponeer, is the perſon who is firſt to wound the whale with his harpoon. Thoſe three ſhallops row as faſt as poſſible they can after the whale, but muſt be very cautious they do

not come too near his tail; when they come pretty near him, they are as silent, and make as little noise with their oars, as possibly they can; for fear the whale should take to the bottom of the sea. When they are near enough, the harponeer of one of these shallops, who believes himself to set within reach, throws his harpoon at him with all his force; this harpoon is about three feet long, having on both sides hooks or notches to prevent its being torn out again, after it is once fixed in the body of the whale; it has a wooden handle, the better to balance it for the conveniency of throwing, and a line fastened at the end, which being about two hundred fathoms long, is laid in a vessel in the shallop; for no sooner the whale finds himself wounded, but with incredible swiftness he goes towards the bottom of the sea: so that the line smoaks, being rubbed against the side of the shallop, and would certainly take fire if the men did not constantly pour water upon it. There is also one whose business it is to take care that the line be not entangled: for if that should happen, they have nothing to do but to cut the line, or else it would overset the shallop. If they find one of these lines fall short, those of the next shallop furnish them with theirs, which they fasten to it: but all this would stand them in little stead, if the nature of this fish were such as to abide long under water; whereas after he has run some hundred fathoms deep, he is forced to come up again to take breath, at which time he sends forth such a terrible sound through his pipes, that it may be heard at half a league distance, though some make a much greater noise than others. As soon as the fish appears upon the surface of the water, the shallops pursue him, being directed by the line which shews them the way. The harponeer, who comes first nearest to him, throws another harpoon into his body, which makes him once more take towards the bottom, but after he comes up again the second time, they do not make any further use of the harpoons, but of certain small pikes, not unlike a lance, of which there are two sorts, throwing-lances and pushing-lances. The throwing-lances resemble an arrow, and are used much in the same manner, but have no hooks at the end; for they are thrown into the body of the whale, and drawn out again, the intention of which is to tire the fish by so many wounds, till they dare venture at him with pushing-lances; for whilst he is in his full strength no body dares come near him, for whatever he hits with his tail and fins, he batters in pieces, as has been seen sometimes in some shallops, which have been torn in flitters, and the men thrown up to a great height into the air. When they find him almost tired, and his strength considerably abated, they draw nearer to him, and make use of the other lances, which resembles our pikes; with those they wound him, but especially near the fins, where this creature is most sensible; and this they hold so long till they have hit his lungs or liver, at which time the fish spouts out a great quantity of blood through the pipes, which rises into the air as high as the mast; then they desist, and the fish finding himself wounded in so sensible a part, begins to rage most furiously, battering the sea and his body with his fins and tail, till the sea is all in a foam; and when he strikes his fins against his body, and his tail at the waves, it may be heard at half a league distance, the sound being no less than if a great cannon was discharged. This struggling affords so agreeable a spectacle to the beholders, that those who have seen it assure us, that they could never be tired with the sight of it. Whilst the whale is making his last efforts, the shallops are obliged to follow him sometimes for two leagues together, till having lost all his strength, he turns upon one side, and as soon as he is dead upon his back; then they draw him with ropes either on shore (if he be near Spitsbergen) or else to the ship, where he is kept so long till he rises above the water; for the first day he lies almost even with the surface of the water, the second, he rises about six or seven feet above it, and the third, sometimes as high as the hides of the ship. On board each ship there is one, whose business it is to open the fish, who after he has put on his garment for that purpose, cuts open his belly with a very large knife, which is not done without a roaring noise, and an intolerable smell sent forth from the entrails of this beast; but notwithstanding, the man proceeds in this business, separating the flesh from the bones by pieces of two or three hundred weight, which are conveyed thus either on shore, or on board the vessel, where they are cut again in smaller pieces.

The tail of this creature serves for a hacking-block, being so very nervous and strong, that it exceeds any wood whatsoever for this use. Being thus cut into small pieces, those who have their settlements at Spitsbergen, extracts the oil immediately by boiling it on shore, which being put into barrels, is thus transported to the respective places to which the ships belong. But those who want this conveniency, and go only on board to catch the whales in the open sea, are forced to put up these pieces in barrels, which they carry home, and boil them after the same manner as they do at Spitsbergen; but this is of less value than the other, as having a very disagreeable scent.

The whale, when full grown, is of a most enormous bulk, and produces besides spermaceti, many puncheons of oil. Another valuable part is the whale-bone, which is sold to great advantage. This fish is viviparous, the female bringing forth her young like quadrupeds.

Greenland is called that country lying to the utmost point of the north, which extends from south to east, from Cape Fare through the Mare Glaciale, or Frozen Sea, as far as Spitsbergen and Nova Zembla. Some are of opinion, that it joins to Great Tartary, but without any certain reason. To the east it borders on the Frozen Sea; to the south upon the ocean; to the west upon Hudson's Streights, by which it is separated from America, and its bounds to the north are unknown hitherto. Some are of opinion that it is on the same continent with America, because the supposed streights, called Davis's Streights, have since been found to be no more than a bay; but Captain Monk, who attempted the same passage, gives us no great reason to believe that it is separated from America, as will plainly appear from his own relation.

A certain Norweigian gentlemen of considerable quality, called Torwald, and his son Erick, having committed several murders, were forced to fly to Ireland. Torwold died soon after, and his son Erick, surnamed Red-Hair, being of a turbulent spirit, and being prosecuted on the account of another murder committed there, went to sea in quest of a country, which lying west off of Ireland, was called Gundebiurn; he was not long at sea before he discovered two promontories, one of which jetted out into the sea from the continent, the other from an island very near to the shore. The promontory on the island was called Witsercken, that on the continent Warf: betwixt both is a good bay, where there is safe riding at anchor: unto this he gave the name of Sand Stafn. The promontory of Witsercken exceeds the other both in height and circumference. Erick Red hair called this promontory of the island Muckla Jockel, which is as much as to say, the Great Ice Shoal; afterwards it got the name of Blowsercken, which is as much as Blue-shirt; and lastly it was called Witsercken, or White-shirt, questionless from the colour of the ice and snow, which covers a great part of it all the year round. Erick's first landing place was in the isle which he called Ericksun, where he passed the first winter.

The next spring he passed over to the continent, where meeting with some grass he gave it the name of Greenland, the place where he landed was called by him Ericsforden, near which he built a castle, called Osterburg. About the fall of the leaf he built another towards the west, unto which accordingly he gave the name of Westburgh. The next winter he passed

over to Erickſun, and the following ſummer again to the north of Greenland, where he met with great rocks, which he called ſnowrocks; and not far from thence found a good harbour, to which, by reaſon of the great number of ravens he ſaw thereabout, he gave the name of Ravensforden. This harbour lies directly north from Ericksforden, which is to the ſouth, being ſeparated from one another by a branch of the ſea.

Erick, after he had continued three years in thoſe parts, took a reſolution to go over into Iceland, where he gave ſuch an advantageous account of the good paſturage, and plenty of cattle, fiſh and fowl of his new found country, that a great many of the inhabitants embarked themſelves to follow him into Greenland.

The Daniſh chronicle aſſures us, that the poſterity of Erick and his followers multiplied conſiderably in Greenland; and that, advancing deeper into the country, they met with fertile ground, good paſtures, and ſprings of freſh water. They divided it into eaſtern and weſtern Greenland, according to the ſituation of the two before mentioned caſtles. In the eaſtern Greenland they built a city called Garde, whither the Norwegians uſed to come every year to traffic with the inhabitants. Afterwards they built another city, unto which they gave the name of Alb, (and being great zealots) laid the foundation of a monaſtery dedicated to St. Thomas, at a ſmall diſtance from the ſea-ſhore. The city of Garde was the epiſcopal reſidence, where the cathedral was dedicated to St. Nicholas, the patron of ſea-faring men.

In the year 1343, whether it is that the people were ſwept away by ſome epidemical diſtemper, or from what other cauſe is uncertain, the connexion with Greenland (commonly called Old Greenland) was loſt, and ſome affirm, the country itſelf has never been found by any European.

Chriſtian IV. King of Denmark, being deſirous to find out a paſſage between Greenland and America, to facilitate the voyage to the Eaſt Indies; ordered one Captain Monck, a perſon of great bravery, to ſail with two ſtout ſhips to the Streights, which were not many years before diſcovered by one Mr. Hudſon, an Engliſhman.

This Mr. Hudſon having been ſeveral times before on the northern coaſts, was at laſt prevailed upon by ſome Engliſh merchants to try his fortune, whether he could find out a paſſage between Greenland and America to the Eaſt Indies; accordingly he ſet ſail from England with one ſhip only, in the year 1610, and paſſing along the coaſt of Greenland, was, what with the fogs, and what with ſtorms forced into a ſtrait paſſage, which at laſt brought him into an open ſea, which made him begin to conceive certain hopes that he had been ſo fortunate as to be the diſcoverer of the ſaid paſſage. But after he had, for a conſiderable time, cruiſed up and down this ſea, without being able to diſcover the deſired paſſage, he reſolved (contrary to the opinion of the reſt) to paſs the winter thereabouts, though he was not ſufficiently ſtored with proviſions for ſo long a time; and they muſt inſallibly have periſhed for want of food, if they had not met with ſeveral ſorts of birds, and among the reſt with white partridges, of which they catched above an hundred dozen; and theſe leaving that part of the country towards the ſpring, they were in their ſtead ſupplied with ſwans, ducks, geeſe, and other ſuch like water-fowl, which were eaſily catched. Beſides, they met with a certain tree there of a miraculous nature, its leaves being green, inclining to yellow, had a ſtrong taſte of ſpice, and being boiled, afforded a balſamic oil; the decoction itſelf being a preſent remedy againſt the ſcurvy, the ſciatica, and other diſtempers occaſioned by cold and viſcous humours. The approaching ſpring furniſhed them with ſuch ſtore of fiſh, as would be ſufficient to freight the whole ſhip, if Mr. Hudſon had not been more intent upon his intended diſcovery than any thing elſe; which however, not being able to effect, he ſaw himſelf under the neceſſity of bending his courſe back to England. In the mean while there happened a mutiny againſt the captain, carried on by one Green, his clerk; who being educated by him, but by reaſon of his miſbehaviour was threatened, as well as ſome other of the ſhips crew who had been wanting in their duty, and dreading the puniſhment, forced his cabin, from whence they took him and his ſon, and putting them and ſeven more in a ſhallop, committed them to the mercy of the ſea. One Philip Staff, a carpenter and a good ſeaman would not ſtay behind with thoſe villains, but choſe rather to go along with his captain. What became of them is wholly unknown, though it is probable they either periſhed for want of food, or elſe were murdered by the ſavages. The ſame fate attended the ring-leaders of this mutiny, who were ſlain by the ſavages; the reſt arrived not till the following year 1611, on the 6th of September, in England, after they had ſuffered ſeverely for want of proviſions, being forced to live upon graſs, and the ſkins of birds, the fleſh they had eaten long before.

To return to Captain Monck, who ſet ſail from the ſound with two ſhips, one manned with forty-eight men, the other with ſixteen, on the 16th of May, in the year 1619. He arrived on the 20th of June near Cape Farewel, being very rocky, covered with ice and ſnow, and ſituate under ſixty-two and a half degrees. From thence ſteering his courſe to the north-weſt towards Hudſon's Straits, he was much incommoded by the ice, which however, did him no conſiderable damage, he having ſea-room enough. Among other accidents that befel him, it froze ſo violent on the 18th of June at night, and the winds blew ſo hard and cold, that his ſails were rendered uſeleſs by reaſon of the ice that adhered to them; yet the following day proved ſo exceſſive hot in the afternoon, that they were forced to lay by their cloths, and go in their ſhirts only.

He did not arrive at Hudſon's Straits till the 17th of July, which he called after the king of Denmark, Chriſtian's Straits. His firſt landing was in an iſland directly oppoſite to Greenland; and having ſent ſome of his people to take a view of the country, they found no men, but by their footſteps, were convinced there were ſome in the iſland. The following day they ſaw ſome of the ſavages, who ſeemed to be ſurprized at the ſight of the Danes, hid their arms behind a great ſtone heap, and then advanced towards them in a friendly poſture, but kept continually a watchful eye upon their arms, for fear the Danes ſhould come too near them. Notwithſtanding which, they found means to get between them and their arms, which they ſeized. The ſavages ſeemed to be exceedingly troubled at this loſs, and in a humble manner begged the Danes to have them reſtored, without which, they were not able to ſubſiſt, hunting being their only livelihood. They offered to exchange their cloaths for them, which moved the Danes at laſt to compaſſion; ſo that they not only gave them back their arms, but alſo preſented them with ſeveral toys, which they received very thankfully, and in lieu of them brought the Danes ſeveral ſorts of fowl and fiſh. One among them having got a ſmall looking-glaſs, and ſeeing himſelf in it, was ſo over-joyed, that he put it into his boſom, and run away as faſt as his legs could carry him. The Danes laughed heartily at his ſimplicity; but what diverted them moſt was, that they perceived ſome of theſe ſavages to make their court-ſhip, after their way, to one of their ſhip's crew, who having long black hair, and being of a ſwarthy complexion, with a flattiſh noſe, they took him for one of their countrymen, who perhaps had been carried away from Greenland ſome time before; which often furniſhed them afterwards with matter of laughter, ſo that the poor fellow was always jeered as long as the voyage laſted.

On the 19th of the ſame month, Captain Monck ordered the ſails to be hoiſted up in order to leave this iſland, but was forced to return into the ſame harbour by reaſon of the ice, which obſtructed his paſſage. In the mean time they left nothing unattempted to find out

ſome of the inhabitants, but in vain; they found ſome nets ſpread near the ſea-ſhore, on which they hung knives, looking-glaſſes, and other ſuch like toys, in hopes to allure them to the ſea-ſide; but no body appeared, whether out of fear of the Danes, or becauſe they were commanded to the contrary by their ſuperiors, is uncertain.

Captain Monck being diſappointed in his hopes of meeting with the inhabitants, ordered a wild rain-deer to be ſhot, of which there were great numbers there; wherefore he gave the name of Reenſund to the iſland, and to the harbour that of Monckepes, being ſituated under 64 degrees 20 minutes; and after he had planted the Daniſh arms there, he once more left the iſland on the 22d of July, but met with ſuch bad weather, and ſo many great ice ſhoals at ſea, that on the 28th of the ſame month, he was forced to ſeek for ſhelter between two iſlands, near one of which he came to an anchor; but finding it unſafe to continue there, he brought his ſhips as near ſhore as poſſible he could, ſo that at low water they lay upon the ſand, and the high tide carried ſuch a prodigious quantity of ice to the ſhore, that they were in no ſmall danger, if by their induſtry they had not prevented it. There was a great ice-ſhoal near fifty feet thick, which being looſened by the violence of the ſea, carried all before it, and among the reſt their ſhallops, which narrowly eſcaped ſinking.

They ſaw ſeveral footſteps of men on ſhore, a ſign that the place was not deſtitute of inhabitants; but whatever care they took, they could not get ſight of any. They alſo found there ſome mineral ſtones, and very good talck, of which they carried off ſeveral tun weight. There were ſeveral other ſmall iſlands thereabouts, but the ſea ran ſo high near the ſhore, that the Danes did not venture to land. Theſe iſlands are ſituated under 62 degrees 20 minutes, about fifty leagues within Hudſon's, or as Monck calls it, Chriſtian's Streights. The bay where he came to an anchor in, he called Hareford, from the great number of hares they met with there. He again he ſet up the arms of Denmark, and the initial letter of his maſter, viz. C. IV. ſignifying, Chriſtian IV.

He ſet ſail again from this place, on the 9th of Auguſt, with a north-weſt wind, ſteering his courſe weſt ſouth-weſt, and on the 10th came to the ſouth of the ſtraits of America, and caſt his anchor near a large iſland, unto which he gave the name of Snow Iſland, becauſe it was all covered with ſnow.

On the 20th of Auguſt, he directed his courſe to the north-weſt, being then, (as his own diary teſtifies) exactly under the elevation of 62 degrees 20 minutes; but there fell ſo much ſnow, and the wind blew ſo violently, that they could ſee no land, though the ſtreights were not above ſixteen leagues over thereabouts. After having paſſed the ſtreights, he got into Hudſon's ſea, which he furniſhed with another name, or rather gave it two names inſtead of one. For that part of it which waſhes the American ſhore, he called Mare Novum, or the New Sea. To the other part which extends to Greenland, (if it be really Greenland) he gave the name of Mare Chriſtianum, or Chriſtian's Sea. He continued his courſe weſt north-weſt, till he came to 63 degrees 20 minutes, when finding himſelf ſurrounded on all ſides by the ice, he reſolved to paſs the winter there; the harbour he called Monck's Winter Harbour, and the country New Denmark. In his relation, he only makes mention of two iſlands in the Chriſtian Sea, which he ſtiles the Two Siſters; and in the New Sea but one, called Dichles Oeland.

He adviſes thoſe who undertake the voyage through theſe ſtreights, to keep as much as poſſible in the middle, to avoid being carried away by the ſtormy tides, and the great ice-ſhoals, which are of ſuch a thickneſs, there, that if a ſhip happens to get between them, it ſeldom eſcapes. He ſays that it flows exactly five hours in the Chriſtian Sea, the tide being regulated by the moon.

On the 7th of September, Captain Monck caſt anchor there; and after his people had refreſhed themſelves for ſome days, he ordered them to bring the ſhips into a little creek, where they were ſheltered againſt the violence of the winds and ice. The next thing they had to do was to provide themſelves good huts againſt the approaching winter ſeaſon. This harbour lay near the entrance of the river, which was not frozen up in October, though the ſea was full of ice all round about.

On the 17th of the ſame month Captain Monck had a mind to go up the river in a boat, but could not go farther than about a league and a half, by reaſon of the cataracts, or rocky water-falls, that oppoſed his paſſage: he then marched with ſome of his men about four leagues deep into the country, to ſee if he could meet with any of the inhabitants; but no body appearing, he reſolved to return another way. Here he met with a certain ſtone, raiſed above the ground, upon which was painted an image reſembling the devil, with claws and horns; near this ſtone was a place about eight feet ſquare, incloſed with leſſer ſtones.

On one ſide of this incloſure there lay a heap of ſmall flat ſtones, intermixed with moſs of trees; on the oppoſite ſide was a large flat ſtone laid upon two others in ſhape of an altar, upon which they found three coals laid acroſs. They ſaw ſeveral more of theſe altars, as they walked about, and ſome foot-ſteps of men near each of them; though they did not come in ſight at that time. It is very likely that the inhabitants uſed to ſacrifice upon thoſe altars, either with fire, or perhaps offer their ſacrifices to the fire itſelf; for round about them they ſaw abundance of bones, which were probably the bones of the ſacrificed beaſts, whoſe fleſh the ſavages had devoured raw, according to their cuſtom. They met alſo with many trees cut down to the roots with iron inſtruments, and with dogs that were muzzled. But what moſt confirmed them in their opinion, that this iſland was not deſtitute of inhabitants, was, that in many places they could diſcover the holes where they had fixed the poles belonging to their tents, and found many pieces of ſkins of bears, wolves, dogs, and ſea-calves, wherewith they uſed to cover them; which ſeemed to intimate, that the inhabitants here led a vagabond life, like the Tartars and Lapponians.

After the Danes had planted their huts, they cut good ſtore of wood to be laid up for the winter, and killed abundance of wild-fowl. Captain Monck killed a white bear with his own hands, which they eat; and he ſays expreſsly, that it agreed very well with them. They catched abundance of hares, partridges, and other fowl, beſides four black foxes, and ſome ſables.

On the 27th of November, there appeared three ſuns to them, and on the January following, two. On the 10th of December old ſtile, there happened an eclipſe of the moon, which they ſaw about eight o'clock at night, after which they ſaw the ſame night the moon ſurrounded with a very bright circle, through the middle of which, was a croſs, which divided the moon in two.

The cold began to increaſe with the winter ſeaſon to ſuch a degree, that they ſaw ice of three hundred feet thick; no beer, no wine, or brandy, was ſtrong enough to be proof againſt it, but froze to the bottom, and the veſſels ſplit in pieces; ſo that they cut the frozen liquor with hatchets, and melted it before the fire, previous to their drinking it. If they happened to leave any quantity of water in their copper or tin veſſels, they found them all in pieces the next morning; neither were the poor Danes able to reſiſt ſo exceſſive a froſt, which maſtered the metals, for they all fell ſick, and their ſickneſs increaſed with the cold; they were generally ſeized with a griping looſeneſs, which did not leave them till it put an end to their days. Thus they dropt away one after another; ſo that about the beginning of March, the captain was forced to do duty as a centry, for want of

others.

others. The worſt was, that the ſpring did augment their diſtemper, for their teeth were ready to fall out, and their gums ſwelled to that degree, that they could not take any nouriſhment but bread ſoaked in water. The poor remnant of theſe unfortunate wretches were in the next following May ſeized with another looſeneſs, with ſuch violent pricking pains in their limbs, as made them look like mere ſhadows, their arms and legs being quite lame, and full of blue ſpots, as if they had been beaten, being a diſtemper not unknown to ſeamen, by whom it is commonly called the Scurvy. So many of them died, that there were not enough left to bury them, the reſt being likewiſe ſick and weak, and to complete their miſery, they began to want bread, inſtead of which they made uſe of raſberries, which they digged out from under the ſnow, which ſupplied the defect of bread, but they were forced to eat them as ſoon as they were taken from under the ſnow, where they kept freſh, but ſoon grew uſeleſs afterwards.

On the 12th of April it rained the firſt time after ſeven months; and towards the end of May there appeared again all ſorts of fowl, ſuch as wild geeſe and ducks, ſwans, ſwallows, partridges, ravens, ſnipes, faulcons, and eagles, but they were too weak to catch them.

On the 4th of June Captain Monck himſelf fell ſo dangerous ill, that he took no food for four days together, and expecting nothing leſs than preſent death, he made his laſt will, in which he deſired thoſe that might by chance come to this place to bury his corpſe, and to ſend the diary of his voyage to the king of Denmark. After four days were paſt he began however to recover a little, and with much ado got out of his hut, to ſee whether there were any of the ſhip's crew left alive, of whom he found no more than two out of ſixty-four perſons he brought along with him. Theſe two being overjoyed to ſee their captain in a condition to ſtir abroad, took him in their arms, and carried him to a fire, to refreſh his ſpirits. They now began to encourage one another, promiſing to ſtand by one another to the laſt gaſp. They digged every where among the ſnow, till at laſt they met with a certain root, which being both a reſtorative and food to them, they were reſtored in a few days. The ice now began to melt a pace, ſo that on the 18th of June they catched ſome ſalmon, and other fiſh, which, with what exerciſe they uſed in hunting, ſo ſtrengthened them in a little time, that they reſolved to return to Denmark.

The ſummer ſeaſon approaching, they were extremely peſtered with gnats, which made them haſten their departure; ſo that on the 16th of July they went on board their leſſer ſhip, (leaving the biggeſt behind) and ſteered their courſe towards Monck's Harbour; they were much incommoded by the ice, and loſt their boat and rudder. Whilſt they were buſy in making a new one, they faſtened their ſhip to an ice-rock, which being looſened by the tide, their ſhip was carried away with it; but the ice being melted ſoon after, they got clear again, and met with their boat which they had loſt ten days before. It was not long before they got faſt within the ice once more; but the weather changing almoſt every day, they were ſoon releaſed again. Having at laſt repaſt the ſtreights, they ſailed by Cape Farewel into the ocean, but were, on the 8th of September, overtaken by a moſt terrible tempeſt, which threatened no leſs than their total deſtruction, they being quite tired out and not able to manage their ſhip; ſo that leaving themſelves to the mercy of the winds, they loſt their mainmaſt, and their ſails blew over-board, which however they made a ſhift to ſave.

In this condition they were forced upon the coaſt of Norway, where they caſt a piece of an anchor (the only one they had left) in a ſmall creek, where they hoped to ſhelter themſelves againſt the ſtorm, but found themſelves deceived in their hopes, for they were in moſt eminent danger of being daſhed to pieces againſt the rocks, if by good fortune they had not got between them and the ſhore, where after they had refreſhed themſelves for ſome days, they purſued their voyage, and arrived at laſt in Denmark.

Captain Monck had no ſooner ſet foot on ſhore, but he went to Copenhagen to give the king an account of his unfortunate voyage, who not imagining him to be ſtill among the living, received him with all imaginable marks of his favour.

Thus we have ſeen the brave Captain Monck return to the Daniſh ſhore, which, as might reaſonably be ſuppoſed, would put an end to all his ſufferings; but it ſeems his ill deſtiny had preſerved him for more, which was to put an unhappy period to the life of this brave man.

For whilſt he was in Denmark, he uſed often to ruminate upon his paſt adventures; and being by degrees convinced of what had been the chief cauſe of his miſcariage in his voyage through the ſtreights, he took a reſolution to try his fortune once more, in which he hoped to ſupply the defects of the former, which aroſe from a want of a proper knowledge of thoſe ſeas, and ſome other circumſtances. Accordingly he propoſed his deſign to ſome perſons of quality, who approving of it, equipped two ſhips, which he was to command in chief.

Having provided himſelf with all neceſſaries for ſuch a voyage, he was ready to ſet ſail, when (as ill fortune would have it) the king ſent for him, and happening, among other things, to ſpeak of his former unfortunate voyage, told him, that he had loſt two ſhips by his want of conduct, which the captain anſwering ſomewhat haſtily, the king took his cane and puſhed it with anger againſt his breaſt. The captain took this affront ſo heniouſly, that he immediately went home to bed, and could not be perſuaded to take the leaſt nouriſhment: ſo that in ten days after he died for melancholy, and want of food.

It may be neceſſary to take notice, that for a ſucceſſion of years, before the voyage above-mentioned was undertaken, ſeveral Daniſh monarchs had at heart the making a new ſettlement in theſe parts.

Chriſtian II. had obliged himſelf by his coronation oath, to endeavour the recovery of Greenland; but inſtead of bringing new acquiſitions to the crown, he loſt both the crowns of Sweden and Denmark, being depoſed by his ſubjects, which is the reaſon he is always painted with a broken ſceptre.

Under his reign one Erick Walckendor, a brave Daniſh lord, was lord chancellor of Denmark, who being after his maſter's diſgrace conſtituted biſhop of Druntheim in Norway, bent all his thoughts on the recovery of Greenland. For which reaſon he ſearched all the antient records, and adviſed with the oldeſt and ableſt mariners, who were ſuppoſed to have any knowledge of that country; but whilſt he was laying the foundation of this deſign, a quarrel aroſe between him and another great lord in Norway, in the year 1524, who being too powerful for him, procured his baniſhment to Rome, where he died. Fredrick I. Chriſtian's uncle, being got into the poſſeſſion of the two kingdoms of Denmark and Norway, was buſy in proſecuting thoſe whom he believed to have the leaſt kindneſs for Chriſtian, which made him encourage the baniſhment of Walckendor, who was thereby diſabled from proſecuting his deſign of the recovery of Greenland.

Chriſtian III. who ſucceeded Fredrick I. attempted the diſcovery of Greenland, but without ſucceſs, which made him recal the ſevere prohibition of going to Greenland without licenſe. But Norway at that time being reduced to great poverty, and not in a condition to undertake ſuch a deſign, this remedy proved likewiſe ineffectual.

King Fredrick II. ſucceeded his father in the throne, and being willing to endeavour the recovery of Greenland, ſent one Magnus Henningſon to proſecute this deſign. If what is related in the chronicle may be taken for authentic, there muſt be ſome fatality which prevented the diſcovery of Greenland at that time; for this Henningſon, after he had been toſſed up and

down at sea by tempests, for a long time, came at last in sight of the shore; but to his great amazement found his ship to stop in the open sea, where there appeared neither ice nor sands; so that after he found all his endeavours of getting near the shore to be in vain, he was forced to return to Denmark, where he gave an account to the king of what had befallen him, and laid the fault of his miscarriage upon the magnet stones, which he believed to be in prodigious quantities thereabouts, in the bottom of the sea.

Previous to this, in the year 1577, Martin Forbisher, an Englishman, had made the first discovery of that country, which is now called New Greenland, and because his account contains many remarkable things concerning the inhabitants and their manners, we shall give the reader some of the most material passages of it here.

This Martin Forbisher set sail from England in the year 1577, to endeavour the discovery of Greenland, which he got sight of at last; but by reason of the great quantities of ice, and the approaching winter, not being able to reach the shore, was forced to return home, where he gave an account of his voyage to Queen Elizabeth, who then swayed the sceptre in England.

The queen sent him the next following spring with three other ships, to pursue the former design, when he got safely to Greenland. But the inhabitants, at the approach of the English, leaving their huts, retired among the rocks, from whence several precipitated themselves into the sea.

The English, after they had in vain endeavoured to mollify these savages, went to their huts, which were tents made of the skins of sea-calves and whales, fixed to strong poles, and sewed together with the sinews of beasts; they had an opening towards the south and west, but were closely and very artificially joined together to the east and north, the better to defend themselves against the coldness of those winds. They met with no living creature there except an old woman, with a child in her hand, which they took from her, and she made a most miserable outcry for the loss of it.

From thence they sailed along the coast, where they saw a sea-monster's head above the water, with a horn about three or four feet long. They landed again, and found the surface of the earth rocky, but very good ground beneath it; they also met with great store of glittering sand like gold, of which they took 300 tons along with them.

They used their utmost endeavours to enter into discourse with the savages, who seemingly shewed no great aversion to them, and gave them to understand by certain signs, that if they would row up higher in the river, their expectations should be answered. Accordingly Martin Forbisher got into a boat with some soldiers, and having ordered his ships to follow him, went up the river, and seeing a great number of the savages posted among the rocks, he did not think fit to expose himself by approaching too near the banks. At last, three among them, who appeared something better than the rest, having made a signal for him to land, he resolved to do it, all the rest being at a considerable distance: but his boat scarce touched the bank of the river, when the savages began to appear in great numbers, which made him soon choose the stream again.

The savages endeavoured to persuade them by signs to come on shore, throwing them some raw flesh. But finding the English suspicious, they resolved to draw them thither by the following stratagem: they laid one of their men upon the bank, who pretending to be lame, they supposed the English would come to take him, whilst they pretended to be retired at a farther distance, being all out of sight behind the adjacent rocks. But the English being aware of the snare, discharged a gun at him, which made him soon recover his legs; and the savages coming to his assistance, pelted the English in the boat with stones and arrows, but were soon dispersed by their guns.

The savages are very strong and well set, of an olive colour; their cloaths being made of the skins of sea-calves, sewed together with the sinews of beasts. The womens apparel is not different from that of the men, for they wear breeches, with many pockets in them, in which they carry their knives, needles, yarn, and looking-glasses, which they either get from strangers, or else are cast on shore by the sea. Their faces are painted with blue, and some let their hair grow very long, hanging down over their shoulders untwisted. Their shirts are made of fish guts, sewed together with sinews; their garments loose fastened about their middle with a girdle; they are naturally very nasty, and freely expose their privy members. All their riches consist in their slings, bows, arrows, and boats. Their bows are very slender, and their arrows thin, tipped at the end with a pointed bone or horn; they manage them with great dexterity, and hit the fishes as they are swimming in the water. Their boats are covered all over with the skins of sea-calves, and fitted only for a single person. Their larger vessels are made of wood, and covered with the skins of whales, they are big enough to contain 20 men at a time. Their sails are made of the same materials with their shirts; and notwithstanding there is not the least iron-work about them, are so strong, that the savages venture very deep with them at sea.

No venomous things are to be found here unless spiders; and the gnats are very busy in the summer time; they have no fresh springs, but this defect is supplied by the melted snow. They have dogs of a prodigious bigness, which they use before their sleds instead of horses.——But to return to Denmark.

Among all the Danish kings, no body had been more zealous to promote the discovery of Greenland than King Christian IV. for which purpose he sent for an expert seaman, out of England, who being acquainted with those seas, he gave him three ships under the command of Gotske Lindenau. They set sail from the Sound in the year 1605, in the summer, and continuing their course for some time together, the Englishman at last turned to the south-west to avoid the ice, whilst the admiral steered his course north-east, and safely arrived at Greenland. He had no sooner cast anchor near the shore, but the savages came with their boats all about his ship, and were welcomed with some wine, which however they did not relish very well; but seeing some oil of whales, they begged some of it, which being given them, they drank it off very greedily.

They had brought along with them good store of skins of bears and sea-calves, and several pieces of the sea unicorn, which they exchanged for needles, knives, looking-glasses, and such other toys. They did not seem to put any value upon gold or silver, but were extremely fond of iron, for which they would exchange their bows, arrows, boats, oars, nay their shirts.

The admiral Golske Lindenau tarried three days on this coast, but durst not venture on shore. On the 4th day being ready to set sail again, he detained two of the savages, who happened to be on board of him, and were so outrageous that they were forced to bind them; the rest seeing their companions in danger of being carried away, made a most hideous outcry, and shot at the Danes with their arrows, but were soon put to flight by the discharge of a cannon, after which the admiral returned home to his own country in safety.

The Englishman had in the mean while landed on the other side of Greenland, where he met with several good harbours, and plenty of pasturage. The savages exchanged their commodities with him, as they had done with their admiral, but seemed more mistrustful; for no sooner had they got any thing from the Danes, but they went away in all haste to their boats, as if they had stolen it.

The Danes being desirous to take a view of the country, went on shore well armed, and met with

good

good grounds, but rocky like Norway. The ſmell of ſulphureous vapours, ſeemed to intimate that there were ſulphureous mountains, not far from thence. They found alſo a certain ſilver oar, of which they carried a great quantity into Denmark, a hundred weight of which, yields about twenty ounces of ſilver. As they were returning to their ſhip, they took four ſavages, one of whom was ſo refractory, that they were forced to knock him down with the but-ends of their muſquets, which frightened the others into a more pliable temper. But the ſavages having taken the alarm, purſued the Danes to relieve their companions, and had found means to cut off their paſſage to the ſhip: but by the help of their fire arms, and the great cannon from the ſhip, they ſoon cleared their way, and got ſafely on board with the other three ſavages, whom after their return into Denmark, they preſented to the king: they were found better proportioned, and more civiliſed than thoſe that were brought over by Lindenau, who ſailed again in 1606, taking with him the ſame three blacks, one of whom died by the way.

Lindenau taking the ſame courſe the Engliſhman had done, arrived on the third day of Auguſt, with four ſhips in Greenland, the fifth being ſeparated from them by a ſtorm. The ſavages appeared in great numbers near the ſea-ſide, but were as miſtruſtful of the Danes, as they were of them, which made them ſail in queſt of another harbour, which they reached ſoon after, but found the ſavages of the ſame temper with the others, and appeared in a poſture to fight them if they ſhould attempt to land.

The Danes, who by reaſon of the great number of ſavages, thought themſelves no equal match for them, ſailed along the coaſt; and the ſavages would follow them at ſome little diſtance in their boats, of whom they took ſix, and then carried them together with their boats and oars on board their ſhips.

As they were riding at anchor one day in a certain ſmall bay, the Admiral Lindenau's gentleman, very earneſtly deſired his maſter to give him leave to go on ſhore, to try whether he could treat with the ſavages; which being granted at laſt, he went, but had ſcarce walked a few paces, when the barbarians falling upon him, cut him to pieces in an inſtant.

Their knives and cutlaſſes were made of unicorn, ſo ſharp edged, by wheting them againſt ſtones, that they cut as well as if they were made of the beſt ſteel.

Lindenau finding but little hopes to ſucceed in this enterpriſe, returned to Denmark. In his return he met with the ſame ſhip that was ſeparated from them before by the ſtreſs of weather; but another ſtorm ariſing ſoon after, they were again diſperſed, and did not meet again till near a month after, when they purſued their voyage to Denmark, and arrived at Copenhagen on the 5th of October, after a ſecond dangerous and troubleſome voyage.

The ſame king ſent a third time two ſtout ſhips to Greenland, under the command of Carſten Richartſon, a Holſteiner, who having on board ſome of the moſt experienced mariners of Norway and Iceland, ſet ſail from the ſound on the 13th of May, and got ſight of Greenland on the 8th of June, but could not approach the ſhore by reaſon of the ice, which lay heaped up like mountains, ſome leagues deep at ſea, for there are ſome years when the ice continues all the ſummer long without being melted; which obliged the Holſteiner, who had been ſeparated from the other ſhip, and was afraid of being entangled in the ice paſt retreating, to return to Denmark, where he, notwithſtanding his miſcarriage, was well received by the king.

The ſavages that were taken and brought into Denmark in the two firſt voyages, had liberty to walk about where they pleaſed, under the guard of ſome waiters. They lived upon milk, cheeſe, butter, raw fleſh and fiſh, according to their own cuſtom, being averſe to bread and boiled meat, but much more to wine, the oil of whales being their favourite liquor. They would frequently turn their faces to the north and fetch a heavy ſigh. One time their keepers being careleſs, they got to their little boats, and without more ado put to ſea, but by a ſtrong wind were forced twelve leagues beyond the ſound, on ſhore in Schonen, where being taken by the country people, they were ſent back to Copenhagen. This ſerved as a warning to their waiters to be better upon their guard for the future; but they pined themſelves to death one after another.

When a Spaniſh Ambaſſador was once ſent into Denmark, there being five of thoſe ſavages yet living, the king ordered that, for the diverſion of the ambaſſador they ſhould row up the ſea in their little boats: theſe boats were ſhaped not unlike a weaver's ſhuttle, being about ten or twelve feet long; they are made of whale-bones of an inch thick, joined together by the help of the ſinews of beaſts, and covered all over with the ſkins of whales, there is in the middle a hole big enough for one man to put his body in. Thus they go to ſea putting their legs underneath, and if any ſpace be left round their body, they ſtop it up with their jackets (which are made of the ſkin of ſea-calves) ſo tight that no water can enter, which done, they are proof againſt all ſtorms and tempeſts beyond what may be expected from ſhips of a conſiderable bulk; for though they are often times turned topſy-turvy, they always turn again upright. They make uſe only of one oar, which they manage with the ſame dexterity as the rope-dancers do their poles, to keep an even balance; and with this they row ſo ſwiftly, that (as it was tried at the ſame time) they could keep pace with a boat with ſixteen oars.

The ambaſſador extremely well ſatisfied with this ſpectacle, made each of them a very good preſent, with which they bought themſelves cloaths made after the German faſhion, and other accoutrements, ſuch as boots, ſpurs, and feathers, and afterwards offered to ſerve the king on horſeback. But this gay humour was of no long continuance, for the deſire of returning to their native country being ſoon revived, two of thoſe who had once before ventured to eſcape at ſea, and conſequently were not the leaſt miſtruſted of attempting ſo dangerous an undertaking a ſecond time, did once more attempt to reach Greenland in their boats. They were purſued with all ſpeed, but one was only overtaken, the other no doubt being ſwallowed up in the waves. It was obſervable in him who eſcaped, that whenever he ſaw a woman with a child in her arms, he uſed to fetch a deep ſigh, which made the Danes believe that he had left a wife and children behind him. The reſt were more narrowly watched, which ſerved only to increaſe their melancholly, of which they died one after another. There remained however at laſt two alive, who lived near twelve years after all the reſt of their companions were dead: they were cheriſhed with all the fair promiſes imaginable, which ſeemed to be ſome comfort to them; but they could never be brought to the true underſtanding of the Chriſtian faith, being quite ignorant of the Daniſh tongue. They were ſometimes obſerved to lift up their eyes towards heaven, and to adore the riſing ſun. One of them died whilſt he was employed in pearl-fiſhing, at Coldingen.

This Greenlander having given them to underſtand one day, that he was very dextrous in fiſhing of pearls, the governor of Coldingen took him along with him to make uſe of him upon that account, which the ſavage performed with ſo much dexterity, that he ſeldom returned without ſome good pearls. The governor, who was very avaricious, being over-eager after ſuch a booty, would not ſtay till the next ſpring, but forcing the poor ſavage to dive in the midſt of winter under the ice, he fell ſick and died. His comrade remaining now alone inconſoleable for the death of his companion, found means the next ſpring to get to ſea in his little boat unperceived by any body; he was however purſued with all ſpeed, but having

having the ſtart of them, was got 30 leagues out at ſea before he could be retaken. They gave him to underſtand by certain ſigns, that it would have been impoſſible for him to have reached Greenland, but that he muſt have periſhed among the waves, at which he made certain ſigns, that he intended to have run along the coaſt of Norway to a certain height, from whence he would have croſſed the ſeas, taking his direction by the ſtars. He was brought back to Copenhagen, where he died ſoon after with melancholly.

This was the end of theſe unfortunate Greenlanders, who approached in ſtature to the Laplanders, being well ſet, but ſhort, of a ſwarthy colour, with flat noſes and thick lips. Their boats, apparel, and other impliments, were kept at Copenhagen, as alſo a Greenland almanack, compoſed of twenty eight or thirty ſmall ſticks, faſtened to a leather ſtring, by which they uſed to diſtinguiſh their time.

Since that time the king of Denmark did not think fit to ſend any more ſhips at his own charge to Greenland, but ſome merchants of Copenhagen being joined in a company, (in which ſeveral perſons of quality had likewiſe a ſhare) called the Greenland Company, they ſent in the year 1636, two ſhips to Davis's Streights, where they were no ſooner come to an anchor, but eight ſavages came in their little boats on board of them. Whilſt they were buſy in laying out their ſea-calves and fur-ſkins, and ſeveral pieces of ſea unicorn, in order to exchange them with the Danes for needles, knives, and looking-glaſſes, it happened accidentally that a gun was diſcharged on board the ſhip, which put the ſavages in ſuch a fright, that they all leaped over board under water, and did not ſo much as put out their heads again till they were at leaſt 200 paces diſtant from the ſhip, but being given to underſtand by certain ſigns that they intended them no harm, they returned, and continued to traffic as before.

Their manner of dealing is thus: They chuſe among the European commodities what they like beſt, which being laid on one ſide, they lay down as much of theirs as they think fit to give in exchange, and this is continued thus till both parties are agreed. They ſaw at the ſame time a dead fiſh on the ſhore, with a bone, or rather a tooth on one ſide of his head, which the ſavages had broken in pieces, and ſold to the Danes. This fiſh is of a prodigious ſtrength, and a declared enemy of the whales, juſt as the rhinocers is to the elephant, among the tereſtial creatures; for if he meets the whale, he ſtrikes his horn into his ſide as deep as it will reach: ſome aſſure us, that it ſometimes runs with ſuch a force againſt the ſhips, that thereby it becomes leaky.

But the intention of the Danes was not ſo much to exchange commodities with them, as to take a full view of the country; and the mate of one of the ſhips having taken notice near a certain river where he landed, that the ſand reſembled both in weight and colour, true gold ſand, loaded his whole ſhip with it, and with great joy returned directly to Denmark, telling his ſhip's crew as they were under ſail, that now they were all rich enough. The lord high ſteward of Denmark, who had a conſiderable ſhare in the ſhip, being ſurpriſed at the ſudden return of this veſſel, the mate told him he was freighted with gold, which made the lord high ſteward ſend ſome quantity of it to the goldſmiths of Copenhagen, to try whether they could bring any quantity out of it; but theſe not being able to produce one grain from this ſand, he was ſo much exaſperated at this diſappointment, that he immediately commanded the mate to go out to ſea, and to throw his pretended gold ſand into the bottom of it, without ſpeaking one word more to any body. The poor mate was forced to obey, but with ſo much reluctancy, that finding himſelf diſappointed in the hopes of his ſuppoſed treaſure, he died ſoon after for grief.

It was not long before the lord high ſteward repented himſelf for his raſhneſs; for ſome ſand reſembling this, was found in the mines of Norway, from whence ſeveral perſons, well verſed in the ſeparation of metallick bodies, drew a quantity of very good gold, which ſeemed to prove that the diſappointment was owing to the unexperienced goldſmiths of Copenhagen.

In this voyage it was, they brought that piece of the unicorn from Greenland, which was to have been ſold to the great Duke of Muſcovy: it is ſtill to be ſeen at Copenhagen, and valued at 6000 crowns. The Danes had likewiſe taken two ſavages, whom they tied to the maſts till they were a great way out at ſea, when they were untied again; but they no ſooner found themſelves at liberty, but they leaped into the ſea, in hopes, as may be ſuppoſed, to reach the ſhore by ſwimming, which was impracticable for them to do, by reaſon of the great diſtance they were then from it.

It is moſt probable, that the ice from the north-weſt has quite ſtopped up the paſſage between Iceland and Greenland, and that whilſt the mariners were endeavouring to make their voyage through this paſſage, they were driven upon the Cape Farewel, and Davis's Streights, or rather gulph, and ſo diſcovered that part of the country, which now is ſtiled New Greenland.

We learn from the Iceland Chronicle, that between Iceland, and the Old Greenland, there were ſeveral iſlands and rocks; as for inſtance, that which they called Scheer Gundebior, which favours this opinion; it being eaſy to imagine that the ice might with leſs difficulty be heaped between theſe iſlands; which being of ſuch a thickneſs as not to be melted by the beams of the ſun, has rendered the ice between Iceland and Greenland, quite impaſſable; ſo that it is impoſſible to give an account of the poſterity of the antient Norwegians who ſettled there: perhaps they bore their ſhare in the plague which raged ſo furiouſly in Norway in the year 1348, and almoſt depopulated that kingdom. It is not altogether improbable, but that Gotſke Lindenau, who in his firſt voyage ſteered his courſe to the north-eaſt, may have caſt anchor near Old Greenland, and that perhaps theſe two ſavages were deſcended from the ancient Norwegians; but though they differed from the other ſavages that were brought over from Davis's Streights both in manners and language; yet theirs had not the leaſt affinity with the Daniſh or Norway tongues. The Daniſh Chronicle tells us, that the three ſavages brought over by the Engliſh, talked ſo faſt, that it was impoſſible for any body to diſtinguiſh one word from another, unleſs it were the two words, Oka, Indecha, the meaning of which no body underſtood. Thus much is unqueſtionable, that what was called Old Greenland, was no more than a ſmall point of the northern part of Greenland, viz. where it lay neareſt to Iceland; and that the ancient Norwegians durſt not venture very far into the country, no more than thoſe who have ſince diſcovered the New Greenland.

The Danes, in their beforementioned voyage to Greenland, in the year 1686, did, by certain ſigns, inquire of the ſavages, whether there were any conſiderable number of inhabitants in the inland countries there, upon which the ſavages gave them to underſtand by ſigns, that there were as many people there as there were hairs upon their heads, that they were very tall, armed with bows and arrows, wherewith they killed every thing they met in their way. From whence it ſhould ſeem probable, after all, that neither the origin of theſe people, nor that of the Old Greenlanders, is thoroughly known to us at this time.

It frequently happens that ſhips beſet among the ice, in thoſe parts, periſh by being daſhed to pieces againſt the ſolid fields of ice, or cruſhed by the broken pieces crowded upon one another, and riſing ſo faſt about the ſhip, as to exceed the height of her ſides, and then there is no eſcaping. Several of theſe mountains, by ſtriking together, and coaleſcing, form thoſe iſlands of ice that are frequently ſeen in the lower latitudes,

latitudes, driving up and down the ſea, as the wind and tides direct them. The greater danger to be apprehended, is from the looſer ice; for the whalers often moor their ſhips to the ſolid fields of ice, that at certain ſeaſons ſeem to reſt upon the earth, and appear fixed to it, and there find the beſt fiſhing. In ſuch ſituations it often appears, that little or no looſe ice is to be ſeen; yet preſently upon a change of wind, or the blowing of a ſtorm, it ſhall pour in upon them ſo ſuddenly, that ſometimes they periſh in it. It is not poſſible to account for the aſtoniſhing quantity that will gather in this manner in leſs than an hour's time.

Though it ſeems to be agreed, that many of the largeſt fields of ice are frozen to the depth of ſea on which they are found, and that they are bedded on the ſolid earth; yet it is equally certain, that they are often rent aſunder by raging billows; and that in breaking, they produce the moſt terrifying noiſe in nature; nay, it is aſſerted, that the claſhing of the pieces of looſe ice againſt each other, or any extraordinary agitation of the waves, is attended with a roaring ſo loud, that a man who is near it can hardly hear the ſounding of his own voice.

Before we conclude, we ſhall add ſome farther particulars, extracted from more modern authors, relative to Spitſbergen, and the probability of a north-eaſt paſſage.——"The rocks are ſtriking objects; before a ſtorm they exhibit a fiery appearance, and the ſun looks pale upon them, the ſnow giving the air a bright reflection. Their ſummits are almoſt always involved in clouds, ſo that it is but juſt poſſible to ſee the tops of them. Some of theſe rocks are but one ſtone from bottom to top, appearing like an old decayed ruin. Others conſiſt of large maſſes, veined differently like marble, with red, white, and yellow, and probably, were they to be ſawed and poliſhed, would equal, if not excel, the fineſt Egyptian marble we now ſo much admire.

On the ſouthern and weſtern ſides of theſe rocks grow all the plants, herbs, and moſſes, peculiar to this country; on the northerly and eaſterly ſides the wind ſtrikes ſo cold, when it blows from thoſe quarters, that it periſhes every kind of vegetable. Theſe plants grow to perfection in a very ſhort time. Till the middle of May the whole country is locked up in ice; about the beginning of July the plants are in flower; and about the latter end of the ſame month, or beginning of Auguſt, they have perfected their ſeed. The earth owes it fertility, in a great meaſure, to the dung of birds, who build and breed their young here in the ſummer, and in the winter repair to more favourable climates.

The plants that are moſt common in Spitſbergen are ſcurvy-graſs, and crow's-foot; there are beſides ſmall houſe-leek, and a plant with aloe-like leaves; an herb like ſtone-crop; ſome ſmall ſnake-weed, mouſe ear-wood, ſtrawberry, periwinkle, and an herb peculiar to this country, which they call the rock-plant. The leaves of this plant are in ſhape like a man's tongue, above ſix feet long, of a dull yellow colour. The ſtalk is round and ſmooth, and of the ſame colour with the leaf; it riſes tapering, and ſmells like muſcles. It is an aquatic, and riſes in height in proportion to the depth of water in which it is found. There are other plants and herbs, but theſe are the chief. Of flowers, the white poppy ſeems the principal.

The rocks and precipices are full of fiſſures, and clefts, which afford convenient harbours for birds to lay their eggs, and breed their young in ſafety. Moſt of theſe birds are water-fowl, and ſeek their food in the ſea. Some indeed are birds of prey, and purſue and kill others for their ſuſtenance; but theſe are rare. The water-fowl eat ſtrong and fiſhy, and their fat is not to be endured. They are ſo numerous about the rocks, as ſometimes to darken the air when they riſe in flocks, and they ſcreem ſo horribly, that the rocks ring with their noiſe.

There are a few ſmall birds like our ſnipes, and a kind of ſnow-bird, but different from that found about Hudſon's bay.

The ice-bird is a very beautiful little bird, but very rare. He is in ſize and ſhape like a turtle-dove, but his plumage, when the ſun ſhines upon him, is of a brigh yellow, like the golden-ring in the pea-cock's tail, and almoſt dazzles the eye to look upon it.

The other inhabitants of this forlorn country are white bears, deer and foxes. How theſe creatures can ſubſiſt in the winter, when the whole earth is covered with ſnow, and the ſea locked up in ice, is hardly to be conceived. It has been ſaid, indeed, that when the ocean is all frozen over, and no ſuſtenance to be procured in this country; they travel ſoutherly to the warmer climates, where food proper for them abounds in the immenſe foreſts of the northern continent.

The bear is by far the beſt accommodated to the climate of which he is an inhabitant. He is equally at home on land and water, and hunts diligently for his prey in both. In ſummer he finds plenty of food from the refuſe of the whales, ſea-horſes, and ſeals, which is thrown into the ſea by the whalers, and cover the ſhore during the time of whaling; and they have beſides a wonderful ſagacity in ſmelling out the carcaſſes of the dead, let them be ever ſo deeply buried in the earth, or covered with ſtones. The dead therefore that annually are buried here, may contribute, in ſome degree, to the ſubſiſtance of a few of theſe creatures in winter; but the queſtion will ſtill recur, how the race of them ſubſiſted before the whale fiſhery had exiſtence, and before men found the way to this inhoſpitable ſhore. Diſquiſitions of this kind, as they are beyond the reach of human comprehenſion, ſerve only to raiſe our admiration of that Omnipotent Being who provides ſo wonderfully for his creatures.

Theſe creatures, as they differ in nothing but their colour and ſize from thoſe commonly ſhewn in England, need no deſcription. The foxes differ little in ſhape from thoſe we are acquainted with, but in colour there is no ſimilitude. Their heads are black, and their bodies white. As they are beaſts of prey, if they do not provide in ſummer for the long receſs of winter, it were, one would think, almoſt impoſſible for them to ſurvive; yet they are ſeen in plenty, though by their ſubtlety and ſwiftneſs, they are not eaſy to he catched.

The Dutch ſeamen report, that when they are hungry, they will feign themſelves dead, and when the ravenous birds come to feed upon them, they riſe and make them their prey.

It is moſt wonderful how the deer can ſurvive an eight months famine. Like ours they feed upon nothing that can be perceived but the vegetables which the earth ſpontaneouſly produces; and yet for eight months in the year, it brings forth neither plant, herb, ſhrub, or blade of any kind of graſs whatever. They are beſides but thinly clothed for ſo ſevere a climate, and what ſeems ſtill worſe, there is not a buſh to be ſeen to ſhelter them, within the diſtance that any man as yet has diſcovered. The means of their ſubſiſtance muſt therefore remain among the ſecrets of nature, never to be diſcloſed, as no human being can ever live here, ſo as to be able to trace theſe creatures to their winter's reſidence.

Amphibious creatures abound the moſt about the ſounds and bays of Spitſbergen, and they ſeem beſt adapted to endure the climate. Theſe are the ſeals, or ſea-dogs, and morſes, or ſea-horſes; of which the whalers avail themſelves, when diſappointed in compleating their lading with the fat of whales.

The ſeal has been already deſcribed; but the ſea-horſe, as it is a creature peculiar to high latitudes, is therefore more rare. It is not eaſy to ſay how he came by his name. He is not unlike the ſeal in ſhape. He has a large round head, larger than that of a bull, but ſhaped more like that of a pug dog without ears, than any other animal we are acquainted with. He tapers all the way down to the tail, like the fiſh we call a lump, and his ſize is equal to that of the largeſt ox. His tuſks cloſe over his under-jaw, like thoſe of a very old boar, and are in length from one foot to two or more, in proportion to the ſize and

age of the animal that breeds them. His ſkin is thicker than that of a bull, and covered with ſhort mouſe-coloured hair, which is ſleeker and thicker, juſt as he happens to be in or out of ſeaſon when he is caught. His paws, before and behind are like thoſe of a mole, and ſerve him for oars when he ſwims, and for legs to crawl when he goes upon the ice, or on ſhore. He is a fierce animal, but being unweildy when on land, or on the ice, is eaſily overcome.

Theſe animals are always found in herds, ſometimes of many hundreds together, and if one is attacked, the reſt make it a common cauſe, and ſtand by each other till the laſt gaſp. If they are attacked in the water, they will fight deſperately, and will even attempt the boats of their purſuers, if any of them are wounded and not mortally. Some of them have been known to make holes in the bottom of the boat with their tuſks, in defence of their young. Their eyes are large, and they have two holes in the upper part of the neck, out of which they eject the water, in like manner as it is ejected by whales.

The ſea about Spitſbergen is full of fiſh. The mackarel, of which, there are no great plenty, ſeem not only to be the moſt wholeſome, and the moſt palatable, but alſo the moſt beautiful. They ſeem to be a different ſpecies from thoſe caught upon our coaſt. The upper part of the back is of a vivid blue, the other part as low as the belly of a gem-like green on an azure ground. Underneath the belly, the colour is a tranſparent white, and the fins ſhine like poliſhed ſilver. All the colours glow when alive in the ſea with ſuch a richneſs, that fancy can hardly form to itſelf any thing in nature more beautiful. Almoſt all the other fiſh on this coaſt are of an oily nature, and of a very indifferent flavour.

The ſaw or ſword-fiſh, is remarkable not only for the oddity of his ſhape, but alſo for his enmity to the whale. This fiſh takes its name from a broad flat bone, in length from two to four feet, which projects from his noſe, and tapers to a point, on each ſide it has teeth like a comb, at the diſtance of a finger's breadth aſunder. He is alſo furniſhed with a double row of fins, and is of aſtoniſhing ſtrength in the water. His length is from ten to twelve feet. He ſeems to be formed for war, and war is his profeſſion. The conflict betwixt him and the whale is dreadful, yet he never gives over till his ſword is broken, or he comes off victorious.

No ſprings of freſh water are found in Spitſbergen; but in the valleys, between the mountains, are many rills cauſed by the rain and melting of the ſnow in ſummer; and from theſe rills the ſhips are ſupplied. Some are of opinion, that this water is unwholeſome, but the whaling people have drank of it for ages, and have found no ill effects from the uſe of it. Ice taken up in the middle of thoſe ſeas and thawed, yields alſo good freſh water.

There are many harbours about Spitſbergen, where ſhips employed in the whale fiſhery, take ſhelter in ſtormy weather: and there are ſome iſlands, ſuch as Charles's Iſland, the Clifted Rock, Red Hill, Hacluit's Headland, &c. that ſerves as landmarks, by which ſeamen direct their courſe. Theſe iſlands are full of the neſts of birds, but their eggs are as naucious as the fleſh of the fowls that lay them. The ſailors ſometimes eat them, but they are filthy food. Even the geeſe and ducks upon the neighbouring iſlands eat fiſhy and ſtrong.

The air hereabouts is never free from icecicles. If one looks through the ſun-beams tranſverſely in the ſhade, or where the rays are confined in a body, inſtead of dark motes as are generally ſeen, he will ſee numbers of particles that ſparkle like diamonds; and when the ſun ſhines hot, as it ſometimes does, ſo as to melt the tar in the ſeams of ſhips when they lie ſheltered from the wind, theſe ſhining atoms ſeem to melt away, and deſcend like dew.

It is ſeldom that it continues clear for many days together in this climate; when that happens, the whalers are generally ſucceſsful. There is no difference between night and day in the appearance of the atmoſphere about Spitſbergen, one being as light as the other; only when the ſun is to the northward you may look at it with the naked eye, as at the moon, without dazzling. The fogs here come on ſo ſuddenly, that from bright ſun-ſhine, you are preſently involved in ſuch obſcurity, that you can hardly ſee from one end of the ſhip to the other.

We have already noticed the opinions of different voyagers to Spitſbergen relative to a north-eaſt paſſage. Many attempts for this diſcovery were made after the unfortunate one of Sir Hugh Willoughby, among thoſe, few were more remarkable than that of Captain Wood in 1676, who ſet out with a full perſuaſion he ſhould be able to open a paſſage: his voyage was unfortunate, he ſtruck upon a ledge of rocks, and beſides which, in endeavouring to diſcover an opening, perpetually embayed himſelf.

When firſt he ſaw the ice, he imagined it was only that which joined to Greenland, and that no ſolid body of ice extended farther from land than twenty leagues; in this perſuaſion, he altered his courſe, and coaſted along in the direction in which the ice lay, expecting, at every cape or head-land of ice, after running a certain diſtance, to find an opening into the polar ocean: but after running two or three glaſſes to the northward in one bay, he found himſelf intangled in another; and thus it continued till his ſhip was wrecked.

By this experiment he found that of Barents confuted, namely. "That by ſteering the middle courſe between Spitſbergen and Nova Zembla, in open ſea might be attained, in which a ſhip might ſafely ſail as far as the pole." From his own experience, he therefore, on his return, pronounced it impoſſible to find out the deſired paſſage.

To this poſitive aſſertion, however, may be oppoſed the teſtimony of many creditable perſons, ſome of whom have themſelves ſailed beyond the eightieth degree of north latitude, and others, upon evidence, whoſe veracity there is no reaſonable cauſe to bring in queſtion.

Among the latter may be reckoned the following teſtimony, That about the year 1670, application being made to the States General for a charter to incorporate a company of merchants to trade to Japan and China, by a new paſſage to the north-eaſt, the then Eaſt-India company oppoſed it, and that ſo effectually that their High Mightineſſes refuſed to grant what the merchants requeſted.

But a proof inconteſtable, is the teſtimony of Capt. Hudſon, who ſailed in 1607, to the latitude of eighty-one degrees thirty minutes north, where he arrived on the 16th of July, the weather being then pretty warm.

To all this it may be added, that the Dutch, who were employed in 1670, in endeavouring to find a north-eaſt paſſage, advanced within a very few degrees of that open ſea, which is now commonly navigated by the Ruſſians, and which would have infallibly have brought them to the coaſts of China and Japan, had they perſevered in the courſe they were purſuing.

It does not appear however, from any authentic account, that any voyage, profeſſedly for the diſcovery of a north-eaſt paſſage, has been undertaken by either public or private adventurers in England, ſince Captain Wood, in the year 1676, till of late years; and it is more than probable, that if the Ruſſian diſcoveries on the north of Aſia had never taken place, no further attempts of finding a practicable paſſage from Europe in that direction, would ever more have been thought of.——

Having thus deſcribed theſe places, we ſhall take leave of ſuch uncomfortable regions, where we can ſelect nothing farther that may contribute to the information or entertainment of our readers.

TRAVELS

7 AP 53

Engraved for Moore's New & Complete Collection of Voyages & Travels.

Various BEASTS *of* DIFFERENT PARTS *of the* WORLD.

1 The Sucoterio.....2 Elephant.....3 A kind of Monkey.....4 The Luchs.....5 A Jackall.....6 Camel
7 A particular kind of Indian Oxen.....8 The Saragose Monkey & Young one.....9 The Macaſsar Fox.
10 Indian He-Goat.....11 An Animal called the Aunts-Bear.....12 A Javanese Animal named Doots-Hoost.
13. A kind of Monkey called the Beard. Man.

TRAVELS

THROUGH

EUROPE, ASIA, AFRICA AND AMERICA.

ACCORDING to our promiſe, we ſhall now proceed to ſelect, for the Entertainment and Inſtruction of our Readers, a collection of the moſt remarkable TRAVELS which have been undertaken at various times to the different quarters of the globe.

VOYAGERS, however attentive to the purſuit of knowledge, have rarely been able to give us any very accurate accounts of great continents, their obſervations being moſtly confined to the countries ſtretching along the ſea coaſts. What they have learned of the interior parts they have been frequently obliged to take upon hear-ſay, and conſequently their relations when not aſſiſted by the accounts of TRAVELLERS, have been frequently uncertain and imperfect.

There are beſides many minutiæ which are more immediately within the ſphere of the TRAVELLER, and are well deſerving the attention of the curious Reader; ſuch are the deſcriptions of the curioſities of art and nature preſerved in various other countries, with many other particulars too tedious to recapitulate.

All theſe will be attended to, as far as they may contribute to uſeful knowledge, ſo that the TRAVELS will form a counterpart to the VOYAGES, and both together conſtitute one *uniform ſyſtem*, anſwering to the plan laid down in our Preface, to which we mean to adhere with the moſt ſcrupulous exactneſs.

TRAVELS THROUGH DENMARK, BY LORD MOLESWORTH AND OTHERS, FROM 1693, TO 1768.

DENMARK, properly ſo called, is bounded on all ſides with the ſea, except one ſmall neck of land, where it joins to Holſtein; the German ocean waſhes it on the weſt and north-weſt; and the entrance into the Baltic, called the Categate, on the north and north-eaſt, the Baltic on the eaſt, and the river Eyder on the ſouth; which having its ſource very near the eaſt ſea, takes its courſe weſtward, and falls into the ocean at Toningen.

Denmark therefore, comprehending its iſlands, lies in length between 54 degrees 45 minutes, and 58 degrees 15 minutes, north latitude, the breadth not being proportionable to its length in general.

Norway, which lies north from Denmark, and is ſeparated from it by the ſea that is uſually called the Categate, is a large and barren country, full of mountains and fir trees; it reaches from 59 to 71 degrees of north latitude, but is very narrow in reſpect to its length. It is bounded on the weſt and north by the ocean, on the eaſt by Sweden, and the territories belonging to it; on the ſouth by the ſea lying between it and Denmark. The ſea is ſo deep about Norway that there is no anchorage for ſhips, and therefore its coaſts are accounted the moſt dangerous of any in Europe to run with in the night, or in a ſtorm, on which if veſſels chance to be driven, there is no eſcaping, the ſhore being all along high rocks, at the very foot of which one may find two hundred fathoms water.

Oldenburg and Delmenhorſt, are two countries in Germany that lie together, detached from all the reſt of the king of Denmark's dominions; the two rivers Elb and Weſer, and the Duchy of Bremen, interpoſing between them and Holſtein. They are bounded on the north-eaſt by the Weſer, on the weſt by Eaſt Frieſland, and the country of Embden, on the ſouth by part of the biſhoprick of Munſter. They are a ſmall territory of about thirty-five Engliſh miles in diameter, the middle of which is in the latitude of 33 degrees and a half.

The reſt of the King of Denmark's territories (not mentioned in the enumeration of his titles are) the Iſlands of Feroe, and Iceland in the northern ocean, St. Thomas, one of the Caribbee Iſlands in the Weſt Indies, and a fort upon the coaſt of Guinea, called Chriſtianſburg, and another in the Eaſt Indies called Tranquebar. He has likewiſe a toll at Elſleet upon the river Weſer.

Thus Denmark conſiſts of many iſlands in the Baltic ſea, and of that part of the continent which is now called Jutland. This is the largeſt and moſt fertile country, but the iſlands are more conſiderable in regard of their ſituation, eſpecially Zeland, becauſe Copenhagen, the chief city of Denmark, is ſeated in it, and the famous paſſage of the Sound is bordered by its ſhore, where, on the narroweſt part of the town Elſenore ſtands.

Zealand is almoſt a circular figure, and contains about 180 Engliſh miles in circumference. Its fertility is but indifferent, there being no bread-corn growing in any part of it, except rye, which indeed is in good quantity, and of which moſt of their bread is made. There are few meadows in it, and yet there is no want of good hay; moſt of their graſs, which is ſhort and ſweet, grows by the ſides of the corn-fields, or in ſome ſcattered ſpots of marſh ground. It has no rivers, nor above half a ſcore of brooks that are able to turn a mill; to ſupply this, there are a great number of fine lakes ſufficiently ſtored with fiſh. The face of the land is pleaſant, diverſified with little hills, woods, and rivulets, in a very agreeable manner. Amongſt the ſea-ports, that of Copenhagen is a very fine one, and is a great addition to the city.

Denmark is one of thoſe ſtates which has ariſen from ſmall beginnings. Though, as a people, the Danes were early known in the world, and, under the name of Eaſterlings, in common with the Norwegians and other nations, infeſted with their piracy the German and Britiſh ocean. Our own hiſtory informs us what depredations they committed upon our Saxon anceſtors, as ſoon as the heptarchy was ſettled in England, till after numerous battles fought with various ſucceſs, they got firſt footing in the iſland, and partly by conqueſt, and partly by agreement, eſtabliſhed ſovereigns of the Daniſh line upon the throne of Britain.

At the period we are ſpeaking of, piracies carried on by great fleets were not looked upon as diſhonourable. Either the expectation of plunder, or the deſire of ſeeking new habitations, was excuſe ſufficient for one people to make deſcents upon another, and in theſe conteſts the conqueror was always in the right.

But as arts and commerce dawned upon the world, mankind began to be more civilized, and to entertain juſter notions of things. That reſtleſs ſpirit which had ſo long animated the northern nations, ſubſided by degrees, and thoſe Eaſterlings that had ſo long been the terror of their neighbours, ſettled into peaceable ſtates, loſing much of their ſavage ferocity, but ſtill generally keeping the flame of freedom alive among them.

It is true, that we muſt expect to meet with a vaſt difference between the characters of the ancient and modern Danes, as well as in the deſcription of their land at theſe different periods of time. The improvemets in agriculture which have taken place, have altered the face of the country; the progreſs of arts, has changed the manners of the people; and Denmark has now her proportionate weight in the ſcale of the European powers.

Copenhagen, (according to modern authors) the capital of Denmark, is a fine city, and the ſtrongeſt place in his Daniſh majeſty's dominions. It is ſituated in a low marſh, ſurrounded by the country of Roſkild; this makes it by nature ſtrong, and the numerous works added to it, in the modern ſtile of fortification, increaſe the ſtrength greatly. The moſt ſtriking object, is the harbour and the naval arſenal; it is capacious enough to hold 500 men of war, and yet only one ſhip can come in at a time; the entrance, ſmall as it is, is defended by ſeveral great guns, and there are ſeveral platforms near it, with three forts. There are no tides in the Baltic, but the depth of water in the harbour, renders it perfectly ſecure for the greateſt ſhips, ſo that it is juſtly reckoned one of the beſt havens in the world. The king's fleet lies regularly arranged between booms, and againſt them magazines, with the name of each ſhip, on the door of the ſtore rooms, belonging to her; and every thing is kept in the completeſt order. The admiralty is on the haven, which contains, beſides theſe magazines, numerous others; the arſenal is very well furniſhed with cannon and other military ſtores; and adjoining to theſe buildings, is a citidal, which commands the harbour.

The royal palace is a fine buliding, very ſpacious, and ſome of the apartments magnificent. The court is a brilliant and military one, for the number of officers are great; the very garriſon of Copenhagen alone amounts to 10,000 men, beſides the king's guards, which are very fine, ſhewy, and well diſciplined ſet of men. The ſtanding forces of the kingdom are about 40,000 men, 14,000 of which are cavalry, and the reſt infantry; a conſiderable number of theſe are militia, but then the militia of this country is as regularly, and as well diſciplined, as the regular troops; and for about two months in the year, they are embodied, and in actual diſcipline; a part of which time, they form the garriſon of Copenhagen, and are immediately under the eye of the king.

The troops of Denmark, have a very good character for bravery and obedience, the two great eſſentials in a ſoldier; but the number kept up is much greater than it ought to be, ſince Denmark furniſhes nine-tenths of them, Norway ſupplying only ſeamen; and their boiſterous coaſt form them ſo bold and hardy, that none are accounted better. None of the dominions, except partial diſtricts, are well peopled; and ſuch a numerous body of troops, many of whom are taken from their own peaſants, is doing a great miſchief to agriculture.

Many of the regiments are filled with foreigners, particularly Germans and Poles; and there are great numbers of foreign officers in all the corps; this is to keep the nation in the more ſtrict obedience.

The princes that have ſet upon the throne of Denmark have been, ſince the revolution, remarkable for their abilities, and for purſuing the real intereſts of the country.

At a certain period, the commons diſguſted with the tyrannical behaviour of the nobles, went to the palace, and made an offer of their lives, liberties, and properties to the king, without ever aſking the concurrence of the third eſtate: but the nobles were utterly againſt the meaſure; and though they agreed in it at laſt, yet every writer is ſufficiently clear, that it was by force they came into the agreement.

There are ſeveral new manufactories at Copenhagen, called royal ones, from being eſtabliſhed at the king's expence; the chief of theſe are the woollen ones; here are more than 400 looms for weaving moſt ſorts of cloths, from the fineſt, for the wear of the king himſelf, and his court, to coarſer ſorts for cloathing the army. There are a great number of hands employed in theſe, and ſome late meaſures have been taken to increaſe them, and with ſuch ſucceſs, that if they went on with as good a progreſs in future, as they have done hitherto, it is ſaid, they would not only cloath all the army, but completely ſupply the whole demand of Copenhagen, and alſo make all that was wanted to export to the Eaſt Indies.

The improvements in agriculture, which have been made with attention and care, are very great and conſpicuous in many parts of the king's dominions; and nothing can exceed the means which have been taken in this work to accompliſh the end. The former bad ſtate of this kingdom, was greatly owing to the miſery under which the peaſants groaned. This has been every where mollified: they have had numerous edicts in their favour, villainage is in many diſtricts aboliſhed, and the nobles and gentry prevented by ſevere laws, from trampling upon the lower claſſes, in the manner they too commonly did formerly.

The late king ſent ſeveral very able men to travel through England, in order to report to him on their return,

return, the peculiarities, laws, cuſtoms, and conduct, which in that kingdom ſeemed to be moſt conducive to the well being of huſbandry. Their journey was executed with great ability, and from their memoirs his majeſty and miniſters were enabled to judge what was, and what was not, practicable in Denmark. The grand articles were, to give more freedom to the claſs of cultivators, to ſecure their property, to aboliſh multipliable taxes, and to lett farms on long leaſes with covenants of improvements. Theſe were the great heads of the report, and the points upon which they moſt inſiſted, as thoſe which were the greateſt benefit in England. They offered numerous inferior ones, upon the particular conduct of certain ſoils, upon draining, manuring, ploughing, &c. Implements were ſent over as patterns, and ſome ingenious men to inſtruct them in the uſe of them; and the king, in order to preſerve the knowledge thus gained, fixed thoſe, with handſome ſalaries, on his crown lands, with their implements, and directed each to manage a given quantity of land according to the Engliſh huſbandry. The men who worked under them for three years, were then changed, and ſent to other eſtates, and freſh ones inſtructed, and the implements were on courſe multiplied with all of them; ſo that at this time there are a great number in conſtant uſe in different parts of the kingdom. The general effects of ſuch meaſures are not immediately felt, but the conſequences of the principal parts of the ſcheme have been rapid and great, particularly the letting lands on leaſes of improvement, which the king put in execution upon the crown lands immediately, and upon a large ſcale; and by his recommendations to the nobility, &c. and granting privileges to eſtates, in this management, the method ſpreads ſo much, that if the ſpirit which now animates the kingdom, laſts but for half a century, Denmark may probably be as well cultivated as ſome parts of England, and thoſe not the worſt. Another encouragement which his late majeſty gave to agriculture, was, ordering the beſt books on that ſubject in the French, Engliſh, and German languages, to be tranſlated into Daniſh, and many complete ſets of theſe he made preſents to ſuch of his ſubjects, as made themſelves at all known by any undertaking in agriculture beyond the common practice. He alſo publiſhed the offer of conſiderable premiums to be annually diſtributed among the tenants of the royal demeſnes, who excelled the moſt in works of this nature.

In the fine arts, the Danes are no proficients; they have not encouragement enough to make any progreſs. The kingdom is too poor to yield a market even to great portrait painters; nothing can ever carry the fine, which in fact are the luxurious arts, to any degree of height, but a period full of wealth; in which luxury abounds to an high degree, and wherein the artiſt may find plenty of employment from the great and rich, and be at the ſame time very well paid for it. The only art that makes any decent figure at Copenhagen, is muſic, which flouriſhes pretty much at their concerts.

Copenhagen principally flouriſhes from the reſidence of the court; this is much the moſt brilliant object in Denmark. There are many great officers of ſtate with conſiderable appointments; theſe, with the numerous inferior ones, and the guards, tend to render the town gay.

The Daniſh army is kept in very good order, and well diſciplined: the men are picked, and their cloathing is in general very neat. We have already mentioned, that they are not all embodied at a time, but they could draw together, at a ſhort notice, about 40,000 men, with a fine train of artillery and all ſtores proportioned. This renders the king a reſpectable monarch, in the military light, among the powers of the north; and has certainly been one reaſon for the long peace, in which two or three very wiſe kings have kept their dominions. Denmark has nothing to fear from any of its neighbours, except Ruſſia, with whom ſhe cannot compare in force.

The revenues of Denmark have been increaſing gradually for fifty years; but the two laſt kings, at the ſame time that they did many great things for the good of their ſubjects, and the ornament of their kingdom; and even aboliſhed ſome taxes, that were the moſt burthenſome, greatly improved the royal income.

The kings army, if ſubſidies be reckoned, and the great numbers to whom he finds nothing but arms, coſts him little, though there have been ſome years in which Denmark has been without any treaties of ſubſidy. His navy is maintained at a very eaſy rate, the number in conſtant pay in times of profound peace, is not conſiderable; the reſt are retained by a month's pay in the year, to be ready at a call, and which they find a moſt excellent way; ſo that the expence of the navy is little more than the building and rebuilding ſhips, and filling the ſtores and magazines.

The increaſe of the royal revenue of Denmark, has been almoſt ſolely owing to a general improvement in the riches and welfare of the nation, and not, in a ſingle inſtance, to the addition of taxes. The increaſe of the trade, the eſtabliſhment of manufactures, and the improvement of lands, have all added to the general income of the people, and increaſed the number of the people themſelves; and where taxes are at all general, as they are in Denmark, and indeed in moſt of the counties in Europe, all increaſe of income immediately makes taxes more productive; becauſe the ſame taxes produce more in proportion, as the wealth of the people increaſes, and as they, conſequently, can afford to make a more free uſe of the things and commodities that are taxed. So that it follows, that Denmark is not to be ſuppoſed poor, in proportion to the increaſe of the king's revenue. On the contrary the kingdom bids fair to flouriſh, as it appears to be continually improving.

"From all the opportunities I have had of ſeeing and converſing with the Danes (ſays a modern author) which I have done with all ranks, they appear to be a brave, courteous, and humane people. The ſuperior claſſes are of an high ſpirit, and have as much vivacity in them as any people in Europe, the French alone excepted. They are ſhewy and fond of magnificence, and live in a mean between the Engliſh and the Germans, more ſumptuous than the latter, but not with ſuch a general conſiſtency as the former; but I ſpeak here of their nobility only. In their dreſs, the French faſhions are generally followed, and the language of that nation is alſo univerſal among them. In their houſes, they are expenſive not only in the architecture, but alſo in the furniture, exceeding in this reſpect the Germans, but not equalling the Engliſh. At their tables they reſemble the Germans moſt for cookery, but do not ſit ſo long at their meals. In Germany, four courſes and a deſart will hold, upon a moderate computation, four hours and a half, which in England is diſpatched in one. But the Danes is between the two, ſeldom riſing however under the two hours. Some of the nobility are very expenſive in French cooks, but it is not general. In their wines, they are particularly curious; nor do I in any country remember taſting a greater variety, or better of the ſort. Their tables are admirably well ſerved with fiſh, particularly of freſh water: and have ſea fiſh in great abundance, though not of the beſt ſorts. Wild fowl they abound greatly in, and have a greater variety than we in England; their veniſon is excellent; but their butchers meat is not, the whole not to be compared to that of the Engliſh. All the rich nobility have hot houſes, and hot walls, fronted with glaſs, in their gardens; yet for want of a complete knowledge in the management of the plants, their fruit in general is bad. In other ſorts of proviſions they have upon a par with their neighbours; and their importations of various eatables of luxury have much increaſed of late years.

"If an account is taken in all theſe particulars of the next claſs of the people, the gentry, there will appear a greater difference between them and the ſame rank

rank in England, than between the Daniſh and the Engliſh nobility. They are not ſo comfortably in their circumſtances, ſcarcely any of them are the maſters of ſuch eſtates as to carry them almoſt to par with the nobles which is ſo common in our country. Conſidering that a great part of the nobility make a very handſome figure, the gentry do not proportionably equal them.

"The lower claſſes are not comparable to ours, in eaſe and happineſs; but they are by no means in that ſtate of abſolute ſlavery, they were in Mr. Moleſworth's time. Several edicts and regulations have been publiſhed by the crown for reſtraining the ancient villainage, and a great number of caſes ſpecified, in which they gain their freedom; and as to the lower inhabitants of the towns and cities, they have the ſame freedom as in other abſolute countries.

"As to the perſons and manners of the lower claſſes, they are generally as well made and as ſtout as the Germans; they make good ſoldiers, and with any gentle uſage, are very docile and tractable. Their manners have nothing of diſtinguiſhing brutality in them; they are in the villages, ignorant and clownish; but I have travelled through ſeveral countries where the poor people are much more contemptible. With proper inſtructions, I believe there are none in Europe; would make better huſbandmen and farmers; for the peaſants, whether free or not, are little farmers; and many of them manage their ſmall ſpots of ground in ſuch a manner, that there can be no doubt, but under more favourable circumſtances they would equal their neighbours in every thing belonging to the culture of the earth.

"The Daniſh army finds employment for many young men of ſmall fortune, who ſerve in order to gain a genteel maintenance, and the employments about the court, of the lower ſort, provide for others; ſome apply themſelves to trade voluntarily, in order to raiſe fortunes, and freely embark for the Eaſt and the Weſt Indies, and in the proſecution of theſe purſuits, they are remarkably diligent and indefatigable; and many of ſuch as ſeek their fortunes abroad, return home with very good ones, eſpecially ſince the late encouragement that has been given to commerce; for during theſe latter reigns, there has been a regular attention to every thing that could promote the intereſt of trade, and no acts of injuſtice or oppreſſion, againſt thoſe who have bettered their circumſtances by any kind of induſtry, have been known in the crown, or ſuffered in any of the great men.

"In their diverſions, the Danes follow the faſhions of the French and Engliſh: cards make a greater progreſs than formerly, and the wives of the nobility, and of ſuch other claſſes as can afford it, have at Copenhagen their aſſemblies almoſt as regularly as any at London. The men are great cheſs players; it is a game they are very fond of, and which is more commonly introduced at their viſits than in England: billiards and tennis are alſo common at Copenhagen. The theatre is French, though they have lately eſtabliſhed a Daniſh one, where pieces tranſlated from the Engliſh and French are indifferently performed: attempts have been made of an Italian opera, but without ſucceſs.

"Learning of all kinds is but at a low ebb, to ſay the truth, the encouragement, which has flowed amply from the crown, during the two laſt reigns, has been almoſt excluſively in favour of objects of utility. Trade, manufactures, and agriculture, have been much more attended to than the cultivation of literature and the ſciences; though an academy was founded, but it has not been very productive. The laws of Denmark are very famous for their brevity and excellence, but then their brevity leaves ſo much in the breaſt of the judge, that it is little more than a delegate of deſpotiſm. The throne of Denmark has, of late years, been filled with able princes, who have ſhewn, in every deportment of the ſtate, ſuch ſpirited conduct, with ſo much attention to the welfare of their ſubjects, that I have no doubt, but the laws have been well and impartially executed; and while ſuch a tight hand is held over all orders of the people in power, of whatſoever kind, I can eaſily conceive many bleſſings to flow from theſe ſhort laws; but what would they be under a negligent one?"

Having mentioned the revolution by which the king of Denmark became abſolute, we ſhall here give the reader an account of that important event.

After the concluſion of the peace between the two Northern crowns, Anno 1660, ſome conſiderable care and time was neceſſary to redreſs the diſorders occaſioned by ſo terrible a war. Denmark had been moſt violently ſhaken; and although the fury of the tempeſt was over, the agitation cauſed by it ſtill continued: The army was not yet diſbanded, nor could be for want of money to diſcharge its arrears; this cauſed frequent inſolencies in the ſoldiers, with a further oppreſſion of the burgers and poor country people, who had been in a manner already ruined by the miſeries attending the war. The nobility, though lords and maſters, were full of diſcontents, and the clergy not in the condition they wiſhed. To redreſs all ſuch grievances, and reduce affairs into ſome order, by procuring money for the payment and diſbanding of the army, the king thought fit to appoint a meeting of the three eſtates at Copenhagen, viz. the nobility, the commonality, and clergy; which accordingly followed about the middle of October: after ſome days ſeſſion, during which the nobility, according to their uſual practice, debated how the ſums of money requiſite might with greateſt eaſe and conveniency be levied upon the commons, without the leaſt intention of bearing any proportionable ſhare themſelves. Several diſputes aroſe, and many ſharp expreſſions paſſed between them and the commons; on one hand the nobility were for maintaining their antient prerogative of paying nothing by way of tax, but only by voluntary contributions; and ſhewed themſelves too ſtiff at a time when the country was exhauſted, and moſt of the remaining riches lodged in their hands; they ſeemed to make uſe of this occaſion, not only to vindicate, but even to enlarge their privileges above the other two eſtates, by laying impoſitions upon them at pleaſure, which weight they would not touch themſelves any farther, than as they thought fit. On the other hand, the clergy for their late adherence to the intereſt of their country, and the burgers for the vigorous defence of their city, thought they might juſtly pretend to new merit, and be conſidered at leaſt as good ſubjects in a ſtate, which they themſelves had ſo reſolutely defended. They remembered the great promiſes made them when dangerous enterpriſes were to be taken in hand, and how ſucceſsfully they had executed them, thereby ſaving from a foreign yoak, not only the city of Copenhagen, but the whole kingdom, the royal family, and even thoſe nobles that dealt ſo hard with them: they judged it therefore reaſonable, that the ſums of money neceſſary, ſhould be levied proportionably, and that the nobility, who enjoyed all the lands, ſhould at leaſt pay their ſhare of the taxes, ſince they had ſuffered leſs in the common calamity, as well as done leſs to prevent the progreſs of it.

This manner of arguing was very diſpleaſing to the nobles, and occaſioned many high words on both ſides: at length a principal ſenator, called Otto Craeg, ſtood up, and told the preſident of the city, That the commons neither underſtood nor conſidered the privileges of the nobility, who at all times had been exempted from taxes, or the true condition of themſelves, who were no other than ſlaves: ſo that their beſt way was to keep within their own bounds and acquieſe in ſuch meaſures as antient practice had warranted, and which they were reſolved to maintain. This word ſlaves, put all the burgers and clergy into diſorder, cauſing a loud murmur in the hall; which Nanſon, the preſident of the city of Copenhagen, and Speaker of the Houſe of Commons, perceiving, and finding a fit occaſion of putting in practice a deſign

before concerted (though but weakly) between him and the biſhop, in great anger roſe out of his ſeat, and ſwore an oath, "That the commons were no ſlaves, nor from thenceforth be called ſo by the nobility, which they ſhould ſoon prove to their coſt;" and upon which, breaking up the aſſembly in diſorder, and departing out of the hall, was followed by all the clergy and burgers, the nobles being left alone to conſult with themſelves at their leiſure, after a little while adjourned to a private houſe near the court.

In the mean time the commons, being provoked to the higheſt degree, and reſolving to put their threats in execution, marched proceſſionally by couples, a clergyman and a commoner, from the great hall or parliament houſe, to the brewer's hall, which was the moſt convenient place they could pitch upon to ſit apart from the nobles, the biſhop of Copenhagen, and the preſident of the city, leading them. It was there thought neceſſary to conſider ſpeedily of the moſt effectual means to ſuppreſs the intollerable pride of the nobility, and how to mend their own condition: after many debates, they concluded, that they ſhould immediately wait upon the king, and offer him their votes and aſſiſtance to be abſolute monarch of the realm, as alſo that the crown ſhould deſcend by inheritance to his family, which hitherto had gone by election. They promiſed themſelves the king would have ſo great obligations to them for this piece of ſervice, that he would grant and confirm ſuch privileges as ſhould place them above the degree of ſlaves. They knew he had hitherto been curbed by the nobility in a great meaſure, and now ſaw their own force, being able (ſince they had arms in their own hands, and the concurrence of the ſoldiers) to perform what they undertook. At the worſt, they ſuppoſed they ſhould only change many maſters for one, and could better bear hardſhips from a king than from inferior perſons: or if their caſe was not bettered, at leaſt they thought it ſome comfort to have more company in it; beſides the ſatisfaction of revenge on thoſe that hitherto not only uſed them ill, but inſulted over them ſo lately. They knew the king, and had ſeen him bear with admirable patience and conſtancy all his calamities, were perſuaded he was a valiant prince, who had often expoſed his perſon for the ſake of the public, and therefore thought they could never do enough to ſhew their gratitude, which is the uſual temper of the people upon any ſort of benefit received from their prince.

Scarcely was this propoſed but it was agreed to, and nothing but the unſeaſonableneſs of the time (it being then near night) deferred the immediate execution of it; but all the neceſſary meaſures were taken againſt the next morning.

The clergy had a farther drift in this change of government; for having been hitherto kept under by the nobility, they forecaſted to have no other ſuperior but the king, whoſe new authority they engaged to maintain by the influence they had on the conſciences of the people; expecting, with reaſon, the like favours and protection from the king, together with an increaſe of their power; ſince he was in a great meaſure obliged to them for his own; and the benefits were likely to be mutual for the future; the one having the force, the other the tie of religion in their poſſeſſion, which contracts ſubſiſts to this day, to the great advantage of both ſides.

The court was not ignorant all this while of what paſſed; they wanted no ſpies, no meſſengers to give notice of the diſcontent of the commoners. Hannibal Seeſtede, a ſenſible man, was prime miniſter; and the biſhop, or ſuperintendent Swan, with Nanſon the ſpeaker of the houſe of commons, were his creatures: theſe had formerly in ſecret laid the deſign, which was now upon the point of diſcloſing, though their hopes were hardly laid ſo high, as to promiſe themſelves ſuch mighty ſucceſs. The whole night paſſed in brigues and meſſengers, the commons anger was to be kept up to the requiſite height, and the reſolution they had taken the night before not to be ſuffered to cool, but perſiſted in betimes the next morning. The queen, a woman of intrigue and high ſpirit, wrought ſtrongly in it by all manner of ways; whilſt the king, either through doubt of the event, or ſenſe of the diſhoneſty and crime of the actors, in procuring after ſuch a manner the abſolute dominion of a free country, could hardly be brought to comply with it. He declared that indeed he ſhould be pleaſed the ſovereignty were entailed on his family, provided it were done by univerſal conſent; but to become abſolute and arbitrary, was neither his deſire, nor did he think it for the benefit of the kingdom; that he was ſatisfied he ſhould not make ill uſe of ſuch an unlimited authority, but no body knew what ſucceſſors he might have; that it was therefore dangerous both for them to give, and him to receive ſuch a power as might be abuſed in future times to the utter ruin of the nation.

But theſe reflections, whether they were real, or only pretences, whether cauſed by the piety or weakneſs of the king, were ſoon over-ruled by the more ambitious and maſculine ſpirit of the queen, who deſired him to ſit ſtill, and ſee how ſhe and her emiſſaries would work for him; told him, that the plot was well laid, and had began to operate proſperouſly; that he muſt not obſtruct his own and his families good fortune; and in fine, ſo far prevailed on him, that he ſeemed with fear to conſent to it, and permit that which he very much deſired. Having however by this ſhew of unwillingneſs, left open to himſelf a door of reconciliation with his people, in caſe the buſineſs did not ſucceed.

All this while the nobles either had none, or but ſmall intimation of the proceedings of the commons, they had been uſed ſo long to ſlight and tyrannize over, that they were not now ſenſible of any impending danger from them, contemning their threats as well as their perſons, and imagining they would have repented the next day, and comply with all that ſhould be demanded of them; but the plot was deeper laid than they ſuppoſed; for not only the prime miniſter, but ſome other members of their own body, who had employments depending on the court, were engaged in it. This inadvertency, with the want of requiſite courage upon the occaſion, brought upon them the miſchief on a ſudden; ſo that except two or three who were more than ordinary doubtful of what might happen, and ſlipt out of the town that night, the reſt were altogether fearleſs of danger, till the very inſtant that the evil was paſt remedy.

Schack, the governor of the town had been gained by the court to favour the deſign, which he performed effectually, though not with ſo ſervile an intention as others; for when the king, upon the firſt news of the reſolution of the commons, did often openly promiſe that he would in gratitude, recompence and declare them all free, as ſoon as it lay in his power, by the gift they were about to make him, and the people were willing to truſt the king's goodneſs, and to depend on the performance of this promiſe, encouraged thereunto by the clergy, who alledged it a thing unbeſeeming and diſhonourable to require any other ſecurity from the king than his bare word; yet Schack urged vehemently that the commons ſhould inſiſt to have this promiſe under the king's hand, and make themſelves ſure of the reward for ſo conſiderable a preſent as they were going to make, whilſt they had ſo fair an opportunity in their hands. But all his inſtances were in vain; they were in the giving humour, and reſolved to do it generouſly, truſting the king for the performance of his word; a thing which they have ſince, often, though too late, repented of.

The next morning, the nobles met in the council houſe, and the other two electors in the brewers hall, the reſolution of the commons could not be kept ſo ſecret, but by this time ſome warm rumours of it had reached the nobility; but ſcarcely had they leiſure to conſider what was fit to be done on that occaſion, when they were informed that the commons were marching towards them; for the biſhop and the preſi-

dent had ſo well performed their parts, and urged the neceſſity of ſpeedily executing what had been reſolved on the day before; that all time was judged loſt which was not employed in putting it in practice; they immediately agreed to go to the council-houſe, and there propound to the nobility their deſign, deſiring their concurrence in ſuch a neceſſary work, for the welfare of the kingdom. They marched through the ſtreets with great gravity and ſilence, by couples, as before, whilſt the mob, by repeated ſhouts, applauded what they were going to do. And thus they came to the houſe where the nobles were aſſembled, who had ſcarce warning ſufficient to receive them.

The preſident Nanſon made a ſhort harangue, ſetting forth that they had conſidered the ſtate of the nation, and that they found the only remedy for the many diſorders which afflicted it, was to make the crown hereditary, and to give more power to the king than hitherto had been enjoyed; that this reſolution was already taken by the commons and clergy, in which if the nobility ſhould think fit to concur, they were ready to accompany them to the king, and make him a tender of an hereditary and ſovereign dominion; if not, that they were going themſelves, and the matter would be done without them; that a ſpeedy reſolution was neceſſary, for they had already ſent word to the court of their coming, and his majeſty expected them in the hall of his palace; therefore deſired to be informed in a few words what they reſolved to do.

The ſuddenneſs of ſuch a propoſition, and briſkneſs in the manner of its delivery, cauſed a general aſtoniſhment in the nobles; one might have ſeen thoſe who but the day before carried it ſo proudly, in an inſtant fall to an exceſs of complacency, and betray their fear by their ſpeeches and countenances, as they formerly had done their arogance. The miſchief no ſooner appeared to them, but they ſaw it was unavoidable; there was no leiſure allowed them to conſult; and to deny their compliance, or even to delay it, was dangerous. To give up at once their beloved power, and to ſubmit their necks to a heavy yoak, was an intolerable grievance: but they ſaw they were no longer maſters; the commons were armed, the army and clergy againſt them; and they found now too late, that what the day before they had conſidered only as the effort of an unconſtant giddy multitude, was guided by wiſer heads, and ſupported by encouragements from court; nay, poſſibly by ſome of their own body: they ſuſpected each other, and no man knew whether his next neighbour was not in the plot againſt the public liberty. It is eaſy to imagine what diſtracted thoughts afflicted them on a ſudden, they were altogether unprepared for ſuch a diſmal ſtroke: but ſome anſwer muſt be given, and that ſpeedily. Such a one as they had a mind to give, they durſt not; for they were aſſembled in a fortified town, remote from their ſeveral countries and intereſts (where they had governed like ſo many princes) in the power of thoſe who could, and certainly would be revenged in caſe they proved refractory. The beſt way therefore was to ſeem to approve of what they could not hinder. They anſwered, That the propoſitions made to them by the commons was not diſpleaſing, but the manner of it wanted the requiſite formalities; that previous deliberation was neceſſary to an affair of ſo great moment; that they could not but take it ill, a reſolution of ſuch conſequence ſhould be concluded on by the commons without the leaſt acquainting the nobility with it, who were the chief eſtate of the realm: that they alſo aſpired to the honour of bearing their part in beſtowing ſuch a material gift on the king and his poſterity, but deſired that the matter might be proceeded on with that gravity, and ſolemnity, which the nature of it required. That it was not fit ſuch a weighty tranſaction ſhould have the appearance of a tumult, and ſeemed forced rather than a free choice. The concluſion of all was, That they hoped the commons would a little defer the putting in execution their deſign; and in the mean time conſult with them, till the affair was done orderly, and with unanimous approbation, as well as to mutual advantage.

This was with great vehemency by the preſident denied. He replied, Theſe were ſhifts only to gain time, that the nobles might be in a condition to fruſtrate the intention of the commons; that the point was already agreed, and the reſolution taken; that they came not hither to conſider, but to act; if the nobles would join with them, they were ready; if not, they would do what was to be done alone; and doubted not but his majeſty would make his uſe of it.

During theſe diſputes the nobility had privately ſent ſome of their body to court to acquaint the king, that the commons were now at their houſe, and had made them ſudden propoſals out of form, but ſuch as they ſhould rather concur with, than be averſe to; that they were ready to join in offering an hereditary crown to his majeſty, and the heirs male of his family for ever; which they hoped his majeſty would accept in good part: but deſired to proceed in uſual methods, which ſuch weighty affairs merited, viz. by conferences and deliberations, that it might appear rather an effect of their juſt ſentiments of his majeſty's valour and conduct, than the ſudden motions of a tumultuous aſſembly.

The king, with a great deal of mildneſs, as if he had been wholly unconcerned and paſſive in the caſe, replied, That he was obliged to them for their deſigns in favour of him, and the royal family; that he hoped what they were about would tend to the benefit of the nation; but that a crown entailed only upon the heirs male, could not be ſo acceptable to him, as if it were given without that limitation; that the government of females had neither been a new thing at home, nor unproſperous in neighbouring countries: That they might conſider of it, and ſince it was their gift, he would not preſcribe, but it could not be acceptable to him unleſs it were more general.

In the mean time the commons grew impatient, the anſwer given them was not ſatisfactory, and the nobles had not yet reſolved on an entire compliance, nor were ready to accompany them, becauſe they had not yet an account of the ſucceſs of their members ſent to ſound the mind of the court.

The clergy and burgers therefore, led on by the biſhop and preſident, proceeded without them to the palace, and were met by the prime miniſter, and conducted by him to the hall of audience, whither, after ſome ſhort time, the king came to them. The biſhop made a long ſpeech, ſetting forth the praiſes of his majeſty, and the cauſe of their waiting on him: concluding with an offer, in the name of themſelves, the two moſt numerous, and if he pleaſed, moſt powerful eſtates, of an hereditary and abſolute dominion; together with the aſſiſtance of their hands and purſes, in caſe any body ſhould go about to obſtruct ſo neceſſary and laudable a deſign for the good of the country. The king told them in ſhort, That he thanked them; and in caſe a univerſal conſent eſtabliſhed this good deſire of theirs, he would accept the preſent they made him; but that the concurrence of the nobles was neceſſary; which he doubted not of in the leaſt, when they had time to make the offer with the neceſſary formalities; that he aſſured the commons of his royal protection, and ſpared not to be unmindful of their kindneſs by eaſing them of their grievances, and by encouraging ſubjects who had behaved themſelves ſo valiantly, and deſerved ſo well from him; concluding with his advice to them to continue their ſeſſion till ſuch time as matters were brought to perfection, and he could receive their gift with the ſolemnity that was fitting: and upon that diſmiſſed them.

But the nobles were all this while in a grievous diſtraction; they ſaw the commons were gone to the king without them: their meſſengers brought news that their propoſition of entailing the crown on the heirs male, was not pleaſing, becauſe a greater advantage was in proſpect; that this offer

was looked upon to proceed from perſons that would not have beſtowed any thing, if they could have helped it. That it was thought they pretended to merit in giving only a part, when it was not in their power to hinder the taking the whole. In this irreſolution they broke up, and ſince they were to meet again at noon upon another ſolemn occaſion, they reſolved how to proceed in an affair ſo delicate.

Monſieur Schele, a ſenator, and principal man of the country, was that afternoon to be buried in great pomp; his body had lain ſome months in ſtate, and according to the cuſtom; was to be accompanied to its interment by all the nobility then in town; this being a parliament time, was choſen for the ceremony, becauſe the nobles were all together, and a magnificent dinner was prepared, as is uſual on the like occaſions. In the height of their entertainment, an officer came into the room, and whiſpered to ſome of the principal men that the city gates were ſhut, and the keys carried to court: for the king having been informed by the governor, that two or three had privately ſlipped out of town the night before, and being reſolved that no more ſhould eſcape out of the net, till he had done his buſineſs, had ordered the governor that morning to lock the gates, and to let no perſon in or out without ſpecial order. The governor ſent one Bill, the town major, to put this in execution; who as ſoon as he had done it, went to the houſe where they were met, and ſat down at the table among the ſenators. This diſmal news of the officer's was preſently whiſpered round the company; who immediately applied themſelves to him, to know what the meaning was of ſuch an unuſual proceeding at the time of a general convention; they aſked him, What deſtiny was appointed them? whether they were there to be maſſacred, or what elſe was to be done with them? The town major calmly anſwered, That he believed there was no danger towards them, that ſuch violent meaſures would not be taken by ſo gracious a king; though he had indeed given the orders himſelf for the ſhutting the gates; and that nobody was to ſtir out of the town without leave; but that this need not diſturb or hinder them from finiſhing the work of the day, and purſuing their public, as well as their private buſineſs. There wanted no more than this confirmation from the officer to overthrow all the reſolution, and conſultations of the nobles; the dread of looſing their lives took away all thoughts of their liberty. They immediately diſpatched meſſengers both to the court, and the commons, to give notice of their diſpoſition to comply with what was formerly propoſed; aſſuring them likewiſe, that they were ready to agree to all that ſhould be aſked of them.

But the king, who had begun and played his game ſo well hitherto, determined to purſue it to the utmoſt, and would not ſuffer the doors to be opened, till the whole ceremony of inauguration was concluded, and the homage done in due form, and therefore ordered they ſhould ſtay, till in the face of the people and the army, they had ſworn fealty, and diveſted themſelves of all right, as well as power, to cauſe any diſturbance or alteration for the future.

Three days time was requiſite to prepare matters for that fatal hour, wherein they were to make a formal ſurrender of their liberty; the ſcaffolds were raiſed in a place before the caſtle, and adorned with tapeſtry; orders were given for the ſoldiers, and burgers to appear in arms under their reſpective officers: and when all things were ready, on the 27th of October, in the morning, the king, queen, and royal family, mounted on a theatre erected for that purpoſe, and being placed on chairs of ſtate under canopies of velvet, received publickly the homage of all the ſenators, nobility, clergy and commons; which was performed kneeling.

They were then obliged to take an oath, and ſome men of quality who were ſick, or pretended to be ſo, were brought in chairs. Among others one Garſdorf, a principal ſenator, who was the only one that ſpoke in behalf of their expiring liberties, ſaying, That he hoped, and truſted, that his majeſty deſigned nothing but the good of his people; and not to govern them after the Turkiſh manner: but wiſhed his majeſty's ſucceſſors might follow the example, which his majeſty would undoubtedly ſet them, and make uſe of that unlimitted power for the good, and not the harm of his ſubjects. Not one of the reſt ſpoke a word, or ſeemed to murmur in the leaſt at what was done.

Indeed it has been ſaid, That had the nobles ſhewed ever ſo little courage in aſſerting their priviledges, the king would not have purſued his point ſo far as to have deſired an arbitrary dominion: for he was in continual doubt, and dread of the event, and began to waver very much in his reſolutions; ſo that their liberties ſeem purely loſt for want of ſome to appear for them.

From the theatre, thoſe that had done homage went to the council houſe, where the nobles were called over by name, and ordered to ſubſcribe the above mentioned declaration, which they did.

Thus this affair was finiſhed, and the kingdom of Denmark in four days time changed from an eſtate little differing from ariſtocracy, to as abſolute a monarchy as any at preſent in the world.

The nobility however, ſtill retain a deſire of power, not eaſily extinguiſhed in the human breaſt: and to the machinations of ſome of theſe may be attributed the fate of a princeſs who was degraded from a throne to ſpend her days in obſcurity.

Among all the hardſhips which are impoſed on the poor peaſants of this country, is the obligation they lie under to furniſh the king, royal family, and all their attendants, their baggage and furniture, with horſes, and travelling waggons, whenever he makes any progreſs (which he often does either to Jutland or Holſtein) or takes any leſſer journey in Zeeland; even, although it be only to his country houſes of Fredrickſburg and Yagerſburg. In theſe caſes all the peaſants that lie near the road, or in that diſtrict, are ſummoned to attend with their horſes and waggons at certain ſtages, where they are to relieve each other: and this they often do, always at their own charges for man's and horſe-meat, for two or three days together, no regard being made to the ſeaſon of harveſt, (which is their uſual travelling time) or to any other convenience of theſe poor wretches. So that they have been ſeen with hundreds of waggons in a company, bewailing their ſad condition: and as ſoon as the king comes up, and his coaches, with thoſe of the other perſons of quality, are fitted with ſix or eight boors horſes each, and every lacquey ſeizes on his boor and waggon, for his own proper uſe; at which time, unleſs his pleaſure be in all things complied with, the poor trembling peaſant (who drives on and takes all patiently, without replying one word) is ſorely beaten and abuſed. Neither is it only when the king himſelf travels, that the boors are put to this trouble, but whenever he pleaſes to give his warrant to any perſon of quality, or officer, that has a journey to make, they are obliged to this ſervice and attendance.——This cuſtom however, is not ſo frequent as it uſed to be.

Apoplexies and the falling ſickneſs are the epidemical diſtempers here; one hardly paſs through the ſtreets of Copenhagen, without ſeeing one or two poor creatures groveling on the ground in a fit, and foaming at the mouth, with a circle of gazers and aſſiſtants about them. Apoplexies among the better ſort, often proceed either from exceſſive drinking, or from diſcontent; it being very uſual here to have them die of a ſlacht, as they call it, which is an apoplexy, proceeding from diſcontent and trouble of mind. But by way of amends for theſe diſtempers, there are few or none that are troubled with coughs, catarrhs, conſumptions, or ſuch like diſeaſes of the lungs; ſo that in the midſt of winter, in the churches, which are very much frequented, there is no noiſe to interrupt the attention due to the preacher. It has

been

been ſaid, that their warm ſtoves, with the plenty and pureneſs of their firing, (which is beech wood) contributes as much to their freedom from theſe kinds of maladies, as the groſſneſs and unwholeſomeneſs of our coals in London does to our being ſo univerſally troubled with them; notwithſtanding the ingenious Sir William Petty be of another opinion; for in all other reſpects of air and ſituation, we have the advantage of them.

The marriages here are uſually preceded by contracts, which will laſt ſometimes three, four, or more years, before they proceed to a public wedding by the miniſter; though often the young couple grow better acquainted before theſe formalities are diſpatched. The gentry give portions with their daughters, but the burgers and peaſants, if they be able, give cloaths, ſome houſhold ſtuff, and a great wedding dinner, but nothing elſe till they die.

Sumptuous burials and monuments are much in requeſt with the nobility; and it is uſual to keep the corps of a perſon of quality in a vault, or the chancel of ſome church, for ſeveral years together, till a fit opportunity to celebrate the funeral. The poorer ſort are buried in great thick cheſts; and in the towns there are about a dozen of common mourners belonging to each pariſh, who are obliged to carry and attend them to their graves.

Lord Moleſworth obſerved that the common people were given to cheating and ſuſpecting others.

"Inſomuch (ſays he) that if you offer them great profit for a thing which they have not been formerly uſed to ſell, they will refuſe to part with it, as ſuſpecting that you ſee an advantage in ſuch a purchaſe, which as yet is unknown to them, but which they hope to find out. I remember one inſtance: ſeeing great flocks of green geeſe in the fields near the town, I ſent to buy ſome, but they being never uſed to ſell, or eat geeſe in that country, till they are big and old, it was not poſſible to perſuade any body to part with one of them; though double the price of a big one was offered for each. They aſked what we deſired to buy them for? what we would do with them, &c. For they could not be perſuaded, any one would be ſo fooliſh to eat them whilſt young, or little; after a week, an old woman, to whom money had been offered for a dozen, came and brought four to ſell, ſaying, "That neither ſhe nor her geeſe, had thriven ſince ſhe had refuſed to ſell them at a good price; for the kite had the night before killed eight of her ſtock, and that now the remaining four were at my ſervice." Thus the ſuperſtition of this old woman procured us the firſt green geeſe that I believe were ever eaten in Denmark; but after that they had taken notice that we fatted and killed them for eating, they furniſhed us with them as often as deſired. I would not omit this ſtory (adds he) becauſe it gives a more lively idea of the common people, than any deſcription I could make. In their markets they will aſk the ſame price for ſtinking meat as for freſh; for lean as for fat, if it be of a kind. And the ſure way not to obtain, is to ſeem to value, and to aſk importunately, a thing which otherwiſe they themſelves would deſire ſhould be done. This laſt remark is not peculiar to the common people only.

"I do not ſee that they are good at imitating the inventions of other countries; and for inventing themſelves, I believe none here, ſince the famous Tycho Braha, ever pretended to it. Few or no books are written, but what ſome of the clergy compoſe of religion. Not ſo much as a ſong, or a tune, was made during three years that I ſtayed here. Their ſeaſons of jolity are very rare, and ſince the fatal opera, about four years ago, in which many hundred perſons were burnt in the old queen's houſe, they contented themſelves with running at the gooſe on Shrove Tueſdays, and taking their pleaſure upon ſleds in the winter, and well wrapped up in wool or fur; a diverſion much in requeſt in this court, and among all kinds of people.

"The language is very ungrateful, and not unlike the Iriſh in its whining complaining tone. The king great men, gentry, and many burgers, make uſe of High Dutch in their ordinary diſcourſe, and of French to ſtrangers. I have heard ſeveral in high employments boaſt that they could not ſpeak Daniſh; yet many of the moniſylables in this tongue are the ſame with the Engliſh; and without doubt we owe the original of them to the Danes, and have retained them ever ſince they were maſters of our country."

The town of Rypen ſtands on the river Nipſaw, which forms three channels, and divides the place into as many parts: it falls into the north ſea about three miles below the town, and forms one of the beſt harbours in Denmark. This advantage occaſions trade here in fiſheries, alſo ſome to Hamburgh, a little to Amſterdam; and they have a few ſmall ſhips which uſe the trade from Norway and the Baltic to England. There is a univerſity here, but it is not in a flouriſhing ſituation; it is a biſhop's ſee; and they have for their defence a fortified caſtle. The church is built of hewn ſtone; the ſteeple is ſo high that it ſerves as a land-mark to ſailors on this coaſt, which is generally eſteemed very dangerous.

Hodſedburg, is a little town, well ſituated on a pretty river, upon which was obſerved ſome ſmall craft, a ſign that the inhabitants carry on a trade; and there is good fiſh here. The country is tolerably well cultivated, except the marſhes, which are all in the ſtate of nature, having never been attempted to be drained. They cultivate many of the turnip grounds here with cabbage leaves. Near this town is Lemwijg, the country continuing pretty good. That town is oddly ſituated on a ſmall bay within 10 miles of the ſea, and is without any trade or ſhipping, but ſmall fiſhing-craft; the reaſon is, that it has no communication with the German ocean, the bay on which it ſtands being in the great lake, which extends quite acroſs Jutland, and falls into the Baltic. There is little worthy of obſervation in this place.

Nikiſbing is ſituated on an iſland on the lake, which they call the Gulph of Leimford. It is chiefly applied to paſturage. The town is pretty large, but ſeems very poor, and has but bad accommodations.

Aalbourgh is the ſee of a biſhop, and a place of ſome trade, and there are alſo a few fabrics of woollen goods, fixed at the king's expence; but they do not ſeem to be in any flouriſhing ſituation, chiefly from want of ſupport and attention to the conduct of them. As the introduction of any thing of this ſort is of but little conſequence, unleſs there is a ſtanding attention paid to their increaſe and welfare.

Wyburg is at thirty miles diſtance; the way lies through waſte land. Theſe waſtes are all well watered with ſtreams, and the ſoil is in general very good, and much of it deep and free from ſtones, though ſome tracts are full of them, and rocky, but none that might not be applied to many very uſeful purpoſes, were they in the hands of active and wealthy induſtrious people. This city is the ſee of a biſhop, and alſo the reſidence of a provincial court of juſtice, but it is nevertheleſs a very inconſiderable place.

Horſens is alſo a ſea-port. The king has great demeſnes in the country, and upon which has been planted ſome colonies of poor Germans. They had lands let them upon leaſe, which they cultivate better than their neighbours the Danes, but they do not ſeem to be good huſbandmen, as they fix only upon the dry lands, whereas the marſhes drained would prove much the richer of the two. Though this attention had been given to peopling theſe waſtes, yet very little care had ſince been taken to increaſe the numbers, or to give ſuch encouragement to them, as to enable them to execute any thing conſiderable in improvements.

Weile, though a ſmall place, is pretty well built. The ſtreets are ſtrait, and tolerably paved, and the houſes well built of brick. It has a commodious harbour, on a bay which falls into the Baltic, by means of which, it carries on a pretty good trade. But

the inhabitants of all these little post towns seem much to want encouragemnt in their trade; they would all flourish very tolerably, if they had a cultivated country, with some manufactories behind them. Many favourable circumstances must unite in a port to create trade, where the export consists of nothing but a scanty product of mere natural commodities: trade consists of and depends upon exportation reciprocal to the importation; but the general misfortune in the commerce of such little ports, is a failure of the exportation part; all of them, as far as the demand reaches, are free enough, at importing. This is a sure trade to the merchant, as most branches are, in which gold and silver are the commodities exported for the products and manufactures of other countries. Indeed the Danish ports have the general misfortune of being deficient in inland navigation, having nothing to depend upon but the mere circulation of the town, which is in general very confined. Trade depends much on manufactures, and not a little on a flourishing agriculture. Neither of these are common in Denmark; so that it is not to be wondered, that the general commerce of the kingdom is confined.

Kolding is a very pretty town, beautifully situated; it contains some trade, and a royal palace, but it has nothing in it that is worthy of a travellers notice, though the inhabitants make a great matter of it, as if it was the Versailles of the north. The king has some considerable demesnes around this town, and raises a revenue by a toll upon all cattle which pass the bridge, and which amounts to a considerable sum; for most that are driven from Jutland for the Dutch drovers, which are very numerous, pay here half a dollar a head. The country from Horsens to Weile is tolerably well cultivated.

The road from Kolding to Hadersthelbe, is through a country remarkable for its cultivation: most of their waste tracks has been of late improved, and many acres, that not many years since were all covered with forests, are now in a state of profit for their owners. This has been totally owing to an emancipation of the peasants. It was found that the earth would never be well cultivated by mere slaves, and acting consistently with this just idea, has had the desired effect.

The Danes in the midst of their attention to commerce and agriculture have laid many plans for increasing their East India trade, and among others, there was one, which had actually been so much approved as to be put partly in execution, and this was to purchase by treaty, the port and territory of Mosambique, on the Coast of Africa, from the Portuguese; a colony which is of little national advantage to that kingdom, since the declension of their affairs in the East Indies, but which would be of infinite importance to the Danes, in case they set heartily about an increase of their India commerce. In some negotiations with the court of Lisbon, matters had gone so far, as fixing the terms, which, though they were too high to conclude on, yet they brought on a farther treaty, relative to other settlements in the Indies, and which it was evident they were willing to part with, in case they could get high terms. Mosambique from its situation, might be a port and colony of as great importance even as the Cape of Good Hope; all Danish ships, going and coming to and from the Indies might water and take in their refreshments there; as behind it lie the richest countries in Africa, and it is open to the trade of the rest of that vast coast, to Arabia, Persia, &c. so that there could be no doubt but it would turn out a place of infinite importance in the hands of an active, and industrious nation. The treaty upon this affair with Portugal was broke off, without coming to any conclusion, but on what account is not known to the world.

The scheme however, was a good one. The best of all government that still belong to the Viceroy of the Indies, is that of Mosambique, already mentioned in the former part of this work. They have a strong fort there with four good bastions, which command the channel, and in which there are seventy pieces of brass cannon, and here is always kept a good garrison, and in tolerable order. The governor is honoured with the title of General of the River Senna, where he has his lieutenant, which employment was worth to him several hundred thousand crowns a year; there are but a few houses about the fort, the inhabitants keeping their effects on a neighbouring continent. The merchandise brought to this place by the ships of the company, are bought at a set price by the royal factory, which afterwards sends them to Chelimani, the mouth of the River Senna, running 300 miles along the coast, in gallies and small vessels, because of the flats from Chelimani; the goods are sent up the river against the stream, in almandies, or little boats, which are ten days going up, and about five coming down. It is very difficult going up for those that are not acquainted with the shallows and windings of the river.

Cafras and blacks as has been observed, resort to this port, from provinces and kingdoms three or four months journey distant, to buy and take up goods upon trust for so much gold, which they never fail to bring punctually the next year, unless death prevents them. This trade yields above cent per cent, so that the Portuguese may be said to have another India in Africa.

Senna is a little town, on the right hand of the river, inhabited by fifty Portuguese families, who make it populous enough by the great number of blacks they keep. They till the ground, and dig the mines, and by that means maintain their masters, instead of being kept by them.

Solfola, where the Portuguese have another establishment, is but about fifteen days journey from hence; and here a prodigious trade is carried on, of which the Portuguse are or might be masters. It consists chiefly of gold, of which there are greater quantities here than in any other country in the world, since the annual produce of this market is computed by the best judges, at 46,000 ounces. There are vast quantities of Spanish and Canary wines, oil, silks, linens, cottons, coral, and other European goods, sold here, which are carried by the inhabitants of the little kingdoms of Solfola, through all the great empire of Monomotapa, which the Portuguese stile the Empire of Gold, from the prodigious quantities of that precious metal, which is brought to them from thence. There are likewise some very rich commodities, brought hither by the negros, such as the most excellent ebony in the world, great quantities of ivory, abundance of fine mats, which are much esteemed in the Indies, and a great number of slaves; so that Goa, and all the rest of the Portuguese settlements, are furnished from hence.

Yet these possessions are said to produce so little to the king of Portugal, that it has been more than once debated, in the council of that prince, whether it would not be to the interest of the crown to abandon them altogether, withdrawing their artillery and effects; it is likewise asserted that it is not any political but purely a religious motive, that has hindered this resolution from being taken, the priests have suggested, that in that case a multitude of souls would be lost to the church. But we shall the less wonder at this, if we consider, that such as are best acquainted with the East India trade, assures us, that not a single merchant, and a single ship of a reasonable burden, may carry on as great commerce, as that which at present subsists between Lisbon and Goa.

There are yet a great many ships employed from Goa, Diu, and Daman, to the Coasts of Persia, Pegu, Manilla, and China, but they are mostly on account of Indian merchants, there scarce being a Portuguese trader at Goa able to furnish a cargo of 10,000 crowns, and it is very much doubted, whether in the whole of their trade they employ above 200,000 crowns; so that it is not at all strange, that one year with another, there are not above two ships sent directly from Goa to Lisbon; and those not

above a fourth part ſo rich as when they annually ſent twenty. Yet there has been a late regulation made at Goa, for the preſervation and promoting of trade, which thoſe who underſtood that ſubject beſt, agree, compleated its ruin. This is an excluſive company which has the ſole right to the commerce of Moſambique and Mocha, which company has taken upon itſelf the payment of the royal officers, who are alſo two thirds employed therein; which has given ſuch a blow to the natural commerce of Goa, that the beſt part of the Indian merchants that were left, are now retired from thence. To ſay the truth, it was the great ſhare the viceroys, governors, and other officers, always took in commerce, without contributing any thing thereto; except protecting the merchants from the violence committed by themſelves, on ſuch as did not admit them to a ſhare of their trade, that firſt deſtroyed the extenſive commerce they enjoyed. But though their power and their commerce are ſo much declined, their pride is as great as ever; inſomuch that they refuſe the natives of the country who are called Canarins, the wearing of ſtockings, though they employ them as phyſicians, lawyers, and merchants; by which, many of them are ſo rich, that they keep a dozen or fourteen ſlaves, and are in much better circumſtances than the Portugueſe themſelves.

The revenues of the church have ſuffered very little by this moſt ſurpriſing change in the ſtate: there is hardly a monaſtery that does not receive four or five thouſand crowns out of the treaſury, at the ſame time the ſoldiers ſtarve and mutiny for want of pay; which is ſo much the harder upon the government, becauſe the reverend fathers know very well how to take care of themſelves, inſomuch, that it is affirmed, the Jeſuits in Goa have a better revenue than the crown of Portugal. It is not eaſy to know what becomes of the money theſe churchmen raiſe; but it is very evident, that the wealth they poſſeſs, together with the eſtabliſhment of the inquiſition at Goa, is ſuch a dead weight on the ſettlement, as muſt ſooner or later deſtroy it.

"The wiſeſt of the Portugueſe in Europe, (ſays our author) underſtand this very well, and would be glad to ſee ſome proper remedy applied, not from a prejudice againſt the church or churchmen, which is far enough from being the vice of that nation, but out of pure regard to the crown and to the nation; but one would think that the clergy themſelves, inſtead of graſping at more, ought to be willing to part with ſome proportion of what is already in their hands, in order to render the ſtate more able to protect them in the poſſeſſion of the remainder. Beſides there is nothing clearer, than that the erecting of religious houſes, is directly oppoſite to the very ſcheme of planting, and muſt always ruin the ſettlements where it prevails, and conſequently the religious houſes themſelves, which is even an argument that ought to prevail with the popiſh princes, to lay more reſtraint on the miſſionaries that are ſent abroad: unleſs they prefer the reputation of zeal, among thoſe who are no competent judges, not only to maxims of policy and good government, but to the principles of true religion. For if there be any piety in converting Pagans to the Chriſtian faith, it follows, that there is ſtill greater piety in doing this effectually, and in maintaining for ever the eſtabliſhments neceſſary to ſupport them, which reaſon and experience ſhews, the building monaſteries, and maintaining numbers of idle people in them, will not do; but on the contrary, will bring on, in time, the deſtruction of thoſe colonies, in which this humour is ſuffered to prevail.

"It is not many years ſince that ſeveral Indian princes were driven from before Goa, which they had blocked up with a numerous army, by the powerful ſuccours ſent by the king of Portugal, and by the excellent conduct of the late viceroy, who was the Count de Laurical, and who, if I miſtake not, was twice in the Indies, and behaved there with great reputation. Such expeditions, however, are to be conſidered as expedients only, which for a time may preſerve that ſettlement, but can never reſtore it, or bring the affairs of the nation, in thoſe parts, into ſo good order as to make them worth the attention of a prince, who has the honour of the crown, and the good of his people at heart.

"It is however certain, that the eſtabliſhments which the crown of Portugal ſtill has in the Eaſt Indies, might in the hands of an active, and induſtrious nation, turn to conſiderable account; for it has been long ago obſerved by Mr. Tavinier, that the port of Diu is as well ſituated for trade, and as capable of improvement, as any in that part of the world, or more ſo; and if put under proper regulations, that is, if made in ſome meaſure a free port, it muſt neceſſarily come in for a large ſhare of that commerce now carried on at Surat, and in all probability, retrieve much of the Arabian and Perſian commerce, that has been ſo long loſt to the Portugueſe: on the other hand, as they have ſtill ſome factories at Biſnager, and other places on that coaſt, it would be no difficult matter to re-eſtabliſh their commerce in the heart of India, at the ſame time, that the port of Macao would furniſh them with the means of ſupplying the China market, as cheap, or cheaper, than any other European nation; becauſe the colony of Moſambique is ſo ſituated, as to ſerve them for the ſame purpoſe that the Cape of Good Hope does the Dutch, or the iſland of St. Helena does the Engliſh.

"But all theſe advantages ſignify nothing in the hands of thoſe, who are ſo far from poſſeſſing the virtues requiſite for ſuch improvements, that, on the contrary, they are not only tainted with, but overrun by ſuch vices, as muſt unqueſtionably overturn the beſt eſtabliſhment in the world. We may therefore ſafely predict, that the continuance even of the ſlender power which the Portugueſe have ſtill left, cannot continue long, and that for theſe two plain reaſons; firſt, becauſe it has been long, and ſtill in a declining condition; ſo that its force being extremely decayed, and at the ſame time continually employed in reſiſting the efforts of its enemies, it is impoſſible, in the nature of things, that it ſhould ſubſiſt for any time: ſecondly, the manners of the people are entirely ruined, ſo that there is not the leaſt probability that any ſuch reformation will ever be effected, as might enable them to make ſuch uſe of the convenient ports, of which they are ſtill poſſeſſed, as is neceſſary to revive and reſtore their commerce in the Indies. We may venture therefore to pronounce, that in the compaſs of twenty or thirty years, their eſtabliſhments in theſe parts will be quite loſt, and that in all likelihood, Goa, Diu, and Daman, will be loſt firſt; which will neceſſarily draw after them the deſertion of Macao, which cannot long ſubſiſt by its own force, and lies at too great a diſtance to receive any effectual ſuccour or ſupport from Portugal directly."

By the ſtate of the matter it is apparent, that the Danes might make ſuch a purchaſe, as we have mentioned, turn out to a very good account.

Though learning is not arrived at any high pitch in Denmark, yet there is an univerſity at Copenhagen, and there are other ſeminaries in the kingdom, which are capable of improvement, and will probably receive it under ſome ſucceeding reign. As to the preſent, it ſeems to promiſe but little; and though we have ſpoken of the Danes as a riſing people, it is likely their progreſs will be but ſlow under the government of ſuch a prince as Chriſtian VII. who ſuffers himſelf to be guided in the moſt important concerns of ſtate by the members of a court faction, who ſeek their own aggrandiſement, rather than the honour of the ſovereign, or the welfare of their country.

In the mean time it behoves Denmark to keep a watchful eye upon a jealous neighbour that has, for a ſucceſſion of ages been conſidered as a natural enemy, and after having been tumbled from the ſummit of power, gives ſigns of once more growing into greatneſs.

7 AP 53

Engravid for Moore's New and Complete Collection of Voyages and Travels.

neſs. The Swedes, under the auſpices of a young monarch, whoſe counſels have baffled thoſe of the aged, may be enabled to thwart the intereſts of her rival in many reſpects, and hinder her from reaping many of thoſe advantages which ſhe may otherwiſe reaſonably hope for, from the wiſe regulations made within the ſpace of the laſt century.

On the whole, it may be obſerved, that though much has been accompliſhed, yet much more remains to be done, to give Denmark that eclat which it ſeems to expect. Among the reſt, a reviſal of their boaſted code of laws appears to be neceſſary, wherein ſome alterations might be made, equally for the benfit of the ſubjects, and the good of the ſtate. The eſtabliſhing a nearer connexion between agriculture and commerce, might be an object worth attending to; and a leſs degree of partiality ſhewn to the military orders might be of real ſervice to the country.—— Theſe ends being attained, we cannot help concluding with ſome ingenious countrymen of ours who have lately viſited thoſe parts, Denmark would cut a good figure among the ſtates of Europe.

TRAVELS THROUGH SWEDEN.

SWEDEN, including the dukedom of Finland, is bounded by the Baltic ſea on the ſouth, the unpaſſable mountains of Norway and Muſcovy on the eaſt, being extended from 59 to 69 degrees north latitude, and from 32 to 55 longitude; and conſequently twice as big as the kingdom of France; but the abatements that muſt be made for ſeveral ſeas, and many great lakes, ſome whereof are above 80 Engliſh miles long, and 20 broad, as alſo for rocks, woods, heaths, and moraſſes, that cover much of theſe countries, will reduce the habitable part to a very ſmall portion, comparatively to the extent of the whole.

The ſoil in places capable of cultivating, is tolerably fruitful, though ſeldom above half a foot deep, and therefore more eaſily plowed, as it frequently is by one maid and an ox, and is generally beſt where there is the leaſt of it, that is, in the little ſpaces between the rocks; and frequently the barren land enriched with the aſhes of trees growing on the places that are burnt, and the ſeed raked among the aſhes, produces a plentiful crop, without farther cultivation.

This practice is ſo ancient, that their writers derive the name of Sweden from a word in their language that expreſſes it; but the danger of deſtroying the woods, has of late occaſioned ſome laws to limit that cuſtom.

If the inhabitants were induſtrious, above what neceſſity forces them to, they might at leaſt have corn ſufficient of their own; but as things are managed, they have not; nor can they ſubſiſt without great importations of all ſorts of grain from the country of Leifland, and other parts of Germany, adjacent to the Baltic ſea; and notwithſtanding theſe ſupplies, the pooreſt ſort in many places remote from traffic, are forced to grind the bark of birch-trees to mix with their corn and make bread, of which they have not always plenty.

The cattle, as in other northern countries, are generally of a very ſmall ſize; neither can the breed be bettered by bringing in larger from abroad, which ſoon degenerate; becauſe in ſummer the graſs is much leſs nouriſhing than in the places from whence they came; and in the winter they are uſually half ſtarved, for want of fodder of all kinds; which often falls ſo very ſhort, that they are forced to unthatch their houſes to keep a part of their cattle alive. Their ſheep bear a very coarſe wool, only fit to make cloathing for the peaſants. The horſes, eſpecially the fineſt, though ſmall, are hardy, vigorous, ſtrong, ſure-footed, and nimble trotters, which is of great uſe to them, becauſe of the length of their winters, and their fitneſs for ſleds, which is their only carriage in that ſeaſon.

Of wild beaſts, which are very plentiful in theſe parts, bears, elks, deer, and hares, are hunted for their fleſh, as alſo together with wolves, foxes, wild cats, &c. for their furs and hides. They hunt here with leſs ceremony than elſewhere, taking all advantages to ſhoot their game, at which they are generally very dexterous. There are no rabbits in theſe countries, but what are brought in for curioſity, and kept tame. In winter, foxes and ſquirrels ſomewhat change colour, and become grayiſh, but hares turn quite white.

Both wild and tame fowl are very plentiful and good in their kind, except ſea fowl, which feed and taſte of fiſh; the moſt common are orras and keders, the former of the bigneſs of a hen, the other of a turky; as alſo partridges, and a kind of bird ſomething reſembling them, called Yerpers. There are taken in winter great numbers of ſmall birds, as thruſhes, black-birds, and ſydenſcwans, the laſt of the bigneſs of Veldefares, but better meat, ſuppoſed to come from Lapland, or yet farther north, and have their name from the beautifulneſs of their feathers, ſome of which are tipt at the point with ſcarlet.

The chief lakes in Sweden are the Vetter, the Wenner, and Maeler; the firſt in Oſtrogothia, remarkable for its foretelling of ſtorms by a continual thundering noiſe the day before in that quarter whence they ariſe; as alſo for the ſudden breaking of the ice upon it, which ſometimes ſurpriſe travellers, and in half an hour's time become navigable: for its great depth, in ſome places is above 300 fathoms, though no part of the Baltic exceed 50; it ſupplies the river Motala, which runs through Norcopingh, where it has a fall of about thirty feet, and ſome winters is ſo choaked up with ice, that for many hours no water paſſes. The ſecond is in Weſtrogothia, from which iſſues the river Elve; that, falling down a rock near ſixty feet, paſſes by Gottenburgh. The third empties itſelf at Stockholm, furniſhing one ſide of the town with freſh water, as the ſea does the other with ſalt.

Theſe, and abundance of other lakes, of which many like ponds, have no vents. and are called Innſeas; they are well ſtored with fiſh, ſalmon, pikes, pearch, tench, trouts, eels, and many other ſorts unknown elſewhere, of which the moſt plentiful is the ſtreimling, a fiſh leſs than a pilcher, taken in great quantities, and ſalted in barrels, and diſtributed over all the country. Beſides, the North-Bottom or bay, that ſeparates Sweden and Finland, abounds with ſeals, of which a conſiderable quantity of train-oil is made and exported; and in the lakes in Finland are great quantities of pikes, which being taken, are ſalted, dryed, and ſold at a very reaſonable rate.

Theſe lakes are of great uſe for the convenience of carriages, both in ſummer by boats, and by ſleds in winter, and among them, and on the ſea coaſts, are almoſt innumerable iſlands of different ſizes, of which

there

there are in Sweden above 6000 that are inhabited, the reſt are either bare rocks, or covered with wood; Gotland, Oland, and Alaud, are iſles of large extent, one being ſixty miles long, and the others little leſs.

Their woods and vaſt foreſts overſpread much of the country: and are for the moſt part of pines, firr, beach, birch, alder, juniper, and ſome oak, eſpecially in the province of Bleaking, the trees growing in moſt places ſo cloſe together, and lying to rot where they fall, make the woods ſcarce paſſable.

Theſe afford a plentiful and cheap firing, and being generally very ſtrait and tall, are eaſily converted into timber fit for all uſes. In the parts near the mines, the woods are much deſtroyed, but that want is ſo well ſupplied from diſtant places, by the convenience of rivers and winter carriages, that they have charcoal above ſix times as cheap as it is in England, though indeed it is not half ſo good.

The mountains abound in mines. There is one of ſilver, into which workmen are let down in baſkets to the firſt floor, which is 105 fathoms under ground, the roof there is as high as a church, ſupported by vaſt arches of ore; thence the decent is by ladders or baſkets, to the loweſt mine, above 40 fathoms where they now work. They have no records ſo ancient as the firſt diſcovery either of this or the copper mine, which muſt needs be the work of many ages; the ore ſeldom yields above four per cent, and requires great pains to refine it; they are alſo at the charge of a water-mill to drain the mine, and have the benefit of another that draws up the ore. It yearly produces about 20,000 crowns of fine ſilver, of which the king has the pre-emption, paying one fourth leſs than the real value. The copper mine is about 80 fathoms deep, of great extent, but ſubject to damage by the falling in of the roof; yet that is ſometimes recompenced by the abundance of ore that the ruined pillars yield.

Iron mines and forges are in great numbers, eſpecially towards the mountainous parts, where they have the convenience of water-falls to turn their mills. From theſe, beſides ſupplying the country, there is yearly exported iron to the value of near 300,000l. But of late years, the number of theſe forges has been ſo much increaſed, that each endeavouring to underſell others, the price has been much lowered; and ſince the prohibition of foreign manufactures (in exchange of which iron was plentifully taken off) it is grown ſo cheap, that it was found neceſſary to leſſen the number of forges; neither has that contrivance had the effect intended; but on the contrary, many more are likely to fall of themſelves, becauſe they cannot work but to loſs, in which many thouſands of poor people, whoſe livelihoods depend upon theſe forges and mines, will be reduced to a ſtarving condition.

The ſeaſons of the year, though regular in themſelves, do not altogether anſwer thoſe of other climates, as a French ambaſſador obſerved, who in a raillery ſaid, There were in Sweden only nine months winter, and all the reſt was ſummer; for as winter commonly begins very ſoon, ſo ſummer immediately ſucceeds it, and leaves little or no ſpace to be called Spring.

The productions therefore of the earth, are, more ſpeedy in their growth than in other parts; the reaſon of which ſeems to be, that the oil and ſulphur in the earth, (as it appears by the trees and minerals it produces) being bound up all the winter, are then of a ſudden actuated by the heat of a warm ſun, which almoſt continually ſhines, and thereby makes amends for its ſhort ſtay, and brings to maturity the fruits proper to the climate. Yet withal, its heat is ſo intenſe, that it often ſets the woods on fire, which ſometimes ſpreads itſelf many leagues, and ſcarce can be ſtopt till it comes to ſome lake, or very large plain.

In the ſummer ſeaſon the fields are covered with a variety of flowers, and the whole country overſpread with ſtrawberries, raſberries, currants, and the like, which grow upon every rock. In their gardens melons are brought to good perfection in dry years; but apricots, peaches, and other wall fruits, are almoſt as rare as oranges, they have cherries of ſeveral ſorts, and ſome tolerably good, which cannot be ſaid of their apples, pears, and plumbs, that are neither common nor well taſted, all kinds of roots are in plenty, and contribute much to the nouriſhment of the poor people.

The ſun at Midſummer is above the horizon of Stockholm eighteen hours and a half, and for ſome weeks make a continual day. In winter, the days are proportionably ſhorter, the ſun being up but five hours and a half, which defect is ſo well ſupplied as to lights, by the moon, the whiteneſs of the ſnow, and clearneſs of the ſky, that travelling by night is as uſual as travelling by day; and journies begun in the evening as frequently as in the morning. The want of the ſun's heat is repaired by ſtoves within doors, and warm furrs abroad; inſtead of which, the poorer ſort uſe ſheep ſkins, and other like defences; and are generally better provided with cloathing, to ſuiting their condition, and the climate they live in, than the common people of any part of Europe; though where any neglect or failure happens, it uſually proves fatal, and occaſions the loſs of noſes, or other members, and ſometimes of life; unleſs the uſual remedy to expel the froſt when it has ſeized any part, be early applied, which is to remain in the cold, and rub the part effected with ſnow, till the blood return to it again.

What has been ſaid in relation to Sweden, is in the main applicable to Finland, except only that hitherto no mines have been diſcovered there. Its chiefeſt commodities are pitch, and tar, all ſorts of wooden ware, dried fiſh, cattle, train oil, &c.

The Swedes, like moſt other nations, are fond of deriving their origin from the remoteſt ages; but there is nothing to be depended on in their ancient hiſtory till the arrival of Odin, who with his Aſiatives emigrated to the north about ſixty years before the Chriſtian Æra. This chief planted his arms and his religion among them. The latter was a heap of abſurdities, but well calculated enough to ſtir up a barbarous nation to warlike atchievements. According to his ſyſtem, the ſouls of the wicked after death were conſigned to *Hela*, a place of puniſhment, while thoſe of the good, and particularly of ſuch as fell in battle, were received into the halls of Odin, where the latter quaffed mead and ale out of the ſkulls of their enemies.

The natives of Sweden were early renowned for their courage, and ſome judgment may be formed of what their neighbours thought of them in this reſpect, where it is obſerved, That one of the ancient Punic writers giving as a ſort of ſcale of the bravery of the northern nations, ſays, "That the *Swedes* were excelled only by the immortal Gods in valour."

Divine honours were paid to Odin Woden after his death, and Wedneſday owes its name to this God, who was adored, together with Thor, Freya, and other idols by the Swedes, and likewiſe by our Saxon anceſtors.

That the Saxons who were called into England about the year 450, were originally a colony of Goths, is conjectured from the agreement of their language, laws and cuſtoms. But that the Swedes and Goths, joined with the Danes and Norwegians in their invaſion of England, about the year 800, we are aſſured from our own hiſtorians, that expreſſly mention them, with the character of barbarous and Pagan nations, as they then were; and the ſame may be concluded from the many Saxon coins, that are frequently found in Sweden, and in greater variety than in England, which ſeem to have been the Dane gilt, or tribute which the nation then paid.

The Normans alſo, who about that time ſettled in France, were in part natives of this country, ſo that England, together with the miſeries that accompanied

thoſe conqueſts, owes a great part of its extraction to theſe people.

It was about the year 830, that the Emperor Ludovicus Pius ſent Arſgarius, afterwards archbiſhop of Hamburgh, to attempt the converſion of the Swedes and Goths, who at firſt had little or no ſucceſs; but in his ſecond journey, ſome years after he was better received, and baptized the king Olaus, who was afterwards martyred by his heathen ſubjects, and offered in ſacrifice to their gods; nor did Chriſtianity become the general religion of Sweden till about 100 years after, when it was planted by Sigfrid, archbiſhop of York and other Engliſh divines, ſent for thither by another Olaus; in whoſe time the kingdom of Sweden, and that of Gothia were united, but became afterwards to be ſeparated again, and continued ſo near 200 years; when they were again joined, on condition that the two royal families ſhould ſucceed each other by turns, as they did for a ſpace of a hundred years, but not without great diſorders, and much blood ſhed, and ended in the extirpation of the Gothic family.

The throne of Sweden was filled by various princes of different lines, and often devolved upon the kings of Denmark; and when this was not the caſe, the Danes had always a faction in the kingdom, and theſe, under the reign of Stenſture the younger, headed by the Biſhop of Upſall, advanced Chriſtian II, to the regal dignity, but he behaved himſelf ſo tyranically, and ſhed ſo much innocent blood, eſpecially of the nobility, which he deſigned utterly to root out, that his reign became intolerable, and the whole nation conſpired againſt him under the command of Guſtavus the firſt, who deſcended from the antient kings of Sweden, whoſe father had been beheaded, and his mother had two ſiſters impriſoned by Chriſtian. He was at firſt received governor of the kingdom, and two years after, had the regal dignity conferred on him, and as the Danes and Norwegians had alſo expelled King Chriſtian, who had married Charles V's ſiſter, and repaired to the imperial court for ſuccour, which he could not obtain to any purpoſe, being, upon his landing in Norway, defeated and taken priſoner, in which ſtate he continued to his death: therefore Guſtavus was freed from all further trouble on that account; and at liberty to redreſs the diſorders of the kingdom.

Hitherto the kingdom of Sweden had for ſeveral hundred years been elective, but was at this time made hereditary to the male iſſue of Guſtavus, in a right line of ſucceſſion, with reſervation that in default of ſuch iſſue the right of election ſhould return to the eſtates. Guſtavus, by his three wives, had four ſons, and ſeveral daughters: his eldeſt ſon, Erick, was to ſucceed to the crown; John was made Duke of Finland; Magnus, Duke of Oſtrogothia; and Charles, Duke of Sudermania; whereby thoſe provinces were in a manner diſmembered from the crown. Having thus in a reign of thirty-ſix years brought the kingdom in ſuch a flouriſhing condition, as it had not ſeen in many ages, and entailed a crown upon his own family, in which it ſtill remains.

The next remarkable prince we find recorded after a ſucceſſion of years, was Guſtavus Adolphus. This monarch found himſelf engaged in a Daniſh war, which he finiſhed, and then turned his arms againſt Muſcovy: to the borders of which he ſent his brother, not with an intention to procure his eſtabliſhment in that throne, which he rather aimed at for himſelf; but to induce the fortified places adjacent to Finland and Liefland, to accept of Swediſh garriſons, in Prince Charles Philip's name, which ſucceeded in a great meaſure, till another was choſen Czar; with whom, after various ſucceſs on both ſides, a peace was concluded by the mediation of England and Holland, by which Sweden, beſides part of Leifland, preſently got the country of Ingermanland, and the province of Kexholm, with ſeveral fortified places, and wholly ſhut out the Muſcovites from the eaſt ſea.

The Poliſh war, that had ſome ſhort intervals of truces, was of a longer continuance, and no leſs beneficial to Sweden; which, in the courſe of it, took Riga, and all other places the Poles had in Leifland, except only one fort, and thence carried the war into Pruſſia, with the like ſucceſs, till at laſt, by the interpoſition of England and France, &c. a truce was concluded for ſix years.

This gave Guſtavus leiſure to engage in the German war, to which he was both provoked by the emperor, and encouraged by others. The year following he began that expedition, and on the 24th of June, arriving in the mouth of the Odor, he landed his little army that conſiſted of 16 troops of horſe, and 92 companies of foot, making about 8000 men, which beſides other additions, was augmented by ſix regiments of Engliſh and Scotch, under Duke Hamilton, but more by the king's incredible ſucceſs.

Upon his firſt approach, Stetin and all Pomerania fell into his hands. The year following having joined the elector of Saxony, he gave the emperor's army, under General Tilly, a total overthrow near Liepſig; whence he traverſed Franconia, the Palatinate, Bavaria, &c. till the next year at the battle of Lutzen (where his army was again victorious) he was treacherouſly killed, (as it is believed) by Francis Albert, duke of Saxon Lawemburgh, not only to the great joy of the imperialiſts, but of France and other his friends, who envied and feared the farther increaſe of his greatneſs. By his death, the crown fell to his daughter, Chriſtina, a princeſs of five years old, in whoſe favour her father had gained the ſtates of the kingdom to alter the hereditary union, as it is ſtiled, which reſtrained the ſucceſſion to the male line. In her minority, the chancellor, Axel Oxenſtiern, had the direction of the Swediſh affairs in Germany, where the war was proſecuted with variety of ſucceſs, but much to the advantage of Sweden, which was poſſeſſed of above 100 fortified places, and had an army exceeding 100,000 men, when Prince Charles Guſtavus was Generaliſſimo, a little before the concluſion of the treaty of Munſter, by which Sweden obtained for its ſatisfaction, the dukedom of Pomerania, Bremen and Verden, with the city of Wiſmar, and a right of ſeſſion; to vote in the diets of the empire, and circle of Lower Saxony, as alſo the ſum of five millions of crowns.

The queen had for ſeveral years entertained a reſolution to quit the crown, which at laſt ſhe effected, and after having procured Prince Charles Guſtavus to be declared hereditary prince, (whom the ſtates would gladly have had the queen married, but neither he nor ſhe were inclined to it) with much ſolemnity ſhe diveſted herſelf of the crown, and releaſed her ſubjects from their allegiance.

She was a princeſs renowned through Europe for her fine ſenſe and underſtanding.

All the world knows to what diſtreſſes the raſh conduct of Charles XII. reduced the Swediſh nation, which have lately been put an end to by their preſent monarch, (to whom, in imitation of the Danes) the bulk of the people have ſurrendered their liberties, with a view of delivering themſelves from the intolerable oppreſſion of an overbearing nobility.

Chriſtianity was not received into Sweden till about the ninth century; and not into Finland till near 300 years after; and if not firſt preached, was at leaſt firſt eſtabliſhed, as we have noticed by S. Sigfrid, who was afterwards martyred with three of his nephews, by the Goths.

The like fate attended St. Eſkill, and other Engliſh, by the Swedes; and about the year 1150, St. Henry, an Engliſh biſhop, accompanied St. Erick, king of Sweden, in his expedition into Finland, which the king conquered, and the biſhop converted into Chriſtianity; he alſo was martyred by the infidels, and lies buried at Abo, the metropolis of that country.

The reformation there, as well as in Denmark and

began ſoon after the neighbouring parts of Germany had embraced Luther's tenets, and was eſtabliſhed according to his platform. The tyranny of King Chriſtian II. who then wore theſe three northern crowns, gave an opportunity to Guſtavus, the founder of the preſent royal family, both to alter religion and advance himſelf to the regal dignity, which till that time was elective, but was then made hereditary to his family, in which it has ſince continued, as the Lutheran religion has alſo done in the country, never but once diſturbed from abroad, and ſince that diſturbance never diſtracted at home with nonconformity; all the orders of men agreeing in a conſtant attendance on divine ſervice, and a zeal for their own way, without any nice inquiries into diſputable points, either in their own tenets, or thoſe of other churches, whereby it becomes the buſineſs of their preachers, rather to perſuade the practice of piety, than to oppoſe the doctrine of others, or obſtinately defend their own.

The church is governed by an archbiſhop and ten biſhops, whoſe ſtudies are confined to their own employments, being never called to council, but only at the aſſembly of the ſtates, nor troubled with the adminiſtration of any ſecular affair. Their revenues are very moderate; the archbiſhop of Upſal not importing four hundred pounds a year, the biſhoprick after that proportion. Under them are ſeven or eight ſuperintendents, who have all the power of biſhops, and only want the name; and over each ten churches is a provoſt, or rural dean, with ſome authority over the inferior clergy, of whom the ſum total may beſt be computed by the number of churches, which in Sweden and Finland, is ſhort of 2000, to which the addition of chaplains and curates, will increaſe the body of the clergy to near 4000 perſons; they are all the ſons of peaſants or mean burgers, and can therefore content themſelves with the ſmall income of their places, which beſides more inconſiderable dues, ariſes from glebe lands, and one third of the tythes, of which the other two thirds are annexed to the crown, to be employed in pious uſes: however, the clergy have generally where-withal to exerciſe hoſpitality, and are the conſtant refuge of poor travellers, eſpecially ſtrangers, who uſe to go from prieſt to prieſt, as in other places from conſtable to conſtable.

The clergy of each dioceſs, upon the death of their biſhop, propoſe three perſons to the king, who either chuſe one of them, or ſome other, to ſucceed in that office, which is alſo practiſed in the choice of ſuperintendents. In the choice of an archbiſhop all the chaplains in the kingdom vote, but the determination is in the king's breaſt. His majeſty hath alſo the patronage of moſt churches, ſome few only being in the diſpoſal of the nobility. Many of their churches are adorned with variety of ſculptures, paintings, gilding, &c. All of them are kept neat and clean, and in good repair, furniſhed as well in country as city, with rich altar cloths, copes, and other veſtments.

Stockholm, the capital of Sweden, lies in fifty-nine degrees twenty-eight minutes north latitude, and about forty-one longitude, as deſcribed by our modern travellers, is romantically ſituated, being built on ſeven or eight iſlands and rocks in the great lake Mecer, which gives it ſome reſemblance of Venice; and this ſituation, like that of Venice, is ſuch a ſecurity to it, that no other fortification have been thought neceſſary. It is very well built; the ſtreets in general are broad, ſtrait, and regular; and the public buildings are many of them great ornaments to the place. Among theſe, the king's palace demands the firſt attention; this is an old building, and therefore irregular in parts, but it forms a ſquare, and is raiſed of ſtone. It is within a citidel, but the fortifications could not do much in defence of the town, and it is beſides commanded by an adjoining hill. Conſidering that the place ſerves for many public uſes, beſides the king's reſidence; it is not only mean but ſmall; all the rooms of the firſt and ſecond floor, are uſed for private meetings of the ſenate, and the courts of judicature; ſo that the apartments of the royal family are three pair of ſtairs high, and ſome of them four. The ſenate-houſe, where the public meetings, is a very regular and fine edifice, making the beſt figure of any in the town.

The houſes of the nobility are not very magnificent, but ſome of them are handſome, others large and commodious. The arſenal is a large building, but by no means well ſtored: the royal ſtables, and the great hoſpital, alſo make ſome figure; the bridge of boats, which is 100 yards long, and which they ſhew with ſome degree of vanity, is a paltry ſubſtitute. Among the churches, the principal are St. Nicholas, St. Mary's, St. Catharine's, St. Clare's, St. John's, and St. Olive's. The king's chapel is more decorated than any of them.

The chief trade of the kingdom is carried on in the city; the harbour will admit of 400 great ſhips, and above 500 ſmall ones at the ſame time, which might all ride in the utmoſt ſafety; and they have a quay for the delivery and taking in of goods, near a mile long; and this is reckoned the pleaſanteſt and moſt chearful part of Stockholm. It has a face of buſineſs and activity upon the public quay, which in a town, is far more lively than the perpetual rattle of coaches. But notwithſtanding it is a place of great trade, and the harbour perfectly ſecure, yet there are difficulties in getting in and out, which is a cramp upon their commerce.

There are numerous iſlands in the lake between Stockholm and the ſea, and theſe cauſe ſuch a winding courſe, that ſeveral different winds are neceſſary to carry them in and out; and which is much the worſe for their having no tides, which would greatly aſſiſt the navigation.

Oregrond is a ſea-port on the gulph of Bothnia, tolerably well ſituated for trade, eſpecially that of timber. From a hill near the town, is a moſt beautiful view of the gulph, with a great part of Finland on the other ſide; the iſlands of Aland ſpot the ſea in a moſt pictureſque manner.

At 100 miles diſtant is Hedemora. The country is very wild and various, hills and dales, mountains and rocks, bogs, rivers and lakes, all mixed thickly with a ſmall quantity of cultivated and profitable land. All the peaſants here are farmers, and moſt of them own the lands they cultivate. Their houſes are very well built of wood, and covered with ſhingles, the materials being to be had in the utmoſt plenty; they are much better, and more comfortable dwellings, than the cottages of mud, covered with thatch, which are ſo common in England. Their furniture is of their own manufacturing, conſiſting of very little more than what they make of their pines. All of them handle the ſaw and the axe with much agility, nor do they make bad or clumſy work, for their chairs, tables, beds, &c. are very decently cut and put together. They ſeem to be a very happy and contented people; each has his farm divided into regular incloſures around his houſe, which the women almoſt totally cultivate, while the men are employed in cutting timber in the foreſts; for they have a conſiderable river, down which they float vaſt quantities.

They always fix their houſes in the midſt of a vale of dry ſoil, upon a rock, if they can chooſe, ſo that all the works of tillage are performed with great eaſe. They cultivate but very little wheat, though their land appears to be good enough for any product; oats, and a little barley, with a good many beans, are their chief crops; but theſe ſeem to bear no proportion to their fields of Swediſh turnips, and alſo another ſort, which we are informed, does very well in the ſevereſt climates, and is more generally cultivated in the northern parts of the kingdom. Upon theſe turnips, they principally depend for their own diet, as well as that of their cattle; and their horſes in winter have no other food: their breed is ſmall, but very ſtrong, uncommonly hardy, and very ſure footed, going down even the moſt rocky mountain's ſides.

The

The famous Province of Dalecarlia is thus described by an Engliſh gentleman, who paſſed through it ſo lately as the year 1768.

"The whole country looks as if there was not any private property in it: but I found that theſe foreſts and wilds had owners, as well as more cultivated provinces. There are ſome gentlemen's ſeats in Dalecarlia, as I was informed, though I ſaw none; and their ſtewards and agents employ the peaſants in cutting timber, in drawing pitch and tar, and in making charcoal, on their accounts, paying them, in general, by meaſure and tale; their rates of labour are not high, few of them earning more than fourpence or five-pence a day, Engliſh, though they are induſtrious and uſed to hard labour; but this pay is ſufficient for maintaining them very well, with the help of their farms, as their wives dung them, and very old men do the principal buſineſs of them. All the purchaſes they have to make with money are ſome parts of their cloathing, which is extremely coarſe and cheap, and alſo utenſils and implements, all which are bought of travelling pedlars; for I do not apprehend there are three ſhops for buying them in this immenſe province. As their money is ſufficient therefore to their wants, theſe being all the uſes of it, except ſome very ſlight taxes, they have very few inſtances among them of unhappineſs on account of the want of money; nor do I any where remember ſeeing a people, that had more appearance of perfect content and happineſs among them. They are bleſſed with an almoſt uninterrupted flow of health, which is owing to the hardineſs of their lives, attended with wholeſome diet; a bolder, braver, hardier race of men, I apprehend, do not exiſt, than the Dalecarlians; they are a moſt ſincere, honeſt, ſimple, but plainly ſenſible people; they are as hoſpitable as can well be conceived, inſomuch, had I been eager and attentive to take advantage of this good diſpoſition, I ſhould have travelled through their province, ſpending nothing but good words: indeed, money is ſo ſcarce here, that paying them what they demanded, without the leaſt heſitation, and forcing money upon ſome of them, ſtill my expences in travelling were low beyond conception. I have ſeveral days travelled forty miles, and paid for myſelf, man, and five horſes, with two or three meals, and a night's lodging, only the value of three ſhillings Engliſh. Indeed I took up with the food of the peaſants, ſat at their board, and was particular in nothing but ſetting up my own bed. This was a mode of travelling extremely deſirable in ſo wild a country, where the peaſants are the only people in it, that demand the leaſt attention.

"I reached Lyma on the 21ſt, the diſtance of near forty miles. The country as I advanced, grew amazingly romantic; the view, as far as the eye can command, from the tops of the mountains, is one vaſt range of mountain beyond mountain, till you ſee the ridge that parts Sweden from Norway, riſing far above the common clouds. The whole proſpect is a thick woodland; and in many places very conſiderable lakes, of ſome miles long and broad, break upon the eye; nothing can be more awful, or more ſublime than theſe wonderful ſcenes: the ſituation of the village of Lyma is greatly uncommon; it lies within the bend of the river, which is in fact a continual water-fall, pouring over one ridge of rocks the moment it has paſſed another; and making ſuch a continual roar as almoſt to ſtun the whole village; immediately behind it riſes a ridge of mountains, whoſe tops are, in cloudy weather, far above the clouds; but fortunately for me, the weather has been uniformly clear; ſo that theſe dreadful heights, with the torrent pouring down at their feet, appeared magnificent in the higheſt degree.

"In the morning of the 23d, I travelled to Serna, which is thirty-two miles; where I met with nothing worthy of obſervation. It is a little village, the peaſants of which have nothing more than gardens. The whole country is, however, amazingly magnificent, as the eye commands ſuch ranges of thick wood as to be almoſt unbounded.

"From Serna, I turned full eaſt to Herdala, the diſtance near ſixty miles, which took me up near two days; through a country in which there is a very broad and conſiderable track of flat land, with a river in the middle of it. It is, as I gueſs, twenty miles acroſs, and of a far greater length. I ſuppoſe Sweden does not contain a richer track of land, yet very little of it is cultivated; much of it is bog, ſome marſh, but moſt of it is a dry, deep, rich, ſound loam. At Herdala, my ſervant overtook me from Stockholm, having traced me by the information of the peaſants.

"From thence I ſet off on the 26th for Linſdal, a village at the diſtance of eighty miles in the province of Helſingia; which proved a journey of three days, through a more romantic, wild, and mountainous country, than any I had yet ſeen."

The trade of Sweden, was left in a moſt miſerable condition at the concluſion of the war with Muſcovy. Immediately after the death of Charles XII. ſuch a langour proceeded, that had not much attention been given to improvement, and a change in the conſtitution enſued, it would have taken at leaſt a century to have recovered, and perhaps much more. Many of the wounds then received, are not yet healed; there are tracks of country, in many of the provinces, which once were well peopled, that are at this day deſarts; and the ravages of the Ruſſians deſtroyed ſome valuable copper mines, which are not yet recovered. Whithin theſe twenty years much has been done to ſpread improvements, ſo that the country wears a fine face; but all this is not to be called a creation of new induſtry, much of it is only a renovation of that which we long ago enjoyed.

The modern improvers, who have puſhed moſt of the advantageous laws which have been made of late years in favour of commerce, &c. had one principal aim, which was certainly very meritorious; it was to force the Swedes, either to manufacture for themſelves, or to go without the commodities formerly imported from abroad; many laws were made with this view; and which at laſt ended in an almoſt general prohibition to foreign fabrics. This was very well meant, but it was driving too faſt, and has had ſome conſequences of a complexion by no means agreeable. It is true ſeveral manufactures were eſtabliſhed in different parts of the kingdom, to enable the people to perform for themſelves, and ſome of them ſucceeded well; but it is a buſineſs of much longer time to make a people a manufacturing nation. The attempt to do it at once, was not only unſucceſsful; but was attended with ſeveral evils to the whole kingdom. Sweden imported, it is true, large quantities of manufactures, but then ſhe paid for all of them, or at leaſt for much the greateſt part, with the products of her own ſoil; ſuch as copper, iron, timber, ſhips, flax, hemp, pitch, tar, furs, ſkins, &c. ſo that the noblemen who dreſſed themſelves in French or Engliſh cloaths; his wife, who wore French and Italian ſilks; and all who expended their revenue in any foreign import, did, at the ſame time, encourage the lower claſſes of the people, and indeed aſſiſt the whole ſtate, by exporting the above products, in proportion to the goods ſo imported and worn. The legiſlature falſely imagined, that foreigners could not do without thoſe products they bought of Sweden, and paid for with their manufactures; they ſuppoſed they would buy in the ſame proportion, and pay for them with money; but this was at beſt a deluſion, for other nations knew their intereſts as well as the Swedes, and immediately transferred a vaſt portion of their trade to Norway and Ruſſia; the conſequence of which has been, that the copper and iron works, in every province in the kingdom, are diſcontinued for want of the old demand; and a great number of hands, once employed in the timber trade, have ever ſince ſtood ſtill.

Trade however, is now rather inclined to flouriſh in Sweden, the people are very attentive to it, and ſome of the laws that have been made to encourage it, have had good effect. The ſhipping belonging to the kingdom, is much increaſed in the laſt thirty years; they

they export more of their commodities in their own bottoms than formerly; which has in every reſpect, proved a very advantageous thing to them. All their ſhipping, and every article of naval ſtores, are their own product; ſo that an increaſe of it, is gaining one of the moſt advantageous markets in the world. Indeed a very conſiderable article of trade with them, is building ſhips for ſale; in which article, the French and Dutch are the beſt purchaſers. The former, it is well known, once bought a fleet of nine ſail of men of war of the line of them, at one time; and the Dutch are regular purchaſers of ſome merchant ſhips; but the chief increaſe of their ſhip building has been for themſelves, in conſequence of an increaſe of their foreign trade, which it is ſuppoſed, is now, on compariſon with what it was thirty years ago, as five to three, tonage reckoned.

The eſtabliſhment of the Eaſt India commerce has been of much conſequence to them, in this article of ſhip building, and indeed to all the other branches of commerce in the kingdom; for Eaſt India goods were before bought with caſh, without bringing in any advantages by ſhip building, or the employment of ſeamen; but the government has obliged the company to export to the Indies a given quantity of Swediſh manufactures; all which exportation is clear profit, beſides the circumſtances mentioned above. This eſtabliſhment of an Eaſt India company in Sweden, employed the ſpeculation of the trading part of Europe, who pronounced it a viſionary ſcheme, and one which could not poſſibly anſwer; but experience has now told them, that nothing was leſs juſt than this condemnation, for the whole kingdom of Sweden is ſupplied by it, and there is a pretty conſiderable quantity of India goods exported to Poland, alſo ſome to Germany, and a few to Ruſſia; all which are very great and conſiderable advantages, compared with the time when they themſelves bought their whole home conſumption of the Engliſh and Dutch.

Another ſcheme of trade which has been partly executed, though not entirely, is to import all their Weſt India commodities in their own bottoms; this was not an eaſy matter to execute, for it is contrary to the laws of all the nations, that have colonies in that part of the world; but certain it is, that in ſpite of all obſtacles of this ſort, they do purchaſe large quantities of ſugar, rum, &c. in the Weſt India iſlands; and another channel, through which they do this buſineſs, is through the Bahema iſlands, where they buy from the account of Boſton merchants, goods which come from the Engliſh iſlands. This plan is not brought fully to bear, but if they get it to be quite ſucceſsful, it will make a conſiderable deduction from the navigation of England, and add to that of Sweden.

Building of ſhips for foreigners has lately received a very laudible bounty of ten ſhillings a ton, which is one of the beſt conſidered meaſures that could have been executed; and if this bounty was to be raiſed ſo high, as to enable the Swediſh ſhip carpenters to under ſell the Engliſh and Dutch ones by many per cent. in their own yards, it would be a moſt political meaſure, and perhaps give the kingdom a more advantageous market for moſt of her ſtaple commodities, than all their other methods put together.

Among the manufactures which they have been eager to eſtabliſh, the principal is the woollen. They have in coarſe cloaths made ſome progreſs, and begin to work ſome that are fine; an improvement, which has been much owing to their gaining a better breed of ſheep from England, and which have been diſperſed with much aſſiduity over moſt parts of the kingdom. By means of Poliſh wool, mixed with the worſt of their own, the Swedes make tolerable coarſe cloths, and other fabricks; and the beſt they import from Poland, mixed with the beſt of their own, makes a finer cloth, that ſells well at home, and precludes the import of any but the fineſt of all, worn by the nobility and gentry of conſiderable fortunes. Their manufactures of the coarſe ſorts are ſo enlarged by degrees, that they have for ſome years, exported ſmall quantities of it to Poland; which ſhews how far they have been able to carry their point.

Beſides theſe woollen fabrics, which are in a way of proving conſiderable enough to ſtop totally all importations in time, they have alſo eſtabliſhed ſome of linen, but theſe are not yet ſo far advanced as the former; they make large quantities of a coarſe ſort, which ſells well among the common people; but all the higher claſſes of inhabitans uſe that which comes from England, Holland, or Germany.

The manufactories of hard ware, are much the greateſt among the Swedes. They work and caſt their copper and iron into many forms, and make of them a great variety of implements, utenſils, and materials for manufacturing: ſuch as bars and plates, of copper and iron, various ſorts of wire, great guns, and numerous other articles in the foundry way. They export vaſt quantities of iron annually, for which, England, Holland and France are their beſt cuſtomers; but the Engliſh pay them a balance of trade, amounting to ſeveral hundred thouſand pounds annually, of which, iron and timber are the principal articles they take; whereas the French pay them in nothing but wines, brandies, and manufactures. Of all the articles of their trade, iron and timber are the moſt conſiderable.

As to the improvements which have been made in their huſbandry, taken at large, the grand article has been the preventing the importation of corn from abroad; high duties at firſt, and then a prohibition, have in this inſtance, been attended with every effect they could wiſh. By quick degrees, they introduced the culture of wheat in many provinces, which before had never thought of ſuch an article of cultivation; and by taking proper meaſures for encouraging the peaſants, the point has been ſo thoroughly carried, that Sweden at preſent, raiſes as much corn as ſhe conſumes, and in ſome years more; ſo that a ſmall exportation has taken place more than once.

In the debates that have ariſen at different times among the members of the legiſlature, on this point of the advancement of huſbandry, they have had, what may be called two parties among them; one who were for eſtabliſhing many rules for the particular inſtruction of peaſants; premiums for their good conduct, for procuring good farmers from other parts of Europe, to ſet examples, alſo the beſt implements and breeds of cattle, with ſome good workmen for draining of bogs, and bringing waſtes into culture, at the expence of the legiſlature, by way of ſhewing in what manner ſuch works ought to be done. On the contrary, the other party ſtrenuouſly urged, That the execution of all theſe minute ideas would prove very expenſive, and particularly from being obliged to truſt them to many people, and almoſt without controul. That beſides this ſtrong objection, the effects reſulting could not be ſo great or general, but would be confined to ſmall ſpots, from which it might be a century before they would travel over half the kingdom; for this reaſon, they propoſed to omit all ſuch attempts, and confine themſelves to general laws, which ſhould afflict the whole kingdom; ſuch, for inſtance, as the prohibition of the importation of all foreign commodities that could be raiſed at home, and particularly corn; that when this law had taken full effect, then to give the improvement of another, offering bounties upon the exportation of various ſorts of corn, and other commodities, to inſure a quick ſale at a good price, which would be of all other meaſures the moſt likely to induce the farmers to enlarge the culture of them. Other general laws ſhould alſo be brought in aid, to exempt the improvers of waſte lands from all taxes, tithes and public charges for life. Alſo to introduce leaſes, in the tenures of lands, of long duration, with ſeveral other ſchemes of management that had reference to the kingdom at large.

The legiſlature very wiſely followed neither of theſe propoſals in excluſion of the other, but gradu-

ally

ally took from both what appeared prudent and likely to be efficacious. They prohibited the importation of corn, upon the plan of one party; and they attended to the minutiæ of agriculture, purſuant to the ideas of the other. Some laws were likewiſe made concerning leaſes, and improvers were exempted from taxes; but whether they will give a bounty on exportation, is yet a queſtion. It is the general opinion, that the plan is not dropped, and that the meaſure will be executed, whenever the quantity of corn at home ſufficiently reduces the price.

With regard to the military power of the Swedes, the change in the conſtitution upon the death of Charles XII. ſunk it entirely to the militia, except a few guards for the king's perſon; the former is entirely upon the old ſyſtem; they are maintained by the farmers; but the number which was once 60,000 men, is not at preſent more than 42,000; however, they are very well diſciplined, and ſufficient for the defence of the kingdom againſt any force that is likely to march againſt it.

Sweden has nothing to fear but from Ruſſia, and whilſt ſhe leaves the conquered provinces peaceably in the hands of the Muſcovites, which undoubtedly ſhe will do, there is not any danger of their diſturbing her poſſeſſion of the remainder. The fleet of Sweden was once pretty conſiderable, amounting to forty good ſhips of war; but it is much declined. They could not ſend out to ſea 20 ſail of the line in good order, ſo that their power is not equal to that of Denmark by ſea, nor that of Ruſſia.

The cuſtom of a jury of 12 men is ſo ancient in Sweden, that their writers pretend it had its original among them, and was thence derived to other nations, but at preſent it is diſuſed every where, except only in the lower courts in the country, and there the jury men are for life, and have ſalaries; they have this peculiarity to themſelves, that amongſt them there muſt be an unanimous concurrence to determine a cauſe, which in other courts is done by a majority of voices.

Titles to eſtates are rendered more ſecure, and leſs ſubject to conteſts, by the regiſters that are kept of all ſales, and alienations, as well as of other engagements of them; the purchaſer running the hazard of having an after-bargain take place of his, if he omit the recording of his tranſaction in the proper court.

In criminal matters, where the fact is not very evident, or where the judges are very favourable, the defendant is admitted to purge himſelf by oath, to which is oftentimes added the oath of ſix or twelve other men, who are all vouchers of his integrity.

Treaſon, murder, double adultry, burning of houſes, witchcraft, and the like heinous crimes, are puniſhed with death, which is executed by hanging of men, and beheading of women, to which burning alive or dead, quartering and hanging in chains, is ſometimes added, according to the nature of the crime.

Learning is of no great antiquity in Sweden; it is not 400 years ſince the introduction of it; and few monuments extant of a more ancient date, excepting inſcriptions, rudely cut upon rocks, and unhewn ſtones, which are every where found; but as they have no date, ſo they ſeldom expreſs more than the names of perſons, of whom no other memory remains; that which makes them moſt remarkable is, that they are writ in the ancient Gothic and Runic characters.

The moſt curious piece of learning among them, is a tranſlation of the Evangeliſts into the Gothic tongue, done about twelve or thirteen years ago, by Ulphila, a biſhop of the Goths in Thracia, of which they have the ſole ancient manuſcript copy that is known in the world. Since the reformation, Guſtavus Adolphus was the firſt great patron learning had in this country, by whom the univerſities that had been much impaired, were endowed with tolerable ſalaries for profeſſors in moſt ſciences. Theſe his daughter Chriſtina ſomething augmented, and by the fame of her own learning, and the favourable reception ſhe gave to ſcholars, drew ſeveral learned men from abroad, that have left good proofs of their abilities, and raiſed an emulation in the natives, whoſe beſt performance is in the hiſtory, antiquities, and ancient laws of the country.

The univerſity of Upſal conſiſts of a chancellor, who is always a great miniſter of ſtate; a vice chancellor, always the archbiſhop; a rector, choſen out of the profeſſors, of whom there are about 20 that have each 150l. a year ſalary. The ordinary number of ſtudents is about ſeven or eight hundred, fifty of whom are maintained by the king, and ſome few others were formerly by perſons of quality; the reſt, that cannot ſubſiſt of themſelves, ſpend the vacation in gathering the charity of the dioceſs they belong to, which is commonly given them in corn, butter, dried fiſh, or fleſh, &c. upon which they ſubſiſt at the univerſity the reſt of the year. They live not collegiately, but in private houſes, nor wear gowns, nor obſerve other diſcipline, than what their own neceſſity or diſpoſition leads them to.

The other univerſity of Abo, in Finland, is conſtituted in the ſame manner, but leſs numerous in profeſſors and ſtudents. There was a third at Lunden in Schonen, which having been interrupted by late wars, is thought fit to be diſcontinued, becauſe its neighbourhood to Denmark nouriſhed in the ſtudents an affection for that crown, to which that province formerly appertained; yet it is again reſtored.

In each dioceſs there is one free-ſchool, where boys are fitted for the univerſity; and other trivial ſchools to which children are ſent to learn to read, write, and ſing their prayers; a cuſtom ſo univerſal, that very few want this degree of education; and ſuch as are not deſigned for a life of ſtudy, ſeldom go any farther.

Public proviſions for the poor, are very few; there are not above five or ſix hoſpitals in the kingdom, and a little alms-houſe in each pariſh, maintained by the charity of the inhabitants, to which they are for the moſt part very well diſpoſed, according to their abilities.

Mr. Wraxall in his tour through Europe, gives us the following deſcription of the preſent ſtate of Upſal.

"The Swedes (ſays he) had inſpired me with ſuch exalted ideas of this univerſity, that I was only fearful leſt a ſingle day might be far inadequate to ſuch an undertaking, and to have ſpent a longer time in ſo agreeable an occupation. I am however, at preſent, moſt completely undeceived, and can aſſure you that Upſal has hardly one inducement to draw a man of taſte to viſit it, unleſs from being the reſidence of Linnæus. This Lycæum of the north, has not one piece of painting within its walls, and only two of ſculpture, which are buſts of Guſtavus Adolphus, and Charles XI. A gentleman who reſides here, and who is ſon of the late archbiſhop of Upſal, did us the honour of being our Ciceronic, and to conduct us over the place. I enquired of him how many colleges there were, and which was the moſt celebrated. "Sir, (ſays he) we have three; but I cannot ſay any of them deſerves your notice. The principal objects of attention are the library, the cathedral, and the botanical garden. I know not of any thing elſe."

The firſt of theſe is a real good building, and there is a cabinet in it, at which, for want of a better employment, I ſpent an hour or two, while the librarian ſhewed me a number of little trinkets, rather than rarities, which are preſerved with great care. Among theſe, is the identical bag which Judas kept one of the thirty pieces of ſilver, money of which he received for his perfidy, in delivering up his maſter; and a pair of red ſlippers, in which the Virgin Mary paid a viſit to her couſin Elizabeth. I muſt do the man the juſtice to ſay, that he bluſhed as he ſhewed them to

me; and I could not help telling him, that I thought the univerſity would not do amiſs to ſend theſe precious relics to St. Januarius, or my Lady of Loretto, who, if they are not already provided with others, might probably be highly obliged by ſo valuable an acquiſition.

"As to the cathedral, it is built of brick, and as the two towers at the weſt end, lately wanted repair, they have with great taſte added a doric architrave to theſe gothic walls, and placed two great domes of copper on the top. It muſt notwithſtanding, be for ever venerable, while the remains of Guſtavus Vaſta, and Chancellor Oxenſtiern repoſe in it. The laſt of theſe great men, whoſe virtue and wiſdom Sweden yet reveres, reſts in an obſcure chapel, beneath a common ſtone. He has no monument erected, or epitaph inſcribed to his memory; while a St. Eric, who was a king and a devotee in ſome barbarous age, is preſerved in a ſhrine of ſilver gilt, and placed on the right hand of the high altar.

"There are at this time, as I am aſſured, near 1500 ſtudents in the univerſity of Upſal. They are not however, young men of family and condition as with us, but for the moſt part miſerable poor, and lodge five or ſix together in wretched hovels amidſt dirt and penury. The profeſſors in different branches of literature are about twenty-two, the largeſt of whoſe ſalaries does not exceed one hundred and thirty or forty pounds per annum, and are in general not half that ſum.

"On our firſt arrival, the gentleman who accompanied me, and who was intimately acquainted with Linnæus, ſent his compliments to ſay, that he would do himſelf the honour to wait on him if agreeable immediately, and would introduce at the ſame time an Engliſh gentleman, who had been induced to viſit Upſal from the fame of ſo great a man. He ſent us word in return, that he would pay us a viſit in the afternoon, at three o'clock, when he had done dinner. He came punctually at the hour marked, and after ſtaying ſome time, conducted us to the botanical garden, where he ſhewed us all his collection of plants, ſhrubs and flowers, which are very numerous, and have been preſented to him from every part of the globe. At the door, he took his leave, and quitted us.

This celebrated botaniſt is now in the ſixty-ninth year of his age. He is of a middle ſize, inclining to ſhort, which is ſtill increaſed by his ſtooping prodigiouſly when he walks. He was dreſſed in a plain blue ſuit of cloaths, and booted, which is common with the Swedes. At his button-hole hung the white croſs of the order of the Pole Star, which was conferred on him by the late king Adolphus, who admired and honoured him. He enjoys a very eaſy independance from his ſalary, and pupils in the univerſity; beſides which, he is ſaid to be poſſeſſed of a conſiderable fortune acquired by his profeſſion. He has a country houſe about five miles out of town, and keeps his chariot. He has one ſon and four daughters alive; but I do not find they poſſeſs any of their father's genius. At preſent he very rarely attends the botanical parties which are made twice a week round Upſal, and are conducted by his ſon, who is botanical profeſſor. Linnæus has been in England, France, and Germany, but ſpeaks no languages except the Latin and Swediſh; in the former of which, he converſes with perfect facility. His knowledge, I am aſſured, is by no means univerſal, but confined almoſt abſolutely to natural hiſtory, in which it is unbounded. His faculties are as yet unimpaired, except his memory, which begins to ſuffer ſome diminution."

Dilſbo ſtands on a river near the Baltic, and has a harbour that admits ſhips of 200 tons burthen, but yet there is hardly any trade at it: now and then a veſſel comes for a load of timber, but it is ſeldom. From thence to Hudwickſwald, is through a flat country, pretty well cultivated, and the inhabitants much more induſtrious. Here are two or three large houſes, ſurrounded by conſiderable farms; and gentleman's ſeats; and the owners ſeem to carry on a huſbandry equal to any in Sweden. Their crops are generally good; and the products riſe, upon a medium of all ſorts, to three or four quarters per acre: their dwarf beans are a favourite crop here, they do not grow more than a foot high. Artificial graſſes are very rarely ſeen in this kingdom, and there is certainly a reaſon for it; the great plenty of wild ground and marſhes, on which the peaſants depend for the ſubſiſtence of their cattle.

Hudwickſwald is extremely well ſituated for the Baltic trade; the harbour is ſpacious, ſafe, and admits ſhips of any burthen: there are a few merchants in the town that are rich. They have a tolerable quay; moſt of the ſtreets are regular and clean, and ſome of them neatly built.

Tuna is about thirty-ſix miles from Hudwickſwald. The country is various; parts of it marſhy, and parts dry: a good deal of the latter is cultivated. Many of the peaſants here pay their rent with part of the products of their land, and their landlord's ſtewards come in ſloops from Stockholm at a certain time of the year, to receive theſe products; this is reckoned here very advantageous to the landlords, for they have the corn, &c. at a much leſs calculated value than what they ſell it for at Stockholm, all expences reckoned; but at the ſame time, the peaſants like it better than being forced to find the money, which is very ſcarce here. They cultivate large quantities of corn, and many turnips and carrots, and have the art of fattening oxen with theſe roots in winter, by boiling and marſhing them, and then mixing ſome meal of barley or oats with them; with this food their oxen and their hogs fatten very quickly, and they reckon, if the crop of roots is good, it proves in their way of uſing it, one of the beſt a farmer can cultivate.

Una is one of the moſt conſiderable towns in Weſt Bothnia. It is ſituate on a very fine large river, which falls into the Gulf: there is a good harbour for ſhips, and the place has a pretty briſk trade in timber, iron, pitch, tar, &c. and having two or three merchants of large property, to whom ſeveral ſhips belong, they carry on a trade here with Holland and England, loading out with the products of the countries around the Gulf, and bringing home a great variety of commodities, which they ſell in all the ports around the Baltic, in Sweden, Ruſſia, Livonia, Poland, Pruſſia and Germany. It is of very great advantage to a town to be inhabited by a few ſuch extenſive traders, for the profits centre in it; they employ their townſmen in their ſhipping, and export much more products than would be done if it were not for them. Theſe merchants alſo much enrich the place by their ſhip building; for they have never leſs than three or four upon the ſtocks at a time; theſe ſhips they ſell wherever they can get a market, cargo and all, which they often do to good advantage.

"From hence paſſing through a wild country, we came to Torneo. Here they have ſome appearance of cultivation around their cottages; but it is only for their own ſubſiſtence; there is enough however, to ſhew, that high as the latitude of this country is, (it is about ſixty-ſix degrees) it would produce plentifully for a numerous people; but it is very thinly inhabited.

"Through all the provinces of Sweden (ſays our author) that I have travelled, I am convinced that the principal cauſe of the country being ſo thinly inhabited, is the ſmall number of farmers; there being only peaſants, with land enough round their cottages, for the ſubſiſtence of the people within them. Many of theſe little ſpots belong to them; and none of the children of one will ever brook living in a worſe manner than their fathers did; which ſeems to be a prevalent idea amongſt them: ſo that a family in this ſituation are ſure to leave but one repreſentative, unleſs ſome gentleman builds cottages, and gives away his lands around them, which it may eaſily be imagined is not very common. This prevents marriages among the ſons; for, as they cannot have

their

their own cottages and lands, they live at home unmarried, with the brother who inherits: thus little or no increaſe happens, unleſs by mere accidents. But if all theſe peaſants lived in hired cottages, without any land, and the country was cultivated by great farmers, who could afford to pay them money for their labour, the farmers would grow ten times the produce which is now grown, and export all that was not conſumed; which would be a conſtant motive to them to increaſe their buſineſs, and of courſe to fix their ſons in other farms. In the caſes of ſome patriotic perſons, who have made improvements in huſbandry, and built houſes, we found before, that the people increaſed as faſt as could be wiſhed.

"Torneo ſtands better than any other town on the Gulf, for the trade of Lapland, which is not inconſiderable in furs, ſome of which are very valuable. It lies near three conſiderable rivers, which flow through all Swediſh Lapland, and opens a ſmall commerce with Norway and Muſcovite Lapland; ſo that at Torneo I found more ſhipping than I had ſeen at any place I had lately been at on this ſea. Ships come from Stockholm hither, laden with all ſorts of neceſſaries for theſe northern provinces, and carry their products back in return. Hence the town is tolerably well built, the ſtreets broad and ſtraight, and very well paved, and ſome of the merchants, of which there are a great number, very rich. They build ſhips and fit them out on trading voyages, and make every effort to employ their money ſo as it may bring in good intereſt; but with all their endeavours, they are not able to increaſe the trade of the place, further than what the ſame men would carry on at any other: which is owing to a want of population and wealth in the country behind them; ſo that they are much limited in the commodities they export, and alſo in the quantity of thoſe they import."

Cryrannum, a little town on the coaſt, which is ſubſiſted chiefly by fiſhing. The inhabitants in the moſt northerly parts of the two Bothnia's, have a different appearance from the Swedes in the ſouthern provinces of the kingdom: they are leſs informed, of a ſhorter ſtature, and more irregular in their dreſs, many of them ſewing together the ſkins of foxes, and other wild creatures whoſe furs are not of value, and make their cloathing in a much rougher and more ordinary manner; nor are they ſo intelligent or comprehenſive; but they are a very ſimple and harmleſs people, appear to be very humane; moſt of them are exceedingly reſpectful and civil. Their ordinary ſalutation is not bowing, like the Swedes in other parts, theſe countrymen take hold of your right hand, and lay it over their left, making ſtrange faces at the ſame time.

The next town of the leaſt conſequence, is Salo, which carries on a very ſmall trade, about eighty miles diſtant from hence.

Nicarlby is a place of no great conſideration. It was once a town that carried on a great trade; but when the Ruſſians over-run the province, they burnt it to the ground, and quite ruined ſeveral of the greateſt merchants in it; ſince which it has never recovered its trade, the commerce at preſent carried on here not being at all conſiderable. It is not however, badly built, and the ſtreets are regular. The church is ſmall, but very neat. They have a trifling manufacture of very coarſe woollen goods, for the ſupply of the neighbouring country; but it does not ſeem to be in a flouriſhing ſituation.

Vero, is another little town on the Gulf, with an exceeding good port, and a tolerably built quay, which is the only good ſtreet in the town. There is a little trade upon the coaſt, and to Stockholm, which conſiſts chiefly in timber. There are not above ſeven or eight hundred ſouls in the place, and it appears to be but a poor one.

Waſſay, is a place of greater note, it has more trade, and ſeveral merchants, tolerably wealthy, inhabit it, who have ſhips of their own, in which they export large quantities of timber; but they want a home demand, to load their veſſels back again, for the country behind the town is one continued foreſt, without any cultivated ſpots or villages, and reaches from hence quite to the white ſea, through ſeveral Ruſſian provinces, at the diſtance of near 700 miles, and ſcarcely any inhabitants to be found all the way.

Of the revolution at Stockholm, which ſurpriſed all the world, we have the following account.

"The oppreſſion (ſays our author) of the concluding years of the reign of Charles XII. was ſuch, that on his death in 1718, the ſtates obliged his ſiſter Ulrica Eleonora, previous to her aſcending the throne, to renounce all hereditary right or abſolute power, and to hold the crown merely by elective conſent. She reſigned even this limited ſovereignity two years after, into the hands of her huſband the Prince of Heſſe, who died in the year 1751. He had the reſolution of a brave and active king, and it is generally apprehended, would have repoſſeſſed himſelf of that power which his queen had been deprived of, if his want of children had not made him indifferent to an acquiſition, which he could not tranſmit to his deſcendants.

"Adolphus, the late ſovereign, was a weak man, and under him the democratical authority attained its utmoſt height. The royal revenue was very inadequate to his dignity, and his weight in the ſcale of government inconſiderable and deſpiſed.

"In this ſituation, Guſtavus III. ſucceeded to the crown. He poſſeſſed the ſame advantage over his two immediate predeceſſors, which his preſent Majeſty George III. of England, did over his, on his acceſſion; that he was born in the country over which he reigned, and ſpoke the language perfectly. The Swedes, who ſince the year 1720, had ſeen only foreigners on the throne, were charmed to have once more a king from among themſelves; their joy was demonſtrated by their behaviour, and medals were ſtruck upon the occaſion.

"On the 19th of Auguſt, 1772, this extraordinary event was produced, which again reſtored to the crown thoſe prerogatives ſhe had loſt for more than half a century. The king's ſecrecy, addreſs, and diſſimulation in ſo dangerous and critical a juncture, far ſurpaſſed what might have been expected from his age. It is ſaid only five perſons in the kingdom were entruſted with the deſign, which was carried into execution with as much vigour, as it had been planned with ſagacity and judgment. The ſoldiery and the people, were ſucceſſively gained by the eloquence with which the young king addreſſed them, who plainly evinced the vaſt importance of this quality in popular commotions, and public affairs. Very few perſons were impriſoned, and that only for a ſhort time; nor have any of them experienced, in the ſmalleſt degree, any diminution of the royal favour on account of their oppoſition. The ſenate took a new oath of allegiance to the prince, and tranquillity was reſtored throughout the kingdom.

"It is however, difficult to ſay, what limits are exactly fixed to the government, or how far they may be enlarged and infringed, particularly under a prince who has already ſucceeded in his firſt enterprize, and certainly poſſeſſed in an eminent degree, many of theſe qualifications and talents, which have a prodigious effect on the multitude. He is affable in his manners and converſation to condeſcenſion, and often makes unexpected viſits to perſons of inferior ranks where he behaves with an eaſe and politeneſs which muſt infallibly render him beloved. He inſpects every department of ſtate in his own perſon, and the meaneſt ſubjects may preſent his grievances without fear of repulſe. His ſoldiery adore him, and the peculiar attention he pays to their diſcipline, the continual reviews he makes of his regiments in different parts of his dominions, his diſdain of fatigue, and undoubted perſonal courage, may probably render Sweden ſome years hence, more important in the ſcale of Europe, than ſhe has been ſince Charles's death.

Very

Very large reviews are intended in Scania, and in Finland; great military ſtores are continually laid up, and every thing has the appearance of forecaſt and deſign. Unable to reward thoſe officers who adhered particularly to him at the revolution, with penſions or pecuniary emoluments, he has found means to attach them by ribbons and ſtars, which he diſtributed without parſimony, and which are equally effectual, without draining an exhauſted treaſury. He has likewiſe founded a new order of knighthood, known by the name of Vaſa, deſigned for men of merit in every ſtation, and which is conferred, without the leaſt attention to birth or diſtinction, on every man who deſerves well of his country. He is active on all occaſions, more commonly on horſeback than in a carriage, and has rarely any the parade of royalty. In his perſon he is rather low, and inclined to thinneſs. His face is not handſome, and what is ſingular, one ſide of it does not reſemble the other, his features being a little diſtorted: an accident which probably happened in the birth.

"The Swedes univerſally lament that he has no children by the queen; and it is on this account that his next brother Prince Charles is now married, in hopes of an heir to the throne. The king is ſaid not to be of an amourous complexion, or attached to women."

Notwithſtanding the cold climate in which Sweden is ſituate, as ſome improvements have been brought to bear, ſo likewiſe many others might yet be made in agriculture, as well as in commerce. There are certainly vaſt tracts of waſte land capable of improvement. But the greateſt miſchief is that in many places the land, which was drained of its inhabitants to ſupply Charles XII. with ſoldiers, ſtill remain deſolate, to the great diſadvantage of the ſtate.

The copper money of that prince conſtitutes the chief currency. His fictitious dollars now paſs for ſomewhat more than half a farthing each. Silver is ſcarce, and gold hardly to be ſeen in common circulation. Paper money is the only ſubſtitute for this defect; and they have bank notes paſſing in many parts of Sweden, not exceeding one ſhilling and ſix-pence value.

All theſe however, are defects, which it may not be impoſſible for a wiſe government to remedy. The Swedes are a people not devoid of emulation; nor is this emulation confined only to military atchievments. Tho' there is not a country where the finer arts can be expected to flouriſh, as in the more genial climate of Italy, yet ſuch as are neceſſary to the well-being of a ſtate, would thrive with proper cultivation. It remains to be ſeen whether Guſtavus III. and his ſucceſſors will render this nation of heroes happy within themſelves, and reſpectable in the eyes of Europe.

TRAVELS THROUGH NORWAY.

With a Deſcription of the Country, by ERICK PONTOPPIDON, Biſhop of BERGEN.

NORWAY is now an appendage to the crown of Denmark; but being conſidered as a ſeparate domain, and its natural hiſtory furniſhing many objects worthy the attention of the curious reader, we have judged it neceſſary to give a particular deſcription of the country, as ſelected from the beſt authorities.

The Norwegians, like the Swedes, were famous of old for their valour; and from theſe rugged regions proceeded the Nordmans, (i. e. North-Men) or North Men, who over-ran ſo great a part of Europe. They have had their heroic chiefs and princes, equally famed for piety and arms, of whom they boaſt to this day, though now become ſubjects to a foreign dominion.

Norway ſtretches along a ſea coaſt, to the weſtward of which are innumerable little iſlands and rocks, ſome indeed are no leſs than nine leagues over, but the greater part are ſo ſmall as to be only inhabited by fiſhermen or pilots; ſo that Norway is defended by a rampart which conſiſts perhaps of more than a million of ſtone columns that have their baſes at the bottom of the ſea, and their capitals a few fathoms only above the ſurface. Amongſt theſe rocks there are good harbours, but they are of difficult and dangerous acceſs; particularly to large ſhips without oars; but to prevent accidents as much as poſſible, the government has cauſed many hundreds of large iron rings to be fixed to theſe rocks, as moorings for ſhips, where there is not room for anchoring.

Beſides the ebb of flood in the ſea of Norway, there is a current or eddy called Maleſtrom, or Moſkoeſtrom. This ſtream derives its name from Maſkoe, an iſland lying between the mountain Heſleggen, in Lofoden, and the iſland Ver, which are about one league diſtant, and the ſtream makes its way between the iſland and coaſt on each ſide. Between Lofoden and Moſkoe it is near 400 fathoms deep; but between Ver and Moſkoe it is ſo ſhallow, that not even a ſmall ſhip can paſs it.

When it is flood, the ſtream runs up the country between Moſkoe and Lofoden, with prodigious rapidity; and when the tide ebbs, returns to the ſea with more noiſe and violence than that of the loudeſt cataracts. It is heard at the diſtance of many leagues, and forms a vortex or whirlpool of great extent and depth, ſo violent, that if a ſhip comes near it, it is inſtantly, and irreſiſtably drawn into the whirl, and diſappears, being in a moment carried to the bottom, where it is daſhed to pieces againſt the rocks; and juſt at the turn of ebb and flood, when the water becomes ſtill for about a quarter of an hour, it riſes again in ſcattered fragments, ſcarcely to be known for the parts of a ſhip. When agitated by a ſtorm, it has reached veſſels at the diſtance of more than five miles, where the crews have thought themſelves in perfect ſecurity.

Even animals, when they have come too near the vortex, have expreſſed the utmoſt terror on finding the ſtream irreſiſtable. Whales are frequently carried a way, and the moment they feel the force of the water, they ſtruggle againſt it with all their might, howling and bellowing in a frightful manner. The like happens often to bears, who attempt to ſwim to the iſland to prey upon the ſheep.

The large ſtems of firs and pines, riſe again ſo ſhivered and ſplintered, that the pieces look as if covered with briſtles. The whole phœnomena are the effects of the violence of the daily ebb and flood, occaſioned by the contraction of the ſtream in its courſe between the rocks.

In the ſummer nights the horriſon, when unclouded,

is ſo clear and luminous, that perſons can ſee to do all kinds of work at midnight, as in the day time; and in the extremity of this country towards the Iſlands of Fnimark, the ſun is continually in view in the midſt of ſummer, and is obſerved to circulate day and night round the north pole. On the other hand, in the depth of winter the ſun is inviſible for ſome weeks; all the light perceived at noon, being a faint glimmering, that continues about an hour and an half; which, as the ſun never appears above the horriſon, chiefly proceeds from the reflexion of the rays on the higheſt mountains, whoſe ſummits are ſeen more clearly than any other objects. But excluſive of the moon-ſhine, which by the reflexion from the mountains, is exceedingly bright in the valley, the people receive conſiderable reflexion from the Aurora Borealis, or Northern Lights, which often affords them as much light as is neceſſary for the diſpatch of their common buſineſs.

The winter on the eaſt of Norway generally commences about the middle of October, and continues till the middle of April. The waters are congealed to a thick ice, and the mountains and vallies are covered with ſnow; this however is of ſuch importance to the welfare of the country, that in a mild winter, the peaſants who live among the mountains, are conſiderable ſufferers: for without ſevere froſt and ſnow, they can neither convey the timber they have felled to the rivers, nor carry their corn, butter, furs, and other commodities, in their ſledges, to the market-towns; for ſuch is the power of the froſt in theſe northern regions, that the largeſt rivers, with their roaring cataracts, are arreſted in their courſe, and the very ſpittle is no ſooner out of the mouth than it is inſtantly congealed, and rolls along the ground like hail. Their extenſive foreſts afford them plenty of timber for building and for fuel. The furs and ſkins of wild beaſts, and the wool of the ſheep, furniſh them with coverings for their beds, and warm lining for their cloaths. They are ſupplied with vaſt quantities of down and feathers, by innumerable flights of wild fowl. The mountains ſerve for fences againſt the north and eaſt winds, and they are well ſheltered by their caverns. While the winter thus rages on the eaſt ſide of Norway, the lakes and bays on the weſt ſide are kept open by the warm exhalations of the ocean, though lying in a direct line with the eaſtern parts; and the froſts are ſeldom known to laſt above a fortnight or three weeks.

In general, the air is pure and healthy, but in particular in the middle of the country about the mountains, where the inhabitants are almoſt ſtrangers to ſickneſs. There are no phyſicians but in the principal towns, where they have a public ſalary; but even there they have but a ſmall ſhare of employment.

All the eaſtern coaſt of this country is ſo ſubject to frequent rains, that the women, when they go abroad, wear a woollen, or ſilken black veil over their heads, and the men defend themſelves by a kind of rain hats, ſomething in the ſhape of umbrellas.

There are in Norway a prodigious number of mountains, ſome of which are ſcattered about, and ſurrounded by a level country, while others extend in a long chain from north to ſouth. This chain is ſaid at leaſt to equal the Alps in height, and abounds with frightful caverns of amazing extent.

"The inhabitants of ſuch a mountainous country (ſays our author) may be ſaid to labour under many more inconveniences than others: thus arable ground is here but little better in compariſon with the waſtes and deſarts, ſo that the people are obliged to procure more than half their ſubſiſtence from the ſea: the villages are ſmall, and the houſes ſcattered among the vallies; but in ſome places the peaſants houſes ſtand ſo high, and on the edge of ſteep precipices, that ladders are fixed to climb up to them; ſo that when a clergyman is ſent for, who is unpractiſed in the road, he riſques his life in aſcending them, eſpecially in winter, when the ways are ſlippery. In ſuch places the bodies of the dead muſt be let down with ropes, or be brought on men's backs before they are laid in a coffin; and at ſome diſtance from Bergen, the mail muſt likewiſe in winter be drawn over the ſteepeſt mountains.

"One of the principal inconveniences, eſpecially to travellers, ariſes from the roads: they cannot without terror, paſs ſeveral places, even in the king's road, over the ſides of ſteep and craggy mountains, on ways that are either ſhored up, or ſuſpended by iron bolts, fixed in the mountains, and though not above the breadth of a foot-path, have no rails on the ſide.

"If two travellers were to meet there in the night, and not ſee each other ſoon enough to ſtop where the road will ſuffer them to paſs, it appears to me, as it does to others whom I have conſulted, that they muſt ſtop ſhort, without being able to paſs each other, or to find a turning for their horſes, or even to alight. The only reſource I can imagine in this difficulty is, that one muſt endeavour to cling to ſome cliff of this ſteep mountain, or if help be at hand, to be drawn up by a rope, and then throw his horſe headlong down a tremendous precipice, in order to make room for the other traveller to paſs.

"Another evil reſulting from the mountains, is the ſhelter they afford in their caverns and clefts to the wild beaſts, which renders it difficult to extirpate them. It is not eaſy to deſcribe the havock made by the lynxes, foxes, bears, and eſpecially wolves, among the cattle, and other uſeful animals.

"It often happens that the cows, ſheep, and goats belonging to the peaſants fall down the precipices, and are deſtroyed. Sometimes they make a falſe ſtep into a projection called Mountain-hammer, where they can neither aſcend nor deſcend; on this occaſion, a peaſant chearfully ventures his life for a ſheep or a goat, and deſcending from the top of a mountain by a rope of ſome hundred fathoms in length, he ſlings his body on a croſs ſtick, till he can get his foot on the place where the goat is, when he faſtens it to the rope to be drawn up along with himſelf: but the moſt amazing circumſtance is, that he runs this riſque with the help of only a ſingle perſon, who holds the end of the rope, or faſtens it to a ſtone if there be one at hand. There are inſtances of the aſſiſtant himſelf having been dragged down, and ſacrificing his life from fidelity to his friend, on which both have periſhed. On theſe melancholy accidents, when a man or beaſt falls ſome hundred fathoms down the precipices, it is obſerved, that the air preſſes with ſuch force againſt their bodies thus falling, that they are not only deprived of life long before they reach the ground, but their bellies burſt, and their entrails guſh out, which is plainly the caſe whenever they fall into deep water.

"A great chain of theſe mountains ſerves as a barrier between Norway and Sweden, and are excellent natural fortreſſes for the defence of thoſe ſtates: beſides, theſe mountains exhibit the moſt delightful proſpects; nature has here been moſt profuſely favourable in adding greater beauties to the ſituation of cottages and farm-houſes, than can be enjoyed by royal palaces in other countries, though aſſiſted with all the varieties of groves, terraces, canals, and caſcades. A predeceſſor of mine is ſaid to have given the name of the northern Italy to the diſtrict of Waas, which lies ſome leagues to the eaſt of Bergen; and certainly there cannot be a more enchanting proſpect. All the buildings in it are the church, the parſonage, and a few farm houſes, ſcattered on different eminences. The beauty of the place is much heightened by two uniform mountains, gradually riſing to a vaſt height, between which runs a valley near half a league in breadth, and a river, which in ſome places participates itſelf down the rocks in foaming cataracts, and at others ſpreads itſelf into ſmall lakes. On both ſides it is bordered with the fineſt meadows, intermingled with little thickets, and by the eaſy declivities of the verdent mountains, covered with fruitful fields, and farm-houſes, ſtanding above each other

in a ſucceſſion of natural terraces. Between theſe a ſtately foreſt preſents itſelf to the view, and beyond that, the ſummits of the mountains covered with perpetual ſnow; and ſtill beyond thoſe ten or twelve ſtreams iſſuing from the ſnow mountains, form an agreeable contraſt in their meanders along the blooming ſides of the hill, till they loſe themſelves in the rivers beneath.

"From the many ſprings iſſuing from the mountains, and the vaſt maſſes of ſnow accumulated on their ſummits, whence, in ſummer they gently diſſolve, are formed many conſiderable rivers, the largeſt of which, is the Gleamen, or Glommen; but none of them are navigable far up the country, the paſſage being every where interrupted by rocks and cataracts. The bridges over them are no where, that I remember, walled, but merely formed of timber caſes filled with ſtones, which ſerves for piers, on which the timbers are laid. The largeſt bridge of this kind, is a thouſand paces in length, and has forty-three ſtone caſes. In many places, where the narrowneſs and rapidity of the current will not admit of ſinking ſtone caſes, thick maſts are laid on each ſide on the ſhore, with the thickeſt end faſtened to the rocks; one maſt being thus laid in the water, another is placed upon it, reaching a fathom beyond it, and then a third or fourth, in the like manner to the middle of the ſtream, where it is joined by other connected maſts from the oppoſite ſide. Thus in paſſing over the bridge, eſpecially in the middle, it ſeems to ſwing, which to thoſe who are not uſed to theſe bridges appear ſo dangerous, that they alight from their horſes, till they imagine themſelves ſafe.

"Whithin the bowels of ſome of the mountains, are the moſt beautiful kinds of marble: the mountains alſo contain that ſurpriſing ſubſtance called the magnet, or load-ſtone, in ſuch quantities, that ſome tons of it have been exported. They likewiſe yield the amianthus, or aſbeſtos, of which incombuſtible linen or paper have been made."

This country formerly produced gold, but the expence of working the mines, and ſeparating the gold from the ore being greater than the profit, they have been neglected. There are however, ſilver mines of great value, which afford employment to ſeveral thouſand perſons. The copper mines are likewiſe extremely rich, and employ vaſt numbers. Iron is alſo one of the moſt profitable products of Norway: there are likewiſe ſome lead mines, but none of either tin or quick-ſilver.

The ſoil produces wheat, rye, barley, white, grey and green peas; vetches, uſed as provinder for horſes; hops, flax, and hemp, many kinds of roots and greens for the kitchen, with a conſiderable number of hardy flowers. Several ſorts of plumbs attain to a tolerable ripeneſs, which can very ſeldom be ſaid of peaches, apricots or grapes. However, apples and pears of ſeveral kinds are found all over the country; but the greateſt part of theſe are ſummer fruits, which ripen early; for the winter fruit ſeldom comes to any perfection, unleſs the ſummer proves hotter, and the winter ſets in later than uſual. But tho' with reſpect to fruit trees, Norway muſt be acknowledged inferior to moſt countries in Europe, yet this deficiency is liberally compenſated in the bleſſings of inexhauſtible foreſts; ſo that in moſt provinces, immenſe ſums are received from foreigners for maſts, beams, planks, boards, &c. not to mention the home conſumption for houſes entirely built of wood, ſhips and bridges: and the amazing number of founderies, require an immenſe quantity of charcoal, in the fuſion of metals, beſides the demand for fuel and other domeſtic uſes; to which muſt be added, that in many places the woods are felled only to clear the ground and be burnt, the aſhes ſerving for manure.

The Norwegian horſes, are better for riding than drawing, their walk is eaſy, they are full of ſpirit, and are very ſure footed. When they mount or deſcend a ſteep cliff on ſtones like ſteps, they firſt tread gently with one foot, to try if the ſtone they touch be faſt, and in this they muſt be left to themſelves, or the beſt rider will run the riſque of his neck, but when they are to go down a very ſteep and ſlippery place, they, in a ſurpriſing manner draw their hind legs together under them, and ſlide down.

They ſhew a great deal of courage in fighting with wolves or bears, which they are often obliged to do; for when the horſe perceives one of them near him, and has a mare or gelding with him, he places them behind him, attacks his antagoniſt by ſtriking at him with his fore-legs, and uſually comes off conqueror; if he turns about to kick with his hind legs, he is ruined; for the bear who has double his ſtrength, inſtantly leaps on his back, while the poor horſe gallops on, untill he drops down through loſs of blood. The Norway cows are generally of a yellow colour, (as are alſo their horſes) they are ſmall, but their fleſh is fine grained, juicy, and well taſted. The ſheep here are ſmall, and reſemble thoſe of Denmark. The goats in many places run wild in winter and ſummer in the fields, till they are ten or twelve years old; and when the peaſant who owns them propoſes to catch them, he muſt do it by ſome ſnare, or ſhoot them. They are ſo bold, that if a wolf approaches them, they ſtay to receive him, and if they have dogs with them, they will reſiſt a whole herd. They frequently attack the ſnakes, and when they are bit by them, not only kill their antagoniſts but eat them, after which, they are never known to die of the bite, though they are ill for ſeveral days. The owner warms their own milk, and waſhes the ſore with it.

There is a flat and naked field, near Roſtad, on which no vegetables will grow, the ſoil is almoſt white, with grey ſtripes, and has ſomewhat of ſo peculiarly poiſonous a nature, that though all other animals may ſafely paſs over it, a goat or kid no ſooner ſets his feet upon it, than it drops down, ſtretches out its legs, its tongue hangs out of its mouth, and it expires, if it has not inſtant help. There are few hogs in Norway, and not many of the common deer, but the hares, which in the cold ſeaſon change from brown to grey or ſnow white, are very cheap in winter. Here are alſo in ſome parts of this country, elks, but they are not numerous. The rein-deer, however run wild in herds, and are ſhot for food by the inhabitants. Theſe animals conſtitute the greateſt, and almoſt the only riches of the Laplanders, who live upon the milk, the cheeſe they make of it, and on the fleſh. They make their cloathing, tents, and bed covering of their ſkins, and of their tendons they make their ſewing thread. There are vaſt numbers of them in Finland, both wild and tame, and many a man has there from ſix or eight hundred to a thouſand, of theſe uſeful creatures, which never come under cover. They follow him wherever he is pleaſed to ramble, and when they are put to a ſledge, tranſport his goods from one place to another. They provide for themſelves, and live chiefly on moſs, and on the buds and leaves of trees. They ſupport themſelves on very little nouriſhment, and are neat, clean, and entertaining creatures. It is remarkable, that when the rein-deer ſheds his horns, and others riſe in their ſtead, they appear at firſt covered with a ſkin; and till they are of a fingers length, are ſo ſoft, that they may be cut with a knife like a ſaſauge, and are delicate eating, even raw; therefore the huntſmen, when far out in the country, and pinched for want of food, eat them, and find that they ſatisfy both their hunger and thirſt. When the horns grow bigger, there breeds within the ſkin a worm that eats away the root. The rein-deer has over his eye-lids a kind of ſkin, through which he peeps, when otherwiſe, in the hard ſnows, he would be obliged to ſhut his eyes entirely.

The ravenous beaſts are the bears and wolves already mentioned, the lynx, vaſt numbers of white, red, and black foxes; and the glutton, a creature, which few other countries know, but by report. This animal receives its name from its voracious appetite; it in ſize and ſhape has ſome reſemblance of a long bodied dog, with thick legs, ſharp claws and teeth;

teeth; the colour is black, variagated with brown and yellow ſtreaks. He has the boldneſs to attack every beaſt he can poſſibly conquer, and if he finds a carcaſe ſix times as big as himſelf, he does not leave off eating, as long as there is a mouthful left. When thus gorged, he preſſes and ſqueezes himſelf between two trees, and thus empties himſelf of what he has not time to digeſt. As his ſkin ſhines like damaſk, and is covered with ſoft hair, it is very precious; it is therefore well worth the huntſman's while to kill him without wounding the ſkin, which is done with ſhooting him with a bow and blunt arrows.

The martin is alſo hunted on account of its ſkin, as is likewiſe the ſquirrel and the ermine, both of which are therefore ſhot with blunt arrows. It is doubted whether the ermine be different from the Daniſh weaſel; its valuable ſkin is of a beautiful white, and it has a black ſpot on the tail. The ermines run after mice like cats, and drag away what they catch, particularly eggs, which are their niceſt delicacy. Here are alſo caſtors, badgers, otters, and hedg-hogs.

Among the mice, ſome are thought poiſonous, and others are remarkable for being white, and having red eyes. But the moſt pernicious vermine is a little animal, called the lœmus, or lemming, which is near the ſize of a rat; the tail is ſhort and turned up at the end, and the legs are alſo ſo ſhort that they ſcarce keep the belly from the ground. They have very ſhort hair, and are of different colours, particularly black, with yellow and brown ſtreaks, and ſome in ſpots. The biſhop aſſures us that, about once or twice in every twenty years, they aſſemble from their ſecret abodes, in prodigious numbers, like the meſſengers of heaven to puniſh the neigbbouring inhabitants. They proceed from Kolen's rock, which divides the Nordland manor from Sweden, and is held to be their peculiar and native place; marching in vaſt multitudes through Nordland and Finmark to the weſtern ocean; and other bodies through Swediſh Lapmark, to the Sinus, Bothnicus, devouring all the graſs and vegetables in their way. They do this in a direct line, and going ſtraight forwards proceed into the rivers of the ſea: thus, if they meet with a boat on any freſh water river, they run in at one end or ſide, and out again at the other, in order to keep their courſe. They carry their young with them on their backs, or in their mouths; and if they meet with peaſants who come to oppoſe them, they will ſtand undaunted, and bark at them like dogs. This evil is, however, of no long duration; for on entering the ſea, they ſwim as long as they are able, and then are drowned: if they are ſtopped in their courſe, ſo that they cannot reach the ſea, they are killed by the froſts of winter; and if they eſcape, moſt of them die as ſoon as they eat the new graſs.

As to the reptiles, there are neither land-ſnakes nor toads beyond the temperate zone; and even thoſe ſnakes on the extremities of the temperate climate, are leſs poiſonous than in more ſouthern countries. Lizards are here of various colours, as brown, green, and ſtriped. Thoſe that are green are found in the fields, and the others in the cracks and holes of rocks.

Among the fowls are moſt of thoſe ſeen in the reſt of Europe, and ſome of them peculiar to this country; of thoſe that are in a manner peculiar to this country is the francolin, an excellent land bird, which ſerves the Norwegians inſtead of the pheaſant, its fleſh being white, firm, and of a delicious taſte. The black-cap is almoſt as ſmall as the wren; the body is black and yellow, it is white under the belly, and the top of the head is black. Theſe birds keep near the houſes, and are ſuch lovers of meat, that the farmers can hardly keep them from it, and therefore catch them like mice in a trap.

Norway is alſo ſupplied as plentifully with fiſh as any country in the world.

The biſhop in his hiſtory beſides the animals before mentioned, tells us of ſome others of dubious exiſtence, ſuch are the mer-man and mer-maid. He alſo deſcribes a creature called the ſea-ſnake, whoſe dimenſions are ſuch as ſhock credibility. But the monſter whoſe ſize is the moſt enormous that we believe was ever heard or read of, is the kraken, a fiſh, in ſhape like the ſtella murina, whoſe circumference, he ſays, is above an Engliſh mile and a half, and which he ſays, is often miſtaken by mariners for an iſland; but ſetting aſide many other improbable circumſtances, this animal muſt encroach too much upon the general proportion of nature to have place in a globe where all is calculated for a ſymmetry of parts; we ſhall therefore; with all ſubmiſſion to the reverend author, conclude that he was deceived in his judgment, and that all accounts he has received of the kraken, are a heap of abſurdities.

"The inhabitants of the mountains, in Norway (ſays our author) do the work of horſes, for nine ſucceſſive hours, ſinging all the time; and throw themſelves every half hour on the ſnow, though in a profuſe ſweat, ſucking it to ſlake their thirſt, without the leaſt apprehenſion of a cold or fever.

"All the peaſants are in general, handy and ingenious, having no tradeſmen among them, nor buying any thing made up in the towns; as the farmers ſay nobody can ever make a good man without being his own taylor, ſhoe-maker, weaver, ſmith, carpenter, &c. though without derogating from their ingenuity, it is moſt probable, that neceſſity, is in a great meaſure, the parent of it; as the produce of their ſoil would be unequal to the employment of ſuch a number of tradeſmen. They ſeem however, to excel in carving with their toll knife, (a broad ſhort one) ſome of the greateſt artificial curioſities in the royal muſeum, conſiſting of their carving in wood."

Though the biſhop celebrates his countrymen for their ability and politeneſs, the peaſants are very ferocious, ſome of whom has been known to buckle themſelves together by their belts, and fight with their ſhort knives, till one of them have been mortally wounded; ſo that, till the middle of the laſt century, our author ſays it was cuſtomary, when the family has been invited to a wedding, for the wife to take her huſband's ſhroud with her.

Except at weddings and other entertainments, the farmers do not uſe rye in their bread, oats being their general corn; and when grain is ſcarce they mix a little oatmeal with a greater quantity of the bark of the fir powder, which makes a bread that is leſs nutrive and bitteriſh; but which however, they accuſtom themſelves to in plentiful ſeaſons, to be prepared againſt a time of ſcarcity. Indeed, in 1743, and 1744, they improved their bread by ſubſtituting elm bark, which was better taſted.

In parts where there were great fiſheries, they attempted to mix cod-roes with oatmeal; but this gave ſome the bloody flux. It ſeems odd that they chuſe to let their fiſh ſour before they ſalt it. They make a ſtock of ſtrong ale againſt Chriſtmas, and chriſtenings, &c. but at other times regale on mungat, a very bad ſmall beer, milk and water, or water and ſour wey. They are great lovers of tobacco, expending annually ſeveral thouſand dollars in it, which makes our author, as a patriot, wiſh for its perfect production there; ſnuff they properly enough call næſemeel.

Their houſes are commonly built of whole trunks of pine and fir trees, chopped ſo as to make them lie cloſe, and joined by mortiſes. They are covered firſt with birch-bark, and over that three or four inches thick with turf, wherein ſervice trees and good graſs grows, whence many a farmer mows a pretty load of hay from the top of his houſe. They are often let to three, four, or five families; and have a ſtaubaret for all their proviſions at a diſtance, for fear of fire. Even the rich farmers have ſeldom any windows, but a ſky-light, called liur, at the top of the houſe, over which, they place the midriff of ſome animal, in a frame, to keep out the rain. The membrane is ſtrong and tranſparent as a bladder; it is called

called Siaa, and lifted on or off with a pole, which pole, every perſon coming on important buſineſs, and eſpecially on courtſhip, muſt touch before they utter a word. The ſmoak paſſes through the liur; and kings, till the 11th century, lived in ſuch houſes.

The maſter of the houſe always ſits at the upper end of the table on the hoy-ſædet, (high-ſeat) where he has a little cupboard to lock up his valuable things. They burn the roots of thoſe fir-trees that have been cut down ſeveral years for tar. As a great part of their livelihood is obtained from the water, many ſpend half their time on that element, and die in it; and though their bodies are ſeldom found, they have a funeral ceremony and ſermon called Gravfæſtelſe. A miniſter at Karſund affirmed, that during his reſidence there, which had been fifty years, there had not died above ten grown men on ſhore; and at Chriſtianſand, they ſay that moſt of the women have had five or ſix huſbands.

The lakes and rivers furniſh the inhabitants with plenty of freſh-water fiſh, and the mountains ſupply them with game. For their winter ſtock they kill cows, ſheep, and goats, part of which they pickle and ſmoke, and ſome of it they cut in thin ſlices, ſprinkle it with ſalt, and then dry it in the wind, and eat it like hung-beef. They are fond of brandy, and of chewing and ſmoaking tobacco.

The Norwegians who live in towns have nothing ſingular in their dreſs, but the peaſants do not trouble themſelves about faſhion: thoſe called Stile Farmers, have their breeches and ſtockings in one piece: they have a wide, looſe jacket, made of coarſe woollen cloth, as are likewiſe their waiſt-coats; but thoſe who would appear fine, have the ſeams covered with a different colour. The peaſants of one pariſh are remarkable for wearing black cloaths, edged with red; another for wearing all black; the dreſs of a third pariſh is white edged with black; others wear black and yellow, and thus the inhabitants of almoſt every pariſh vary in the colour of their cloaths. They wear a flapped hat, or a little brown, grey, or black cap, made quite round, and the ſeams adorned with black ribbons. They have ſhoes of a peculiar conſtruction, without heels, conſiſting of two pieces, the upper-leather ſits cloſe to the foot, to which the ſole is joined by a great many plaits and folds. When they travel, and likewiſe in the winter, they wear a ſort of half-boots, which reach up to the calf of the leg, and are laced on one ſide; and when they go on the rocks in the ſnow, they put on ſnow ſhoes; but as theſe are troubleſome when they go a great way to travel, they put on ſkates as broad as the foot, but ſix or eight feet long, and pointed before; they are covered with ſeal-ſkin, ſo that the ſmooth grain of the hair turns backward to the heel. With theſe ſnow-ſkates they ſlide about on the ſnow, as well as they can upon the ice, and faſter than any horſe can go.

The peaſants never wear a neck-cloth, nor any thing of that kind, except when he is dreſſed; for his neck and breaſt are always open, and he lets the ſnow beat into his boſom. On the contrary, he covers his veins, binding a woollen fillet round his wriſt. About their body they wear a broad leather belt, ornamented with convex braſs plates; to this hangs a braſs chain, which holds their large knife, gimblet, and other tackle.

The women at church, and in genteel aſſemblies, dreſs themſelves in jackets, laced cloſe, and have leather girdles, with ſilver ornaments about them. They alſo wear a ſilver chain three or four times round the neck, with a gilt medal hanging at the end of it. Their handkerchiefs and caps, are almoſt covered with ſmall ſilver, braſs, and tin plates, buttons, and large rings, ſuch as they wear on their fingers, to which they hang again a parcel of ſmall ones, which make a jingling noiſe when they move. A maiden bride has her hair plaited, and hung as full as poſſible with ſuch kind of trinkets, as alſo her cloaths.

The peaſants are buſied in cutting wood, felling and floating timber, burning of charcoal, and extracting of tar. Great numbers are employed in the mines, and at the furnaces and ſtamping mills, and alſo in navigation and fiſhing, beſides hunting and ſhooting; for every body is at liberty to purſue the game, eſpecially in the mountains, and on the heaths and commons, where every peaſant may make uſe of what arms he pleaſes. Some of the inhabitants procure a good maintenance by catching of birds; but it is impoſſible to give a juſt idea of the fatigue and danger with which they ſearch for birds in the high and ſteep rocks, many of which are 200 fathoms perpendicular. Theſe people who are called Bird-men, have two methods of catching them; they either climb up theſe perpendicular rocks, or are let down from the top by a ſtrong, thick rope; when they climb up, they have a large pole of 11 or 12 ells in length, with an iron hook at the end; they who are underneath in a boat, or ſtand on a cliff, faſten this hook to the waiſtband of the man's breeches who climbs, by which means they help him up to the higheſt projection he can reach, and fix his feet upon; they then help up another to the ſame place, and when they are both up, give them their bird-poles, and a long rope, which they tie at each end round their waiſts. This done, one climbs up as high as he can, and where it is difficult, the other, by putting his pole under his breach, puſhes him up till he gets a good ſtanding place: the uppermoſt of the two then helps the other up to him with the rope; and thus they proceed till they get to the part where the birds build, and there they ſearch for them. As they have many dangerous places yet to climb, one always ſeeks a convenient place to ſtand ſure, and be able to hold himſelf faſt, while the other is climbing about. If the latter ſhould happen to ſlip, he is held up by the other who ſtands firm, and when he has got ſafe by thoſe dangerous places, he fixes himſelf in the ſame manner, that he may aſſiſt the other to come ſafe to him; and then they clamber about after birds where they pleaſe; but accidents ſometimes happen; for if one does not ſtand firm, or is not ſtrong enough to ſupport the other when he ſlips, they both fall and are killed, and thus ſome periſh every year.

When they thus reach the places that are ſeldom viſited, they find the birds ſo tame that they can take them with their hands; for they are loth to leave their young; but where they are wild, they either throw a net over them in the rock, or entangle thoſe that are flying, with a net fixed at the end of their poles. Thus they catch vaſt numbers of fowls, and the boat keeping underneath them, they throw the dead birds into it, and ſoon fill the veſſel.

When the weather is tolerably good, and there is a deal of game, the bird-men will continue eight days together on the rocks; for there are here and there holes in which they can ſecurely take their repoſe: they draw up proviſions with lines, and boats are kept coming and going to take away the game.

On the other hand, many rocks being ſo ſteep and dangerous, that they cannot poſſibly climb up them, they are then let down from above; when they have a ſtrong rope eighty or one hundred fathoms long. One end of it the bird-man faſtens round his waiſt, and drawing it between his legs, ſo that he can ſit on it, he is let down with his bird-pole in his hand, by ſix men at the top, who let the rope ſink by degrees; but lay a piece of timber on the edge of the rock for it to ſlide on, to prevent its being torn to pieces by the ſharp edges of the ſtones. Another line is faſtened round the man's waiſt, which he pulls to give ſigns when he would have them pull him up, let him lower, or keep him where he is. He is in danger of the ſtones looſening by the rope, and falling upon him, he therefore wears a thick furred cap, well lined, which ſecures him from the blows he may receive from ſmall ſtones; but if large ones fall, he is in the greateſt hazard of loſing his life.

Thus do theſe poor men often expoſe themſelves to the moſt imminent danger, merely to get a ſubſiſtence for their families. There are ſome indeed who

ſay

ſay there is no great hazard in it, after they are accuſtomed to it; but at firſt the rope turns round with them, till their heads are giddy, and they can do nothing to ſave themſelves. Thoſe who have learnt the art make a play of it; they put their feet againſt the rock, throw themſelves ſeveral fathoms out, and puſh into what place they pleaſe. They even keep themſelves out on a line in the air, and catch with their poles numbers of birds, flying out of, and into their holes. The greateſt art is required in throwing themſelves out, ſo as to ſwing under the projection of a rock where the birds gather together; here they fix their feet, looſen themſelves from the rope, which they faſten to a ſtone, to prevent its ſwinging out of their reach, and then the man climbs about and catches the birds, either with his hands or his pole; and when he has killed as many as he thinks proper, he ties them together, faſtens them to a ſmall line, and by a pull gives a ſignal for thoſe above to draw them up. In this manner he works all day, and when he wants to go up, he gives a ſignal to be drawn up, or elſe works himſelf up with his belt full of birds.

When there are not people enough to hold the rope, the birdman fixes a poſt in the ground, faſtens his rope to it, and ſlides down without any help to work as before. In ſome places there are ſteep cliffs of a prodigious ſize, lying under the land, and yet more than 100 fathoms above the water, which are very difficult to be got at. They help one another down theſe cliffs in the manner abovementioned, and taking a ſtrong rope with them, faſten it here and there in the cliff, where they can, and leave it all the ſummer: upon this they will run up and down, and take the birds at pleaſure.

It is impoſſible to deſcribe how frightful and dangerous this bird-catching appears to the beholders, from the vaſt height and exceſſive ſteepneſs of the rocks, many of which hang over the ſea: it ſeems impoſſible for men to enter the holes under theſe projections, or to walk 200 yards high on crags of rocks where they can but juſt fix their toes. When they have brought home their birds, they eat ſome of them freſh, and ſome are hung to dry for the winter ſeaſon. Theſe birds afford the inhabitants a very good maintenance, partly from their fleſh and eggs, and partly from their feathres and down, which are gathered and ſent to foreign parts.

We ſhall here ſubjoin the account given of the country, by a French gentleman who embarked at Copenhagen on board a northern fleet, bound on a voyage of diſcovery, which landed him ſafe upon the coaſt of Norway.

"The peaſants of Norway (ſays he) who are ſlaves to the nobility, are moſt of them fiſhermen, and remarkable for their ſimplicity and hoſpitality. The women, who are very handſome, though red haired, are fond of ſtrangers; they look after the cattle, of which there is a great plenty; they are likewiſe excellent houſewives, and in general make their own family cloth.

"As we were on our way towards Chriſtiana, we met one of the neighbouring gentlemen, followed by two ſervants, and a pack of dogs, going upon an elk chace. The gentleman knowing the man that was with me, invited us to partake of his diverſion. After riding with him about a mile, we met his huntſman, together with more of his ſervants, and ten or twelve peaſants, who led us three miles farther to a wood full of buſhes, at the entrance of which we diſmounted, and gave our horſes to one of his domeſtics.

"Preparations had been made for the chace the day before by the gentleman's vaſſals; in conſequence of which we had ſcarce gone 40 yards before we perceived an elk, who had not advanced far when he dropped down dead, being ſeized, as they told me, with the falling-ſickneſs, from whence they derive the name of Elk, which ſignifies a miſerable creature; and it ſeems they often fall in this manner at the beginning of the chace. Had not this accident happened, I believe we ſhould have found it hard to have run him down; for we were above two hours in purſuit of the next, which I do not believe we ſhould have ever catched, had he not alſo dropped down dead; however, he killed two of the beſt dogs with his fore feet, and the gentleman being extremely ſorry for their loſs, would hunt no more; but ſent for a cart to carry the game, and inſiſted on our going with him to his caſtle, where he treated us in a plentiful and agreeable manner.

"The elk is as big as a large horſe, and his body like that of a ſtag, but longer and larger; his legs are alſo long, his feet broad and cloven, his antlers large, hairy, and broad like a fallow deer's, but he is not ſo well furniſhed with horns as a ſtag.

"At my departure my hoſt made me a preſent of the two left ſhanks of the elks, aſſuring me that they were an excellent cure for the falling-ſickneſs; to which I replied by my interpreter, that I wondered, ſince the leg of the elk had ſuch virtue in it, why the animal did not cure himſelf. The gentleman reflecting on what I ſaid, laughed aloud, and told me I was in the right, for he had given it to ſeveral perſons afflicted with the ſame diſeaſe, but it had never produced a cure; upon which he had long ſuſpected that the pretended virtue of the leg or foot of this animal was a vulgar miſtake. He then gave me many inſtances of the ill effects produced on human bodies by eating the fleſh of elks."

"The gentleman having obliged us to ſpend the night at his caſtle, we took our leave of him the next morning, after breakfaſt, and returned to Chriſtiana, where we ſtaid four or five days, and then ſailed for Berghen; but being becalmed in our paſſage for five days, we employed ourſelves in catching fiſh, and took ſo large a quantity, that we lived chiefly on that food for a long time afterwards.

"Berghen, the capital of the province of the ſame name in Norway, has one of the fineſt ports in Europe. It is a large trading town, full of merchants, and was formerly an archbiſhoprick; but it has not been acknowledged as ſuch ſince the reformation, which prevails here as well as in the king of Denmark's other dominions. The archbiſhop's palace was given to the Hans towns for the reſidence of their ancient merchants, ſo long as they continue ſingle; but if they marry, they are obliged to remove. The merchants are called monks, though they do not wear a cowl, or obſerve the rules of any order; and the warehouſes bear the name of the Cloiſters. The chief branch of trade carried on at Berghen is in herring, cod, and ſtock-fiſh; for which there is a great demand in Muſcovy, Poland, Sweden, Denmark, Germany, and other parts of Europe.

"When we had diſcharged the cargo we had to deliver at Berghen, we ſet ſail for Drontheim, half our lading conſiſting chiefly of bread and beer, being conſigned to the ſurveyor of the copper and ſilver mines, for the uſe of the miners, and other workmen; but being again becalmed for ſeveral days, we caught a vaſt quantity of klip-fiſh, a great part of which we ſalted and barrelled. They are a ſpecies of cod, and obtain the name of klip-fiſh, from their never leaving the rocks, klippe, in the German tongue, ſignifying a rock.

"When we arrived at Drontheim, we applied to the ſurveyor to unlade our ſhips as faſt as poſſible, that we might proceed on our voyage; but he told us he could not begin, till the officer, who was to receive the proviſions, came back from the mines, and offered to ſend a meſſenger on horſeback for him, whom I obtained permiſſion to accompany. Early the next morning, the ſurveyor's man and I begun our journey; but the roads were ſo rugged, that we could not reach only eighteen miles from Drontheim; for the night came on, and we had a long wood to paſs through, in which were lynxes, boars, and wolves, in great numbers, that rendered it dangerous to travel in the dark.

"We came to our journey's end the next night, and lodged at the forges, where, according to the

cuſtom of the country, we were entertained by the people who have the care of the mines, with tobacco, beer, and brandy; and our hoſt was ſo very hoſpitable, that there was no poſſibility of going to bed ſober. I here became acquainted with one of the officers of the mines, who ſpoke French, and on my expreſſing a deſire to go down into them, he promiſed to gratify my curioſity.

"Having breakfaſted with the perſon who ſpoke French, and the maſter miner, they went with me fifty or ſixty paces from the forges, which are upon a high mountain, to the mouth of one of the mines, over which was erected a machine not unlike a crane, turned by two great wheels, each guided by a man, by which means the ore is drawn up; and the maſter miner and I, being fixed in a wooden bucket, to which our hands were bound with iron gantlets, were let down fifty fathom deep. Never was there ſeen a more horrid proſpect, nor a truer picture of the infernal regions; the flames of fire that blazed every where around, the rugged caverns, and the ſight of creatures that had a nearer reſemblance to the fiends than to men, all conſpired to fill the ſoul with terror. The miners were dreſſed in black leather coats of mail, and muffiers of the ſame faſtened round their heads, juſt under their eyes, reaching down to their breaſts, they had alſo leathern aprons. Theſe miners have different employments; for while ſome divide the ore from the maſs, others ſearch for new veins of metal, and others try to diſcover caverns filled with water, which often unexpectedly burſt forth, and drown thoſe in the mines: however, if theſe are found the miſchief is ſometimes prevented. The maſter miner, who deſcended with me, imagined I was near being ſeized with a cold fit, which is common in theſe places, rang a bell, which being the ſignal for thoſe above to draw us up, we ſoon aſcended with the ſame eaſe with which we had gone down. Never was freſh air more welcome to me, than after having breathed the unwholeſome damps of this cavern.

"We now went to the houſe of the officer who ſpoke French, who entertained us in a very hoſpitable manner. After dinner, he ordered horſes to be got ready to take us to the ſilver mines. Having introduced me to the ſurveyor, we were each of us preſented with a large glaſs of brandy, and then treated with beer and tobacco: when we were thus refreſhed, the ſurveyor conducted us to the forges, which were about a mile from his houſe, and we ſoon after reached the mouth of a mine, down which we went in the ſame manner we had done at the copper mine.

"The miners never work in winter, and in the ſpring and autumn, they only labour three hours before, and three hours after dinner; but in the ſummer they work four hours in the morning, and five in the afternoon. The reſt of the time they ſpend in mirth and feaſting; they delight much in dancing and have violins, hautboys, and other muſical inſtruments, to enliven their ſpirits. This merry life they are well able to ſupport, being paid a crown a day all the year round. I had an opportunity of ſeeing them engaged in their paſtimes, the ſimplicity of which, gave me much pleaſure. Theſe mines turn to a good account, and are not the leaſt part of his Daniſh majeſty's revenue.

"Having ſeen every thing worth notice at the mines, we went home with the ſurveyor, who treated us with brandy, beer, and tobacco: we afterwards partook of a plentiful ſupper, and when we had refreſhed ourſelves, went to bed. In the morning the maſter miner and I having thanked our hoſt for his kind entertainment, went back to the copper mines, where having taken leave of the officer who ſpoke French, we ſet out for Drontheim."

With this relation we ſhall cloſe our deſcription of Norway, and proceed to give that of Lapland, a country where the manners of the inhabitants forms a ſtriking contraſt to that of the civilized nations of Europe.

TRAVELS THROUGH LAPLAND.

LAPLAND might appear, from its remote ſituation, to be placed at the northern extremity of the globe; but the diſcovery of Spitſbergen has convinced voyagers and travellers that they could proceed yet farther in their approaches towards the north pole. The author whom we quoted above, was bound for both theſe places. He thus continues his relation.

"As night came on before we had gone eight miles on our way, we were obliged to take up our quarters in the next village, at the houſe of a peaſant, who thinking himſelf greatly honoured by having ſuch gueſts, did all in his power to oblige us. He firſt treated us with beer and tobacco, and a kind of brandy diſtilled from malt; and having lately killed a hare and a couple of pheaſants, he dreſſed them for our ſupper. When we had done ſupper we again ſwallowed large quantities of brandy and beer, and were inveloped in clouds of tobacco. At length the maſter miner was made dead drunk, at which the peaſant expreſſed the utmoſt ſatisfaction, and took large draughts to put himſelf in the ſame condition; nor was I much better; it is the cuſtom of the country among all ranks of people, and not to be avoided, they have no notion of there being any pleaſure in ſociety that does not end in drunkenneſs. When we had drank our fill, we betook ourſelves to reſt on clean ſtraw which had been ſpread on the floor for that purpoſe. As I was firſt awake in the morning, I by ſigns, made the peaſant's ſon underſtand that I wanted the horſes to be got ready, being determined to reach Drontheim that night, if poſſible. When I ſaw they were ſaddled, I rouſed my companion and his hoſt, and having again eaten and drank more than in prudence we ought, we took our leave of the hoſpitable peaſant, and before night arrived at Drontheim.

"The ſhip having cleared out, and taken in her ſtock of proviſions and other neceſſaries; in two days after my return, we ſet ſail with a fair wind to purſue our voyage to the northward. After a few days we were becalmed under the arctic circle, and ſome of our crew being ſo ſuperſtitious as to imagine that the inhabitants of the neighbouring coaſt, like thoſe of Finland, could rule the elements, and diſpoſe of the winds at their pleaſure: our captain ſent his boat on ſhore with the mate, to purchaſe a wind of them; and though I believed nothing of the matter, I had the curioſity to accompany thoſe employed in this ridiculous commiſſion.

"We landed at the firſt village we ſaw, and as the mate could ſpeak enough of the language of the country to make himſelf underſtood, he ſoon found out the chief necromancer, and aſked if he could

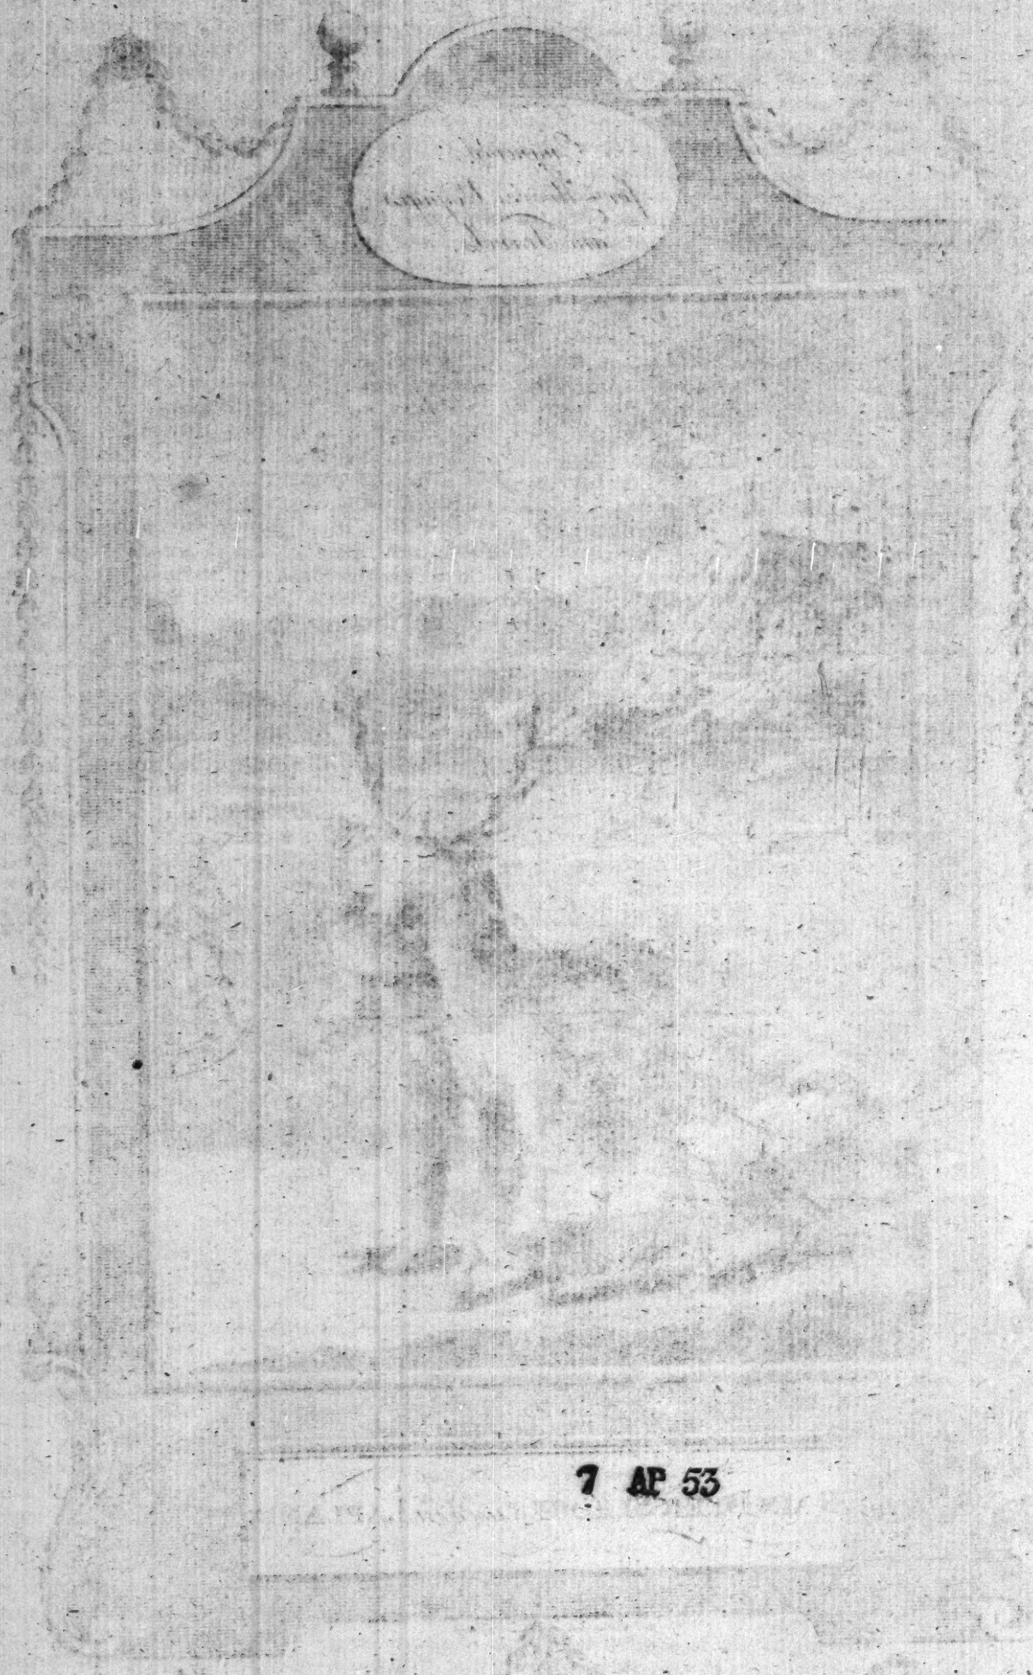
and Travels.

RAIN-DEER-SLEDGES *used in* LAPLAND.



7 AP 53

furniſh us with a wind that could laſt till we arrived at Maurmanſkeimore? but the necromancer gravely replied, that he could not; for that his power extended no farther than the promontory of Rouxella. The mate conſidering, that if we reached ſo far, we might eaſily make the north cape, deſired him to go on board with us, and bargain with the captain. The wizard conſenting, took three of his comrades with him, and leaping into a ſmall fiſhing boat, went on board our ſhip, where the captain and he ſoon agreed, and he paid ten kronors, which is about thirty-ſix ſhillings, and a pound of tobacco. When the bargain was concluded and the money paid, the conjuror tied a woollen rag, about half a yard long, and a nail broad, to the foremaſt. This rag, in which three knots were tied, was all the captain had for his money; and the necromancer and his companions immediately returned on ſhore. Not long after he was gone, the captain agreeable to the inſtructions he had received, untied the firſt knot in the rag, and ſoon afterwards a briſk gale ſprung up from the ſouth weſt, which drove us thirty leagues beyond Malſtrom, a whirlpool in the Norwegian Sea, that has proved fatal to many veſſels. For this reaſon thoſe pilots that are acquainted with thoſe coaſts, keep eight or ten leagues out to ſea, to avoid that and ſeveral other eddies, as well as the rocks that lie off Oſtraford.

"The wind now beginning to veer a little to the northward, the captain untied the ſecond knot, on which the wind ſettled as before, till we reached Rouxella. When we had paſſed that promontory, the needle of our compaſs turned back half an inch, from which ſome imagined, that there was a loadſtone in the mountain. However, if we had not had an experienced pilot, we certainly ſhould have loſt our courſe. He ſhut up the compaſs, and diſplayed a flag on the top of the fore-maſt head, as a ſignal for ſome other ſhips that were in company to follow our way. We were two days and nights in this ſituation, having nothing to depend upon but the pilot's experience; but on the third day, when we were at a conſiderable diſtance from the mountains of Rouxella, the needle again pointed to the north, from whence we concluded that we drew near the north cape. The wind failing us about this time, our captain untied the third knot, and there ſprung up a ſmart breeze at north-eaſt, which ſoon increaſed to a moſt dreadful tempeſt. We we were now obliged to take in all our ſails, and drive before the wind under our bare poles, expecting every minute to go to the bottom; and dreading leſt this ſhould be a judgement inflicted on us for our infernal commerce. At length we ſtruck upon a rock, when leaſt we expected any; as ſoon as we felt the ſhock, we gave ourſelves up for loſt, and every man betook himſelf to his devotions; but by great good providence there came a high rolling ſea, which carried us clear over the rock, though not without ſome damage to the veſſel.

"On the 4th, the ſtorm ceaſed, when we were under great concern at having loſt ſight of our other veſſels, which we had great reaſon to fear were loſt; but having a fair gale, we continued our courſe, being reſolved to make the firſt port in order to refit.

"With reſpect to the ſale of winds for which theſe northern people are ſo famous, it may be proper to obſerve, that like all other kinds of witchcraft and necromancy, it has its foundation in fraud and impoſture. Thoſe who deal in it ſtudy the weather with the utmoſt care; and from conſtant obſervation, are able to foreſee the variation of the winds for ſeveral days to come, and they take care to ſtart ſo many difficulties in making their bargains, that they are ſure never to come to a concluſion, till they perceive the ſign of the approach of the wind that is wanted; and when our ſuppoſed conjurer affirmed that his power reached no farther than Rouxella, it ought to be underſtood that he knew well, by experience, that cape to be the limit of his obſervations, and that he ſhould riſque his credit, if he preſumed to exceed his bounds. This account we have received from ſome intelligent perſons who lived ſome time in Iceland; where they are famous for this kind of traffic, and diſpoſe of winds with leſs limitation than elſewhere, becauſe living upon an iſland, they are more able to judge of the variation of the winds in all the ſeas round about them. This kind of knowledge is confined to a very few people, who pretend to diſpoſe of the wind as their own proper merchandiſe, whereby they keep their neighbours in ſubjection, and put foreigners under tribute; nor are theſe ſtrange ridiculous notions to be wondered at in a country where religion is at a very low ebb, and learning has made but a ſmall advance towards the improvement of the mind.

"The coaſts of the ſea all over the north, are ſo full of rocks, that the ports and creeks are almoſt inacceſſible, and we were obliged to ſail two days longer before we could make a proper port; however, we at length reached the coaſt of Wardhuys, the chief town of Daniſh Lapland, where there is a garriſon of two companies of ſoldiers belonging to the king of Denmark, and a collector of the duties impoſed on foreigners, trading to or from Archangel.

"The collector judging us to be Danes by our colours, and our ſaluting the caſtle, ſuffered us to ſail on to Varanger, without ſearching us. The country all about ſeemed very wild, and no perſon on board had the leaſt knowledge of it; the captain, impatient to find a place where we might refit, and deſirous of obtaining ſome information relative to trade, ordered out the long-boat, and taking with him eight men well armed, rowed towards the town, where he arrived in about half an hour. He found the port very convenient, and the place populous, but ſo little frequented, that the inhabitants ſeemed amazed at ſeeing him, but readily offered to aſſiſt in refitting the ſhip, though they gave him ſmall encouragement reſpecting trade.

"On the next day we entered the port, and unladed our cargo, which conſiſted of bales of cloth and rolls of tobacco, with which we deſigned to have traded. Theſe goods were locked up in a warehouſe near the ſhore, and a watch ſet to guard them. To ſome of the principal inhabitants we preſented ſmall quantities of tobacco, which being more welcome to them than gold, it ſecured their friendſhip, and in return they entertained us with fiſh that ſerves them inſtead of bread; the fleſh of rein-deer, which I did not think very palatable, together with ſome bear's fleſh, and that of other wild beaſts, of which we had no knowledge; they alſo treated us with freſh fiſh, boiled without ſalt, and ſerved up either with the oil of other fiſh, or a ſour liquor that is highly eſteemed by them. Their dainties not ſuiting our taſte, we ſent for proviſions from the ſhip, the chief of which was ſalt-beef and biſcuits, over which, and a can of liquor, we made ourſelves very merry; but when we offered ſome of our food to the Laplanders, we found that it was as diſagreeable to them as theirs was to us. The ſour liquor which I have mentioned, is made by throwing into water a quantity of juniper berries, and a grain like lentiles, which is very common in Lapland. They accepted and drank freely of our beer and brandy, though they preferred their common liquor to either."

The religion eſtabliſhed in Lapland is Lutheraniſm, but moſt of the natives are inclined to their ancient heatheniſm; and ſo ſuperſtitious, that if in the morning they meet a beaſt in their way whoſe appearance is eſteemed ominous, they return home and neglect all buſineſs for that day; and when they go a fiſhing, if they take but one fiſh at the firſt draught, they think it an ill omen, and leave work for that time.

Both the men and women are low in ſtature, but ſtrong and active: their faces are broad, and their noſes flat. Their eyes are ſmall like a hog's, and their eye-lids make them look as if they were blear-eyed. Their complexion in general is ſwarthy, and they are of a rude, uncivilized, and laſcivious diſpoſition; eſpecially

especially the women, who readily proſtitute themſelves to all comers, provided they can do it without their huſband's knowledge.

The men's coats, which reach but a little below their hips, are made of the ſkin of rein-deer, with the hair turned outwards, as are likewiſe their hats, ſtockings and breeches. Their hats, or rather their bonnets, are edged with a ſtrip of either grey or white fox-ſkin. The women wear on their heads a coif, not unlike thoſe worn in Norway, made of coarſe canvas, and their hair is twiſted up in two rolls, which hang down, one on each ſhoulder. Some of them wear a kind of ruff, of the breadth of eight fingers, which they tie behind. Their cloaths and ſtockings are either coarſe cloth, or rein-deer's ſkin, with the hair turned outward; and their ſhoes are of fiſh-ſkin, with the ſcales on, and ſomewhat reſembling the wooden ſhoes worn by the peaſants in France.

Their houſes reſemble thoſe of the peaſants about Chriſtiana. They have no light but what enters by a hole at thetop of the hut, and do not make uſe of beds any more than the other Laplanders. The whole family, maſters, miſtreſſes, children, and men and maid-ſervants, lie down promiſcuouſly in the middle of the apartment, upon bear-ſkins, which when they riſe in the morning, are taken up and laid by, till they are wanted again at night. Every family has a large black cat, which is highly eſteemed, which the maſter of the family will talk to as if it was a reaſonable creature, and which follows the people in all parties of fiſhing or hunting like a dog.

"When we had unladed the ſhip (ſays the author) we hauled her on ſhore, and found the inhabitants ready to give us all aſſiſtance in their power; for the veſſel being under a neceſſity of having timber to refit her, they helped us to fetch what we wanted from a neighbouring mountain. As we found that the ſhip would be ſome time in refitting, the ſupercargo propoſed to two of the ſhip's company and myſelf, to make a journey into the country, to try whether any trade could be carried on with the peaſants there.

"Having ſupplied ourſelves with ſalt-beef, pork, and biſcuit for proviſions, and with cloth and tobacco to trade, we ſet out on our journey on the 12th of May, attended by three of the inhabitants of Varanger, whom we followed through the woods, mountains and valleys, without meeting with any living creature, till about four o'clock in the afternoon, when we obſerved two white bears of prodigious ſize approach, as we thought, to devour us, but our guides laughed at our fears, and aſſured us if we kept our arms ready for defence, we ſhould not be attacked, and we found what they ſaid to be true; for whether the bears were frightened at the fire which ſtruck from our flints, or from what cauſe it happened I cannot ſay, but we had no ſooner prepared our fuzees, than they fled with the utmoſt precipitation.

"As we were deſcending a mountain, about an hour before night, we perceived at a diſtance a herd of beaſts not unlike ſtags, which our guides told us were rein-deer. Soon after this, we came to a village, which conſiſted of about a dozen ſtraggling houſes, at one of which we were very glad to repoſe ourſelves, having travelled a long way with our baggage at our backs. We preſented our hoſt with a piece of roll tobacco, which he received with extraordinary joy, aſſuring us that he had not had ſo valuable a preſent in nine months before; and in return he brought out his brandy bottle, ſome dried fiſh, and ſome rein-deer's fleſh dreſſed without ſalting, which we gave to our guides, and ſupped, ourſelves, upon the proviſions we had brought with us; after which we ſlept upon bear-ſkins, according to the cuſtom of the country. In the morning we aſked our hoſt if he had any thing to barter with us for cloth and tobacco? To which he anſwered, that he had ſome wolf, fox, and white ſquirrel ſkins, and that his neighbours had ſome of the ſame commodities, and would gladly exchange with us. We then bid him bring out his ſkins, and if he had any cloaths made of rein-deer ſkins, we would deal with him for four ſuits, which we wanted to keep us warm; accordingly he brought forth his merchandiſe, which we bartered, and paid him partly in tobacco, and partly in cloth. When we had purchaſed all that he had to ſell, we trucked with his neighbours as long as they had any thing worth buying, and then deſired our hoſt to aſſiſt us with ſome rein-deer, to carry us forward on our journey, to which he readily conſented, and taking down a horn that hung in his cottage, he went to the door and blew it, on which fourteen or fifteen of thoſe animals came running towards the hut, from among which he choſe out ſix, which he immediately yoked to ſix ſledges. We put our merchandiſe and proviſions in one of the ſledges, and aſſigned another to one of the guides, who underſtood the languages of our different Laplanders, and diſmiſſed the other two guides, having firſt paid them in tobacco for their trouble.

"We then put on our Lapland cloaths, and each of us lying down in his ſledge, was covered with a bear-ſkin. At the back of each ſledge were two girts made of rein-deer ſkin leather, in which we thruſt our arms up to the ſhoulders, to keep ourſelves ſteady, and we had each a ſtick, with a ſtrong ferrel to it, to ſupport the ſledge, in caſe it ſhould be in danger of overturning againſt the ſtumps of trees or ſtones, lying in the way.

"When we were ready to ſet out, our hoſt muttered ſome words in the ears of our cattle, which I afterwards learnt from our guide, were directions whither they ſhould carry us; for ſo credulous are theſe poor wretches as to think the beaſts underſtand them. However, cuſtom has made this muttering ſo familiar to them, that when our hoſt had gone to all the ſix, they ſet off at a prodigious rate, going over hills and dales without keeping any beaten path, till ſeven o'clock in the evening, when they brought us to a village between two hills, on the borders of a great lake. They ſtopt at the fourth houſe in the place, and beating the ground with their feet, the maſter of the houſe and ſome of his ſervants came out at the noiſe, and having unharneſſed our cattle, and taken us out of the ſledges, they gave each of us a brimmer of brandy, poured from a juniper can, of which wood all their veſſels are made: this it ſeems was to revive our ſpirits, our guides having informed them that we were frightened at our been drawn ſo ſwiftly, not having been uſed to that kind of travelling.

"When we got out of our ſledges, our hoſt conducted us into his hut, which, like the reſt of the cottages in the place, was very little, low, and covered with the bark of trees, the light entering in at a hole in the top. The people ſeemed here more barbarous than thoſe we had laſt converſed with: however, we gave our hoſt a piece of our roll tobacco, about two inches long, and a piece not quite ſo long to each of the inhabitants of the place, to engage their friendſhip. Their language was very different from that of the people of Varanger, from which we were now very diſtant, having travelled above thirty leagues this day.

"After ſupper we lay down on bear-ſkins, as uſual, having firſt exchanged with our hoſt, our Lapland habits, for thoſe that were longer and more commodious, and bartered ſome tobacco for the ſkins of an hundred grey ſquirrels, a fur much eſteemed in Denmark and other parts of Europe. The next day the people provided us with ſix other ſledges, and having treated us with brandy, and wiſhed us a good journey at parting, our hoſt performed the ſame ceremony of muttering in the ears of the ſix rein-deer, and they then ſet off, and drew us with the ſame ſwiftneſs as before. Our cattle did not ſtop till three o'clock in the afternoon, at which time we arrived at a village of eight cottages, pleaſantly ſituated by the ſide of a wood on the top of a hill. Here we ſaw no inhabitants, the reaſon of which, as our guide told us, was that it belonged to the Kilops, one of the wildeſt

Lapland nations, the people of which, fly from ſtrangers, and ſubſiſt entirely by hunting.

"We now baited our deer with moſs, which grows here in great plenty, and refreſhed ourſelves with ſalt-beef and biſcuits, and a dram of brandy, with which the people of the laſt village had furniſhed us, while our interpreter dined upon veniſon and fiſh. After ſtaying about an hour, our guide endeavoured to make the deer go forward, but had great difficulty to do it, though no Laplander whatever knew better how to manage them. This village being the uſual ſtage of the deer, they are very unwilling to quit it; our guide, in order to induce them to move, uſed many ridiculous and ſuperſtitious ceremonies: he went alone into the wood, and coming out again, muttered ſome words in the ears of theſe animals, which, whether they underſtood or not, had but little effect on them, till he had played the farce over four or five times, when they began to proceed, though not ſo ſwiftly as before. We now deſcended the mountain, and at a ſmall diſtance diſcovered four kilops returning from hunting in ſledges drawn by rein deer, but they returned aſide to avoid meeting us. In leſs than half an hour we entered a long wood, in which we heard terrible howlings, but ſaw no beaſts of prey. Having paſſed the wood, we had another hill to deſcend, at the bottom of which was a little village, whither our cattle conveyed us, and ſtopping before the door of a cottage, gave their uſual ſignal with their feet, at which the maſter made his appearance, whoſe friendſhip we ſolicited with a piece of tobacco, and he made us welcome: being tired with our journey, we had no ſooner ſupped, than we lay down to reſt on bear-ſkins.

"The next morning, our guide informed us that we had travelled forty leagues the preceding day; but I imagine he muſt be miſtaken, or elſe the leagues are not ſo long as they are generally reckoned; for forty Lapland leagues are equal to 160 of thoſe of France. Our guide likewiſe informed us that we were now in Muſcovite Lapland; and having deſired him to enquire if the inhabitants had any thing to barter for cloth and tobacco, they produced white, black, and grey fox-ſkins, grey ſquirrels and ſables, for which we ſoon bargained, and paid them chiefly in tobacco. When we had finiſhed our buſineſs, we ſat down to drink with them, and though they were not quite ſo brutal as ſome of the Laplanders, their converſation was extremely rude and indecent.

"Our hoſt here furniſhed us with as many ſledges as we had occaſion for; and we departed about one o'clock in the afternoon, and went with great ſpeed through different and unbeaten waſtes, till about ſix in the evening, when deſcending a hill, we obſerved two huts under a rock, a little out of the way. Our guide informed us that they belonged to two Kilops, who no ſooner ſaw us, than they fled with their wives and families. After a moſt fatiguing journey, we arrived about 11 o'clock at night, at a large village at the bottom of a hill, by a river ſide, and went to a cottage in the middle of the place, whither our cattle thought proper to conduct us to. The maſter of the houſe received us with great civility, made a fire in the middle of the hut to warm us, and treated us with brandy, dried fiſh, and ſalt veniſon, with ſalt butter and milk: this was the beſt fare we had met with ſince our ſetting out, and we ſhould have ſupped moſt ſumptuouſly had we had any bread left, but our ſtore was unhappily conſumed. We were ſurpriſed at this ſudden change, not having before met with any ſalt proviſions, which however our guide would not taſte, but ate ſome freſh veniſon that he had brought with him.

"In the morning we found they had nothing to trade with, and that they could not ſupply us with ſledges; upon which we croſſed the river, and ſoon reached another village, and hired rein-deer and ſledges to carry us to Kola, where we arrived about noon.

"Kola is a little city, ſituate on the ſide of a river, near ten leagues from the north ſea, having a large foreſt and deſarts to the eaſt, Maurmanſk more to the weſt, and very high mountains to the ſouth. It conſiſts of one indifferent ſtreet, the houſes of which are built of wood, and very low, but are handſomely rooſed with fiſh bones; and on the top there is a hole left to let in the light, as in other parts of Lapland. The inhabitants of this place, and indeed of Muſcovy in general, are ſo jealous of their wives, that they lock them up to prevent their being ſeen by ſtrangers.

"The perſons with whom we lodged at Kola, took all our cloth off our hands, and gave us in exchange two lynxes ſkins finely ſpotted, three dozen of white fox ſkins, ſome ermines, and half a dozen of wyetfras, an animal not unlike a badger, but with longer and rougher hair, of a dark red colour, and a tail like a fox. Our hoſt likewiſe ſupplied us with ſledges to the ſide of the river we had ſo lately paſſed, and proviſions ſufficient to laſt us to Varanger.

"The next morning, when we were preparing to depart, ſome of the towns people enquired whether we had any rolls of tobacco left? and being anſwered in the affirmative, ſoon fetched furs enough to purchaſe all we had, except ſeven or eight rolls, which we reſerved to pay our way back to Varanger; for tobacco is more neceſſary to thoſe who travel in this wild and unfrequented country, than gold, the Laplanders preferring a bit of the length of one's finger, to a crown-piece.

"The kings of Denmark and Sweden, and the Czar of Muſcovy, have taxed it ſeverely, and there are collectors ſettled in every frontier town, to gather the imports upon it.

"When we had diſpatched our buſineſs, we were obliged, according to the cuſtom of the place, to drink with our chapman. They all entertained us with brandy, and kept us till two in the afternoon, when our hoſt provided us with rein-deer and ſledges, packed up our furs for us, and furniſhed us with biſcuit, ginger-bread, and ſalted rein-deer veniſon, beſides a ſmall runlet of brandy. We now ſtored our merchandiſe in one of our ſledges, got into the other ourſelves, and having drank a bumper of brandy with our chapman at parting, ſet out on our return for the village, on the other ſide of the river.

"We arrived at the firſt village by ſeven o'clock, ſoon croſſed the river, and went directly to our old quarters, where our landlord, in hopes of getting more tobacco, received us very joyfully. He immediately gave us a cup of brandy, and if we choſe it, would have provided us with ſledges to go forward immediately; but we choſe to reſt ourſelves till the morning, there being no village for ſeveral leagues from his habitation; upon which he gave us another cup of brandy, and aſked us to accompany him to the funeral of one of his neighbours, who had been dead about four hours.

"This invitation was extremely agreeable to us, as we had heard much of their funeral ceremonies; we therefore attended him to the houſe of the deceaſed, where we ſaw the corpſe removed by ſix of his moſt intimate friends, from the bear's ſkin on which he had expired, into a wooden coffin; the body being firſt wrapped in linen, and the face and hands only being left bare. In the coffin they had put brandy, dried fiſh and veniſon, to ſubſiſt him on his journey to heaven; in one hand they put a purſe with money in it, to fee the porter of the gate of Paradiſe, and in the other a certificate, ſigned by a pariſh prieſt, and directed to St. Peter, informing him that the bearer had been a good Chriſtian, and ought to be admitted into heaven; and at the head of the coffin was placed an image dreſſed like a pilgrim, which they called St. Nicholas, who was one of the ſeven deacons mentioned in the acts of the Apoſtles.

"This St. Nicholas is greatly reverenced in all parts of Muſcovy, where he is ſuppoſed to be a particular friend to the dead; therefore his image is always fixed near the corpſe, inſtead of a crucifix.

"They ſet fire to ſome fir-tree roots, piled up at a convenient diſtance from the coffin, wept, howled, and made a variety of ſtrange geſtures, aſſuming a thouſand different attitudes to ſhew the extravagance of their ſorrow. When this noiſe, and theſe geſticulations were over, they marched ſeveral times round the corpſe in proceſſion, aſking the deceaſed why he died? Whether he was angry with his wife? Whether he ſtood in need of meat, drink, or cloaths? If he had been unſucceſsful in fiſhing, or loſt his game when hunting? After aſking theſe, and a thouſand other queſtions equally ridiculous, they reſumed their howling, ſtamped with all ſigns of diſtraction, while a prieſt, who attended, frequently ſprinkled conſecrated water on the corpſe and the mourners alternately.

"Being quite wearied with looking on theſe barbarous rites, we left our landlord behind us, and returned to his cottage, where we found his wife. She had made a ſally from the place in which her huſband had confined her on our arrival, and no ſooner ſaw us, than ſuppoſing he was in our company, would have retired to her corner, but our interpreter acquainting her that her huſband was at the funeral, and would not return for ſome time, ſhe came very willingly among us, examined us all attentively one after another, appearing good humoured, and well pleaſed with us. When ſhe had ſatisfied her curioſity, ſhe ſat down with us, and ſhewed us a bonnet of her own embroidering, very curiouſly performed with tinſel thread. After having taſted our proviſions, but particularly the gingerbread, which ſhe ſeemed fond of, and drank two or three glaſſes of brandy, ſhe withdrew to her place of confinement, for fear of her huſband's return, who would have certainly reſented her taking ſuch liberty, had he catched her amoug us.

"When the huſband came home, he inſiſted on our eating and drinking with him, after which we ſmoaked a pipe; and as our guide would touch nothing that was ſalt, he had a piece of bear's fleſh, which he broiled on the coals.

"We roſe early the next morning, and being furniſhed with convenient ſledges, and excellent reindeer, were carried at the rate of ſix leagues an hour. As we were paſſing between two hills, we ſaw a Laplander going a hunting, who came up to us, and ſkated on the ſnow, which often lies unmelted till ſummer, as faſt as we rode in our ſledges. His ſkates, which were made of the bark of a tree, were ſeven feet and a half long, four fingers broad, and flat at the bottom. His dreſs was deer's ſkin, embroidered with tinſel, and he had a girdle of the ſame ſort round his waiſt, a large quiver at his back, a dart in one hand, and a bow in the other, and was followed by a large black cat. He kept company with us about half a league, and we parted at the foot of the mountain.

"We continued our rout three days, ſtopping at the ſame places where we lay before, and meeting with nothing extraordinary. Our entertainment and method of travelling was exactly the ſame as before, and on the 21ſt of May, about nine o'clock at night, we arrived ſafely at Veranger, having met with no accident in the courſe of our journey, and having been every where treated with the utmoſt civility."

The Laplanders throw the dart with ſuch dexterity, that they will hit a mark of the ſize of a crown piece, at the diſtance of thirty paces, and they are ſo expert in the uſe of the bow and arrow, that they can ſhoot a bird flying in whatever part they think proper: yet they are ſo averſe to war, that if the King of Sweden or Denmark, or the Czar of Muſcovy, wants ſoldiers from among them, they leave their dwellings, and ſkulk in the woods, to avoid being forced into the ſervice.

The women of the Muſcovite Lapland, who are kept under greater reſtrictions than thoſe of the other Laplands, make all the cloaths for their huſbands and families, which they embroider round the edges with tinſel thread drawn between their teeth to a ſurpriſing fineneſs. They are handſome, well ſhaped, and good humoured, but ſo extremely lewd, that they would give themſelves up to the firſt comers, if they were not narrowly watched.

The Laplanders have plenty of fowl, which they feed with the grain of which they make their drink, and when that is ſcarce, give them dried fiſh. Moſt of the beaſts of Lapland are white, as hares, wolves, foxes, &c. but what is very extraordinary, their crows may be compared to ſwans for whiteneſs, having nothing black about them, but their bills and feet.

There is a bird of prey in this country, of a deep pearl colour, as large as an eagle, but not otherwiſe reſembling it than the beak and claws: his head is like that of a cat, his eyes are red and ſparkling; he devours hares and other ſmall game.

They have likewiſe a ſmall cur, which is an excellent mouſer, and feeds on his prey like a cat, theſe dogs, though very ugly, are greatly eſteemed: they are about a foot long, and four inches thick; their ears prick up like thoſe of a fox, and their heads are ſhaped like a rat's, the tail curls, and the hair, which is a light yellow, is very rough, and generally ſtands an end.

The fiſh, which when dried, the Laplanders uſe for bread, is called raff; it is very broad, and two or three yards long; it is firm, ſubſtantial, and excepting the fat, has a very good taſte. They have plenty of other ſorts of fiſh, and though they have an antipathy to ſalt, yet they boil them in ſalt water, if they live near enough to the ſea, to get it conveniently.

The rein-deer, of which we have given a deſcription, is a native of this country, and like certain trees, peculiar to other climates, ſeems calculated to ſupply in general, the wants of the ſimple inhabitants. The riches of a Laplander conſiſt in the number of theſe animals that he poſſeſſes, which are equally uſeful and hardy, and entirely adapted to endure the cold winter of the arctic regions.

We met with nothing farther worthy of notice in Lapland, unleſs we were willing, like ſome authors, to crowd our relation, with an account of the wonderful ſorceries of the natives, who when intoxicated with brandy, are mad enough, by the help of an inſtrument painted with various figures, to pretend to foretel future events to thoſe who are weak enough to believe them. We ſhall therefore cloſe this account, and proceed to a deſcription of the Ruſſian Empire.

TRAVELS IN RUSSIA, SIBERIA, &c. BY MR. HANWAY AND OTHERS.

RUSSIA owes her elevation to her preſent pitch of greatneſs, to the active genius and unremitting toils of the Czar Peter the third, who firſt began to mould the rugged natives into men, and brought the vaſt unwieldy body he governed into the form of a growing empire, and an European power.

The ancient ſovereigns of Ruſſia, ſtiled themſelves great Dukes, and afterwards Czars; but Peter the Great aſſumed the title of emperor, and that title is allowed by all Europe. The titles of the emperor at full length are, "Emperor and ſole Sovereign of all the Ruſſians, Sovereign Lord of Moſcow, Kiow, Wadimirea,

Wadimirea, Novogrod, Czar in Caſan, Aſtracan, and Siberia; Lord of Pleſkow; Great Duke of Smolenſko; Duke of Eſthenia, Livonia, and Carelia; of Tweria, Ingria, Pernia, Wiatkia, Bulgaria, and Lord of ſeveral other Territories; Great Duke of Novogrod, in the low Country of Tſhernickow, Yeſan, Roſtow, Jaroſlaw, Bielo-ſero, Uldoria, Condinia; Emperor of all the Northern Parts; Lord of the Territory of Juweria; of the Carthalinian, Grewzinian, and Georgian Czars; of the Kabardinian, Circaſſian, and Gorian Princes; Lord and Supreme Ruler of many other Countries and Territories."

The power of the Emperor of Ruſſia is as abſolute and unlimitted as poſſible. Peter the Great publiſhed an ordnance, by which the ſucceſſion was entirely to depend upon the will of the reigning ſovereign; nor have they any other written fundamental law, relating to the ſucceſſion.

The empire of Ruſſia is bounded on the north and eaſt by the main, and towards the weſt and ſouth its limits are ſettled by treaties, concluded by ſeveral far diſtant powers; with the Swedes, the Poles, the Turks, the Perſians, and the Chineſe.

The number of provinces comprehended in the Empire of Ruſſia being very great, and many of them very extenſive, it neceſſarily follows, that the ſoil and temperature of the air, muſt be extremely various in different parts.

In thoſe which lie beyond ſixty degrees of north latitude, there are few places where corn will grow to maturity; and in the northern parts of the empire, which reach beyond ſeventy degrees, no good fruits are produced, except in the country about Archangel, where many buſhes and ſhrubs grow ſpontaneouſly, and yield ſeveral ſorts of berries. In the neighbourhood of that city horned cattle are alſo bred, and there are plenty of wild beaſts and fowls, and ſeveral ſorts of fiſh.

In the middle province of this empire, the ſoil produces moſt kind of trees and garden fruits, corn, honey, &c. They are alſo well ſtocked with horned cattle; the rivers are navigable, and filled with the beſt kind of fiſh, and the woods abound with game.

In the ſouthern parts of the empire the cold is very ſevere, and the days in winter are extremely ſhort; but the ſummers are warm and pleaſant, and even in the ſhorteſt nights the twilight is very luminous.

When the day is at the ſhorteſt at Archangel, the ſun riſes at twenty-four minutes after ten in the morning, and ſets at thirty-ſix minutes after one.

At Peterſburg, the ſun riſes at fifteen minutes after nine, and ſets at forty-five minutes after two: but at Aſtracan the ſun riſes at forty minutes after ſeven, and ſets at twelve minutes after four. At the ſummer ſolſtice, when the day is at the greateſt length, this order is reverſed, and the ſun riſes at Aſtracan at twelve minutes after four, and ſets about forty minutes after ſeven; and at Archangel riſes at thirty-ſix minutes after one, and ſets at twenty-four minutes after ten.

It is generally remarked, that the eaſtern countries are much colder in winter, than the weſtern that lies in the ſame latitude; this is particularly true with reſpect to Ruſſia: for the river Neva, at Peterſburg is in ſome years covered with ice, ſo early as the 24th of October; and in other years, when lateſt, about the 22d of November, but in general thaws by the 26th of April, old ſtyle.

The reader cannot fail of being pleaſed to ſee the progreſs of the ſeaſons at Peterſburg, which is ſituated in fifty-nine degrees of latitude, as given by Mr. Hanway.

February generally brings with it a bright ſun and a clear ſky; every object ſeems to glitter with gems, and the nerves become braced by the cold. There is no ſmall amuſement in riding in ſledges upon the ſnow, to thoſe who from the length of the winter have forgot the much ſuperior pleaſure, which nature preſents when cloathed in all her verdure.

March is frequently attended with ſhowers, which with the heat of the ſun, penetrates the ice; this is generally three quarters of a yard thick on the Neva, and in ſome great rivers to the north-eaſt, much thicker. This renders it like a honey-comb, and about the end of that month, it uſually breaks up.

The month of April is very warm; ſummer ſeems to precede the ſpring; for it is ſometimes the firſt of June before any verdure appears, and then the intenſe heat brings it on ſo faſt, that the eye can diſcover its progreſs from day to day. Till the middle of July it ſeems to be one continued day, the ſun not entirely diſappearing above two hours in the twenty-four.

The rain and froſt generally begins in September, and the ſeverity of both increaſes in October, and in November the river Nerva is always frozen. At this time comes on the ſeaſon for an eaſy and expeditious conveyance on the ſnow, by which, freſh proviſions are brought to market, 1000 Engliſh miles by land; ſo that beef of Archangel is often eaten at Peterſburg. The cold is ſo very intenſe in December and January, that the poor, who are overtaken by liquor, or expoſed to the air in open places, are frequently froze to death: but the great quantities of wood, chiefly birch and elder, with which the country abounds, and the commodiouſneſs of the ſtoves, enables the inhabitants to introduce any degree of heat into their houſes.

There is not a tenth part of the Ruſſian Empire properly cultivated, or ſufficiently peopled; for notwithſtanding its prodigious extent, the number of inhabitants who pay the poll tax, is reckoned at only five millions one hundred thouſand; and the reſt, including the females, are about ten millions, excluſive of the inhabitants of the conquered provinces.

The principal rivers of Ruſſia, are the Wolga, which takes its riſe in the foreſt of Walconſki, and is one of the largeſt rivers in the world; for it runs above 2000 miles before it falls into the Caſpian Sea. Its banks in moſt places are fertile, and though not ſufficiently cultivated, on account of the frequent incurſions of the Tartars, yet the ſoil ſpontaneouſly produces all kinds of eſculent herbs, and aſparagus in particular, of a very extraordinary ſize and goodneſs. This river receives ſeveral other conſiderable ones, among which are the Occa and Cama, and diſcharges itſelf by ſeveral mouths into the Caſpian Sea, by which means it forms many iſlands.

The Don (or Tanais) has its ſource not far from Tulain, the Iwans Affero, or St. John's Lake. It firſt runs from north to ſouth and after its conflux with the Soſna, directs its courſe from weſt to eaſt, and in ſeveral large windings, again runs from north to ſouth, but at length dividing into three channels, falls into the ſea of Aſaph. The Don in its courſe, approaches ſo near the Wolga, that in one place the diſtance between them is but a hundred and forty werſts, or about eighty Engliſh miles.

The Devina is a very large river, the name ſignifies double, it being formed by the conflux of the Sukona and the Yug. This river divides itſelf into two branches or channels near Archangel, from whence its runs into the White Sea,

The Nieper, the ancient Boryſthenes, ariſes from a moraſs in the foreſt of Walconſki, about 120 miles above Smoloſki, and forms ſeveral windings through Lithuania, Little Ruſſia, the country of the Zaporo Caſſaes, and a track inhabited by the Nagian Tartars; and after forming a marſhy lake of ſixty werſts in length, and in many places, two, four, or even ten werſts in breadth, diſcharges itſelf into the Black Sea.

The banks on this river are on both ſides generally high, and the ſoil excellent; but in ſummer the water is not very wholeſome. The Neiper has no leſs than thirteen water-falls, within the ſpace of ſixty werſts; yet in ſpring, during the land floods, empty veſſels may be hauled over them. There is but one bridge over this river, and that is a floating one, at Kiow, 1638 paces in length. This bridge is taken away

about the end of September, to give the flakes of ice a free paſſage down the river, and is again put together in ſpring.

A great number of mills erected in boats, are to be ſeen on this river.

The lake of Ladoga, ſituated between the gulph of Finland and the lake of Onega, is eſteemed the largeſt lake in Europe, and is ſuppoſed to exceed any other for its plenty of fiſh, among which are alſo ſeals. It is 150 miles in length, and ninety in breadth. This lake is full of quick-ſands, which being moved from place to place, by the frequent ſtorms to which it is ſubject, cauſe ſeveral ſhelves along its courſe, which often proves fatal to the flat-bottomed veſſels of the Ruſſians.

This induced Peter the Great to cauſe a canal near 70 Engliſh miles in length, ſeventy in breadth, and ten or eleven deep, to be cut, at a vaſt expence, from the ſouth-weſt extremity of this lake, to the ſea.

This great work was begun in the year 1718, and though vigorouſly proſecuted, was not completed till the year 1752, in the reign of the Empreſs Anne. There are 25 ſluices on this canal, and ſeveral rivers run into it. At the diſtance of every werſt, along its banks, there is a pillar marked with the number of werſts; and a regiment of ſoldiers are conſtantly employed to keep the canal in repair. The moſt fruitful part of Ruſſia is near the frontiers of Poland, where the inhabitants have corn enough to ſupply their neighbours. The northern parts are over-run with foreſts, chiefly inhabited by wild beaſts, and are extremely cold and marſhy.

Fiſh is much more common diet than fleſh, throughout the whole nation; for their faſts take up near two thirds of the year, during which they are abſolutely prohibited by their religion to taſte of animal food; which is obſerved with the utmoſt ſtrictneſs.

A perſon may travel very cheap and expeditiouſly both in ſummer and winter in Ruſſia: the poſt-roads leading to the chief towns are very exactly meaſured, with werſts marked, and the poſt ſtages fixed at proper diſtances; for throughout the whole empire, and even in Siberia, a pillar is inſcribed with the number of werſts erected at the end of each.

Between Riga and Peterſburgh, the hire of a poſt horſe for every werſt is no more than two copeiks and an half, which is one penny three farthings ſterling; between Novograd and Moſcow, but half a copeik. Nothing can be more accommodated to eaſe and diſpatch than travelling in ſledges during the winter, when the earth is covered with deep ſnow, and impaſſable for wheel carriages; for in the journey Mr. Hanway made in that ſeaſon from Moſcow to Peterſburgh, he ſlept in his ſledge, without waking, while he advanced 100 werſts, or 66 Engliſh miles.

The whole road betwixt thoſe two cities was marked out in the ſnow by young fir-trees, planted on each ſide, at the diſtance of twenty yards, which at a moderate computation, amount to 128,480 trees. At certain diſtances were likewiſe great piles of wood, to be ſet on fire, in order to give light to the empreſs and her court, if they paſſed by in the night.

Her majeſty, on theſe occaſions, is drawn in a kind of houſe, which contains her bed, a table, and other conveniences, where four perſons may take repaſt. This wooden ſtructure, which has a ſloping roof, and ſmall windows to keep out the cold, is fixed on a ſledge, and drawn by 24 poſt-horſes; and if any of them fail on the road, there are others ready to ſupply their places.

The late empreſs was ſeldom more than three days and three nights on the journey, (notwithſtanding her having ſeveral palaces at which ſhe ſometimes ſtopped to refreſh herſelf) though the diſtance is 488 Engliſh miles: and once this journey was made by Peter the Great in 46 hours, but he did not travel in the ſame kind of carriage.

The Ruſſian language is derived from the Sclavonian, but at preſent it is very different from it; and with regard to religious ſubjects, abounds with Greek words.

Their alphabet conſiſts of 24 letters, moſt of them Greek characters, as they were written in the 9th century; but as the latter did not expreſs every particular ſound in the Sclavonian language, recourſe was had to ſeveral Hebrew letters, and to the invention of ſome arbitrary ſigns. Various dialects are uſed in the different parts of the Ruſſian empire, as the Muſcovite, the Norogrodian, the Ukrainian, and that of the Archangel.

The Ruſſians profeſs the religion of the Greek church, which was firſt embraced by the Great Ducheſs Ogla, ſovereign of Ruſſia, in the nine hundred and fifty-fifth year after the birth of Chriſt. The external part of their religion conſiſts in the number and ſeverity of their faſts, in which they far exceed the Romiſh church. Their uſual weekly faſts are on Wedneſdays and Fridays. In lent, they neither eat fleſh, milk, eggs, nor butter; but confine themſelves to vegetables, bread, and fiſh fried in oil.

The Ruſſians are great enemies to the worſhip of graven images, and yet are ſo abſurdly inconſiſtent, that in their private devotions, they kneel before a picture of our Saviour, the Virgin Mary, St. Nicholas, or ſome other ſaint, which is an indiſpenſable piece of furniture in their cloſet. To this they bow ſeveral times, making the ſign of the croſs with their thumb, fore-finger, and third-finger, on the breaſt, forehead, and ſhoulders; at the ſame time repeating, in a low voice, the Lord's Prayer, and ſome ſhort ejaculations; particularly, "Lord be mercifnl unto me." Indeed they ſeldom paſs by a church without uttering theſe words, at the ſame time bowing and croſſing themſelves, without paying the leaſt regard to any perſon who may happen to be within ſight.

Great numbers of the common people, and even ſome perſons of rank, either by way of penance, or ſome other motives of humiliation, proſtrate themſelves on their faces at the entrance of the church, and thoſe who are conſcious of having contracted any impurity, forbear entering the church. The bells are often rung; and as ringing is counted a branch of devotion, the towns are provided with a great number of bells, which make, as it were, a continual chiming.

The divine ſervice is entirely performed in the Sclavonian tongue, which the people do not underſtand, as it is very different from the modern Ruſſian; and this ſervice conſiſts of abundance of trifling ceremonies, long maſſes, ſinging, and prayers; all which are performed by the prieſts, while the people only repeat, "Lord be merciful to me." They ſometimes give a lecture from one of the fathers; but there are few churches in which ſermons are ever delivered, and even in theſe they preach but ſeldom.

In Ruſſia there are a great number of convents for the religious of both ſexes; but Peter the firſt, with the utmoſt prudence and good policy, ordered that no perſon ſhould be allowed to enter on a monaſtic life before 50 years of age; however, ſince his death, this regulation has been repealed, it being thought proper to ſhew a greater condeſcenſion to the monaſteries; but no man is permitted to turn monk till he is thirty, nor any woman to commence until ſhe is 50; and even then not without the expreſs approbation and licence of the holy ſynod.

Ruſſia affords a variety of articles of commerce, that are of great uſe to foreigners; and as the exports of this country far exceed its imports, the balance of trade is conſiderably in its favour. The Ruſſian home commodities are ſables, and black furs; the ſkins of blue and white foxes, ermines, hyænas, lynxes, ſquirrels, bears, panthers, wolves, martins, wild cats, white hares, &c. Likewiſe Ruſſia leather, copper, iron, iſinglaſs, tallow, pitch, tar, linſeed-oil, train-oil, roſin, honey, wax, pot-aſh, hemp, flax, thread, calamancoes, Ruſſia linen, ſail-cloth, mats, caſtor, Siberian muſk, mamonts teeth and bones, as they are called; ſoap, feathers, hogs briſtles, timber, &c. to which may be added the Chineſe goods, rhubarb, and

other drugs, with which the reſt of Europe is partly ſupplied by the Ruſſians.

The trade to China is chiefly carried on by caravans, and partly by private adventurers. The moſt valuable commodities, and thoſe in the greateſt quantity, carried by the Ruſſians to China, are furs, in return for which they bring back gold, tea, ſilks, cotton, &c. The trade to Perſia, by the way of the Aſtracan and Caſpian ſeas, is conſiderable; and the returns are made in raw ſilks, and ſilk ſtuffs. The trade with the Calmucs, which is entirely in private hands, conſiſt of all kinds of iron and copper utenſils; in return for which they receive cattle, proviſions, and ſometimes gold and ſilver; but this trade is of no great importance. The trade to Bochara, one of the chief towns of Uſbec Tartary, is either for ready money, or by bartering of goods for cured lamb-ſkins, Indian ſilks, and ſometimes gems brought to the yearly fair at Samarkand. The traders in the Ukraine ſell all kinds of proviſions to the Crim Tartars; and alſo carry on a trade with the Greek merchants at Conſtantinople. The inhabitants of Kiow ſend cattle and Ruſſia leather to Sileſia.

The Engliſh enjoyed conſiderable privileges in trade, ſo early as the reign of the Czar Iwan-Baſilowitz, to whom Captain Chancellor delivered a letter from Edward VI. in 1553, and received a licenſe to trade, which was renewed by Peter the Great.

A treaty of commerce was concluded between Ruſſia and England in 1742, by which it was ſtipulated that the Engliſh ſhould be allowed the privilege of ſending goods through Ruſſia into Perſia: but Captain Elton, an Engliſhman, having entered into the ſervice of Nadir Shah, and built ſhips for that monarch on the Caſpian ſea, the Ruſſians, together with the troubles of Perſia, put an end to that trade; however, the Engliſh ſtill carry on a conſiderable trade to Ruſſia, and larger than that of any other nation.

Next to the Engliſh, the Dutch carry on the greateſt trade with the Ruſſians. Bills of exchange are drawn at Peterſburgh or Amſterdam only, on which account the traders of any other country than Holland, who give commiſſion for buying Ruſſian commodities at Peterſburgh, are obliged to procure credit, or otherwiſe to have proper funds at Amſterdam.

All the coins of Ruſſia, except ducats, have inſcriptions in the Ruſſian tongue. The gold coins are imperial ducats; and the largeſt ſilver coin is the ruble, the value of which riſes and falls according to the courſe of exchange. A ruble in Ruſſia is equal to an hundred copeiks, or four ſhillings and ſix-pence ſterling. The other ſilver coins are half rubles, which are called Potinnics, and quarter rubles. Agraphe, or griwes, is of the value of ten copeiks; and ten griwes are equal to a ruble. The copper coins are, a copeik, which is of the value of about a half-penny; or denga, or denuſhka, two of which make a copeik; and a poluſhka, which is a quarter of a copeik. There are no other foreign pieces current in Ruſſia, except Holland rix dollars, albert dollars, and ducats.

Mr. Voltaire obſerves of the Ruſſian empire, that "It is of greater extent than all the reſt of Europe, or than the Roman empire in the zenith of its power; or of the empire of Darius, ſubdued by Alexander; for it contains more than eleven hundred thouſand ſquare leagues.

"Neither the Roman empire, nor that of the Macedonian conqueror, compriſed more than 550,000 each; and there is not a kingdom in Europe the 12th part ſo extenſive as the Roman empire. In length, from the iſle of Dago, as far as its moſt eaſtern limits, it contains very near 170 degrees; ſo that when it is noon day in the weſt, it is very near midnight in the eaſtern part of this empire. In breadth, it ſtretches from ſouth to north, 3000 werſts, which make 800 leagues."

Moſcow was formerly the capital of this vaſt empire, till the Czar thought fit to build it at Peterſburgh, by which means he reſolved to make Ruſſia a conſiderable European power.

This city is built on ſeveral iſlands, which were nothing more than marſhy ſpots of mud, over-run with reeds: but the immortal Peter, whoſe undertakings in every thing carried a magnificence of idea in them that can never be ſufficiently admired, converted a miſerable bog into a fine city.

This city is the ſoul of commerce in all theſe northern parts; it is the foundation on which all the Ruſſian naval force has been erected; and the port, on which moſt depends their nurſery of ſailors. At the ſam time it is very deficient as a receptacle of the men of war of a great empire; for the depth of water, the freſhneſs of it, the docks, yards, every thing at Peterſburgh, are againſt the uſe of it for that purpoſe. The yards are at Peterſburgh, but the depth of water is ſo inconſiderable, that nothing can be put on board the firſt rate men of war before they are conveyed to Cronſtadt, which is not eaſily done neither. Once this work was effected by means of moſt expenſive machines, but now they come without that difficulty by means of the new canal, which is not ſo complete but infinite attention is neceſſary for conducting them.

Men of war are not the only veſſels that are built here; galleys are much in uſe for the Baltic, but as this empire has experienced of late great changes in the ſyſtem of politics, the uſe of galleys varies accordingly.

A celebrated author ſays, "Galleys are here the proper things, be there never ſo little water, there is always enough for them. They glide between the iſlands and the rocks; they can land any where. The Czar was ſenſible of it at laſt, and ſent for galley-builders from Venice. I met with one of them greatly advanced in years, and was not a little ſurpriſed to hear terminations in a. o. in 60 degrees of latitude. The galleys one ſees here, are of different ſizes: there are ſmall ones which carry about 130 men, and others ſome much larger. They are all armed with two pieces of cannon on the prow, and furniſhed with chace-guns, and ſwivels on the ſides. The Czar gave to each of them the name of a Ruſſian fiſh. Now they are numbered as the legions were; there are upwards of 130 of them, and they are to be much more numerous. By this means an army of 30,000 men are tranſported with great eaſe. Rowing is to the Ruſſian ſoldiers what the exerciſe of ſwimming was to the Romans. Every foot ſoldier learns to handle the oar at the ſame time as the muſquet, by which means, without maritime commerce, and without embargoes, the Ruſſians have always crews ready for their galleys. They caſt anchor every night, and land where it is leaſt expected. When diſembarked, they draw them up upon the land, range them in a circle, with their prows and artillery pointed outward, and thus they have in a trice a fortified camp. They leave five or ſix battalions to guard it, and with the reſt of their troops over-run the country, and lay it under contribution. The expedition ended, they reembark, and begin in another quarter. Sometimes they tranſport their veſſels from one water to another over a ſlip of land, as was practiſed by the antients on ſeveral occaſions, and particularly after the example of Mahomet II. at the ſiege of Conſtantinople.

"The Swedes can teſtify whether theſe Ruſſian galleys are formidable. They have ſeen them ravage their rich mines of Norkopping, the whole coaſts of Gothland and Sudermania, and ſhew themſelves even before Stockholm."

Peterſburgh is amazingly increaſed within theſe 40 years: at the death of Peter the Great, it did not contain 80,000 inhabitants, and now the Ruſſians aſſert that there are 500,000, but this is an exaggeration. It covers a very great extent of land and water. The ſtreets are ſome of them broad, long, and with canals in the middle of them; and others are planted in the Dutch faſhion; the houſes are im-

menſely large; the palaces of the nobility exceed in ſize, thoſe of any city; and that of the empreſs is an amazing ſtructure: but all is gigantic, they are rather great than beautiful; the ſize is all that ſtrikes the eye; and theſe prodigious piles are ſtuck ſo thick with ornaments, that there is hardly any ſuch thing as judging of their proportions: the Italian architecture is mixed with the Dutch, and the whole forms very inelegant buildings, in which true taſte is wholly ſacrificed to a profuſion of ornament. The Czar himſelf ſpared no pains in rendering it as ſtrong as poſſible; for being at the very extremity of his dominions, cloſe to his enemies the Swedes, and open to all the attacks which are poſſible to ariſe from his European connexions, he made a point of having it impregnable; but herein he certainly failed. There are many forts, and whole ſhores converted into platforms, and lined from end to end with great guns. Theſe works begin at Cronſtadt, which is made very ſtrong, and they laſt to the city. There is a citidal regularly built, and capable not only of protecting the city on one ſide, but alſo itſelf of ſtanding a ſiege.

There are many public buildings well worth the attention of a traveller, particularly the dock yards and the naval magazines, the arſenal, foundry, admiralty, &c. without inſiſting on the imperial palace, the cathedral, or many churches.

Here is a foundry: the iron is brought from Kexholm by water, and the number of cannon and mortars that are caſt here are very great; alſo cannon-balls, ſhells, and all ſorts of military implements in which iron is uſed; which are made here at as ſmall an expence as in Sweden, or any other part of the world. The arſenal is always well ſtored with them; and there are vaſt quantities made on a private account for exportation, forming a very conſiderable branch of commerce.

"This city, (ſays Mr. Wraxall) is as yet only an immenſe outline, which will require future empreſſes, and almoſt future ages to complete. It ſtands at preſent on a prodigious extent of ground; but as the houſes in many parts are not contiguous, and great ſpaces are left unbuilt, it is hard to aſcertain its real ſize and magnitude. Devotion has not been wanting to add to her magnificence, and to erect places of worſhip in almoſt every part. Curioſity and novelty have carried me to all of them. The external architecture differrs very little in any: the Greeks ſeem as fond of domes, as the Mahomedans are of minarets in their churches. They uſually encircle one large with four ſmaller cupulos, and cover them with copper gilt, which has a fine effect on the eye when the ſun ſhines upon it. The ornaments within are coſtly and barbarous: a Mexican temple can hardly be more ſo. They ſurround a daubing of the Virgin Mary and Jeſus, with gold and ſilver head-dreſſes, and ſometimes complete habits, and leave only expoſed the fingers, which the multitude very devoutly kiſs. Some of theſe ſtrange compound figures of paint and metal, are very laughable, and the poor Madona ſeems like a priſoner in golden fetters. The prieſts, are dreſſed in veſtments, which very much reſemble the Romiſh, and are generally compoſed of tiſſue and expenſive ſilks. The manner in which they perform the ſervice, rather reminds me of an incantation, than a prayer offered to the Deity; and they repeat much of it ſo incredibly faſt, that one is tempted to ſuppoſe it impoſſible the auditory can underſtand one articulate word the prieſt utters, let their attention be ever ſo ſtrong.

"In the church of the citadel repoſe the body of Peter I. and the ſucceſſive ſovereigns ſince his death; who are ranged in coffers ſide by ſide, but have not any of them marble monuments erected to their memories; nor is there any other motive to induce a traveller to enter this church, except the conſciouſneſs that he beholds the wood which contains the aſhes of Peter, and that mingled ſentiment of reverence and pleaſure, which the mind may experience from the contemplation of it. Only one monarch is excluded, as if unworthy to be entombed with his progenitors and predeceſſors in the throne of Ruſſia. This is the late unhappy Peter III. who after his death, was expoſed during ſome days in the monaſtery of St. Alexander Newſkoi, a few miles out of town, to convince the people that he had not ſuffered any violence, but ended his life naturally, he was afterwards privately interred there."

The public buildings of different kinds are prodigiouſly numerous in this city. Some of them are ſtone, but the larger part are only brick, or wood plaiſtered. The winter palaces is compoſed of the former materials, and was erected by the late Empreſs Elizabeth; it is very large and very heavy; one would have ſuppoſed Sir John Vanburgh was invoked to lend his aid in the plan of it, ſince nothing can more ſtrikingly reſemble his ſtyle. It is not yet quite finiſhed, like almoſt every thing elſe in Ruſſia. The ſituation is very lovely, on the banks of the Neva, and in the centre of the town, contiguous to it is a ſmall palace, built by the preſent Empreſs, and called, The Hermitage. When her majeſty reſides in this part of the building, ſhe is in retreat. Theſe apartments are very elegant, and furniſhed with great taſte. There are two galleries of paintings, which have been lately purchaſed at an immenſe expence in Italy. The crown is perhaps the richeſt in Europe. It is ſhaped like a bonnet, and totally covered with diamonds. The ſcepter is the celebrated one, purchaſed by Prince Orloff for five hundred thouſand rubles (a coin of the value of about four ſhillings and ſix-pence Engliſh) and preſented by him to his ſovereign miſtreſs.

There are two academies here, one of arts and the other of ſciences. The preſent empreſs has founded the firſt, which will be, when finiſhed, a ſuperb edifice: it is furniſhed with maſters in the different branches of polite letters, and filled with caſts from the moſt renouned of Greek and Roman ſculpture; but it does not appear that any eminent geniuſes have ariſen, though they have not been without artiſts. Nature ſeems to have confined perfection in theſe elegant and exquiſite productions, to certain climates and people, among whom they ſpring ſpontaneous for centuries; and which are only imperfectly copied by other nations, where the ſeeds are not ſo happily diſpoſed, or the organs ſo juſtly adapted.

Our modern travellers obſerve that the Thames is not comparable to the Neva, in beauty; and as the ſtream ſets conſtantly out of the Lake Ladoga into the Gulf of Finland, it is always full, clear, and perfectly clean. Along its banks is the fineſt walk in the world. It is not a quay, as veſſels never come to this part, but a parade running a mile in length; the buildings on which, are hardly to be exceeded in elegance. It is yet to be continued to double the length. Over the river in the narroweſt part is a bridge on pontoons. From this noble river, canals are cut to all parts of the city; nor could any ſituation be more favourable to the genius of commerce, if the inclemency of the latitude did not keep it frozen up at leaſt five months annually.

"As this place (ſays Mr. Wraxall) is the formation of ſo few years, it is laid out with great regularity; there is not any thing that looks odd, and much is ſtill imperfect and unfiniſhed. The buildings throughout have a very handſome appearance, and are like every thing elſe, on a larger ſcale than is to be ſeen elſewhere. The ſtreets are moſtly paved; but they have a cuſtom here of laying in many places a flooring of timber on the ground. This was more common formerly in Moſcow, where, in the frequent fires they uſed to have, the ſtreet itſelf caught the flames, and the conflagrations became terrible, as the houſes likewiſe are moſtly made of wood even at preſent."

The trade of Peterſburg is much more conſiderable than that of any other town in the Ruſſian Empire; and would figure in compariſon with many very great marts in other parts of Europe; but unfortunately that

that vaſt commerce is nine-tenths of it carried on in foreign bottoms. The Dutch alone load annually here with timber, iron, and all ſorts of naval ſtores, a great many ſhips, and the Engliſh many more.

The commodities theſe nations carry from Peterſburg, are tar, bees-wax, pitch, hemp, flax, leather, ſkins, furs, pot-aſhes, timber, plank, iron, yarn, linen, lint-ſeed, &c. and theſe in ſuch quantities that the very balance of trade between Great Britain and Ruſſia has been reckoned at 400,000 pounds a year againſt the former; the amount of the total commerce may therefore be eaſily conceived. The royal navy of England is almoſt totally ſupplied with hemp from Peterſburg, great quantities of iron, and other naval ſtores, and all the ſhipping in England likewiſe; and this importation has increaſed very much ſince the Swedes laid a prohibition on our manufactories, ſo that the importation from that country was reduced to the few articles which neceſſity obliged us to have from thence; and all the reſt very politically transferred to Ruſſia.

The greateſt trade at Peterſburg is carried on by the Engliſh; next in rank come the Dutch; as to the French, they deal here as little as poſſible; for the two crowns are very far from being on a good footing, the French and the Swedes being in cloſe alliance, they therefore trade to Sweden for all thoſe commodities which England gets from Ruſſia, ſome few excepted, which are not to be had at that market. Notwithſtanding this, they conſume large quantities of French commodities in Ruſſia, but theſe come to them principally through the hands of the Dutch.

The building this capital has had a very great effect in improving large tracks of land in the ſurrounding provinces. The corn and other proviſions brought hither, and the variety of merchandiſe exported from hence, employ ſome of the moſt conſiderable inland navigations in the world. The Neva, the great Lakes of Lagoda and Onega; the Tuerka, the Meſta, the Volcova, and the Wolga, all theſe rivers, with many others, though ſome of them are at a great diſtance, keep open a communication between Peterſburg and thoſe noble tracks of country upon the Caſpian and Euxine Seas: but it may be ſuppoſed that the greateſt advantages are made by the people who have not ſuch a diſtance to go; ſo that the products of all the neighbouring provinces are infinitely greater than thoſe of others more diſtant.

Next to Peterſburg the favourite city of Peter was Azoph, the reaſon of which, was his deſign of eſtabliſhing a trade from thence through the Thracian Boſphorus to the Archipelago. This would not only have given him greater mercantile advantages than Peterſburg, but would have endangered the very being of the Turkiſh Empire; by letting a naval power of the Ruſſians into the very heart of Conſtantinople; and that Peter deſigned ſomething more than commerce, we may eaſily gather from his forming dock-yards and naval magazines, at Azoph; and actually had ſhips of ſeventy guns upon the ſtocks, which ſufficiently ſhewed that he intended a naval war upon the Euxine Sea againſt the Turks.

The Ruſſian Empire is but badly peopled. The beſt writers inform us, that it contains ſeventeen millions of inhabitants, and one million in the conquered provinces; but the preſent Empreſs has increaſed the number of her ſubjects many ways, principally by a general and very active encouragement of all arts, of agriculture, mining, manufactures, and commerce, and this with ſuch effect, that all of them are more flouriſhing at this time by many degrees, than they were twenty years ago. And another means which ſhe has taken to increaſe her people, has been inviting foreigners; this ſhe has done in a ſtill greater degree than any of her predeceſſors; almoſt from her acceſſion to the empire ſhe has brought continual bodies of Germans, Poles, and Greeks from Turkey, to ſettle in her dominions, and theſe not few in number; from the coaſts of Germany ſhip loads, but from Poland and Turkey, whole towns, villages, and diſtricts, have left their habitations, and ſettled in Ruſſia; nor has it been only at certain times, but regular emigrations, in conſequence of her continued encouragement. All the expences of the journey or voyage of thoſe foreigners from their native country, are borne by her; ſhe feeds and ſupports them by the way. Upon their arrival at the territory appointed them to cultivate, (which has always been part of the crown lands) every family has a cottage erected at her expence, to which they contribute labour; they then are furniſhed with implements neceſſary for cultivation, and one year's proviſion for the whole family, and a further advantage is an exemption from all taxes for five years. All which is a ſyſtem of ſuch admirable policy, and carried into execution with ſuch unuſual ſpirit, even while the finances of the empire have been much diſtreſſed by expenſive wars. The continual diſorders in Poland, and the apprehenſions in Turkey, have cauſed many thouſands of families annually to leave their country, and make uſe of this bounty of the Empreſs. So that the number of the new comers is at preſent greater than ever, and promiſes to be ſo conſiderable, that in a few years, if the troubles in Poland continue, the increaſe of people will be immenſe, and with them certainly that of the power and wealth of the empire. Nor has any event of her reign diſcovered a greater underſtanding, than this regular favour ſhewn to population.

The revenues of the Ruſſian Empire are very great, conſidering the value of money. The Empreſs is in many articles the ſole merchant in her dominions. The whole trade by land to China is on her account; this is not indeed conſiderable, for a caravan rarely goes now. Rheubarb, pot-aſhes, and ſpices, are branches in which ſhe, and nobody elſe, trades. Salt is an article that brings her an immenſe revenue. Very large quantities of the beſt hemp of the Ukrain are bought and ſold on her account; much iron the ſame, and even beer and brandy are hers. Beſides theſe articles, ſhe has cuſtoms, tolls, and a poll tax of three ſhillings and ſix-pence a head. The crown lands which are prodigiouſly extenſive, bring in a conſiderable revenue.

We ſhall here preſent our readers with ſome circumſtances relative to the life and character of Peter the Great, as ſelected from the beſt authorities.

He had the utmoſt averſion to rich cloaths, and liked no dreſs ſo well as his regimentals: he never wore but one ſuit of embroidery, and that only for a ſingle day. It was his common cuſtom in the ſummer time to drive about the ſtreets of Peterſburg in a chair with one horſe, attended only by a ſingle ſoldier on horſeback. He has been often ſeen in winter, in a common hackney ſledge; and it has ſometimes happened that he had not the value of three-pence to pay the fare; on which occaſions he has not ſcrupled to aſk the loan of the money of any perſon whom he knew and accidently met. Yet notwithſtanding theſe ſeeming improprieties, the ſuperiority of his genius, ſupported the dignity of a great monarch.

In the winter ſeaſon he was uſually at his tribunals and public offices by five in the morning; and thus his perſonal attendance and knowledge of buſineſs, taught his ſubjects their reſpective duties, confined them to thoſe duties, and advanced the welfare of the ſtate.

Peter the Great was not ſatisfied without examining to the bottom of things, and therefore, inſtead of making his people wait on him, he watched them; ſo that he was but ſeldom to be found in the palace. The care of providing public feaſts for the foreign miniſters was committed to Prince Menzikoff, ſo that the emperor loſt no time in idle ceremonies; and with regard to his own diet, it was rather coarſe than elegant. He uſed to eat and drink with all ſorts of people, and was often god-father to their children; if his god-child died, he has even more than once attended their funerals.

He was very inquiſitive about trade, yet he confeſſed it was what he leaſt underſtood: but his eſta-

bliſhment of the commerce in St. Peterſburg, and bringing the greateſt part of it from Archangel; the premiums he offered to thoſe who ſhould find out new branches of trade; his ſetting up and encouraging new manufactories of linen and hemp in his own country; the great countenance he gave to foreign merchants, and many other ſuch like circumſtances, are certain indications that he underſtood in many inſtances, the means of advancing commerce, as well as the great end of it.

This prince made even his pleaſures and amuſements ſubſervient to the important ends of his government. He had more than once received very melancholy proofs of the impatience of his ſubjects under the reformation which he had planned, and was now accompliſhing; this rendered him extremely ſuſpicious of them. As mens hearts are generally moſt open in their cups, he often drank with them liberally, ſometimes at court, and oftener at their own houſes. His manners ſeemed to be rude, in requiring even the ladies, upon certain occaſions to ſwallow goblets of wine, or other ſtrong liquors; but in this he had his views: drinking is ſtill the vice of Ruſſia; but in this they conduct themſelves with more decorum than they did formerly.

He had frequent convulſive diſtortions of his head and countenance, contracted by a fright in his youth, upon an occaſion when his life was in danger; but in ſuch caſes it was always the rule of the company he was in, to look down, or a different way, and purſue their diſcourſe without ſeeming to regard him.

He would never lie alone, leſt any attempt might be made on his life; when he was not with the empreſs, or other companion, he ordered one of his chamberlains to ſleep with him, which was an uncomfortable ſituation to them, as he was very angry if they awaked him; tho' he uſed to graſp them very hard in his ſleep.

His character, as a maſter of exquiſite art, and acute judgement, will appear from his being able to inſpire his people with a contempt of that ſordid ignorance which had for many ages reigned through the country, and which he made it his particular care to baniſh. He could not bring this about more effectually than by ridiculing the ſuperſtitious reverence they entertained for the cuſtoms of their anceſtors; with this view he ordered a number of dreſſes of the ſeveral officers of the crown and court, as were worn in paſt ages, and in theſe himſelf, and his whole court appeared in maſquerade; by which means the people were perſuaded, that at leaſt they were as wiſe as their forefathers.

Mr. Bell in his travels to Derbent, in Perſia, has given us the following account of this great man.

About the middle of October, 1714, (ſays he) I arrived at Cronſtadt in an Engliſh ſhip. The Czar having notice of the ſhip's arrival, came on board the next morning from St. Peterſburg; being attended only by Dr. Areſkine, who was his chief phyſician at that time, and on that occaſion, ſerved him as interpreter.

After his majeſty had enquired news about the Swediſh fleet, &c. he ate a piece of bread and cheeſe, and drank a glaſs of ale, then went on ſhore to viſit the works carrying on at Cronſtadt, and returned the ſame evening in his boat to St. Peterſburgh; diſtance about twenty Engliſh miles.

The firſt winter after my arrival at St. Peterſburg, I lodged at Mr. Noy's, an Engliſh ſhip builder in the Czar's ſervice. One morning before day-light, my ſervant came and told me that the Czar was at the door. I got up, and ſaw him walking up and down the yard, the weather being ſeverely cold and froſty, without any one to attend him. Mr. Noy ſoon came, and took him into the parlour, where his majeſty gave him ſome particular directions about a ſhip on the ſtocks, which having done, he left him.

His majeſty's perſon was graceful, tall, and well made, clean, and very plain in his apparel. He generally wore an Engliſh drab-colour frock, never appearing in a dreſs ſuit of cloaths, unleſs on great feſtivals, and remarkable holidays; on which occaſions he was ſometimes dreſſed in laced cloaths, of which ſort he was not owner of above three or four ſuits. When he was dreſſed he wore the order of St. Andrew; at other times he had no badge or mark of any order on his perſon. His equipage was ſimple, without attendants. In ſummer, a four-oared wherry was always attending, to carry him over the river, if he ſhould want to croſs it, which he frequently did. When he went about the town by land, he always made uſe of an open two-wheeled chaiſe, attended by two ſoldiers or grooms, who rode before, and a page, who ſometimes ſtood behind the chaiſe, and often ſat with his majeſty and drove him. In winter he made uſe of a ſledge, drawn by one horſe, with the ſame attendants. He found theſe to be the moſt expeditious ways of conveyance, and uſed no other. He was abroad every day in the year, unleſs confined at home by illneſs, which rarely happened; ſo that ſeldom a day paſſed but he was ſeen in almoſt every part of the city.

I have, (ſays the author) more than once ſeen him ſtop in the ſtreets to receive petitions from perſons who thought themſelves wronged by ſentences paſſed in courts of judicature. On taking the petition, the perſon was told to come the next day to the ſenate, where the affair was immediately examined, and determined, if the nature of it would admit its being done in ſo ſhort a time.

He roſe almoſt every morning in the winter time before four o'clock, was often in the cabinet by three, where two private ſecretaries, and certain clerks paid conſtant attendance. He often went ſo early to the ſenate, as to occaſion the ſenators being raiſed out of their beds to attend him there. When aſſembled, after hearing cauſes between ſubject and ſubject, or public affairs, regarding the interior of the empire, read by the ſecretary, and the opinion of the ſenate recited thereupon, he would write upon the proceſs, or upon the affair under deliberation, with his own hand, in a very laconic ſtyle, Let it be according to the decree of the ſenate: and ſometimes would add ſome particular alterations, ſuch as he thought fit to mention, and wrote PETER under it.

His majeſty knew ſo little of relaxation of mind when awake, that he never allowed his time of reſt to be broke in upon, unleſs in caſe of fire. When any accident of that kind happened, in any part of the town, there was a ſtanding order on its firſt appearance to awake him; and his majeſty was frequently the firſt at the fire, where he always remained giving the neceſſary orders, till all further danger was over. This example of paternal regard of the Czar for his ſubjects was, of courſe, followed by all the great officers, and thoſe of the firſt quality, which was frequently the means of ſaving many thouſands of his ſubjects from utter ruin, whoſe houſes and goods, without ſuch ſingular aſſiſtance, muſt have ſhared the fate of their ruined neighbours.

In acts of religion he appeared devout, but not ſuperſtitious. I have ſeen him at his public devotions in church many times. I have been preſent when his majeſty, not liking the clerk's manner of reading the pſalms, hath taken the book from the clerk, and hath read them himſelf; which he did very diſtinctly, and with proper emphaſis. His majeſty was allowed by the beſt judges of the Sclavonian and Ruſſian languages, to be as great a maſter of them as any of the moſt learned of his ſubjects, whether churchmen or laics. He wrote a very good hand, very expeditiouſly, yet the characters diſtinct enough. As to the ſtyle, ſome of his ſecretaries, and other complete judges of the language affirmed, that they had never known any man who wrote more correctly than he, or could compriſe the ſenſe and meaning of what he wrote in ſo few words, as his majeſty.

The following I had from a certain Ruſſian gentleman of very good family, and who was a general officer of unexceptionable character, in the army, who

attended

tended his majeſty from his very youth, in all his expeditions. This officer being an old friend of mine, I went to pay him a viſit one evening, long after the death of Peter the Great, when he told me that ſuch and ſuch officers, naming them, had dined with him that day, and that the principal ſubject of their converſation turned on the actions of their old father (as he termed him by way of eminence) Peter the Great. He told me further, that though his majeſty ſeemed to be ſevere on certain occaſions, yet not one of them all could produce or recollect one ſingle inſtance of his having puniſhed an honeſt man, or that he had cauſed any perſon to ſuffer any puniſhment, who had not well deſerved it.

He hath been repreſented as making too frequent uſe of ſpirituous liquors to exceſs, which is an unmerited aſperſion; for he had an averſion to all ſorts, and to thoſe too much given to drinking. It is true, he had his times of diverſion, when he would be merry himſelf, and liked to ſee others ſo; this may have been neceſſary, and proper for the unbending his mind from affairs of great weight; but ſuch amuſements occurred generally during holidays, and feſtival times, and was with him, at no time of long continuance. It hath been imputed to him, and not without ſome appearance of reaſon, that he had political views in encouraging drinking at thoſe times of merriment, for on theſe occaſions, he mixed with the company, and, converſing with them on the footing of a companion, had better opportunities, at ſuch times, of diſcovering the real ſentiments of thoſe about him, than when they were quite cool.

Thoſe, who by their offices about the perſon of Peter the Great, might be ſuppoſed to be the beſt acquainted with his diſpoſition, always diſavowed his drinking, to acceſs; and inſiſted on his being a ſober prince.

During the campaign of the expedition to Derbent, in Perſia, he was not guilty of the leaſt exceſs, but rather lived abſtemiouſly. In this point I could not be miſtaken, as the tent of Dr. Blumentroſt, his majeſty's chief phyſician, with whom I lodged, was always the neareſt tent to that of his majeſty. One inſtance occurs in proof of the temperance of this great man, viz. in our third day's march, on our return from Derbent, when we were kept in continual alarms by conſiderable bodies of mountaineers, both horſe and foot, whom we ſaw hovering on the tops of the adjacent hills, though they durſt not come down to the plain, to attack any part of our army, yet it was neceſſary to be watchful of them, which in ſome meaſure impeded our march. The evening of that day, we had a hollow way to paſs, which took up much time, and obliged the greateſt part of the army to remain there all night; ſo that none reached the camp, except the guards, and ſome light horſe who attended his majeſty. On my arrival there, about midnight, I found only his majeſty's tent ſet up, and another ſmall one for Mr. Felton, the Czar's principal cook, and maſter of his kitchen.

I went into Felton's tent, and found him all alone, with a large ſaucepan of warm grout before him, made of buck-wheat, with butter; which he told me was the remains of his majeſty's ſupper, who ate of nothing elſe that evening, and who was juſt gone to bed.

During the whole courſe of his life, his majeſty avoided all ſorts of ceremony, except on public occaſions. His manner of living in his houſe, was more like that of a private gentleman than of ſo great a monarch. I was once at court on a holiday, when the emperor came home from church to dinner, with a large attendance of his miniſters, general officers, and other great men.

His table was laid with about 15 covers. As ſoon as dinner was ſerved up, he and the empreſs took their places; and his majeſty addreſſing himſelf to the company, ſaid, "Gentlemen, pleaſe to take your places as far as the table will hold, the reſt will go home and dine with their wives." On ſuch occaſions, the princeſſes, his children, dined in another room, to whom he ſent ſuch diſhes from his own table, as he thought proper for their dinner.

This great monarch took all the pains, and uſed all means poſſible, in order to be intimately acquainted with every thing proper for a man, who ruled a mighty empire to know. He entered into the detail of every branch of arts uſeful to mankind; into that of the manufacturies which regard the conſtruction of ſhips, and fitting them for the ſea; into that of the making of arms, artillery, &c.

If he had a ruling paſſion for any part of theſe acquirements, it muſt have been for ſhip-building, into which he entered himſelf very early, in the quality of a common workman, with his hatchet, and proceeded regularly through all the degrees, to the rank of maſter-builder, which he attained but a few years before his death.

After he got that length in the art, he made the draughts, formed the mouldings, and directed the building of ſeveral men of war, of the ſecond and third rates, himſelf; and he duly demanded and received his ſalary as a maſter-builder. The day of launching the ſhips, which he himſelf built, he celebrated as a holiday, and put on laced cloaths, but before he went to work, to ſtrike away ſtanchions, blocks, &c. he always put off his fine coat.

He was very frugal in what regarded his perſonal expences, and thoſe of his houſehold. Notwithſtanding his frugality in what related to himſelf, he ſpared no coſt, in whatever concerned the public, in the ſtructure of the men of war, in the artillery, fortifications, arſenals, canals, &c. all which bore marks of very great magnificence. Nor has he ſpared in his buildings, and the decoration of his gardens with ſtatues, grottos, fountains, &c. of which the buildings of the ſummer palace, and the gardens of St. Peterſburgh, at Peterſhoff, Strealna, Czarſky, Scalo, and many others, are ſufficient proofs.

As his majeſty was always very early up in the morning, he went abroad generally without breakfaſt, came home to dinner about eleven o'clock; after dinner went to ſleep for about an hour; after which, if buſineſs did not intervene, he ſometimes diverted himſelf at his turning loom; then went to viſit thoſe he had a regard for, as well foreigners as Ruſſians, with whom he would be very ſociable, and eaſy in converſation. He ſometimes ſupped with them, which generally in his latter days, was on hare or wild-fowl, roaſted very dry, he drank ſmall-beer, and ſometimes a few glaſſes of wine, and generally was in bed before ten o'clock at night. He neither plaid at cards, dice, or any other game of chance.

This great monarch was at no time, even during maſquerades, feaſtings, aſſemblies, or any other diverſions or amuſements, by day or night, without the attendance of ſome or other of his miniſters, and of thoſe who poſſeſſed his confidence; by which means buſineſs, and ſuch affairs as were of the greateſt conſequence, went on regularly; and ſome of them were even concerted during thoſe times of relaxation.

Notwithſtanding theſe elogiums, there have been thoſe who have pointed out many defects in the character of this great man. They have ſaid that he was given to intrigues with women, and that he was of a cruel vindictive temper. As to the firſt circumſtance, ſeveral private anecdotes have been brought forward in proof it. And as to the ſecond charge, it has been thought ſufficient to obſerve, that he put to death his own ſon, though many reaſons have been offered, on the other hand in ſupport of the policy and juſtice of the ſentence. In effect, we are not to expect princes to be perfect characters, and much leſs are we to expect to find ſuch perfection in the the abſolute monarch of a rude and barbarous people.

We cannot help taking notice here, that his amourous diſpoſition, which at certain times would not

admit of the controul of political conſiderations, led him to the moſt fortunate action of his life, when it occaſioned him to advance an obſcure Livonian to be the partner of his throne. When this prince and his army were ſurrounded by the Turks at a critical period, and ſaw no hopes of eſcaping their hands, in ſpite of his orders to be left alone, the Empreſs entered his tent, and propoſed to him the only means of deliverance, which was to bribe the Grand Viſir, who having excepted the propoſal, after ſettling terms with the Czar, drew off his troops;——and thus did his conſort preſerve him from impending deſtruction.——

But to return to our traveller, he thus continues his recital. "As I advanced on my journey (ſays he) I every where made enquiries after new ſettlements on the lands belonging to the empreſs; but heard nothing of them till I got to Twera: there they told me, that in the foreſt of Volkouſkile, about an hundred miles to the South Weſt, was a very large new colony of poles, ſettled at the expence of the Czarina. I immediately determined to go out of my way to view it, that I might have an opportunity to ſee in what manner they were fixed, and what a reception they met with. I got there the 16th, paſſing through a country, the chief of which is waſte, being either foreſt or meadow, but with few villages. I found the ſettlement of Poles conſiſted of about 600 families; and pleaſed me better than any thing I had ſeen in Ruſſia. Each family has a ſmall, but not a bad houſe, built of wood, and covered with ſhingles; a houſe as good or better than the generality of ſmall farm houſes in England, where mud walls would give foreigners an idea that we were the pooreſt nation in Europe. Behind every houſe was an incloſure of about 50 Engliſh acres in one field. The fence was a ditch and parapet with a row of young plants for a hedge, that ſeemed to be a kind of elm. Each incloſure came down to a rivulet, where cattle might water. Each family had two ſheep and a ram to a certain number, a cow and a couple of oxen to till the arable, with a cart and a plough; all which was at the empreſſes's expence, and do not coſt what they do in England. This may be conceived, when I give the rates. Two oxen for ploughing and carting come to about five pounds; a cow to thirty ſhillings; a ſheep eighteen pence; a plough four ſhillings, a cart nine ſhillings, each houſe coſt the empreſs about twenty-four ſhillings, and every family had an allowance of proviſion the firſt year from the neighbouring county, which coſt her nothing; ſo that the total expence, per family, was only eight pounds ten ſhillings; and many of the families conſiſts of eight or nine perſons. The farms were all under culture, and ſubdived by the people themſelves: and I obſerved that theſe inner fences were done exactly in the ſame manner as the ſurrounding ones. Some had four fields, others five, and ſome ſix. The land, when they ſettled it, was waſte foreſt, but not many trees on it, that yielded a wild and luxuriant graſs; it is a red loom or clay. The peaſants cultivate wheat without exception, which they had been uſed to in Poland; each had one field of it; alſo a crop of barley, oats, rice; with a piece of beans, and another of turneps. Their farms were in general in good order, and they ſeemed to be extremely diligent and induſtrious in their management. Some of them had vaſtly encreaſed on the adjoining foreſt: ſome had more than twenty ſheep, ten cows, and ſix oxen; but they had greatly increaſed their farms, which the empreſs allows, provided the former portion is all in culture. They all ſeemed to be perfectly happy, being entirely free from all oppreſſion by being the lands of the crown: and there is no doubt but they will in time yield a fine revenue, without any ſeverity being employed.

"Some of them had pieces of hemp, which thrives with them ſo well, that its culture increaſes among them daily. I enquired particulary into the value of an acre, and found that it was worth upon the ſpot from fifty ſhillings to four pounds, which I think is very conſiderable, and ſhews that theſe new colonies may prove a ſource of very great wealth and population.

"It is extremely evident from this inſtance, that the way of bringing improvements to bear in Ruſſia, is not by encouragements given to the peaſants, unleſs they could at once be ſet as free as in other countries, which I am convinced already is an impoſſibility, from what I have ſeen on this journey; becauſe the nobility and other land-owners, to whom they are vaſſals, fleece and oppreſs them to ſuch a degree, that they can never be ſecure of any property, unleſs their encouragement comes from their own lords. Even they who are not vaſſals, but have poſſeſſions of their own, are trampled on by the ſoldiery. No improvements, by giving them a greater degree of liberty, can have any effect, unleſs it comes from their lords; as in this caſe of the Poliſh emigrants. The empreſs fixing them upon the crown lands, they are vaſſals of the crown, and all the liberty ſhe chuſes to give them they will ſecurely enjoy without any one's daring to injure them in any reſpect; and as the ſovereign can never profitably cultivate an extenſive domain for her own account, this is the only means of working improvements; and they cannot fail of proving moſt highly profitable.

"Theſe crown lands are ſo amazingly extenſive, that very great things might in this manner be done, and far more effectually than by general laws, in a country where the people are ſo habituated to ſlavery, that it would be a vain attempt to free them under all maſters. Theſe 600 families had at once 30,000 acres in culture, beſides the increaſe, which by many of them was very conſiderable; all which will, in proceſs of time, yield a great revenue to the crown, beſides the acquiſition of ſtrength which the empire receives by the addition of population, and the amount of ſo much induſtry as all theſe people create. After five years this colony is to pay an annual rent, which in ten more will be increaſed, and after that remains a freehold to the Poles, ſubject only to that rent.

"This colony of Poles have a market in the middle of their ſettlement on the great road, where the merchants reſort to buy their ſpare products, hemp, &c. bringing all thoſe ſorts of commodities which they want; and this trade occaſions a circulation among them, which is highly advantageous. The report of the indulgence and benefit they have met with has had great effect in Poland: ſo that they pointed out to me a track of land contiguous, where they ſoon expected 200 families more.

"I arrived at Moſcow on the 20th, paſſing through a very fine variagated country, well watered and wooded, and ſpread in fine plains, with many villages, ſcattered through them; and much appearance of cultivation: all this country is in the hands of three or four nobles, whoſe ſtewards direct the management of it.

This city is the greateſt in the empire; it was once ſtrongly fortified for this part of the world, but the ſecurity of the preſent times has made every thing unneceſſary except a wall: it is about ſixteen miles in circumference, and contains about half a million of inhabitants, till lately the Czars ſpent a part of the year here; but the palace, which is a very indifferent one, having been damaged by fire, they have not of late years been there; but notwithſtanding, this, Moſcow is the reſidence of a vaſt number of the nobility, indeed of three fourths of thoſe whoſe offices or expectations do not oblige them to attend the court, in which inſtance there is a greater appearance of liberty than in moſt other countries, for in general, all the nobility of a kingdom, flock to the ſeat of government.

"This city is very irregularly built, but it is a beautiful city; from the windings of the river, and from many eminences which are covered with groves of fine tall trees, and from numerous gardens and lawns, which open to the water, give it a moſt delightful airy appearance. I expected to ſee nothing but wooden houſes, but was

agreeably

agreeably ſurpriſed at the ſight of many very fine fabricks of brick and ſtone. It is beyond compariſon a finer city than Peterſburg. The number of churches and chapels, amounting it is ſaid to 1800, make a great figure in the printed deſcription of this city; but from the appearance of them I ſhould ſuppoſe the fact falſe, and that out of great numbers very few are worthy of notice. I ſaw the great bell, which is the largeſt in the world, and indeed a moſt ſtupendous thing it is. They have many other bells in this city, which much exceed any thing that is to be met with elſewhere; the Ruſſians being remarkably fond of this heavy ornament of their churches.

"There is a very conſiderable manufacture at Moſcow, of various hemp fabricks, particularly ſail cloth and ſheeting; which employs ſome thouſands of looms, and many thouſands of people: the hemp is moſt of it brought from the Ukraine; there are alſo great numbers of conſiderable merchants here; who carry on a very extenſive commerce with all parts of the Empire; for there is water carriage from hence to the Black and Caſpian Seas, and with but few interruptions to the Baltic alſo, which are circumſtances that make it the centre of a very great commerce.

"Our author ſays, Moſcow is much better ſituated for the metropolis of the empire than Peterſburg; it is almoſt in the centre of the moſt cultivated parts of it, communicating in the manner above mentioned, with the three inland ſeas, not at a great diſtance from the moſt important province of the empire, the Ukraine, open to the ſouthern territories on the Black Sea, and by the means of the rivers Wolga and the Don commanding an inland navigation of a prodigious extent. Its vicinity alſo to the countries, which muſt always be the ſeat of any wars with the Turks, the enemies moſt to be attended to of all thoſe with whom the Ruſſians made war; upon the whole made it infinitely a better ſituation for the ſeat of government, than that of Peterſburgh, which is at the very extremity of the empire.

"The 23d, (continues he) I left that city, taking the road towards the Ukraine.——I was fortunate in having very fine clear weather, and found the roads every where exceedingly good, no autumnal rains having yet fallen, I got that night to Molaſky, the diſtance about ſixty miles, nor did I find ſuch a day's journey too much for the horſes, the country all this way is a level plain, very fertile, and much of it well cultivated, with many villages, and in general, a well peopled territory; the peaſants ſeemed tolerably eaſy, but ſcarce any of them have any property. From Molaſky, fifty-ſix miles carried me the next day to Arcroiſy, a ſmall town ſituated in a territory not ſo well peopled as the preceding; the villages thinner, and but little of the ſoil cultivated, being covered with much timber of great ſize and beauty. On the 25th, I reached Demetriovitz, at the diſtance of more than fifty miles, every ſtep of which, was across a foreſt in which I ſaw not the leaſt veſtige of any habitation; the road was not difficult to find, even if I had not had a guide, but it is not much frequented; the mercantile people making that part of the journey to the Ukraine by water.

"This immenſe track of wild country, is part open meadow and part timber, which would in England be thought a glorious ſight: the ſoil is all a fine ſand, and, if I may judge from the ſpontaneous vitation, a moſt fertile loom; ſo that nothing is wanting but an induſtrious population; but without that, the whole territory is of little worth. I baited the horſes in the middle of the foreſt, and refreſhed myſelf and company, much admiring the uncommon extent of country that was without the leaſt appearance of being inhabited: I apprehended that the country muſt have a great reſemblance of the boundleſs plains and woods of Louiſiana.

"The 26th I rode forty miles through an uninhabited plain, to Serenſky; no timber in it, but all one level fertile meadow. I ſaw ſome herds of cattle feeding as if wild, but the land was not a tenth part ſtocked; for the graſs, if we turned out of the road, was up almoſt to the bellies of the horſes.

"The 29th, I got to Staradoff, at the diſtance of 50 miles, full twenty of which are through a rich and pleaſant country, much of it very well cultivated; they were getting in part of their harveſt; they cultivate all the grain and pulſe common in England; and from what I ſaw, I have little doubt but their huſbandry is extremely good."

From Staradoff to Czernicheu is 75 miles. Part of the track is as well cultivated as that on the other ſide of Staradoff, but much of it is covered with the foreſt. Czernicheu is a very well built town, finely ſituated on the banks of the river Deſna, which is navigable for barges of 50 tons, is very well fortified, and inhabited by about 15,000 people, many of whom carry on a conſiderable trade with Kiovia, and by the Nieper, with Poland. All the track of country, which lies upon the river Deſna, is very rich, and well cultivated. Many of the inhabitants of Czernicheu are Coſſack Tartars; but a traveller has no more reaſon to fear them, than the inhabitants of any other part of Ruſſia, for the government, although milder in the Ukraine, and the neighbouring provinces, from having been conquered from Poland, is yet the ſame, and the police as ſtrict as any part of the empire.

Kiovia is the capital of the Ukraine, and eighty miles from Czernicheu. The road leads on the banks of the Deſna, through a beautiful country, great part of it being well peopled and cultivated. It is inhabited by Tartarian deſcendants; but the preſent Coſſacks, who have very little idea of huſbandry, come far from the eaſtward, from countries that reach the river Don, at the diſtance of above 1000 miles from hence. The preſent race of the Ukraine are a civilized people, and the beſt huſbandmen in the Ruſſians empire.

Kiova is a place well known in the empire; for though it has been ſubject to many revolutions, which reduced it to a low ſtate, compared with its former grandeur; yet it has now recovered all thoſe ancient blows; it is well built of brick and ſtone; the ſtreets are wide and ſtrait, and well paved; it has a very noble cathedral, much of it lately rebuilt, and eleven other churches. It has 40,000 inhabitants, and is ſtrongly fortified. The Nieper is here a noble river; and ſeveral larger rivers falling into it, after waſhing ſome of the richeſt provinces of Poland, enable this town to carry on a very conſiderable commerce. It is the grand magazine of all the commodities of the Ukraine, particularly hemp and flax, which in this fine province are raiſed in greater quantities, and of a better quality, than in any other part of Europe. The Ukraine is the richeſt province in the Ruſſian empire. Part of it formerly was a province of Poland, and the reſt an independent ſovereignty, under a Tartaran prince; but the whole is now a mere province of Ruſſia, and much the richeſt acquiſition that crown has made. It is upon an average 250 miles long eaſt to weſt, and 140 broad from north to ſouth.

The grounds are moſt of them incloſed with ditches, to ſome of which are hedges, but not to all. They have fine meadow grounds, which they convert to hemp, but leave them under graſs for ten or twelve years before they break them up; and keep them in a tillage management as long: upon ſome grounds they have three crops of hemp running.

Flax they alſo cultivate, but they do not reckon it ſo profitable as hemp. In the management of their cattle they are very good farmers: they have large ſtocks, and they houſe them all whenever the ſnow is above four inches deep upon the ground; they litter them down well with ſtraw, and feed them with hay or turnips; cows are their principal ſtock, and they ſell immenſe quantities of butter and cheeſe; tho' it is extremely remarkable, that not many years ago, they knew not what butter was. The property of all this country is very much divided; here are very few great

eſtates

eſtates belonging to the nobility; the old inhabitants of the country are very free, and have a great equality among them; and this in poſſeſſions as well as other circumſtances; and fortunately this continues, though in ſubjection to Ruſſia. Moſt of the peaſants are little farmers, whoſe farms are all their own. They pay a conſiderable tribute, but raiſe it among themſelves according to their own cuſtoms; and they alſo furniſh the Ruſſian armies with a great many very faithful troops. Theſe points, with the immenſe value of trade the Ruſſians carry on by the means of their products, hemp and flax in particular, render the province of the firſt importance.

Buda is a little town, or rather a village, prettily ſituated between two rivers in a country very pleaſant.

To the north-weſt is Kordyne. Tobacco grows in the neighbouring country; and the Tartars upon the Black Sea, and the Kalmucks, buy large quantities, and they are not ſo nice in the ſeparation of the ſorts, as the American planters. They have large houſes, highly run up for drying it. They think the land cannot be too rich for either hemp or tobacco, and accordingly plant them on freſh land.

Catherine II. who ſways this vaſt empire may be ranked among thoſe wiſe uſurpers whoſe policy leads them by enacting good laws to obliterate from the memory of their ſubjects, the indirect means by which they arrived at that power they ſeem diſpoſed to exerciſe for the good of their people.

When Peter III. had, by his attempts at reformation, gained the ill will of moſt of the orders of the ſtate, all Europe with aſtoniſhment beheld a woman ſeize on the ſovereign power. Surpriſed with the news of an inſurrection, which he whom it concerned the moſt, was the laſt appriſed of, he haſtened from his country ſeat to the ſea ſide, called Onenabeium to take refuge in the fortreſs of Cronſtadt, where he was refuſed admittance, and ſome guns which were not charged, being pointed at his boat, ſtruck with a panic, he bore off, and after ſome friendly overtures ſurrendered himſelf at diſcretion. Every one knows he died in priſon, and all may gueſs of what diſorder; though his death was attributed to a natural diſtemper, and his body was expoſed to public view for ſome time by command of the empreſs.

Mr. Wraxall gives us a ſhort deſcription of the perſon of this princeſs, which we ſhall preſent the reader in his own words, together with ſome remarks of his on her palace at Peterſhoff.

"As we arrived early, I had an opportunity of viewing the gardens before her majeſty's appearance. They are very extenſive, lying along the ſhore of the Gulf of Finland, and waſhed by its waters. In the midſt of them ſtands the palace itſelf, ſituate on an eminence, and commanding a fine view, it was begun by Peter the I. but has been enlarged and improved by the empreſſes, his ſucceſſors, ſo that it is become now very large. In the front is a canal of ſome hundred yards in length, which joins the Gulf, and from which three *jets d' eau* are filled, which do not like thoſe of Verſailles, only play on great feſtivals, but conſtantly through the year. The apartments are all very ſplendid; but my attention was chiefly engroſſed by the drawing room, where hung five matchleſs portraits of the ſovereigns of Ruſſia. They are all length pieces, but by what maſters I cannot ſay. Peter himſelf is the firſt, and oppoſite to him appears the Livonian villages, whom he raiſed from a cottage to the moſt unbounded ſovereignty. I ſtood for ſome moments under this painting in ſilent admiration of the woman, who had paſſed from ſo humble a ſituation to an imperial diadem, of which her genius, her fidelity, and her virtue made her worthy. She is drawn by the painter as in middle life; her eyes and hair black, her countenance open, ſmiling and ingratiating, and her perſon not exceeding the middle ſize. The empreſs Anne and Elizabeth fill their reſpective places in this apartment, but did not long detain me from a portrait of the reigning ſovereign, which is of a ſingular kind. She is habited in the Ruſſian uniform, booted, and ſits aſtride on a white horſe, in her hat is the oak bough, which ſhe wore at the memorable revolution which placed her on the throne, and which was likewiſe taken by all her adherents. Her long hair floats in diſorder down her back: and the flushing in her face, the natural heat and fatigue ſhe had undergone, is finely deſigned. It is a faithful and exact reſemblance of her dreſs and perſon, as ſhe appeared twelve years ago, when ſhe came to Peterſhoff, and ſeized the throne of Ruſſia.

"While my eyes were rivited to this picture, and my thoughts employed on the melancholy cataſtrophe of the unhappy emperor which ſo ſoon followed, the empreſſes entrance was announced. She was preceded by a long train of lords and gentlemen. I felt a pleaſure corrected with awe as I gazed on this extraordinary woman, whoſe vigour and policy, without any right of blood, has ſeated and maintains her on the throne of the Czars. Though ſhe is now became rather corpulent, there is a dignity tempered with graciouſneſs in her deportment and manner, which ſtrikingly impreſſes. She was habited in a deep blue ſilk with gold ſtripes, and her hair ornamented with diamonds

Another modern traveller draws the character of the empreſs in the following manner.

"The empreſs (ſays he) entered more than once into converſation with us; and enquired into our opinions of ſeveral objects we had viewed. She is reſerved in the manner of her ſpeech, but has a noble open countenance; with a becoming greatneſs in her air and carriage. There is nothing lively or pleaſing at court, the whole being but a dull though a fine ſcene. It is certain that the great wiſdom that has hitherto appeared in all the actions and counſels of this princeſs, flows from her own perſonal genius and abilities.

"I have not learnt that ſhe has any miniſters, whoſe diſtinguiſhed parts would give one any reaſon to ſuppoſe the ſucceſs owing to them; beſides, it is well known here, that the empreſs is very determinate in her opinion. She aſks and hears the advice of her council upon important affairs; but generally follows her own opinion, which is evident from her acting directly contrary to the opinion of the whole in two or three affairs of conſequence; and in which the ſucceſs that followed, proved clearly that her own judgment was far ſuperior than that of all her miniſters. She is remarkable for being quick in her deciſions; ſhe never acts from long and repeated conſiderations, but determines almoſt inſtantaneouſly, and executes with equal celerity. Such a diſpoſition is certainly fitter for the conduct of great affairs, than one in which more caution, and a greater degree of prudence appeared: for nothing is ſo fatal in the government of an empire, as inconſtancy and irreſolution.

Under the government of ſuch a princeſs, there will be no wonder if the Ruſſians ſee the ſchemes of Peter the Great, which were left unfiniſhed, and happily completed, and the foundation laid for intirely reducing the power of the unwieldy Ottoman empire, which has ſo long tottered under its own weight. Catharine has already made them feel the force of her arms. She has ſufficiently availed herſelf of the troubles in Poland; and where ſhe has not ſhared in the partition of provinces, has depopulated whole tracts of land in that country, to add to the number of her ſubjects in one part of her dominions, whilſt the Tartars in diſtant parts own her ſway; and there remain yet vaſt regions capable of cultivation, and of filling her coffers, and increaſing her power.

The palaces of the Ruſſian nobles are not without their beauties.

I have made one or two excurſions (ſays a modern writer) into the country, particularly to Gathchina, a place of prince Orloffs, about forty miles off. It is ſituate in the moſt eligible ſpot within a great diſtance

of

of the metropolis, and will when finiſhed be a perfect ſeat. The gardens are laid out in the Engliſh taſte by a man of great merit, who was ſent for by the prince on that account. The nature of the ground, and a fine piece of water near the houſe, gave him ſcope for his genius. On my return from hence, I ſaw the royal palace of Zarſco-Zelo; this was built by Elizabeth, and is the completeſt triumph of a barbarous taſte I have ſeen in theſe northern kingdoms. The ſituation is low, and commands hardly any proſpect, nor has any natural advantage to claim ſuch a preference. It is very large, and the front extends to a great length, as there is only one ſtory beſides the ground floors. All the capitals of the pillars, the ſtatues, and many other parts of the external ſtructure, are gilt; nor does the eye ſcarce meet any thing elſe, in the apartments within. One room is in a very peculiar and uncommon ſtyle of magnificence, the ſides of it being entirely compoſed of timber, on which are diſpoſed feſtoons, and other ornaments of the ſame. Its tranſparency, and the conſciouſneſs of its rarity, have a fine effect. This was a preſent of the reigning king of Pruſſia to the late empreſs. Her preſent majeſty prefers this palace to any of the others; and when here ſhe is in retreat, as in town at the Hermitage.

AMONG the extenſive territories of the Czarina is Siberia, which if we may believe ſome modern travellers, is far from being incapable of improvement.

It is to this province that the Ruſſians generally baniſh ſuch criminals, as not having merited death, are yet adjudged worthy of ſevere puniſhment; and indeed theſe unhappy exiles, for the moſt part, ſuffer ſo much during their baniſhment, which is often for life, that it were better for them to fall by the hands of the executioner, than thus to drag on a miſerable exiſtence.

The frontiers of Siberia are for the moſt part well garriſoned, which is very neceſſary, to preſerve them from the incurſions of ſuch of the Tartar tribes as are diſpoſed to commit depredations upon their neighbours.

The religion of this province is called Nicholatian. The judiciary proceedings are all expeditiouſly terminated, for all their courts of juſtice are courts of equity. There are no pettifoggers that prey upon the innocent and unwary, and under pretence of relieving innocence, and ſuccouring diſtreſs, enrich themſelves with the ſpoils of the widow and the fatherleſs.

The people of Siberia are grave, robuſt, ſwift, and very dexterous at ſhooting at the croſs-bow, but they are ignorant, churliſh, and jealous of their wives, whom they generally lock up; and even if they do not, none of them dare quit their rooms without leave of their huſbands.

The adulterers of either ſex are ſtoned to death; the murderer ſeldom eſcapes with his life; perjury is moſt ſeverely puniſhed, and the robber generally meets with his deſerts.

Toboleſk, or Tobolſke, is the chief city of Siberia, whoſe juriſdiction extends ſouthward, beyond Bazapa, from Warchaturia to the river Oby; eaſtward to Samojedia; northward to Oſtiaſki; and weſtward to Uſſa, and the river Zuzawaja. This province is every where well peopled, as well by Ruſſians who depend on huſbandry, as by all ſorts of nations, particularly Tartars and heathens, who pay tribute to her Czariſh majeſty. Corn is ſo very cheap there, that a thouſand German pounds of rye flour, may be purchaſed for ſixteen cops; and as for fleſh, the price of an ox is commonly two rix dollars; two and an half about eleven ſhillings Engliſh money; and that of an indifferent large hog is from thirty to thirty-five ſtivers. Beſides, the river Irtis produces ſuch a prodigious quantity of fiſh, that a ſturgeon, weighing forty pounds, is to be bought for five or ſix cops or ſtivers; and theſe fiſh are ſo far from being lean, that when they are boiled their fat appears the thickneſs of a finger. Here are great plenty of all ſorts of wild beaſts, as elks, ſtags, deer, hares, &c. and of wild-fowl, viz. pheaſants, partridges, ſwans, wild geeſe, ducks, and ſtorks, all which are cheaper than beef.

This city is ſecured by a ſtrong garriſon of well armed ſoldiers, who upon orders from the Czars, can bring 9000 men into the field; beſides which, here are ſeveral thouſand of Tartars, who ſerve their Czariſh majeſties all on horſeback on occaſion.

Strolling incurſions in the weſt, upon their Czariſh majeſties frontiers, are very frequently made by the Kalmucks, the Coſack Orda, and the ſubjects of the Taſticham, or governor of the Bucharian Tartars: Beſides which, the Uffimer and Bakirian Tartars commit ſeveral inſolences; but theſe birds of prey are immediately oppoſed and repulſed by the Toboleſkians.

This city is alſo the place of reſidence of the metropolitan or chief eccleſiaſtic, who is ſent from Moſcow hither, and exerciſes ſpiritual juriſdiction over all Siberia and Dauria.

About a centry ago, this city, and the whole province of Siberia, became ſubject to the Czar, by the following accident. Jeremak Timoſciewitz, a certain robber in the reign of Czar Ilam Waſitiwitz, having plundered theſe, and all the circumjacent countries, had greatly injured thoſe of his Czariſh majeſty; when he was purſued, he and his companions fled up the river Kama, and from thence into the Iwzawaja, which falls into the Kama, where lie the lands of Straginoff, famous for his vaſt eſtate and works, which take up the greateſt part of the ſhore, and ſtretch to the length of 70 German miles. It was this rich man's grand-father that he applied himſelf to for protection, and begged his intereſt in obtaining his Czariſh majeſty's pardon, offering at the ſame time, by way of atonement for his fellonious crimes, to reduce the whole province of Siberia to be ſubject to the Czar; purſuant to which he alſo obtained from the abovementioned Straginoff, aſſiſtance of barks, arms, and neceſſary workmen; and thus provided, and accompanied with his fellow robbers in light barks, he paſſed up the river Serebrenkoy, which runs by the north-eaſt part of the Werchaturian hills, and falls into the Iwzawaja; thence he conveyed his equipage by land to the river Togin, on which he ſailed into the Tura, took the fort of Tumeen, ſituate thereon, razed it to the ground, and advanced up the river Tobol to Toboleſk, where then reſided a Tartarian prince, aged about 12 years, whoſe name was Altanai Kutzjumſwitv. This city he likewiſe attacked and took with ſmall loſs; after which he carried the prince priſoner to Moſcow, and put the conquered city into a better poſture of defence.

After this ſucceſs he proceeded down the river Jetiſoh; but was ſet upon in the night by a party of Tartars, not far from Toboleſk, who cut off a great many of his men, and he himſelf endeavouring to ſtep from one bark into another, leaped ſhort, and by reaſon of his heavy armour, irrecoverably ſunk to the bottom; his body was carried away by the force of the ſtream, and never found. In the mean while Straginoff had obtained the Czar's pardon for Jeremak; and ſeveral Muſcovite officers and ſoldiers came and garriſoned and fortified the places which he had taken; and from this juncture the Czar's ſovereignty over Siberia is to be dated.

Moſt of the inhabitants of the country near the river Irtis are Ruſſian Jemſkicks, who are in the annual pay of her Czariſh majeſty, for which they ſupply the way-wodes, that are ordered this way, and all other perſons who travel on the Czariſh affairs in Siberia, with free carriages and men to work; and are obliged to carry them by water, as far as Surgut, ſituate on the Oby, at a very reaſonable price. Theſe people keep great numbers of dogs, which they make uſe of to travel with in winter, for it is utterly im-

poſſible to paſs this country with horſe-ſleds, by reaſon that ſometimes the ſnow on the Oby is above a fathom deep.

Theſe dogs are yoked two to each ſled, which is for that purpoſe made very light and thin, and can carry from two to three hundred German weight. Neither the ſled nor the dogs are hurt by the ſnow, but both run very ſwiftly over, leaving a trace only of the depth of a finger's breadth. Some of theſe dogs know before hand whether there is a likelihood of any work to be for them, as we are told; and if they are likely to be employed, they herd together in crowds, and howl in a diſmal manner, whence their maſters draw their preſages. If when they are on the way, they are inclined to hunt, the maſter takes his gun on his ſhoulder, and puts on his long ſliding ſhoes, with which he goes over the ice, takes his dogs with him, and ſteps a little way into a wood, turns up all manner of wild game, perhaps a fine black fox; and the ſkins of the game are the maſter's, and the fleſh he gives the dogs. Thus they make a ſufficient and very profitable uſe of theſe draught dogs, which are middle-ſized, ſharp-noſed, with long-erected ears, and carry their tails crooked, ſome of which are like wolves or foxes, inſomuch that as they lie aſleep in the woods, they are ſometimes by miſtake, ſhot for one of thoſe two ſpecies; to countenance which, it is alſo certain, that theſe dogs mix their ſtrain by a promiſcuous copulation with that of wolves and foxes; whence it is that whenever a courſing match happens among the inhabitants of the villages, they find a great number of both ſpecies near the villages, as hath been frequently obſerved.

The banks of the Oby are inhabited by a people called Oſtiacks, who worſhip terreſtrial gods, but acknowledge, that according to nature, there muſt be a Lord in heaven, that governs all; nevertheleſs they do not pay any worſhip at all to him, but have their own gods made of wood and earth, in ſeveral human ſhapes. Some of the richeſt amongſt them dreſs theſe deities in ſilken cloaths, made after the faſhion of the Ruſſian women. All of them have theſe idols placed in their huts, which are made of barks of trees, ſewed together with harts guts.

On one ſide of the god hangs a bunch of human and horſe-hair, and next that a wooden veſſel, with milk pap, with which they daily ſupply their gods, and thruſt it into their mouths with a ſpoon, made for that purpoſe, but by reaſon the idols cannot ſwallow this their milk diet, it runs out again at both ſides of their mouth, down their bodies, in ſuch a filthy manner, as is ſufficient to diſguſt one from eating that diet. When this nice god is to be worſhipped or prayed to, his adorers ſtand bolt upright, and toſs their heads up and down, without bending their backs in the leaſt; beſides which they chirrup or whiſtle through the lips, as we do when we call a dog.

They call their god Saiturn. Mr. Ides in his travels from Moſcovy to China, tells the following pleaſant ſtory, of the idolatry of theſe people. "Once, (ſays he) ſeveral Oſtiacks came on board the ſhip in which I was, to ſell us fiſh, and one of my ſervants, a Nurenburgh-bear in clock-work, which when wound up, drummed and turned his head backwards and forwards, continually moving his eyes, till the work was down. Our people ſet the bear at play a little; and as ſoon as ever the Oſtiacks ſaw it, all of them performed to it their cuſtomary religious worſhip, and danced exceſſively to the honour of the bear, nodding their heads, and whiſtling at a great rate. They repreſented our bear for a right Saiturn, crying out, What are our Saiturns which we make? If we had ſuch a Saiturn, we would hang him all over with ſables and black fox-ſkins. They alſo aſked if this clock-work was to be ſold; but I ordered it out of their ſight, to avoid adminiſtering any occaſion of idolatry."

They have as many wives as they can maintain, and marry their near relations without any ſcruple: If a relation dies, they cry inceſſantly for ſeveral days; covering their heads, and ſitting on their knees in their huts, and will not ſuffer themſelves to be ſeen; but they carry the corps on poles to the ground to be buried. They are a poor people, and live very miſerable in ſorry huts. They might indeed live well, ſince all parts near the Oby, abound with great quantities of rich furs; beſide that, there is extraordinary good fiſhing in that river, inſomuch that 20 large ſturgeons may be bought of them for three pennyworth of tobacco; but they are ſo horrid lazy, that they do not deſire to get any more than will barely ſuffice them annually for the winter; for when they travel, they eat moſtly fiſh, eſpecially when they are on the water fiſhing, for then they live on nothing elſe. They are of a middle ſtature, moſt of them yelloviſh or red haired; and their faces and noſes diſagreeably broad; they are weak, and unable to labour hard, not at all inclined to wars, and utterly uncapable of military excurſions. Bows and arrows are their weapons, with which they ſhoot wild beaſts, though not much addicted to this either. Their cloaths conſiſt of ſturgeon and other fiſh-ſkins, and they wear neither linen nor woollen; their ſhoes and ſtockings are faſtened together; and they wear a ſhort coat with a cape, which in caſe of rain they pull over their heads. Their ſhoes are alſo made of fiſh-ſkins, and are ſewed faſt to their ſtockings, but not cloſely, ſo that their feet muſt neceſſarily be always wet. When they are upon the water, notwithſtanding the thinneſs of their cloathing, they will bear extraordinary great cold; for if it be but a common winter, they are no better cloathed than abovementioned; but if the winter prove hard, thoſe who are thus cloathed, are neceſſitated to put another coat of the ſame ſort of fiſh-ſkin over that; and they expreſs this ſevere winter amongſt one another, by ſaying, Do you like the winter that forces one to wear two coats of ſkins? They ſometimes go a hunting in the winter with a ſingle coat only, and their breaſts bare, depending upon warming themſelves quickly with ſliding and running over the ice in their ſcates, or ſliding ſhoes; but if, as it often times happens, they are overtaken by an extraordinary ſevere froſt, and it ſeems utterly improbable to eſcape or ſave their lives, (ſo incredibly does it ſometimes freeze on the Oby) they with the utmoſt haſte throw off their fiſh-ſkin coat, and fling themſelves into the deepeſt ſnow, and willingly freeze to death: the reaſon why they put off their coat is, only that they may die the ſooner and with much leſs pain.

The womens cloaths are almoſt like the men; the men's greateſt diverſion is bear-hunting, to which ſport they gather together in crouds, armed with no other weapon than a ſharp iron, like a large knife, fixed to a ſtick, about a fathom long.

When an Oſtiack is jealous of one of his wives with another man, he cuts ſome hair off the under part of a bear's ſkin, which he carries to the man whom he ſuſpects: if he be innocent, he then accepts it; but if he be guilty, they believe he dare not venture to touch it, but acknowledges the truth, and then amicably makes up the buſineſs with the huſband, and the wife is ſold. But if any ſhould preſume to be ſo raſh as to take the hair, though he was guilty, they tell us they are aſſured, that the bear's ſkin from whence that hair was cut off, will again become a living-bear, which after the expiration of three days, will appear in the woods, and tear the perjured wretch to pieces, who was not afraid fraudulently to receive his hair in order to deny the truth. On this occaſion they invoke bows, arrows, axes, and knives, and firmly believe that if any guilty takes any of theſe, he ſhall certainly be killed by thoſe individual inſtruments, which he accepts, within the ſpace of a few days, which is not only avered by themſelves, but alſo unanimouſly backed by the Ruſſians, who live all round theſe parts.

Buratz is a fortreſs, the country about which is inhabited by Buzartians; of whoſe manners, and thoſe of the neighbouring people, the following account

count is extracted from M. Ides's Travels. The houſes of theſe people are built at ſome diſtance from each other, as in villages, and are generally ſituated at the ſide of a river. Cloſe to their doors ſeveral poles are erected in the ground, on ſome of which are ſtuck ſheep, on others bucks, and ſome faſten horſe-hides on them.

In ſpring and autumn they go out by hundreds, in a troop on horſeback, to hunt ſtags, wild ſheep, and roe-bucks. When they have found a place where there is game, they range themſelves in circular order, ſo that they can eaſily come near one another, by which in ſuch a ring, they will hunt together, and encompaſs ſome hundreds of beaſts; and having once got them within reach of their arrows, every one lets fly, ſo that very few of the beaſts eſcape, each hunter being ſo well provided as to make thirty ſhots ſucceſſively.

After hunting, each huntſman eaſily finds his arrows, by their peculiar marks; but there is one great misfortune attending this way of hunting, which is, that they unawares frequently ſhoot one another, and the horſes are often wounded. They ſkin their game, cut the fleſh from the bones, and dry it in the ſun; on this proviſion they live as long as it laſts, and when it is gone, they go out a hunting again.

Thoſe who want oxen or camels of an extraordinary ſize to convey their goods to China, are obliged to buy them of theſe people, who will not deal for money, but receive in exchange of the buyers, pale ſables, pewter, copper baſons, red Hamburgh cloths, otter ſkins, and Perſian ſilks of all colours, in which commodities the price of an ox is not above four or five rubles, and that of a camel ſeldom exceeds ten or twelve rubles.

Both men and women of this country are large, robuſt, and have tolerable handſome features. In the winter both ſexes wear long coats made of ſheep-ſkins, with a broad girdle tipped with iron. They have a ſort of caps which they draw over their ears in cold weather; and in ſummer they wear coats of a light red cloth. Theſe people never cut the nails either of their hands or feet, nor are ever waſhed, except at the time of their birth; ſo that they make a very naſty appearance. The hair of the unmarried women ſticking faſt together in plaits, ſtands an end, and makes them look juſt as Envy is repreſented by the painters. The married women have only two plaits, which hang down on each ſide of their heads, adorned with all ſorts of tin figures.

When any of them die, they are buried with their beſt cloaths, bows, and arrows. Their religion conſiſts of worſhipping the dead bucks and ſheep which are ſtuck upon their poles before their houſes, at ſeveral times of the year, as long as they continue unputrified. Their adoration of them is performed by bowing the head, while they are kneeling with their hands claſped, without either prayers, or ſo much as ſpeaking one word.

This is the only divine ſervice they are acquainted with, nor will they learn any other. They have indeed ſeveral prieſts, whom, when they think proper, they kill and bury, together with cloaths and money, alledging it is neceſſary to ſend them firſt to the other world to pray for them, and that they ought to have money to ſpend, and cloaths to wear, leſt they ſhould be driven to neceſſity.

When they are to take an oath, they go to a hill which they eſteem ſacred, and upon this hill they take the oath, firmly believing that the falſe ſwearer ſhall never come down alive. To this hill they frequently offer up all ſorts of ſlaughtered cattle, and have paid a veneration to it for many years; but upon what tradition this reverence is founded, is not as yet known.

In this neighbourhood is found the muſk cat. This animal is almoſt like a young buck, without horns, with this difference, that its hair is a little black, and the head reſembles that of a wolf. The Chineſe call this animal Yelicam, that is Muſk-hart, on account of its likeneſs to a ſtag; but beſides the diſſimilitude of the head, it hath two tuſks like that of a wild boar, which ſtick out of its mouth. The muſk is contained in a certain ſwelling at the navel, like a little purſe, which is compoſed of a thin ſkin, covered with a very fine hair.

Philip Martinus, in his Chineſe Atlas, gives the following deſcription of this animal:

"The muſk-cat is almoſt like a young hart or doe; only that he is ſomewhat browner, and ſo ſlow and unactive, that the hunter's greateſt difficulty is in putting him up; for that once done, he is immediately ſhot, for he ſuffereth himſelf tamely to be killed, without either defending himſelf or ſtirring; the muſk, of which there are various ſorts of different values, is prepared from this beaſt in the following manner.

"After he is taken, all his blood is drawn off and reſerved; and from under his navel is taken out a bladder, that is filled with blood, or ſome other oderiferous liquor there concreted; after which the animal is flead and cut to pieces.

"When the Chineſe deſign to make the beſt ſort, they take the hinder part of the animal, beginning from the kidneys, which they ſtamp and bruiſe to a jelly, which they dry, and there with it fill the ſmall bags, which they make of the ſkin of the beaſt.

"But if they deſire a ſlighter ſort of muſk, which ſhould yet be very good, and not at all ſophiſticated, they then beat all the parts of the animal together, without any diſtinction, to a jelly, with a little of his blood, in a mortar, with which, as before, they fill up the bags made of the hide.

"Beſides theſe two, there is another ſort of muſk, which is highly valued, though not ſo good as either of the former. This is prepared of the fore-part of the animal to the kidneys, which they particularly lay by the reſt of his body, in order to make the common muſk; ſo that none of this creature is thrown away, but all parts of it are good; whence it is ſaid to be better dead than alive."

Thus far Martinus; we will now purſue our author.

After travelling ſome days, he arrived at the city of Jakutkoi, which was large and populous. In this city, grain, ſalt, fleſh and fiſh, were very cheap: an hundred weight of rye was ſold for ſeven ſtivers. For ſome miles round the city, the land is very fruitful, and corn grows in great abundance; beſides which great numbers of Ruſſians have ſettled here, and it is inhabited by ſome hundreds of villagers, where they follow agriculture, with great induſtry and ſucceſs.

Oppoſite to the city on the eaſt ſide, is a burning cave, which for ſome years before Mr. Ides was there burnt very violently, but was then almoſt extinct; it is a large cleft in the earth, and on a long pole, being put into it, it felt very warm.

Near this city was a very fine cloiſter, in which lived a Mongalian Baron, who had put himſelf under the protection of their Czariſh majeſties, and embraced the Greek Chriſtian religion.

This gentleman had a ſiſter, who, according to the Mongalian cuſtoms lived in the devoted ſpiritual ſtate, and was almoſt inclined to receive the Chriſtian faith. When any one diſcourſed with her on that ſubject, ſhe uſed to reply, "I am ſatisfied that the Chriſtians God muſt neceſſarily be a ſtrong God, ſince he will return thither, though he ſhall again be beaten down."

Our author paid a viſit to this lady, who on her entering the room ſaluted no perſon, her order not admitting of ſuch condeſcenſion. She had a roſary or ſtring of beads in her hand, which ſhe conſtantly paſſed round through her fingers. There was with her a lama, or prieſt, who had alſo a ſtring of beads in his hand, which he very ſwiftly and inceſſantly turned over through his fingers, continually moving his lips, as though at his devotions; and with this perpetual telling of his beads, his thumb was worn through the fleſh and nail up to the knuckle; which

which having been rubbed off by very ſlow degrees, did not pain him at all.

Mr. Ides and his retinue having remained ſome time at Jakutſkoi, ſet forward in ſledges on the firſt of March, towards the lake of Baikol, which they reached on the 10th of the ſame month, and finding it frozen up very hard, paſſed ſafely over.

The lake of Baikol is about forty German miles long, and ſix broad. The ice in it was about eight feet thick. There are commonly in it ſeveral broken places or wind holes, which not being frozen up, prove very dangerous to travellers when ſurpriſed with ſnow or tempeſtuous winds: for the horſes, if not ſharp ſhod, are driven ſo violently by the fury of the winds, that they cannot tread ſure, but falling on the ice, are hurried on by the wind, till they and the ſledge are ſwallowed up in one of thoſe open places, by which both horſes and paſſengers are infallibly loſt: beſides, to augment the danger, the ice of this lake is ſometimes torn open ſeveral fathoms by ſudden winds, which make a noiſe as loud and terrible as thunder claps; but after the expiration of a few hours, the ice joins again, and ſoon becomes as cloſe as before.

The camels and oxen which travellers take with them on their journey to China, are obliged to paſs over this lake from Jakutſkoi; in order to which the camels have a kind of boot tied about their legs, which is very ſharp at the bottom; and the oxen are provided with ſharp irons ſtruck through their hoofs, without which it would be impoſſible for them to go forwards.

The water of this lake is clear, taſtes very freſh, and yet it is of a deep green, like that of the ocean. Where the ice was open, our author frequently obſerved a great number of ſea-dogs, and fiſh in great abundance, particularly ſturgeons and pikes, ſome of which he aſſerts weighed two hundred German pounds.

We have already mentioned the cuſtom of ſending exiles into Siberia, whither perſons of rank are frequently baniſhed after having their ears and noſes ſlit, or receiving ſome corporal puniſhment.—In order to give the reader a clear idea of this matter, we ſhall here quote the narration of a traveller, who converſed with ſome of theſe unhappy exiles there, together with his deſcription of the city of Papinowgorod, whither he was going when he met with the adventure.

"Having held on our way (ſays he) through almoſt impaſſable foreſts, and over high mountains, at length, after three hours journey, as we approached a thick wood, we obſerved five men in long coats of white bears ſkin, made after the Muſcovite faſhion, each of whom had a gun on his ſhoulder, a pouch on one ſide, and a knife and ſheath on the other. As they advanced towards us, our guide ſtopped the rein deer. When the five men being near enough to be heard, one of them perceiving that we were ſtrangers, bad us good-morrow in the German tongue, wiſhing they were as free as we were. Our ſupercargo being a native of Lower Saxony, was attracted by the ſound of his own language, and aſked him what countryman he was; when entering into converſation, ſeveral things were ſtarted, by which it appeared that they had been intimate acquaintances. The ſupercargo now alighted from his ſledge, embraced him, and enquired how he came there; to which he replied, that he had been baniſhed for hunting ſables, a very capital offence.

"While they were diſcourſing, I had leiſure to ſurvey the other four, when one of them, of whoſe features I had ſome idea, though I could not inſtantly recollect who he was, aſked me in French whence I came, and whither I was going. Finding that I could not recollect him, he told me his name, and that he had often drank with me at Stockholm. I now knew him well; he was a perſon to whom I had been greatly obliged, having received many civilities from him in Sweden. He was a gentleman by birth, a native of Lorrain, and lieutenant colonel of a regiment of Muſcovite horſe. He had endeavoured to perſuade me to go with him to Moſcow, by offering to procure me a poſt of honor and profit; but I had declined the propoſal.

"When I compared the fine appearance he made at that time, the reſpect with which he was treated on account of his eſtate, his rank, and his character, with the miſerable condition to which I now ſaw him reduced, I could not refrain from tears. I embraced him with the utmoſt tenderneſs and affection, and enquiring into the cauſe of his diſgrace, he replied, that the Czar unjuſtly ſuſpecting he had not been ſo zealous in his ſervice as he ought to have been, had baniſhed him to Siberia for three years, where he endured hardſhips not to be expreſſed; being expoſed to the greateſt dangers in hunting wild beaſts for his ſubſiſtance, to the miſeries of hunger, and the rigour of the ſeaſons, which he and his companions were obliged to endure, no perſon daring to afford them the leaſt relief. He ſaid that ſcarce a day paſſed but they were attacked by wild beaſts, which they met in herds ſeeking for prey, and that they frequently found great difficulty in defending themſelves; that beſides, they were obliged to ſupply the Czar's officers with a certain number of ſables, under the penalty of being ſeverely laſhed with a whip of thick hard leather, on their naked backs, till they were covered with blood.

"One of the others had been receiver-general of the Czar's revenues, another had been a major-general, and a fifth a man of note. They all joined in deploring their misfortunes, exclaiming loudly againſt the Czar, and declared, that when once the time of their exile was expired, they would take care to get far enough out of his power. We offered our beſt endeavours to facilitate their eſcape; but they told us this was impoſſible, all the frontiers being guarded by forts, to the commandants of which their faces were well known, and that nothing leſs than the crueleſt death barbarity could deviſe, would be the certain conſequence, both to them and us, for the attempt.

"Having refreſhed them and ourſelves with ſuch proviſions as we had with us, we told them we reſolved to ſpend a few hours with them, for we could not think of leaving ſo very ſuddenly, men whom we had known in better days, when fortune ſmiled upon them.

"They received this propoſal with great joy, told us they had five little huts, which they had built in the neigbouring wood, and if we would be ſo kind to go thither with them, they ſhould be greatly obliged to us, and all the ſkins they had ſhould be at our ſervice, except the ſables, which they were obliged to reſerve for the Czar: they added, that the remembrance of the happy hours they ſhould ſpend with us in their ſolitude, would make many future months glide more ſweetly. We immediately complied with a requeſt ſo politely and affectingly enforced, and on approaching the huts, we found that neceſſity had rendered theſe unhappy men ingenious. They were built of fir, and were higher and more commodious than any we had ſeen in our travels; there were two or three rooms in each of them, and lattices to let in the light at the ſides. They were each ſhaded by trees, and ſo artfully paved with fiſh bones, that the floors looked as if they were inlaid with ivory. To defend themſelves from the depredations of wild beaſts, they had dug a trench round theſe buildings, and erected palliſadoes with ſtrong poſts and pieces of wood nailed acroſs them, on the tops of which were ſpikes of fiſh bones. Thus, when their gate was cloſed, they were as ſecure as in a fortified place. They had within all kinds of hunting and fiſhing-tackle, beſides a good ſtore of ſalted rein-deer veniſon, biſcuit, and metheglin.

"While the reſt of the company ſat down to drinking, the lieutenant colonel and I withdrew to his hut to converſe together. Our converſation turned chiefly on the wilderneſs of the country, and the barbarity of its inhabitants; and his deſcriptions were ſo lively and juſt, as added greatly to the picture. He told me that when the time of his exile ſhould be

be expired, he intended to return home; and gave me his direction in Lorrain. When my friend and I had tired ourſelves with talking, we compoſed ourſelves to ſleep, upon bear ſkins, as our companions did alſo when they were tired of drinking, and ſlept ſoundly till next morning.

"We aroſe early, at the deſire of the five exiles, took each of us a gun, and attended them into the woods, to examine their ſnares, to ſee what prey was caught in thoſe they had laid the night before. We killed ten or twelve white foxes, and half a dozen grey martins, but met with none of the larger game. As we intended to purſue our journey in the afternoon, we did not chuſe to loſe much time in hunting, but returned to the huts, and having dined heartily, and drank plentifully, we took our leave, truly affected at not being able to relieve thoſe unhappy gentlemen.

"At parting, they forced upon us ſome ermines, bears, foxes, and wolfs ſkins, for which they would take no money; however, we prevailed on them to accept ſome brandy, tobacco and cloth, which we took care ſhould exceed in value the commodities they had given us. We wept reciprocally at parting; and having taken a laſt farewel, we mounted our ſledges, and purſued our journey with the uſual expedition.

"In about three hours we came to five or ſix huts, inhabited by about a dozen people, of whom we bought all their ſkins; and afterwards following the courſe of the river Petzora, we frequently met with ſmall villages, in ſome of which we found inhabitants, and in others none; but whenever we meet with any body to trade with, we were ſure of having ſkins either for money or brandy, but none would venture to ſell us ſables. We now reached a large ridge of mountains, that are almoſt always covered with ſnow, and ſo barren, that no human creature can live upon them. On both ſides of theſe mountains were vaſt numbers of white bears and wolves, which put us in fear of our lives; though I am apt to believe thoſe beaſts were as much terrified as we were, for they fled from us on all ſides, perhaps frightened by the glittering of our arms, which we took care to diſplay to the beſt advantage.

"We were above twelve hours croſſing theſe mountains, over which our cattle had great difficulty to draw us; but we at length reached the deſcent, and ſoon arrived at a village in Siberia, where the people had linen ſhirts, cloſe buſkins, and garments of bear-ſkins, with the hair outwards; they appeared to be leſs barbarous than thoſe with whom we had lately converſed, receiving us with great hoſpitality and civility, aſking our country and buſineſs. Having reſolved their queſtions, we bought all their ſkins for ready money; feaſted with them on dried bears and wolfs fleſh, rice cakes, and brandy; and then ſlept upon bears ſkins, in houſes built after the manner of thoſe in Lapland. At our riſing, they treated us with a glaſs of brandy, and then we ſet forward for Papinowgrod, which place we reached in twenty-four hours.

"The governor hearing of our arrival, ſent for us, upon which we immediately waited on him, and anſwered all his queſtions much to his ſatisfaction. When he underſtood we were Daniſh merchants, who had travelled ſo far to buy furs, he treated us in a very friendly manner, and as a mark of his reſpect, ſent for his wife to entertain us, which was a moſt ſingular honour.

"She came into the room with a bottle of brandy in one hand, and a ſilver cup in the other, and was followed by a ſervant maid, who carried a plate of gingerbread. We ſaluted her according to the cuſtom of the country, by bowing our heads, when untying the knot of her ſhift ſleeves, ſhe let it fall to the ground, and the ſupercargo taking it up, we each of us kiſſed it. She then furled it up again with her left hand, and taking the bottle and cup, which ſhe had ſet down to perform this ceremony, gave each of us a bumper of brandy, and gingerbread, ſtanding all the while near her huſband at the end of the table. She then withdrew, and the governor treated us with an excellent ſupper.

"The entertainment being ended, we were conducted to the lodgings prepared for us in the caſtle, and conſidering the country, lay in very good beds. Having ſlept about ſeven hours, we aroſe, and the governor inſtantly waited on us, followed by a ſervant with a bottle of brandy, of which he gave each of us a hearty cup for a morning's whet. He then produced his ſkins, which though they were valued much higher than any we had met with in our travels, they were the beſt worth our money.

"When he had diſpoſed of his own ſtock, he ordered one of his ſervants to enquire for chapmen among the people of the town; and while the ſupercargo was dealing with the people, I diverted myſelf with walking about the town.

"The houſes of Papinowgrod are low and meanly built, of mud or wood, the chinks being ſtopped up with moſs, and the ſtreets are paved with timber, laid cloſe together. The country about it is very fertile, and well watered by a fine river, in which there is variety of excellent fiſh.

"The people of faſhion wear a long cloth coat, which reaches down to their toes, with very cloſe ſleeves of another colour, under which they have breeches, and ſtockings of the ſame cloth. Their ſhoes, or rather their boots, are of blue, red, or low colour, buttoned on the top; and on their hands they wear cloth caps, lined and bordered with ermine, ſable, or black fox ſkins. The women are very handſome, and ſomewhat fat; their hair is of a light cheſnut colour, hanging down to their waiſt, and their head-dreſs is an oval cap; their upper garments, which like the men's, hang down to their feet, are made of a red, blue, or violet coloured cloth, and are lined either with ſable, or white fox-ſkin, ſtudded with pearls, and their ſhifts are made of fine callico, with ſleeves all ruffled up from the wriſt to the ſhoulder, ſome of which are five ells long; and this bundle prevents their uſing the arms of their robes, which therefore hang uſeleſs, and are only pinned on."

The baniſhment of priſoners into Siberia by order of the government of Ruſſia, is in general conſidered as a puniſhment even worſe than death itſelf; and yet we find that there are ſome authors of a contrary opinion. And the country, although as barren as we have repreſented it, yet is in a capacity of admitting of many improvements, which good ſenſe will point out, and honeſt induſtry will ſubmit to; indeed it muſt be granted in favour of the unhappy perſons who are condemned to live in thoſe inhoſpitable deſarts, that their ſpirits are depreſſed, and conſequently they have no deſire to cultivate the ground. They are often left in a ſtate of uncertainty, with reſpect to the time allotted for their baniſhment, and thus think it unneceſſary to begin what they may not accompliſh.

Many perſons were baniſhed to Siberia in the reign of Peter the Great; but moſt of theſe were perſons of eminence, who had incurred the royal diſpleaſure; for that emperor although in many reſpects an eminent perſon, yet being a ſlave to his paſſions, like Alexander the Great, often deſtroyed his moſt intimate friends. It was the deſign of Peter, nor has it ever been loſt ſight of by his ſucceſſors, that nations can never riſe to grandeur, unleſs commerce is cultivated; and for this reaſon, Peter whoſe dominions were interior, and whoſe people were ſavages, left nothing undone in order to eſtabliſh a harbour, from whence he could ſend ſhips into any parts of the known world.

It is well known what methods Peter made uſe of in order to cultivate the manners of his ſubjects, and while he was laying the grand ſcheme for the conqueſt of Livonia, the oppoſition he met with from his rival Charles XII. ſerved rather to accellerate than fruſtrate his deſign. After the battle of Pultou, 1709,

Peter found the whole province of Livonia as it were laid open to him, and it was taken poſſeſſion of by his victorious troops. On a cluſter of iſlands he built the city of St. Peterſburgh; and partly by promiſes, and partly by force, he cauſed ſome of the moſt reſpectable perſons in his empire to come and ſettle in it. The encouragement he gave to men acquainted with the liberal arts and the ſciences, induced many perſons to ſettle in the new city, and this part of his conduct is imitated by his ſucceſſors.

The late empreſs, who died 1762, made it an invariable rule never to put a criminal to death, and this practice gave riſe to the frequency of baniſhments to Siberia. It was common to ſend regiments of raw undiſciplined recruits along with theſe priſoners, and when theſe young men returned again to Peterſburgh, they were ſo much inured to the ſevere hardſhips of the climate, that they became ſoldiers able to undergo any fatigues whatever. This was a bold ſtroke of policy, and it is in part owing to it that the Ruſſian armies make at preſent ſuch a diſtinguiſhing figure. It is well known that at the battle near Frankfort on the Oder, in 1758, the Ruſſian forces, commanded by General Apraxin, ſtood like an immoveable wall againſt the forces of that experienced general the preſent King of Pruſſia, and obliged him to quit the field.

The baniſhment of criminals to reſide in wild deſarts has been attended with different conſequences, in different ages; and there have been many inſtances wherein the deſcendants of the baniſhed have returned to thoſe countries from which they were driven, as unworthy of a place in ſociety, and eſtabliſhed governments upon more enlarged principles of freedom.

Aſtracan, by ſome writers called Aſtrakan, is ſituated on a plain near the river Wolga, and not far from the borders of Ruſſia. It is a town of conſiderable antiquity, and according to Mr. Hanway, who viſited it in 1742, it is in a thriving condition. It is built upon an aſcent, and ſurrounded with a wall, which has been lately rebuilt; and within the wall are many pleaſant gardens, where the inhabitants ſpend much of their time in ſummer. Two or three regiments of ſoldiers, are commonly ſtationed in it, and there is a caſtle where the governor reſides. The inhabitants are partly Greeks, Mahometans, and Heathens. The Greeks, as in other parts of Ruſſia, have their churches; the Mahometans have a moſque, and the heathens a temple; for it is a maxim in the Ruſſian government, to grant a toleration to the profeſſors of all different religions, ſo as they do not give any offence to the civil power. This is in all reſpects conſiſtent with the infancy of a government, which aims at extenſive power, and intends to eſtabliſh an univerſal monarchy. The perſons who aſſemble in the Heathen temple of Aſtracan, are diſciples of the ancient Magi; but they having been ſo long mixed with the Tartars, they have forgot the principles of their religion; and are now become worſhippers of images and attendants on ſacrifices.

When Mr. Hanway was at Aſtracan, his curioſity led him to be preſent one day in the Pagan temple, where ſacrifices are offered, and he found theſe to conſiſt of fleſh, cakes, and ſuch liquor as the country affords, and one of the officers of the temple, brought him a part on a plate, but he refuſed to eat it, knowing it had been offered to idols. He adds, that the Heathens in that city are not very numerous, and in general they are compoſed of the lower ranks of people. They have ſome confuſed notions of a Supreme Being, but although there can remain no doubt of divine revelation having been made known to them during the firſt ages of Chriſtianity, yet there are at preſent no remains of it among them. But the Greeks, and the Mahometans in Aſtracan, and throughout the whole of that province, are equally as ignorant as the Heathens; and Peter the Great was ſo much intent on acquiring a dignified place in the political ſyſtem of Europe, that he payed but little regard to ſuch of his ſubjects as lived eaſtward of Moſcow.

All along the banks of the Wolga there are ſuch vaſt numbers of Tartarian robbers, that the government has found it neceſſary to puniſh them in a moſt exemplary manner. The mode of puniſhment is indeed conſiſtent with the manners of a barbarous, ferocious people, but it is much to be doubted whether they ever lead towards the reformation of manners; thoſe who are ſavage in their manners, pay little regard to torture, when inflicted on themſelves, for ſeverity of puniſhment ſerves rather to harden than to humanize the mind. A conſtant repetition makes it familiar, and that which would to us become ſhocking, is conſidered by theſe barbarians no more than ordinary puniſhments, in the ſame manner as the people in France, Germany, and other countries, are not in the leaſt ſhocked when they ſee a man broke alive upon the wheel.

Mr. Hanway, who travelled that extenſive part of the Ruſſian empire which lies between Peterſburgh and Aſtracan, had an opportunity, as a man of experience, to make proper remarks on every object that preſented itſelf to his view, and being well acquainted with drawing, he ſketched out the forms uſed in the execution of thoſe Tartarian robbers. All along the banks of the Wolga, ſmall platforms of wood, like ſcaffolds, are built, and in the centre of each is a pole with great hooks ſtuck into it. Theſe hooks are almoſt in the form of a gardeners pruning knife, with the points ſtanding upwards, and when the thief is taken, he is ſtrip'd naked, and the point of the hook is driven in between two of his ribs, and the point ſtretching upwards, it keeps the criminal ſo confined to the ſtake that he is like one nailed to a croſs. This part of the barbarous ceremony being performed, the ſoldiers, who are the executioners, ſet the ſcaffold afloat on the river, and it frequently happens, that ſome of theſe wretches will live three or four days under the moſt excruciating tortures; nay it frequently happens, that ſome of them make their eſcape, and although this may appear rather incredible to ſome perſons, who never viſited the country, yet we cannot doubt the veracity of Mr. Hanway, a man eſteemed by the learned, the pious, and indeed by all thoſe who are not aſhamed of virtue and truth.

When he viſited that country, robberies were perhaps more frequent than they are at preſent, and he himſelf, although he had a guard to eſcort him from Moſcow to Aſtracan, yet was very often in danger. He ſaw many of their temporary gibbets floating on the river, and there were generally a few ſoldiers to take notice of the criminals till ſuch time as they expired.

One day a thief was fixed to the gibbet in the manner already mentioned, and ſet afloat on the river. This happened about noon, and notwithſtanding the ſeverity of the torture, yet he continued in that condition till night, when by an unaccountable exertion of his manual power, he extricated himſelf from his confinement, and ſwam aſhore. It was not enough for him that he had recovered his liberty, nor did he value ſelf-preſervation ſo much as the deſire of being revenged on his tormentors. Accordingly he walked ſlowly to the place where three ſoldiers were poſted, two of whom were aſleep; and he wreſted the gun from the third, who was not the leaſt aware of his coming. He ſoon diſpatched the centinal from whom he had taken the gun, and with the butt end of it he knocked out the brains of the two others who were aſleep. He then went in queſt of his companions, carrying the three muſquets with him as a valuable acquiſition.

From what has been ſaid concerning theſe barbarians, of whom we ſhall have ſtill more to ſay when we come to treat of Aſiatic Tartary, it appears that the Ruſſian empire, is like an unwieldy body with a ſmall head. The extent of territory is too large for government to take proper notice of the conduct of

all the inhabitants; and the civil power is ſtill weak, there being yet no fixed body of laws, for the preſervation of property and protection of ſociety. This extenſive empire would be greater in power and more rich in commerce, if its territories were leſs, and its ſubjects not ſo numerous. It is very probable, however, that it is riſing from obſcurity, on the decline of ſome of the greateſt European powers, and it will acquire glory, as well as ſtrength, in proportion to the virtue of the people.

The late war between the Ruſſians and the Turks has been of more ſervice to the latter than the former. The Turkiſh janiſſaries had been long unaccuſtomed to war, but here an unexpected event rouſed them from a ſtate of lethargic ſtupidity. It was the deſign of the preſent empreſs to eſtabliſh a port on the Euxine ſea, and from thence to open a paſſage into the Mediterranean. The French apprized the Turks of the deſign of the empreſs, and forces from all parts of the Ottoman empire were brought to oppoſe the Ruſſians. Moſt people believed that the Ruſſians would have prevailed, but they had a more dangerous enemy to engage with than the Turks. The warmth of the climate, and the luxurious way of living, fought and prevailed againſt men who had been brought up and inured to hardſhips in a cold mountainous country.

It was during this conflict which the Ruſſians had with the Turks, that a fleet of men of war for the firſt time paſſed through the ſound, and from thence up the Mediterranean as far as Conſtantinople. Very little ſucceſs attended this expedition, for the French continued to ſend aſſiſtance to the Turks, and all the Ruſſians could do after the loſs of many thouſands of men, was to conclude a peace on the beſt terms they could. The preſent Empreſs continues to give all poſſible encouragement to men of learning to come and ſettle in her dominions; but what with the difference of religion, and the unſettled form of government, there are but few that chuſe to go, except ſuch as we commonly call adventurers, who having no fixed habitations in the country which gave them birth, think all nations alike to them.

The religion of Ruſſia is what we call the Greek, and ſeems to reſemble that form of worſhip which prevailed in the Eaſtern church about the eighth century. Miſſionaries from ſeveral parts of Greece introduced their religion in Muſcovy about the middle of the eleventh century, and in moſt things there is but little difference between them and the Greeks in the Levant. They have archbiſhops and biſhops, with convents both of monks and nuns. None of the ſecular prieſts can be ordained till they are married, and if they ſhould marry after ordaination, they are depoſed. Every proteſtant who embraces their religion, muſt be re-baptiſed and anointed with oil, as was the caſe of the preſent empreſs and the grand ducheſs, both of whom were brought up Lutherans. They have vaſt numbers of convents near Muſcow, which was once the capital city, but there have ſo many foreigners ſettled at Peterſburgh that we find not many of them there except a few for form ſake. Originally the great land-holders had power to ſell their tenants, but in conſequence of their progreſs in refinement in manners, that barbarous cuſtom begins to ſink into oblivion. In a word, Ruſſia will either become a moſt flouriſhing empire, or it will ſink under the extent of its dominions. Its internal reſources are much contracted, and therefore prudence and well timed œconomy can only promote the intereſt of the people, and ſupport the dignity of the ſovereign.

TRAVELS FROM ASTRACAN THROUGH ASIATIC RUSSIA TO CHINA;

BY FATHER AVERIL, THE MUSCOVITE AMBASSADORS, &c.

THE antient geographers had ſo little knowledge of that vaſt extent of land ſituated between the river *Oby* and the famous Chineſe wall, that they either paſſed it over in ſilence, or invented fabulous ſtories concerning it. Neither have the modern geographers been more ſucceſsful, for moſt of them have told us, that in that vaſt country there are nothing beſides mountains and deſarts. For the diſcovery of that country we are obliged to the *Zaporogian Coſſacks*, a ſavage body of people, whoſe ſituation was originally beyond the Boryſthenes. Theſe having been oppreſſed by the Ruſſians, they formed a reſolution to ſhake off the yoke of ſubjection, and to effect this they marched in great numbers towards the Wolga, by the way of Caſſan, and from thence to the river Joliſh, where they built a city, which they named Tobol, from a river upon which it was ſituated. It was not long before they extended their conqueſts a great way into the country, but not being able to procure the neceſſaries of life, they once more ſubmitted to the Muſcovite yoke, in order to carry on a trade by diſpoſing of the ſkins of ſuch beaſts as are found in the country, but notwithſtanding their formal ſubmiſſion, yet they pay no more regard to the Ruſſian laws, than as it ſuits their own intereſt.

The moſt valuable creatures throughout Tartary are the ſable martins, and the manner in which they are hunted is very ſingular. Some companies of ſoldiers are ſent once in ſeven years into thoſe provinces where theſe creatures are found. They are found in general in the ſmall iſlands, or on the banks of the rivers, and the ſoldiers kill them with croſs-bows, leſt fire-arms ſhould ſpoil the fur. As the chief part of this hunting depends on the activity and diligence of the ſoldiers, ſo the officers are obliged to reward them with ſome of the ſkins. Some of theſe officers clear upwards of four thouſand crowns during the ſeven years they are there, and the common ſoldiers ſix or ſeven hundred, which are vaſt ſums in that country. There are alſo in this country black foxes as in Siberia, and theſe are conſidered as extremely valuable. Formerly the Muſcovites were contented with ordinary furs, except the ermines, which were uſed only by perſons of quality, but ſince the diſcovery of theſe more precious furs, they have been ſo eager in the ſearch of them, that by penetrating every year further into the country, they have diſcovered the roads leading to China. The firſt of theſe roads is through the territories of the great mogul, but the vaſt deſarts being much frequented by robbers, the journey is extremely dangerous. All thoſe who travel this road are obliged to go in caravans of two or three thouſand each, carrying fire-arms and other weapons along with them for their preſervation. Several of the French jeſuits have travelled this road, particularly Father Averil, to whom we are under many obligations for the curious diſcoveries they have made, and the information they have communicated to all the European nations.

The

Engraved for Moores Voyages & Travels.

The ſecond road is that uſed by the merchants of Bocara, who travel through the cities of Samarkan, Kabal, Kachemire, Tourſan, and ſo on through ſeveral other cities to Barantola, the moſt conſiderable city of great Tartary. This road, like the other already mentioned, is equally dangerous, for there are many ſandy deſarts, and vaſt numbers of Calmuc Tartars, who rob and murder all thoſe who are not able to defend themſelves; and yet it is often made choice of by the Ruſſians, in preference to any other. The third, and that which is moſt commonly uſed by thoſe who regard their preſervation, is from Tobolſko, along the banks of ſeveral lakes, yielding large quantities of ſalt; and this journey takes up about nine or ten days before they arrive at the great wall of China. The fourth road is along the banks of the river Oby, and this leads them to Szelingii Khun's reſidence, which is a journey of about eight weeks, from whence by means of a ſma'l preſent, they procure carriages and guards to conduct them to the great wall.

This is the road the Muſcovites have uſed ever ſince they were laſt at war with the Chineſe, and it is reckoned the moſt ſafe of any; for although the roads are ſometimes peſtered with robbers, yet here they ſeldom appear in large bodies; but all thoſe who travel along this road, muſt, before they begin their journey, provide themſelves with water, otherwiſe they will be in danger of periſhing. The fifth road is that which Spartavius the Ruſſian ambaſſador took to China; he paſſed through Siberia, to the city of Narezinſki, on the river Najunai, and from thence to Chiria, which is near the entrance into China. This road is the more ſafe, becauſe the travellers generally once in a day meet with the ſable martin hunters, who are well acquainted with the country, and who for a ſmall gratuity, are always ready to eſcort them.

The ſixth road is likewiſe through Narezinſki, and the country of the Monguls, and from thence to the Lake Dalai, out of which riſes the river Argus, which is navigable all along, and joins its current with the Turnour. Near the Argus are mines of ſilver and lead, and the prince, or Taiſo, whoſe territories border upon it, is obliged to find the Muſcovite caravans, which paſs that way three times in the year, carriages and horſes.

From Narezinſki, to the Lake Dalai, is a journey of upwards of a week, and near it we find a province, ſubject to China, the inhabitants of which cultivate the ground near the lake, and in three weeks carry paſſengers in waggons drawn by horſes, to the great gate of the Chineſe wall.

And hence it may be proper to ſay ſomething concerning theſe tribes of Tartars who inhabit the country near the borders of China, and over whom the Ruſſians pretend to exerciſe a ſovereign authority. This account is taken from the writings of the Jeſuits, who have been indefatigable in finding out new unknown countries, in order to make converts to the church of Rome. The firſt of theſe are the Bogdoi, and their country being of a large extent, they are divided into ſeveral tribes, or herds, each having a particular prince of their own. One of theſe provinces is called by the Ruſſians Dionerſki, and is incloſed between the eaſtern ſea, and the two great rivers Ebingala, and Yamour. They were anciently known to the Chineſe, but little regarded by them, till they made an irruption into that empire, and conquered ſix provinces, which induced the Chineſe to ſend for the Youſbec Tartars to aſſiſt them; but theſe ſettled the family of Jvina on the throne of China, and by the princes of that family, the empire was governed till 1386, when being expelled by the Chineſe, who enthroned the family of Tayminga, and they reigned till 1664, at which time the Dioughi Tartars again invaded China, and made an entire conqueſt of that kingdom. Their prince who took poſſeſſion of the throne of China, was named Cuncki, and his poſterity are at this time ſovereigns of that empire, of whom more ſhall be mentioned afterwards.

Throughout the whole country of Bogdoi, and ſeveral other of the neighbouring provinces, ſubject to Ruſſia, all the houſes are built of earth, and their trade conſiſts in exchanging with the Muſcovites ſables of martins and black foxes ſkins. In their features they are much like the Crim Tartars, but they are more polite in conſequence of converſing with the Chineſe. They are all heathens, and worſhip many different idols, but they have no regular ſyſtem of theology. They wear croſſes about their necks, called lamas, and ſome of them pretend to pay much regard to the Chriſtian religion. Probably it had been once planted among them, but at preſent there are no remains of it to be found; for, when the Jeſuits began to enquire into their ſentiments, they found them extremely ignorant. Their language is a ſort of corrupt Perſian, but they have ſixty letters in their alphabet, and, like the Chineſe, read from the top to the bottom. Their rivers of Argus, Yamour, and Ebingala, produce great ſtore of rubies and pearls, which they ſell to the Ruſſians, for things of a more uſeful nature, and they know the uſe of gunpowder, although it does not appear that they avail themſelves of that deſtructive invention.

Next to the Bogdoi, is a vaſt extent of land to the weſt, called Mongul, beginning at the eaſtern countries of the river Yamour, and extending weſtward, to the dominions of the Calmuc Tartars, from whom they are ſeparated by great deſarts. Upon the ſouth eaſt it borders upon Turqueſton, and reaches to China on the eaſt. Theſe people live under the government of their Taiſos', or Khans, but as they are all of one family they live together on the moſt amiable terms, and aſſiſt each other againſt all their enemies; not excepting even the Ruſſians themſelves, who vainly call them their ſubjects. As they inhabit neither towns nor villages, ſo they live moſtly on plunder, by making excurſions into thoſe territories near the Lake Dalai. As their grounds are watered with a great many rivers that fall into the Szelinga, they are very fertile, fit for paſture, and rich in cattle, which makes them live on good terms with the Muſcovites, to whom they pay a ſmall annual tribute. Amongſt themſelves they are peaceable, but when it happens that a quarrel ariſes, it is referred to the deciſion of the judge, whom they call contriſta, and one of that character attends all their clans when they go out to war, or to plunder their neighbours.

The Monguls bear a conſtant grudge againſt the Bogdoi, ever ſince the latter had the addreſs to plant one of their colonies in China, and to give ſovereignty to that vaſt empire. But as they are not acquainted with the uſe of fire arms, ſo they are not in condition to do them any conſiderable miſchief, any farther than to drive away their cattle and ſell them to the Ruſſians, and this practice is very common.

One of the chiefs of the Monguls is called Otchiourtiçane, and he pretends to derive his origin from the great Tamerlane, and this is not in the leaſt improbable. This prince has vaſt power over thoſe who are in poſſeſſion of ſmaller territories, and even the Ruſſians who pretend that he is ther vaſſal, are often obliged to court his friendſhip. He lives in great magnificence, and is ſerved with as much ceremony and grandeur as the emperor of China. His ſubjects have no fixed habitations, much leſs either towns or cities, but live in the fields under tents made of ſkins, and theſe are very commodious and neat; for as they lead a vagabond wandering life, they are the quickeſt in the world at encamping. Some time ago one of theſe chiefs of the Monguls raiſed an army to invade Ruſſia, and advanced near to Aſtracan. While he lay encamped in that neighbourhood, he was viſited by a French officer, who found that he had no leſs than one hundred thouſand horſe; but he contradicted the common accounts that this prince was ſerved in gold and ſilver, which would be very ſurpriſing indeed, when we conſider that the Tartars have but few artiſts among them.

All the inhabitants of Ruſſian Tartary, are Pagans,

7 AP 56

Engraved for Moore's New & Complete Collection of Voyages & Travels.

An IMAGE worshipped by the CHINGULAIS as the Deity who presides over Health, Wisdom, Plenty, &c.

and they have a ſupreme high prieſt, whom they call Dalac Lama, but this name is a quality, for even the Dalac is ſuppoſed never to die; which has ſome affinity with the notions entertained by the Egyptians, concerning their God Apis, who was no other than a bull, and when he died another was ſubſtituted in his room to deceive the people.

This Dalac Lama, has his temple in the fortreſs of Beatabac, near the city of Barantala, the metropolis of the kingdom of Tunchut; lying between China and Perſia. It is in a manner impoſſible to deſcribe the veneration ſhown to him; all the Tartars ſend preſents to him annually, and ſometimes they carry him into China, where he is worſhipped as a god. As ſoon as he dies, his prieſts make choice of one of their own body to ſucceed him; ſo that it is not a difficult matter for them to make the vulgar Tartars believe that he is immortal. It is rather more than probable, that this Dalac Lama, is no other than the famous Preſter John, of whom we have read ſo many fabulous accounts in hiſtory; and when we conſider the ſtories related of him, it will be more rational to look for his reſidence in Aſia, than in Abyſinia, where he certainly never was. To make this the more evident, it is to be obſerved, that when John II. king of Portugal, had ſent Peter de Coulan to make the diſcovery of the paſſage by ſea to the Eaſt Indies, he gave orders in the moſt particular manner, to the ſaid Coulan, to make an exact enquiry after the famous Preſter John, ſo much talked of in Europe, without its being known in what part of the world he reſided. Purſuant to the king's commands, Coulan advanced a great way into the Indies, where after the moſt diligent enquiry he poſſibly could make, he could not hear one word of Preſter John, but on his return home, coming to Cairo, he was told that in Ethiopia, beyond Egypt, reigned a certain potent prince, a profeſſed protector of the Chriſtians, and that whenever he appeared in public, he had a croſs carried before him.

As theſe characters bore a near reſemblance to thoſe of the prince he was in ſearch of, he thought himſelf ſufficiently informed of the truth of what he eagerly ſought for, and believing this monarch to be the ſame Preſter John, king of the Abyſinians, he ſent an account thereof to the king his maſter, containing a relation of his diſcovery. The king received the news with tranſport, and next year, when his ſhips ſailed to Africa, he gave orders to make further enquiries, and they, upon their return home, ſpread the news through every part of Europe, that they had found the country and city of the famous Preſter John; ſo that the ſtory was believed, and ſeveral accounts were written concerning this extraordinary perſon, but all ſtuffed with the groſſeſt falſhoods. Father Kircher juſtly obſerves, that none of the Abyſinian hiſtorians make any mention of this Preſter John, and therefore it is reaſonable that we ſhould look for him in Aſia.

But this ſubject is of too much importance to be ſlightly paſſed over, eſpecially as we find ſomething of this Preſter John in moſt of the writings of our ancient travellers, although they generally differ from each other. Some of the Jeſuits tell us, that the emperor of the Tartars having ſent his ſon to conquer the Leſſer India, which he effected, he advanced with his victorious army, againſt the Greater India, at that time inhabited by Chriſtians, where he was overthrown by their prince, commonly called Preſter John. This agrees with what Paul the Venetian, another Jeſuit, ſays on this ſubject, and he reſided ſeveral years in the palace of the Great Khan of Tartary, and was better acquainted with that country than the reſt of his brethren. It is certain, that by Kitay, the Ruſſians underſtand that country which runs from the Wolga to China; and the only objection againſt this opinion is, that the ſubjects of the ancient Preſter John, are ſaid to have been Chriſtians, whereas the modern Tartars are all heathens, except a few Mahometans who reſide amongſt them. But this objection is ſoon anſwered, for if any credit can be given to hiſtory, there are many nations now in the world ſitting in darkneſs under the power of idolatry, whoſe anceſtors were once illuminated with the glorious light of the goſpel. It is generally allowed that Thomas the apoſtle preached the goſpel in India; for there is a province northward of China, where the inhabitants are ſtill called by way of deriſion, the Diſciples of St. Thomas, although it does not appear that they have any veſtiges of Chriſtianity left among them.

Upon the whole, it appears evident that this Preſter John, ſo much talked of, was one of the Tartarian princes in the middle ages, ſince the incarnation, and that he, as well as his ſubjects, had ſome faint notions of Chriſtianity, and the name itſelf ſeems to have been corrupted by oral traditions among the ignorant barbarous inhabitants. And as knowledge decreaſed among the Tartars, nothing was more eaſy than for ſome of their prieſts, who were ſlaves to ſuperſtition, to make the natives believe, that Preſter John was ſtill alive, and as ignorance encreaſed, he became an object of idolatry!

It is true, the Dalac Lama is no temporal prince at preſent, as Preſter John was of old, but this muſt be the conſequence of ſome revolution, of which hiſtory is ſilent. He is ſtill at the head of religion, and he is called in the language of the country, Lama, which ſignifies a croſs, and all his followers wear croſſes.

Beſides theſe Tartars before mentioned, there are ſeveral other tribes or hordes, ſuch as the Oſtiaki, the Braſki, the Jacuti, and the Tongueſi, who inhabit about the lakes, betwixt Siberia and the Monguls. As they ſpeak the ſame language, and wear the ſame habits as the Calmucs, ſo it is probable they are of the ſame original, but having, in their roving manner, ſettled near to Muſcovy, became ſubject to that empire, rather from motives of ſelf-intereſt, ariſing from the benefit of trade, than with any deſign of becoming ſlaves. They are generally of a ſwarthy complexion, inclining to an olive colour, with broad flat faces, high above, and falling in below. Their noſes are flat, their eyes are ſparkling, and they ſuffer their beards to grow. Their habits are ſheep-ſkins, or ſkins of any other animals ſewed together, in the ſhape of veſts, cloſe to their bodies, having a cord about their waiſts, inſtead of a girdle, whereunto they faſten their bow and quiver, wherever they go. They ſhave their heads, leaving a ſmall tuft of hair on the middle of the crown, and on their heads they wear a round bonnet of the ſame ſtuff with the reſt of their habit, and to the top of their bonnet is fixed a piece of cloth in the form of a cockade, to diſtinguiſh the horde to which they belong. Thoſe who live in the countries where they catch martins, make themſelves cloaths of their ſkins, as alſo of dogs ſkins, of which they have vaſt numbers.

Sometimes they wear double veſts, and when that happens, the ſkins of the martins, although much eſteemed, are kept within next to the body, and thoſe of the dogs without. And natural ſenſe in thoſe people, who are little better than ſavages, points out an excuſe for this part of their conduct. They ſay, that as the dogs aſſiſt them in taking the martins, ſo they are more noble creatures than the latter, and that the martins, for their cowardice, ought to be concealed, and the dogs for their boldneſs, expoſed to public view. Here is philoſophy, without education, and from theſe ſavages we may learn that all the difference between mortals in the exertions of mental powers, conſiſts only in the aids that we receive from human learning, ſelf knowledge, and an acquaintance with the world.

From what has been here ſaid, it appears evident, that the Ruſſians could be under no great difficulty in opening a road and eſtabliſhing a communication between their own empire and that of China; for although it is not an eaſy matter to ſubdue populous nations of ſavages, yet when theſe ſavages are divided

in ſmall hordes, political and deſigning princes can eaſily ſet them againſt each other. By theſe means the power of theſe hordes is weakened, and they become an eaſy prey to thoſe who have ſtanding armies inured to hardſhips, and acquainted with military diſcipline; for as the Ruſſians know the art of war, and are acquainted with the uſe of gun-powder, it could not be ſuppoſed that thoſe ſavages ſhould be long able to oppoſe them, and yet the Ruſſians have never been able totally to ſubdue them.

It would be much for the intereſt of the Ruſſians to erect forts for the defence of their conqueſts, the furthermoſt of which is called Albaza, not above three weeks journey from Peking, although above three months from Moſcow. It is ſeated on the banks of the River Yamour, which occaſioning a difference between the Ruſſians and the Chineſe about the privileges of pearl fiſhing and hunting of ſables, broke out at laſt into a war; but the Ruſſians conſidering the diſadvantages they lay under in expoſing an army to be deſtroyed for want of proviſions in ſo vaſt a country, thought it moſt convenient to accommodate the matter in an amicable manner, by leaving things in the ſame ſtate as before.

The Ruſſians in journeying to the eaſt, commonly ſet out in the months of February, the ſnow being then hard, and they are drawn by rein deers on ſledges properly conſtructed for that purpoſe. They wait near the borders of Siberia a few days to ſee whether it will thaw, which if it does, they ſail in boats down the River Oby, but if the froſt continues they go on by land to the country of the Oſtiaks, a horde of Tartars, under the juriſdiction of the Ruſſians. Here, if the thaw does not overtake them, they ſend back their carriages to Toboloſko, which they change for others, and in order to make the rein deer run as faſt as poſſible, there is a great dog behind each of the carriages, who barks and ſcares the creatures when they begin to be idle. But the moſt ſurpriſing thing is, that in the open country all the way between Siberia and Mount Caucauſus, the travellers to eaſe their beaſts have a method of putting up ſails to their ſledges, which, if the wind be favourable, carries them over the ſnow and frozen rivers. In this manner they travel over the ice to the River Geneſſai, where the Ruſſians have built a city of the ſame name. There they take ſhipping on the river, which carries them to two other rivers, Tongueſſi and Angara, which runs out of the Lake Baſkala. The waters of this lake are ſo clear, that although very deep, yet a perſon can ſee the ſtones which lie at the bottom. This lake is ſurrounded by lofty mountains, but although it is not above eight leagues in length, yet, on account of ſome troubleſome winds, it often takes them eight days to croſs it.

Having paſſed the lake, if they intend to go further by water, they embark in ſmall veſſels on the River Schelinga, which carries them to a city of the ſame name, built by the Ruſſians for the convenience of their caravans; but when they intend to go by land, they buy dromedaries and mules from the Mongul Tartars. This being one of the principal roads which the Ruſſian merchants take to China, makes it appear, that all that country, known formerly by the general name of Great Tartary, is not ſo unpeopled as many have repreſented it.

They have many fine rivers, which produce abundance of precious commodities, ſuch as pearls, ginſong roots; and in many parts of the country there is plenty of rhubarb, caſtors, azure-ſtone, with ſables, martins, black foxes, and lead mines. The Ruſſians have found out a kind of ivory, which for its whiteneſs and ſmoothneſs, ſurpaſſes any that is brought from India. This they are furniſhed with by a certain amphibious creature, called behamoth, found moſt commonly in the River Laka, or near the ſhore of the Tartarian Sea. "I have ſeen (ſays Father Avaril) ſeveral of theſe creatures at Moſcow, and their teeth were about ten inches long, and two in diameter. Theſe teeth are more beautiful than the elephant's; and they have a remarkable quality in ſtopping the blood of wounds. The creature is very fierce, and it requires much labour and trouble to hunt him. The Tartars uſed to carry along with them their whole families to the chace, and it frequently happened that proceeding too far upon the ice, many hundreds of them have periſhed.

Among the many rivers that lie beyond Siberia in Tartary, the four following are the moſt noted, the Oby, the Geneſſai, the Lena, and the Yamour. The moſt weſterly of theſe rivers is the Oby, and it is extremely dangerous by reaſon of the vaſt mountains of ice lying at the mouth of it, which prevents ſhips from getting into the ſea. The next to the eaſt, is the River Geneſſai, which, beſides the mountains of ice in common with the Oby, it labours under another inconvenience, that of being incommoded with ſeven cataracts or water-falls, which puts the merchants to vaſt trouble in loading and unloading their veſſels. The River Lena has a more uniform current, but inſtead of ice, it is ſo much peſtered with rocks and ſhelves at the mouth, that it is only paſſable for ſmall boats. The River Yamour, the moſt eaſterly of all, which falls into the ſea of Japan, is not ſubject to thoſe inconveniencies, but where its waters mix with the ſea, there grow ſuch prodigious quantities of bulruſhes, and thoſe of ſo large a ſize, that the entrance is extremely difficult.

The Ruſſian ambaſſador who travelled over Tartary to China, has related many curious particulars, which will not ſurpriſe the reader that he went in a public character, and a numerous retinue to attend him. "Walking one day along the banks of the Pultou, (ſays Brand, the ſecretary) we ſaw at a diſtance ſome of their huts, and among them one ſomewhat bigger than the reſt, which raiſed my curioſity to go and take a view of it, having obtained leave of the owner for a ſmall preſent of bread and ſalt. I entered without any ceremony, and found three women lying on the ground, who roſe up as ſoon as they ſaw me, and by their geſtures, ſufficiently teſtified their diſpleaſure, but as I had ſecured the owners good will, I went forward, and took a view of every thing in the hut. I was afterwards told that thoſe were the wives of one of their princes or chiefs; but their furniture appeared but little ſuitable to ſuch a rank. The only thing worth notice in the hut, was their domeſtic idol, which they call their *Sheitan*. It was made of wood, about a yard in length, of a moſt dreadful aſpect, for its head being covered with an iron plate, it appeared as black as a chimney, occaſioned by the incenſe they offer to it; beſides that, its garments were nothing but a parcel of woollen rags of different colours. One day, the ambaſſador being in a good humour, ordered one of his ſervants to bring out a wooden machine, made in the ſhape of a drum, ſo curiouſly contrived, that it beat by means of clock-work within. He immediately ſet it a beating, which ſo much frightened the Tartars who were preſent, that they all ran away; but recollecting themſelves, they imagined it to be a god, and returned and worſhipped it in the ſame manner they do their own idols. They begged earneſtly that the ambaſſador would let them have it, but he did not chuſe to comply with their requeſt, leſt it ſhould encourage their idolatry.

Their manner of devotion is the moſt ſingular that can be imagined, for inſtead of ſaying their prayers, they whiſtle them, clapping their hands together, and knocking their heads againſt the ground: when they ſwear, they lay their hands upon a bear's ſkin, and each of the parties drinks a cup of horſe's blood. They have ſuch reſpect for their idols, that in all public entertainments, the firſt diſhes are ſet before them, and when they neglect that ceremony, they believe that the victuals would rot or turn to worms in their bellies. Their chiefs are much addicted to tobacco, and they take it after a manner peculiar to themſelves. Having filled their mouths with water, they draw the ſmoak from the pipes into the

the water and ſwallow it, which is the reaſon that frequently at taking it, they fall down in a fit, but ſoon recover themſelves, and it does not affect them any more at that time.

The ambaſſador having reſted himſelf two days at the village Buhutſha, began his journey through the northern deſart, and did not find any houſes in it except a few huts, although it took up eight days to croſs it. At the eaſtern extremity of this deſart, there is a numerous tribe of Tartars, called Tongueſſes, who were formerly reputed for their valour, but they have been for many years ſubject to the Ruſſians, and pay an annual tribute. They are, generally ſpeaking, well proportioned, and have ſtraight limbs, and there is no difference between the dreſſes of the men, and thoſe of the women. They have a cuſtom which ſeems peculiar to themſelves, which is to ſtitch the cheeks of their children while infants with black thread, through and through in different forms, ſome being like croſſes, and others ſquare, or which ever way they chuſe, and this they conſider as a badge of honour and antiquity, tranſmitted to them by their anceſtors, and theſe marks they retain as long as they live.

Their huts are made either of the ſkins of rein deer, or of ſome other wild beaſts, or of the bark of trees, and in theſe miſerable places they live, enduring the ſevereſt winters, being inured to cold from their birth; for no ſooner are they born, than they are laid into cold water, in the ſummer, and on the ſnow, in winter. Theſe Tartars, in this province, are divided into three hordes; the firſt live by plundering their neighbours, and they are very expert horſemen; the ſecond ſubſiſt by hunting, and the third are ſo barbarous, that in their way of living, they reſemble beaſts, rather than men. Their idols are all of wood, every one having his domeſtic god, or patron, unto whom they direct their devotions: but if they do not obtain what they pray for, they make nothing of throwing them out of doors, where they muſt lay till they procure an anſwer to their prayers, when they are again taken into the houſe, and have an offering made to them. In all places where five or ſix families live together, they jointly maintain a Shamman, or Prieſt, and at their meetings, this prieſt makes his appearance in a habit, having upon it all the figures of lyons, bears, ſerpents, adders, and ſuch like, which being made of iron, they ſometimes weigh two hundred pounds, and the prieſt beats on an inſtrument like a drum, while the people make the moſt diſmal outcries and lamentations, pretending that they ſee apparitions under the forms of ravens, and ſome other birds.

In the mean time the prieſt leaving his drum, pretends to fall into a trance, which the people conſider as a ſure ſign of his ſincerity, and while he remains in that poſture, they believe him to be converſing with ſpirits. Notwithſtanding their wretched way of living, they maintain a plurality of wives, eſpecially the chiefs, who buy the young women from their parents, for a few rein deer each. He that is to take an oath, muſt drink the blood of a dog, ſtabbed in the fore legs for that purpoſe, and the blood is ſuffered to run out till the creature dies. They neither bury nor burn their dead, but hang their bodies upon trees, till they putrifie. The worſt curſe they imprecate upon thoſe who offend them, is, that they may be taken into Europe by the Ruſſians, and forced to cultivate the ground; ſo that although they pay a ſmall tribute of ſkins annually, yet it appears that the Czars, are rather their nominal than real maſters.

As the ambaſſador approached nearer the borders of China, he ſtopped at a village, where there was a ſheep and a goat killed, and fixed on a tree with their heads upwards, being intended as ſacrifices to the heavenly bodies. Mr. Brand, the ſecretary, made ſome enquiry into the religion of thoſe Tartars, but all he could learn was, that they were Pagans, who offered a ſheep and goat every year, to the Creator of the Heavens; and they adored the ſun. They are very rich in cattle, particularly in camels, whom they ſell to the Ruſſians, who travel towards China.

In eight days after they arrived at Udinſky, a Ruſſian fort, and were met a mile from the place by the commanding officer of the garriſon, who treated them in the moſt hoſpitable manner. This fort is ſituated on a hill fortified in the Ruſſian manner, and is conſidered as a place of great ſtrength, and the chief bulwark of the province of Dauria; for although it has been often attacked by the Mongul Tartars, yet they have never been able to take it. In this place the ambaſſador and his retinue were obliged to remain three weeks, to provide themſelves with camels and horſes, and with ſuch other neceſſaries as were wanting to conduct them over a great deſart, through which they had to paſs.

Having procured what they wanted, they entered the deſart, on the 6th of April, with a caravan conſiſting of 250 men, ſome hundreds of camels and horſes, 400 waggons; the camels carrying about 600, and the horſes about 250 weight a piece. As the Mongul Tartars are generally abroad in large parties, thoſe in the ambaſſadors retinue were obliged to be conſtantly upon their guard, and for that purpoſe when they pitched their tents at night, it was done in a circular form, that centinals might be the more conveniently placed round it, at a proper diſtance from each other, to give the alarm to the others if there ſhould happen to be any neceſſity for it. This precaution having put it beyond the probability of the Tartars doing them any harm, they ſoon found themſelves moleſted in a manner they little expected. The Mongul Tartars being well acquainted with the nature of the country, ſet fire to the graſs, in order to prevent them from procuring proviſions for their cattle. Several of their horſes and camels died for want of ſubſiſtance, which was very agreeable to the Tongueſſes, a certain horde of Tartars, who inhabit that deſart, and live chiefly on horſes fleſh, as the moſt delicious food in the world. Theſe Tongueſſes, whom the Ruſſians call their ſubjects, know little or nothing of any civil government whatever. They burn the bodies of their dead with all their moveables along with them, and if any of them become decripped before they die, they burn them upon a high mountain, and impale their horſes beſide them. Having croſſed the deſart, they came to the city of Nerkinſkoy, ſeated on the banks of the river Neſtza, where there is a colony of 600 Tongueſſes, ſettled by Peter the Great, and they have fortified the place againſt the Mongul Tartars. In this city the ambaſſador was obliged to remain two months, in order to procure carriages and horſes, having loſt a great number in croſſing the deſart. Beſides the guard they had already with them, they were allowed 50 Coſſacks, who were to conduct them into China, and eſcort them again into the Ruſſian territories.

Leaving Nerkinſkoy with part of the caravan, they reached the ſame night the Schilaka, which they ferried over, but as this was their general rendezvous, they were obliged to wait three days, till the reſt of the caravan came up.

At laſt they arrived, being in all about 600, and every one having had his ſhare of bread, beef, and veniſon, they proceeded on their journey, for three days together, through a vaſt boggy foreſt, and three days more through a dry barren deſart, and two days more through another deſart, which brought them to the river Samur, where they pitched their tents, of which they had no more than 50, the road having been ſo bad that many of their camels were not able to travel. Here they refreſhed themſelves, and ſetting out for the city of Arguin, where they arrived in ten days after, but very much fatigued. Near this city is a river, from which it takes its name, and the ſtream is ſo rapid, that it was four days before the whole caravan could paſs it. This river is in ſome parts the boundaries between the two empires

pires of China and Ruſſia, for the city of Arguin is the laſt frontier of the province of Dauria, ſubject to the juriſdiction of the Ruſſians.

As the Mongul Tartars are always roving abroad for booty, the ambaſſadors caravan was obliged to keep a watchful eye wherever they went, but as thoſe Tartars are for the moſt part, puſillanimous cowards, they were not much afraid of them. The ambaſſador diſpatched twenty of his Coſſacks to the town of Naun, on the frontiers of China, in order to know in what manner he was to be received, but they could not proceed in leſs than four days, becauſe the rivers were ſo much ſwelled, that they had overflown their banks, and rendered it dangerous for thoſe Coſſacks to attempt paſſing them, although they are ſeldom afraid of the moſt threatening dangers.

About ten days afterwards the Coſſacks, with the meſſengers that had been ſent to the city of Naun, returned and brought advice to the ambaſſador, that there was a perſon of rank come from Peking, to meet him and receive him with the honours due to his rank. While they were waiting for the return of theſe meſſengers, a Ruſſian convoy came up, conſiſting of 300 camels. They were returning from China, where they had been to purchaſe goods, and to diſpoſe of the commodities of their own country. They ſpent two days together, entertaining one another in the moſt friendly manner, for few things can be more pleaſing, than for the natives of a country to meet each other in a foreign land.

Theſe friends having parted, the ambaſſador with his retinue proceeded on his journey two days longer through many fruitful plains, and encamped near the ſource of the river Gull, which is another of the boundaries, between Aſiatic Ruſſia, and China. For ſeveral days after they travelled through the moſt delightful wood, the branches of the trees covering heir heads. Here were likewiſe many filbert trees, and although not ſo high as thoſe in Europe, yet they were ſo loaded with fruit, that they afforded an agreeable entertainment to thoſe people in the caravan, while the camels and horſes were refreſhed by the ſweet graſs, that grew along the ſides of the paths. At laſt they were received by the Chineſe meſſengers from the emperor; but of this we muſt treat afterwards, in our account of the different travels into that extenſive empire.

Thoſe other parts of Aſiatic Ruſſia, which we have not yet deſcribed, are ſuch as lay near the borders of Perſia, along the banks of the Wolga. The firſt place deſerving our notice, is the iſle of Dolgoi, which is all ſandy and barren, producing nothing for the ſupport of human life, except what is brought forth by the ſevereſt induſtry of the inhabitants, in their gardens, and in ſome ſmall ſpots of ground. The continent on the right hand is no leſs barren, but on the left, towards the river Jaika, are ſome very good paſtures. On this ſide the Wolga is a very long heath, extending ſeventy German leagues to the Euxine ſea, and another extending eighty leagues to the Caſpian ſea, the laſt of which generally takes up two weeks to travel over it. The only thing theſe barren heaths produce, is ſalt, of which there are many valuable pits, and it is a uſeful article of commerce, for the Ruſſians in their dealings with the eaſtern Tartars, who purchaſe large quantities of it for the preſervation of their fiſh, upon which they live great part of the winter.

This ſalt is baked by the heat of the ſun, which leaves it to ſwim upon the ſurface of the water of about half an inch thick, much in the form of rock cryſtal, and in ſuch prodigious quantities, that for the value of a halfpenny, one may be permitted to take up of it about forty pounds weight, one cruſt being no ſooner taken off, but another comes up. This ſalt is much eſteemed, but we do not find that any of it is ſent into Europe, becauſe it anſwers the end of the merchants to a better purpoſe to ſend it among the Tartars, who pay them for it in the commodities of their own countries.

The Wolga between Aſtracan and the Caſpian ſea abounds ſo much with fiſh, that the gentlemen in the retinue of the ambaſſadors from the duke of Holſtien, bought twelve large carp for two-pence, and 200 young ſturgeons for half a crown; lobſters are here in infinite numbers, becauſe the Muſcovites and Tartars do not eat of them. The numerous iſles in the river afford a great variety of wild-fowl, eſpecially wild geeſe, and wild ducks, which the Tartars hunt with falcons and hawks; and in the breeding of theſe birds, the Tartars are very ingenious. Theſe Tartars are very much addicted to the hunting the wild boar, and becauſe their religion does not permit them to eat it, they ſell it to the Muſcovites.

The fruits here are much inferior to thoſe which grow in Perſia, but ſome of them are much eaten, particularly a ſort of melons, called Arpus by the Tartars, becauſe they are of a cooling nature. The ſeeds from which they grow were firſt brought from the Indies, and the fruit is pleaſant both to the ſight, and the taſte: the rind being of a lively green colour, the meat of a pale carnation, and the ſeed black, and yet for all that, they are ſold as cheap as the worſt of our apples.

Grapes were but lately introduced here by means of ſome Perſian merchants who brought the firſt ſamples of them to Aſtracan, and being ſold to an old monk, who happened to be there on a viſit, he carried them home to his convent, and planted them in his garden. Peter the Great, having taſted ſome of theſe grapes, ordered the monk to propagate them with unremitting induſtry, which he did ſo effectually, that ſome years ago when the Holſtien ambaſſadors viſited the place, no houſe was without its walks or arbours of vines. This turned ſo much to the advantage of the inhabitants, that the landlord where the ambaſſadors lodged, told them, that the year before, the vines about his houſe had yielded him one hundred crowns, and that ſome of the vines in ſmall gardens had yielded no leſs than ſixty pipes of excellent wine.

This monk, whoſe name will ever be treated with reſpect in the country, was born in Auſtria, in Germany, and being taken priſoner by the Tartars, was ſold to thoſe Muſcovite Tartars, and by them to the Muſcovites. Having embraced the religion of the Greeks, he turned monk, and became the ſuperior of a convent. He lived to a great age, and was much eſteemed and reſpected by all who knew him. And when any ſtrangers came to viſit him, he treated them with all that his convent could afford, and with ſuch pleaſure as none but the virtuous feel.

The Tartars of Nagalia, near the Wolga, were formerly governed by their own princes, till they were conquered by the Muſcovites, about the year 1554, and now there are ſo many Muſcovites among them, that they begin to live on amicable terms, many of the Tartars having embraced the religion of the Greek church. Theſe Tartars are much more refined in their manners, and leſs ferocious than thoſe we have mentioned inhabiting near the borders of China; but they ſtill retain many of their antient cuſtoms, ſuch as eating the fleſh of horſes, and drinking the blood of thoſe ainmals when they are taken ſick. When they go out to war, they are all mounted on horſe-back, and when they come to a deep river that cannot be forded, they diſmount in an inſtant, and plunging themſelves into the water with their horſes bridles in their hands, ſwim acroſs with as much eaſe as if they were marching on land.

In all that part of Tartary which lays ſouth of Aſtracan along the banks of the Wolga, the people in winter aſſemble in troops together, and lodge at a proper diſtance from each other, that they may be in a condition to aſſiſt each other againſt the Calmucs, who in that ſeaſon generally pay them a viſit to rob them of every thing they can carry away. For this reaſon the Ruſſians furniſh them with arms and ammunition

ammunition to oppoſe the common enemy. This is the more neceſſary, becauſe if they had not arms, they would be in danger of being murdered, and robbed of all they have in the world; and the Calmucs are obliged to return ſoon from their expeditions, leſt a thaw ſhould take place, and then their journey would ſubject them to be attacked by thoſe whom they came to rob. The Tartars along the banks of the Wolga, who acknowledge the Ruſſians to be their maſters, are obliged to furniſh the empreſs, or the ſovereign for the time being, with a certain number of troops, and this they are to do whether he is attacked in his own dominions, or makes war upon thoſe of any other prince. It is true, they have provinces of their own; but in order to ſecure their allegiance to the Ruſſians, they are obliged to give up hoſtages, who for the moſt part are kept confined in the caſtle of Aſtracan, where they are treated in a princely manner, in order that, when they are exchanged in the room of others, they may carry home with them a favourable report to their own country. This is attended with another advantage; for as many of theſe hoſtages are induced to embrace the Greek religion, ſo when they return home, it is no difficult matter for them to make converts among their countrymen, and this is perhaps one of the wiſeſt maxims in the Ruſſian government.

The Crim Tartars are generally low of ſtature, inclining to fat, with large faces and little eyes. They are of an olive colour, and the men have wrinkles, with ſhort beards, and their heads ſhaven. The men wear a garment of coarſe cloth, with a mantle of ſheep-ſkin over it, having the woolly ſide outward, and a cap of the ſame materials. The women are tolerable in their ſhapes, and they moſt commonly wear a robe of coarſe linen cloth, with a coif on their heads, round about which hang a great number of the ſmalleſt ſorts of Ruſſian coins.

The ſecretary to the Holſtein ambaſſador ſays, that while he was there, he did all he could in order to find out their manners and cuſtoms.

"They have a cuſtom (ſays he) of devoting their children to that god, or idol, who is the object of their worſhip: and if the child is a girl, ſhe is diſtinguiſhed from others by a ring with a ruby, hanging from her noſtrils; but if a boy, he wears it in his right ear. It is not unneceſſary to obſerve, that this cuſtom prevails in many other parts of the world, particularly in Perſia.

"They live upon what their cattle, their hawking, and fiſhing ſupplies them with, and their cattle are exceedingly large. Their ſheep have large fat tails, with flat noſes, and hanging ears like our ſpaniels. Their horſes are ſmall, but capable of undertaking any fatigue; and their camels have two hunches on their backs, which ſeems to be peculiar to this country and Perſia; for we did not ſee any of the ſame ſhape in the other parts which we viſited. We made particular enquiries into their manner of living, and we found that it was moſtly on fiſh, dried in the ſun, which they uſe inſtead of bread, though the better and more opulent ſometimes make cakes of meal, rice, and millet, and fry them in oil or honey. They eat the fleſh of camels and horſes, and they drink either water or mare's milk; but the latter is the moſt eſteemed, and they treated us with it as a mark of reſpect."

As we proceeded towards the Caſpian ſea, we had frequently occaſion to ſtop for proviſions; and no ſooner did we ſtop for that purpoſe, than ſome of the Tartarian princes came to viſit us, and preſented us with all ſuch neceſſaries as their country could afford, ſuch as melons, apples, apricots, peaches, and grapes, in exchange for which we preſented them with diſtilled waters and ſweet-meats. As we proceeded farther down the river, we met with ſtill greater civilities, particularly one day, when we were in want of proviſions, we were obliged to ſend our ſhallop on ſhore, to try whether the natives would let us have any of thoſe things we were in need of, but this they could not do without permiſſion from their prince. Accordingly we made application to him, and he came on board our veſſel, attended by forty domeſtics, and having along with him another prince, who ſeemed to be his relation. The firſt was a tall, comely looking man, who ſeemed about twenty-eight years of age, of a fine complexion, and merry diſpoſition, being richly clothed after the faſhion of the Muſcovites.

We received them with ſound of trumpets, under the diſcharge of three pieces of cannon, and after a ſtay of two hours in the ambaſſador's apartment, and viewing our veſſel, he was reconducted on ſhore; for although we had prepared a collation for him, yet he politely refuſed to eat any of it; but with the utmoſt condeſcenſion ordered his people to bring us what proviſions we wanted. His preſents conſiſted of rice, millet, and ſeveral ſorts of dried fruits, with twenty flitches of bacon, and a great number of large fiſhes dried in the ſmoak, a barrel of beer, and two or three barrels of mead.

Next day the Tartarian prince deſired the ambaſſador would honour him with a viſit; and accordingly we rowed our boat to the ſhore, and were received by him in the moſt polite manner.

We were conducted to an apartment prepared for us without the city, where we were met by the prince, who attended us to an apartment richly hung with tapeſtry, which is common in that country, becauſe they purchaſe it from the Perſians. There was a noble collation of fruits prepared for us, and we were ſerved with wines, beer, mead, and ſpirituous liquors reſembling what the Europeans call Geneva. The prince in the moſt humble poſture drank the health of the Czar; and ſuch was the reſpect he had entertained for him, that he would not put on his cap till he had drank to all his pages. Here it was that we met with the Muſcovite ambaſſador, or rather deputy; for although he is called an ambaſſador, yet he enjoys a power ſuperior to that name. His buſineſs is to enquire into the public revenues, that he may ſend an account thereof to Peterſburgh, and according to his account of the ſtate of affairs in the province, the taxes are regulated. He does not exact the tribute himſelf, but another perſon of an inferior rank is ſent to do it, who acts much in the ſame manner as the Roman quæſtors, although with much leſs power.

This Ruſſian ambaſſador entertained us in the moſt ſumptuous manner, for he was a man of experience, who had been formerly on ſeveral embaſſies into Perſia, ſo that he had acquired a very conſiderable knowledge of the world, and was reſpected by all thoſe who knew him. After the entertainment was over, we wanted to take a view of the habitations of the Tartars without the city, but the Muſcovite guards would not permit us, it being contrary to their orders, nor could the ambaſſador from that court comply with our requeſt, unleſs he would have gone beyond the line of his duty.

A few days afterwards, the Ruſſian ambaſſador came on board our veſſel, to pay us a viſit, and we treated him as magnificently as we could, conſiſtent with our circumſtances, being then far from home, in a ſtrange country, and depending for ſubſiſtence upon people whom we imagined to be ſavages, although we found them quite otherwiſe. This ambaſſador was about fifty years of age, had a moſt graceful appearance, and was well acquainted with the Latin language, the mathematics, and ſeveral other ſciences; and what was ſtill more to his honour, he had, during his embaſſy, at his leiſure hours, begun making daily progreſs in every thing that could enlarge his mind in human knowledge. He was ſo well acquainted with aſtronomy, that he could at any time calculate an eclipſe, and take the elevation of the pole while he ſtood in the fields, or in the ſtreets, to the no ſmall ſurpriſe of ſuch of his countrymen as attended him.

Proceeding ſtill farther down the Wolga, we

came to the territories of a prince who was nominally ſubject to the Ruſſians, but paid little regard to their government. He entertained us with much civility, and conducted us to the places where the Tartars have their houſes, that we might be able to form ſome notion of them; for he told us that we had been miſinformed with reſpect to many particulars concerning them. To this we anſwered, that it was not much to be wondered at that we ſhould be miſinformed, becauſe there being ſo many nations of Tartars, we ſometimes conſidered them all as one and the ſame, in conſequence of the imperfect accounts that had been tranſmitted to us; but we were glad to find ourſelves miſtaken, and for the future would be cautious how we drew our concluſions.

Here it was that we firſt obſerved that they did not threſh their corn as we do in Europe, but trod it out by oxen and horſes, nor did we meet with a hut ſo mean but it had its hawk and falcon. In our return we met with one of their deputy princes, who came with his hawk in his hand, as did all the reſt of his retinue. He complimented the ambaſſadors in the politeſt manner, telling them, that he was ſorry he had not an opportunity of waiting on them at home, that he might have treated them according to their rank.

The next place we came to was a Ruſſian or Greek chapel, and near it was a village, which the natives call Zuanzuk, a place where vaſt numbers of fiſh are taken, and here the Wolga is divided into many channels, which form ſo many iſlands, all covered with buſhes, canes, and oziers, as indeed is the greateſt part of the coaſts of the Caſpian ſea. Among the reſt of theſe iſlands, there is one of conſiderable bigneſs, on which there is a houſe pretty high, having on the top a pole, with the ſcull of a ſheep fixed to the ſummit of it. They aſſured us that this was the ſepulchre of a Tartarian ſaint; and that the inhabitants who paſs that way, kill a ſheep, part of which is offered up in ſacrifice, the remainder they feaſt on, and the head is fixed on a pole, where it remains till it falls off, and then another is put up in its room, and this is the reaſon why the Muſcovites call this place, The Tartar's Sacrifice. In the ſame iſland are a vaſt number of huts, where the fiſhermen reſide free from the noiſe of a tumultuous world, for if their enjoyments are ſmall, their deſires are few, and they are utterly unacquainted with luxury.

At night we came within ſight of another fiſhing place, fenced in, and guarded by about a hundred Ruſſian ſoldiers, where we ſaw a great many dog-fiſh, or ſea-hounds, and a kind of fowl, called by Pliny onocratabus, with long beaks, round and flat at the end like a ſpoon beaten out, having taken its name from the noiſe it makes like an aſs, by putting its beak into the water. We alſo diſcovered a vaſt number of creatures as large as wild geeſe, larger than ſwans; their bills about a foot and a half long, two fingers broad, and forked at the ends. They have under their bills a bag of ſkin, which they can contract or extend as they pleaſe, and it will contain three gallons of liquor, and this they uſe as a preſervatory for the fiſh they take till they can ſwallow them. We ſhot one of them, and it meaſured two ells and a half between the extremities of the wings, and ſeven feet from the head to the feet. We alſo ſaw a kind of wild ducks much larger than thoſe in Europe, and as black as crows, with forked bills, and their feathers as hard as thoſe of crows. The Ruſſians call them braclun, and they never appear but in the night, when they make a moſt horrid noiſe.

When we arrived at the mouth of the Wolga, we found it full of ſmall iſlands covered with reeds and canes, and theſe iſlands extend ſix leagues into the ſea, which has given riſe to a proverbial expreſſion among the natives, "That the Wolga has ſix mouths." With reſpect to ourſelves, we found we had many difficulties to encounter, for the bottom was all muddy, with ſhallow water not above four or five feet deep; ſo that in ſeven days we did not advance above four leagues. One day we ſtuck upon a ſand bank near one of theſe iſlands, and after fatiguing ourſelves ſeveral hours in getting off, we came into ſix feet of water, but ſoon found it was only a pit, ſurrounded on all ſides with ſands, and the wind changing about, brought us in three feet water, ſo that we ſoon found ourſelves fixed in the mud.

We unloaded our goods into the Tartar's boats, and tried day and night to get her out, but in vain, there being no hopes of relief till the return of the water, which could not be expected without the change of the weather. In four days after, perceiving the waters to have increaſed five feet, we began to entertain ſome hopes of being extricated out of our difficulties, and the next day a tempeſt raiſed the water to nine feet, and we might have got into the ſea had not the violence of the winds prevented us. Our Ruſſian pilot was extremely ignorant, and all the maps we had along with us were falſe, ſo that we found it neceſſary to addreſs ourſelves to the colonel of the ſoldiers who did duty there, to procure us a pilot, to conduct us to the Caſpian Sea.

This gentleman, who was a native of Moſcow, came on board our veſſel, and we having treated him in the beſt manner we could, he promiſed to ſend us a pilot, but no ſooner was he gone, than he ſet ſail in a veſſel of his own, and left us to reflect on our credulity. We met with this fellow after our arrival at Terki, and when we upbraided him with his inſolence and perfidy, he only laughed at it; nay, he had even the impudence to tell us, It was a fine matter to talk of.

In the mean time being reduced to ſuch ſtraits, we reſolved to apply to the maſter of a Perſian veſſel, a man of ſome knowledge in navigation, far beyond moſt of his countrymen. No ſooner had he heard our requeſt, than he came on board our ſhip, and at eleven at night ordered the anchor to be weighed, ſo that we ſoon found ourſelves in eighteen feet water, and continued ſailing along the coaſt till next morning, when, to our inexpreſſible pleaſure, we beheld the trees waving over the ſea.

Having eſcaped from theſe dangers, we diſcovered the country of Circaſſia, which extending along the coaſt, forms a ſpacious bay, in the form of a creſcent. We did all we could to get round the point of the Gulph; but the wind veering about, had infallibly forced us into it, had we not caſt anchor at the entrance. About twenty fiſhermen, who came to ſell us ſome fiſh, put us in much fear, becauſe we believed they were Coſſacks; but coming nearer, we diſcovered who they were, and bought plenty of proviſions of them. The fiſh they ſold us were large; and what was very remarkable, moſt of them had lobſters in their bellies. The remainder of the day was ſpent in giving God Almighty thanks for his gracious goodneſs to us, in preſerving us from ſuch imminent dangers, and in the mean time our Perſian pilot not only ſent a proper perſon to direct us, but likewiſe a boat as a guide.

Next day a thick miſt ſurrounded us, ſo that we were obliged to lay at anchor till morning, when, after much fatigue, we weathered the point, and caſt anchor about a quarter of a league from the ſhore. We were told that the Coſſacks had a deſign of attacking us the night before, near the point where we had been reduced to ſo many difficulties; but miſſing us, they had the inſolence, upon their return, to attack thoſe Tartarian princes who had treated us with ſo much civility. In this, however, they found themſelves doubly miſtaken, for the Tartars fired upon them, and killed ſeveral, upon which, they begged for mercy, telling them that it was only the Germans whom they wanted to rob; which circumſtance ſerves to ſhew, 'That idleneſs will always ſtimulate 'people to acts of the greateſt injuſtice.'

A rumour that the Coſſacks were in the neighbourhood, had been ſpread the ſame morning in the city of Terki, and the noiſe of our great guns having increaſed their fears, becauſe they knew that their

prince Muſſalto was there, occaſioned a great alarm in the place, which was however quickly appeaſed, when the prince and his fleet ſoon after came into the road, and giving a ſalute with their fire arms, invited us to honour them with a viſit, at the houſe of his mother. But here we muſt ſtop, to give ſome account of the city of Terki.

This antient city is ſituated about two miles from the ſhore, upon a ſmall river called Temenſki, a branch of the great River Buſtro, and facilitates a communication between the ſea and the city, which has no other avenues by land, being ſurrounded with trees for a quarter of a league round.

The ſituation is low, and all the houſes, as well as the ramparts, were formerly built of wood, but Peter the Great ordered a rampart of earth to be thrown up, and ſeveral other fortifications to be raiſed. There is a large garriſon conſtantly kept in this city, and a battalion of them attends the Tartarian prince.

Circaſſia is a very antient kingdom, and although now ſubject to the Ruſſians, yet they ſtill enjoy their own religion, and in general are governed by their own laws. The men are ſtrong limbed, and of a tawny complexion, but in general not ſo broad-faced as thoſe Tartars we have already mentioned. They wear long black hair, but ſhave the middle of their heads from the forehead to the neck, but not above the breadth of an inch, leaving a lock juſt at the crown, which falls down behind, and makes them appear frightful to ſtrangers.

Several authors have repreſented them as extremely barbarous, and probably that was the caſe formerly, but it is not ſo at preſent, for ever ſince they became ſubject to the Ruſſians, they have been making daily improvements in politeneſs, as far as is conſiſtent with the ſtate of the country and the form of government. Beſides their own language, which is that of the Tartars, many of them, particularly thoſe in offices, ſpeak the Ruſſian, which is much eſteemed among them. In their dreſs they reſemble the other Tartars who inhabit thoſe parts, only that their cloaks are ſomewhat longer, and faſtened to the neck with a ſtring; but as they do not cover the whole body, ſo they turn them according to the weather. Their women have good ſhapes, amiable countenances, and freſh complexions. They wear no veils, and their locks hang down in treſſes on both ſides. They wear black coifs upon their heads, and cover them with a piece of fine calico or linen cloth tied under the chin. In the ſummer the women wear ſcarce any thing but a ſhift, which is either green, yellow, or blue, and they are cut ſo deep before, as to betray a large ſhare of immodeſty.

Widows are diſtinguiſhed from the others, by having the bladder of an ox full blown, and covered with calico, or any other ſort of ſtuff, hanging from their necks. Their women in general treated us with much familiarity, taking particular notice of our cloaths; and not in the leaſt offended, when ſome of our ſervants, proceeding from one familiarity to another, would often thruſt their hands into their boſoms.

Some of them invited us to their huts, and told us that it was the cuſtom of the country, when ſtrangers came to viſit the women, for the huſbands to go abroad into the fields. They have, notwithſtanding all this, the reputation of being very virtuous; and one day an officer in our retinue, having got into a familiar acquaintance with one of them, who was very handſome, having an opportunity to make trial of her chaſtity, found her deaf to all his intreaties, but at the ſame time was not diſpleaſed; when he told her it was common enough in his own country, ſhe ſaid, ſhe would ſhew him all the kindneſs in her power conſiſtent with modeſty and decency, but further ſhe would not go.

Polygamy, or a plurality of wives, is allowed among them, and they may marry as many as they pleaſe, ſo as they can maintain them, but in general they are contented with one. If a man dies without iſſue, his brother, if unmarried, muſt eſpouſe the widow; and this practice being one of the maxims of the Jewiſh law, there is reaſon to believe that theſe Circaſſians learned it from thoſe people, while they were captives in Perſia. Some of them are Mahometans, others are Chriſtians, their rites conſiſting of a mixture of Jewiſh, Popiſh, and Greek ceremonies. The heathens, however, are the moſt numerous, and ſome of their ceremonies differ from thoſe of the Tartars. Thus, when a perſon of any note dies, the relations of both ſexes appoint a meeting in the fields, to perform the ſacrifice, which is a he goat, that creature being conſidered as moſt proper to make an atonement for ſin.

The firſt thing they do, is to try whether the goat is fit for the ſacrifice; and for this purpoſe, they cut off his teſticles, and throw them againſt a wall. If they ſtick there, they flay the goat, and ſtretch the ſkin upon a long pole, before which they offer the ſacrifice: the fleſh is both boiled and roaſted, after which, it is eaten. After the feaſt, the men pay their devotions to the ſkin; which done, the women are ſent home, and the men conclude the day with drinking ſpirituous liquors to ſuch an exceſs, that they appear rather like beaſts than human creatures, and ſeldom part without blows. The ſkin of the goat remains fixed on the pole till another perſon of quality dies, for theſe ſacrifices are not for the ordinary ranks of people. We ſaw one of theſe ſkins near Terki, upon a black croſs, with the head and horns on it; it was fixed in the middle of a quick-ſet hedge, to keep the dogs and cattle from profaning it.

In burying the bodies of the deceaſed, they uſe a great number of ceremonies, perſons of quality having houſes built over their tombs; and to expreſs their grief for the loſs of their departed friends, they ſcratch their foreheads, arms and breaſts, till the blood flows plentifully; and ſo far do they carry this ridiculous part of their ſuperſtition, that they tear open their wounds, and make them bleed afreſh.

So far as we can learn, there is little or no mention made of the Circaſſian Tartars in antient hiſtory, and equally as little by modern authors; Scaliger makes mention of them in very few words, and calls them by the name of Ziga; as Strabo, the famous geographer, did of old; and he aſſigns their habitations beyond Mount Caucaſus, upon the Euxine Sea, near the Palus Mæotis, betwixt Aſia and Europe.

In this however, they are miſtaken, for thoſe Circaſſians mentioned by our learned traveller are deſcended from the antient Scythians, inhabiting part of Albania, being incloſed on the eaſt and weſt by the Caſpian Sea, by Mount Caucaſus to the ſouth, and the vaſt mountains of Aſtracan to the north. Our traveller proceeds to deſcribe ſeveral other curious particulars.

"In the neighbourhood of Terki, we ſaw ſeveral creatures of the bigneſs of a man's arm, and ſix feet in length, ſporting themſelves in the heat of the ſun, and the place is peſtered with a ſpecies of creatures called jerbuah, or field mice. They are moſtly of the ſize of a ſquirrel, and not unlike it in ſhape, only that they are more inclining to black, with heads like rats, long ears, and the fore feet ſhorter than the hindermoſt, which makes them unfit for running, but they will leap five or ſix feet high from the ground, with their tails laid over their backs, which are long without hair. They are in great numbers, not only in Tartarian Circaſſia, but all the way along as far as Babylon, and many of the people eat them.

"If they get into the houſes, they will carry every thing they can along with them to their neſts, and they will even take money, as happened to a Perſian, the father of one Ackwerdi, who was my ſervant. He had long miſſed ſome money, and although there were no thieves that any one knew of, or ſuſpected in the place, yet his pockets were picked almoſt every night. He told this to our landlord, who deſired him

to

to ſearch the neſt of one of theſe creatures, and there he found more than he had loſt."

Having ſeen every thing worth notice in Terki, we prepared to continue our journey, and bargained with our inn-keeper to furniſh us with waggons at a crown each, with two horſes, to carry us through the deſart, which was about ſeventy leagues, between this place and Aſtracan. We were joined by as many Perſian, Turkiſh, Greek, and Ruſſian merchants, that we had in all about two hundred waggons, each carrying three or four perſons, ſo that we amounted to about ſeven hundred and fifty. Our proviſions for ſuch a journey were as ſcanty as can well be imagined, each of us had a few pounds of hard biſcuit, a mouldy loaf of bread, and the half of a dried ſalmon for his portion. We had no water, becauſe Baron Brugman, one of the ambaſſadors, would not conſent to hire a waggon to carry it, and moſt of us did not urge the matter, although we had reaſon afterwards to repent of this part of our conduct.

We had only left Terki a few hours when we came in ſight of the dreadful deſart, our journey being along the eaſt of the Caſpian ſea. It was no ſmall matter of ſurpriſe to us not to ſee a city, town, village, houſe, or even a tree, for eleven days; nay, not ſo much as a bird, or a river, except the Kiſibar; the whole was one vaſt ſandy plain, which here and there produced a little graſs, and ſome ſtanding pools of ſalt, with a little corrupted muddy water; near one of which pools, we took up our lodgings, on the 11th night, having made no more than two leagues a day. On the 13th day we travelled through fenny grounds, that were ſcarce paſſable, and were much afflicted with heat, thirſt, gnats, waſps, and other inſects, eſpecially the camels, who having no tails, could not defend themſelves againſt them ſo well as the horſes.

On the 14th day we made four leagues in the forenoon, and after having refreſhed our beaſts, we made four more in the afternoon; and in the evening, the Tartars, who were along with us, roaſted one of their horſes, which they had killed, becauſe it was likely to die, and they ſeemed to eat it with much pleaſure. On the fifteenth we travelled ſeven leagues, and encamped near a ſtanding pool, made by the overflowing of the ſea, but the water was ſo much corrupted, that we could not drink it without holding our noſtrils. On the ſixteenth we travelled ſeven leagues farther, and had the good fortune to encamp near a ſmall brook of freſh water, near the banks of the ſea.

On the ſeventeenth, we travelled eight leagues, and encamped near a pool of freſh water, formed by the Wolga, but the taſte was ſo nauſeous, that few of us could drink it. This day ſome of our Tartars having been in purſuit of wild boars, killed ſeveral of them, and brought them to us in the evening. In this place we found an eagle's neſt, with two young ones not quite fledged, which we conſidered as a very great curioſity. On the eighteenth day we travelled eight leagues, and pitched our tents within ſight of Aſtracan; and the next day we came to the banks of the Wolga, juſt oppoſite to that city. It was ſurpriſing to ſee ſome of our people who had not taſted freſh water from the time they left Terki, running into the river to quench their thirſt. We were no ſooner arrived here than ſome of our friends came from Aſtracan, and brought us freſh proviſions, which were received by us with a hearty welcome, and we continued encamped till we could learn whether the governor would provide us lodgings.

Having obtained permiſſion of the governor, we croſſed the river, and had lodgings aſſigned us in a long ſtone-houſe without the city, near the river ſide, where we were furniſhed with plenty of proviſions, ſent us by the duke of Holſtein's reſident. The ambaſſador, for reaſons we were not then acquainted with, ordered all the baggage to be put into one room, which was done accordingly; which ſo exaſperated ſome of our retinue, that they burſt open the doors, and took away the cheſts, in ſpite of the centinel who was to guard it. The governor of Aſtracan treated us with the utmoſt politeneſs, and ſent us beef and mutton, with all ſorts of poultry that the country afforded, together with beer and other liquors, in recompence for a preſent we had made him.

About this time, a miſunderſtanding took place between our two ambaſſadors, in conſequence of Baron Brugman being apprehenſive of being called to an account for his conduct, for during the whole of our journey, he had treated us in a very indifferent manner. He became moroſe and ſulky at table, and would ſcarce ſpeak to any of us, and often broke out into injurious and offenſive expreſſions. This happened in a remarkable manner one day, after dinner; for not content with quarrelling with his domeſtics, he broke out into the moſt abuſive language againſt me, whom he wanted to charge with the whole of his miſconduct. I ſaid a few words in my own vindication; but this, inſtead of allaying the heat of his paſſion, enraged him ſo much, that he laid hold of a knife, and would certainly have ſtabbed me, had I not riſen from table and left the room. He treated the chaplain of the embaſſy with ſo much cruelty, that he was often in want of the neceſſaries of life; and one day, while he was adminiſtering the ſacrament, the Ruſſian governor took notice that he had nothing under his caſſock but a pair of drawers. The governor ordered cloaths to be made for the poor miniſter; but although he was in ſuch want of them, yet he durſt not accept of them, leſt Brugman ſhould have treated him with ſtill greater ſeverity. This Ruſſian governor did all he could to ſoften the temper of Brugman, but all to no purpoſe, for he continued to increaſe in his ſeverity every day, and even laid a plan for ruining his colleague. Nor did the Ruſſian governor, who had treated us with ſo much tenderneſs, eſcape his cenſure, for he even wrote to the emperor concerning him, accuſing him with things he had never been guilty of; which had ſuch an effect upon the poor gentleman, that he poiſoned himſelf.

While we remained at Aſtracan, a German, whoſe name was Andrew Reuſner, provided with letters of recommendation from the duke of Holſtein to the king of Perſia, came in a caravan from Moſcow to Aſtracan, where in a little time he entered into ſo ſtrict a friendſhip with Brugman, that he relinquiſhed his deſign of going to Perſia, and engaged to return with the ambaſſador to Holſtein. We had an opportunity while we were at Aſtracan of ſeeing a public feſtival, which is obſerved annually in memory of the Ruſſians having taken the place, which was on the firſt of Auguſt, 1554. Maſs ſaid in the morning, then the great guns of the caſtle were fired off, and the evening was concluded with much drunkenneſs and debauchery. Several perſons were killed; for ſuch is the licentious diſpoſition of theſe Ruſſians, that they will intoxicate themſelves, and then fight like ſo many wild beaſts.

A Muſcovite caravan, conſiſting of two hundred perſons, went by land from this place to Moſcow, which induced Andrew Reuſner to embrace that opportunity for his departure. Some of our retinue were alſo ſent at the ſame time, and every thing was got ready for our departure, it being the ambaſſador's deſign that we ſhould go by water to Caſan. A few days before the time fixed for our departure, ſome Ruſſian Tartars brought to the ambaſſadors two young girls, one of ten, and one of ſeven years old, whom they propoſed to ſell. The firſt was the daughter of a Tartar of Frecos, taken by the Coſſacks, when they took poſſeſſion of Azoph, a place of conſiderable ſtrength, ſituated near the mouth of the river Don. The young one of ſeven years old had been ſtolen from a village not far from Aſtracan, and the wretches had put her into a bag, like a pig. She had on her cheeks two large marks, to be known by her parents, from which circumſtance, two things are to be learned; firſt, that the practice of ſtealing children is common in that country; and ſecondly,

that however barbarous people may be in their manners, yet a lover of their offspring is to be found throughout the whole human race. The ambaſſador Brugman purchaſed both the girls, the eldeſt for twenty-five, and the youngeſt for ſixteen crowns, and after his return to Holſtein, he preſented them to the ducheſs, who had them inſtructed in the Chriſtian religion, and baptized.

Much about the ſame time the Perſian ambaſſador, a man of ſeventy years of age, bought a wife for 120 crowns. This Perſian ambaſſador was a man of a fine appearance, and a vigorous conſtitution, owing, as he told us, to his living chiefly on hemp-ſeed, baked in the embers. The lady he purchaſed was the daughter of a Tartarian prince; and one of our interpreters, nearly related to her, had embraced the Chriſtian religion. His ſiſter endeavoured to perſuade him to go with her to Perſia, but nothing could prevail with him; and being afraid leſt he ſhould be trepanned and taken away, he ſeldom went out of the ambaſſador's apartments. In the mean time the Perſian ambaſſador received orders to viſit the duke of Holſtein, and therefore it was propoſed that we ſhould all ſet out together in boats on the Wolga.

Such is the preſent ſtate of that vaſt extenſive country in Aſia, ſubject to the Ruſſians, or at leaſt pretended to be ſo; for, as we have already taken notice, the Tartars in moſt parts of the Ruſſian empire look upon themſelves as free, although for their own intereſt they ſometimes ſubmit to the name of vaſſals. And now the grand queſtion before us is, "Is it conſiſtent with ſound policy in the Ruſſian government to attempt the cultivation of one part of the empire, and pay no more regard to the other than juſt to conſider the inhabitants as beaſts of burden?"

A proper anſwer to this queſtion is of much importance to the inhabitants of thoſe European nations who are continually ſeeking to extend their conqueſts over ſavage nations, without conſidering whether it will ever be of any ſervice to them. It would be happy for us in the preſent caſe if we could draw a parallel line between the Roman empire and that of Ruſſia; but this cannot be done, the circumſtances being in many reſpects different; to which may be added, "We know what Rome was, but we know not what Ruſſia will be."

The Romans were at firſt a band of robbers, but having formed themſelves into ſome ſort of ſociety, they gradually, from time to time, ſubdued the inhabitants who lived in the villages around them, till at laſt they laid the foundation of a city, which has for many ages been the admiration of the world. When Rome was built, the territories of the Romans did not exceed in extent one of our Engliſh counties, nay, it was leſs than ſome of them; but the love of power, ſo peculiar to the human mind, ſurmounted all difficulties, and moſt of Italy ſoon became ſubject to them. From Italy they extended their conqueſts into Gaul, now called France; into Iberia, now called Spain; into Africa, part of which they ſubdued; into all the known parts of Aſia, and Greece ſubmitted to their victorious arms. But of that grandeur there remains nothing at preſent but the name.

Had we been as well acquainted with the origin of the Ruſſians, as we are with that of the Romans, many rational conjectures might have been formed; but as they have no writings to throw any light upon the actions of their predeceſſors, we are obliged to ſit down contented with what has been tranſmitted to us by travellers, without having recourſe to antient writings. It is common to conſider all nations as emerging from a ſtate of obſcurity, and doubtleſs Ruſſia did ſo; for it was formerly divided into many principalities, although at preſent it bears one general name. Their extending their conqueſts into Aſia, was partly from motives of ſelf preſervation, and partly from the love of power.

The Tartars invaded them ſo often, and drove away their cattle, that it was found neceſſary to make reviſals. This happened in early times, when the Ruſſians were little better than ſavages, and utterly unacquainted with commerce; but as circumſtances have taken a different turn, different objects ſhould be kept in view. Every man of common experience will grant, that it is more for the intereſt of a prince to be the ſovereign of a ſmall country well cultivated, and its inhabitants civilized, than to have the vain empty name of being the lord of barren deſarts inhabited by ſavages. This will in every reſpect apply to Ruſſia, and to all thoſe other nations in the world, where there are more inhabitants than the civil power can take notice of. And here we would ſuggeſt a few thoughts that have often occurred to us in the peruſal of the hiſtory of different nations in the world.

The conduct of Peter the Great, in attempting to civilize his ſubjects, was truly laudable, and his endeavours to extend commerce gave a proof of his good ſenſe; but, like moſt other human beings, he had his weak ſide. One grand object he had in view, was, to equal any of the European princes in glory, to become a mediator in all quarrels amongſt them, and in war to take part with thoſe whoſe cauſe he eſpouſed from motives of policy. This part of his conduct is not mentioned merely on account of its being blameable, but to point out that he attached himſelf too much to it; becauſe by purſuing it with unwearied aſſiduity, he neglected the interior parts of his empire. This might have been rectified, and his errors amended, had his predeceſſors adopted the following plan, and carried it into execution with perſeverance.

Had the ſucceſſors of Peter continued to extend the cultivation of the Empire, in the manner it was begun at St. Peterſburgh, they might before this time have carried it on as far as Moſcow, which is an extent of territory reaching ſix hundred miles in length. To have effected this valuable ſcheme, it would have been proper for the ſovereign to have given every ſort of encouragement to huſbandmen. This is not yet too late; and until it is put in practice, little good can be expected in Ruſſia, either from commerce or conqueſts. Let the government conſider the peaſants as the moſt uſeful members of ſociety, and beſtow upon them lands in proportion to their ability to cultivate them. This would carry civilization to a great height; for men become in love with the ſpot of ground they have cultivated, and, where they have brought up their children. It would prevent them from roving about in idleneſs, and their neighbours next to them in ſituation would chearfully copy their example. It is true, this would be the work of time, but if once begun, perhaps a ſingle generation might ſee it accompliſhed. As Mr. Pope ſays of refined ſelf-love, it would gradually extend itſelf to all the provinces of the empire.

Another thing to be attended to is, that along with encouragement given to the cultivation of the lands, the ſame care ſhould be taken to improve the minds of the riſing generation; knowledge expels barbarity, as light ſwallows up darkneſs.

It is ſaid of the preſent Empreſs, that ſhe gives every ſort of encouragement to the liberal arts and uſeful ſciences; but it is much to be feared, that her benevolence is confined to ſuch ſorts of learning as can only be of ſervice to her military and naval officers. This conveys a moſt unnatural idea to the mind, for it is like beginning a ſtructure where it ſhould end.

To give encouragement to the liberal arts and ſciences, is laudable in every country; and the neglect of this, is what has kept the Turks ſo many years in a ſtate of ignorance; but to diſregard the improvement of the minds of the vulgar, is like a father who having twenty ſons, ſuffers nineteen of them to continue in ignorance.

It is of little ſervice for the Empreſs to ſay, that ſhe has academies, which ſhe ſupports at her own expence, while the greateſt part of her ſubjects remain in a ſtate of profound ignorance. It would be much to her honour to have ſchools eſtabliſhed in the province of Livonia, at her own expence, and this ſhe could

could the more eaſily do, becauſe ſhe is under no reſtriction with reſpect to the uſes to be made of the public money: it would be a noble and generous exertion of her regal authority, and ſerve to point out that even abſolute power, when employed in a proper manner, might be of ſervice to mankind. The general objection to be made againſt what is here laid down is, that ſovereigns are diſcouraged from undertaking what they may never live to ſee accompliſhed; but this objection is no more than a ſilly excuſe: with the ſame reaſon might a man ſay, I am afraid to begin building a houſe, or to undertake any thing whatever, becauſe I may die before it is completed. It is our buſineſs, in whatever ſtation we are in here below, either to begin ſomething beneficial to ourſelves, or to carry on that which has been already begun.

The Ruſſians, by confining their attention to the provinces near Peterſburgh for ſome time, would be of great ſervice to the reſt, eſpecially thoſe which lay more to the eaſt, for it would ſtimulate the inhabitants to ſeek for the ſame uſeful arts to be eſtabliſhed among themſelves. There are many parts of Great Britain as barren and mountainous as many of the provinces of Ruſſia, and yet who can ſay that we have a ſavage amongſt us; nor was this the work of a day; it required time, and we may now ſafely ſay, that the pooreſt of our peaſants are as civilized in their manners, as ſome of the chiefs in other nations. Upon the whole, it is probable that Ruſſia will never make a very great figure, until learning is encouraged among the lower ranks of people. This, with agriculture, would civilize their manners, humanize their minds, lead them off from antient prejudices and ſuperſtitions, and might even, in the end, reach as far as thoſe inhoſpitable deſarts in Siberia, Tartary, and many other parts which we have already deſcribed.

TRAVELS IN CHINA, BY THE RUSSIAN AMBASSADOR, FATHER NAVARETTI, FATHER DUHALDE, FATHER LECOMPTE, &c.

THE vaſt Empire of China, of which we have no accounts in ancient hiſtory, is bounded on the north by the great wall which divides it from Weſtern Tartary. On the weſt by Tibet and Ava; on the ſouth by the Laos Tong-king, and the Chineſe Sea, or Oriental ocean; and by the ſame ocean on the eaſt. It is remarkable, that notwithſtanding the vaſt diſtance of China from us, and the ſentiments of the people ſo oppoſite to ours, in politicks as well as in religion, yet by the unwearied induſtry of the miſſionaries from the ſociety of Jeſuits, the dimenſions have been well aſcertained, and from them we are enabled to diſcover how it is ſituated. China lies between an hundred and fifteen and an hundred and eighty-one degrees of eaſt longitude, and between twenty degrees twenty-five minutes of north latitude. It is in ſhape almoſt ſquare, being in length, from ſouth to north, about 1270 miles, and 1100 in breadth.

China is, by many travellers, reckoned the fineſt country in the world; being exceeding fertile, and the mountains are cultivated even to the tops. In many parts it produces two crops of rice annually, with all ſorts of other grain, beſides a variety of fruits and herbs. It abounds with horned cattle, ſheep, and all ſorts of game; and it has many fine rivers, ſtored with all ſorts of fiſh. Its mountains yield mines of gold, ſilver, copper, and many other metals, and in every province there is plenty of coals.

The provinces of Pe-che-li, Kyang-nan, and Shang-tong, are in moſt parts flat, and cut into canals like Holland; but the northern provinces are more mountainous, being of great extent; the ſouthern parts are hot, and thoſe to the north cold, but in both the air is generally pure and wholeſome. It exceeds all other nations or empires we know of, in the number of its inhabitants, cities and towns; and its temples, according to their mode of architecture, are the moſt magnificent in the world. Their laws are founded upon principles of morality, and their courts of juſtice are regulated with the ſtricteſt care.

The commerce of China, conſiſts in gold, ſilver, precious ſtones, porcelain ſilks, cottons, ſpice, rhubarb, beſides tea and many other articles. The trade of the provinces with each other is ſo great, that the empire could very well exiſt without any commerce with Europeans. The Jeſuit Lecompte tells us, that there are in China one thouſand four hundred and ſeventy-two rivers and lakes, and upwards of two thouſand remarkable mountains. Beſides oranges, lemons, and citrons, which come from thence, there are the varniſh tree, the tallow tree for candles; the iron wood, of which anchors are made; and here we find the muſk deer, the man ape, the gold fiſh, very beautiful, and another fiſh called the Hay-ſong, very hideous.

The public works in China are extremely numerous, and ſome of them are curious, others ſtupendous, particularly the great wall already mentioned. According to the account which the Jeſuits procured from the moſt learned men in China, this wall was built two hundred and fifty years before the incarnation of Chriſt, and it was done in order to prevent the inroads made by the Tartars.

It is in length one thouſand ſeven hundred and ſeventy miles, about twenty-five feet high, and broad enough for ſix horſes to travel abreaſt. The great canal extends three hundred leagues in length, quite through the empire, from Kanton to Peking. It was cut about four hundred years ago, and is conſtantly crouded with ſmall veſſels, carrying goods from one place to another. There are upwards of three hundred bridges on this celebrated canal, one thouſand one hundred and fifty-nine towers and triumphal arches, erected in memory of great men; two hundred and ſeventy-two libraries, and above ſeven hundred halls; thirty-two palaces for the emperors, and thirteen thouſand ſix hundred grand houſes for the nobility and magiſtrates. All along the banks of the canal are vaſt numbers of fine gardens, laid out in the Chineſe taſte; and theſe are adorned with ſummer-houſes, pleaſant walks, and the moſt refreſhing groves. In theſe the nobility, and people of high rank in office, divert themſelves during the heat of ſummer, as the delicious fruits which grow in them ſerve to heighten their pleaſures.

The cities in China are generally all built on the ſame plan, although many of them are different in grandeur. Where the ground will permit, they are ſquare, ſurrounded with high walls and towers built at proper diſtances from each other, and they have

ditches, either wet or dry, according to the ſituation of the place. Within their cities they have temples, for the worſhip of their gods, with grand triumphal arches, in memory of ſuch perſons as have been of ſignal ſervice to the ſtate. Their ſtreets and ſquares are broad and open, but few of the houſes have any more than the ground floor, and none of them more than two. In theſe ſtreets are their ſhops, and before the doors of each their goods are piled up ſo as to make a grand appearance. Before the door is a pedeſtal, with a board fixed upon it, either painted or gilded, with three characters, by way of a ſign. On this board are painted the names of three or four ſorts of goods, and underneath that of the ſhopkeeper himſelf, with the following words, Pú hú, that is, "he will not cheat you."

We ſhall not pretend to ſay whether the Chineſe always act conſiſtent with principles of honeſty, but probably they do as much ſo as their neighbours, and it is certain that their laws are well calculated to promote ſuch a ſalutary purpoſe. That which the Romans called the lex talionis, was long attended to in China, but at preſent it is in a great degree fallen to decay. Thus the murderer was put to death in the ſame manner as he had murdered the deceaſed; and a thief was ſold as a ſlave, to make a recompence for the loſs of the ſtolen goods. Of old, and even during the laſt century, the puniſhments they inflicted upon criminals were attended with circumſtances of the moſt horrid barbarity; but whether by their connections with the Europeans, or by ſome other means, this much is certain, that the ferocity of their manners begin to wear off, and at preſent they are in many reſpects, more civilized than the Ruſſians, only that they are ſtill jealous of permitting ſtrangers to ſettle among them. With reſpect to their titles of nobility, they are not hereditary in families; for although a ſon may, and frequently does ſucceed to his father's eſtate, yet he does not enjoy his honours, for theſe are beſtowed upon other perſons; for the emperor gives them away to whomſoever he pleaſes. Perhaps it would be much better if this was attended to in other nations, for by ſuch a practice none could have reaſon to expect honours, but thoſe whoſe merits entitled them to the enjoyment of them. This method makes the Chineſe youth ſtudious to tread in the ſame ſteps with their anceſtors; and when they do ſo, the emperor generally reſtores them to their father's titles. All the princes of the blood royal enjoy titles, but they have no power annexed to them. Each of them is allowed a palace, with proper officers, and every thing becoming their rank; but although the people treat them with the greateſt reſpect, yet they are not permitted to poſſeſs any place at court, either of honour or profit.

But notwithſtanding all that has been ſaid, the emperors of China are far from being backward in rewarding merit, even when they find inſtances of it in foreigners. In 1678, Father Verbieſt, a Flemiſh jeſuit, happened to be in China, and being well acquainted with every thing in aſtronomy, the emperor ſent for him, and deſired him to draw out tables of the celeſtial motions of the heavenly bodies, and calculations of eclipſes for two thouſand years backwards. This the jeſuit completed in thirty-two volumes of maps, and preſented them to his majeſty, whoſe name was Kang-hi; and the emperor was ſo much pleaſed with them, that he cauſed them to be placed among the archives of the palace; and to reward the jeſuit for his extraordinary ingenuity, he made him preſident of the college of aſtronomy, with the title of Tau-ſin, which in Engliſh ſignifies, "Great Man:" ſuch a title as this is ſeldom conferred, even on the moſt deſerving of the natives; but when it is, it extends to all their kindred, even of the moſt remote degree of conſanguinity.

Although Verbieſt had no relations in China to enjoy this honour, yet all the miſſionaries paſſed for his brethren, and were conſidered under that title by the mandarins. This title of great man, gained the Jeſuits an eaſy admiſſion into the court, and moſt of them had it inſcribed on the doors of their houſes. In every city in China, there are ſchools, with teachers to inſtruct the youth in the ſciences, and the ſons of people of faſhion have tutors to attend them. In theſe ſeminaries of learning, the youth are inſtructed, firſt in the fundamental principles of their language; from that they proceed to hear lectures on morality, according to the doctrine of Confucius; and laſt of all, they are made acquainted with the laws of their country.

The employment of a ſchool-maſter is counted honourable; and whenever the parents of the youth meet them, they give them the right hand, and ſay, Syew-ſeng, "Our maſter, our doctor:" and their pupils have the higheſt reſpect for them as long as they live, and generally make them valuable preſents.

Although there are no univerſities in China as in Europe, yet every city of the firſt diſtinction has a place ſet apart for the examination of thoſe who have been brought up at the public ſchools, and moſt of theſe places are built in the ſame manner. They are encloſed with high walls, the entrance is magnificent, and before it is a large ſquare, one hundred and fifty paces wide, planted with trees, having benches and ſeats for the captain and ſoldiers who do duty during the time of examination.

The entrance is firſt into a large court, where the mandarins ſit in ſtate, attended by a numerous retinue, and at the end of this is another wall, with folding gates. Theſe gates being opened, there is a bridge over a canal, which leads to a third gate, where guards are planted, who let none in without orders from the proper officers; paſſing through this gate, there is a narrow paſſage leading to a broad open ſquare, on both ſides of which are a vaſt number of little chambers cloſe together, four feet and a half long, and about three and a half broad, for the ſtudents to lodge in, who are on ſome particular occaſions above ſix thouſand in number. As all theſe ſtudents are obliged to compoſe their themes without any aſſiſtance from others, that there may be no deception with reſpect to their knowledge, they are ſtopped when they come to the gate, and ſearched, leſt any papers ſhould be found upon them: if in ſuch caſes any fraud was diſcovered, the youth would not only be excluded from all connections with the learned, but he would alſo be puniſhed as an impoſtor. When every one is examined, the gates are ſhut up, and the public ſeal affixed to them; and there are officers appointed to ſee that every thing is conducted in a proper manner, and that the ſtudents may not go out of their chambers to ſpeak to each other; for this would in all reſpects deprive them of the benefit of their degrees.

At the end of the narrow paſſage above mentioned, there is a tower erected upon four arches, and flanked with four turrets or a ſort of round domes; from which, if any diſturbance is perceived, a drum is immediately beaten to alarm the guards, that the diſorder may be remedied. Near this tower there are ſeveral apartments, and a great hall, in which thoſe aſſemble who are to be preſent at their firſt examination. Paſſing through this hall, there is another nearly adjoining to it, but more magnificently furniſhed, with divers apartments for the preſidents and principal officers. There are alſo galleries, a garden, and many little apartments for the mandarins, ſecretaries, and other inferior officers whoſe buſineſs it is to attend. In the apartments are beds, fire places, kitchen furniture, with every thing neceſſary for the reception of the examiners; becauſe many of them come from very diſtant parts, and therefore it is but reaſonable that they ſhould be ſupported at the public expence.

The preſidents before whom the youth are examined, are the Fu-ywen, the Chi-fi, and the Chi-byen, who are governors of provinces and cities, of the firſt and third rank. As ſoon as the ſtudents have paſſed the examination of the mandarins, they muſt begin with that of the Chi-byen, in whoſe

juriſdiction

juriſdiction they were born. In every province there is a mandarin, who is ſent to reſide in the palace by the emperor, and at the end of three years he returns to Peking. When theſe mandarins arrive in the province allotted for them, the firſt thing they do is to offer up ſacrifices to Confucius; for although this celebrated perſon is allowed to have been a human being, yet divine honours are paid him. After this all the ſtudents are brought together, along with their teachers, and examined with reſpect to the progreſs they have made in learning; and if they are approved of, then they are ſent up to the chief city in the province, to receive their degrees.

But the moſt remarkable thing is, that the ſame mandarins who examine the ſtudents in the common ſciences, likewiſe examine the cadets in military diſcipline; and theſe military cadets cannot be admitted into any office, nor have a commiſſion in the army, till they have given the utmoſt proof of their abilities in riding, ſhooting, fencing, and ſuch like manly exerciſes. This mandarin, whoſe title is Heyo-tau, delivers themes to the ſtudents, who are obliged to return anſwers within a limited time, otherwiſe they will be expelled from the ſeat of learning; he is alſo obliged to viſit every city, town, and village, in the province, and tranſmit to Peking an account of what comes under his notice. This is ſuch a plan of excellent policy, as ought to be imitated by all thoſe nations who ever heard any account of it.

The mandarin generally divides his ſtudents into ſix claſſes, whom he viſits once every year; and if at the third examination any ſhould happen to be abſent without aſſigning a reaſonable cauſe for it, they will be in danger of loſing their degrees. All thoſe who have had their degrees, go once in three years to Peking, to hear the public examinations, unleſs they are in office, and then they are excuſed. On theſe occaſions the emperor is preſent, and dictates queſtions to the young gentlemen.

In China, the huſbandmen are treated with great reſpect, and conſidered, as they always ought to be, as worthy members of ſociety. They are preferred to all ſorts of merchants and mechanics: their profeſſion being accounted the moſt neceſſary in the ſtate. Moſt of their children are brought up at the public expence, for they look upon the cultivation of the earth as the principal means of human exiſtence. Great part of their huſbandry conſiſts in rice, and they manure their land extremely well; gathering, for that purpoſe, all ſuch things as can be of any ſervice to it, ſuch as rotten herbs, linſeed oil, and many other things. This ſort of manure, which in ſome countries would burn up the plants, is of great ſervice in China, where they have the art of tempering it with water, before they uſe it. They gather the dung in pails; which they commonly carry covered on their ſhoulders; and this contributes very much to the cleanneſs of their cities, the filth being taken away every day. The induſtry of thoſe huſbandmen is almoſt incredible; but ſuch is the kindneſs of the ſoil, that it repays them amply for their trouble, by producing generally two crops in the year of different ſorts of grain.

The number of merchants and traders in China is exceeding great; for into whatever town one enters, there ſeem to be more ſellers than buyers: they are all very obliging, and will not refuſe money, ſo as they can be in the leaſt gainers. When they once tell the loweſt price of their goods, they will not abate any thing; notwithſtanding all the arguments that might be uſed for that purpoſe. We are told by Le-Compte, that there are no people in the world better acquainted with trade than the Chineſe: for they are very inſinuating in their manners, and their eagerneſs to get money puts them daily upon the invention of ſome new ſchemes. They turn every thing to advantage, and undertake the moſt difficult voyages for the leaſt hope of gain. They have a mean opinion of foreign merchants, it being a maxim with them, in their commerce, that all thoſe who come to trade with them, would have their goods for as little as poſſible, or even for nothing at all if they could.

Having ſaid thus much concerning China in general, we ſhall proceed to give a more particular account of it in the words of the travellers themſelves.

"The firſt place we came to (ſays Brand, ſecretary to the Ruſſian ambaſſador) was a fortified town on the confines of the province of Dauri, inhabited by the Tanguts, a rude people, formerly without any form of government, but now ſubject to the Chineſe; for all that part of Dauri lying on the other ſide of the river Argum, is ſubject to the Ruſſians. We found moſt of the people here employed in huſbandry, and we ſaw large crops of barely, oats, and tobacco. After we had ſpent three days more in travelling through the deſart, we came to the village of Suttegat; where being met by the Adogeda, or miniſter, who had along with him about fifty perſons, he invited us to his tent the ſame evening, where he treated us with milk-tea, and ſome ſweetmeats and preſerves. Next day, the adogeda having invited the ambaſſador to dinner, he met him at ſome diſtance from his tent, and, after a mutual ſalute, conducted him thither.

The dinner was ſerved up, on a ſmall table, without a table-cloth; the ambaſſador, and the adogeda, having each his own diſh, as had every one of the reſt. Our diſhes were filled with ſoup and mutton; and the ſecond courſe was pottage with a kind of pudding in it, long and thick like a gut. There being no knives or forks, we were at firſt greatly at a loſs, till we ſaw the adogeda take two ſtraight ſticks of ebony, tipped with gold and ſilver at the end, and about a quarter of a yard in length; with theſe he took the victuals out of the diſhes, and having bit a large mouthful, let the reſt fall into the diſh again. After dinner, two ſilver cups filled with brandy were brought in, one for the adogeda, and the other for the ambaſſador, which they both drank off; and we who attended, were ſerved in China cups with the ſame liquor, which we were obliged to drink to the bottom, and then we had a diſh of ſweetmeats ſerved up.

Having reſted ourſelves two days longer, till September the 14th, the ambaſſador invited the adogeda to dinner, and we found that our proviſions ſeemed as ſtrange to them, as theirs did to us. After dinner the adogeda and ambaſſador, by the help of the interpreter, converſed very friendly together, and then we found what our allowance was to be from the court. The emperor had ordered the adogeda to furniſh us with carriages and all ſorts of proviſions that we ſhould want, ſuch as bread, mutton, brandy, and milk-tea, ſo that we were not in want of any thing. We found all the inhabitants in this part of the country the groſſeſt pagans we ever met with; for they worſhipped the devil in the night, with the moſt horrid outcries. Their houſes are both convenient and neat, and moſt of them procure a ſubſiſtence by planting tobacco. On the 16th, the ambaſſador ſent the adogeda a preſent of forty ſables, fifty ermines, with two fine looking glaſſes, and ſeveral other things; but it was difficult to perſuade him to accept of them, for the Chineſe have very high notions of honour, it being a maxim with them never to accept of a preſent without making a double return.

September 21ſt, the adogeda ſent the ambaſſador ſix tables with ſweetmeats, and ſeveral bottles of brandy; and invited us to dinner on the 23d, as we did him on the 24th. On the 29th, our carriages being got ready, we proceeded on our journey, and ſpent the two next days at a village, where we were treated with great hoſpitality; for it ought to be mentioned, to the honour of the Chineſe, that they are very obliging to ſtrangers. We found many inſtances of this, for all the while we paſſed through the deſart, we were accommodated with very convenient lodgings, and where-ever we arrived at night, ſervants were ordered to attend us with what kitchen utenſils we wanted, and in the morning they conducted us part of our journey. We were ſure to have freſh horſes every other

CHINESE HUSBANDMEN *with their manner of* TILLAGE

7 AP 53

day, and we were conſtantly guarded in the night by perſons who had bells to give the alarm if there ſhould be any neceſſity for it. Our converſation with the adogeda turned moſtly upon politics, which ended chiefly in praiſe of the Chineſe; for, like moſt other people, they are extremely fond of flattery.

The chief difficulty we had to ſtruggle with was, the ſcarcity of water, for it is very muddy in the deſart, ſo that whenever we met with any that was freſh, we were obliged to fill our leather bottles with it.

We frequently diverted ourſelves with hunting; which I was once in danger of having paid dear for. Having gone out one morning with a particular friend of mine, to ſhoot ſome ſheep, we miſſed our caravan, and rode about the deſart two days and nights, till coming within ſight of ſome Tartarian huts, we were much afraid, and ſought to conceal ourſelves, leſt they ſhould have murdered us. But we had formed too harſh notions of thoſe people; for no ſooner did they ſee us, than they conducted us to their cabins or huts, where, beyond our expectations, they treated us very obligingly, and having by ſigns made them underſtand that we belonged to the Ruſſian ambaſſador, they ſent a meſſenger to give him notice of our being there; and that we waited for his coming, which we accordingly did till the caravan paſſed that way."

From what is here related by the ſecretary, we find that Europeans are apt to uſe too harſh expreſſions in calling all heathens ſavages; for although their manners are not ſo refined as ours, their vices are not ſo numerous. Notwithſtanding ſome of them may commit robbery, and murder travellers, yet we muſt not ſuppoſe them all equally guilty; and probably thoſe who do commit ſuch crimes, are ſuch as their own laws would puniſh. We have but too little reaſon to condemn them, while ſuch crimes are daily committed amongſt ourſelves, of which it would be in vain to produce inſtances. In all accounts of theſe people, we ſhould judge in the moſt candid manner; for if the Chineſe have not been able to civilize thoſe Tartars ſubject to them, neither does it appear that we have made many improvements in the manners of thoſe heathens where we have ſettlements.

October 15, we arrived near the banks of the river Caſumur, which falls into the river Naun; where having refreſhed ourſelves for twenty-four hours, we continued our journey, and on the 16th paſſed in ſight of the ruin of ſeveral antient cities, the remains of them having ſome ſtrange figures upon them, very different from any that are to be found in Europe. They told us that thoſe places had been deſtroyed by Alexander the Great; but although Quintius Curtius tells us, that the Grecian conqueror extended his conqueſts into India, yet no man, who has the leaſt knowledge of the country, on recollecting the ſhort time that hero lived, who died in the 33d year of his age, will ever believe that he went ſo far as China. At the ſame places we ſaw large ſtone pillars, with bells hanging on them, which made a noiſe as often as the wind blew upon them. A little beyond theſe we diſcovered the ruins of ſome places, with the figures of men, women, and beaſts cut on ſtone, but could not learn for what reaſon they had been ſet up. The moſt probable conjecture we could form was, they had been ſet up in memory of ſome illuſtrious perſons, whoſe names are not recorded in hiſtory, and that all this devaſtation happened when the Tartars invaded China, or when the Chineſe fought againſt each other, as was frequently the caſe.

There were vaſt numbers of wild ſheep, deer, and hares, all the way along as we croſſed the deſart, and we had leave to ſhoot as many of them as we thought proper. There were likewiſe vaſt numbers of pheaſants, but as they did not ſit upon the boughs of the trees, ſo we found it a difficult matter to catch them; but the talios, or ſecretary, whom the adogeda had brought along with him, was very expert in that exerciſe, and we were ſurpriſed to ſee how eaſily the Chineſe could ſhoot any fowls flying. We obſerved that the nearer we approached the Chineſe wall, the country appeared more and more populous; and our laſt three days journey, before we got ſight of it, was by a road cut very conveniently through the rocks, in the midſt of which was a city, cut out of a mountain, called Rora-Ratou. In this place we were allowed hogs inſtead of ſheep; and it may not be improper to obſerve, that although the Chineſe hogs are not large, yet they are ſo fat, that their bellies hang down to the ground. As theſe rocks through which we paſſed, are infeſted with tygers, leopards, and panthers, it was ordered that none ſhould leave the caravans, unleſs there were at leaſt three in company, and fire-arms along with them; for nothing is more common than for thoſe wild beaſts to devour ſingle paſſengers, of which there will be many inſtances recited in the courſe of this work.

Having paſſed theſe rocks, we had a good journey to the Chineſe wall, and here we had an opportunity of making ſome inquiries into the ceremonies of the Mongul Tartars, who inhabit thoſe parts. They have their domeſtic idols, to whom they offer up ſacrifices; but they believe there is one Supreme Being, although they have very confuſed and groſs notions concerning him. When they bury their dead, they place a cock upon the lid of the coffin, and this induced us to believe that theſe heathens have ſome notion, from tradition, of a reſurrection. The crowing of the cock is generally a ſign of the approach of the morning; and probably they do this to point out the morning of the reſurrection. This however is only mentioned by way of conjecture; becauſe we found many other things of a ſingular nature, which we could not eaſily account for. Indeed the moſt remarkable thing we met with here was, a Mongul nun, and ſhe was frequently at her prayers, with her book in her hands. Being aſked, by the ambaſſador, to whom ſhe offered her prayers; ſhe anſwered, "To the ſame God, who being excluded from heaven by your God, will at laſt return, and put your God out of his place, and then you will ſee prodigious alterations on this earth."

Mr. Brand, the ſecretary, has made no remarks upon this expreſſion of the nun, which is the more to be wondered at, becauſe he is for the moſt part very judicious, and ſeems to have been a man of very extenſive knowledge. Let the intelligent reader but attend only a few minutes to the words, and he will find that they have a near affinity with the pagan mythology, which teaches, that the rebellious gods were driven out of heaven; nay, it may be added farther, that this tradition itſelf was no other than a mutilated account of the fallen angels. But to return to our traveller.

"October 27, towards evening, we got ſight of the famous Chineſe wall, and it was the moſt ſtupendous work we had ever ſeen. Near the firſt gate we entered at, the wall ſeemed rather decayed; and a little farther we paſſed through another gate, which was fortified, in the form of a baſtion. We paſſed two more gates, and over the third was a guard of ſoldiers, who are conſtantly placed there in order to ſpread an alarm, in caſe the Mongul Tartars ſhould attempt to make an attack. Scarce had we paſſed a mile within theſe gates, when we came to a ſtrong town called Galyra, and near it we met with the firſt idol of the Chineſe, of which they have vaſt numbers, not only in the empire at large, but likewiſe in every city, town and village. The idols we ſaw at this place had a moſt dreadful aſpect, having ſpears in their hands, and ſurrounded with all the implements of war.

October 28, we paſſed by another Chineſe city, and in the evening arrived at the city of Xantuning, where we were ſplendidly entertained by the governor, and officers both civil and military, in the ſame manner as we had been in all the places through which we paſſed. Muſicians were ordered to divert us, and the evening was ſpent in the moſt agreeable manner.

On the 29th we came to the city of Xun-gu-kou, where we were diverted with a farce, on a ſtage erected

for that purpoſe. Here we ſaw, in one of their temples, a goddeſs of ſtone, 128 feet high, with 700 hands; and as we frequently went into their temples, we found all their idols richly dreſſed, but with the moſt frightful countenances. Near this place were many ſepulchres of the dead; and on the 30th of October, meeting a great many men and women on the road following an idol, preceded by pipers, drummers, and other muſicians, we aſked the adogeda what they meant by it? He told us that they were going to perform their devotions at a ſepulchre, and that they were obliged to take their god along with them. We learned afterwards, that this is a common practice in China, much in the ſame manner as it was with the Greeks of old, and other heathen nations throughout many parts of the world, as appears by the teſtimony of travellers.

The ſame day we came in ſight of a ſpacious place called the Red City, and famous for being the burying-place of many of their princes and emperors in antient times. We lodged that night in a village, and as ſome extraordinary buſineſs detained the adogeda in the place, we ſet out in the morning without him; but before we had travelled far, his ſteward came up, and deſired us to tarry a little in the place where we were; his maſter being on the road to overtake us, we ſpent this time in taking a view of one of their temples, where we ſaw three of the adogeda's ſervants proſtrating themſelves before an idol that ſtood in the middle, and two others that ſtood on both ſides of it. We were much ſurpriſed to find a people, who in many things are undoubtedly ingenious, and more acquainted with learning than either the Mahometans or many other people in the world, ſuch groſs idolators; for wherever we went, we found temples erected, and the number of their gods ſeemed almoſt endleſs.

November the 2d, we came to the city of Tunko, famous for its traffick in Porcelain, and here we were again ſumptuouſly entertained with all ſorts of muſic, and we had a play acted in the evening; the actors being in the richeſt dreſſes we had ever ſeen.

The next evening we came near to the ſuburbs of Peking, the capital city of China, where we were met by many perſons of high rank from the emperor's court. November the 4th, the ambaſſador made his public entry into Peking, in the following order: About one hundred peace officers to clear the ſtreets; theſe were followed by a party of the emperor's guards, with drums, trumpets, and other ſorts of martial muſick. Behind them walked the adogeda, who had conducted us from the borders of China. And then the ambaſſador himſelf, with two of the emperor's officers of ſtate on each hand. And we, who compoſed his retinue, cloſed the proceſſion. We were all lodged in the court, as is the cuſtom for ambaſſadors from Ruſſia to China. Here we lodged till November the 12th, when the adogeda came to inform the ambaſſador, that he was to have an audience the next day, and therefore deſired him to have his credentials ready. He aſked him at the ſame time, Who were to carry the preſents? The ambaſſador told him, the Coſſacks; which did not ſeem to pleaſe the adogeda; for he would rather have had them carried by Chineſe ſervants; but this the ambaſſador would not comply with.

It was, however, November the 14th, before we could get every thing ready; and then we proceeded to court in the following order: Fifteen Coſſacks carrying the preſents, followed by one of the maſters of the jewel-office to the Emperor of Ruſſia; and he was followed by myſelf as ſecretary of the embaſſy, carrying the credentials: the ambaſſador came next, attended by four adogedas; and in the rear marched the reſt of the gentlemen belonging to the embaſſy. Coming to the caſtle, we alighted from our horſes, and walked in through a long narrow paſſage, arched on the top, and at each end was a ſtrong folding gate. Within the inner gate, we came to a ſpacious ſtone bridge, about ſixty paces in length, and on each ſide was a wall not above three feet high; but adorned with a great number of images cut in ſtone. Beyond the bridge we paſſed through a broad ſpacious court, where we ſaw two large pillars wrought very artificially, and adorned with a variety of figures. Beyond this court, we were conducted into the moſt ſpacious and elegant hall I have ever ſeen; and there we ſaw tables placed, with bolſters on the ground for us to ſit on, which is the cuſtom in China, particularly with ſuch as are treated with more than ordinary reſpect.

We had not been ſeated above ten minutes, when we ſaw the great miniſters of ſtate enter the hall, and the emperor walking behind them, and into his own hands the credentials were delivered. The preſents were given to the adogeda, who ordered them to be laid upon the tables; and then the four great officers of ſtate walked forwards, and ſaluted the ambaſſador. They enquired very particularly concerning the health of the czar; and told the ambaſſador, that the credentials ſhould be immediately tranſlated, and an anſwer given to them. This ceremony being over, we were re-conducted to the ambaſſador's lodgings in the ſame manner we came; and within three hours after, two adogedas came to let the ambaſſador know, that the czar's letters had been received with more than ordinary ſatisfaction at court, and that the emperor had ſent all ſorts of moſt delicious proviſions for him and his retinue for that day, becauſe we were to dine with the emperor on the day following. This was an honour we did not expect, and the adogeda did not fail to let us know that few ambaſſadors had ever been indulged with ſuch a privilege.

Next day we went in proceſſion to the palace in the ſame manner as before, and being ſeated again on pillows, in the hall already mentioned, the emperor, attended by the ſame officers as before, came forwards, and welcomed the ambaſſador with a very hearty ſalute. Four tables were immediately brought in, two of which were covered with forty ſilver diſhes, filled with all ſorts of ſweetmeats, for the ambaſſador; and the other two which had likewiſe ſweetmeats on them, and mutton, were for us who belonged to his retinue. After dinner we were treated with the liquor called milk-tea, in wooden diſhes, which, when we had drank off the liquor, were re-delivered to the ſervants with a low inclination of the head. The ambaſſador was no ſooner riſen from table, than all the ſweetmeats were given to the Coſſacks, who carried them away when we left the palace. The whole of this entertainment was conducted with ſo much decorum and ſobriety, that we could not help forming very high notions of Chineſe politeneſs. It is true, there were many ceremonies obſerved, but they were not impoſed on us, nor did they blame us for not complying with what we did not underſtand. Two days after we had dined with the emperor, his firſt miniſter of ſtate, accompanied by ſeveral of the officers of court, waited on the ambaſſador, who entertained them with very good muſick, to their no ſmall ſatisfaction and pleaſure. The ambaſſador likewiſe preſented the dorgamba, or chief miniſter, with a large looking-glaſs, two ſmaller ones, two watches, with ſome other things, ſuch as ſables, black foxes ſkins, ermines, and other Siberian commodities, which were accepted of in the moſt obliging manner.

November the 18th, two heralds came from the palace, to invite us to dine again with the emperor; and we were conducted to the hall where we had dined before. The ambaſſador, with fourteen of his retinue, being ſeated on the pillows, the officers of ſtate already mentioned, came in; and after the mutual compliments were over, aſked the ambaſſador, if he could ſpeak Latin? He anſwered, he could not; they then aſked if any one in his retinue could, and being told there was one, but he was afraid he could not hold a long converſation, they went away, leaving us to wait for the emperor. We waited in the hall five hours, when the adogeda came, and conducted us through three fine gates, and as many ſpacious courts. In the middle court was a beautiful

fiſh-

fish-pond filled with clear water, and over it a noble bridge, supported by five lofty arches.

As soon as we entered the presence chamber, we found the emperor seated on his throne; and the ambassador was conducted by the adogeda, and seated beside him on his right hand.

The room, which was very lofty, and adorned with many marble statues, was filled with vast numbers of courtiers, carrying the emperor's arms on their breasts and backs wrought in gold. Just opposite the door of this room we had a view of the seraglio on the one hand, and the imperial temple on the other. The ambassador's retinue stood behind him, and opposite the four chief ministers of state. Near the throne stood a guard of forty persons, all dressed in one uniform manner, holding in their hands halberts, pikes, and battle-axes. We had not sat long when we saw a table brought in, covered very thick with large dishes of gold, filled with sweetmeats, grapes, apples, pears, chesnuts, China oranges, citrons, and other fruits. Every one took care to observe when the emperor began to eat; and having gently inclined their heads, they eat likewise.

Several tables were set for the ambassador's retinue, with large dishes of silver, filled with sweetmeats, and such other things as had been served up for the emperor. The persons who waited at table were richly dressed, which surprised us much; but we learned afterwards that these were officers of rank at court.

After dinner, which lasted three hours, two very large cups of brandy being presented to the emperor, he commanded the dorgamba, and another of his chief ministers, to conduct the ambassador to the throne; and he being come upon the steps, the dorgamba gave one of these cups to the ambassador, desiring him to make a low bow with his head, and then drink it off at one draught. This being done, several jesuits came into the room, and spoke in Latin to the ambassador, and he answered them in Italian, that he was not well acquainted with Latin. It happened that one of the jesuits understood Italian, and by order of the emperor, he asked the ambassador several questions; as, How long he had left Moscow? what wars were carrying on in Europe? and whether the Czar was engaged in any of them? with many others of a similar nature. All these being answered and explained to the emperor, the ambassador was re-conducted to the throne, and we in our turn ordered to stand before the emperor, and drink a gold cup full of brandy each. Returning to our seats, we had milk-tea set before us to drink. The tables being removed, the adogeda conducted us into another room, that we might not see the emperor descend from the throne, that being contrary to the laws of China, because by that is pointed out his being dethroned, which notion likewise prevails in other parts of the east.

The royal family of China are descended from the Mongul Tartars, and the emperor who treated us with so much magnificence, was of a brown complexion, tall, and about fifty years of age. After he left the throne, he came into the room where we were, and ordered all that was left of the sweetmeats to be given to the servants. By this time it was drawing towards evening, and we were re-conducted to the ambassador's lodgings, where we made our remarks upon Chinese magnificence and hospitality, nor did we know which to commend most.

In this manner we spent the time in a continual round of feasting, till December 11, when we were invited to be present at a grand solemnity, it being the day on which the Chinese lords pay their homage to the emperor. They prostrated themselves several times before him, and knocked their heads against the ground. This ceremony being over, we were again entertained as before, and in the evening the adogeda conducted us to see a play acted. It was somewhat like our European opera, there being much music in it, and the action was tragic, but it was impossible for us to know upon what it was founded. After the play was over, there was something acted like a farce, consisting chiefly of legerdemain tricks, and several other feats of dexterity.

The jesuits, of whom there were eight in Peking at that time, treated us with a fine dinner, and the ambassador returned the compliment within a few days afterwards. We continued at the court of Peking upwards of four months, when having settled every thing relating to our embassy, we were re-conducted out of the empire to the borders of Russia, in the most honourable manner, having had carriages, horses, and provisions allowed us."

Such is the narrative of Mr. Brand, who returned home to Russia with his ambassador. And we shall now give a description of the imperial city of Peking, from the learned jesuits, Father Du Halde, and Father Le Compte.

It is called Peking, which signifies the Court of the North, it being the ordinary residence of the emperor's, who removed from the south to settle here, about the year 1405, in order to watch the motions of the Tartars. It is the capital of the empire, situated in a most delightful plain, twenty leagues from the great wall. It is almost square, and is divided into two equal parts. That where the emperor's palace stands is named Lau-Ching, or the Old City. It is also called the Tartar city, because the houses are inhabited by the Tartars, as are likewise the lands around it; and they have ever been exempted from taxes since the present royal family came to the throne, the emperor being descended from those people.

The second is called Lingo-Ching, or the New City; because the Chinese retired from the old city, and settled here when the present family took possession of the empire. Both these cities, taken together, are about eighteen English miles in circumference, and are encompassed with strong walls. Those of the old city are stately, and worthy of the greatest capital city in the world; but those of the new city are narrow, and have nothing in them remarkable. The walls of the old city are made with an ascent; and there are houses for the soldiers to do duty in, at proper distances from each other.

The ditch is dry, but very broad and deep, and every thing is kept in the same order as if they were continually in fear of an enemy. The gates of the city are nine in number, and they are high and well arched, with pavilions over them. Their pavilions are nine stories high, and each story is furnished with loop-holes; the lower story forming a great hall for the officers and soldiers. Before each gate there is an open area, or parade, of above three hundred and sixty feet, which serves as a place for arms, and it is encompassed with a semicircular wall, like that of the city. The entrance into these parades is never on that side which faces the great road leading into the city, for the Chinese are very jealous of the country people's wives with the soldiers.

The road is also defended by a pavilion, with cannon upon it; so that it would be no easy matter for an enemy to get into the city. At each gate, on each side, are two other pavilions, facing each other, much lower than that over the gate; and these having likewise cannon placed upon them, no city in the world can be better guarded, both against an enemy, and also to suppress insurrections among its own inhabitants.

Almost all the streets are built in a direct line, the largest being about one hundred and twenty feet broad, and three miles in length. In this, and in the other large streets, they have many shops for selling their silks; and as different pieces are hung out, these, with their gilded signs, give the whole a most beautiful appearance. Their signs have the figures of all sorts of animals painted upon them, and many other things, in the same manner as in Europe. The little streets run all from east to west, and divide the space between the large ones into so many equal and proportionable parts.

The amazing multitudes of people who throng these streets,

ſtreets, without one woman, and the confuſion occaſioned by the vaſt numbers of horſes, cattle, and carriages, is aſtoniſhing. Perſons of diſtinction would be ſtopped every moment, if they had not a man on horſeback to go before, and call to the paſſengers to make way. Many people are carried through the ſtreets in chairs, but moſt commonly they ride on horſeback, or on mules. One may hire a horſe or a mule the whole day for ſix-pence; and there are books ſold, which give an account of the wards, ſtreets, or places, where every perſon lives who has any public employment.

The houſes bear no proportion to the beauty of the ſtreets, being neither lofty, nor well built; except the emperor's palace: the former are extremely mean, the noblemen's being but one ſtory high, like the others. But the numerous apartments they have for themſelves, their wives, and their domeſticks, make ſome amends for other deficiencies. Their courts of juſtice are no better than their houſes; except that they have lofty gates, with ſome curious emblematical figures upon them; but neither the halls, nor rooms, have any thing in them worth notice. All their temples are built at the expence of the emperor; who alſo allows ſomething for the ſupport of the prieſts, the ſchools, the judges, and other officers, whether eccleſiaſtical or civil.

The governor of Peking is always choſen in from among the Tartars, and is called Kyú-men-tí-tú, or General of the nine gates. He has under his juriſdiction the ſoldiers as well as the inhabitants, in all civil matters; and nothing can exceed the policy obſerved here. It is amazing to ſee the perfect tranquillity that reigns among ſo many people. For ſeveral years together a houſe is not broken, nor a murder committed; for it would be almoſt impoſſible for the criminals to eſcape being puniſhed.

All the great ſtreets, which run in a line from one gate to another, have ſoldiers day and night, with ſwords by their ſides, and whips in their hands, to chaſtiſe all without diſtinction who make any diſturbance; and to confine thoſe who reſiſt; the leſſer ſtreets have, at each end, wooden gates, with openings in them, ſo that the ſoldiers can ſee what is tranſacting. Theſe wooden gates are ſhut at night, and not opened till morning; unleſs a perſon wants a phyſician, or ſome other thing abſolutely neceſſary. As ſoon as the firſt ſtroke of the watch is given on a great bell, two or three of the ſoldiers walk from one guard to another, playing with a ſhort piece of wood upon a thing reſembling a bowl.

They ſuffer none to walk the ſtreets at night, and even queſtion thoſe whom the emperor ſends upon buſineſs; who, if they cannot give a good account of themſelves, are immediately taken into cuſtody. That the ſoldiers may be conſtantly upon their duty, the governor orders ſome of his officers to go round the ſtreets, at the time they are leaſt expected; and this keeps them conſtantly upon their duty. It is true the empire is put to great expence on this account; for part of the ſoldiers are employed for nothing elſe, but to take care of the ſtreets; and they have large pay. But what ſignifies the expence, while the place is well governed, and crimes prevented inſtead of being puniſhed? If ſomething on a plan ſimilar to this was adopted by us, we ſhould not have ſo many houſes broken, nor ſee ſuch numbers of wretches executed.

Beſides theſe ſoldiers watching day and night, it is their buſineſs to ſee that every one ſweeps that part of the ſtreet before his own door; and waters the place morning and evening in dry weather. The ſoldiers themſelves clean the middle part every morning for the carriages; which is the more neceſſary, becauſe the ſtreets are not paved, and the ground is rather ſoft.

After the ſoldiers have taken up the dirt, they beat it, and mix it with dry earth; ſo that within two hours after rain, the ſtreets become dry. Du Halde, ſpeaking of the Obſervatory at Peking, gives the following deſcription of it. "We firſt entered a pretty large court, where thoſe who took care of the place lodged; going in, we found a very narrow ſtair-caſe, which led to the top of a ſquare tower, contiguous to the wall of the Tartar city, and raiſed but ten or twelve feet above the bulwark. Here the Chineſe aſtronomers had placed their inſtruments, which although but few, yet took up the whole room. Thoſe inſtruments were inferior to what we have in Europe; ſo that when we inſtructed them how to make others, according to the lateſt diſcoveries, the emperor ordered all the old ones to be locked up. But though the inſtruments we taught them to make, were extremely good, yet they could not be permitted to uſe them, till an order from the emperor came for that purpoſe."

The city bell for ſtriking the watch, or hour of the night, is reckoned the biggeſt in the world; and the ſound of it is heard at a great diſtance in the country. It was carried up to the tower by engines, contrived by the jeſuits, to the aſtoniſhment of the whole court, who had never ſeen any thing of the nature before.

We have already given an account of the manner in which the Ruſſian ambaſſador was treated at Peking: but Brand the ſecretary has given us but a very imperfect account of the emperor's palace; tho' this is not to be wondered at, eſpecially when we conſider that even the ambaſſador himſelf was not admitted into any parts of it but the hall of audience, and the dining room. It is to the two learned jeſuits, Du Halde and Le Compte, that we are indebted for a proper deſcription of that magnificent ſtructure. Theſe jeſuits had gained the affections of the Chineſe ſo much, that they were admitted into every place, except the ſeraglio, where none are permitted to go beſides the emperor and his eunuchs.

This ſpacious palace ſtands in the middle of the old Tartar city; is of a ſquare form; the eaſt, north, and weſt ſides, being equally diſtant from the wall. The ſouth ſide forms the front, and has many curious figures upon it. It is divided into two, one being called the outer, and the other the inner palace. The outer palace is an oblong ſquare, about four miles in circumference, and ſurrounded by a wall, with gates, at each of which a guard is kept.

The ſouth gate is the gate of the palace itſelf, being about one hundred fathoms from the great gate of the city, and is called the gate facing the noon day ſun. The inner wall, which immediately encompaſſes the palace where the emperor reſides, is extremely high and thick, built with large bricks, and embelliſhed with battlements, well contrived. It has four gates with large arches; thoſe to the ſouth being three-fold, but the others on the ſides are ſingle. Upon theſe gates, and upon the four angles of the walls are eight towers, or rather halls, of an extraordinary bigneſs, and very curious workmanſhip, varniſhed with a moſt beautiful red, adorned with flowers of gold, and covered with tiles painted yellow, which when the ſun ſhines upon them, appear as if they were of ſolid gold. In the reigns of the Chineſe emperors, twenty eunuchs kept guard at each of theſe gates; but ever ſince the Tartars ſubdued the empire, ſoldiers have been appointed in their room. All the officers of the palace, with the mandarins, are allowed entrance within theſe gates; but all others are prohibited under the ſevereſt penalties, unleſs they ſhew a tablet of ivory, with the name of the mandarin upon it to whom they belong. Round this inner wall is a deep moat filled with water.

Cloſe by the eaſtern wall on the outſide, runs a river, over which are built ſeveral very fair bridges all of marble, except the arch in the middle, where there is a draw-bridge, which is never let down but when ſome of the officers are to paſs. The whole palace is divided into a great number of apartments, each being for a ſeparate uſe, particularly for the great
